

Attachment 1 - Pricing	
Contractor:	Dice IT Solutions Limited Liability Company dba TechProjects
Contract Number:	PB70748
Lots Awarded:	Lot 2
<p>Authorized Users Please Note the Following:</p> <p>A competitive Mini-Bid is required for every transaction under this Centralized Contract. (Section 1.3 of Attachment 16 - How to Use this Contract)</p> <p>The Contractor acknowledges that any mini-bid under this Centralized Contract which includes pricing in excess of the “maximum Not-To-Exceed price” shall be rejected by the Authorized User. (Sections 7.9 of the Contract - Reasonableness of Price)</p> <p>Price increases will only apply to the OGS Centralized Contracts and shall not be applied retroactively to Authorized User Agreements or any Mini-bids already submitted to an Authorized User. (Section 8.5 of the Contract - Pricelist Adjustments)</p> <p>When provided for in the Mini-Bid and resultant Authorized User Agreement, an Authorized User may reimburse travel expenses. All rules and regulations associated with this travel can be found at http://osc.state.ny.us/agencies/travel/travel.htm. In no case will any travel reimbursement be paid that exceeds these rates. All travel will be paid only as part of a deliverable specified within the Authorized User Agreement and must be billed with that associated Invoice with receipts attached. (Section 7.12 of the Contract - Travel, Meals and Lodging)</p>

4	TP004	Project Manager_1	<ul style="list-style-type: none"> • Directs and oversees the Project Management Life Cycle (PMLC) which encompasses the planning, organizing and managing of resources to bring about the successful completion of specific projects goals and objectives. This includes defining project scope of work, developing detailed project plans, establishing milestones and defining the resources/funding required. • Partners with Technical Leads to direct and oversee the Software Development Life Cycle (SDLC) which encompasses establishing a logical process in developing information systems, requirements and authentication which will result in the production of a highly qualified system that meets or exceed expectations within time and cost estimates, and works effectively and efficiently in the current and planned Information Technology infrastructure. • Evaluates the scope and complexity of projects and programs and implements the necessary resources to ensure adherence to policies and procedures. This includes preparing detailed project plans, allocating staff and establishing budget requirements. • Develops and monitors schedules to ensure that projects are completed within established deadlines. • Leads status meetings, Tracks and maintains detailed issues and risks lists, and prepares appropriate project meeting minutes and status reports. Meets regularly with other related areas to ensure that integration issues are identified and resolved. • Identifies project risks/issues and mitigation strategies and communicates risk/issue status updates to stakeholders. • Assist with Methodology deployment and Process reengineering and evaluation efforts • Interfaces with all levels of business and technical management staff and project teams to facilitate problem resolution and the resolution of competing priorities. • Monitors and manages team progress to ensure that project objectives are met. • Conducts scoping sessions and assists in the creation of work and proposal statements. This may include providing technical approaches, tasks, deliverables, work estimate, assumptions, dependencies, etc. • 8+ years of experience of structured IT Project Management executing medium to large-scale technology programs, along with corresponding sub-projects. Structured IT Project Management execution includes (but is not limited to) managing program/project scope/deliverables, schedules/milestones, budgets, and progress/status reporting. • 8+ years of experience managing project teams of five or more resources, where resources were either dedicated to the project and/or matrixed into the project from other teams. • 8+ years of experience utilizing either Waterfall or Iterative/Incremental methodologies for project delivery. • 8+ years of experience demonstrating strong interpersonal skills, clear/persuasive communication abilities (verbal/written), leadership skills, motivation, decisiveness, flexibility, and sound business judgment. 	PMP Certified - Master's Degree	8+	\$132.50
5	TP005	Application Developer - 2	<p>Create and Develop Web Application specifications. Development and Delivery of web forms in ASP.NET, including C#, SQL Server OR Oracle, OR Open-Source java, AngularJS and Node.js. etc., Develop specifications for full-stack apps which include Web server, relational database, and client-side servers. Design pattern specifications using object-oriented analysis/design. Perform Testing/Evaluation. Perform unit testing & documentation of programs and systems. Perform Code Review. Monitor and implement information technology quality assurance standards. Develop and prepare documents for the general design of solutions that meet system and security requirements, including the selection of alternative approaches. Develop specifications for databases, communication systems, hardware, network, security, storage, and software configurations. Perform System Coding. Create the program code in various technologies such as .NET OR Open-Source Java etc. Provide general programming assistance to other MIS programmers/projects as may be needed. Test and maintain the program code to make sure it meets all the functional requirements.</p>	Bachelor's degree	7	\$150.90
