- Black, hard double wheel casters, which work on multiple surfaces, are standard
- Black, soft double wheel casters are available for use on hard floors; upcharge applies to this option

JURY BASE

- Pneumatic jury base
- Auto return swivel

FINISH

- Wood models feature a catalyzed top coat which resists denting, peeling and reactions to chemicals
- Can be cleaned with a damp cloth

A.C.T. ICONS

A.C.T. PERFORMANCE ICONS

A.C.T. (The Association for Contract Textiles), an organization made up of some 40 contract textile houses (Jobbers) has introduced a simple visual system for several ASTM and AATCC test standards.

These icons do not represent new testing for fabrics. National, as have many manufacturers, has always used these standards as requirements when developing fabrics. These icons were developed to create a common vernacular among textile companies and manufacturers in order to give specifiers uniform technical guidelines.

In order to use the A.C.T. icons, fabrics must pass the minimum requirements as established by ASTM (American Society of Testing and Materials) and AATCC (American Association of Textile Colorists and Chemists).

All National fabrics meet, and in most cases exceed the minimum requirements as set up by A.C.T. For the purpose of uniformity in the industry, National will be utilizing the A.C.T. icons on swatch cards and related materials.

FIRE RETARDANCY

Flammability testing determines a fabric's resistance to burning.

APPLICATION	PASSES
Upholstery	California 117
Panels and Upholstered Walls	ASTM E 84 (unadhered method)

COLORFASTNESS TO LIGHT

Colorfastness to light is the degree to which fabric will retain its color when exposed to light.

APPLICATION	PASSES
Upholstery	AATCC 16 Option 1 or 3 Class 4 minimum at 40 hours
Panels and Upholstered Walls	AATCC 16 Option 1 or 3 Class 4 minimum at 40 hours

ABRASION

Abrasion is the ability of a fabric to withstand damage from wear and rubbing. There is a general contract specification as well as a heavy duty specification.

APPLICATION	PASSES
Heavy-duty Upholstery	ASTM 3597 modified (#10 cotton duck) 30,000 double rubs Wyzenbeck method or ASTM D4966 (with 21 oz. weight) 40,000 rubs Martindale method
Upholstery	ASTM 3597 modified (#10 cotton duck) 15,000 double rubs Wyzenbeck method

COLORFASTNESS TO WET & DRY CROCKING

Colorfastness to wet & dry crocking refers to the rubbing off of color from the fabric onto clothing, hands or other materials and can occur under wet or dry conditions.

APPLICATION	PASSES
Upholstery	AATCC 8 Dry Crocking, Class 4 minimum Wet Crocking, Class 3 minimum
Panels and Upholstered Walls	AATCC 8, Class 3 minimum

PHYSICAL PROPERTIES

3 physical property tests include:
Brush pill test to determine a fabric's piling
Breaking/tensile strength is the ability of a fabric to withstand tension without breaking or tearing
Seam slippage is the pulling apart of fabrics at the seams

APPLICATION	PASSES
Upholstery	Brush pill ASTM D3511, 3 minimum Breaking strength ASTM D5034 50 lbs. minimum in warp & welt Seam slippage ASTM D4034 25 lbs minimum in warp & welt
Panels and Upholstered Walls	Breaking strength ASTM D5034 Grab Method 35 lbs. minimum in warp & welt

FINISHES AND MATERIALS

WOOD FINISH COLOR MATCHING

Each piece of natural veneer offers unique texture and grain. Minor variations in finish color and value may occur due to the natural characteristics of wood. National carefully selects all materials used in every product ensuring a commercially acceptable color and finish. Factors such as aging and exposure to light alter finishes.

FABRIC COLOR MATCHING

National will always ship a satisfactory commercial match on fabric. Because of industry dye-lot variation, colors may not match exactly.

For more information about our products and services or to find a certified National® dealer near you, please visit us at NationalOfficeFurniture.com or contact our customer service team at 800.482.1717.

FABRIC CHARACTERISTICS

Different fabrics/constructions will respond better than others to specific seating applications. Certain fabrics/constructions are more prone to relaxing over time and can demonstrate characteristics such as wrinkling, pilling, fuzzing, and puddling. Some upholsteries may experience dye transfer (clothing dyes transfer to the seating fabric). This does not mean that the fabric or application is deficient, but rather it is an inherent characteristic of that fabric or application and is considered normal behavior.

