NOTICE TO AUTHORIZED USERS OF AWARD #23295 - Furniture, All Types (Except Hospital Room and Patient Handling)

This pricelist/catalog **may** contain items that are not within the Scope of the Contract Award and/or not within this Contractors approved furniture Categories. All Authorized Users are strongly encouraged to review the Scope of the Award and the Contractors Category Matrix prior to selecting items for purchase under the Contract. Per Solicitation Section 4.5 (D) - Procurement Instructions for Authorized Users: When placing orders under this Award, the Authorized User should follow and be familiar with the terms and conditions governing the Contract and are responsible for determining that the product(s) they intend to purchase fit within the scope of the Award.

References to other government contracts that may be included in a Contractor's pricelist/catalog, including any additional terms or conditions, are void under the OGS Award and should be disregarded. Only OGS' Terms and Conditions, including those within a Contractor's posted Contractor Information and Supplemental Information sheet, are valid under the Contract.

Additionally, Authorized Users are reminded that where discrepancies exist between Price List documents, the lowest price shall prevail (see Section 5.3 Price).

All orders must be placed with the Contractor, or the Contractor's OGS approved Authorized Reseller listed on the OGS website under the Award. Orders placed with a reseller not approved by OGS are not considered contract orders and therefore are not subject to the same terms and conditions of the OGS Award.

Authorized Users should contact the OGS Contract Manager listed on the Award with any questions pertaining to this pricelist/ catalog.

NYS Price List Effective 5/1/26

Allsteel®

Architectural Products

Specification Guide 2026

Limited Lifetime Warranty

Our unwavering commitment to our customers compels us to care, and our dedication to quality is just one of the ways we show our customers how much they mean to us.

We recognize that keeping up with the pace of change requires having products that work as hard as the people who use them. That's why each of our products is rigorously tested and certified to meet the highest industry standards.

In the unlikely event that any Allsteel product or component covered by the Allsteel Warranty should fail under normal workplace use because of defective material or workmanship, Allsteel promises to fix it. Because taking care of *people* is how Allsteel takes care of business.

For information on Allsteel's warranty coverage, visit AllsteelOffice.com.

New, Revised, & Discontinued Products

GSA/FEDERAL CONTRACT INFORMATION:

Model numbers identified with the following verbiage "When purchased separately without a configurable TAA compliant end product, not on GSA contract" is to mean that these configurable parts or components:

- Have no functionality or capability without being integrated into an end product; and
- Are considered Open Market if purchased without a configurable TAA compliant end product.

ITEMS ON GSA CONTRACT

Please note, in order to verify if an item is on GSA Contract or is "Open Market," please use Compass quoting which is updated in real time with all GSA contract changes. If you need additional assistance, please contact your local sales representative.

NOTE ABOUT CHANGED MODEL LOGIC AND CONFIGURATION ID

—Configuration ID is a dynamic series of numbers that holds information about the model SKU. Examples are options, feature selections, and finishes.

—Configuration ID is represented as "#####" in specification guide. Note that the actual character length may vary.

—Example: BY-FRMDPANEL.#####

PRODUCT CHANGES

—Beyond enhanced acoustics for ceiling grid clips, framed and solid panels, and sliding doors.

—Aspect and Beyond panels available down to 18"H.

—Aspect glass available 48"W up to 108"H.

—Aspect sliding door track model.

NEW FINISHES

Stratawood Veneers V2

—Belair on Stratawood Maple – Code SE934

—Field Elm on Stratawood Maple – Code SE599

—Beigewood on Stratawood Maple – Code SE878

—Stratawood Silver Oak – Code SB100

Natural Veneer V3

—Fawn Cypress on White Rift Oak – Code RF108

L1 Laminates

—Field Elm – Code LWFE

P1 Paints

—Cove – Code P096

—Dune – Code P094

—Harbor – Code P097

—Sage – Code P095

DISCONTINUED FABRICS

—Circuit – 6/30/2025

—Phantom Charcoal LPC1 – 6/30/2026

—Veranda Teak LVT1 – 6/30/2026

COM Policy

COM Program

Allsteel understands that customers may at times want to specify fabrics outside of Allsteel's standard fabric offering. Our COM program was designed to make specifying COMs on Allsteel products a simpler, friendlier, and hassle-free process. This process is simple and easy to use, and is described below under "Allsteel to Supply." If Dealers wish to manage the COM process themselves, they can do so by following guidelines under "Dealer to Supply." Find out more about Allsteel's COM process by emailing our COM Department at **ASICSCOM@allsteeloffice.com.**

Allsteel to Supply:

1. Select the fabric you wish to use and check the Tailored Solutions Application on our Website. You need the COM supplier's name, fabric pattern name, and color name to search for approved fabrics.
2. If your fabric is listed as an approved fabric for Stride® or Beyond, you may place your selection with your Beyond Planner. Please use the fabric code (e.g., P242761XP) from the Tailored Solutions Test Request. **Make sure to confirm with your Beyond Planner that fabric is "Allsteel to Supply."** If your fabric is not listed as approved, you will need to complete a COM Test Request on Tailored Solutions. Allsteel will arrange to obtain the test fabric and you will be notified of the results within 3 to 5 working days of receipt of the test yardage by Allsteel.
3. If the fabric is approved, you will receive an email summary from Tailored Solutions with the correct price grade and fabric code for order purposes. Written COM price quotes hold pricing for 90 days after issue date.
4. Once the fabric has been approved by Allsteel, the code can be supplied to your Beyond Planner for submittal of your order. Allsteel will purchase all COM fabric directly from the COM suppliers and schedule for production.

In the event that the Dealer decides to cancel a COM fabric order, the Dealer is responsible for the cost of the fabric plus a handling charge that is equal to 10% of the fabric cost.

Dealer to Supply:

1. Select the fabric you wish to use and check the Tailored Solutions Application on our Website. You need the COM supplier's name, fabric pattern name, and color name to search for approved fabrics.
2. If your fabric is listed as approved for Stride® or Beyond, work with your Beyond Planner and Beyond Project Specialist to determine yardage required for your order.
3. If your fabric is not listed as already tested and approved, you will need to complete a COM Test Request on Tailored Solutions. You will need to arrange for the test fabric to be sent to:

Panel Test Fabric:

Allsteel Inc.
Attn: Com Dept.
Dock Doors 46-48
3000 North Hwy 61
Muscatine, IA 52761

Allsteel requires 3 yards of fabric for each panel system fabric being tested. Make sure to include two memo samples for each fabric to be tested with the test fabric. You will be notified of the test results within 3 to 5 working days of receipt of the test yardage by Allsteel.

4. Work with your Beyond Planner to specify your chosen fabric for your order, **making sure to clearly specify that it will be Dealer to Supply.**
5. All "Dealer to Supply" orders will be charged Grade B for panels. Dealers will pay for the COM fabric separately.
6. All "Dealer to Supply" fabric must be sent on a fabric roll.
7. Place your fabric order directly with the COM Supplier with instructions for the fabric to be sent on a fabric roll to:

HNI Fabric Distribution Center – Dealer PO Number **COM Production Yardage**
Allsteel Inc.
Attn: COM Team
200 Oak St.
Muscatine, IA 52761

Information that MUST be included in the packing slip attached to the fabric:

a. Dealer's Purchase Order Number to Allsteel
b. Allsteel's tracking number for the COM fabric
c. Dealer Name
d. Yards of fabric

If the fabric shipment does not match the correct fabric and yardage, Allsteel will notify the Dealer for resolution.

If Allsteel receives fabric with incorrect labeling that cannot be linked to an Allsteel furniture order, Allsteel will hold the fabric for up to 7 days, while the COM Expeditor attempts to identify the order. After 7 days, Allsteel will return the fabric to sender. There are no exceptions to this policy.

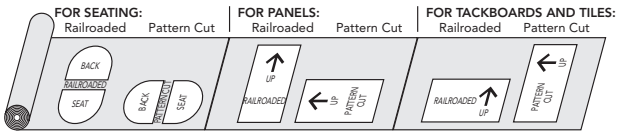
Any canceled orders are subject to cancellation charges up to the full value of the Allsteel product canceled. Allsteel will determine the actual cancellation charge at the time the cancellation is requested.

COM Policy

Additional Policy Information:

The Company assumes no responsibility for the overall appearance, flammability, normal durability, colorfastness, or any other quality standards. The Company reserves the right to reject a COM if the quality of the COM is not satisfactory for the product. Should this occur, the Customer will be notified with an explanation within 7 working days of receipt of test materials.

The Company is not responsible for fabric that has become obsolete at the COM supplier, that is of poor quality, or that is delivered late to the manufacturer from the COM supplier. Excess yardage will be disposed of at Allsteel's discretion.



All cancellations or changes to COM orders are subject to Company approval. Because of the nature of COM, special fabrics, finishes, and structural modifications, products ordered as special and then canceled prior to shipment are subject to cancellation costs up to the full value of the product canceled. The Company determines the actual cancellation charge at the time the cancellation is requested. Upon approval, a cancellation number is issued to the Customer.

Purchase orders will not be accepted or entered unless the testing process is complete with positive results.

If all testing has been previously completed, re-testing is only necessary if fabric is to be used on a different product, or pattern direction has changed from that previously approved.

Previous test results can be obtained by a Customer on the Tailored Solutions Application or by calling Allsteel Customer Support.

COM testing will require 3-5 working days from receipt of test yardage.

All COM fabric will be applied to seating and panel systems Pattern Cut unless Railroad Cut is requested and approved on the COM Test Request in Tailored Solutions. Any fabrics approved as a width pass, the dealer is responsible for clarifying Railroad Cut on orders containing items that are too large to support the Pattern Cut of a fabric application (any items larger than 48" high or wide).

Fire Retardant

The Dealer is responsible for ensuring that the COM fabric is certified to meet all flame retardant requirements.

For more information, please contact Allsteel Customer Support.

Special Paint, Stain, and Laminate Policy

Special Paint and Stain Policy

Allsteel at its own discretion may modify its standard products with non-standard paint and stain colors to meet specific needs. Dealer is required to submit a special paint or stain request via the Tailored Solutions Application on our Website. A sample of the non-standard paint or stain color desired will be required for matching. Pricing, lead time, and order information will be provided at the time of approval.

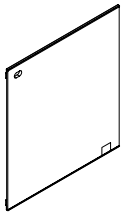
- For each new requested stain or paint, there will be a $500 net fee to cover supplier costs to match the special item.
- For existing, previously-approved stains or paints, there is no $500 matching fee, however, there is a sample chip fee of $175 net for stains and $100 net for paints.
- Samples, preferably at least 3" x 5" chips, of the exact color desired should be sent to the Allsteel Tailored Products Group. Paint matches require (3) sample chips and stain matches require (3) sample chips. Please mail these sample chips to the address below and reference the Special Item Request Number from Tailored Solutions.

  Allsteel Inc.
  Attn: COM Department
  Dock Doors 46-48
  3000 North Hwy 61
  Muscatine, IA 52761
- Allsteel will color match the sample and send control samples to the address provided in the request. Dealer will review Allsteel's color match and approve by signing the back of the sample chip. Send the signed sample back to the Allsteel Tailored Products Group.
- Product pricing for all special paints falls under the Select Paint price grade.
- Orders will not be accepted until Allsteel receives the Dealer's written approval on the color match.
- Extended lead times will apply on orders containing special paints or stains.
- Due to manufacturing techniques, materials, and quality issues, some exclusions will apply and some matches may be declined.

Important Notes

- Natural veneer is subject to nature's quality control. Differences in grain and color are naturally occurring variations and cannot be controlled by the manufacturer and cannot be considered as product defects. Natural veneer has the characteristics and beauty of a living organism; with its own variations of grain, growth, and color patterns. For these reasons, Natural veneer is preferred by many for its warmth and personal characteristics.
- Color changes will occur over time when wood is exposed to light. For this reason, when new product is ordered as an addition to existing product, there will be color variances between the old and new product. Please remember when specifying new product that although the species of veneer will be the same, additional product is being manufactured from a different tree. It may take several months for the new furniture to mature to the color level of existing product. Even with this maturation process the additional product will not be an exact match.

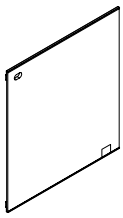
Special Laminate Policy



The Company at its own discretion may modify its standard products with non-standard laminates to meet specific needs. Contact the Allsteel Tailored Products Group for pre-approved Wilsonart, Formica, Nevamar, and Pionite laminates and pricing for special laminates. When requesting a special laminate please supply manufacturer, along with name and pattern number of laminate.

- Extended lead times will apply on orders containing special laminates.
- Due to manufacturing techniques, materials, and quality issues, some product exclusions will apply and some requests may be declined.

Sample Yardage and Fabric Care



16x20 Sample Yardage

- Sample yardage is available for both Seating upholstery and Systems fabrics.
- Samples have sewn edges, a grommet, and identifying label.
- Not available in COM fabrics.
- Swatch cards and 4" x 5" memo samples are available through Allsteel Advantage at 1-866-ALLSTEEL.

Fabric Care

Cleaning instructions are listed on the back of our fabric cards and are available in written form upon request.

Cleaning Codes

D Dry clean only.

L Clean with warm water and mild soap, using clean cloth, as soon as possible.

P Clean with detergent and water or perchlorethylene.

R Detailed recommended cleaning and/or disinfecting procedures are available upon request.

S Only pure, water-free solvents may be used. CAUTION: Use of water-based or detergent-based solvents may cause shrinking and/or permanent water stains.

SM Same as S. Do not brush.

SW Clean with water-based cleaning agents, foam, or pure water-free solvents (Energine®, Carbona®, Renuzit®, or other similar products). Vacuuming or light brushing is recommended to prevent dust and soil buildup.

W Water-based cleaning agents or foam may be used.

WS See SW.

X Brush or vacuum only.

XS Brush and vacuum only, NO liquid cleaners.

S *Shippable by small-package carrier.*

Veneer Care Instructions

Veneer worksurfaces feature the Gunlocke® finishing system. The finishing system is a process that begins with the application of stains, which promote exceptional depth and clarity. Next the worksurface receives a specialized coating that provides exceptional durability and chemical resistance. The remaining surfaces receive a top coat. These finishing processes ensure depth, clarity, color consistency, and durability throughout the product.

Veneer worksurfaces have exceptional resistance to:

- Heat and moisture (hot beverages, pizza boxes)
- Chemicals (liquid paper, nail polish)
- Stains (permanent markers)
- Scratches and impact (everyday wear and tear)

Caring for your veneer finish:

- General maintenance procedures entail wiping clean the entire surface with a clean, water-dampened soft cloth once per week (be sure to wipe with the grain).
- Murphy's® Oil Soap may be used as a general purpose type cleaner with warm water to clean tops.
- The finish may also be polished with Guardsman® Furniture Polish (contains no waxes or silicones) to provide renewed luster.
- Be sure to wipe up all spills immediately. Do not allow spills to dry.

Wood owes its inherent beauty to variations in color, grain, and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next even though they are finished at the same time. Exposure to light and the aging process will cause a darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. Allsteel does not guarantee the exact matching of grain, pattern, and color.

Beyond Sustainability Information

Beyond demountable walls play an important role in a workplace that is productive, healthy, and concerned with employee wellness and environmental impacts. Glass walls provide more natural light and better views to the outside, which improves productivity and enjoyment of the space. With more natural light entering the space, less artificial lighting is needed, requiring less energy to be used by the building and its tenant spaces. These factors have been shown to help with talent attraction and retention.

Being durable and truly movable allows Beyond walls to be used and reused longer, decreasing the need to extract, refine, and transport natural resources. The longer a product is used, the lower its environmental footprint. Beyond glass and solid walls drastically minimize off-gassing, compared to drywall painted on-site, so the workplace air quality is better for future occupants from the start. Beyond solid walls contain formaldehyde-free fiberglass. Good indoor air quality can contribute to higher productivity and other wellness benefits. Beyond is Indoor Advantage™ Gold certified and meets ANSI/BIFMA e3 credits 7.6.1, 7.6.2. and 7.6.3.

Beyond demountable walls are level®2 certified to the ANSI/BIFMA e3 Furniture Sustainability Standard. The product is evaluated by a third-party certifier on performance in the categories of materials, energy and atmosphere, human and ecosystem health, and social responsibility. Not only is the product audited against the standard, but also the manufacturing site and the organization. level®2 is the second-highest achievement.

LEED® Project Contributions

Beyond demountable Walls can support LEED® projects by contributing to several credits within LEED V4.

Energy & Atmosphere

Beyond's glass walls allow more natural light into a space in which may reduce energy use by decreasing the use of artificial lighting.

Materials & Resources

Long-Term Commitment: Beyond's ease of reconfiguration makes it easier for a tenant to make a long-term commitment to a space, knowing that it will be possible to rearrange the workplace to suit changing needs in the future.

Interiors Life-Cycle Impact Reduction, Options 1 and 3: Designing for reuse and flexibility, like using demountable and movable walls, helps lessen the environmental impacts of interior spaces over time. Change is inevitable; Beyond's ease of reconfiguration and reuse helps project teams better accommodate changing floorplates in short timeframes.

BPDO Sourcing of Raw Materials, Option 2: Although glass must be virgin material to achieve its clarity and strength, other components in the Beyond system have recycled content. Environmental Data Sheets are available for Beyond's various setups and provide details about the material types and recycled content. Beyond's wood components are also available as FSC Certified.

Construction and Demolition Waste Management: Allsteel's Beyond demountable walls product packaging can be recycled with other on-site wastes or off-site, depending on project preference.

Indoor Environmental Quality

Low-Emitting Materials: Many of the materials used in Beyond are non-emitting, including glass, aluminum, steel, and other hardware. These components do not off-gas into the workplace and do not require repainting or refinishing that could release VOCs (Volatile Organic Compounds). Beyond's components have been tested for emissions and are certified for indoor air quality through the SCS Global Services Indoor Advantage™ Gold program. Beyond also meets the CDPH v1.1-2010 emissions criteria.

Indoor Air Quality Assessment: Beyond may indirectly support this credit. Beyond uses components that are non-emitting and do not require any on-site finishing or touch-ups, meaning that indoor air quality will not be impacted by the installation of Beyond.

Interior Lighting: Beyond can be specified with a variety of finishes, many of which are lighter in color and may contribute to the Light Reflectance Values (LRV) needed to achieve strategy E of this credit.

Daylight: Beyond's glass walls allow more natural light into a space, which may support this credit.

Quality Views: Beyond's glass walls may provide occupants with access to views outside. Being able to access views to the outdoors has productivity benefits and may increase workplace satisfaction.

Acoustic Performance: Beyond has been tested for acoustic performance and may contribute to this credit, depending on the other materials selected for the interior spaces.

WELL Project Contributions

Beyond demountable walls can support WELL projects by contributing to several features within WELL V1.

Air 04: VOC Reduction: Good indoor air quality has been linked to improved productivity in office spaces. Allsteel's Beyond is SCS Indoor Advantage™ Gold certified and meets the referenced criteria in the WELL Building Standard (ANSI/BIFMA e3-2011 7.6.1 and 7.6.2).

Light 53: Visual Lighting Design: Balancing spatial brightness across a variety of spaces can contribute to sharper visual acuity and focus, while potentially reducing eye strain. Beyond's glass walls allow light to flow more deeply into the space than drywall and may help project teams with light balance from room to room.

Light 59: Surface Design: Exposure to light during the workday can promote alertness and activity. Choosing surfaces with high Light Reflectance Values (LRVs) can help increase the amount of light in a space without increasing unwanted glare. Allsteel's portfolio of paints, laminate, and veneer finishes include many options with an LRV of 0.5 or higher, contributing to this feature.

Light 61: Right to Light: Beyond's glass walls can increase access to views by employees if the building has sufficient vision glazing to allow views from the required areas. Offices and taller features placed in the interior of the space maximize view opportunities.

Comfort 78: Reverberation Time: Acoustic comfort in the office is crucial to productivity. Allsteel's Beyond may contribute to the acoustic requirements of this feature. Additional considerations should be made with the other elements of the space, like flooring, ceiling materials, and furnishings, which may also impact this feature.

Comfort 80: Sound Reducing Surfaces: Reducing sound in an office can contribute to more comfortable levels throughout the space. While Beyond's walls are primarily made of glass which may not have a high NRC, additional elements, like acoustic privacy tiles, can be added that may improve the acoustics within a space.

Comfort 81: Sound Barriers: Noise from adjacent spaces can be disruptive in a work environment. Sealing gaps between walls and adding thresholds for doors may help reduce noise between rooms.

Mind 87: Beauty and Design, Part 1: Occupants' moods and morale can be impacted by the design of their workspace. Integrating aesthetically pleasing elements into a space can provide a calming or joyful experience. Allsteel's Beyond demountable walls can be customized to create room layouts that capture and enhance their organizational culture and contribute to this feature.

Mind 88: Biophilia I Qualitative: Research has shown that humans with a connection to nature generally experience a stronger state of well-being, and biophilic elements can help reduce stress, while improving learning, healing, and worker productivity. Allsteel's Beyond walls are available with upholstery options and finishes that incorporate nature's patterns. Elements like natural wood veneer and wool upholstery can help contribute to a biophilic space.

Aspect Sustainability Information

Aspect™ demountable walls play an important role in a workplace that is productive, healthy, and concerned with employee wellness and environmental impacts. Glass walls provide more natural light and better views to the outside, which improves productivity and enjoyment of the space. With more natural light entering the space, less artificial lighting is needed, requiring less energy to be used by the building and its tenant spaces. These factors have been shown to help with talent attraction and retention.

Being durable and demountable allows Aspect walls to be used and reused longer, decreasing the need to extract, refine, and transport natural resources (when compared to traditional drywall construction). The longer a product is used, the lower its environmental footprint. Aspect glass walls drastically minimize off-gassing, compared to drywall painted on-site, so the workplace air quality is better for future occupants from the start. Good indoor air quality can contribute to higher productivity and other wellness benefits. Aspect is Indoor Advantage™ Gold certified and meets ANSI/BIFMA e3 credits 7.6.1, 7.6.2. and 7.6.3.

Aspect demountable walls are level®2 certified to the ANSI/BIFMA e3 Furniture Sustainability Standard. The product is evaluated by a third-party certifier on performance in the categories of materials, energy and atmosphere, human and ecosystem health, and social responsibility. Not only is the product audited against the standard, but also the manufacturing site and the organization. level®2 is the second-highest achievement.

LEED® Project Contributions

Aspect demountable walls can support LEED® projects by contributing to several credits within LEED V4.

Energy & Atmosphere

Aspect's glass walls allow more natural light into a space, which may reduce energy use by decreasing the use of artificial lighting.

Materials & Resources

Interiors Life-Cycle Impact Reduction, Options 1 and 3: Designing for reuse and flexibility – like using demountable and movable walls – helps lessen the environmental impacts of interior spaces over time. Aspect demountable walls may contribute to this credit.

BPDO Sourcing of Raw Materials, Option 2: Although glass must be virgin material to achieve its clarity and strength, other components in the Aspect system have recycled content. Environmental Data Sheets are available for Aspect's various setups and provide details about the material types and recycled content. Aspect's wood components are also available as FSC Certified.

Construction and Demolition Waste Management: Allsteel's product packaging for Aspect can be recycled with other on-site wastes or off-site, depending on project preference.

Indoor Environmental Quality

Low-Emitting Materials: Many of the materials used in Aspect are non-emitting, including glass, aluminum, steel, and other hardware. These components do not off-gas into the workplace and do not require repainting or refinishing that could release VOCs (Volatile Organic Compounds). Aspect's components have been tested for emissions and are certified for indoor air quality through the SCS Global Services Indoor Advantage™ Gold program. Aspect also meets the CDPH v1.1-2010 emissions criteria.

Indoor Air Quality Assessment: Aspect may indirectly support this credit. Aspect uses components that are non-emitting and do not require any on-site finishing or touch-ups, meaning that indoor air quality will not be impacted by the installation of Aspect.

Daylight: Aspect's glass walls allow more natural light into a space, which may support this credit.

Quality Views: Aspect's glass walls may provide occupants with access to views outside. Being able to access views to the outdoors has productivity benefits and may increase workplace satisfaction.

Acoustic Performance: Aspect has been tested for acoustic performance and may contribute to this credit, depending on the other materials selected for the interior spaces.

WELL Project Contributions

Aspect demountable walls can support WELL projects by contributing to several features within WELL V1.

Air 04: VOC Reduction: Good indoor air quality has been linked to improved productivity in office spaces. Allsteel's Aspect is SCS Indoor Advantage™ Gold certified and meets the referenced criteria in the WELL Building Standard (ANSI/BIFMA e3-2011 7.6.1 and 7.6.2).

Light 53: Visual Lighting Design: Balancing spatial brightness across a variety of spaces can contribute to sharper visual acuity and focus, while potentially reducing eye strain. Aspect's glass walls allow light to flow more deeply into the space than drywall and may help project teams with light balance from room to room.

Light 59: Surface Design: Exposure to light during the workday can promote alertness and activity. Choosing surfaces with high Light Reflectance Values (LRVs) can help increase the amount of light in a space without increasing unwanted glare. Allsteel's portfolio of paints, laminate, and veneer finishes include many options with an LRV of ½ or higher, contributing to this feature.

Aspect Sustainability Information

Light 61: Right to Light: Aspect's glass walls can increase access to views by employees if the building has sufficient vision glazing
to allow views from the required areas. Offices and taller features placed in the interior of the space maximize view opportunities.

Comfort 78: Reverberation Time: Acoustic comfort in the office is crucial to productivity. Aspect demountable walls may contribute to the acoustic requirements of this feature. Additional considerations should be made with the other elements of the space, like flooring, ceiling materials, and furnishings, which may also impact this feature.

Comfort 80: Sound Reducing Surfaces: Reducing sound in an office can contribute to more comfortable levels throughout the space. While Aspect is primarily made of glass which may not have a high NRC, additional elements, like acoustic privacy tiles, can be added that may improve the acoustics within a space.

Comfort 81: Sound Barriers: Noise from adjacent spaces can be disruptive in a work environment. Sealing gaps between walls and adding thresholds for doors may help reduce noise between rooms.

Mind 87: Beauty and Design, Part 1: Occupants' moods and morale can be impacted by the design of their workspace. Integrating aesthetically pleasing elements into a space can provide a calming or joyful experience. Allsteel's Aspect can be customized to create room layouts that capture and enhance their organizational culture and contribute to this feature.

Review Delivery Requirements

Offload Requirements

Determine if there are any delivery requirements or special delivery methods to be included in project cost.

Examples of questions to ask include:

- "Delivery to site or warehouse?"
- "Does the city allow 53' trucks to deliver to the site?"
- "Can a 53' truck access the planned offload area?"
- "Is there a loading dock?"

Freight Elevator/Crane Requirement/Stair Carry

During the pre-order site visit, determine the most appropriate delivery path from offload location to product staging area. Make sure the paths are sized adequately to accommodate the component or skid size, according to the planned method. Fully dimension elevator to insure ability to transfer product and check for any elevator booking requirements or restricted hours of delivery.

Staging Install – Product Placement

Review the floorplate in the area of install and/or talk to building officials to determine the best staging areas and delivery routes for easy install. If security is an issue, the dealer partner or contracted installation company is responsible for providing a secure environment to house the Beyond product upon delivery until the project is complete; losses due to theft will be the responsibility of the dealer partner or contracted installation company.

Key Recommendations

- As shown in the illustration below, please be aware of any obstacles in the ceiling, floor or horizontal connections. Examples of potential obstacles to be aware of are lighting, HVAC and sprinkler heads.
- Since the product will produce noise to install, please understand from the client any activity restrictions.
- If available, review floor finish type and transitions. For example, VCT location in relationship to carpet.

We recommend that installers review the parts prior to installation to ensure the desired aesthetic is achieved.

Step 1
Confirm seismic design category.

Step 2
Verify that product limitations and site restrictions have been met.

Step 3
Provide architect of record with Aspect's standard seismic package from Allsteel

- Standard package is free
- Drawings are not stamped

If local code authority requires stamped drawings, dealers must:

1. Provide Allsteel with additional information for the engineering firm to complete stamped shop drawings
2. OR work with local engineer of record to create a stamped package

The project architect is ultimately responsible for code compliance including seismic requirements.

Allsteel has created guidelines regarding the sale and installation of Aspect in seismic zones. Before selling Aspect in a seismic zone, it's important to know which seismic zone the project is in as well as the building category. Aspect has been evaluated for seismic design categories C-F through a third-party engineering firm, where glass deflection was tested using computer analysis. Product installation is restricted to seismic risk categories I, II and III. Please consult the project architect for more details.

Please contact your Allsteel PM or Wall BDM with further questions.

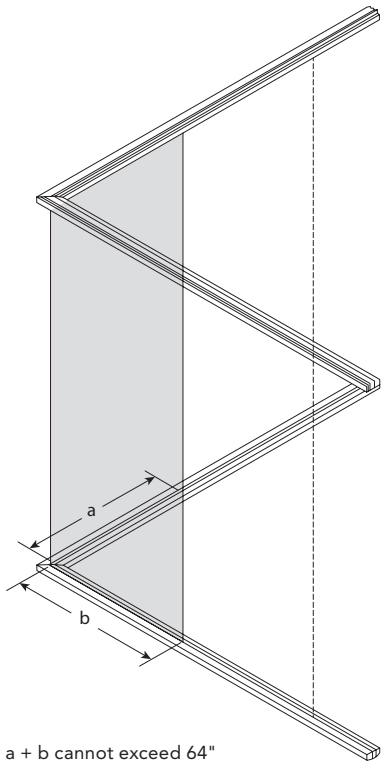
Panels & Trim

Anchoring

There are no additional requirements for anchoring. See the Ceiling/Floor Connection Rules in the following pages for details.

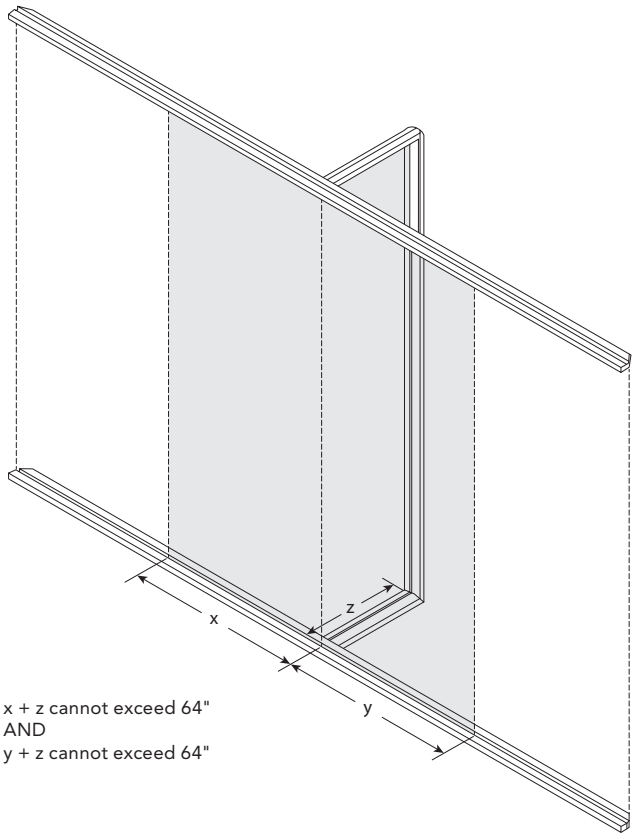
Note: Aspect trim has centerlines at 15" centers, and a fastener needs to be placed in every pre-drilled hole.

Header Structure



Allsteel defers to the project architect and engineer of record for all building elements necessary to meet a project's seismic requirements. Structural soffits for Aspect should be designed with lateral loading and uplift vs. down load in mind in seismic zones.

Product Limitations



Aspect product limitations differ by glass type. There are no limitations regarding Aspect doors.

Tempered glass is the least restrictive. The only restrictions for tempered glass are on glass widths at 2-way and 3-way connections.

- At a 2-way connection, the sum of the width of two panels at the corner cannot be more than 64".
- At a 3-way connection, the sum of the width of the panel on either side of the return combined with the width of the return cannot be more than 64".
- Aspect finished ends (ETO-AP-AS-TRIMF.M594487) can be used in seismic applications as long tempered glass is specified.

a + b cannot exceed 64"

x + z cannot exceed 64"
AND
y + z cannot exceed 64"

Laminated glass is more restrictive. Note that door placement can help mitigate restrictions as there are no limitations on Aspect doors.

Aspect cannot support corner applications (two-way or three-way connections) with laminated glass and is limited to straight runs only. These straight runs can only include a single laminated glass panel, regardless of width, because it must be captured on four sides by ceiling track, floor track, wall-starts, connections to doors, flybys, etc.

Laminated glass runs in seismic zones are limited to (1) 48" wide glass panel, if the nominal height of the glass is 108" or less. If the nominal height is over 108"H, then the maximum allowed panel width is 42"W.

Additionally, laminated glass must be structurally adhered to all three trim components using silicone. This requirement is needed for the walls to withstand seismic clearance based on calculated seismic drift. Without being structurally adhered to trim components, Aspect runs are limited to a single glass panel that is no more than 30" in width.

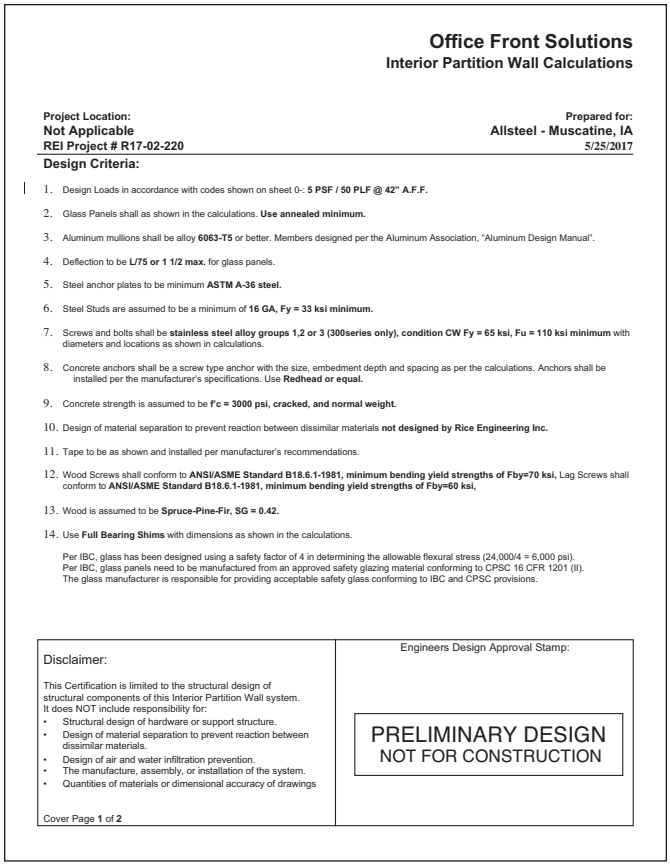
Panels & Trim

Documentation

Allsteel provides a standard seismic package for Aspect. This standard package is not stamped. There is no cost to obtaining this package and it is available on our Website or through your Allsteel PM. This package should be provided to the Architect of Record.