6	TP006	Quality Analyst – 3	<p>Work closely with Management and Programming teams in testing applications in either manual and/or automated test environments. Makes recommendations, if needed, for approval of major systems installations. Prepares milestone status reports and deliveries/presentations on the system concept to colleagues, subordinates, and end user representatives. Responsible for development of project Software and/or Systems Quality Assurance Plan and the implementation of procedures that confirm the requirements of the contract. Responsible for verifying that each functional component of the project follows a defined process, which is in conformance with contractual requirements.</p> <p>Creates and designs the following deliverables: test strategy & test plan, detailed test cases, test scripts, traceability matrix, test estimates, progress reports for test execution, various defect and statistical data reports, etc.</p> <p>Experience authoring, building, and adopting large scale, cross-functional automation frameworks with well-balanced coverage across UI, back-end integration, database levels. Deep understanding of different test automation approaches (keyword-driven, Data-driven, BDD, hybrid) and technology stacks (Java, .NET, JavaScript, Python, etc.)</p>	Bachelor's degree	8	\$143.25

Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
7	TP007	Business Analyst - 2	<p>Develop business and technical requirements. Identify user stories and translate them into technical requirements as required. Prepare detailed EDP project plans, by identifying milestones/scheduling tasks/due dates. Responsible for efficient implementation of projects by managing changes to achieve project outputs by performing root cause analysis, management communication and client relationship management in partnership with Service Support team members. Provide Management Reporting and Information dissemination. Prepare executive summary status reports, by reviewing progress reports of scheduled tasks, activities, summarizing, analyzing data, to report progress to management on automation projects. Liaison with IT project managers and analyze their Infrastructure needs. Draft comprehensive reports, in narrative and statistical form, by applying knowledge of data processing techniques, researching, analyzing data, applying agency formats, to provide a written summary of results and recommendations.</p> <p>Coordinate Testing of application. Develop test cases and acceptance criteria. Coordinate QA testing and acceptance between QA staff, developers, and stakeholders. Review the requirements with the stakeholders for their approval. Analyze and document current systems and processes as currently implemented. Make recommendations for improvements based on client feedback. Work directly with business stakeholders, clients, designers, developers, and engineers to coordinate the building of applications to specifications and on time. Use Business Analysis tools such as JIRA, &MS office & MS Visio.</p>	Bachelor's degree	7	\$146.75
8	TP008	Product Manager	<p>Perform Design and implementation. Co-design products with business leadership, understanding and predicting the needs of the business leadership, leading the execution and delivery of software releases using defined hybrid-agile software development life cycle process. Coordinates development and ongoing refinement of the feature backlog for all releases and any dependencies. Leads the translation of software features into technical requirements (Features) following agile principles. Defines software release plan and scope with the scrum master and development teams. Act as a single point of contact for all engineering and innovation related items for assigned products. Work as a Product owner designing and developing software solutions</p> <p>Work in a software development environment using one of the AGILE SDLC methodologies and direct a team to deliver a successful project.</p>	Bachelor's degree	7	\$198.98
9	TP009	Project Manager - 2	<p>Develop comprehensive project management plans. Lead the planning and implementation of project. Facilitate the definition of project scope, goals and deliverables. Define project tasks and resource requirements. Manage project execution from start through completion. Plan and schedule project timelines. Track project deliverables using appropriate tools. Provide direction and support to project team. Provide management reporting and information dissemination. Constantly monitor and report on progress of the project to all stakeholders. Present reports defining project progress, problems and solutions. Publish project meeting agendas and minutes from discussions. Provide project quality assurance. Develop quality assurance metrics to measure output. Implement and manage project changes and interventions to achieve project outputs. Ensure all projects changes meet the developed quality assurance metrics before it is released to the user community. Work in a software development environment using SCRUM and Agile Development Methodologies and Sprint Delivery.</p>	Bachelor's degree	7	\$210.75