LEATHER CHARACTERISTICS

Leather is a natural product. Healed scars, scratches, cuts, and stretch marks are natural markings and are characteristics of leather. Leather may experience dye transfer (clothing dyes transfer to the leather). This does not mean that the leather or application is deficient, but rather it is an inherent characteristic of that leather or application and is considered normal behavior.

NATIONAL SEATING FABRIC GUIDELINES

TEXTILE APPLICATION GUIDELINES

National has listed textile application guidelines for each seating series. These guidelines are intended to help educate you of certain fabric characteristics. **Please make a point to review these guidelines when ordering National seating with National fabrics.** Application of the upholstery will be depicted as on the swatch card unless otherwise instructed on the order.

TEXTILE APPEARANCE GUIDELINES

Please note that these guidelines are here to help you have the best looking product that National can provide. Guidelines 1–4 are simply explanations of what you may see on your product. We can still upholster fabrics associated with these guidelines, but you may see some of the characteristics described.

1 Due to thickness and or stiffness this textile may result in gathers and puckers around corners, contours, and certain seams.
2 Patterns are considered matched directional; however, decorative stitching, tufting/buttons, seams, and seat to back on corner, wedge, and diagonal units may not align due to pattern configuration.
3 Textile with high nylon or wool content (more than 50%) may show signs of material stretch and lack of rebound when room temperatures fluctuate.
4 Mohair, velvet, and chenille may be easily bruised or have the potential of crooked seams due to the heavy nap and flip.

TEXTILE RESTRICTION GUIDELINES

Fabrics associated with guidelines 5 and 6 prevent us from upholstering the applicable models.

5 This textile cannot be used for glue application. Potential issues could include poor adhesion quality to the mating surface, separation of the fabric face from the backing, or glue bleeding through the fabric.
6 Thin and/or loosely woven textiles cannot be used due to potential fabric separation at the seams.
7 This textile has an uneven/irregular surface and cannot be used with topstitch upholstering. The topstitch disrupts the visual appearance of the upholstery. You can contact By Design to see if it is possible to remove the model's top stitch in order to use the fabric.

ALLIANCE PROGRAM OVERVIEW

National has developed joint programs with Arc-Com, Carnegie, Designtex, Maharam, Mayer, Momentum, Stinson and Ultrafabrics to offer you quality office seating with exciting lines of designer upholsteries. This program enables you to issue just 1 purchase order, providing simplified ordering and the most convenient, yet complete, seating choices available from a single source. All Alliance patterns meet TB117-2013.

APPLICATION

Application of the Alliance Program upholstery will be depicted as on the memo sample or website. If a different application is desired the pattern will need to be custom quoted.

Directional upholstery, such as stripes, patterns, and plaids may not be suitable for chairs with contoured shapes, tufting, or decorative stitching. Every effort is made to upholster all chairs as expertly as possible; however such orders are not subject to return.

Fabric that requires non-stock special treatments such as flame proofing, anti-microbial treatment, electrical conductive backing, water repellent, stain repellent, or acrylic backing are not part of this program. Such orders will need to be custom quoted.

LEAD TIMES/AVAILABILITY

Models specified with Alliance Program fabrics will be acknowledged at standard lead times based on the supplier's delivery schedule. Exceptions may occur when extended lead times apply. Each supplier reserves the right to discontinue patterns and colors. National will not be held responsible for suppliers discontinuing patterns/colors or when minimum order quantities apply. Contact customer service for availability before finalizing orders.

WARRANTY

Alliance Program fabrics are non-standard materials and are **not** covered under our warranty.

PRICING

Alliance Program graded pricing includes the cost of material. Repeat is also accounted for and no additional upcharge is required.

FABRIC AND SEATING CONSTRUCTION

Different fabrics and seating constructions will respond better than others to specific seating applications. Certain fabric constructions are more prone to relaxing over time and may demonstrate characteristics such as wrinkling, pilling, fuzzing, or puddling. Some upholsteries may experience dye transfer (clothing dyes transfer to the seating fabric.) This does not indicate that the fabric or application is deficient, but rather it is an inherent characteristic of that fabric or application and is considered normal behavior.

COM DECORATIVE/DIRECTIONAL FABRICS

Mobile pedestal cushion tops, box/file height storage cushions, and Wixler:

- Yardage requirements are greatly affected by not only size of repeats but also by the print or pattern
- National will cut patterns with aesthetic concerns in mind for high quality and consistency
- Some COM fabrics are considered directional that may not be considered directional by the fabric supplier, due to the upholstering process used by National
- Application of the COM upholstery will be depicted as on the COM supplier memo sample or website. If a different application is desired the pattern would need to be custom quoted.