Upfront Proposal Pricing

In some situations, local code authorities may require additional documentation including stamped drawings. Below are two options for obtaining stamped drawings that may carry additional costs. Allsteel is not responsible for covering these additional costs. It is recommended that dealer partners include verbiage in their proposal to the customer that notifies the customer of the potential of these additional costs.



Option 1) Provide Allsteel with additional information for the engineering firm to complete stamped shop drawings. For a small fee, Rice Engineering can create site-specific stamped drawings. To receive site-specific stamped drawings, the dealer will need to provide the following details to the Allsteel Project Manager:

1. Project Name
2. Location (City and State)
3. Structural Notes if available
4. Specifications if available
5. Building Type (Hospital, Store, Office, School, etc.)
6. Final Shop Drawings and Bill of Materials: Include plan/elevation view and wall height
7. Optional: Substrates at the Head and Sill

Option 2) The engineer of record for the project can take site-specific calculations and incorporate these calculations into the package they submit.

Product Testing

Aspect Design Loads are in accordance with codes shown on Sheet No: "0" of the standard calculations package: **5 PSF / 50 PLF @ 42" A.F.F.** (Standard calculations package is available on allsteeloffice.com. Contact your project manager or local sales person.)

Office Front Solutions
Interior Partition Wall Calculations

Project Location:
Not Applicable
REI Project # R17-02-220

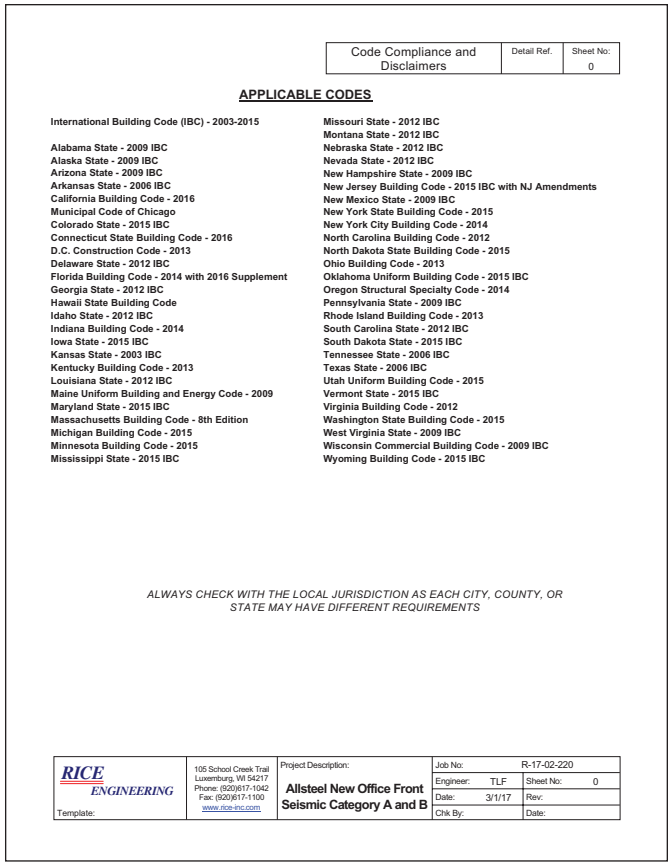
Prepared for:
Allsteel - Muscatine, IA
5/25/2017

Design Criteria:

1. Design Loads in accordance with codes shown on sheet 0-: **5 PSF / 50 PLF @ 42" A.F.F.**
2. Glass Panels shall as shown in the calculations. **Use annealed minimum.**
3. Aluminum mullions shall be alloy **6063-T5** or better. Members designed per the Aluminum Association, "Aluminum Design Manual".
4. Deflection to be **L/75 or 1 1/2 max.** for glass panels.
5. Steel anchor plates to be minimum **ASTM A-36 steel.**
6. Steel Studs are assumed to be a minimum of **16 GA, Fy = 33 ksi minimum.**
7. Screws and bolts shall be **stainless steel alloy groups 1,2 or 3 (300series only), condition CW Fy = 65 ksi, Fu = 110 ksi minimum** with diameters and locations as shown in calculations.
8. Concrete anchors shall be a screw type anchor with the size, embedment depth and spacing as per the calculations. Anchors shall be installed per the manufacturer's specifications. Use **Redhead or equal.**
9. Concrete strength is assumed to be **f'c = 3000 psi, cracked, and normal weight.**
10. Design of material separation to prevent reaction between dissimilar materials **not designed by Rice Engineering Inc.**
11. Tape to be as shown and installed per manufacturer's recommendations.
12. Wood Screws shall conform to **ANSI/ASME Standard B18.6.1-1981, minimum bending yield strengths of Fby=70 ksi,** Lag Screws shall conform to **ANSI/ASME Standard B18.6.1-1981, minimum bending yield strengths of Fby=60 ksi,**
13. Wood is assumed to be **Spruce-Pine-Fir, SG = 0.42.**
14. Use **Full Bearing Shims** with dimensions as shown in the calculations.

Per IBC, glass has been designed using a safety factor of 4 in determining the allowable flexural stress (24,000/4 = 6,000 psi).
Per IBC, glass panels need to be manufactured from an approved safety glazing material conforming to CPSC 16 CFR 1201 (II).
The glass manufacturer is responsible for providing acceptable safety glass conforming to IBC and CPSC provisions.

Disclaimer:



This Certification is limited to the structural design of structural components of this Interior Partition Wall system. It does NOT include responsibility for:

- Structural design of hardware or support structure.
- Design of material separation to prevent reaction between dissimilar materials.
- Design of air and water infiltration prevention.
- The manufacture, assembly, or installation of the system.
- Quantities of materials or dimensional accuracy of drawings

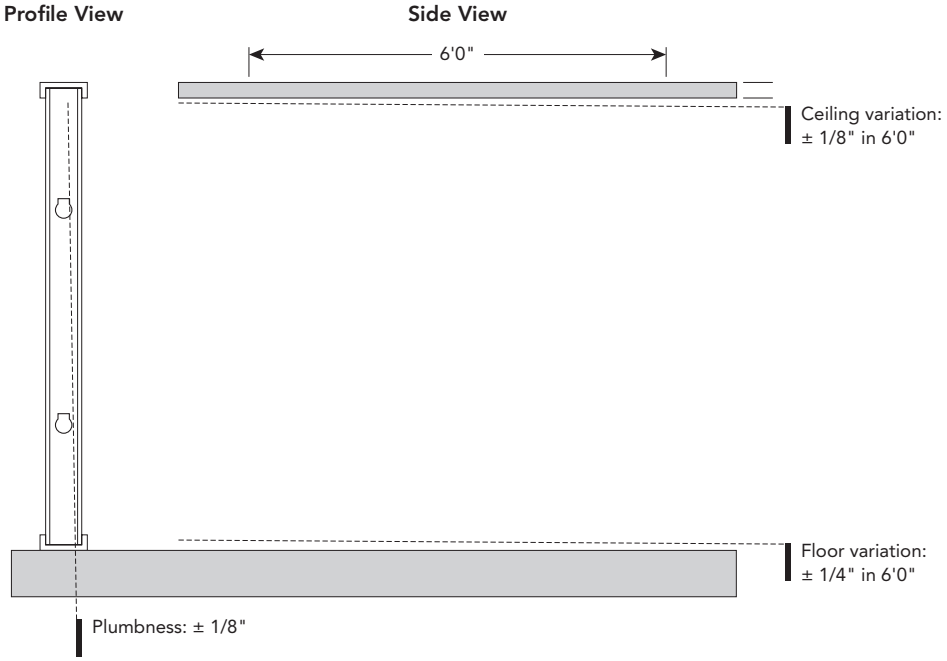
Panels & Trim

Floor



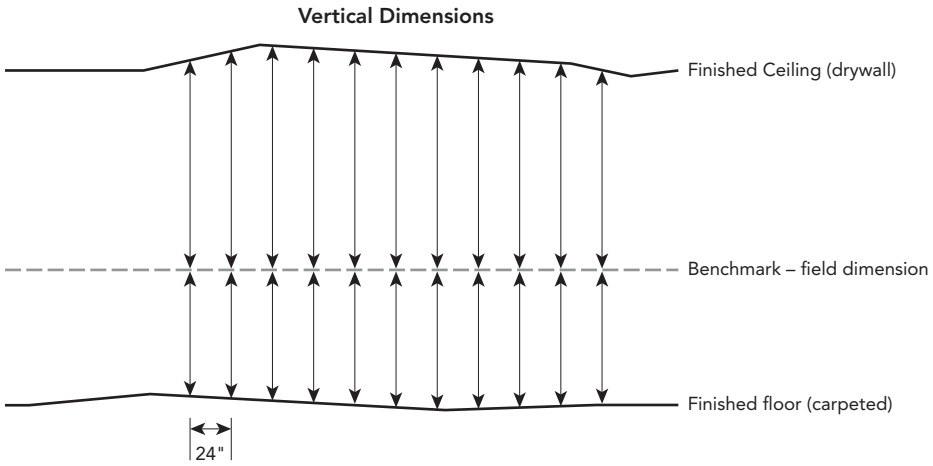
Aspect requires that the contractor adhere to a finished floor variation of ±1/4" every 6'.

Note: Acceptable "flat" finished floor variation using straightedge method: ±1/4" every 10'.

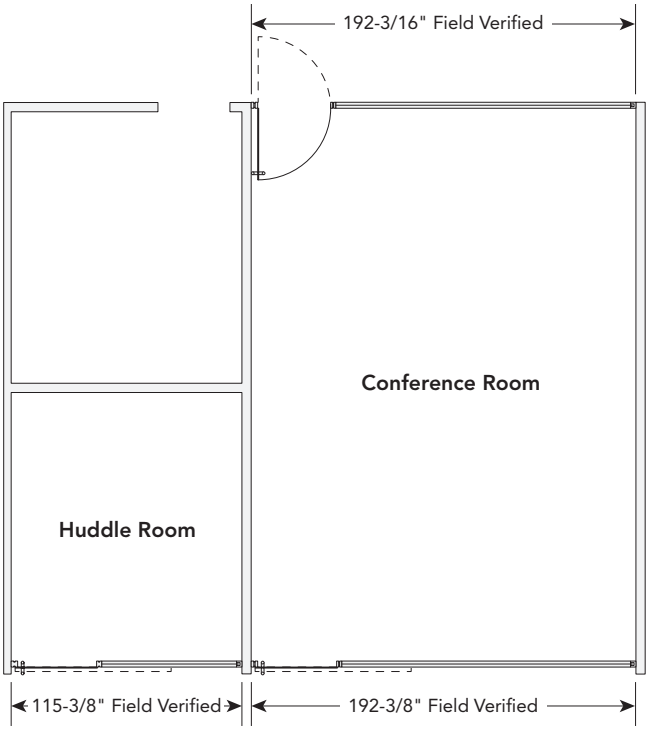
Ceiling

Aspect requires that the contractor adhere to a ceiling header variation of ±1/8" every 6'.

Note: The Metal Lath/Steel Framing Association (ML/SFA) and the American Society of Testing Materials (ASTM) state under section C1007 that tolerances for steel framing horizontal alignment (levelness) of walls shall be within 1/960th (1/8" in 10') of their respective lengths.



Wall Plumbness



Aspect requires the contractor adhere to vertical plumbness of ±1/8" over 10'.

Note: Metal Lath/Steel Framing Association (ML/SFA) recommends acceptable gypsum wallboard plumbness of 1/8" in 10'.

It is recommended that measurements are taken from the benchmark to the floor and to the ceiling every 24" when using Aspect.

For horizontal dimensions, it is recommended that opening dimensions from finished drywall to finished drywall are taken when using Aspect.

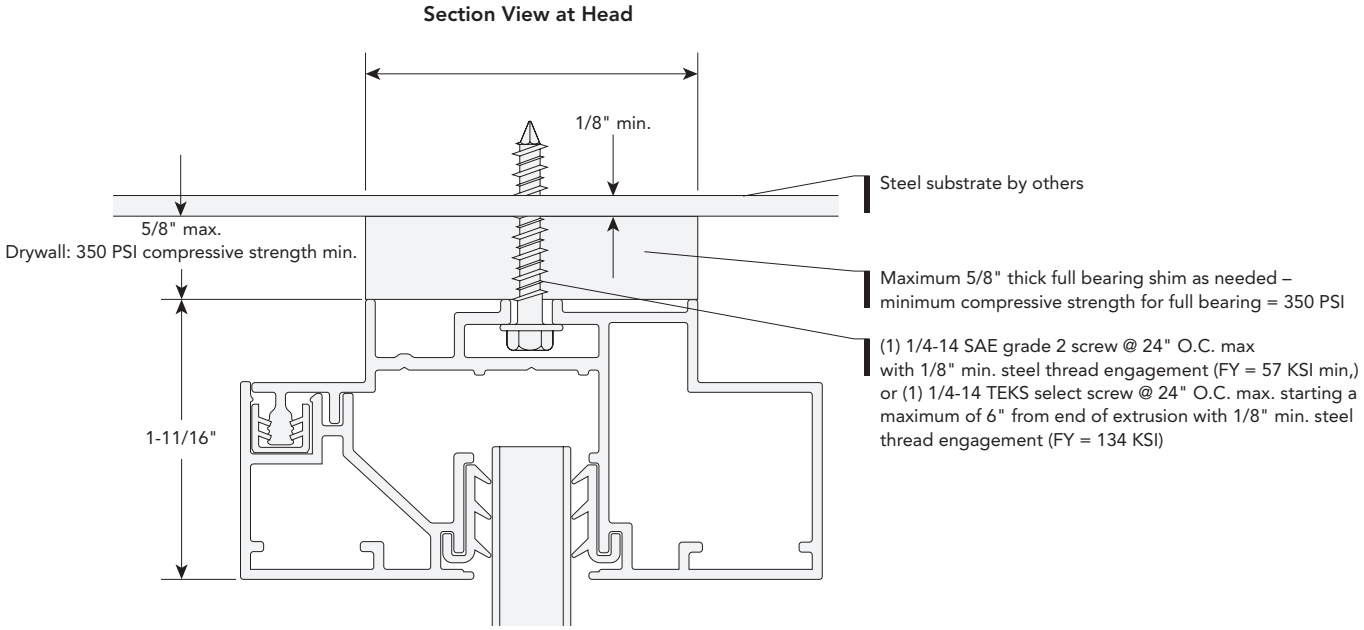
BM = Default is Bench Mark is reset at each office

Finished = Examples include carpet at floor & painted drywall at header and side wall

Green: Within **Aspect** tolerance

Red: Not within **Aspect** tolerance

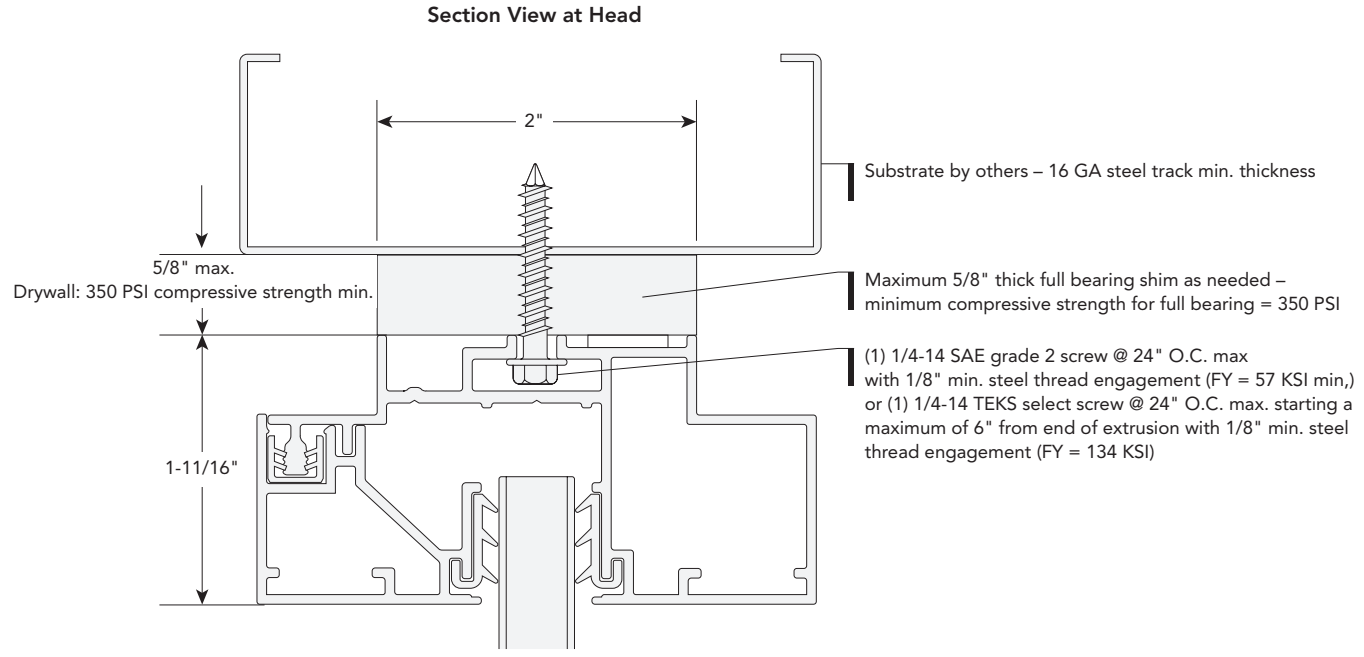
Ceiling and Floor Levelness



1. Review areas outside of **Aspect's** floor levelness tolerance with the general contractor following field dimensions.
2. Obtain time line for completion of corrective action from general contractor, factor potential delay into overall project schedule, and communicate to appropriate parties.
3. Confirm results of resolution on site to agreed-upon date.

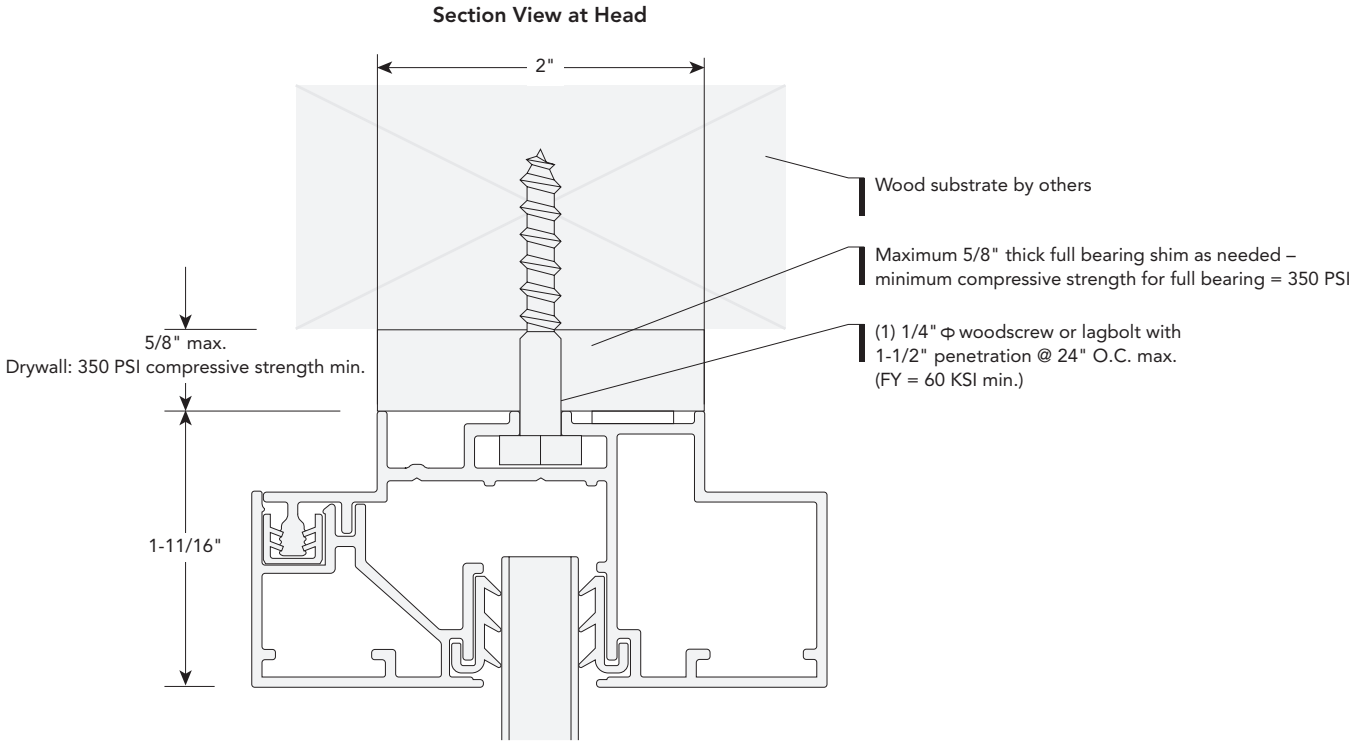
Construction Vertical Partition Plumbness

1. Review areas outside of **Aspect's** vertical construction partition tolerance with the general contractor following field dimensions.
2. Obtain time line for completion of corrective action from general contractor, factor potential delay into overall project schedule, and communicate to appropriate parties.
3. Confirm results of resolution on site on agreed-upon date.



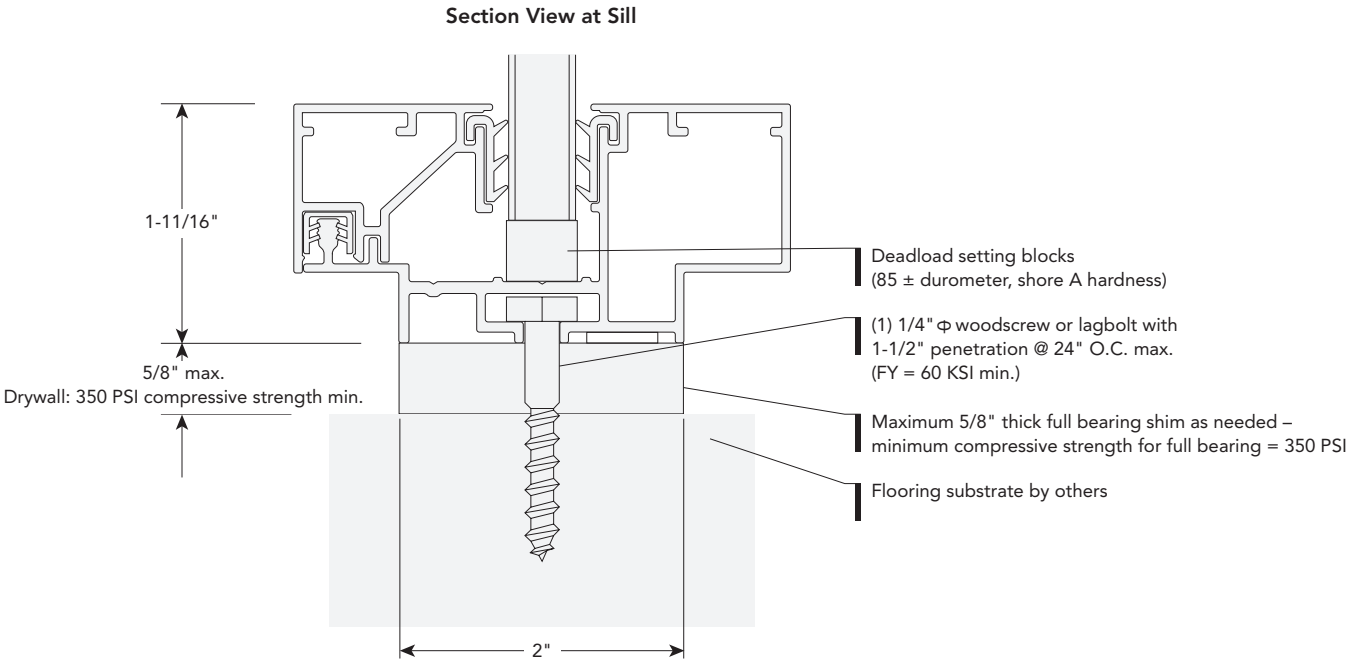
Panels & Trim

Requirements for a Steel Bulkhead



Note: Anchors supplied by installation partners.

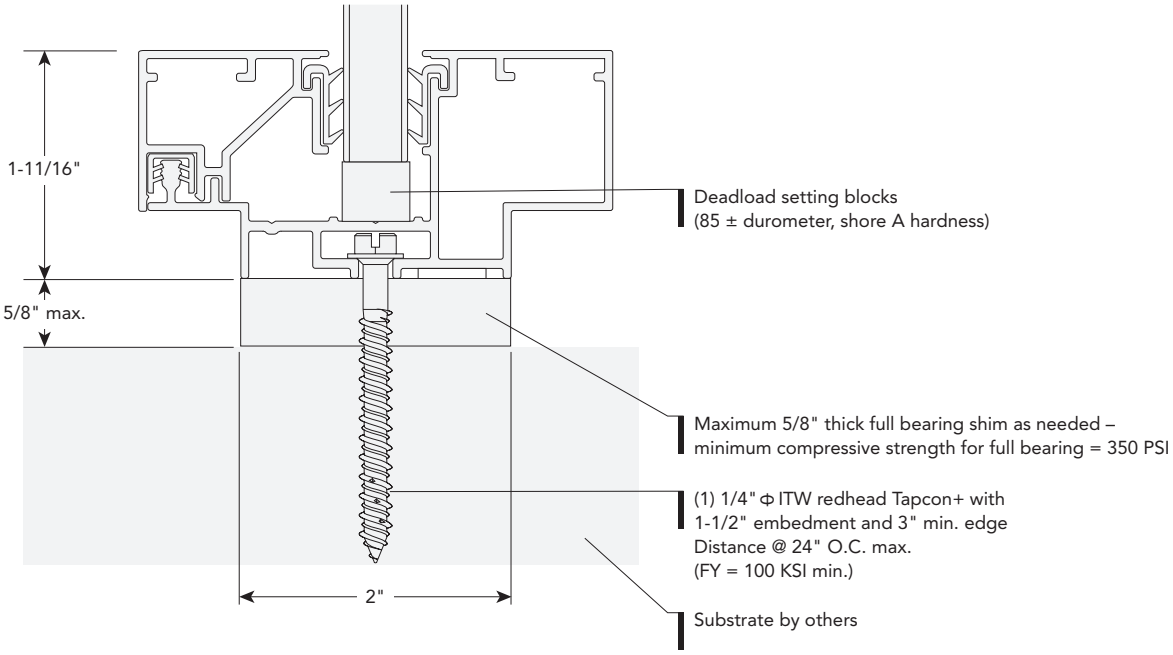
Requirements for a Metal Stud Bulkhead



Note: Anchors supplied by installation partners.

Requirements for a Wood Bulkhead

Requirements for a Wood Floor



Note: Anchors supplied by installation partners.

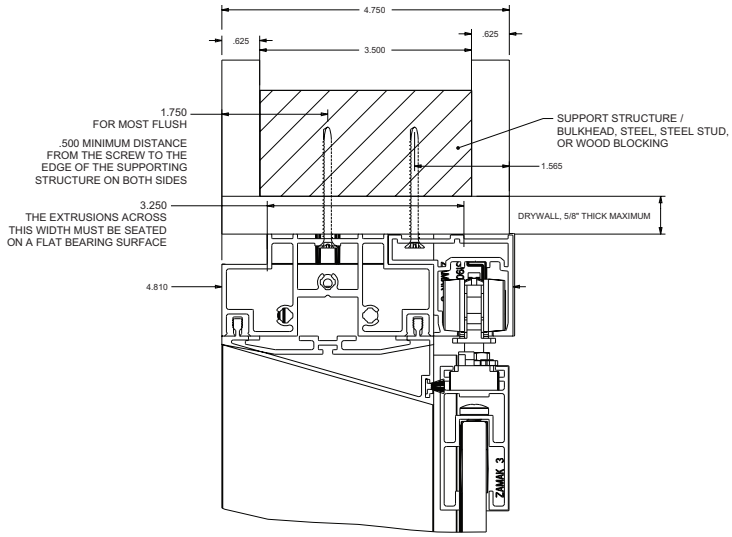
Panels & Trim

Requirements for a Concrete Floor

Section View at Sill

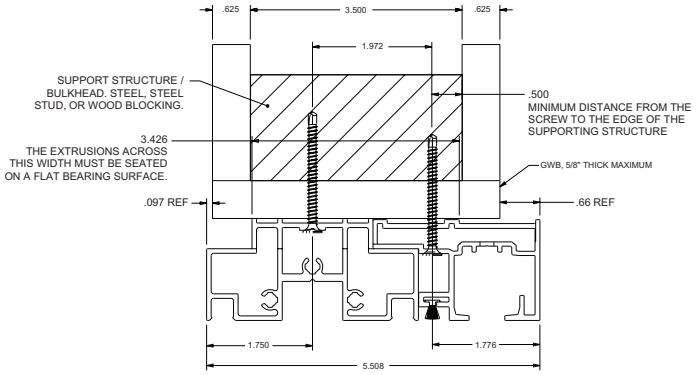
Note #1: Anchors supplied by installation partners.

Note #2: For post tension concrete applications, please consult with the architect prior to specifying.



Requirements for a Sliding Door

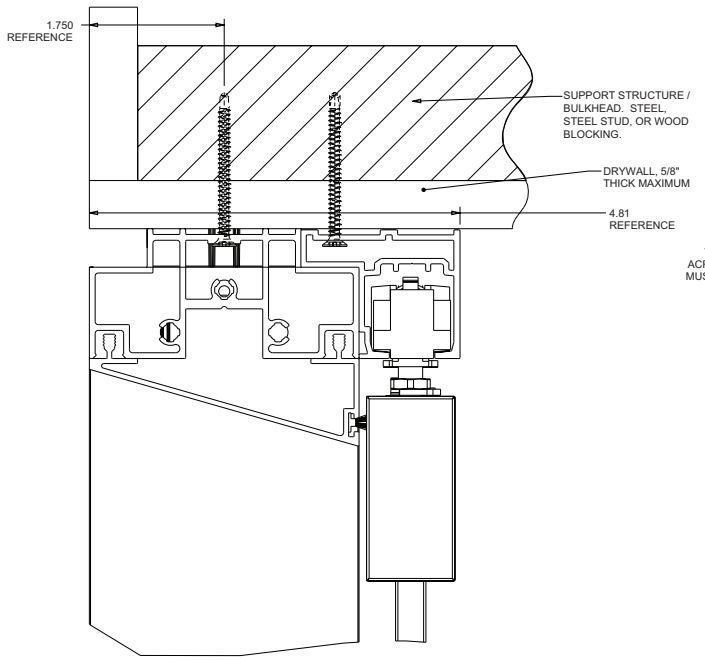
For Aspect sliding doors, headers/soffits should be built with minimum requirements in mind. Reference dimensions are not required.



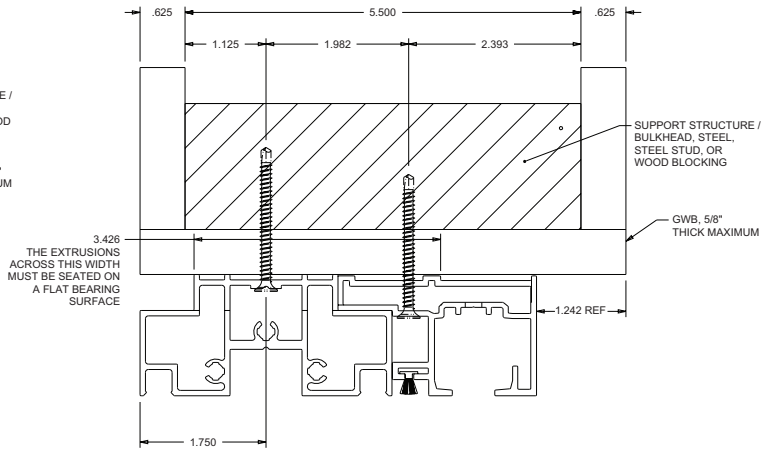
Allsteel recommends the removable portion of trim be oriented to outside of room and sliding doors always be placed on inside of room. The sliding door should be placed opposite the side of the removable trim.

Minimum bulkhead structure requirements for Aspect sliding door.

Frameless Glass Sliding Door



Thin Frame Aluminum Sliding Door

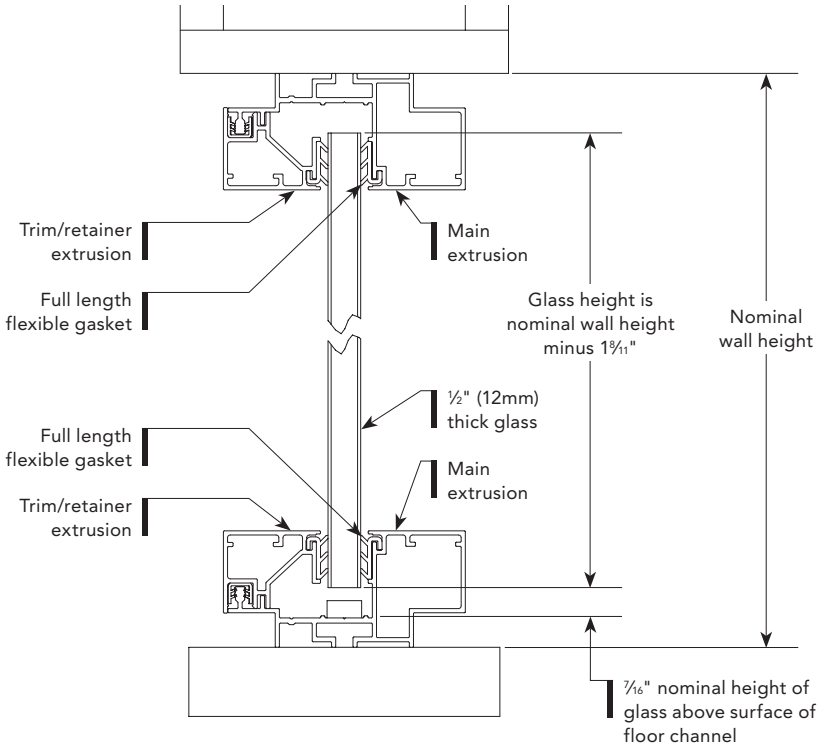


Application Example

Product visualized to front edge of soffit with reference dimensions.