10	TP0010	Database Administrator – 3	<p>Develops and maintains necessary public synonyms, database links, and user access controls. Provides database tuning and monitoring to insure effective and efficient data access to include comparison of performance ratios, tuning of memory configuration, disk I/O, and application software, design and maintenance of the physical layout of the databases and calculating disk space requirements for database tables and indexes. Responsible for developing project plans, justifications, guidelines, and controls.</p> <p>Monitor and Maintain Oracle or SQL server Databases. Develop, maintains, enhances databases and information systems by defining physical structures and organization of databases and data sets. Reorganize databases at appropriate intervals, monitoring performance, implementing backup, recovery and restart procedures, utilizing the latest releases of database software in order to optimize performance, minimize storage requirements and support applications or systems areas. Prepare executive summary status reports by reviewing progress reports of scheduled tasks, activity.</p> <p>Database Normalization, logical and physical modelling, capturing data lineage, table and column data definitions, valid values and others necessary information in the data models. Enforcing standards and best practices around data modelling efforts. Developing automated routine tasks for backup, restore and DBCC scripts for databases maintenance, optimization and transaction logs. Designing and implementing enterprise data warehouse solutions.</p>	Bachelor of Science Degree	8	\$153.73
11	TP0011	Enterprise Architect	<p>Contribute to the design and creation of initial points of view, assets and service offerings that use emerging technologies. Perform technology architecture and infrastructure design activities, test and deployment activities and refine and enhance architecture and framework.</p> <p>Responsible for understanding new software and systems technologies that are emerging in use, driving the initial assets and engagements using these technologies. The Enterprise Architect will be responsible for establishing system information requirements to develop large scale information systems. They will, design architecture to include the software, hardware, and communications, ensure compatibility, compliance, and regulatory requirements and evaluate work flows, organization, and planning. Enterprise Architecture professionals have diverse, technology-centric backgrounds, have experience in delivering solutions based on advanced technology and are self-starters who are enthusiastic about technology and have a deep personal interest in working on the leading edge.</p>	Bachelor's degree	7	\$231.50

Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
12	TP0012	Sr. IT Subject Matter Expert (SME) Consultant - Technical	Define procedures or standards with respect to what the right or best way to implement an emerging technology would be for an IT organization. Define performance objectives and determine acceptable performance levels. Provide recommendations for procedural and technology improvements. Define and plan the future of the IT organizations. Act as the "go to" person for questions and problems within his/her area of technology expertise. Conduct research on emerging technologies. Assist in identifying best technology options and create technology adoption road- maps. Collaborate with customer IT teams to implement new technologies. May supervise a staff of Sr. IT specialists, Sr. Programmers and/or other engineers. Works independently without direct supervision. Provides advanced specialized scientific and engineering and other necessary related functional support required to complete IT/telecommunication tasks. Specifically, provides high-level advice, planning, troubleshooting, integration, research, design, development, testing, modeling, simulation and training on the most complex work requirements. Participates as needed in all phases of software development with emphasis on the planning, analysis, testing, integration, documentation, training and presentation phases. Applies principles, methods, and knowledge of specific functional areas of expertise to specific task order requirements.	Bachelor's degree	8	\$243.42
13	TP0013	Sr. IT Subject Matter Expert (SME) Consultant - Business	To ensure the facts and details are correct so that the project's/program's deliverable(s) will meet the needs of the stakeholders, legislation, policies, standards, and best practices. Have a deep understanding of a particular process, function, technology. Understand requisite knowledge that underlies effective decision-making and is able to describe where anomalies or flaws may occur in the decision-making for his/her area of expertise. Define procedures or standards with respect to what the right or best way to implement an emerging technology would be for an IT organization. Define performance objectives and determine acceptable performance levels. Provide recommendations for procedural and technology improvements. Define and plan the future of the IT organizations. Act as the "go to" person for questions and problems within his/her area of technology expertise. Conduct research on emerging technologies. Assist in identifying best technology options and create technology adoption road- maps. Collaborate with customer IT teams to implement new technologies. Specifically, provides high-level advice, planning, troubleshooting, integration, research, design, development, testing, modeling, simulation and training on the most complex work requirements. Participates as needed in all phases of software development with emphasis on the planning, analysis, testing, integration, documentation, training and presentation phases. Applies principles, methods, and knowledge of specific functional areas of expertise to specific task order requirements.	Bachelor's degree	8	\$243.53