Epicenter, Exhibit, and Tack Boards:

- Yardage requirements based upon roll width and tack board size. Pattern repeat is not taken into account. If the fabric pattern needs to be upholstered in a specific manner, a quote will be required to see if possible.
- Epicenter, Exhibit, privacy screens, and tack boards will have railroaded fabric application

FLAMMABILITY

- TB133 models are not available for mobile pedestal cushion tops and box/file height storage cushions. This request would need to be custom quoted.
- COM must be U.L. recognized for use on Epicenter
- COM must be U.L. recognized, meet ASTM E84 Class A, NFPA 701, or GSA 100% Polyester Waiver Program for use on Alloy, NAC Edgemount/Set On Privacy Screens, Return to Work Screens, Tackboards - Exhibit, NAC Accessory Tack boards, Tessera, WaveWorks Metal
- If ASTM-E84 Class A is requested for Exhibit, a quote will be required
- If a fabric is selected with specifications different from those listed above, the customer has the option of having it burn tested to see if meets the requirements. ASTM-E84 testing requested by the customer will require a custom quote. For cost estimates, contact customer service. The fabric/tack board burn test results will determine whether future orders can be entered as standard product or custom quotes. Each instance may vary.
- Letters of assurance are available upon request. A letter of assurance verifies that an ASTM E-84 test was conducted on a combination of tack board/fabric comparable to the requested tack board/fabric.

- Hardwire solution available for field installation on the 1 touch pivoting power grommet, see page 557
- Wire/data manager is available for additional cable management, see page 577 for accessories
- Undersurface wire managers available, see page 577 for accessories

FLIP/NEST FUNCTIONALITY

- Release lever allows top to flip vertical for nesting capabilities
- Bases are angled at 20° to allow tables to nest
- Locking casters are standard on user side; non-locking on approach side
- Tables can still nest when optional grommets and/or modesty panels are attached
- Depth of base is 22¹⁵⁄₁₆" for 18" and 24" tables and 28³⁄₁₆" for 30" tables
- 18" deep training tables will have a 6" gap between the tables when configuring from the approach side due to the base size
- When nesting the tables, the first table is 16" from the wall. Each additional table adds 6½" to the depth
  Example: 18 x 72 flip nest = 72" width x (16" + (6½*9)) = 75" depth for 10 tables

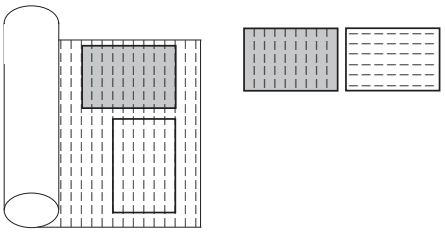
- Wall rail and faceplate are a powder coated aluminum extrusion
- Available in lengths of 72" and 144"
- Wall rails come in sets of 1 or 2 and include faceplate and alignment brackets
- Wall rails can also be ordered without faceplates
- When attaching worksurfaces to the wall rail without the use of tack board, marker board, or slat wall inserts, wall rail can be ordered without the faceplate
- Faceplate snaps onto wall rail to secure marker board, tack board and slat wall inserts in place; Inserts can be removed or replaced without removing wall rail
- Faceplate conceals alignment brackets, fasteners and provides a clean aesthetic look
- Wall rail is mounted horizontally providing tie in to appropriate load bearing studs
- Alignment bracket is required to align 2 adjacent sections of wall rail and is included with wall rails
- Alignment bracket is hidden from view once installation is complete
- Wall rails can be cut to size in the field
- WaveWorks and Epic worksurfaces can be attached to wall rails with worksurface brackets
- Worksurfaces that are attached to the wall rail can be ordered with or without a wire manager; Worksurfaces with a wire manager have a flexible PVC trough that allows cords and cables to be routed along the back edge or sides of worksurface

MARKER BOARD INSERTS

- Marker board inserts have erasable writing surface and are available in HPL or magnetic porcelain models
- Marker board inserts are available in white only
- HPL marker board and tack board insert models can be scribed in field
- Marker board, tack board and slat wall inserts include 2 trim channels

TACK BOARD INSERTS

- Tack board insert is available in fabric, see page 440 for fabric options
- Shaded rectangle portrays a railroaded tack board



SLAT WALL INSERTS

- Slat wall inserts are powder coated aluminum
- Slat wall inserts offer flexibility in placement of work tools; Combo slat wall inserts offer a slat wall insert combined with a tack board insert providing a multi-functional area and is an economical alternative when overhead storage will be used