Frameless Glass Sliding Door

Thin Frame Aluminum Sliding Door



Panels & Trim

Aspect requires the header/soffit/bulkhead to be designed to support the weight listed below.

Ceiling Height	Door Type	Single or Double	Door Unit Width (inch)	Approx. Aluminum weight supported by header per foot	Door Leaf Type	Door Leaf Glass Thickness (inch)	Approx. Weight of Door Leaf
120	Slider	Single	42	1 to 2 lbs/foot	Glass	0.375"	172 lbs.

Note: Stand-alone glass units and center swing pivot doors need to support the weight of the aluminum only at the header or approximately 1 to 2 lbs/foot. The center swing pivot door's weight is dispersed to the floor. Hinged doors are supported through the vertical which takes load to floor.

Frameless Glass

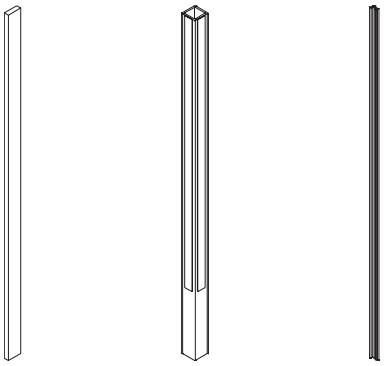
- Panel Dimensions
  - Height
    - 18"–120" in 1/16" increments
  - Width
    - 6½"–42" up to 120"H in 1/16" increments
    - 42 1/16"–48"W up to 108"H in 1/16" increments
  - Glass Thickness
    - ½"
- Applications
  - 1, 2, 3, and 4-sided applications
  - Product designed for office front or conference room walls. Panels are anchored into the floor and ceiling and the weight of the doors is supported at the ceiling. Product designed to fit under a drywall soffit. Blocking required to support the weight of the doors.
    - Refer to the Pre-Specification guide for building requirement details.
- General overview
  - Universal two-piece trim at 1 11/16" high captures the glass at the top, bottom and at wallstarts
  - Corner block pieces lock horizontal and vertical trim elements together, creating clean corner connections and maintaining a continuous reveal. The continuous reveal is a unique aesthetic element that creates a look of windows between spaces
  - Trim is removable to allow front loading of glass and ease of leveling
  - Panels are leveled through adjustment of setting blocks (shims)
  - Base trim remains flush with the floor for a clean aesthetic because glass is leveled inside base trim
  - Aspect laminated glass panels are available with no additional upcharge over tempered glass. Laminated glass panels typically carry a higher STC rating. Option to upgrade to 39 STC rating for a fully assembled panel with a high performance interlayer.

Panels & Trim

Glass Information and Acoustical Performance

Aspect glass comes in a variety of thicknesses and opacities. All Aspect glass meets ANSI Z97.1 safety glass standard. Different types of glass can be specified to boost acoustic properties, add visual privacy, or create an artistic look.

Glass Thickness Options

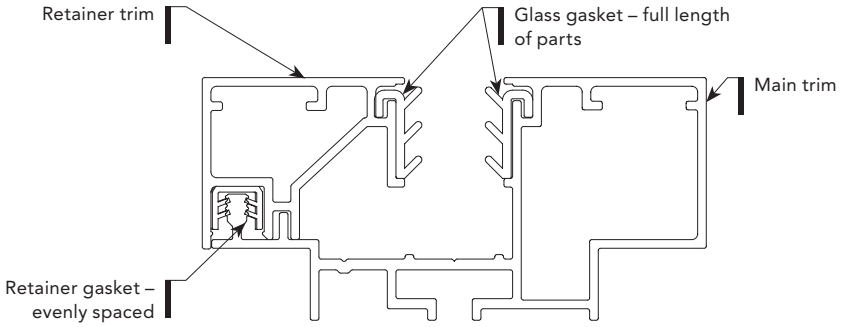


- Frameless: ½"

Glass Types & Acoustical Performance

- Tempered glass is one sheet of heat-treated safety glass.
- Laminated annealed glass is made of up two pieces of heat-treated safety glass that are secured together. Laminated glass boosts acoustic properties and typically carries a higher STC rating.
- Performance or high acoustic laminated glass further boosts acoustic properties. A thin, transparent film is placed between the sheets of laminated glass that reduces sound travel and gains additional STC points.
- Aspect performs up to a 39 STC. STC test results represent testing of a fully assembled panel.

Glass Colors

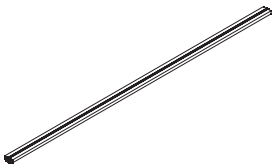


- Clear glass has a slight greenish hue when glass is viewed from the edges or side profile.
- Low iron glass is ultra-clear and of higher transparency and clarity than clear float glass. Generally, the green hue of the glass is reduced. It is typically more expensive than clear float glass.
- Translucent white laminated has a medium light transmission level of 65%, meaning it's semi-transparent.
- White markerboard laminated has a low light transmission level of 10%, meaning it's nearly opaque. The lower the light transmission level, the more difficult it is to see through the glass.

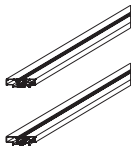
Vertical Fillers for Glass

- Description:
  - QTY 1 at each connection
  - Always comes in 120" lengths
  - Must be cut in field
  - Three types of connections
- Straight (Inline Application):
  - Clear VHB tape at inline connections
  - Use between glass panels in a straight run
- 2-Way (90-Degree Application):
  - Clear polycarbonate filler
  - Use between glass panels at 90-degree corner connections
- 3-Way (Three-Way Application):
  - Clear polycarbonate filler
  - Use for glass panels that intersect at a three-way intersection such as for set-back panels or glass demising walls
  - CET adds 10% to vertical filler quantity for scrap.

Panels & Trim

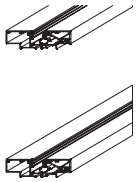


Universal Trim

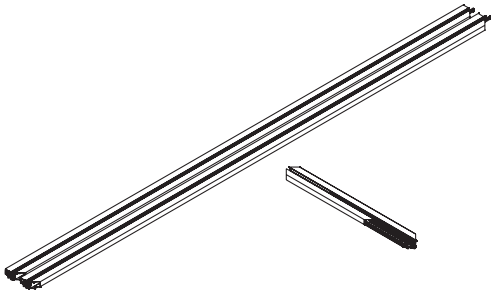


- Universal two-piece trim
  - Comprised of a main trim piece and a retainer trim piece.
  - Two pieces are connected with a retainer gasket.
  - Trim captures the glass at the top, bottom and at wallstarts.
- Dimensions
  - 1 11/16" tall
  - 3 1/2" wide
  - 1/2" reveal
  - Straight trim comes in 120" lengths.
  - Two-way and three-way trim comes pre-mitered on both sides for ease of install.

Finished End



- ETO-AP-AS-TRIMF.M594487.COLOR
  - 1 3/16" wide
  - Finished end comes in 120" lengths to be cut in the field.



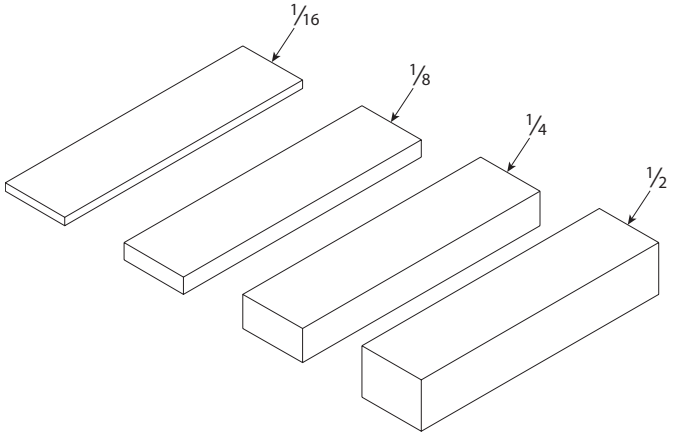
Straight

Two-Way - 120" Option

Two-Way - 48" Option

Three-Way

Universal Trim



- Straight: 120" lengths only
  - Order QTY (1) for top
  - Order QTY (1) for bottom
- Two-Way: 48" and 120" options
  - Order QTY (1) for top and bottom, one side (contains 2 sets of trim)
  - Order QTY (1) for top and bottom, other side (contains 2 sets of trim)
- Three-Way:
  - Order QTY (1) for top which includes
    - 120" for main run, top (contains 2 sets of trim)
    - 36" for demising wall, top
  - Order QTY (1) for bottom which includes
    - 120" for main run, bottom (contains 2 sets of trim)
    - 36" for demising wall, bottom

Leveling

- Panels have +/- ¼" adjustment over 6 ft.
- To level panels, setting blocks are placed in the base channel.
- See Aspect Installation Guide for details.

Setting Blocks (Shims)

- Trim is removable to allow front loading of glass and ease of leveling. Panels are leveled through adjustment of setting blocks (shims).
- Base trim remains flush with the floor for a clean aesthetic because glass is leveled inside base trim.
- Need QTY (1) AS-INSTALLKIT per 200 LF
- Installation Kit
  - Contains setting blocks (shims) for leveling in the following sizes and quantities:
    - Glass Setting Block 1/16 – QTY 100
    - Glass Setting Block ⅛ – QTY 100
    - Glass Setting Block ¼ – QTY 100
    - Glass Setting Block ⅜ – QTY 100
  - Nominal position for Aspect is using the 1/16 and ⅜ setting blocks to add up to 7/16

Doors

Aspect™ — Door and Hardware Matrix

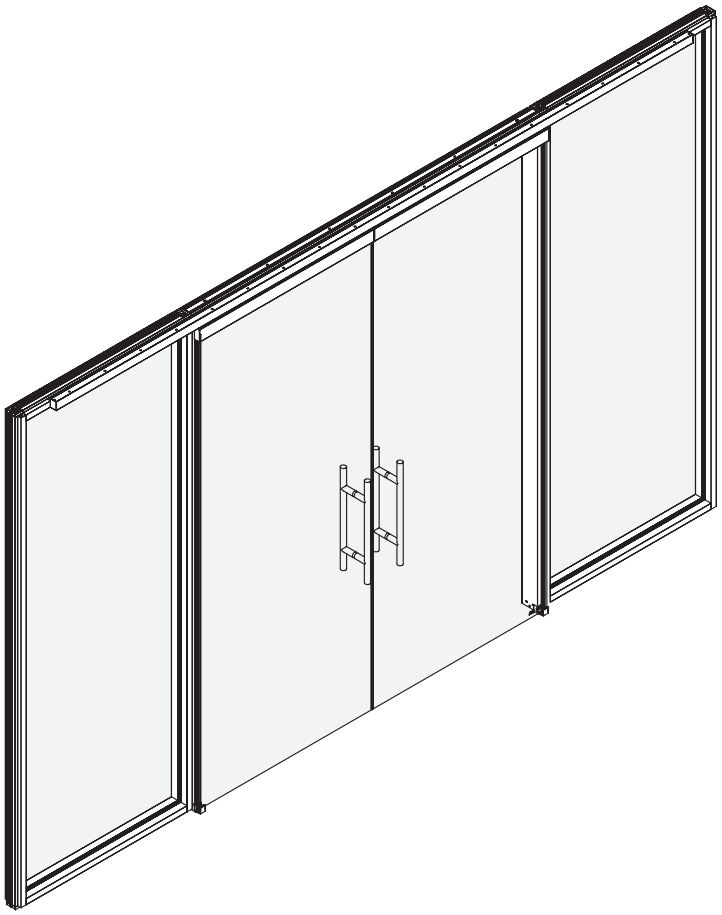
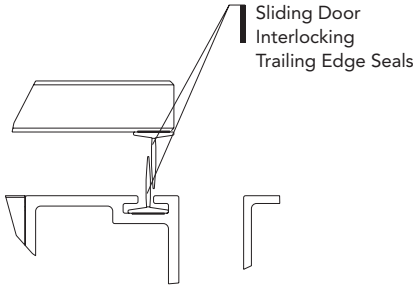
Sliding Doors

Blocking is required above the header to support the weight of the door. Please see pages 17-30 for more details.



General Information

- Sliding doors should be mounted on the interior of the office for a better aesthetic and for ease of installation.
- Frameless glass sliding doors come in nominal 42" modules for single doors and nominal 78" modules for double doors.
- Thin aluminum framed sliding doors come in nominal 42" or 48" modules for single doors and nominal 78" modules for double doors.
- Door frames only come in 120" lengths vertically and are cut to size in the field.
- Sliding door mounting hardware is included with the sliding door frame for both single and double doors.
- For double sliding doors, specify double door models and frames.
- Adjacent glass panels of the following dimensions are required next to sliding doors to support the door track and to eliminate interference with another panel or door:
  - 42" door module requires a 36"W minimum adjacent panel.
    - Clearance is 33 15/16".
  - 78" door module requires a 33½"W (33.5") minimum adjacent panel on both sides of the door.
    - Clearance is 63½" (63.5").
- Sliding door tracks are available in two options.
  - Standard (Single Doors Only)
  - Slow Close/Slow Open (Single or Double Doors)
    - Incorporates a motion-dampening mechanism to support soft closures and openings for sliding doors.



Single Sliding Door

Sliding Doors

Double Sliding Door

- A rubberized leading edge seal is included with each door frame. The seal creates an acoustic barrier between the door and the door frame.
- Interlocking trailing edge seals are included with each frameless sliding glass door. Seals create added acoustic barriers.

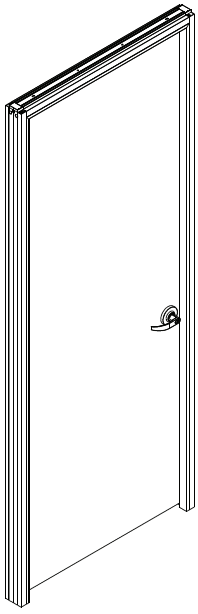
  - Trailing edge seal is field-applied to the trailing edge of the frameless glass door. This seal interlocks with the trailing edge seal on the door frame.
  - Sliding doors are non-handed.

Pivot Doors

Pivot Doors

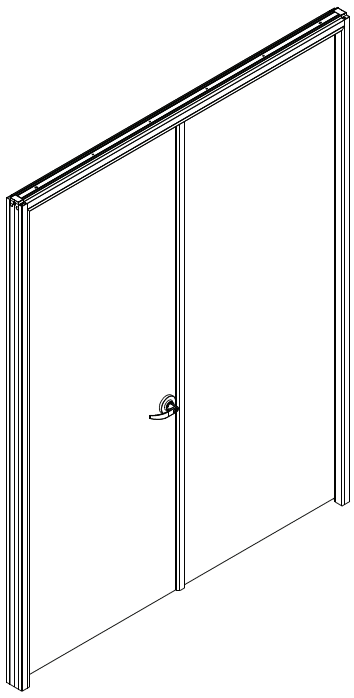
- General Information:
  - All single center swing pivot doors utilize a nominal 39" door module.
  - Door frames are available in partial strike.
  - All double center swing pivot doors utilize a nominal 75" door module. Note: Only thin aluminum framed center swing pivot doors are offered in a double module, frameless glass doors are not.
  - The strike plate for partial strike door frames can be reversed, allowing the door frame to be non-handed.
  - Allsteel's center swing pivot door housing can be specified with a passage (non-locking) cylindrical lever, and a locking lever with a standard format interchangeable core (SFIC). SFIC locking is available for field-keying to building requirements and locks with a 7-pin SFIC push-button lock.
  - The pivot lever housing can accommodate other manufacturers' cylinder-style locks as a custom option.
  - Center swing pivot frameless doors can be specified with ladder pulls. The specification needs to include a magnetic catch and the corresponding door frame and door models.

Hinged Doors



Frameless Glass Hinged Doors

- General Information
  - Single option.
  - Single frameless glass hinged doors utilize a nominal 39" module including the frame.
  - Door frames are non-handed.
  - Doors swing 90 degrees both inward and outward. An optional strike bracket can be installed to prevent the outward or inward swing of the door.
- Hydraulic hinges provide self-closing mechanism.
  - Automatic closing from 0 to 80 degrees.
  - Adjustable closing speed.
  - Stops at +90- or –90-degree open position.
- Utilize ladder pull options for door hardware. See the Hinged Door Hardware pages of the Doors section for details.
- Frameless glass hinged doors can be locked by specifying the locking ladder pull options.
  - The frameless glass center swing pivot door levers may also be used as a custom hardware and custom door frame option to provide additional locking options for frameless glass hinged doors.



Hinged Doors

Solid Hinged Doors

- Available in single and double door options.
- Single doors utilize a nominal 39" module including the frame. Double doors utilize a nominal 75" module including the frame.
- Available in veneer, laminate and painted wood.
- Door frames incorporate a full height strike for the door and are handed for both single and double doors.
- Double doors require specifying an active door.
  - The active door opens and closes with a lever.
  - The inactive door utilizes a flush bolt latch connecting into the door frame to lock out swing. Disengage latch to open the door.
  - The inactive door also incorporates an astragal for the active door to close against and provides a seal against light and sound between the doors.
- Door levers are available in the following options. See the Hardware pages of the Doors section (pages 46-49) for details.
  - Passage
  - Locking with SFIC

Single Solid Hinged Door

Double Solid Hinged Door

- Allsteel believes there are benefits in guaranteeing environmental and social responsibility. For this reason, all materials can be ordered with FSC (Forest Stewardship Council) Certification, ensuring that products have come from a forest and supply chain that is managed responsibly. Allsteel offers this benefit at no extra charge to consumers.

Door Hardware

All door hardware may be specified in silver or in black.

Ladder Pulls

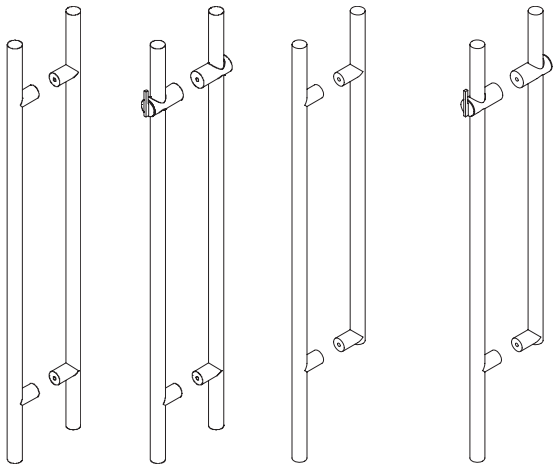
- Use with sliding, center swing pivot / hinged frameless and thin framed glass doors.

12"H Ladder Pull

- ¾" (.75") diameter pull
- Stainless steel finish
- Passage (non-locking) only

12"H Value Ladder Pull

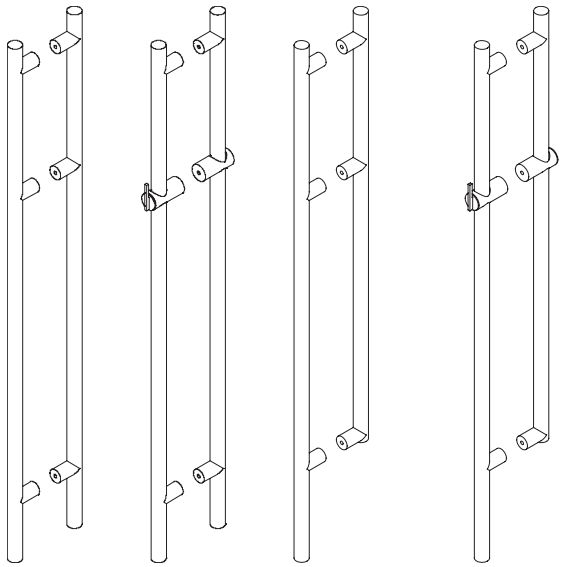
- 1" diameter pull
- Stainless steel finish
- Passage (non-locking) only



20"H Ladder Pull

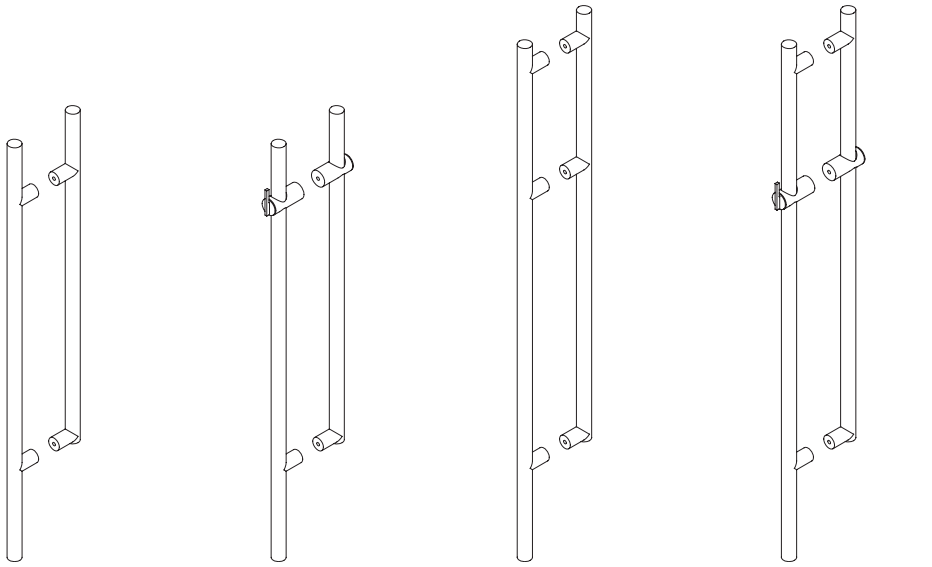
- 1" diameter pull
- Anodized finish
- Passage (non-locking) only

49"H Ladder Pull



- 1⅜" diameter pull
- Anodized finish
- 49"H Ladder Pull offered as either standard or accessibility, with accessibility pulls featuring an asymmetrical design with intent of supporting ADA building code, see page 47 for more details
- Passage option
- Locking option
  - Thumb-turn deadbolt lock is received into a floor socket
  - Rim cylinder with SFIC format
  - SFIC core for field-keying to building requirements
  - Best E keyway
  - Random keying
  - Use SFIC for any custom keying requirements
  - LFIC and other RIM cylinders are available as a custom option
  - Master keying is available by others

Passage | Locking | Accessibility, Passage | Accessibility, Locking



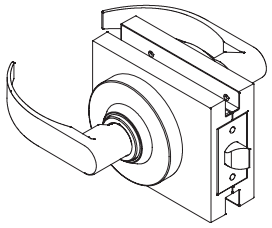
60"H Ladder Pull

- 1⅜" (1.375") diameter pull
- Anodized finish
- 60"H Ladder Pull offered as either standard or accessibility, with accessibility pulls featuring an asymmetrical design with intent of supporting ADA building code, see page 47 for more details
- Passage and locking options
  - Thumb-turn deadbolt lock is received into a floor socket
  - Rim cylinder with SFIC format
  - SFIC core for field-keying to building requirements
  - Best E keyway
  - Random keying
  - Use SFIC for any custom keying requirements
  - Master keying, LFIC, and other RIM cylinders are available as a custom option

Passage | Locking | Accessibility, Passage | Accessibility, Locking

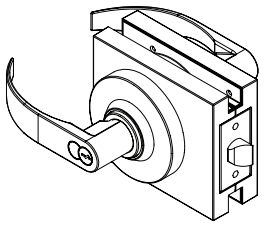
Accessibility Ladder Pulls

49"H Accessibility, Passage | 49"H Accessibility, Locking | 60"H Accessibility, Passage | 60"H Accessibility, Locking



Accessibility ladder pulls are offered on doors as a solution where required for ADA.

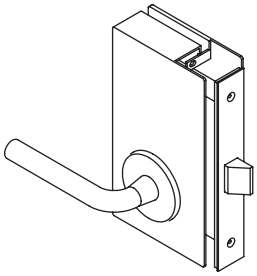
- Accessibility ladder pulls feature an asymmetrical design where the bottom of the ladder pull aligns with the bottom of the door on one side of the door but does not extend down to the bottom of the door on the opposite side.
- The thin frame door leaf has also been designed with an offset glass feature, designed to create a smooth surface on one side of the door with an offset on the opposite side of the door.
  - In swing-door applications, the smooth side of the glass offset will always be on the push side of the door.
- Although this product has been designed with input from ADA, Allsteel is not certified or licensed to enforce building code and it is the responsibility of the specifiers, architect, and/or design firm to ultimately ensure that the way that the product is being used or specified will meet local and state building codes within that specific jurisdiction.



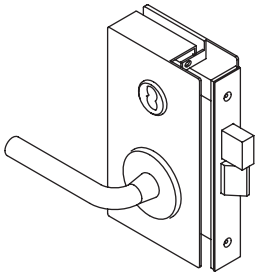
Door Hardware

Cylindrical Lever

- Passage (non-locking) and locking with standard format interchangeable core (SFIC) lever options can be specified with Allsteel's cylindrical lever housing.
- Lever housing accommodates other manufacturers' cylinder-style locks as a custom option.

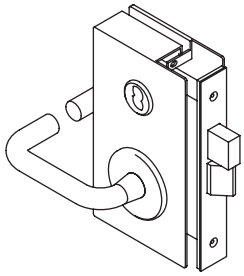


Passage



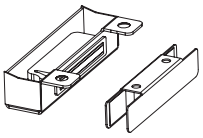
Locking with SFIC

Mortise Lever & Mortise Lever Housing



- Offered as either passage (non-locking), locking with standard format interchangeable core (SFIC), or locking with standard format interchangeable core, less core (SFIC-LC).
- Only offered on thin frame aluminum hinged doors, see Door Hardware Reference Guide (pages 38-40) for full hardware application guide.
- Must be specified with mortise lever housing (model AS-MHOUSING).

Passage, Straight Mortise Lever

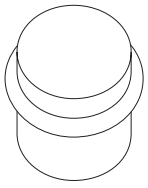


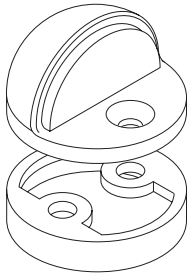
Locking, Straight Mortise Lever

Locking, Return/Title 24 Mortise Lever

Magnetic Catch

- Painted to match trim finish
- For use with center swing pivot frameless doors when specified with a pull.





Magnetic Catch

Door Stops

Cylindrical Door Stop

- Floor-mounted.
- Height is 1½" (1.5").

Dome Cylindrical Door Stop

- Floor-mounted.
- Height is 1⅛" (1.125") with optional spacer to increase height to 1½" (1.5").

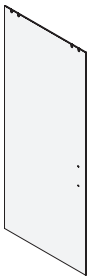
Electronic Locking

The optional electronic locking feature on Aspect thin framed doors offers keyless entry and remote access when integrated with building security systems and/or electronic card readers.

- For use with Aspect thin framed glass sliding doors & hinge doors only.
- Locking mechanism includes electronic flushbolt with integrated position sensor and a 14' wire to provide power-access to locking mechanism on door.
  - Hinge door model also includes concealed door loop to pass wire between door & door frame
- Electronic lock is offered as either Failsafe or Failsecure function
  - Failsecure Operation: In the case of a power outage, door will automatically lock. Recommended for high security applications only.
    - Note: There is no override feature provided with this lock, additional power supply recommended for this application.
  - Failsafe Operation: In the case of a power outage, door will automatically unlock. Recommended for life safety applications.
- In hinged, single-door applications, electronic lock will mount into the vertical strike side of the door and locks into the door jamb.
- In hinged, double-door applications, electronic lock will mount into header of the door and lock into the header of the door frame.
  - When specifying electronic locking on a sliding door, please note that the glass offset must be towards the door frame.
- It is recommended that a low-voltage security installer is responsible for wiring & integration of lock with building security system. Work with project manager to coordinate installation. Please note that this model includes the locking mechanism and other accessories outlined above only. Allsteel does not provide the building security system, card-readers, or exit devices and these items must be sourced separately.

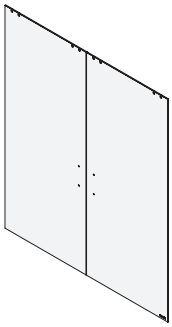
Finish options:
Silver (satin stainless steel US32D)
Black (oxidized black + lacquer US19)
Manufactured by SDC

Self-Closing Hinges (AS-SCHINGE)



- Hinges are offered as either full close or hold open function.
- Hinges have a designated hand, left or right.
- Offered in silver or black.

The performance of self-closing hinges may be affected by the following conditions:



- Frequent opening of multiple doors or rapid successive door use.
- Significant changes in air pressure or airflow disturbances.
- Exposure to constant vibrations or mechanical shocks.
- Obstructions such as dirt or debris.