14	TP0014	System Data Network Specialist - 3	Monitors and responds to complex technical hardware and software problems including network infrastructure and communication hardware and software configuration problems. Provides primary interface with vendor support service groups or provides internal analysis and support to ensure appropriate notification during outages or period of degraded system performance. Provides LAN server support. Provides system administration support of network, web and/or communication systems including Local Area Network (LAN) and Wide Area Network (WAN) systems. This includes administration of user accounts, passwords, email, chat, and FTP. Maintains servers, creates monitoring reports and logs, and ensures functionality of links. Monitors web site for acceptable performance and user accessibility. Establishes back-ups and monitors site security. Coordinates network administration and performance requirements with others in the information systems function. Identifies, analyzes and documents long-range requirements and schedules resources related to the enterprise network. Responsible for configuration management and documentation of network and system topologies and/or web site. Prepares technical implementation plans that provide integrated solutions including actions, milestones, timelines and critical paths required for complete solutions. Prepares activity and progress reports regarding network performance. Performs day-to-day network administration tasks including network equipment installation, configuration, upgrades, testing, and troubleshooting. Supports day-to-day operations that include routing, switching, firewalls, wireless, VoIP, and VPN. Maintains and supports network technologies that sustain data center operations. Configures load balancing for internal and external facing applications. Collaborates with various departments representing the network support team to design, test, and implement proposed solutions. Troubleshoots network performance issues and recommends appropriate solutions. Provides periodic network traffic and security status reporting. Contributes to root cause analysis reports for network outages. Prepares network diagrams, floor plans, and schematics using Visio where required. Analyzes business requirements to develop technical network solutions designs and their framework. Performs complex, hands-on solution design, solution architecture, architecture roadmaps, concepts and collaborating with network architects and engineers to create enterprise networks and address supports issues such as routing protocols, data center performance, high-availability and scalability. Collaborate with Project Managers during the deployment phase of the project, which includes documenting all installation, customization and integration efforts. Lead the creation of the configuration deployment procedures and train integration and field engineers, on various networking configurations. Utilize knowledge of ITIL processes and methodology to develop project structure and documentation.	Bachelor's degree	8	\$153.20

Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
15	TP0015	Data Analyst	<p>Create and maintain all databases required for development, QA, Staging and production usage. Involve in implementing all the Data model changes. Perform the capacity planning required to create and maintain the databases. Perform data analysis and troubleshooting. Write complex SQLs and integrate technologies with internal and external data sources. Perform ongoing tuning of the database instances. Perform Performance tuning, Performance monitoring, Replication, Log shipping, Database Mirroring, Database capacity planning, Users and Role creation and monitoring Perform Data Extraction. Extract critical data from various data sources, load data into a centralized Microsoft SQL Server Database. Prepare data feed files for a business intelligence database and identify new data sources. Create new Extract, Transform and Load (ETL) Jobs using Microsoft SSIS. Perform Data Analysis and Reporting. Interpret the data to answer the question of why it is important, and to suggest recommended actions for management to take in response to it. Work with SQL 2008/2008R2/2012/2014 database management and related products from Microsoft including PowerShell, Windows 2008R2/2012R2 Server operating systems. Perform advanced SQL queries and reading query execution plan, developing and performance tuning complex, SSRS and SSIS-2012 packages. Use SQL 2012 on High Availability configuration, support, and troubleshooting.</p>	Bachelor's degree	3	\$128.17