ORGANIZER SHELF INSERTS

- Veneer organizer shelf inserts are plain sliced slipmatched cherry (Amber, Autumn, Mocha, Truffle) or maple veneer (Brighton, Caramel, Honey, Natural), plain sliced bookmatched walnut veneer (Clear Walnut, Cordovan, Judicial), quarter cut walnut veneer (Almond, Portobello, Sable), or quarter cut oak veneer (Sonoma).
- When specifying Clear Walnut, a clear coat finish, the natural wood characteristics of walnut veneer are visible. These characteristics include, but are not limited to, color and woodgrain variation
- All Veneer surfaces feature a semi-open pore matte finish

EXHIBIT TV MOUNT INSERT

- Single TV Mount included with laminate or veneer inserts
- Dual TV Mount available as an option on 60" inserts for additional upcharge

TRIM CHANNELS

- Quantity of 2 is standard with each board/insert
- Available in powder coat paint or fabric
- Provides an expansion joint, vertical cable manager attachment and compensates for out-of-plumb walls
- Trim Channels can be ordered separately for boards/inserts that have been scribed in the field

FULL END TRIM

- Full end trim is steel and powder coated
- Full end trim finishes the end of a run and connects the top and bottom wall rail

SINGLE END CAP

- Single end cap is steel and powder coated
- Single end cap finishes the end of a single wall rail by capping off the wall rail, perfect for when a wall rail is used without inserts and a faceplate

VERTICAL CABLE MANAGER

- Vertical cable manager attaches between the insert and trim channel
- Conceals and allows for power cords to be managed and routed from overhead to outlet

VERTICAL CABLE MANAGER FOR TV MOUNT INSERT

- Vertical Cable Manager attaches to the Exhibit TV Mount Insert
- Conceals and allows for power cords to be managed and routed from TV to outlet

WORKSURFACE BRACKETS

- Exhibit worksurface brackets attach worksurfaces to lower wall rail
- A worksurface bracket is required every 48" along back edge of worksurface
- Worksurface bracket is anodized aluminum

PLANNING TIPS

- Wall rails can be mounted at any height if not utilizing with WaveWorks or Epic vertical storage units
- Consider the worksurface load when planning support; For worksurfaces that will hold office equipment, such as printers and copiers, additional support other than standard worksurface brackets is recommended
- Undersurface storage and pedestals satisfy both storage and support needs
- Reconfiguring existing worksurfaces may require new supports or brackets
- When worksurfaces meet end-to-end, a support panel or undersurface storage is required for additional support of the front edge
- Perpendicular worksurfaces can use flat brackets and worksurface brackets to provide adequate support from 1 surface to the other at the worksurface joint
- Worksurface brackets and supports can be positioned anywhere along the worksurface without the limitations of pre-drilled or predetermined locations
- Knife rim adds 1½" per side to worksurface depth. Knife rim is not recommended on lower storage as it affects user's kneespace
- Consider where you specify a worksurface with Worksurface wire manager. When attached to Exhibit lower wall rail, do not use at the end of run for a cleaner aesthetic
- Tack boards may be field scribed to match Epic knife rim worksurface depth