Option	Specification Description	Specification
Glass Selection	TA: ⅜" Tempered, Clear TB: ⅜" Tempered, Low Iron	
Paint Color Selection	3-digit painted or anodized finish	

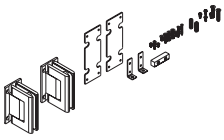
Specification Example: **AS-TALHDLEAF.####.TA.P8X**

Hinged Door Frame, Single

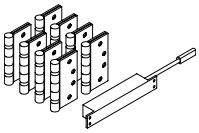


Hinged Door Frame, Double

Base Model	Description	Specification
AS-HDFRAME	Hinged Door Frame	**AS-HDFRAME**

Configuration ID	Specification Description
Product	Aspect
Width	39" - Single Door 75" - Double Door
Height	84"-120" in ¼" increments
Strike Style	Will populate if specified with a wood or aluminum framed door Full
Door Type	Hinged
Door Style	Frameless Glass Wood or Aluminum
Door Module	Single Double
Hand	Will populate if specified with wood or aluminum framed door Left Right
Lock Style	Cylindrical Lever Mortise Mortise Lever Passage or Floor-Locking
Electronic Lock Style	Electronic Locking No Electronic Locking
Closure Style	*Will populate with wood door* No Latch Lever Latch Roller Latch
Frame Finish	Painted or Anodized Finishes

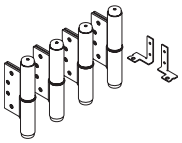
Option	Specification Description	Specification
Paint Color Selection	3-digit painted or anodized finish	**See Aspect Frame Finishes**



Specification Example: **AS-HDFRAME.#####.P8X**

Hinged Door Mounting Hardware, Frameless Glass

Hinged Door Mounting Hardware, Single Aluminum Framed/Wood



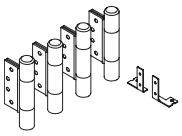
Hinged Door Mounting Hardware, Double Aluminum Framed/Wood

Base Model	Description	Specification
AS-HINGEDMOUNT	Hinged Door Mounting Hardware	**AS-HINGEDMOUNT**

Option	Specification Description	Specification
Hinge Configuration **Door Module**	 Single Double	 **S** **D**
Type/Functionality sub-option	Frameless Glass Aluminum Framed/Wood	**FGCLSR** **AL-WDNCSR**
Trim Color	3-digit code	**See Aspect hardware finishes**

Specification Example: **AS-HINGEDMOUNT.SAL-WDNCSR.SIL**

Hinged Doors



Self-Closing Hinges

Base Model	Description	Specification
AS-SCHINGE	Self-Closing Hinges	**AS-SCHINGE**

Option	Specification Description	Specification
Hand	Left	**L**
	Right	**R**
Close Type	Full Close	**FC**
	Hold Open	**H**
Color	Black	**BLK**

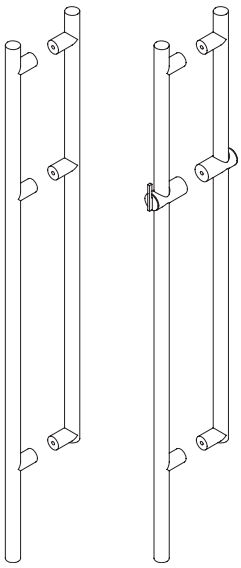
Specification Example: **AS-PULL60.P.SIL**



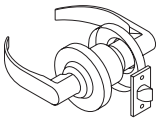
49"H ADA Passage

49"H ADA Locking with SFIC

Base Model	Description	Specification
AS-PULL49ADA	49" Ladder Pull, ADA	**AS-PULL49ADA**

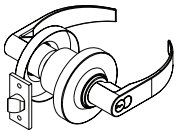
Option	Specification Description	Specification
Locking Option	Passage	**P**
	Locking with SFIC	**SFIC**
	SFIC Locking - Less Core	**SFIC-LC**
Trim Color	3-digit finish code	**See Aspect hardware finishes**

Specification Example: **AS-PULL49ADA.P.SIL**



60"H ADA Passage

60"H ADA Locking with SFIC

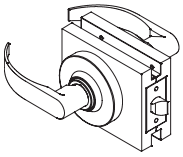


Base Model	Description	Specification
AS-PULL60ADA	60" Ladder Pull, ADA	**AS-PULL60ADA**

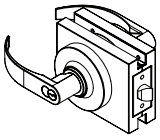
Option	Specification Description	Specification
Locking Option	Passage	**P**
	Locking with SFIC	**SFIC**
	SFIC Locking - Less Core	**SFIC-LC**
Trim Color	3-digit finish code	**See Aspect hardware finishes**

Specification Example: **AS-PULL60ADA.P.SIL**

Passage, Aluminum Framed/Wood



Locking with SFIC, Aluminum Framed/Wood

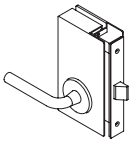


Base Model	Description	Specification
AS-LEVER	Cylindrical Lockset	**AS-LEVER**

Option	Specification Description	Specification
Locking Option	Passage Locking with SFIC	**P** **SFIC**
Trim Color	3-digit code	**See Aspect hardware finishes**
Door Material	Frameless Glass Aluminum-Framed/Wood	**FG** **AL-WD**

Specification Example: **AS-LEVER.P.SIL.FG**

Passage, Frameless Glass



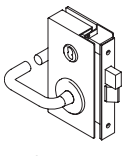
Locking with SFIC, Frameless Glass

Base Model	Description	Specification
AS-HOUSING	Cylindrical Lever Housing	**AS-HOUSING**

Option	Specification Description	Specification
Trim Color	3-digit finish code	**See Aspect frame finishes**

Specification Example: **AS-HOUSING.P8X**

Passage, Straight Mortise Lever



Locking, Straight Mortise Lever

Base Model	Description	Specification
AS-MLEVER	Mortise Lever	**AS-MLEVER**

Option	Specification Description	Specification
Locking Option	Passage	**P**
	Locking with SFIC	**SFIC**
	Locking with SFIC, Less Core	**SFIC-LC**
Door Style	Thin Aluminum Framed	**TAF**
Lever Style	Straight Lever	**SL**
	Return Lever, Title 24 Compliant	**RL**
Trim Color	3-digit finish code	**See Aspect hardware finishes**

Specification Example: **AS-MLEVER.P.TAF.SL.SIL**

Locking, Return/Title 24 Mortise Lever

Base Model	Description	Specification
AS-MHOUSING	Mortise Lever Housing	**AS-MHOUSING**

Option	Specification Description	Specification
Locking Option	Passage Locking with SFIC	**P** **SFIC**
Hand	Right Left	**R** **L**
Trim Color	3-digit finish code	**See Aspect frame finishes**

Specification Example: **AS-MHOUSING.P.R.P8X**

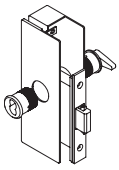
Door Hardware

Dome

Base Model	Description	Specification
AS-DOMESTOP	Dome Door Stop	**AS-DOMESTOP**

Option	Specification Description	Specification
Trim Color	3-digit code	**See Aspect hardware finishes**

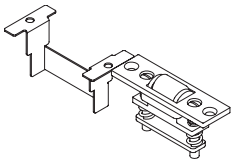
Specification Example: **AS-DOMESTOP.SIL**



Cylindrical

Base Model	Description	Specification
AS-CYLSTOP	Cylindrical Door Stop	**AS-CYLSTOP**

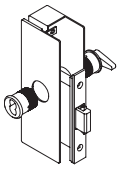
Option	Specification Description	Specification
Trim Color	3-digit code	**See Aspect hardware finishes**



Specification Example: **AS-CYLSTOP.SIL**

Base Model	Description	Specification
AS-SWINGLOCK	Swing Door Lock	**AS-SWINGLOCK**

Option	Specification Description	Specification
Locking Option	SFIC Locking SFIC Locking - Less Core	**SFIC** **SFIC-LC**
Door Material	Thin Aluminum Framed	**TAF**
Trim Color	3-digit finish code	**See Aspect hardware finishes**
Trim Color	3-digit finish code	**See Aspect Frame Finishes**

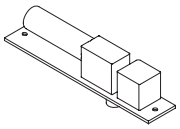


Specification Example: **AS-SWINGLOCK.SFIC.TAF.SIL.PR0**

Base Model	Description	Specification
AS-ROLLERLATCH	Roller Latch	**AS-ROLLERLATCH**

Option	Specification Description	Specification
Module Option	Single Double	**S** **D**

Specification Example: **AS-ROLLERLATCH.S**

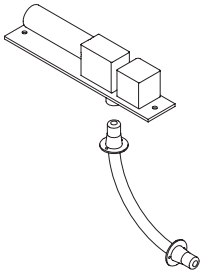


Thin Framed Sliding Door Lock

Base Model	Description	Specification
AS-SLIDINGLOCK	Sliding Door Lock	**AS-SLIDINGLOCK**

Option	Specification Description	Specification
Locking Option	SFIC Locking	**SFIC**
	SFIC Locking - Less Core	**SFIC-LC**
Door Material	Thin Aluminum Framed	**TAF**
Trim Color	3-digit finish code	**See Aspect hardware finishes**
Trim Color	3-digit finish code	**See Aspect frame finishes**

Specification Example: **AS-SLIDINGLOCK.SFIC.TAF.SIL.PR0**



Sliding Door Electronic Lock

Base Model	Description	Specification
AS-SLIDINGELECLOCK	Sliding Door Electronic Lock	**AS-SLIDINGELECLOCK**

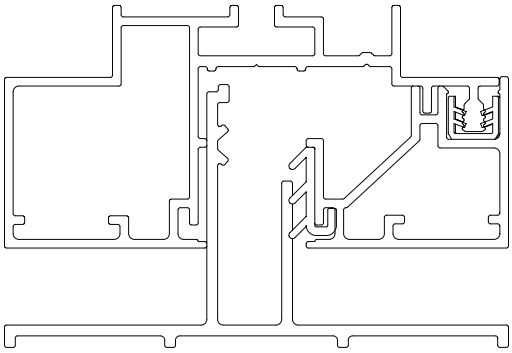
Option	Specification Description	Specification
Type	Single	**S**
	Double Active	**D**
Lock	Electronic Lock - Failsafe	**SF**
	Electronic Lock - Failsecure	**SC**
Trim Color	3-digit finish code	**See Aspect hardware finishes**

Specification Example: **AS-SLIDINGELECLOCK.S.SF.SIL**

Hinged Door Electronic Lock

Base Model	Description	Specification
AS-HINGEDELECLOCK	Hinged Door Electronic Lock	**AS-HINGEDELECLOCK**

Option	Specification Description	Specification
Type	Single	**S**
	Double Active	**DAA**
	Double Active / Inactive	**DAI**
Lock	Electronic Lock - Failsafe	**SF**
	Electronic Lock - Failsecure	**SC**

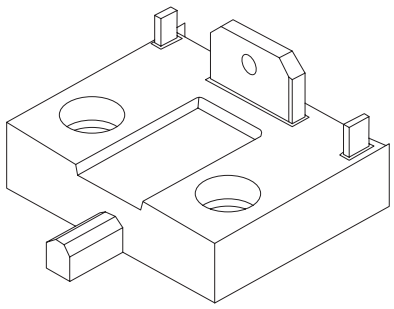


Option	Specification Description	Specification
Trim Color	3-digit finish code	**See Aspect hardware finishes**

Specification Example: **AS-HINGEDELECLOCK.S.SF.SIL**

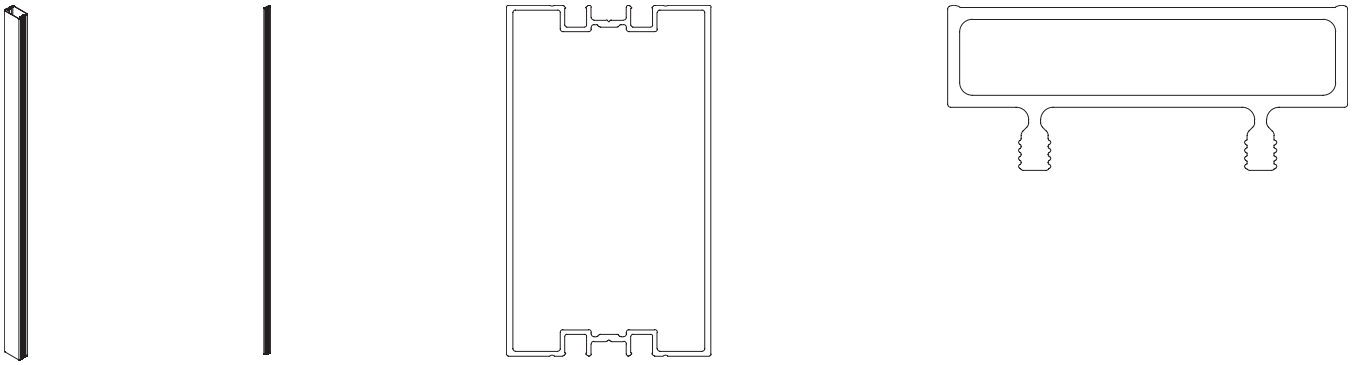
Connectors

Doors are the first component installed when working with Aspect.



Door Frame to Drywall Wall Channel

- Aspect panels can be specified with a variety of door and hardware options.
- When connecting a door frame to drywall, utilize the door frame to drywall wall channel (specified as base model AS-DWCHANNEL).
- Aspect panels can be specified with a variety of door and hardware options.
  - Doors can reach a maximum height of 120" with a minimum height of 84".
  - All specification for door sizes is nominal. This differs from the glass panels which are specified in actual sizes.
    - Door height is specified in quarter inch (¼") increments.
    - Doors specified at nominal height have a half inch (½") planned clearance between the bottom of the door and the floor.
    - Door clearances should be confirmed on the job site with field measurements for both the open and closed positions of the door.
  - All doors have a set width per module (nominal size of the door with frame).
- Utilize door frame to drywall wall channel (specified as base model AS-DWCHANNEL) when connecting a door directly to drywall.
- A door frame corner block is QTY (2) corner blocks are automatically included with each door frame



Wall Channel

- Wall channels are used when Aspect glass intersects with drywall or the building interior. Wall channel is comprised of the same 2-piece universal trim as the top and bottom trim; however, the wall channel contains a notch at the top. This notch is necessary for the trim component to clear the glass gasket during installation.
- Dimensions
  - 1 11/16" tall
  - 3½" wide
  - ½" reveal
- Wall channels also come with QTY (2) corner blocks
  - Corner blocks help with the alignment of the vertical and horizontal elements and create a continuous reveal.
  - Corner blocks are automatically included and do not need to be specified.
- Wall channels have +/- ¼" of adjustment.
- Wall channels are used to connect glass to drywall, glass to door frame, and when glass intersects a drywall end cap.
  - Specify QTY (1) from glass to drywall.
  - Specify QTY (1) from glass to door frame.
  - Specify QTY (1) from glass to end cap.

Wall Channel Corner Block

Connectors

Drywall End Cap

Drywall end caps are used to create a clean, continuous look across a wall run. Three-way drywall end caps are used at a three-way connection where drywall connects perpendicularly to Aspect (typically as a demising wall). The end of the Aspect wall terminates in a drywall end cap post that extends to cover the width of the drywall. Drywall endcap adapters are used to connect an Aspect door frame into the drywall end cap.

- Drywall end caps should be planned so the end of the drywall end cap post aligns with the face of the perpendicular drywall.
  - The 6" wide three-way post is engineered to accommodate drywall widths up to 5½". They should be planned so the centerline of the post aligns with the centerline of the perpendicular drywall. Contact Architectural Products Engineering prior to shop drawing completion if specifying a door adjacent to a drywall end cap with a ladder pull or non-standard lever set for the door hardware to ensure the door will open a full 90 degrees.
- One full height length strip of foam tape is installed to provide an acoustic seal at the demising drywall condition. Allsteel will also supply a piece of foam for the top gap between the ceiling channel and the drywall.
- Dimensions
  - Actual and planning dimensions of a three-way drywall end cap are 6" wide.

- Service Kit:
  - Specified as base model AS-SERVICEKIT
  - Need 1 kit per 500 LF
  - Finish type must be specified on Service Kit
    - Contains sliding door mounting hardware, various screws, and vhb tape to assist with installation.
- Touch Up Paint Kit, Brush:
  - Specified as base model APTK
  - Need 1 kit per 1000 LF
  - Finish specified to match trim finish
  - Bottle of touch up paint with brush - 0.5 oz.
- Touch Up Paint Kit, Spray:
  - Specified as base model ARSLCC
  - Need 1 kit per 1000 LF
  - Finish specified to match trim finish
  - Spray can of touch up paint - 12 oz.

ALLSTEEL PARTNERSHIP PROGRAM

Allsteel understands that customers may want to specify panel and seating textiles outside of Allsteel's standard offering. Allsteel's Partnership Program consists of on-trend and design-forward patterns that have been tested and approved by Allsteel for use on Allsteel products. A subset of these approved patterns is available on cards in the textile binder, while numerous others are available on our website, allsteeloffice.com.

For memo samples, please contact our partners:

- **Camira, memos@camirafabrics.com 1.616.288.0655**
- **Carnegie, carnegiefabrics.com 1.800.727.6770**
- **CF Stinson, cfstinson.com 1.800.841.6279**
- **HBF Textiles, hbftextiles.com 1.877.494.5727**
- **Maharam, maharam.com 1.800.645.3943**
- **Ultrafabrics, ultrafabricsinc.com, 1.877.309.6648**

The intent of the **Partnership Program** is to offer a wide variety of on-trend textiles to meet your varied needs, but since these textiles are not part of our standard offering they may be subject to extended lead times. Because new materials will be introduced regularly, Allsteel reserves the right to change the offering at any time.

Panels & Trim

Step 1
Confirm seismic design category.

Step 2
Verify that product limitations and site restrictions have been met.

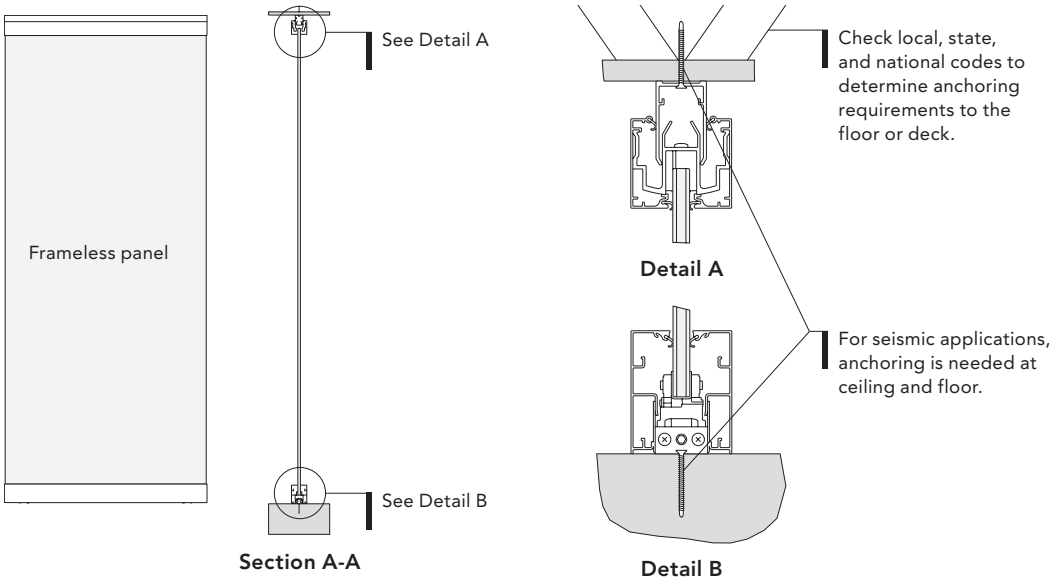
Step 3
Provide architect of record with Beyond's standard seismic package from Allsteel

- Standard package is free
- Stamped drawings available

If local code authority requires additional documentation:

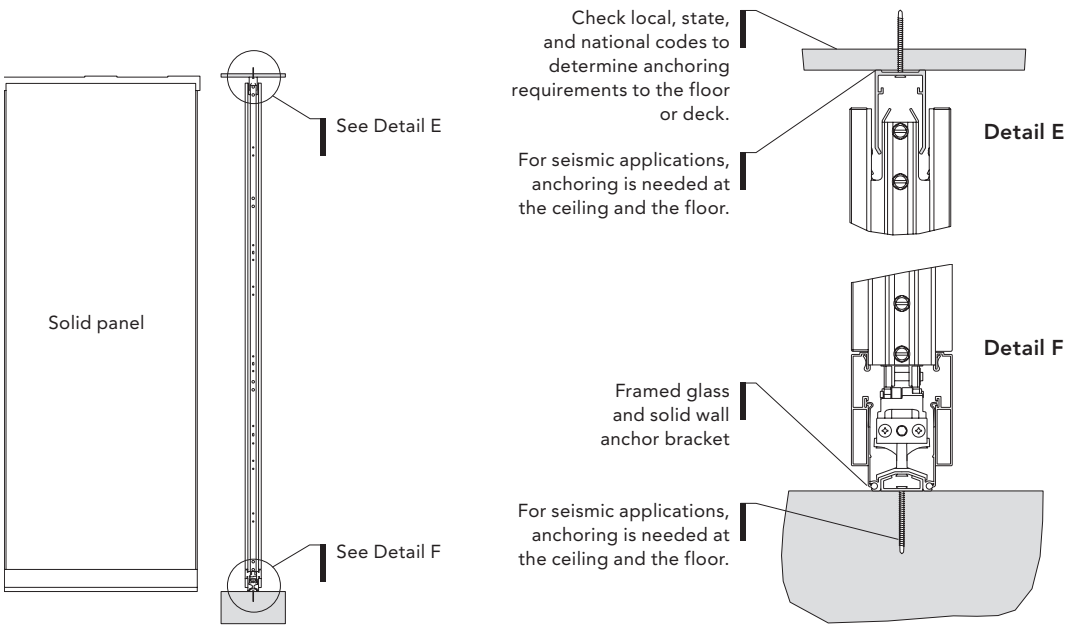
- Trade partners can work with local engineer of record to create a stamped package.
- Note that Allsteel is not responsible for additional costs. It is recommended that trade partners include verbiage in their proposal to the customer that notifies the customer of these additional costs.

The project architect is ultimately responsible for code compliance including seismic requirements.



Allsteel has created guidelines regarding the sale and installation of Beyond in seismic zones. Before selling Beyond in a seismic zone, it's important to know which seismic zone the project is in as well as the building category. Beyond has been evaluated for seismic design categories C-F through a third-party engineering firm, where glass deflection was tested. Product installation is restricted to seismic risk categories I, II and III. Please consult the project architect for more details.

Please contact your Allsteel PM or Wall BDM with further questions.



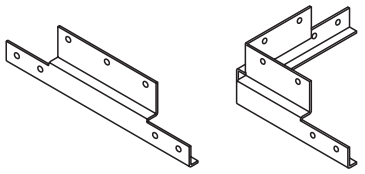
Anchoring

Beyond must be anchored to the floor and ceiling in seismic areas C-F.

Frameless Panels - Anchoring to Floor and Ceiling:

Framed and Solid Panels - Anchoring to Floor and Ceiling:

For additional information regarding seismic bracing, please contact your Allsteel PM.

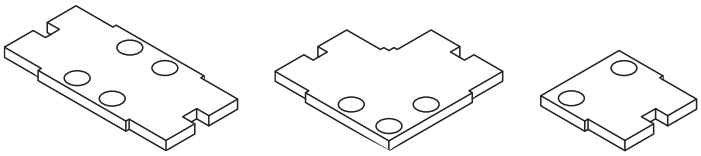


Panels & Trim

Anchoring

Top and floor anchors are used when required by code or when seismic bracing is needed. In seismic zones C-F, Beyond frameless panels must be anchored to the floor and ceiling. Floor anchors are required on framed and solid panels. Straight top anchors are also used next to doors on frameless wall applications only and are included with the door frame.

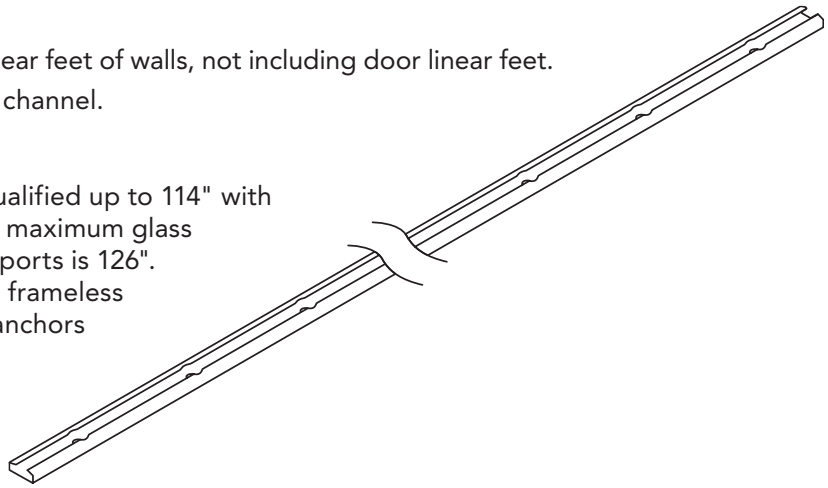
Frameless Top Anchors



- Specify QTY (2) straight top anchor per straight vertical filler.
- Specify QTY (1) straight top anchor per three-way vertical filler.
- Specify QTY (1) two-way top anchor per two-way vertical filler.

Straight Two-Way

Frameless Floor Anchors



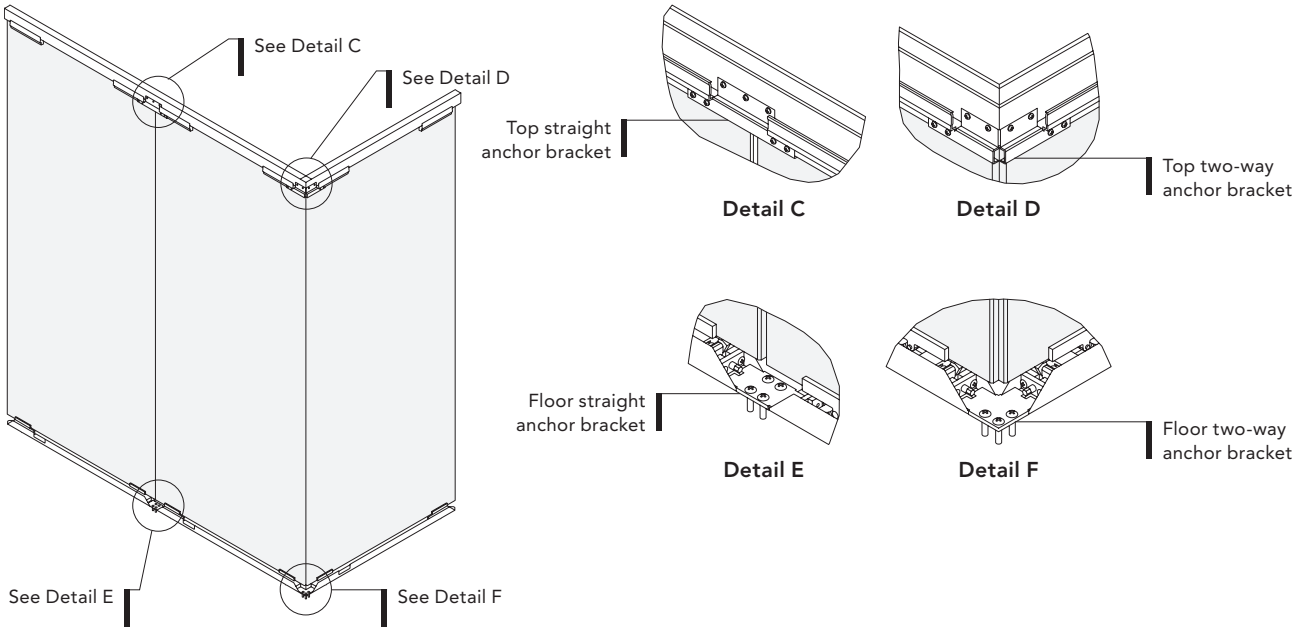
- Specify QTY (1) straight floor anchor per straight vertical filler.
- Specify QTY (1) straight floor anchor per three-way vertical filler.
- Specify QTY (1) two-way floor anchor per two-way vertical filler.
- Specify QTY (1) finished end floor anchor per three-way vertical filler.
- Specify QTY (4) finished end floor anchor per four-way vertical filler.
- Specify QTY (1) finished end floor anchor per frameless wall channel.
- Specify QTY (1) finished end floor anchor per frameless adapter.
- Specify QTY (1) finished end floor anchor per frameless finished end.

Straight Two-Way Finished End

Framed/Solid Floor Anchor

- Specify QTY (1) floor anchor for every 8 linear feet of walls, not including door linear feet.
- Floor anchors interconnect with the base channel.

Product Limitations

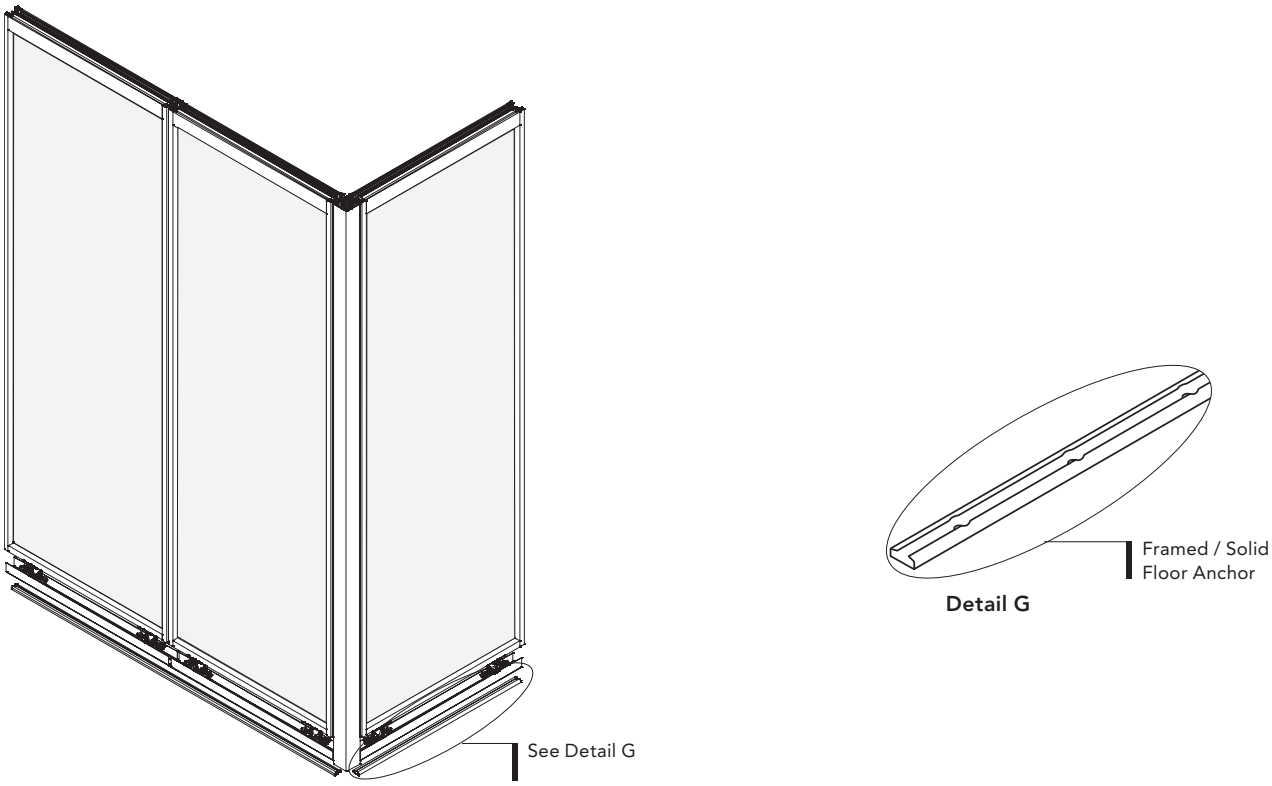


Beyond frameless glass walls are seismic qualified up to 114" with no restrictions. For heights above 114", the maximum glass run before requiring additional vertical supports is 126". Vertical supports include wall channels and frameless adapters. Beyond frameless top and floor anchors or 135-degree angles are engineered to order through TPG.

Beyond framed and solid walls are seismic qualified up to 10 feet. Seismic qualification reports with details on required anchorages can be provided upon request.

Frameless

Top and Floor Anchors



Details below demonstrate how anchor brackets connect to frameless panels:

Framed and Solid

Floor Anchors

Details below demonstrate how anchor brackets connect into the floor:

Panels & Trim

Beyond Freestanding applications include framed, wood slat and solid applications of Beyond including Pavilion and Cabana. Beyond Freestanding applications have been enhanced with new components consisting of hidden internal bracketry, a new cornice and new posts. These new components allow for expanded applications. With unitized panel design, a hidden bracketry solution, and parametric customizable dimensions, these expanded applications no longer need Allsteel engineering review and allow for the creation of the largest single freestanding room.

Freeways can now be specified up to 18 ft and top anchors are no longer needed in seismic design categories C-F. There is also a new power pole option to shroud electrical conduit from above.

Allsteel can provide trade partners with a set of blanket calculations that can be provided to customers. These blanket calculations consist of dozens of modules that were analyzed by a third-party structural engineering firm. These modules can be combined to create hundreds of applications.

To determine seismic risk on your project, enter the project street address into this link: https://hazards.atcouncil.org/.

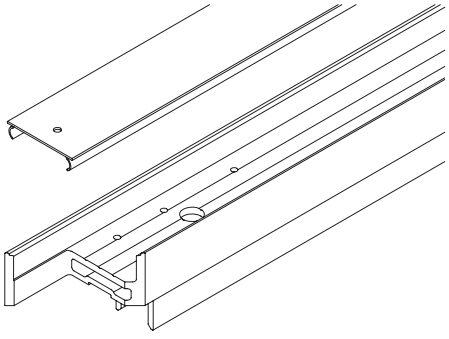
Our product was analyzed per IBC code 1607.15. It was evaluated for 5psf "Wind Load" (A-F) and Seismic Lateral Loading (C-F). One point of mention is that you need to consider this value – S_S. If this value is less than 230%, it means the project site is covered by Allsteel's blanket calculations. If the value is over 230%, it would require site specific analysis.

For project specification, designers should specify the height as they did previously but know that there will be an additional ⅞" added to the top of the cornice. The dimension between the floor to top of cornice will be ⅞" taller than nominal that is specified. This means you should communicate 13" as the minimum amount of space needed from top of panel (12⅛" from top of cornice) for installation and sprinklers to account for the additional ⅞" added to the new cornice.

Seismic post anchors are recommended in some applications in "non-seismic" zones (A-B).

Seismic anchors are required below panels and posts in seismic zones (C-F).

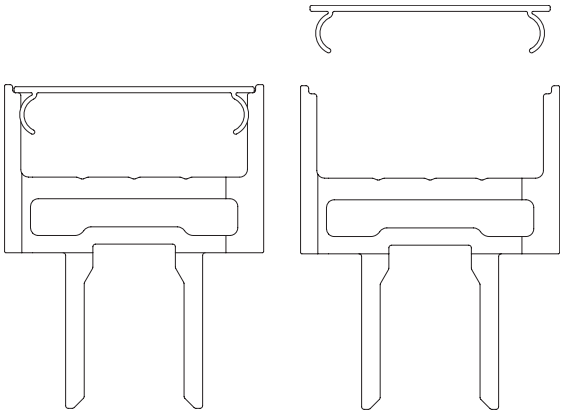
Seismic anchors are a specifiable model (BY-ANCHORKIT), which will automatically be added in CET when a seismic zone is selected.



Site specific analysis can be taken on any applications that fall outside of Allsteel's blanket calculations, or if additional documentation is needed by the Engineer of Record in SDC C-F. Please contact your Allsteel PM for more information.

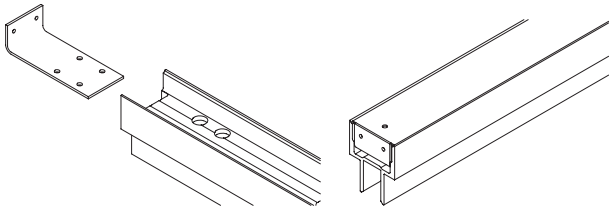
General Specification Notes:

- All doors can now be used with this freestanding solution.
- Furniture hanging on solid panels is allowed
  - Slotted standards are only on solid panels
- Butt-jointed tiles can be specified but will increase steps in installation sequence, adding cost and time to the installation.
- Tiles to the floor can be specified but will also increase steps in installation sequence, adding cost and time to the installation.
- To remove a solid top tile or monolithic tile, the cornice must be removed first due to the z bracket attachment on the back of the tile.
- Any framed/solid wall channel can be used to connect to building interface. Adjustable small wall channel, adjustable large wall channel, and adjacent door wall channel.
- To update a previously existing pavilion, the following components need to be replaced:
  - Freeways
  - Posts
  - Cornice
- The following components can be reused:
  - Panels
  - Doors / door frames / hardware
  - Zippers
  - Trim
  - Wall Channels



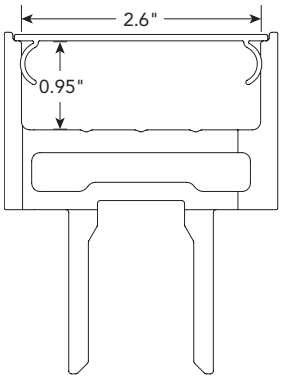
Freestanding Cornice

- Beyond freestanding and pavilion applications come with a new cornice.
- New cornice is ⅞" taller than the older when installed.
- New cornice is not backwards compatible with older freestanding applications.
- The freestanding cornice should be specified with snap-on trim to conceal all structural bracketry in cases where the freestanding application can be viewed from above. Cornice will default to without snap-on trim in CET.



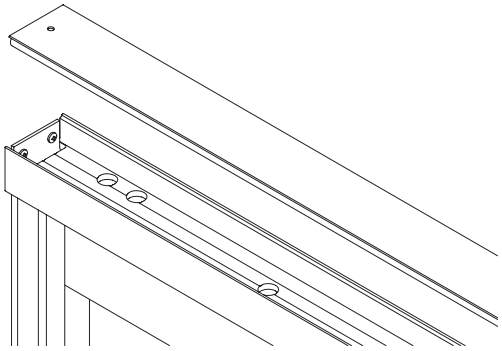
New Cornice + Optional Snap-On Trim

- The new freestanding cornice is designed for use in a straight or 90-degree corner application. The cornice contains a LH and RH pre-mitered corner at each end. Overall length is 10ft.
  - Flat post brackets fit into the cornice profile and reinforce the main corner structure. Flat post brackets should be specified with the freestanding post models.
  - When a straight splice is required at cornice connection points, the cornice can be cut flat and mated to the adjacent cornice. Cutting off the pre-mitered end requires 3" of length removed.
- 20% Scrap should be specified for cornice.
- No cornice seams should land above double sliding doors in any freestanding application.