16	TP0016	Strategic Information Technology Advisor	<p>Highly specialized knowledge and expertise in one or more vertical disciplines such as Public sector , State and City's information technology needs, law enforcement, banking, transportation, or other such disciplines as required to define /establish the functional or business direction of an enterprise, agency, or inter-agency requirement. Aligns the business processes and information technology strategy with the conditions and circumstances of the functional environment and establishes effective performance measures. Contributes to the definition and implementation of planning processes and/or systems at the enterprise level including both strategic and operational activities. Analyze job tasks, organizational structure and user requirements to provide system-wide solutions.</p> <p>Understanding customer requirements and business objectives. Providing strategic advice on using technology to achieve goals. Managing IT initiatives and collaborating with the technical staff. Provide expert advice, consultation and leadership in designing, coordinating and maintaining project goals, objectives and priorities. Develops strategies to meet short- and long-range goals for the applicable program and assures that strategies reflect most promising directions. Applies new methods, approaches, and technology to new and unusual situations. Collaborates with and provides expert advice to all organizational levels with the agency.</p> <p>Provide architecture direction/solutions for business & technical designs for large complex applications using Enterprise Java technology OR Microsoft (.net) technologies OR Oracle Technologies or any other relevant technologies. Customize the frame works for which we rarely find the resources, such as Cúram Framework OR latest angular frame works to meet project functional and business requirements. Provide architectural design and development estimates utilizing Object Oriented Design Patterns and enforcing architectural standards and best practices. Develop system architecture using component diagrams, development and runtime hardware and software configurations.</p> <p>Highly specialized knowledge and expertise in an uncommon or emerging related information technologies which is hard to find in marketplace.</p>	Bachelor's degree	8	\$263.95
17	TP001	Senior Full stack Developer	<p>Responsible for all standard SDLC processes: planning, designing, coding, configuring, installing, testing, troubleshooting, integrating, performance monitoring, maintenance, enhancements, security management, and support of computer applications programs in a Microsoft .NET environment.</p> <p>Key Requirements</p> <ul style="list-style-type: none"> • Sound knowledge in Algorithms and Data structures and extreme mathematical problems and can efficiently translate algorithms, ideas and concepts to software applications. • Expert in database design in MS SQL Server, stored procedures, functions and triggers. <ul style="list-style-type: none"> • Expert in working with scripting languages like JavaScript, AJAX, jQuery • Proficient in programming JavaScript data capture and event handling methods via the DOM event model. <p>• Excellent knowledge and proficiency in core java concepts like OOPs, collections, Threading, generics, Exception Handling, Thread pools, Execution services, concurrent utilities, File IO and serialization and handling XML</p> <ul style="list-style-type: none"> • Familiar with design patterns, Service Oriented Architecture (SOA), Aspect Oriented Programming (AOP) and Representational State Transfer (REST) • Experience with development and design work in all the layers from front-end, middle-ties, service layer and backend <p>Experience</p> <ul style="list-style-type: none"> • Minimum 7 years' experience <ul style="list-style-type: none"> - in software analysis, design, estimation, development, testing, enhancements, support, and related activities - in writing programs using C#, ASP.net, .NET Core, MVC, Web API, HTML/HTML5, CSS/CSS3, JavaScript, Angular, .Net Framework, jQuery, Entity Framework - in using MS Visual Studio 2019 and experience in database design, optimization, and maintenance in SQL Server 2019 - in conducting unit testing and integration testing and drafting related documents and maintaining bug tracker 	BS	7+	\$133.00

22	TP006	Quality Analyst – 3	<p>Work closely with Management and Programming teams in testing applications in either manual and/or automated test environments. Makes recommendations, if needed, for approval of major systems installations. Prepares milestone status reports and deliveries/presentations on the system concept to colleagues, subordinates, and end user representatives. Responsible for development of project Software and/or Systems Quality Assurance Plan and the implementation of procedures that confirm the requirements of the contract. Responsible for verifying that each functional component of the project follows a defined process, which is in conformance with contractual requirements.</p> <p>Creates and designs the following deliverables: test strategy & test plan, detailed test cases, test scripts, traceability matrix, test estimates, progress reports for test execution, various defect and statistical data reports, etc.</p> <p>Experience authoring, building, and adopting large scale, cross-functional automation frameworks with well-balanced coverage across UI, back-end integration, database levels. Deep understanding of different test automation approaches (keyword-driven, Data-driven, BDD, hybrid) and technology stacks (Java, .NET, JavaScript, Python, etc.)</p>	Bachelor's degree	8	\$143.25

Dice IT Solutions Limited Liability Company dba TechProjects Approved Price List			Number of Approved Titles:	32	Last Updated:	6/16/2025
Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