EXHIBIT

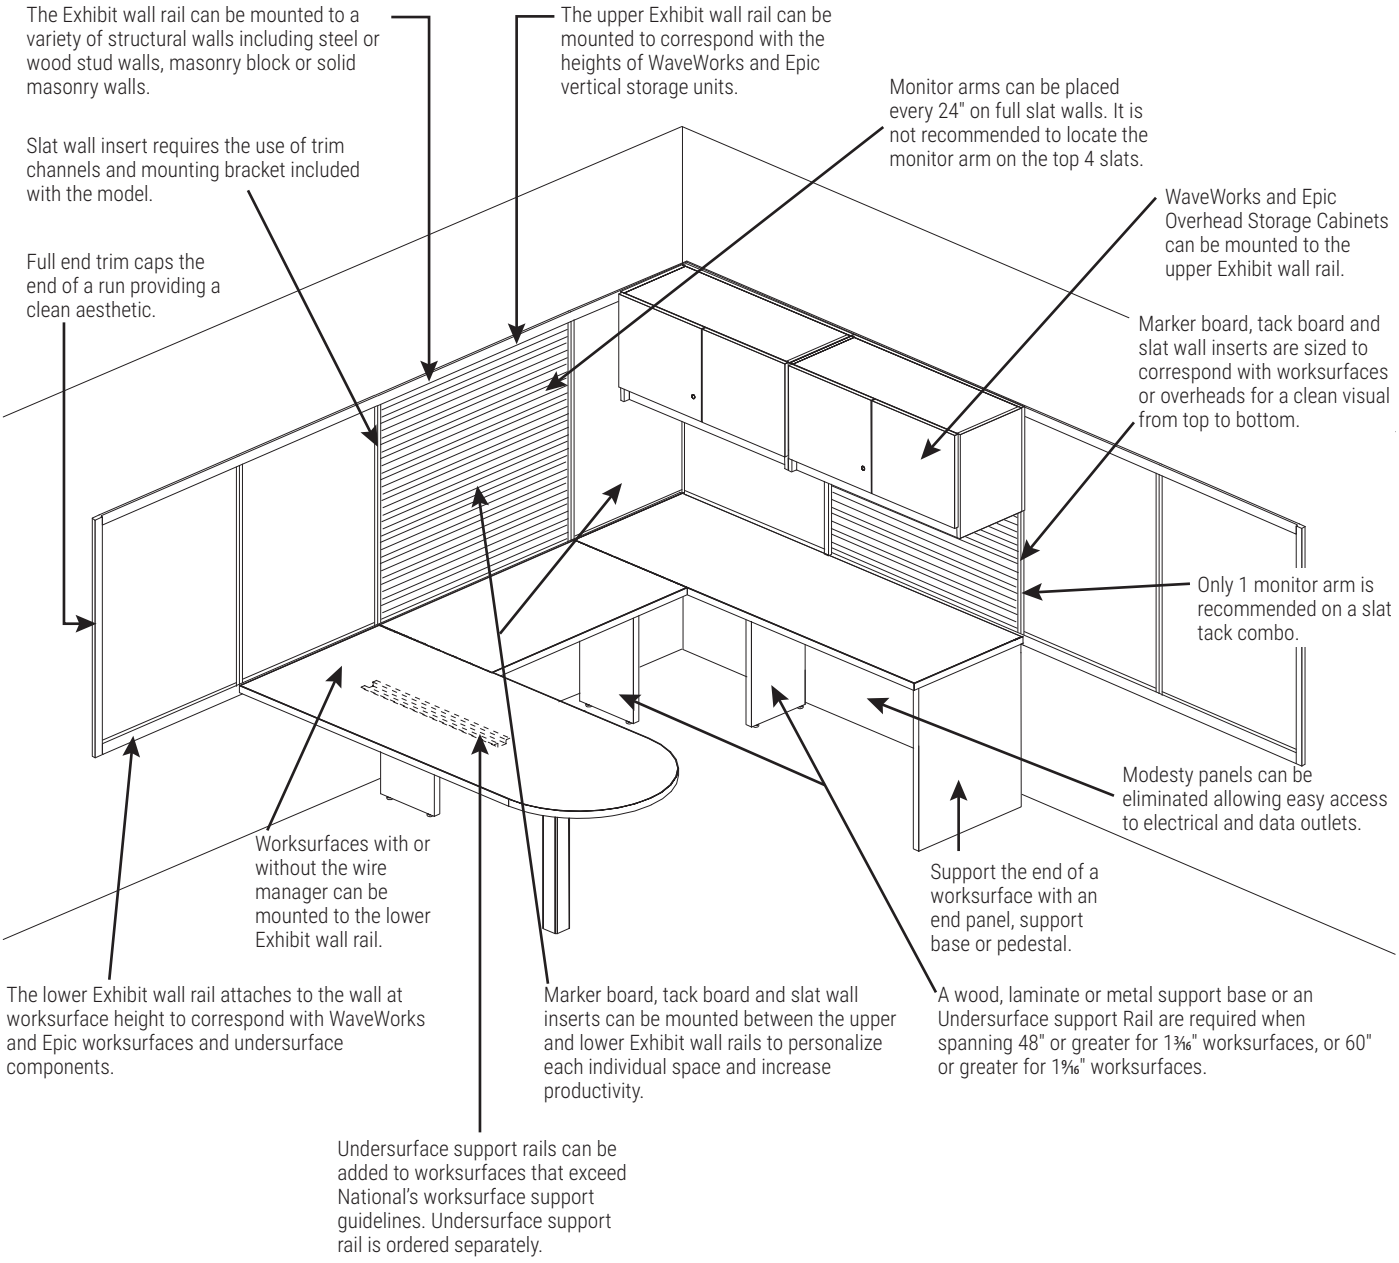
OVERVIEW

Exhibit is a series consisting of a horizontal rail, marker board, tack board, and slat wall inserts, and work tools.