New Cornice + Optional Snap-On Trim
Without Building Interface

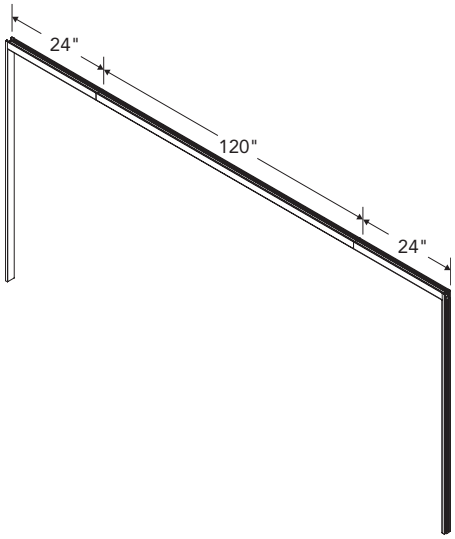
- Specify “with building interface" when the freestanding panels are connecting into adjacent building structure.
  - Contains 1 building interface bracket
  - 120"W
  - Any wall start can be utilized. The end of the cornice is notched to avoid interference beyond the panel verticals. The cornice will attach to the building directly, and the wall start is not considered structural.
- Scrap should not be specified for cornice with building interface.
- Electrical cannot route up wall channels in a freestanding application. The building interface bracket attaching the cornice to drywall cannot be drilled through.
- Blocking in the drywall is required for all building interface cornice brackets.



New Cornice + Optional Snap-On Trim
With Building Interface

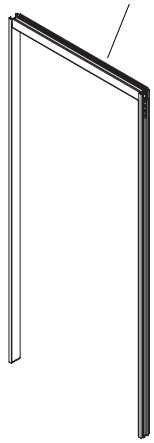
Panels & Trim

Electrical Routing



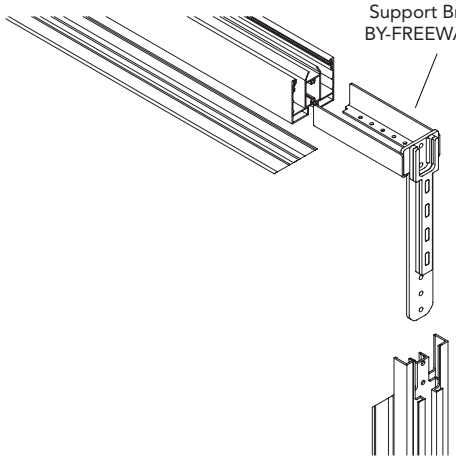
With Building Interface + Optional Snap-On Trim

- There is space for cables in general in the freestanding cornice. The recommendation is to stay within the available cross-sectional areas that could be capped by the cornice cap.



Freestanding Freeway

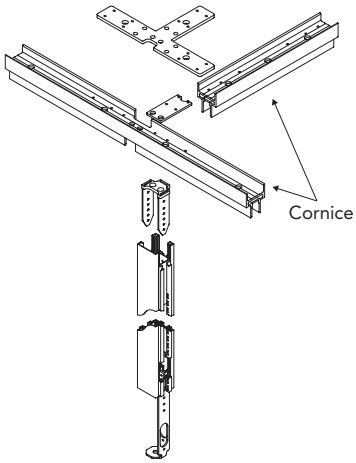
- Freeway models have been updated from a single piece vertical to vertical post with vertical trim on each side.
- Width is available up to 18ft wide in freestanding applications.
  - <120"W generates 1 horizontal piece.
  - 120"W up to 168"W generates 2 horizontals at 24" and 1 horizontal that varies in width.
  - Over 168"W generates 1 horizontal at 120"W and 2 horizontals that vary in width.
  - All parts will be cut and machined ready to assemble in the field.
  - Freeways longer than 120"W come with splice pieces.



- Vertical components remain with excess length to cut to floor measurements in field.
- BY-FSFREEWAY – Freestanding Freeway – Freeway to be used in freestanding applications. Order with 0, 1 or 2 Freestanding support brackets.
  - Replaces BY-FREEWAY (will be de-emphasized)
- BY-FREEWAYBRK – Freestanding Support Bracket – to be specified with Freeways.
  - Required at any freeway corner that is directly adjacent to a freestanding structural post. Nearly all posts will be structural – exception is in-line application.
- A two-, three- or four-way post in a freestanding application is structural.
  - Brackets will not be supplied for freeway connections that do not land next to a freestanding structural post, and will cause interference if installed adjacent to a solid or framed panel.
  - Freeway tags will indicate where the freeway and bracket variants should go within floor plan.
- Bracket quantities are calculated as follows:
  - If the freeway is not connected to a structural post on either side, no brackets are needed.
  - If the freeway is connected to a structural post on 1 side = 1 bracket
  - If the freeway is connected to a structural post on both sides = 2 brackets
- Freeways can still be specified under ceiling channel. If under ceiling channel, no brackets are needed. Another way to accomplish this detail is to specify finished ends.
- New freestanding freeways are not backwards compatible with older freestanding applications.

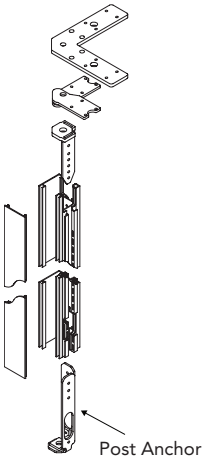
Freestanding
Freeway
BY-FSFREEWAY

Freestanding
Support Bracket
BY-FREEWAYBRK

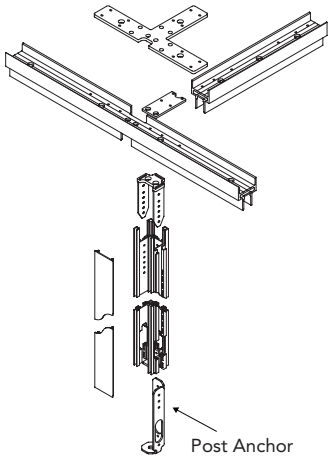


Freestanding Posts

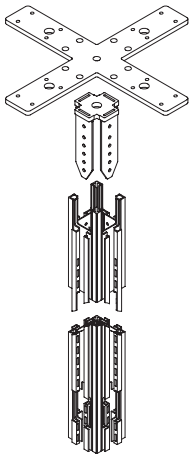
- Two-, three- and four-way freestanding posts are structural. Inline posts are not structural posts.
  - BY-POST – Freestanding Post – Structural post
  - BY-APOST – Beyond Freestanding Post with Access Trim – Structural post
  - Structural posts
    - Structurally attach to floor and to cornice
    - Shipped at nominal heights as specified
    - Three-way contains pre-cut and machined cornice pieces to provide minimal seams. It needs to be specified as with snap-on trim or without snap-on trim.
    - Two-way and three-way posts come with post anchors.
  - BY-PLATE – Freestanding Post Flat Bracket
    - Previously Boomerang Bracket (boomerang bracket has been discontinued)
    - Tagged with plan information
- New freestanding posts are not backwards compatible with older freestanding applications.



- Post Anchor Rules
  - Anchors included with all posts
  - Required in SDC C-F
  - Sometimes recommended in SDC A-B.
  - See application rules for more detail.

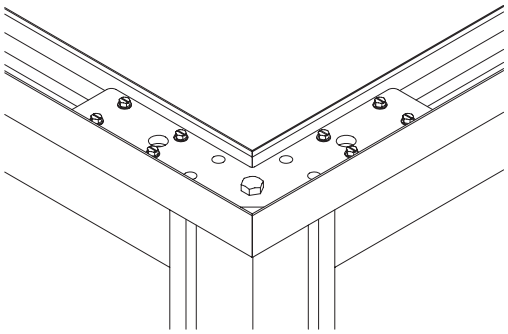


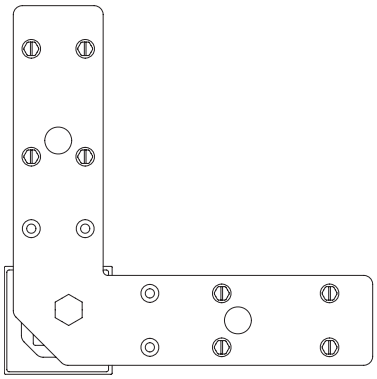
Two-Way Freestanding Post



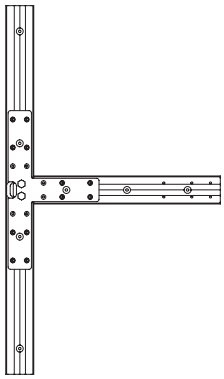
Three-Way Freestanding Post

Two-Way Freestanding Post with Access



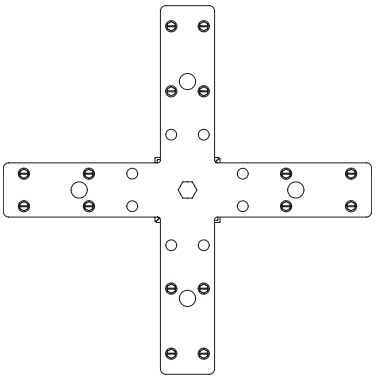


Three-Way Freestanding Post with Access



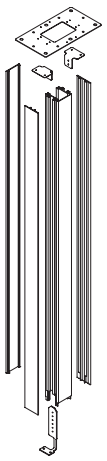
Four-Way Freestanding Post

- Post Flat Brackets
  - Specified as BY-PLATE
  - Automatically added in CET when a two-, three- or four-way freestanding post is specified
  - Installed at the top of post inside cornice



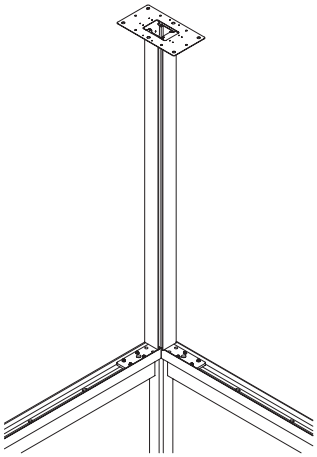
Two-Way Flat Bracket

Three-Way Flat Bracket

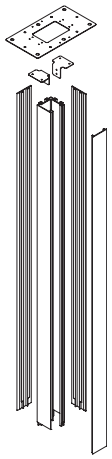


Four-Way Flat Bracket

Freestanding Electrical Routing

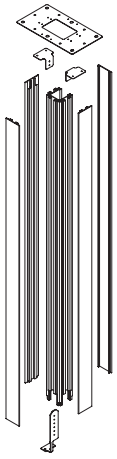


- Can use posts or electrical panels to route power up or down
- Electrical panels
  - Cornice may be field drilled up to 1" diameter in alignment with the electrified panel below.
- Posts
  - Beyond in-line standard and access posts may be used anywhere in the middle of a run. These posts are not structural.
  - For an inline post, up to two 1" diameter holes may be drilled through the centerline of the cornice.
  - Freestanding posts contain electrical pass through holes at the base for routing throughout base of the structure.
  - Allsteel recommends using freestanding access posts where routing will go up a structural post.
  - Allows lay in functionality inside post.
  - Prevents any snagging on fasteners if electrical or data were to be pulled through.
- Electrical Pass Through Information
  - Electrical cannot route up wall channels in a freestanding application. The building interface bracket attaching the cornice to drywall cannot be drilled through.
  - Two-way – Clearance for 1 standard conduit pass through at top, 2 conduit pass through at base
  - Three-way – Clearance for 2 standard conduit pass through at top, 2 conduit pass through at base
  - Four-way – Clearance for 2 standard conduit pass through at base. No room for conduits routing up because of four-way flat bracket.



Freestanding Power Pole

- Specified as BY-APOST – Beyond Freestanding Post with Access Trim – Stacking Post = Power Pole
  - – Specified as access post with stacking
  - – Power poles are non-structural elements used to shroud conduit routings extending upwards. Conduit may extend up without power pole if desired.
  - – All power poles are intended to fasten to the freestanding cornice and have features to self fixture into place.
  - – 5'H only.
  - – Straight option is not intended for above structural posts (two-, three- or four-way), and should be offset at least 12" to CL of structural post.
  - – Power pole is a new type of Infeed.
  - – Power pole is fastened to the cornice with supplied hardware, and to the deck above with hardware supplied by others.
  - – If 5'H power pole is not tall enough, the equivalent stacker post (2-way, 3-way, inline) can be ordered and spliced in. Need to use the top mounting bracket from the power pole model at the top.



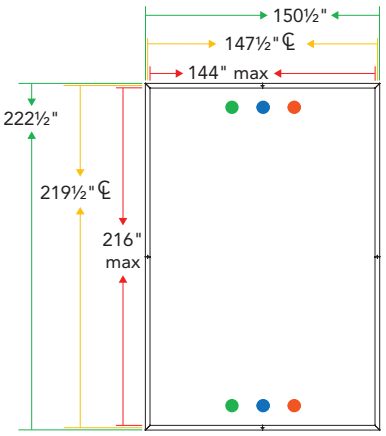
Straight

Two-Way

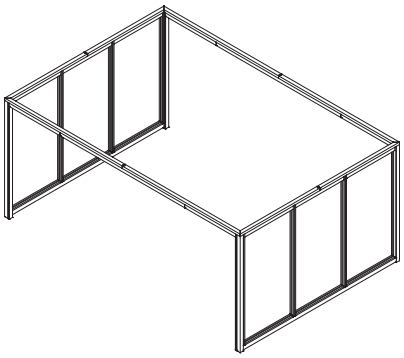
Three-Way

General Guidelines

- The following typicals consist of panels, freeways, or doors between **4 structural posts.** They are labeled as modules. It is recommended that all A-B modules are anchored into the floor at posts, unless otherwise noted. **The exception is 4-sided room modules – posts do NOT need to be anchored.**
- All framed glass types are possible in SDC A-B.
- Maximum height is 120"H unless otherwise noted.
- Minimum height is 86" due to clearance needed for freeways and doors to meet 80"H clear opening.
- Panel runs are 24"W minimum (27.5" CL TO CL) for four-sided modules.
- All modules can connect at structural posts in any direction.
- ALL DIMENSIONS ARE LENGTH MAXIMUMS UNLESS OTHERWISE NOTED.
- If Worksurface Mounting, worksurfaces must be ≤ 135lbs self weight at 42" AFF (60" x 72" worksurface max).
- If TV Mounting, TVs must be ≤ 170lbs at ≤ 78" AFF, no pivot or articulating / extending arm allowed. 1 TV allowed per module. If you have multiple modules connected, TVs are allowed to be back to back.
- Only a framed/solid run can be replaced with drywall. Reference the orange dots in the modules.
  - If drywall is acting as one of the 4 walls of a module, the perpendicular walls coming off the drywall should follow the rules of a framed/solid run. Find the correct module that applies with those walls as framed/solid runs.
  - A post to post freeway or wood slat run perpendicular to drywall should follow the rules of a framed/solid run.



SDC A-B:
Freestanding Panel Module Possibilities

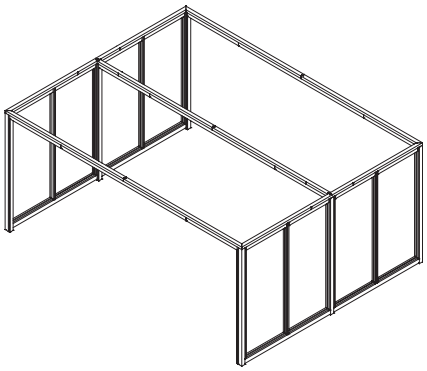


1. Standalone - 2 Framed / Solid Panel Runs between 2 Freeways
2. Connected - 2 Framed / Solid Panel Runs between 2 Freeways
3. Standalone - 1 Framed / Solid Panel Run with 3 Freeways
4. Connected - 1 Framed / Solid Panel Run with 3 Freeways
5. Standalone - L-Configured Framed / Solid Panel Runs with 2 Freeways
6. Connected - L-Configured Framed / Solid Panel Runs with 2 Freeways
7. Standalone - 4 Freeways
8. Connected - 4 Freeways
9. Standalone - 3 Framed / Solid Panel Runs with 1 Freeway, Single Door
10. Connected - 3 Framed / Solid Panel Runs with 1 Freeway, Single Door
11. Standalone - 3 Framed / Solid Panel Runs with 1 Freeway, Double Door & 48"W Door
12. Connected - 3 Framed / Solid Panel Runs with 1 Freeway, Double Door & 48"W Door
13. Standalone - 3 Framed / Solid Panel Runs with 1 Freeway, Freeway over 42"W
14. Connected - 3 Framed / Solid Panel Runs with 1 Freeway, Freeway over 42"W
15. Standalone - 4 Framed / Solid Panel Runs and Phone booth, Single Door
16. Connected - 4 Framed / Solid Panel Runs and Phone booth, Single Door
17. Standalone - 4 Framed / Solid Panel Runs and Phone booth, Double Door & 48"W Door
18. Connected - 4 Framed / Solid Panel Runs and Phone booth, Double Door & 48"W Door
19. Standalone - 4 Framed / Solid Panel Runs and Phone booth, Freeway over 42"W
20. Connected - 4 Framed / Solid Panel Runs and Phone booth, Freeway over 42"W
21. Standalone - 1 Framed / Solid Panel Run between Building Structure

Panels & Trim

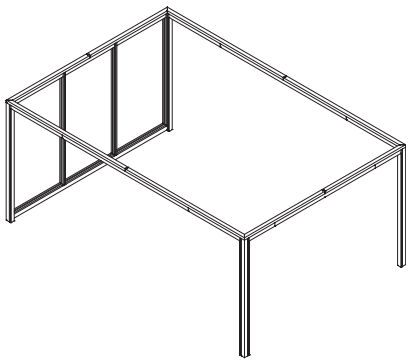
1. **Standalone**
   2 Framed / Solid Panel Runs between 2 Freeways

   - If this module is standalone as shown:
     - Panels can be specified up to 144"W.
     - Freeways can be specified up to 216"W.
   - If using solid panels or posts:
     - Worksurface – anywhere along run (solid panels only)
     - TV – anywhere along run (solid panels or posts)
     - Framed / Solid run can be replaced with drywall



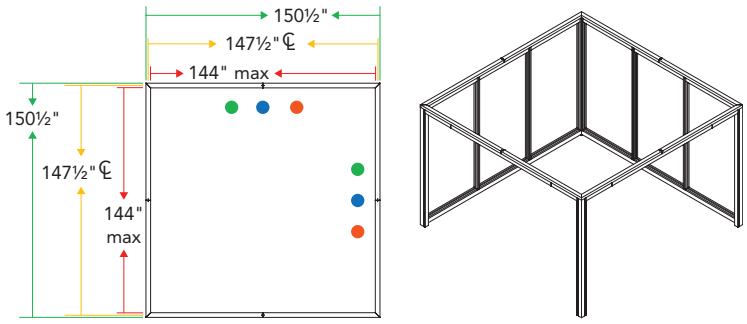
2. **Connected**
   2 Framed / Solid Panel Runs between 2 Freeways

   - If this module is connected to other modules on any side:
     - The framed / solid panels are limited to 80"W maximum.
     - Freeways can be specified up to 216"W.
   - If using solid panels or posts:
     - Worksurface – anywhere along run (solid panels only)
     - TV – anywhere along run (solid panels or posts)
     - Framed / Solid run can be replaced with drywall



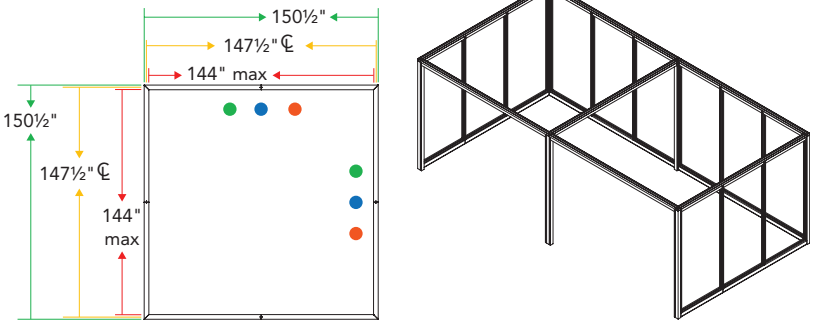
3. **Standalone**
   1 Framed / Solid Panel Run with 3 Freeways

   - If this module is standalone as shown:
     - Panels can be specified up to 144"W.
     - Freeway opposite panels can be specified up to 144"W.
     - Freeways perpendicular to panels can be specified up to 216"W.
   - If using solid panels or posts:
     - Worksurface – anywhere along run (solid panels only)
     - TV – anywhere along run (solid panels or posts)
     - Framed / Solid run can be replaced with drywall



4. Connected
1 Framed / Solid Panel Run with
3 Freeways

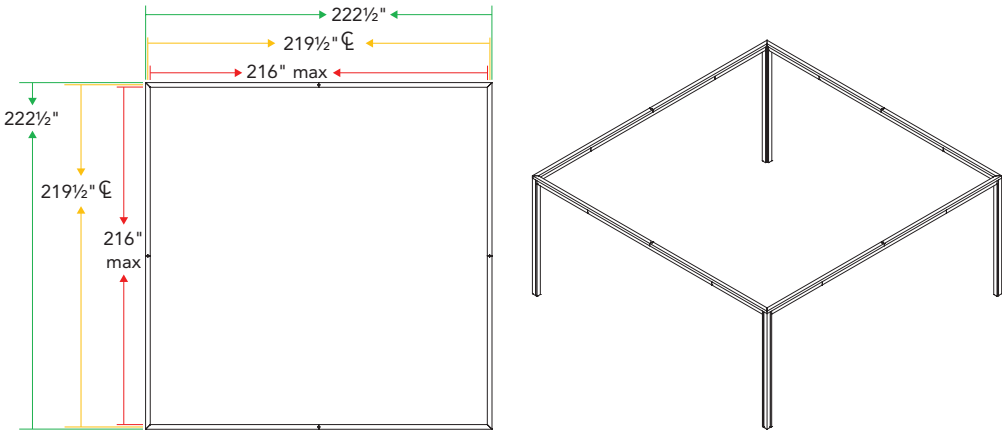
- If this module is connected to other modules on any side:
  - The framed / solid panel runs are limited to 80"W maximum.
  - Freeways opposite to panels can be specified up to 80"W.
  - Freeways perpendicular to panels can be specified up to 216"W.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Framed / Solid run can be replaced with drywall



5. Standalone
L-Configured Framed / Solid Panel Runs with
2 Freeways

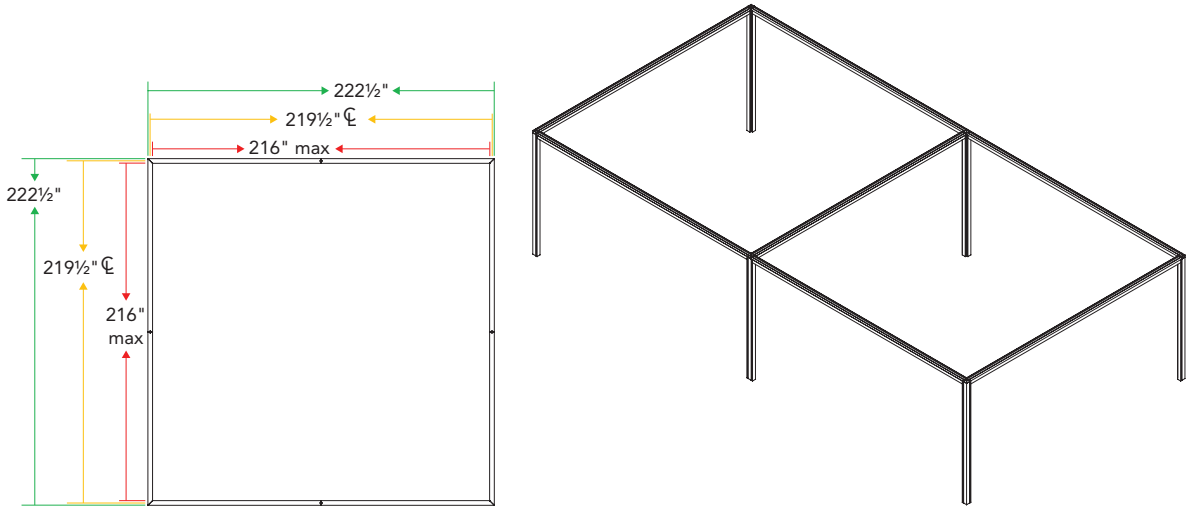
- If this module is standalone as shown:
  - Panels can be specified up to 144"W.
  - Freeways can be specified up to 144"W.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Framed / Solid run can be replaced with drywall

6. Connected
L-Configured Framed / Solid Panel Runs with
2 Freeways



- If this module is connected to other modules on any side:
  - The framed / solid panels are limited to 144"W maximum.
  - Freeways can be specified up to 144"W.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Framed / Solid run can be replaced with drywall

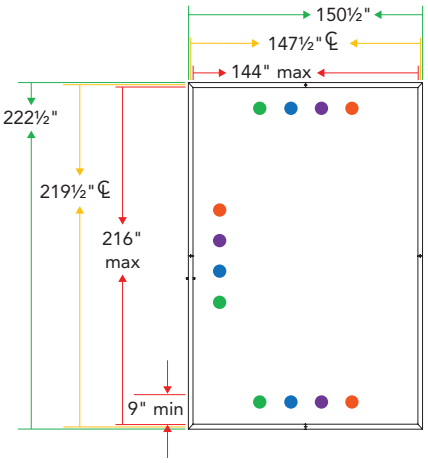
Panels & Trim



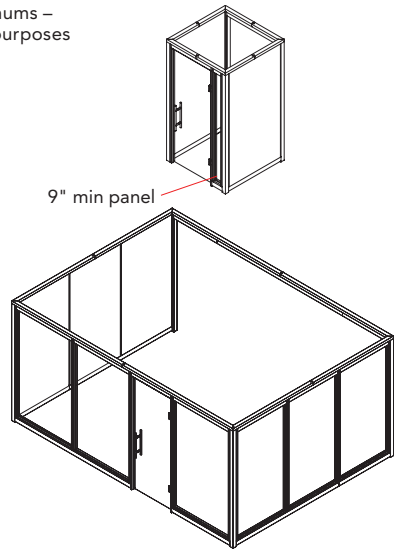
7. Standalone
4 Freeways

- If this module is standalone as shown:
  - Freeways can be specified up to 216"W.
  - No worksurface or TV mounting allowed.

8. Connected
4 Freeways



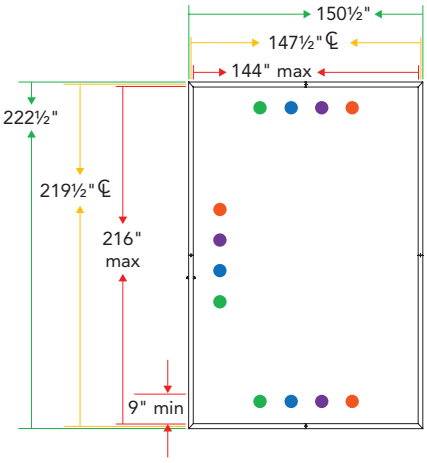
- If this module is connected to other modules on any side:
  - Freeways can be specified up to 216"W.
  - No worksurface or TV mounting allowed.



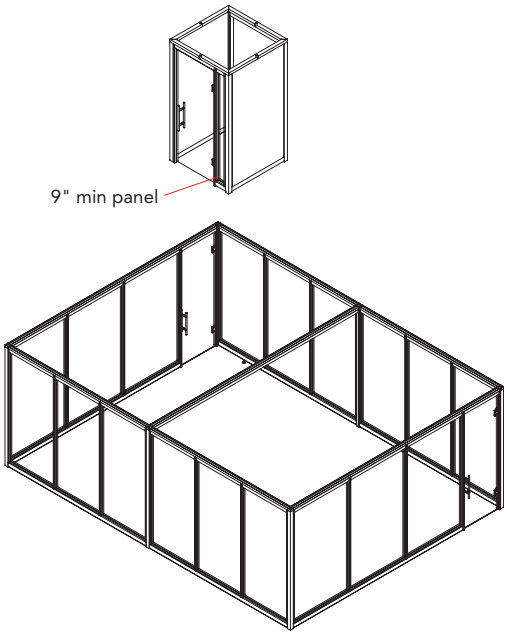
9. Standalone

3 Framed / Solid Panel Runs with 1 Freeway – SINGLE DOOR

- If this module is standalone as shown:
  - Panel run with door can be specified up to 216"W.
  - Panel runs perpendicular to door can be specified up to 144"W.
  - Freeway can be specified up to 216"W.
  - Single door or freeway up to 42"W can be added to 216" max panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

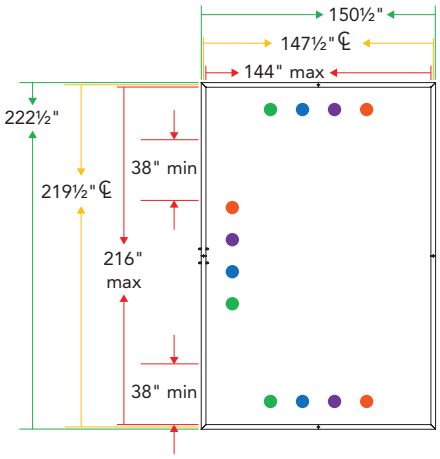


Absolute minimums – for illustrative purposes

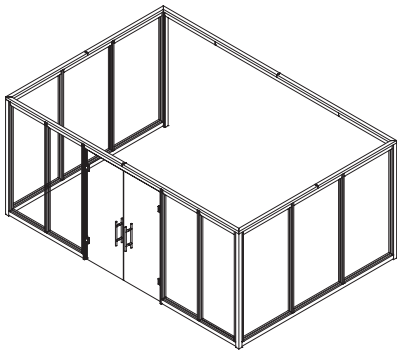


10. Connected

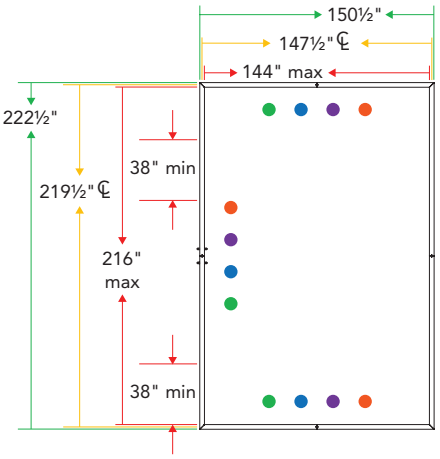
3 Framed / Solid Panel Runs with 1 Freeway – SINGLE DOOR



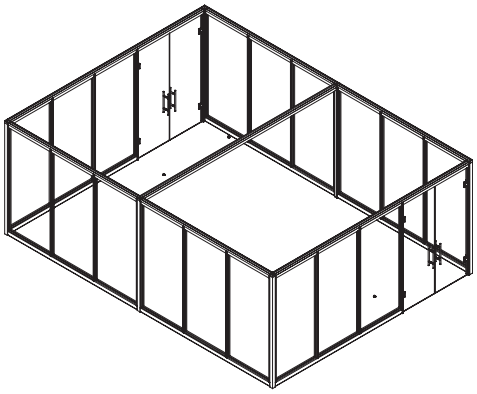
- If this module is connected to other modules on any side:
  - Panel run with door can be specified up to 216"W.
  - Panel runs perpendicular to door can be specified up to 144"W.
  - Freeway can be specified up to 216"W.
  - Single door or freeway up to 42"W can be added to 216" max panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall



Panels & Trim

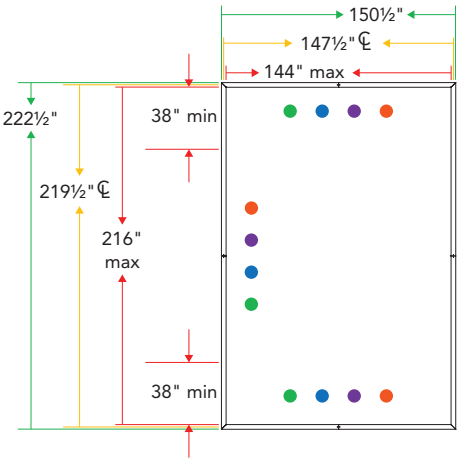


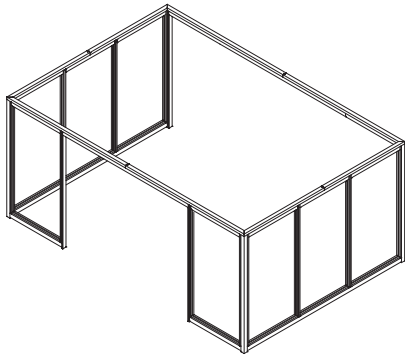
11. Standalone
3 Framed / Solid Panel Runs with
1 Freeway – DOUBLE DOOR &
48"W DOOR



- If this module is standalone as shown:
  - Panel run with door can be specified up to 216"W.
  - Panel runs perpendicular to door can be specified up to 144"W.
  - Freeway can be specified up to 216"W.
  - A double door or 48"W door can be added to 216" max panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with door.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywalll

12. Connected
3 Framed / Solid Panel Runs with
1 Freeway – DOUBLE DOOR &
48"W DOOR

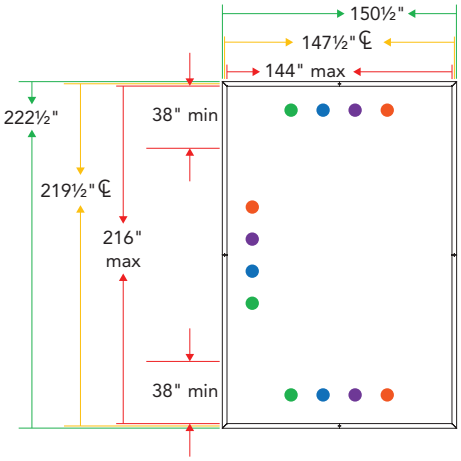


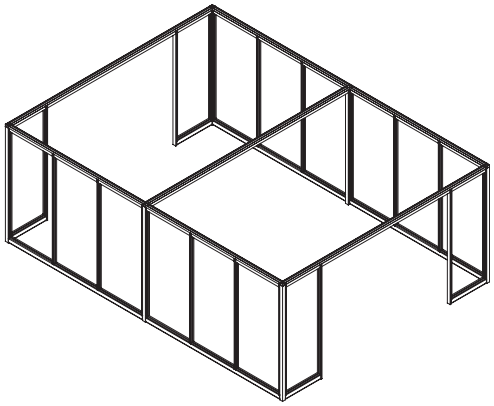


- If this module is connected to other modules on any side:
  - Panel run with door can be specified up to 216"W.
  - Panel runs perpendicular to door can be specified up to 144"W.
  - Freeway can be specified up to 216"W.
  - A double door or 48"W door can be added to 216" max panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with door.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