23	TP007	Business Analyst - 2	<p>Develop business and technical requirements. Identify user stories and translate them into technical requirements as required. Prepare detailed EDP project plans, by identifying milestones/scheduling tasks/due dates. Responsible for efficient implementation of projects by managing changes to achieve project outputs by performing root cause analysis, management communication and client relationship management in partnership with Service Support team members. Provide Management Reporting and Information dissemination. Prepare executive summary status reports, by reviewing progress reports of scheduled tasks, activities, summarizing, analyzing data, to report progress to management on automation projects. Liaison with IT project managers and analyze their Infrastructure needs. Draft comprehensive reports, in narrative and statistical form, by applying knowledge of data processing techniques, researching, analyzing data, applying agency formats, to provide a written summary of results and recommendations.</p> <p>Coordinate Testing of application. Develop test cases and acceptance criteria. Coordinate QA testing and acceptance between QA staff, developers, and stakeholders. Review the requirements with the stakeholders for their approval. Analyze and document current systems and processes as currently implemented. Make recommendations for improvements based on client feedback. Work directly with business stakeholders, clients, designers, developers, and engineers to coordinate the building of applications to specifications and on time. Use Business Analysis tools such as JIRA, &MS office & MS Visio.</p>	Bachelor's degree	7	\$146.75
24	TP008	Product Manager	<p>Perform Design and implementation. Co-design products with business leadership, understanding and predicting the needs of the business leadership, leading the execution and delivery of software releases using defined hybrid-agile software development life cycle process. Coordinates development and ongoing refinement of the feature backlog for all releases and any dependencies. Leads the translation of software features into technical requirements (Features) following agile principles. Defines software release plan and scope with the scrum master and development teams. Act as a single point of contact for all engineering and innovation related items for assigned products. Work as a Product owner designing and developing software solutions</p> <p>Work in a software development environment using one of the AGILE SDLC methodologies and direct a team to deliver a successful project.</p>	Bachelor's degree	7	\$198.98
25	TP009	Project Manager - 2	<p>Develop comprehensive project management plans. Lead the planning and implementation of project. Facilitate the definition of project scope, goals and deliverables. Define project tasks and resource requirements. Manage project execution from start through completion. Plan and schedule project timelines. Track project deliverables using appropriate tools. Provide direction and support to project team. Provide management reporting and information dissemination. Constantly monitor and report on progress of the project to all stakeholders. Present reports defining project progress, problems and solutions. Publish project meeting agendas and minutes from discussions. Provide project quality assurance. Develop quality assurance metrics to measure output. Implement and manage project changes and interventions to achieve project outputs. Ensure all projects changes meet the developed quality assurance metrics before it is released to the user community. Work in a software development environment using SCRUM and Agile Development Methodologies and Sprint Delivery.</p>	Bachelor's degree	7	\$210.75
26	TP0010	Database Administrator – 3	<p>Develops and maintains necessary public synonyms, database links, and user access controls. Provides database tuning and monitoring to insure effective and efficient data access to include comparison of performance ratios, tuning of memory configuration, disk I/O, and application software, design and maintenance of the physical layout of the databases and calculating disk space requirements for database tables and indexes. Responsible for developing project plans, justifications, guidelines, and controls.</p> <p>Monitor and Maintain Oracle or SQL server Databases. Develop, maintains, enhances databases and information systems by defining physical structures and organization of databases and data sets. Reorganize databases at appropriate intervals, monitoring performance, implementing backup, recovery and restart procedures, utilizing the latest releases of database software in order to optimize performance, minimize storage requirements and support applications or systems areas. Prepare executive summary status reports by reviewing progress reports of scheduled tasks, activity.</p> <p>Database Normalization, logical and physical modelling, capturing data lineage, table and column data definitions, valid values and others necessary information in the data models. Enforcing standards and best practices around data modelling efforts. Developing automated routine tasks for backup, restore and DBCC scripts for databases maintenance, optimization and transaction logs. Designing and implementing enterprise data warehouse solutions.</p>	Bachelor of Science Degree	8	\$153.73