Exhibit can be used in numerous applications. Here are a few examples of how it can be used with National Office Furniture products.

EXHIBIT WITH WAVEWORKS AND EPIC MODELS

The Exhibit rail is a horizontal rail that attaches to walls to accommodate WaveWorks and Epic worksurfaces and components. Attaching worksurfaces directly to the wall rail allows the reduction of modesty panels and opens the space for a clean aesthetic.



APPLICATION GUIDELINES

FASTENERS

- Fasteners must tie in directly to the substructure of a structural wall for proper attachment of Exhibit wall rail. National defines a structural wall as a load bearing wall constructed of materials such as poured concrete, concrete block, or studs

MINIMUM REQUIREMENTS

- Wood studs must be nominal 2" x 4" minimum
- Metal studs must be "C" channel, 20 gauge minimum thickness
- Metal or wood studs must be on centers no greater than 24" and have a maximum height of 14' restrained at floor and ceiling
- Interior walls must be designed to resist not less than a force of 5 lbs. per sq. ft. applied perpendicular to the wall. The deflection of such walls under a load of 5 lbs. per square foot shall not exceed $\frac{1}{240}$ of the span for walls with brittle finishes and $\frac{1}{120}$ of the span for walls with flexible finishes (per International Building Code sections 1604.4 and 1607.13)
- Exhibit wall rail may not extend more than 6" beyond the last solid attachment point
- Minimum width of Exhibit wall rail that can be attached to a wall is 16" mounted to studs 16" apart
- If an overhead is being mounted, the minimum width for Exhibit is 30" with the Exhibit wall rail being centered on studs 24" apart, so as not to extend more than 6" beyond the last solid attachment point

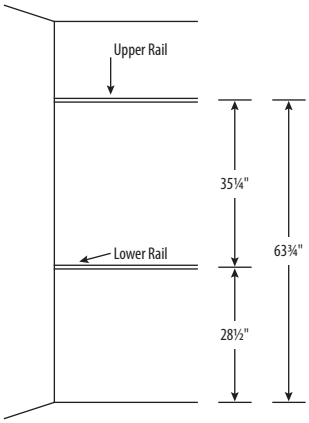
RECOMMENDED FASTENERS

- Selection and purchase of the proper attachment fasteners for your wall conditions is the responsibility of the installer

Type and Size	Description
Steel Studs (½" to ¾" drywall) Hilti® Toggler® anchor toggle bolts, ¼"–20 x 2" grade 5 bolts	
Wood Studs (¼" to ½" drywall) Meets or exceeds ANSI/ASME B18.6.4 and SAE J933. Pan head sheet metal screw	10-2 PHPMS
Solid Masonry Crown Bolt lag shields ¼" x 1½" Buildex Tapcon concrete anchor screw ¼" x 2¾"	
Masonry Block Hilti Toggler anchor toggle bolts, ¼"–20 x 2" grade 5 bolts Crown Bolt lag shields ¼" x 1½" Buildex Tapcon concrete anchor screw ¼" x 2¾"	

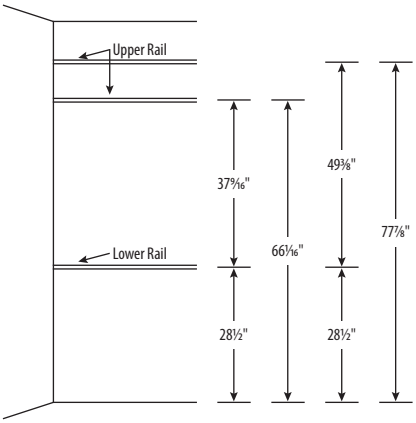
- Actual mounting height can be varied to meet specific needs; however, undersurface storage height must be considered
- Variations in the floor surface (peaks and valleys) should be considered, especially where horizontal placement is critical
- Exhibit wall rail extends ⅞" from the wall. This dimensional loss should be considered when space planning for components, when Exhibit wall rails are being used on 2 or more walls of a space
- Select worksurfaces and inserts can be field scribed to fit space
- In fixed wall Exhibit applications, choose your insert height based on your specific application or height of corresponding WaveWorks vertical storage. Consider the height of the cabinet and clearance between the bottom of the overhead and the worksurface

34" Tall Inserts



36" and 48" Tall Inserts

Compatible with WaveWorks and Epic 68" and WaveWorks 79" High WW Models



37" and 49" Tall Inserts