13. Standalone

3 Framed / Solid Panel Runs with 1 Freeway – FREEWAY over 42"W

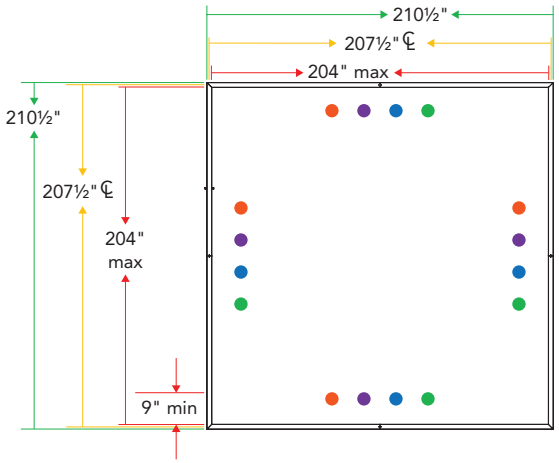


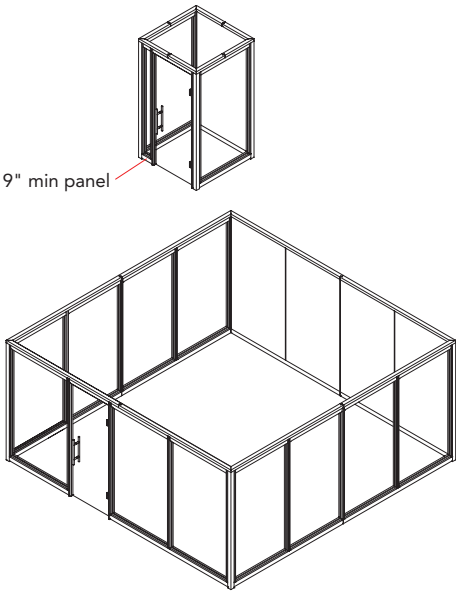


- If this module is standalone as shown:
  - Panel run with freeway and wing panel can be specified up to 216"W.
  - Panel runs perpendicular to freeway with wing panel can be specified up to 144"W.
  - Post to post freeway can be specified up to 216"W.
  - Freeway with wing panel can only be added to 216" max panel run. Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

14. Connected

3 Framed / Solid Panel Runs with 1 Freeway – FREEWAY over 42"W

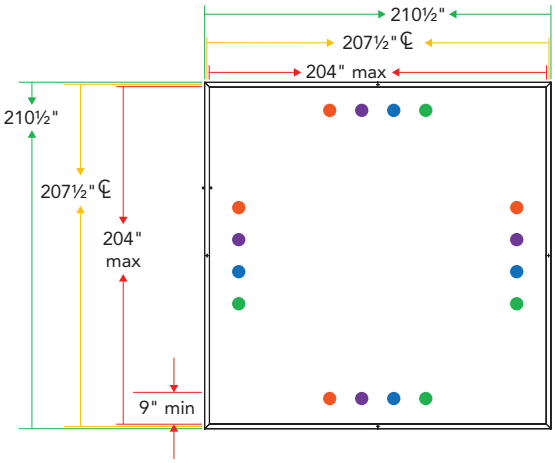




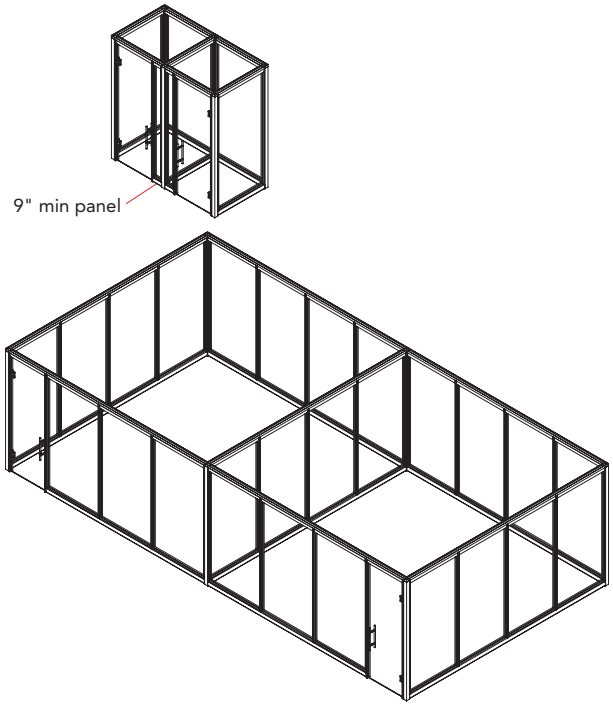
- If this module is connected to other modules on any side:
  - Panel run with freeway and wing panel can be specified up to 216"W.
  - Panel runs perpendicular to freeway with wing panel can be specified up to 144"W.
  - Post to post freeway can be specified up to 216"W.
  - Freeway with wing panel can only be added to 216" max panel run. Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

Panels & Trim

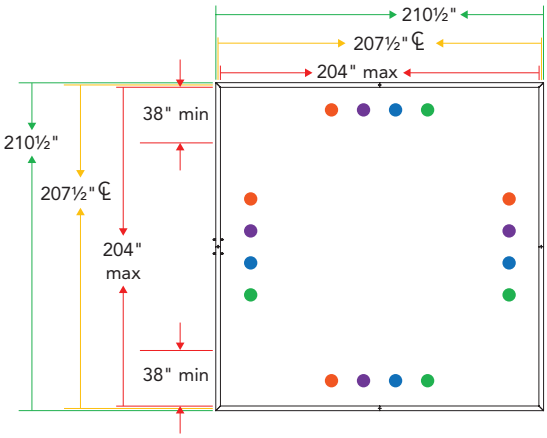
15. Standalone
4 Framed / Solid Panel Runs and Phone Booth – SINGLE DOOR



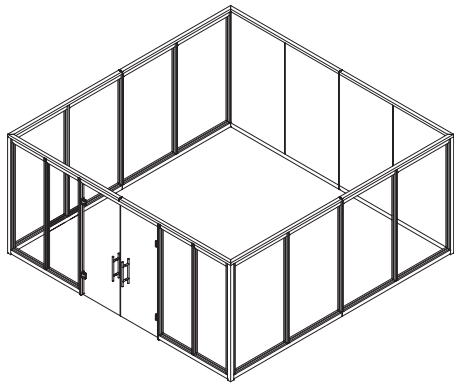
- If this module is standalone as shown:
  - Panel runs can be specified up to 204"W.
  - Single door or freeway up to 42"W can be added to any panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall



16. Connected
4 Framed / Solid Panel Runs and Phone Booth – SINGLE DOOR

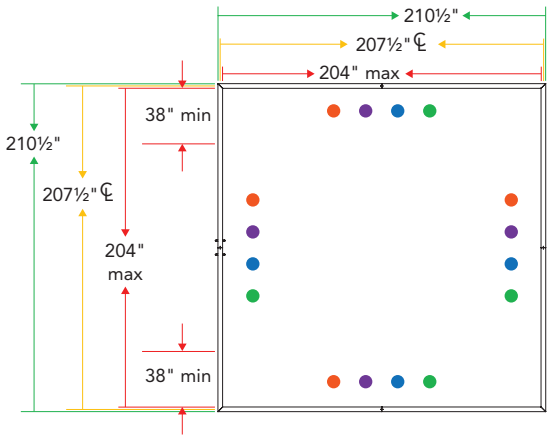


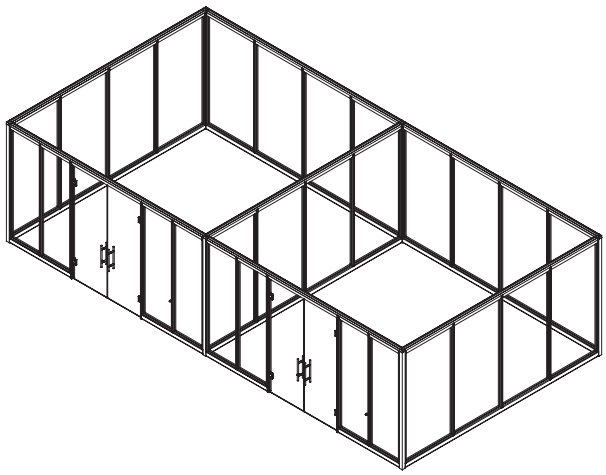
- If this module is connected to other modules on any side:
  - Panel runs can be specified up to 204"W.
  - Single door or freeway up to 42"W can be added to any panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall



17. Standalone

4 Framed / Solid Panel Runs and Phone Booth – DOUBLE DOOR & 48"W DOOR



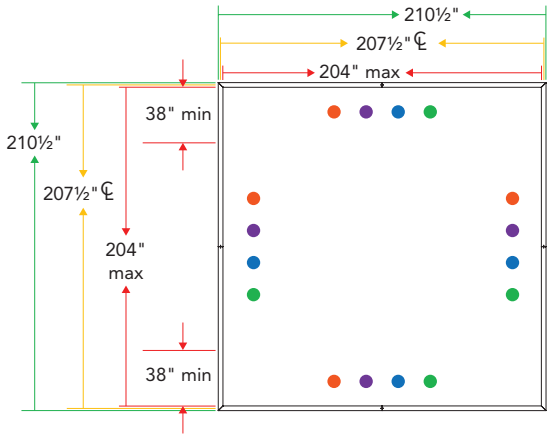


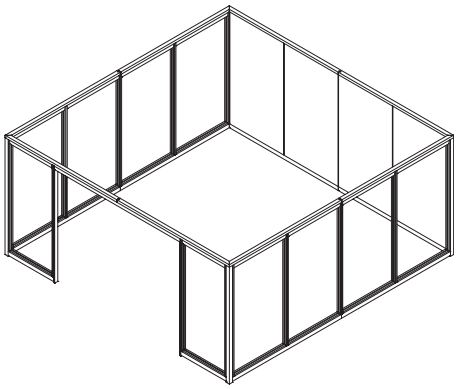
- If this module is standalone as shown:
  - Panel runs can be specified up to 204"W.
  - A double door or 48"W door can be added to any panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

18. Connected

4 Framed / Solid Panel Runs and Phone Booth – DOUBLE DOOR & 48"W DOOR

- If this module is connected to other modules on any side:
  - Panel runs can be specified up to 204"W.
  - A double door or 48"W door can be added to any panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

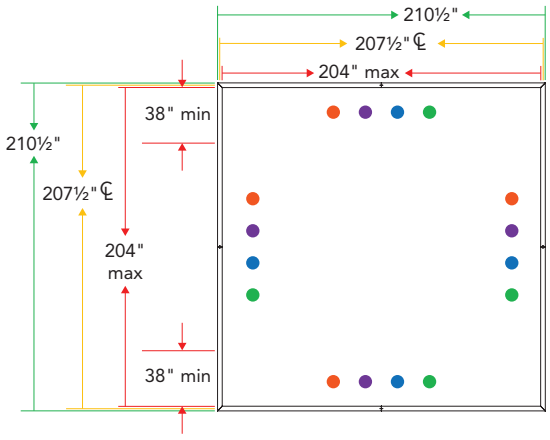


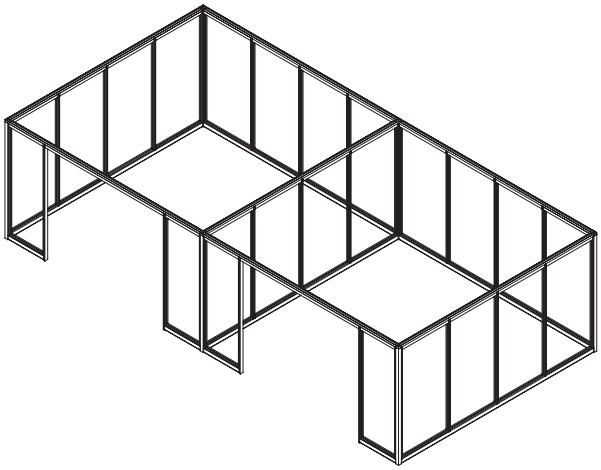


Panels & Trim

19. Standalone

4 Framed / Solid Panel Runs and Phone Booth – FREEWAY over 42"W



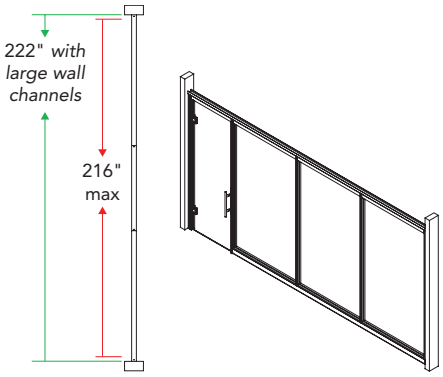


- If this module is standalone as shown:
  - Panel runs can be specified up to 204"W.
  - A freeway over 42"W can be added to any panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with freeway.
  - 1 freeway allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall

20. Connected

4 Framed / Solid Panel Runs and Phone Booth – FREEWAY over 42"W

- If this module is connected to other modules on any side:
  - Panel runs can be specified up to 204"W.
  - A freeway over 42"W can be added to any panel run.
  - Must have 38"W framed / solid wing wall at 1 post and additional 38"W framed / solid minimum wall within run with freeway.
  - 1 freeway allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid panels only)
  - TV – anywhere along run (solid panels or posts)
  - Overhead – mount anywhere along run (solid panels only)
  - Framed / Solid run can be replaced with drywall



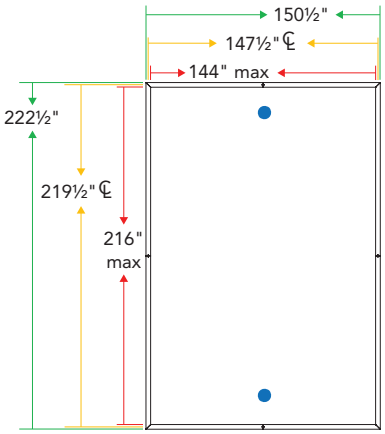
21. Standalone

1 Framed / Solid Panel Run between Building Structure

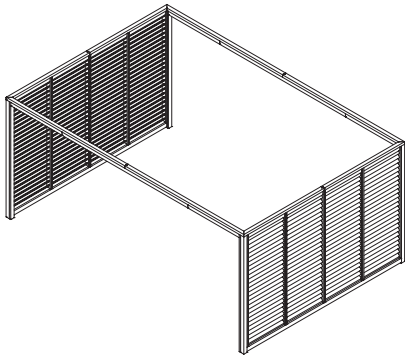
- Any size door or freeway can be added anywhere within the run.
- 216"W freeway is possible if desired.
- 1 door or freeway allowed per module.
- No worksurface or TV mounting allowed.

General Guidelines

- The following typicals consist of panels, freeways, doors and wood slat panels between 4 structural posts. They are labeled as modules. It is recommended that all A-B modules are anchored into the floor at posts, unless otherwise noted. **The exception is 4-sided room modules – posts do NOT need to be anchored.**
- Maximum height varies – some modules are limited to 96"H; others can go to 120"H.
- Minimum height is 86" due to clearance needed for freeways and doors to meet 80"H clear opening.
- Panel runs are limited to 24"W minimum – (27.5" CL TO CL) for four-sided modules.
- All modules can connect at structural posts in any direction.
- ALL DIMENSIONS ARE LENGTH MAXIMUMS UNLESS OTHERWISE NOTED.
- If Worksurface Mounting, worksurfaces must be ≤ 135lbs self weight at 42" AFF (60" x 72" worksurface max).
- If TV Mounting, TVs must be ≤ 170lbs at ≤ 78" AFF, no pivot or articulating / extending arm allowed. 1 TV allowed per module. If you have multiple modules connected, TVs are allowed to be back to back.
- Wood slat panel standard special sizes reminder:
  - Widths: 24"W, 30"W, 36"W, 42"W, 48"W
  - Heights: 96"H, 102"H, 108"H, 112"H, 120"H
- Applications with wood slat runs connecting at a 2-way post will always require site specific calculations. These applications are not covered in Allsteel's blanket calculations.
- Only a framed/solid run can be replaced with drywall. Reference the orange dots in the modules.
  - If drywall is acting as one of the 4 walls of a module, the perpendicular walls coming off the drywall should follow the rules of a framed/solid run. Find the correct module that applies with those walls as framed/solid runs.
  - A post to post freeway or wood slat run perpendicular to drywall should follow the rules of a framed/solid run.



SDC A-B: Freestanding Panel Module Possibilities



22. Standalone - 2 Wood Slat Runs between 2 Freeways
23. Connected - 2 Wood Slat Runs between 2 Freeways
24. Standalone - 1 Wood Slat Run and 1 Framed / Solid Panel Run between 2 Freeways

  - TV – anywhere along run (solid panels or posts)
  - Framed / Solid run can be replaced with drywall

General Guidelines

- The following typicals consist of panels, freeways, or doors between 4 structural posts. They are labeled as modules. **All C-F modules must be anchored into the floor at posts and all panels must be anchored into the floor using standard seismic anchors.**
- **Framed glass and/or solid panels with an integrated glass clerestory must be ⅜" laminated glass when freestanding in SDC C-F.**
- Maximum height varies between 96"H - 120"H.
- Minimum height is 86" due to clearance needed for freeways and doors to meet 80"H clear opening.
- Panel runs are limited to 24"W minimum – (27.5" CL TO CL) for four-sided modules.
- All modules can connect at structural posts in any direction.
- ALL DIMENSIONS ARE LENGTH MAXIMUMS UNLESS OTHERWISE NOTED.
- If Worksurface Mounting, worksurfaces must be ≤ 135lbs self weight at 42" AFF (60" x 72" worksurface max).
- If TV Mounting, TVs must be ≤ 60lbs at ≤ 78" AFF, ≤ 6" CG from Panel Surface, no pivot or articulating / extending arm allowed. 1 TV allowed per module. If you have multiple modules connected, TVs are allowed to be back to back.
- Only a framed/solid run can be replaced with drywall. Reference the orange dots in the modules.
  - If drywall is acting as one of the 4 walls of a module, the perpendicular walls coming off the drywall should follow the rules of a framed/solid run. Find the correct module that applies with those walls as framed/solid runs.
  - A post to post freeway or wood slat run perpendicular to drywall should follow the rules of a framed/solid run.

  - Panel run with door can be specified up to 162"W.
  - Panel runs perpendicular to door can be specified up to 72"W.
  - Freeway can be specified up to 162"W.
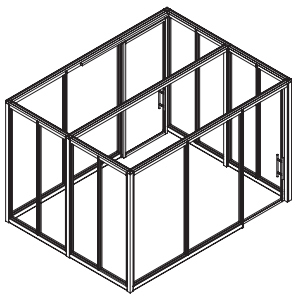
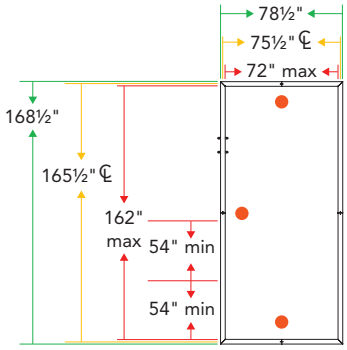
  - A 48"W door can be added to 162" max panel run.
  - Must have 54"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run with door.
  - **Height Limitation: 96"H Maximum**
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall

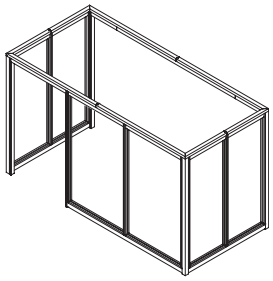


43. Connected

3 Framed / Solid Panel Runs with 1 Freeway – 48"W DOOR

- If this module is connected to other modules on any side:
  - Panel run with door can be specified up to 162"W.
  - Panel runs perpendicular to door can be specified up to 60"W.
  - Freeway can be specified up to 162"W.
  - A 48"W door can be added to 162" max panel run.
  - Must have 544"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run with door.
  - **Height Limitation: 96"H Maximum**
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall

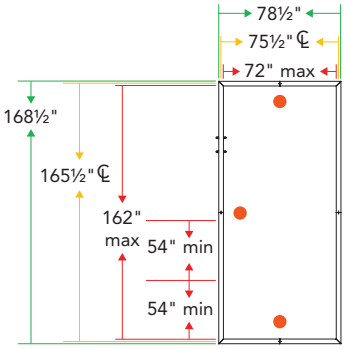


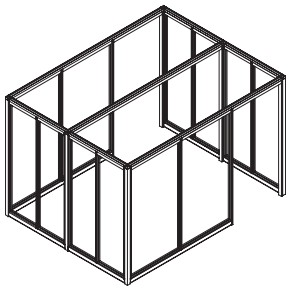


44. Standalone

3 Framed / Solid Panel Runs with 1 Freeway – FREEWAY over 42"W

- If this module is standalone as shown:
  - Panel run with freeway and wing panel can be specified up to 162"W.
  - Panel runs perpendicular to freeway with wing panel can be specified up to 72"W.
  - Post to post freeway can be specified up to 162"W.
  - Freeway with wing panel can only be added to 162" max panel run. Must have 54"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run.
  - **Height Limitation: 96"H Maximum**
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall

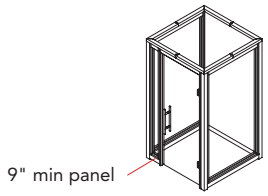


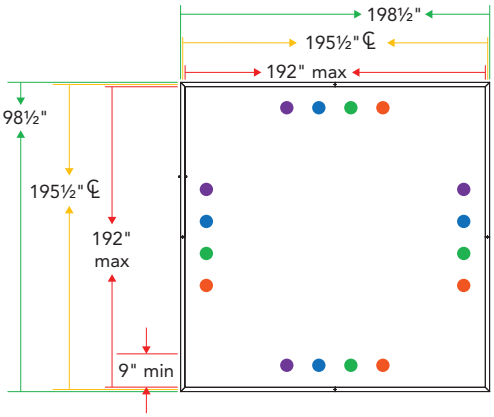


45. Connected

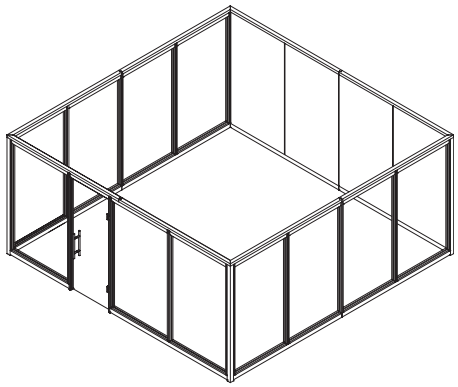
3 Framed / Solid Panel Runs with 1 Freeway – FREEWAY over 42"W

- If this module is connected to other modules on any side:
  - Panel run with freeway and wing panel can be specified up to 162"W.
  - Panel runs perpendicular to freeway with wing panel can be specified up to 60"W.
  - Post to post freeway can be specified up to 162"W.
  - Freeway with wing panel can only be added to 162" max panel run. Must have 54"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run.
  - **Height Limitation: 96"H Maximum**
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall





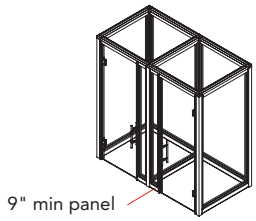
Panels & Trim

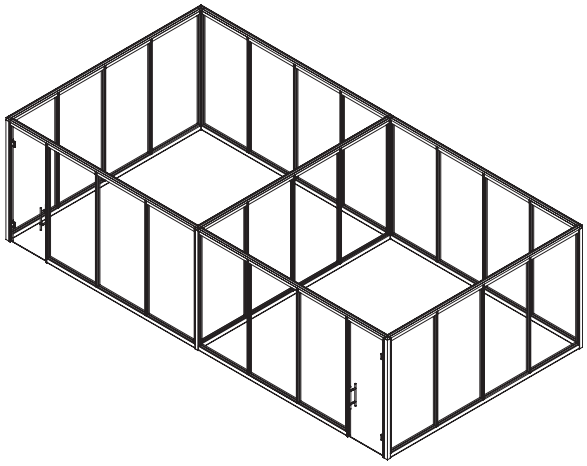


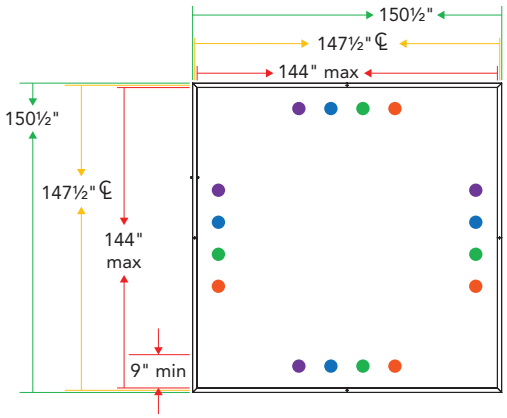
46. Standalone

4 Framed / Solid Panel Runs – SINGLE DOOR

- If this module is standalone as shown:
  - Panel runs can be specified up to 192"W.
  - Single door or freeway up to 42"W can be added to any panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid only)
  - TV – anywhere along run
  - Overhead – mount anywhere along run (solid only)
  - Framed / Solid run can be replaced with drywall

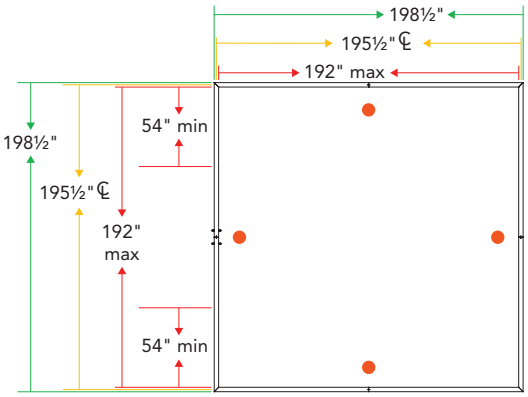




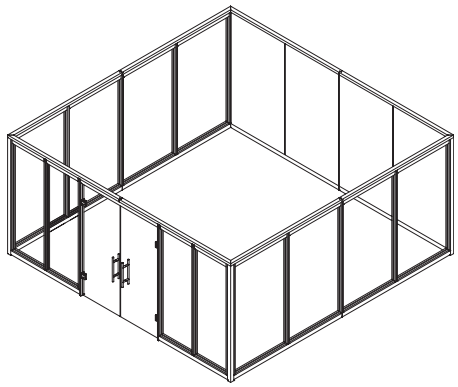


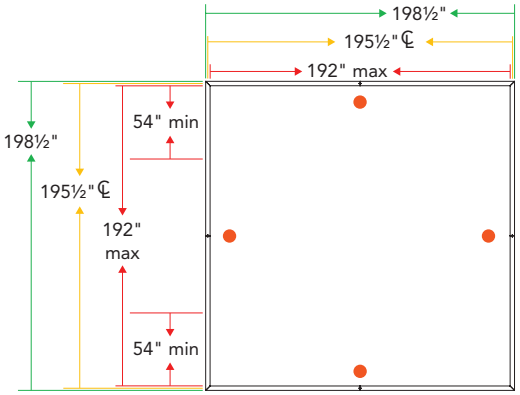
47. Connected

4 Framed / Solid Panel Runs – SINGLE DOOR

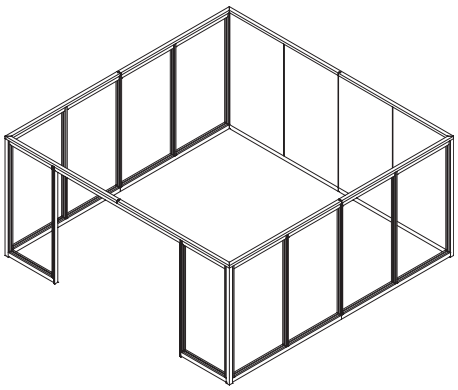


- If this module is connected to other modules on any side:
  - Panel runs can be specified up to 144"W.
  - Single door or freeway up to 42"W can be added to any panel run.
  - Must have minimum 9"W wing panel adjacent to post on one side within run with door.
  - 1 door allowed per module.
- If using solid panels or posts:
  - Worksurface – anywhere along run (solid only): If work surface is added, height limited to 96"H.
  - TV – anywhere along run: If TV is added, height is limited to 108"H.
  - Overhead – mount anywhere along run (solid only): If overhead is added, height limited to 96"H.
  - Framed / Solid run can be replaced with drywall: 96"H

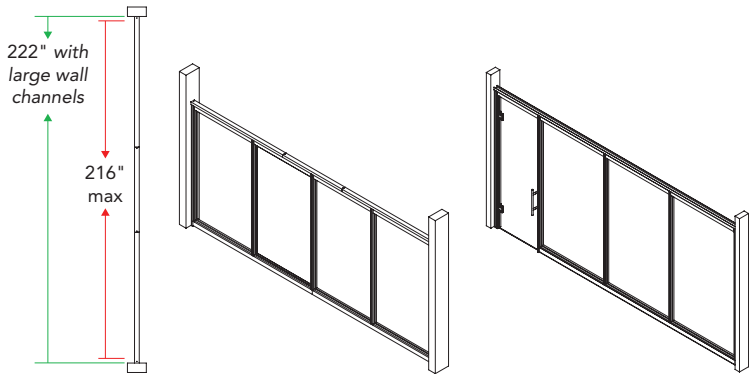




48. Standalone
4 Framed / Solid Panel Runs – DOUBLE DOOR OR 48"W DOOR



- If this module is standalone as shown:
  - Panel runs can be specified up to 192"W.
  - A double door or 48"W door can be added to any panel run.
  - Must have 54"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run with door.
  - 1 door allowed per module.
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall



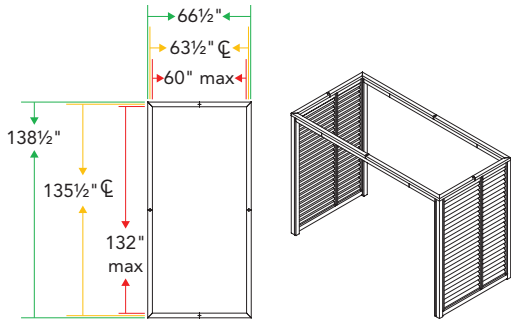
49. Standalone
4 Framed / Solid Panel Runs – FREEWAY over 42"W

- If this module is standalone as shown:
  - Panel runs can be specified up to 192"W.
  - A freeway over 42"W can be added to any panel run.
  - Must have 54"W framed / solid wing wall at 1 post and additional 54"W framed / solid minimum wall within run with freeway.
  - 1 freeway allowed per module.
- No worksurface, overhead or TV mounting allowed.
  - Framed / Solid run can be replaced with drywall

50. Standalone
1 Framed / Solid Panel Run between Building Structure

- Any size door or freeway can be added anywhere within the run.
- 216"W freeway is possible if desired.
- 1 door or freeway allowed per module.
- No worksurface or TV mounting allowed.

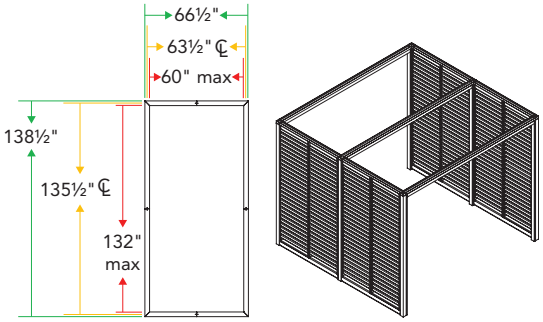
General Guidelines



- The following typicals consist of panels, freeways, doors and wood slat panels between 4 structural posts. They are labeled as modules. **All C-F modules must be anchored into the floor at posts and all panels must be anchored into the floor using standard seismic anchors.**
- **Framed glass MUST be ⅜" laminated in SDC C-F.**
- **Maximum height is 96"H.**
- Minimum height is 86"H due to clearance needed for freeways and doors to meet 80"H clear opening.
- Panel runs are limited to 24"W minimum – (27.5" CL TO CL) for four-sided modules.
- All modules can connect at structural posts in any direction.
- ALL DIMENSIONS ARE LENGTH MAXIMUMS UNLESS OTHERWISE NOTED.
- If Worksurface Mounting, worksurfaces must be ≤ 135lbs self weight at 42" AFF (60" x 72" worksurface max).
- If TV Mounting, TVs must be ≤ 60lbs at ≤ 78" AFF, ≤ 6" CG from Panel Surface, no pivot or articulating / extending arm allowed. 1 TV allowed per module. If you have multiple modules connected, TVs are allowed to be back to back.
- Wood slat panel standard special sizes reminder:
  - Widths: 24"W, 30"W, 36"W, 42"W, 48"W
  - Heights: 96"H, 102"H, 108"H, 112"H, 120"H
- Applications with wood slat runs connecting at a 2-way post will always require site specific calculations. These applications are not covered in Allsteel's blanket calculations.
- Only a framed/solid run can be replaced with drywall. Reference the orange dots in the modules.
  - If drywall is acting as one of the 4 walls of a module, the perpendicular walls coming off the drywall should follow the rules of a framed/solid run. Find the correct module that applies with those walls as framed/solid runs.
  - A post to post freeway or wood slat run perpendicular to drywall should follow the rules of a framed/solid run.