27	TP0011	Enterprise Architect	<p>Contribute to the design and creation of initial points of view, assets and service offerings that use emerging technologies. Perform technology architecture and infrastructure design activities, test and deployment activities and refine and enhance architecture and framework.</p> <p>Responsible for understanding new software and systems technologies that are emerging in use, driving the initial assets and engagements using these technologies. The Enterprise Architect will be responsible for establishing system information requirements to develop large scale information systems. They will, design architecture to include the software, hardware, and communications, ensure compatibility, compliance, and regulatory requirements and evaluate work flows, organization, and planning. Enterprise Architecture professionals have diverse, technology-centric backgrounds, have experience in delivering solutions based on advanced technology and are self-starters who are enthusiastic about technology and have a deep personal interest in working on the leading edge.</p>	Bachelor's degree	7	\$231.50

Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
28	TP0012	Sr. IT Subject Matter Expert (SME) Consultant - Technical	<p>Define procedures or standards with respect to what the right or best way to implement an emerging technology would be for an IT organization. Define performance objectives and determine acceptable performance levels. Provide recommendations for procedural and technology improvements. Define and plan the future of the IT organizations. Act as the "go to" person for questions and problems within his/her area of technology expertise. Conduct research on emerging technologies. Assist in identifying best technology options and create technology adoption road- maps. Collaborate with customer IT teams to implement new technologies. May supervise a staff of Sr. IT specialists, Sr. Programmers and/or other engineers. Works independently without direct supervision. Provides advanced specialized scientific and engineering and other necessary related functional support required to complete IT/telecommunication tasks. Specifically, provides high-level advice, planning, troubleshooting, integration, research, design, development, testing, modeling, simulation and training on the most complex work requirements. Participates as needed in all phases of software development with emphasis on the planning, analysis, testing, integration, documentation, training and presentation phases. Applies principles, methods, and knowledge of specific functional areas of expertise to specific task order requirements.</p>	Bachelor's degree	8	\$243.42
29	TP0013	Sr. IT Subject Matter Expert (SME) Consultant - Business	<p>To ensure the facts and details are correct so that the project's/program's deliverable(s) will meet the needs of the stakeholders, legislation, policies, standards, and best practices. Have a deep understanding of a particular process, function, technology. Understand requisite knowledge that underlies effective decision-making and is able to describe where anomalies or flaws may occur in the decision-making for his/her area of expertise. Define procedures or standards with respect to what the right or best way to implement an emerging technology would be for an IT organization. Define performance objectives and determine acceptable performance levels. Provide recommendations for procedural and technology improvements. Define and plan the future of the IT organizations. Act as the "go to" person for questions and problems within his/her area of technology expertise. Conduct research on emerging technologies. Assist in identifying best technology options and create technology adoption road- maps. Collaborate with customer IT teams to implement new technologies. Specifically, provides high-level advice, planning, troubleshooting, integration, research, design, development, testing, modeling, simulation and training on the most complex work requirements. Participates as needed in all phases of software development with emphasis on the planning, analysis, testing, integration, documentation, training and presentation phases. Applies principles, methods, and knowledge of specific functional areas of expertise to specific task order requirements.</p>	Bachelor's degree	8	\$243.53
30	TP0014	System Data Network Specialist - 3	<p>Monitors and responds to complex technical hardware and software problems including network infrastructure and communication hardware and software configuration problems. Provides primary interface with vendor support service groups or provides internal analysis and support to ensure appropriate notification during outages or period of degraded system performance. Provides LAN server support. Provides system administration support of network, web and/or communication systems including Local Area Network (LAN) and Wide Area Network (WAN) systems. This includes administration of user accounts, passwords, email, chat, and FTP. Maintains servers, creates monitoring reports and logs, and ensures functionality of links. Monitors web site for acceptable performance and user accessibility. Establishes back-ups and monitors site security. Coordinates network administration and performance requirements with others in the information systems function. Identifies, analyzes and documents long-range requirements and schedules resources related to the enterprise network. Responsible for configuration management and documentation of network and system topologies and/or web site. Prepares technical implementation plans that provide integrated solutions including actions, milestones, timelines and critical paths required for complete solutions. Prepares activity and progress reports regarding network performance. Performs day-to-day network administration tasks including network equipment installation, configuration, upgrades, testing, and troubleshooting. Supports day-to-day operations that include routing, switching, firewalls, wireless, VoIP, and