Siemens	14422382	1	Symbia Intevo Bold - The Symbia Intevo Bold is the latest in the Symbia Intevo family. This system integrates a 16 slice Scope Power CT gantry enabling advanced CT features SAFIRE, iMAR, IVR, Fast 3D Align and Dual Energy. It is built on xSPECT technology, enabling true integration of SPECT and CT. With xSPECT technology the SPECT information is registered into the CT frame of reference laying the foundation for higher SPECT image resolution and accurate and reproducible quantitative results. The Symbia Intevo Bold has state-of-the-art SPECT and high quality 16 slice diagnostic CT, providing this system full functionality for all SPECT, xSPECT, and stand-alone CT diagnostic applications in Cardiology, Oncology.	\$1,015,000.00	42.00%	\$ 588,700.00

Siemens	CS9522	Angio-CT Custom Solution - Each custom solution is on an individual request by customer see (below) then the CS PN and price are assigned based on requirements. Both modalities share one table. With this modification, 3 operating modes are possible: 1. CT-Gantry in a far park-position area from Artis system: · Angio mode with Artis system, in which Artis system movements are not restricted 2. CT-Gantry in a closer park-position area from Artis system: · Angio mode with Artis system, in which Artis system movements are restricted 3. Artis stand in a park position (=CT OK position) near the Artis table base and CT-Gantry is moving over the Artis table top: · CT mode with Angio table The CS interface includes a combination of the e-stop function of both systems. If the CT Sliding Gantry will not be used for a while, it can be switched off independently from the Artis system. Therefore the CT Sliding Gantry must be brought to a dedicated park position, which can be defined on-site Parts of the CS kit: The CS-kit includes all modifications to provide the interface for Angio CT facility, a user interface comprising of a green indication lamp for the system position "CT OK" and a yellow indication lamp which indicates, that the CT Sliding Gantry is in a safe position to be switched off. In addition the CS-kit includes the holder for mounting the CT Joystick "Control" onto the accessory rail of the Artis table. It will then be able to attach and remove the joystick from the holder. It will be made in such a way that the joystick will line up precisely with the Artis modules. In addition the CS-kit includes the documentation and the release for these modifications. Notes: The system software must be VD11 for this modification. The room planning and room layout is not part of this CS kit. The Planning Guides (PG) of Artis system and CT system remain valid. This offer is only valid for a combination with a CT Sliding Gantry model range "Definition	Call for pricing	38.00%	Call for pricing