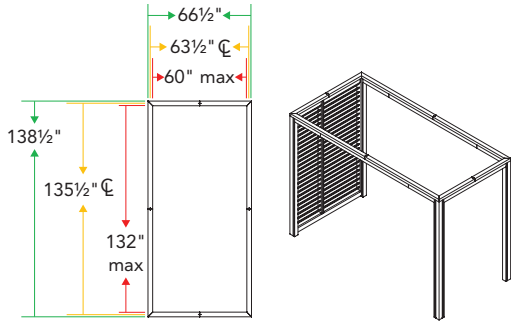
SDC C-F:
Freestanding Panel Module Possibilities

51. Standalone - 2 Wood Slat Runs between 2 Freeways
52. Connected - 2 Wood Slat Runs between 2 Freeways
53. Standalone - 1 Wood Slat Run with 3 Freeways
54. Connected - 1 Wood Slat Run with 3 Freeways
55. Connected - 2 Framed / Solid Panel Runs between 1 Wood Slat Run and 1 Freeway



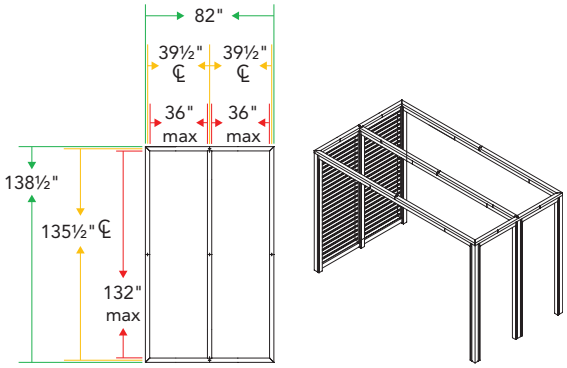
51. Standalone
2 Wood Slat Runs between 2 Freeways

- If this module is standalone as shown:
  - Wood slat runs can be specified up to 60"W.
  - Freeways can be specified up to 132"W.
- Wood Slat Planning: 30"W x 2 = 60"W or 24"W + 36"W = 60"W
- No TV mounting possible.
- **Height Limitation: 96"H Maximum**



52. Connected
2 Wood Slat Runs between 2 Freeways

- If this module is connected to other modules on any side:
  - Wood slat runs can be specified up to 60"W.
  - Freeways can be specified up to 132"W.
- Wood Slat Planning: 30"W x 2 = 60"W or 24"W + 36"W = 60"W
- No TV mounting possible.
- **Height Limitation: 96"H Maximum**

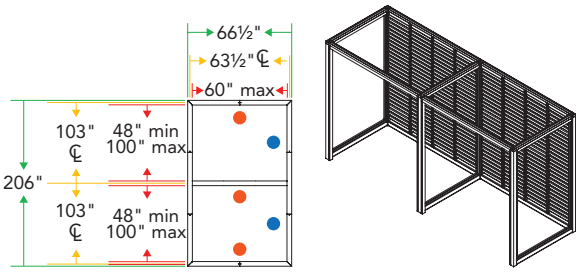


53. Standalone
1 Wood Slat Run with 3 Freeways

- If this module is standalone as shown:
  - Wood slat run and freeway opposite wood slats can be specified up to 60"W.
  - Freeways perpendicular to wood slats can be specified up to 132"W.
- Wood Slat Planning: 30"W x 2 = 60"W or 24"W + 36"W = 60"W
- No TV mounting possible.
- **Height Limitation: 96"H Maximum**

54. Connected
1 Wood Slat Run with 3 Freeways

- If this module is connected to other modules on any side:
  - Wood slat run and freeways opposite wood slats can be specified up to 36"W.
  - Freeways perpendicular to wood slats can be specified up to 132"W.
- Wood Slat Planning: 36"W wood slat panels to be used.
- No TV mounting possible.
- **Height Limitation: 96"H Maximum**

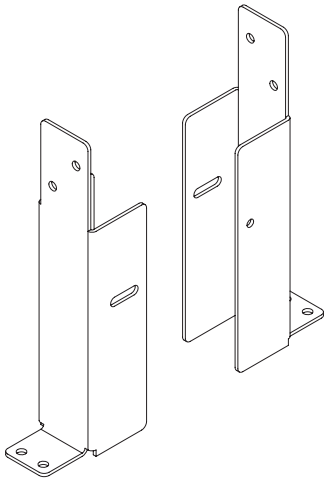


Panels & Trim

Beyond® — Working with Freestanding & Wood Slats: SDC C-F

55. Connected

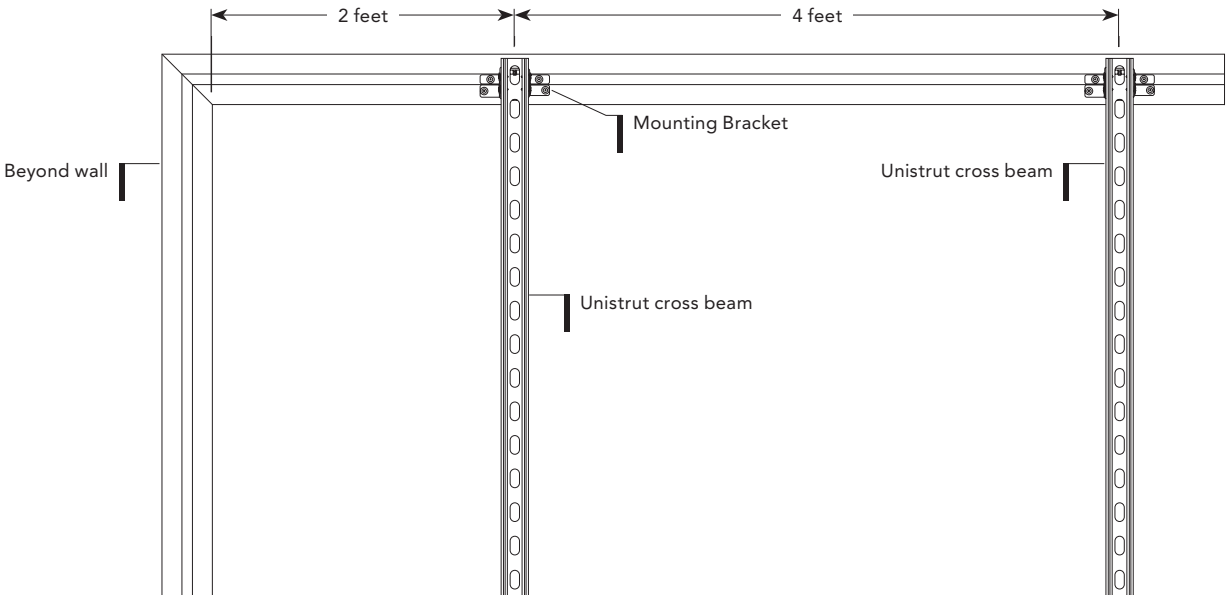
2 Framed / Solid Panel Runs between 1 Wood Slat Run and 1 Freeway



- No standalone option for this module.
- Must specify at least 2 connected modules as shown:
  - No modules can be connected to wood slat run.
  - Wood slat run and freeway opposite wood slats can be specified up to 99.5"W. Required minimum being 48"W.
  - Framed / solid panel runs can be specified up to 60"W.
  - Required to use 24"W wood slat panels.
- **Height limitation: 96"H Max**
- Wood Slat Planning: 24"W x 4 = 96"W + 3.5" inline post = 99.5"
  - TV – anywhere along run
  - Framed / Solid run can be replaced with drywall

Suspended ceiling can be added to freestanding Beyond. Most components, including the suspended ceiling, are supplied by others. Allsteel provides the following components:

- Freestanding cornice - provides the structure to tie the Beyond walls together. See page 82 for specification details.
- Suspended Ceiling Mounting Brackets - brackets to support Unistrut® cross beams, attached to the cornice. QTY (2) brackets are required at every vertical seam in the ceiling trim.
- Flush mounted ceiling trim for flush ceiling applications. See page 173 for specification details.



- Suspended Ceiling Mount Brackets.
  - Qty 1 model consists of two bracket assemblies, which mount 1 Unistrut.
  - New brackets are NOT backwards compatible. Physically taller than the de-emphasized bracket to lift Unistrut the same distance as the cornice increased in height.
  - Older Unistrut mount bracket to be de-emphasized.

Mounting Brackets

The ceiling structure hangs from the Unistrut cross beam supports (not provided by Allsteel). The maximum freestanding span in one direction with suspended ceiling is 12' 3½".

The maximum distance between each Unistrut cross beam is 4 feet, as illustrated below.

- Review charts for required Unistrut® type per desired spacing, and per ceiling weight pounds per square foot.

Panels & Trim

Beyond® — Working with Beyond Supported Suspended Ceiling

- The charts below indicate the required Unistrut® crossbeam type per the desired spacing, and per ceiling weight pounds per square foot.

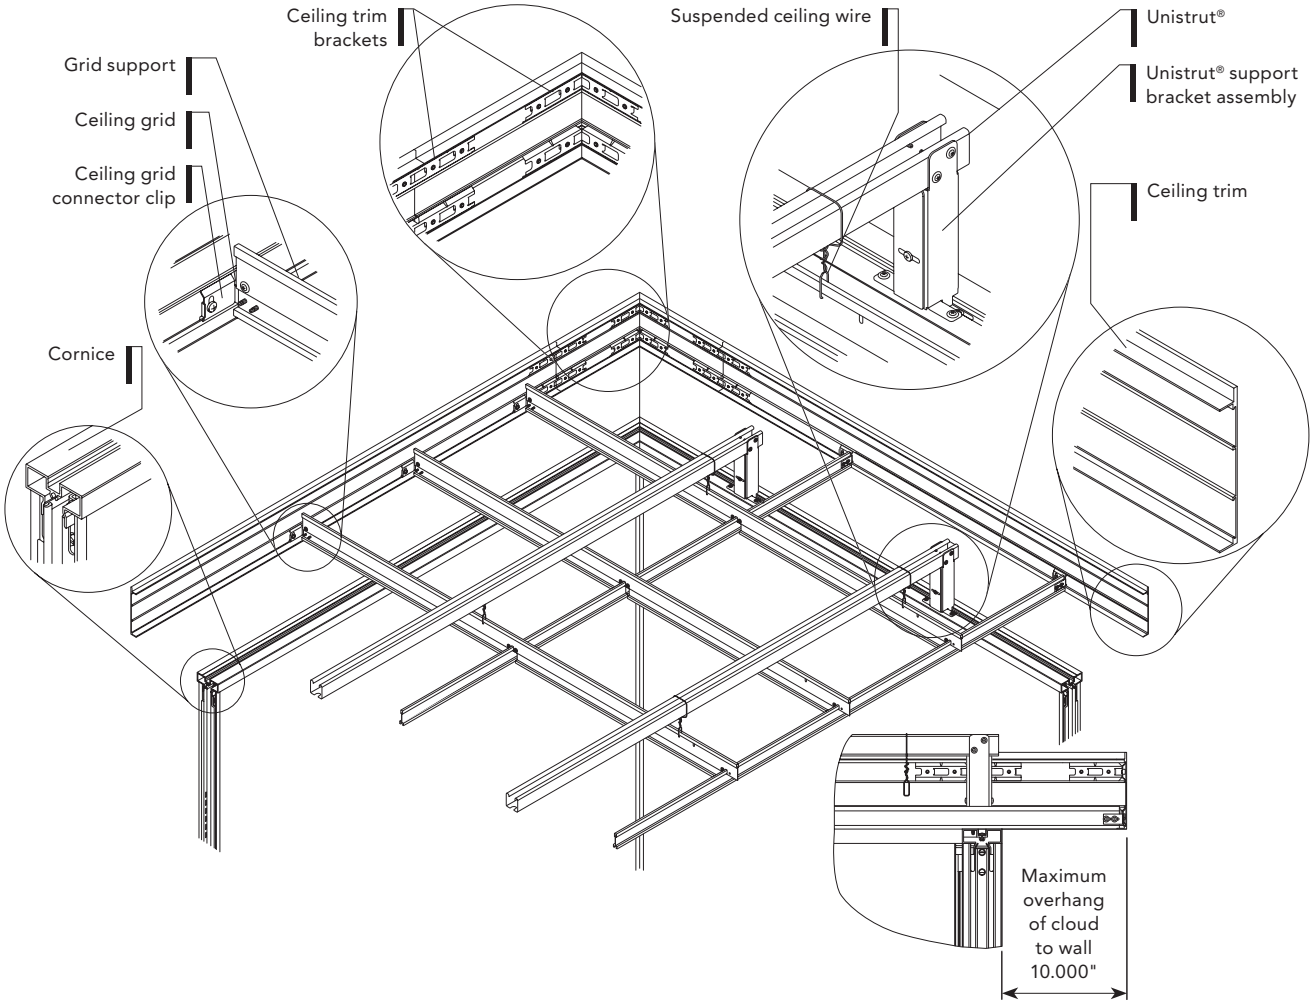
- There are some additional guidelines regarding the Unistrut® crossbeam. The Unistrut must either be:
  - perpendicular to the main suspended ceiling rail,
  - or perpendicular to the grid support (strongback), if applicable.
- See below for ceiling support assembly examples with lighting clearance:
  - Standard Grid
    - Distance between the bottom of the Unistrut® support and the face of the ceiling grid = 5½".
    - B = Height of the suspended ceiling grid.
    - C = Clearance for the height of the ceiling light assembly.
    - 5½" – B = C
    - If light fixture height is > C but < 5½", mount the lighting fixture parallel to the Unistrut®, or plan for a more difficult assembly (cross rails put in after the light has been installed).
    - If light fixture height is > 5½", mount the lighting fixture parallel to the Unistrut®.
  - Grid with Support
    - Distance between the bottom of the Unistrut® support and the face of the ceiling grid = 5½".
    - D = Height of the suspended ceiling grid and grid support.
    - E = Clearance for the height of the ceiling light assembly.
    - 5½" – D = E
    - If light fixture height is > E but < 5½", mount the lighting fixture parallel to the Unistrut®, or plan for a more difficult assembly (cross rails put in after the light has been installed).
    - If light fixture height is > 5½", mount the lighting fixture parallel to the Unistrut®.

* If C or E are greater than the height of the light fixture, then the light can be positioned in any orientation without interference.

There are two main types of suspended ceilings that hang from the Unistrut support structure. The first type is flush mount, where the ceiling trim aligns flush with the Beyond panels; and the second type is overhang mount, which can overhang the Beyond panels up to 10 inches. The two options are detailed below and on the following page.



- Flush Mount Trim Option
  - Supplied by Allsteel:
    - Flush mount ceiling trim. Trim is 7" high and comes in 120" lengths.
    - Mounting brackets to support Unistrut crossbeams. See page 173 for specification details.
    - Freestanding cornice. See page 172 for specification details.
  - Supplied by others:
    - Ceiling trim brackets
    - Ceiling grid connector clips
    - Unistrut® crossbeams
    - Suspended ceiling wire
    - Ceiling tiles
    - Ceiling grid

Panels & Trim

Beyond® — Working with Beyond Supported Suspended Ceiling

- Overhang Trim Option
  - – Maximum overhang is 10". Note - Allsteel does not provide ceiling trim with the overhang option.
  - – Supplied by Allsteel:
    - Mounting brackets to support Unistrut crossbeams. See page 173 for specification details.
    - Freestanding cornice. See page 172 for specification details.
  - – Supplied by others:
    - Ceiling trim
    - Ceiling trim brackets
    - Ceiling grid
    - Ceiling grid connector clips
    - Unistrut® crossbeams
    - Suspended ceiling wire
    - Ceiling tiles

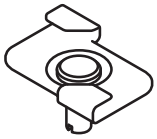
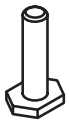
15/16" T Beam

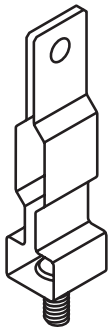


Panels & Trim

Ceiling Grid Mounting Clips

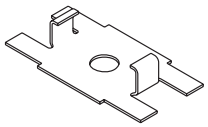


- Ceiling grid mounting clips are required to install Beyond under ceiling grid. Clips attach ceiling channel to grid. Multiple clip types are available to fit the most common grid types. Mounting clips are non-defacing.
- National, state and/or local codes will dictate proper connection methods based on building conditions and location. Please consult with the local building inspector and/or architectural firm prior to installation of ceiling channel.
- Specify 5 clips per 10 linear feet.
- Available in quantities of 10 or 100.
  - For 40 or less clips, specify 10 packs.
  - For 41 to 100 clips, specify 100 pack.
- If the ceiling is not stable, reinforcement may be necessary through the use of suitable materials above the ceiling grid system or the drywall soffit ceiling. This reinforcement work is not included in Allsteel's scope.
- Ceiling clips are not utilized in seismic zones.
- The 9/16" fineline clip with 1/8" reveal can be specified for interlude 9/16" grid.
- The tbolt clip is 9/16" with 1/4" reveal.

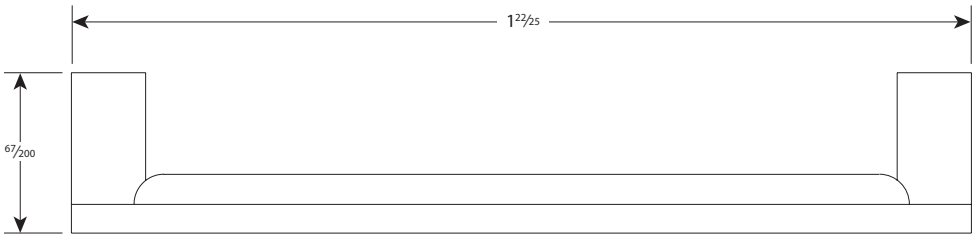


9/16 T-Bar Clip

15/16 T-Bar Clip



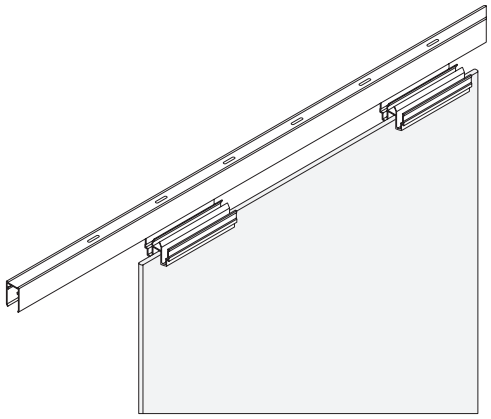
T Bolt



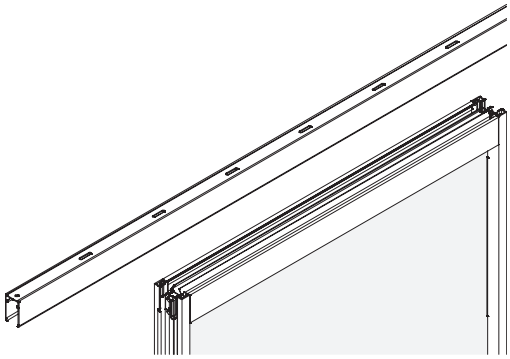
9/16 Fineline Clip

Ceiling Grid Tegular Spacer

- Tegular spacers are specifically used where tiles drop below the surface of the grid. There are cases (as with the 9/16 fineline clip) where tegular tiles are used but they are flush with the surface of the grid so spacers are not needed.
- Specify 5 clips per 10 linear feet.
- Available in quantities of 10 or 100.
  - For 40 or less clips, specify 10 packs.
  - For 41 to 100 clips, specify 100 pack.

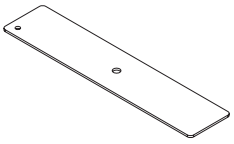


Tegular Spacer

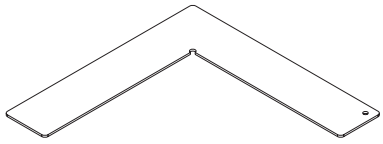


Ceiling Channel

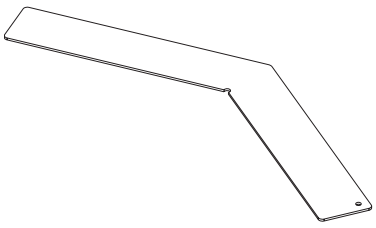
- Ceiling channels are the first component installed in the installation process and can be shipped and installed ahead of the panels. This part is universal and used to connect frameless, framed and solid panels to the ceiling or grid above.
  - A connection to a drywall header utilizes screws provided by the installer through a drywall layer into a ceiling stud or soffit header.
  - A connection to a ceiling grid utilizes non-defacing ceiling channel mounting clips.
- Ceiling channels are mitered at 90° corner conditions and come with end caps to finish exposed ends.
- The top of the panel frame in a framed/solid panel or ceiling brackets in a frameless panel connects with the ceiling channel to support the top of the panel.



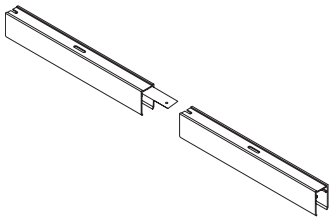
Frameless Glass



Framed and Solid



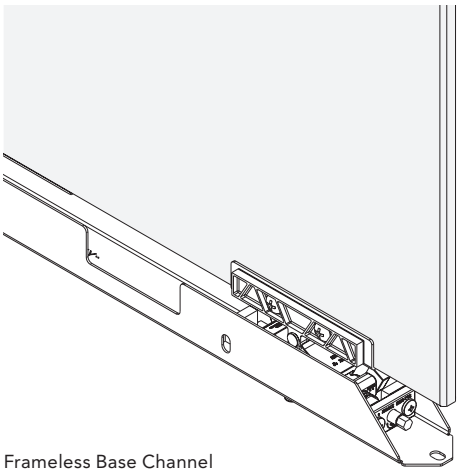
Ceiling Channel Splice Kits



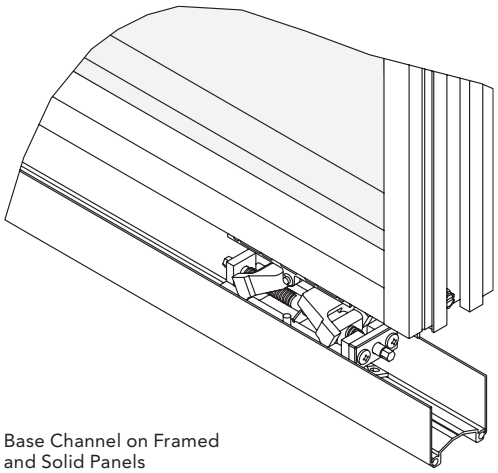
Straight

Two-Way

135-Degree



Straight Splice Kit Assembly with Ceiling Channel



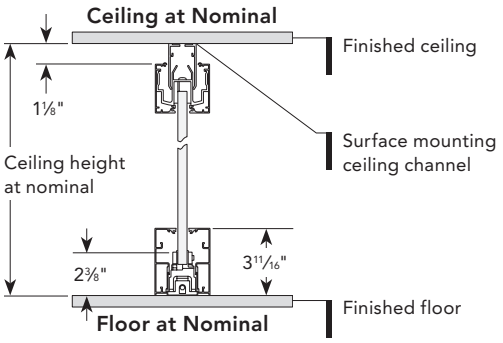
- To connect ceiling channels together, ceiling channel splice kits should be used at straight, two-way, and 135-degree connections. Splice kits provide alignment and mitigate light and sound transference.
- Specification Detail:
  - Specify when runs are over 10 feet.
  - Specify one straight splice kit for every 10 linear feet.
  - Splice kits should also be specified at two-way and 135-degree connections (QTY 1 per connection).
  - Straight splice kits are used across three-way vertical fillers in long runs.
  - The new ceiling channel (BY-CCCHANNEL) and splice models (BY-CCSPLICE), launched on February 3rd, 2025, are fully compatible with existing ceiling channels (BY-CCHANNEL) and will maintain a consistent appearance after installation. However, the old splice kit (BY-CSPLICE) will not be compatible with the new ceiling channel.

Panels & Trim

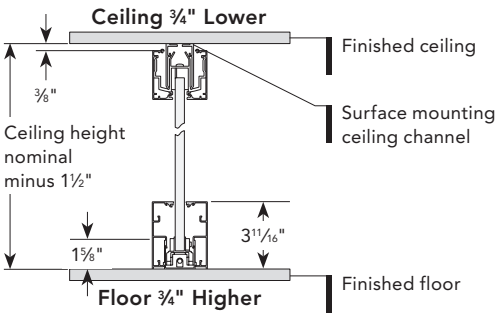
Beyond® — Working with Base Channel & Leveling

Frameless Base Channel

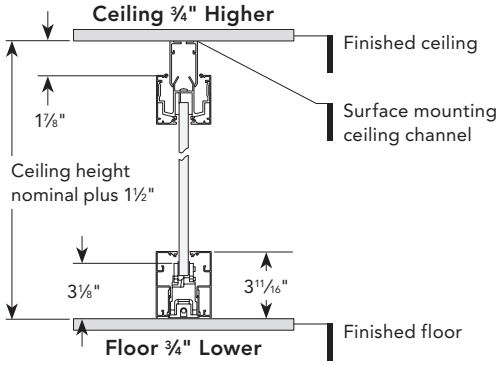
Base Channel on Framed and Solid Panels



- Base channels are included as part of the factory-assembled unitized construction on all three types of Beyond panels (frameless, framed and solid). The base channel houses the leveling mechanisms and supports the weight of the panel.
- Base channels are non-defacing unless required by code or in seismic zones C-F.
- Patented scissor-lift leveling mechanisms are contained within the base channel and provide fast and easy leveling of the panel with a simple power tool.
- On framed and solid panels, the base channel flipper door pivots outward to provide access to the scissor-lift mechanism. The base channel and flipper doors are the same component in both standard and electrical base options. The base height difference for framed and solid is accommodated by utilizing a one inch taller scissor-lift mechanism for the electrical base.



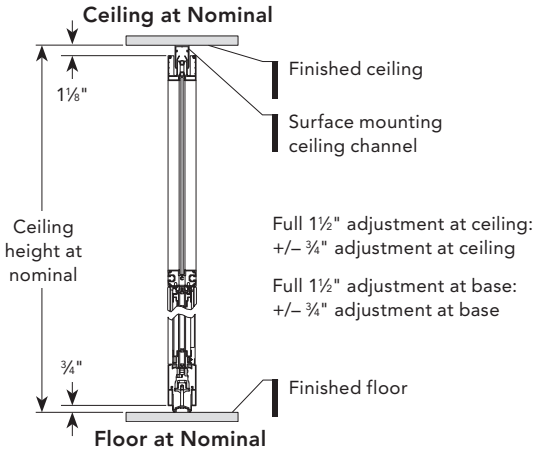
Leveling Capability

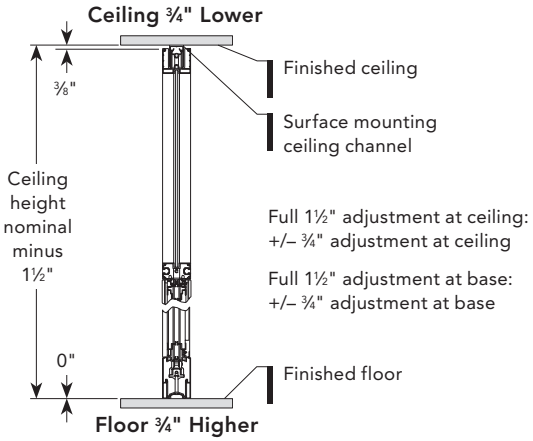


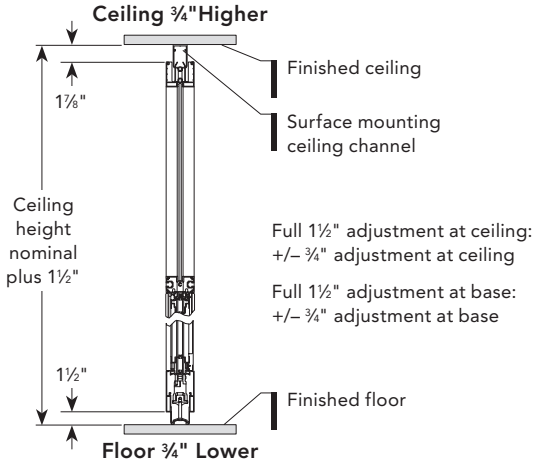
Patented scissor-lift mechanisms provide fast and easy leveling with a simple power tool adjustment. Beyond panels are shipped at the ordered height of the panel with the scissor-lift mechanism in the nominal position. Leveling capability in the base is +/– ¾" (1½" travel range) and allows for +/– ¾" float in the ceiling channel. These two dimensions are independent of each other. It is recommended that specifiers select a common panel height across a run.

Beyond Frameless

With frameless glass, the scissor-lift mechanism connects the glass to the floor channel. The glass is leveled independently from the base trim. Once the panel is level, the base trim is installed and remains flush with the floor for a clean aesthetic.

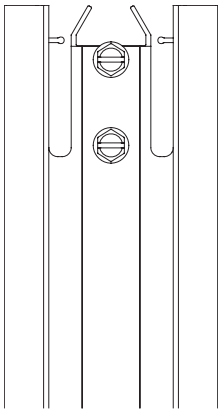


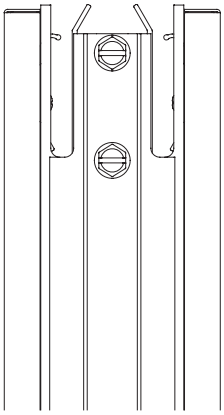




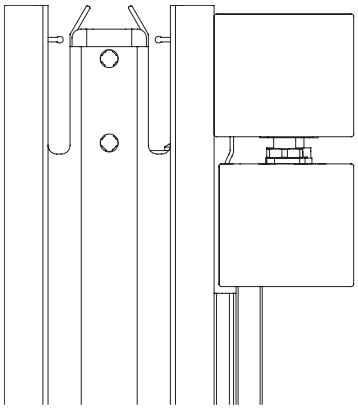
Panels & Trim

Beyond Framed and Solid





Enhanced Acoustics



- Enhanced acoustical upgrades are now available. All electrical and data ported trim for framed and solid panels comes with enhanced gasketing, and standard upgrades are included with every order at no extra cost. Enhanced options can be specified for framed and solid panels and all sliding doors except thin aluminum framed sliding doors.
- Standard Option
  - Includes a modification to the panel frame assembly for tighter acoustic seal.
- Enhanced Option
  - Modification to top horizontal of unitized framed panel to minimize reverberation with ceiling channel.
  - Modification to allow for track and bottom seals on all sliding door types.
  - Retrofit kits available to add enhanced options Day 2 for framed and solid panels and doors. Panels and doors must have been ordered after the launch of the acoustical enhancements to allow proper fit of retrofit kits.

Panels & Trim

Beyond glass comes in a variety of thicknesses and opacities. All Beyond glass meets ANSI Z97.1 safety glass standard. Different types of glass can be specified to boost acoustic properties, add visual privacy, or create an artistic look.

Glass Thickness Options

- Beyond Frameless: ½"
- Beyond Framed and Solid with integrated glass:
  - ¼"
  - ⅜"

Glass Types

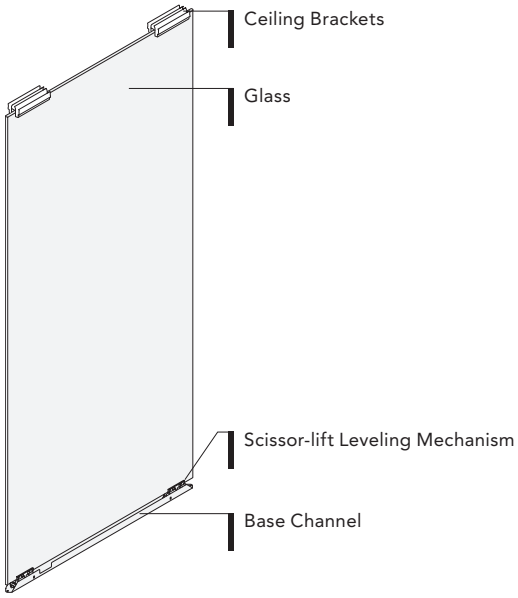
- Tempered glass is one sheet of heat-treated safety glass.
- Laminated annealed glass is made of up two pieces of safety glass that are secured together with an interlayer. Laminated glass boosts acoustic properties and typically carries a higher STC rating.
- Performance or high acoustic laminated glass further boosts acoustic properties. A thin, transparent film is placed between the sheets of laminated glass that reduces sound travel and gains additional STC points.

Glass Colors

- Clear glass has a slight greenish hue when glass is viewed from the edges or side profile.
- Low iron glass is ultra-clear and of higher transparency and clarity than clear float glass. Generally, the green hue of the glass is reduced. It is typically more expensive than clear float glass.
- Translucent white laminated has a medium light transmission level of 65%, meaning it's semi-transparent.
- White markerboard laminated has a low light transmission level of 10%, meaning it's nearly opaque. The lower the light transmission level, the more difficult it is to see through the glass.

Acoustical Performance

BEYOND	STC*
Frameless	Up to 37
Framed	Up to 37
Solid	Up to 46



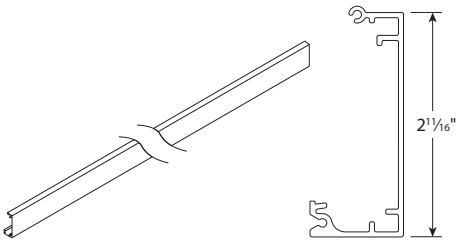
*STC test results represent testing of a fully assembled wall panel.

Beyond panels and trim are available in painted and anodized aluminum. See Materials and Finishes for trim finish details.

Frameless Glass Panels

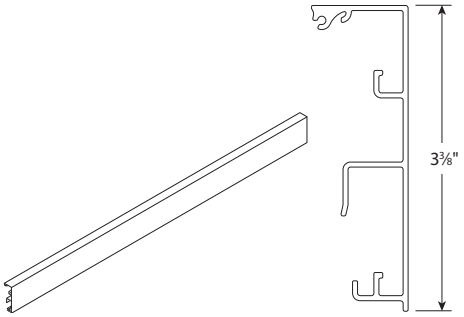
Frameless Panel

Frameless Panel



- Panel Dimensions
  - Height
    - Min: 18"
    - Max: 120"
  - Width
    - 8"-42" up to 120"H in ¼" increments
    - 42¼"-48" up to 108"H in ¼" increments
  - Glass Thickness
    - ½"
    - For glass colors and types, please see Beyond Glass Information, page 126.
  - Assembled Panel Thickness
    - 3" in depth at ceiling and base trim
  - Orderable Increments
    - ¼" for height and width

- Panel ships from factory fully unitized with ceiling brackets, scissor-lift leveling mechanism, base channel attached to glass. Each panel ships with 2 ceiling brackets and scissor-lift leveling mechanisms, unless the width of the panel is less than 18".
- Panel weight is supported at the bottom and base channels are non-defacing (unless anchoring is required by code or for seismic zones C-F).