VPN. Maintains and supports network technologies that sustain data center operations. Configures load balancing for internal and external facing applications. Collaborates with various departments representing the network support team to design, test, and implement proposed solutions. Troubleshoots network performance issues and recommends appropriate solutions. Provides periodic network traffic and security status reporting. Contributes to root cause analysis reports for network outages. Prepares network diagrams, floor plans, and schematics using Visio where required. Analyzes business requirements to develop technical network solutions designs and their framework. Performs complex, hands-on solution design, solution architecture, architecture roadmaps, concepts and collaborating with network architects and engineers to create enterprise networks and address supports issues such as routing protocols, data center performance, high-availability and scalability. Collaborate with Project Managers during the deployment phase of the project, which includes documenting all installation, customization and integration efforts. Lead the creation of the configuration deployment procedures and train integration and field engineers, on various networking configurations. Utilize knowledge of ITIL processes and methodology to develop project structure and documentation.</p>	Bachelor's degree	8	\$153.20

Dice IT Solutions Limited Liability Company dba TechProjects Approved Price List			Number of Approved Titles:	32	Last Updated:	6/16/2025
Item Number	SKU	Job Title	Job Description	Minimum Education / Certification Level	Minimum Years of Experience	NYS Contract Price (Not to Exceed Hourly Rate, Exclusive of Travel)
31	TP0015	Data Analyst	Create and maintain all databases required for development, QA, Staging and production usage. Involve in implementing all the Data model changes. Perform the capacity planning required to create and maintain the databases. Perform data analysis and troubleshooting. Write complex SQLs and integrate technologies with internal and external data sources. Perform ongoing tuning of the database instances. Perform Performance tuning, Performance monitoring, Replication, Log shipping, Database Mirroring, Database capacity planning, Users and Role creation and monitoring Perform Data Extraction. Extract critical data from various data sources, load data into a centralized Microsoft SQL Server Database. Prepare data feed files for a business intelligence database and identify new data sources. Create new Extract, Transform and Load (ETL) jobs using Microsoft SSIS. Perform Data Analysis and Reporting. Interpret the data to answer the question of why it is important, and to suggest recommended actions for management to take in response to it. Work with SQL 2008/2008R2/2012/2014 database management and related products from Microsoft including PowerShell, Windows 2008R2/2012R2 Server operating systems. Perform advanced SQL queries and reading query execution plan, developing and performance tuning complex, SSRS and SSIS-2012 packages. Use SQL 2012 on High Availability configuration, support, and troubleshooting.	Bachelor's degree	3	\$128.17
32	TP0016	Strategic Information Technology Advisor	Highly specialized knowledge and expertise in one or more vertical disciplines such as Public sector, State and City's information technology needs, law enforcement, banking, transportation, or other such disciplines as required to define /establish the functional or business direction of an enterprise, agency, or inter-agency requirement. Aligns the business processes and information technology strategy with the conditions and circumstances of the functional environment and establishes effective performance measures. Contributes to the definition and implementation of planning processes and/or systems at the enterprise level including both strategic and operational activities. Analyze job tasks, organizational structure and user requirements to provide system-wide solutions. Understanding customer requirements and business objectives. Providing strategic advice on using technology to achieve goals. Managing IT initiatives and collaborating with the technical staff. Provide expert advice, consultation and leadership in designing, coordinating and maintaining project goals, objectives and priorities. Develops strategies to meet short- and long-range goals for the applicable program and assures that strategies reflect most promising directions. Applies new methods, approaches, and technology to new and unusual situations. Collaborates with and provides expert advice to all organizational levels with the agency. Provide architecture direction/solutions for business & technical designs for large complex applications using Enterprise Java technology OR Microsoft (.net) technologies OR Oracle Technologies or any other relevant technologies. Customize the frame works for which we rarely find the resources, such as Cúram Framework OR latest angular frame works to meet project functional and business requirements. Provide architectural design and development estimates utilizing Object Oriented Design Patterns and enforcing architectural standards and best practices. Develop system architecture using component diagrams, development and runtime hardware and software configurations. Highly specialized knowledge and expertise in an uncommon or emerging related information technologies which is hard to find in marketplace.	Bachelor's degree	8	\$263.95