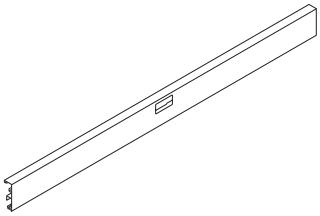


- Specification Notes
  - Glass panels, posts, and associated components can be specified at 18" minimums. This allows for applications such as a clerestory window over drywall.
  - Frameless privacy tile systems must use tempered, perforated glass. See Frameless Glass Privacy Tile System for details.
  - Width of wall segment is determined by the dimension from the centerline of the vertical filler on one side of the segment to the centerline of the vertical filler on the opposite side of the segment.
  - Actual wall panel width will be 5/16" less than specified wall panel width.
  - Glass arris edge is designed with a double chamfer for a precision fit into vertical fillers. This provides for true modularity and no dimensional creep.
  - If multiple frameless glass panel heights are required within a run, adjacent frameless glass panels are recommended to be within ¼" in height for trim to align at the top.

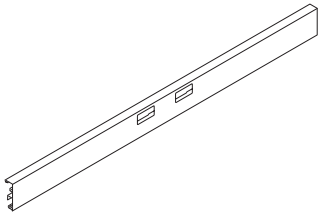
Panels & Trim

Frameless Trim

Full View Profile View



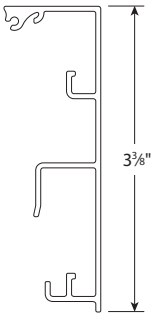
Full View Profile View



Ceiling Trim

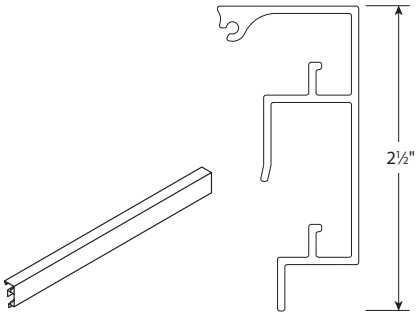
Base Trim

- Base and ceiling trim are both available in 120" lengths. Trim attaches to both sides of the top or bottom on the panel and comes pre-mitered at 90 degree corners. At pre-mitered corners, trim can be specified in 96" lengths (previously 24" and 96"). Both ends are mitered so that it's non-handed, and one end will be cut straight in the field. Polymer gaskets between the trim and glass condition provide an acoustic seal.
- Ceiling trim is 2 11/16"H and attaches to both sides of the ceiling channel "w" brackets that come pre-installed on the top of frameless glass wall panels.
- Base trim is 3 11/16"H and attaches to the base channel of the unitized panel, allowing it to remain flush with the floor for a simple, clean aesthetic.



Single Receptacle

Double Receptacle

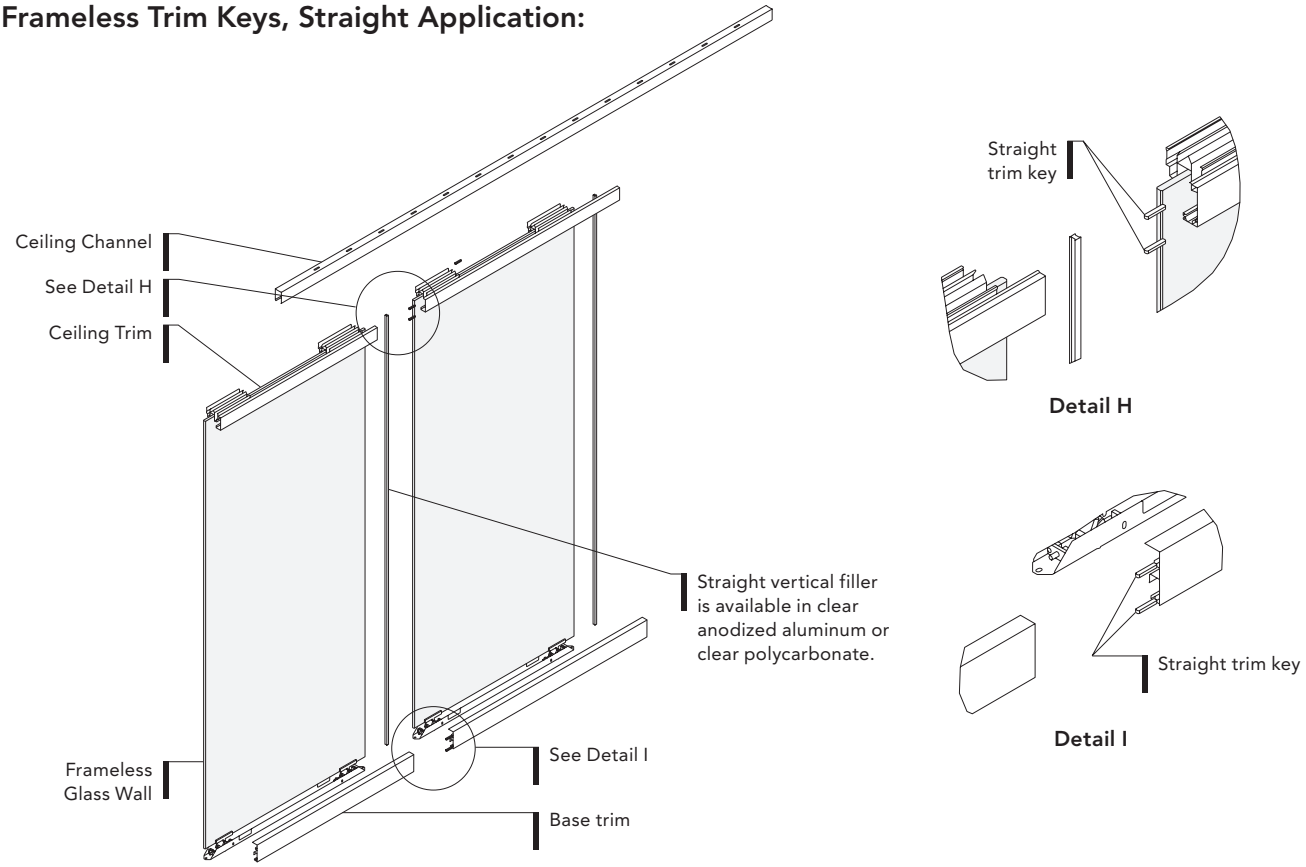


Frameless Electrical Base Trim

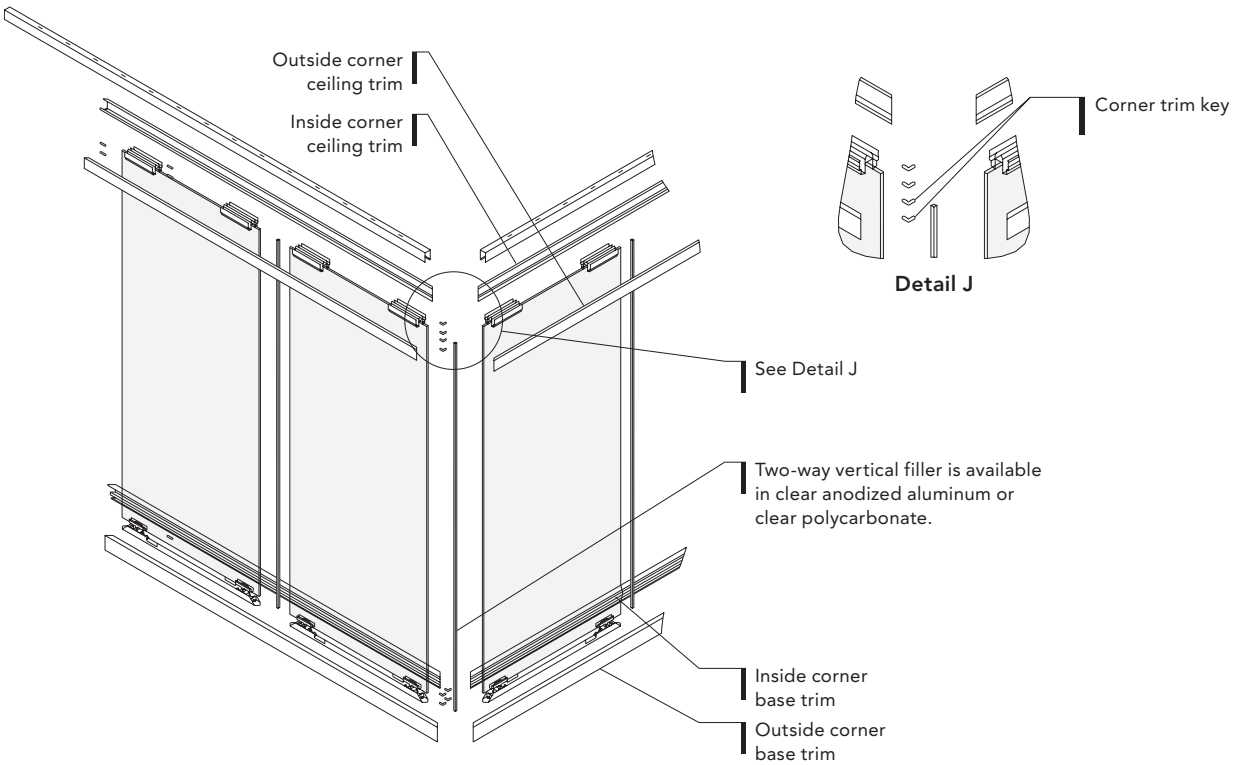
- Specify the electrical base trim for modular electrical. See Beyond Electrical section for details.
- Electrical base trim is available in 48" lengths. Trim attaches to one or both sides of the bottom on the panel. Polymer gaskets between the trim and glass condition provide an acoustic seal.
- Base trim is 3 11/16"H (the same dimension as the non-electrical base trim) and attaches to the base channel of the unitized panel, allowing it to remain flush with the floor for a simple, clean aesthetic.

Profile View

Low Profile Base Trim

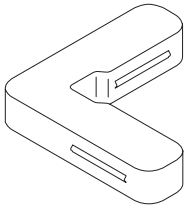


Straight Profile View

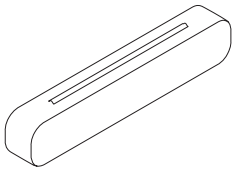


- Non-telescoping with a consistent reveal with the floor for a simple, clean aesthetic. Polymer gaskets between the trim and glass condition provide an acoustic seal.
- Low-profile base trim is 2½"H.
- Available in 120" lengths.
- Adjustment range restricted to +/– ¼".
- Trim is also available as pre-mitered inside and outside 90° corners in 96" lengths (previously 24" and 96"). Both ends of the trim are mitered so that it is non-handed, and one end will be cut straight in the field.
- Specification Notes
  - Depending on floor conditions, continuous runs longer than 20 linear feet may not be feasible with low-profile base trim.
  - Office front applications that start and stop at drywall or that use drywall end caps are preferred for low-profile base trim applications.
  - Floating rail-mounted privacy tiles may be used with low-profile base applications.
    - Full height privacy tile options as well as adjacent privacy tile sets cannot be used with low-profile base.
  - Button-mounted tiles cannot be used with low-profile base applications due to decreased leveling capability in the trim which may cause issues with tile alignment.
  - Modular electrical in the base is not available with low-profile base. For power, utilize electrical ported posts.
  - Due to the limited panel adjustment range, glass panels, frameless wall channels and adapters are ordered at a ½" taller height than nominal height. All other components remain at nominal height.
  - Floor conditions may require multiple frameless glass panel heights within a run.
    - Adjacent frameless glass panel height variability cannot exceed ¼" in height. The height variability resets at door frames.
  - Depending on building conditions, floating the unfinished floor may be required prior to finished floor material installation.
  - Additional time may be required for site measurements and installation due to limited adjustment height and multiple panel heights.

Panels & Trim



Frameless Trim Keys, Straight Application:

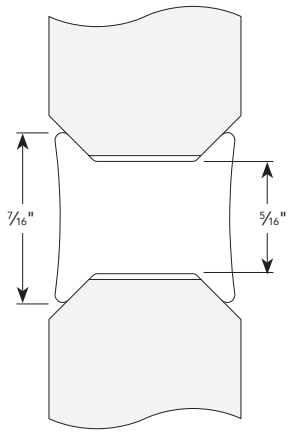


Frameless Trim Keys, Corner Application:

Frameless Trim Keys

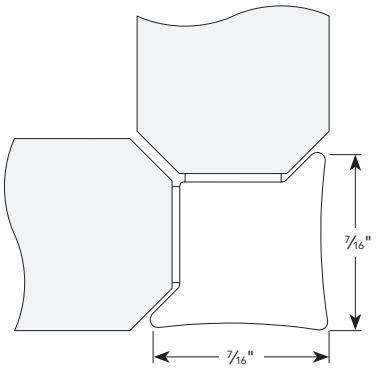
Corner Key

Straight Key



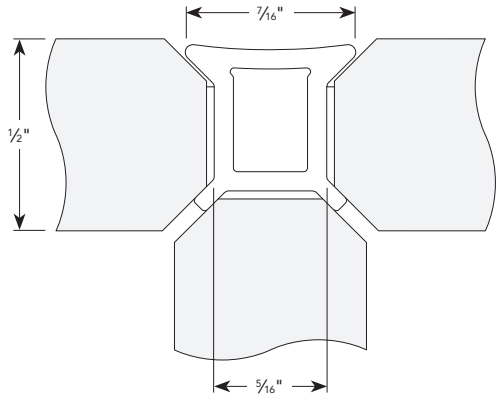
- Trim keys are utilized to ensure proper alignment at straight and corner seams for frameless standard and low-profile base trim and ceiling trim.
- Two trim keys are used at each trim seam.
- Trim keys may be ordered in bulk pack quantities of 50 and 250.
  - For 50 keys or less, specify the 50 pack.
  - For 51 keys or more, specify the 250 pack.
- The number of keys should be specified as follows:

Type	Straight	Two-Way	Three-Way	Four-Way
Straight Keys	8	—	4*	—
Corner Keys	—	8	8	16

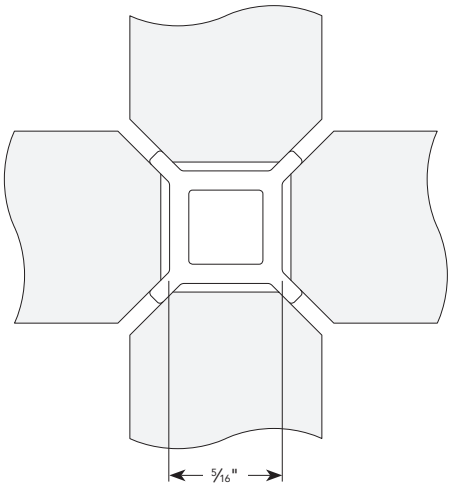


QTYs above assume that inside/outside ceiling and base trim is all seamed at the same location.

*QTY (4) straight keys are only needed if outside trim is seamed at a three-way vertical filler. If the application allows, outside trim may span three-way vertical fillers when one 120" length of trim will cover the wall length.

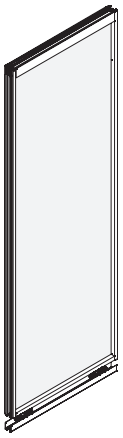


Vertical Fillers

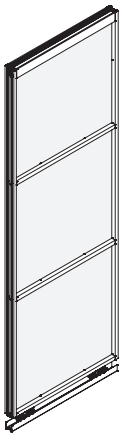


Straight

Two-Way



Three-Way



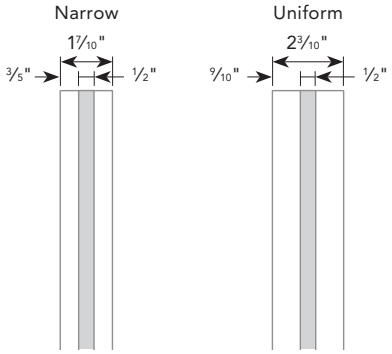
Four-Way

- Vertical fillers provide the connection between frameless glass wall panels.
- The unique shape of each vertical filler allows ½" glass wall panels to be fully modular, meaning each vertical filler shape can be swapped for another to allow different wall configurations without dimensional creep.
- Frameless glass wall panels are non-progressive and can be added, removed, or reconfigured without disrupting adjacent walls panels.
- Vertical fillers are attached with a clear double-sided VHB™ (Very High Bond) tape to eliminate the need to caulk or glaze the seams between frameless glass wall panels.
- Vertical fillers keep the installation clean. By eliminating any need for glazing, they also reduce the need for another trade on the job site.
- Vertical fillers are available in anodized or clear polycarbonate in straight, two-way, three-way, or 135-degree connection types. Four-way fillers are available in clear polycarbonate only.
- Vertical fillers are 120"L.
- Fillers can flex up to 3 degrees to accommodate minimal angles. Angles outside of the 3 degree flex would require the glass to be caulked in the field.
  – CET adds 10% to vertical filler quantity for scrap.

Framed Glass

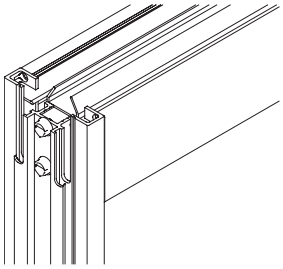
Monolithic

Segmented



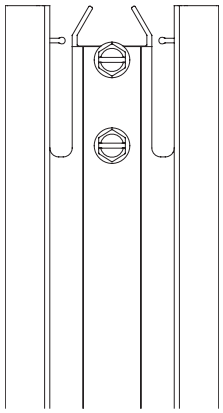
With Modular Electrical Base

- Panel Dimensions
  - Height
    - 18"-120" for standard and electrical bases.
    - Up to 144" with stacking - see Stacking section for additional information.
    - 86"-120" for freestanding.
  - Width
    - 8"-60"
  - Glass Thickness
    - ¼" or ⅜"
    - For glass colors and types, please see Beyond Glass Information.
  - Assembled Panel Thickness
    - 3" in depth at ceiling and base trim.
  - Orderable Increments
    - ¼" for height and width.
    - Segmented glass lites available in 1/16" increments. Note that each segment measurement on the framed panel model is from AFF to the top of the segment bar.
- Panels ship from factory fully unitized with panel frame, glass lite(s), integrated ceiling trim, base channel, and scissor-lift leveling mechanism(s), pre-assembled for ease and speed of installation.
- Each panel ships with two leveling mechanisms unless under 18". Only one leveling mechanism is attached to panels less than 18". Panel weight is supported at the bottom and base channels are non-defacing (unless anchoring is required by code or for seismic).
- Panels are non-progressive. A panel can be removed from the middle of a run without disturbing adjacent panels.
- Panels can be segmented with various glass types and can be integrated with solid tiles. See following pages for segmentation pattern rules.
- The electrical base option is 1" taller in height.
- An integrated mounting rail can be specified to allow for attachment of sliding doors with transom, TV mounts, Stride® off-modular connection (for panels up to 57½"), and accessory hooks. This segmentation pattern option was previously specified as S30 and S39. The rules for the integrated mounting rail have been expanded and are detailed in the following pages.



Panels & Trim

Framed Glass Vertical Styles & Segmentation



- Framed glass panels come in two vertical styles:
  - Uniform – frame-to-frame with zipper: 2 3/10".
    - Uniform width on both horizontal and vertical frame members.
    - Optimal for segmented glass.
    - Required when using stacking.
  - Narrow – frame-to-frame with zipper: 1 7/10".
    - Optimal for monolithic glass.
    - Clean, minimal aesthetic.
    - Not for use with stacking.
      Framed Segmentation Panel Rules.
- Segmentation Pattern Rules:
  - Segmentation patterns are now parametric. Up to 6 glass lites can be specified per panel and segment bars can be moved up/down in 1/16" increments.
  - Minimum glass lite sizes
    - Bottom lite with standard base: 11 5/16" AFF to top of segment bar
    - Bottom lite with electrical base: 12 5/16" AFF to top of segment bar
    - Bottom lite with integrated mounting rail: 83/8" AFF to top of integrated mounting rail bar
    - Middle lites:
      - 6" minimum distance from top of segment bar to top of segment bar
      - With integrated mounting rail:
        - 6 1/2" from top of segment bar to top of integrated mounting rail
        - 6 1/2" from top of integrated mounting rail to top of segment bar
    - Top lite:
      - 8 3/8" minimum distance from ceiling to top of top segment bar
      - 9 1/8" minimum distance from ceiling to top of integrated mounting rail bar
  - The previous segmentation patterns will be available as a starting point.
  - Note: while measurements shown in the specification program for segments are from AFF to the top of the segment bar, the measurement in the manufacturing program is from AFF to the centerline of the segment bar. The offset (the distance from the CL of the segment bar to the top) is .547" for a standard segment bar and .875 for an integrated mounting rail segment bar.

- Framed Glass Enhanced Acoustics
  - – Standard Option
    - Includes a modification to the panel frame assembly for tighter acoustic seal.
    - All electrical and data ported trim for framed panels comes with enhanced gasketing.
  - – Enhanced Option
    - Modification to top horizontal of unitized framed panel to minimize reverberation with ceiling channel.
  - – Retrofit kits available to add enhanced option Day 2

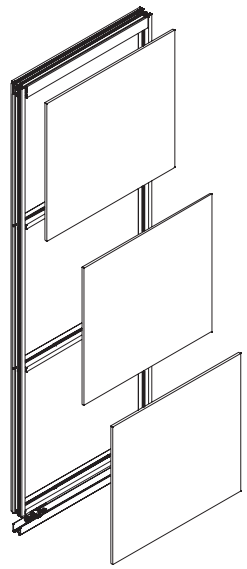
Framed Wood Slat Infill Panels

The Beyond Cabana application utilizes Beyond framed wood infill panels for integration of partially private spaces. This new materiality creates a soft, organic aesthetic for a statement piece that can be designed into a solo, team or booth setting.



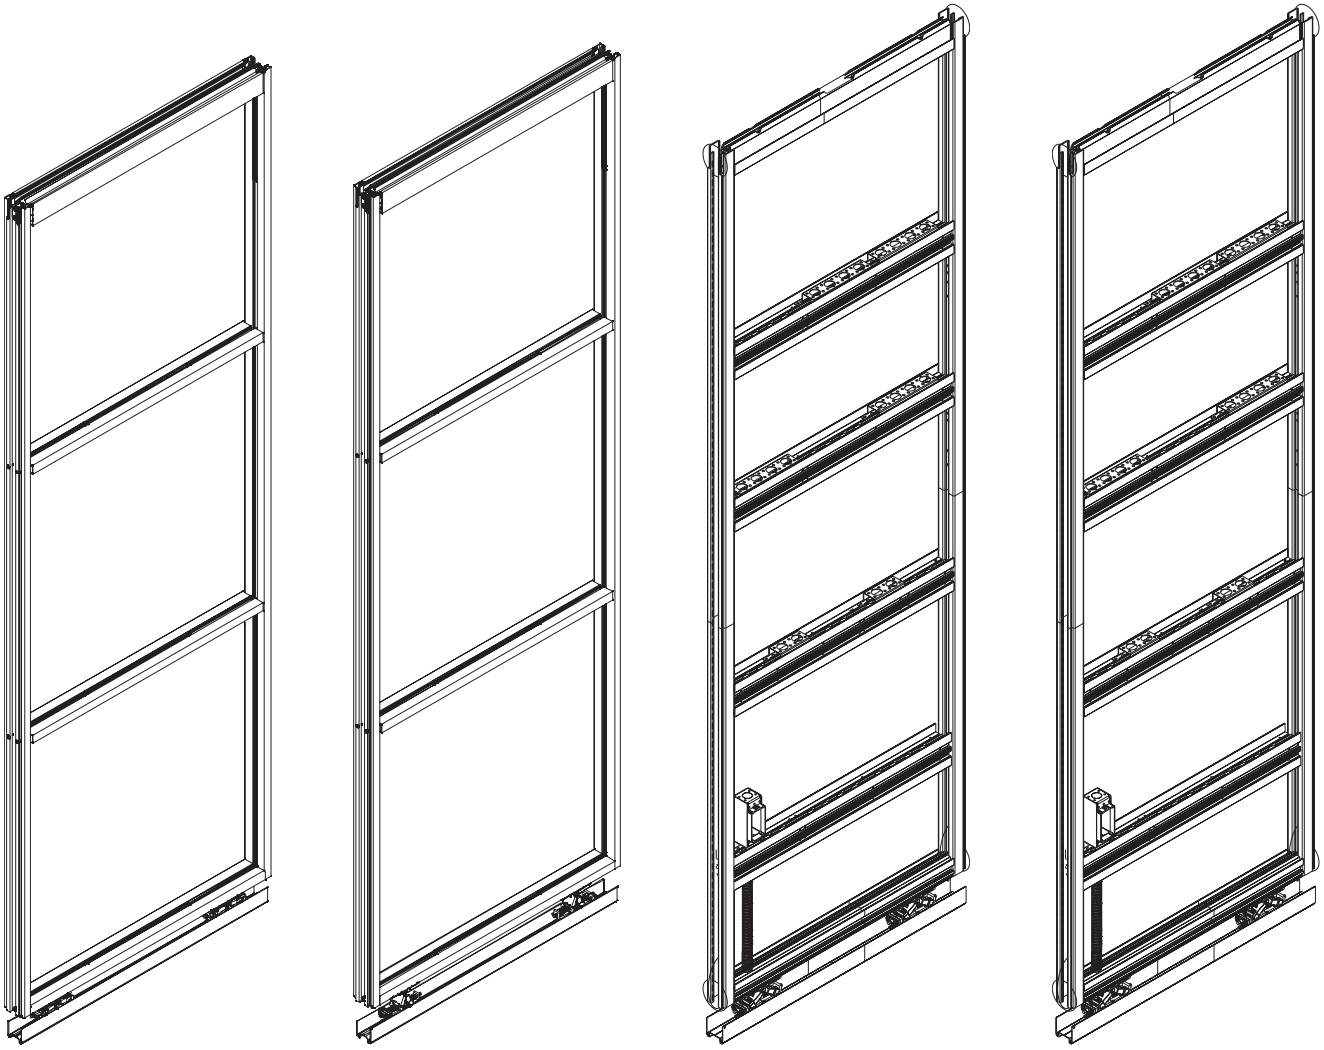
The Beyond wood infill panels are shipped with wood slats attached to a metal frame, with the Beyond scissor-lift leveling mechanism attached to the bottom of the panel inside a base channel. The Beyond framed wood infill panels utilize a uniform Beyond frame with wood slats infilling the frame instead of glass. The wood infill panels connect to panels and posts utilizing the same specification rules as Beyond framed glass. Beyond framed and solid trim is installed to cover the base channel and create a finished look. These panels can only be specified in a freestanding application and come in set widths and heights. The panels follow the Beyond framed and solid freestanding rules.

Beyond framed wood infill panel dimensions:

- Height options: 96", 102", 108", 114", 120"
- Width options: 24", 30", 36", 42", 48"

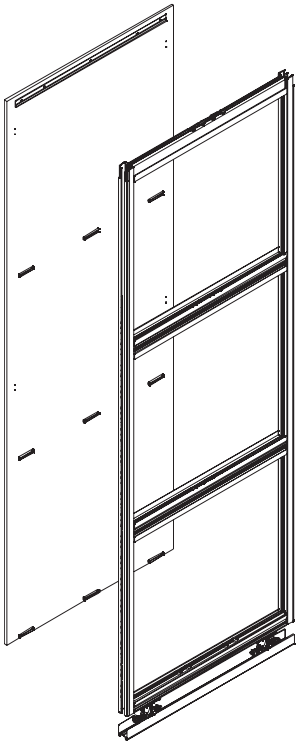
Panels can be specified with standard or electrical base heights. Base heights come in the same dimensions as a Beyond framed glass panel. For ported trim in an electrical base, order trim separately for field installation.

Solid Panel Assembly



- Solid panels consist of a frame and tile construction, shipped fully assembled from the factory.
  - Frames are constructed of mechanically fastened extruded aluminum components.
    - A minimum of two intermediate horizontal supports per frame provide tile attachment and frame structure.
    - The top horizontal of the frame interconnects with the ceiling channel upon installation.
    - The bottom horizontal connects to the scissor-lift leveling mechanisms, attaching the base channel to the frame structure.
  - Panels can be specified with standard insulation, which consists of two-pound, two-inch thick formaldehyde-free (NAUF) fiberglass included in the cavity of the solid wall.
    - Panels are available without insulation but this is not recommended for optimal acoustics.

- Panel Dimensions
  - Height
    - 18"-120" (previously 86") for standard and electrical bases
    - Up to 144" with stacking - see Stacking section for additional information
    - 26" minimum height with integrated glass for standard and electrical bases
    - 86"-120" for freestanding
  - Width
    - 8"-60"
    - 9"-60" for fabric tiles greater than 54.5" high
- Panel Specification
  - Panel model is an assembly of a frame and tiles, meaning that one assembly is ordered which contains all associated components including the panel frame and applicable tiles for both sides including ported tiles.
    - Woodgrain laminate and Stratawood veneer tiles are only recommended in a monolithic or base tile. Grain pattern will not align vertically if the panel is segmented.
    - Natural veneer tiles are only available in a monolithic or base tile.
    - Glass markerboard tiles are not available on top tile on solid panel adjacent to trailing side of sliding door without stacker including integrated mounting rail. Only applies to side of panel where track is mounted.
    - Steel Markerboard Tile: 115"x50" is the max size for steel markerboard (previously called laminite) independent of orientation.
  - Assembly Model only contains a Configuration ID, which contains all information for the solid frame and tiles. The Configuration ID can be expanded out in the specification program (CET). Note that model logic details for the frame and tile models can be expanded out in the specification program. However, the base models for the frame and tile models will NOT show up in the specification program. Base models will only appear if the frame and/or tile(s) are ordered separately, for example as a field-installed component.
- Back-painted glass markerboards can be ordered as a stand-alone component to attach to drywall or other building materials. Order model BY-GLASSWALLMB through the CET Picklist for the stand-alone markerboard. Markerboard comes with mounting hardware.



Panels & Trim

Solid Panel Frames

- Solid frames can support modular electrical in the base and/or hardwired electrical with ported tiles.
  - Electrical frames are a sub-option listed within the Configuration ID of the standard frame model.
  - Electrical frames and ported tiles are incorporated into the solid panel assembly.
  - Modular electrical base frames allow for the routing of modular electrical through the base of the panels. Frames have pre-milled locations in the base for powerblock attachment.
  - Electrical frames have junction boxes and conduit installed and allow for wiring without the removal of tiles. A pull string is routed through the conduit to allow the electrician to tie on the wire and pull through the conduit to the junction box. Hardwired electrical tiles come pre-ported. Various positions of receptacle ports are possible in left, right, centered, or custom (in 1/16" increments) horizontal and vertical positions. Electrical frames can be specified with ported and non-ported tiles. Specify ported tiles where receptacles will be placed. Painted steel, fabric-wrapped, veneer and laminate tiles can be ported.
  - See the Electrical section for additional details.

Solid Panel Tiles

Tiles are constructed with clips on the back of the tiles for easy removal and reconfiguration. Tiles mount vertically on a single wall frame. A variety of tile materials are available on solid panels. Solid tile material type options include:

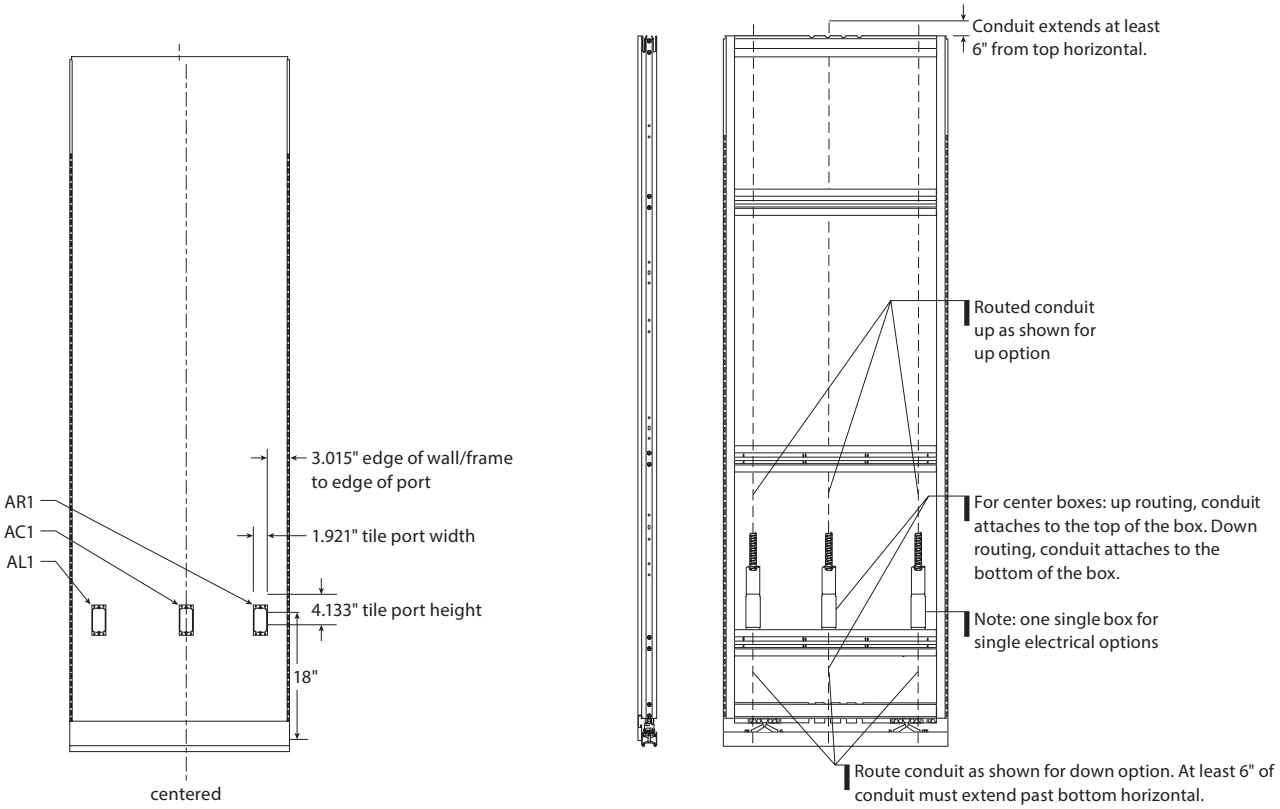
- Painted Steel
  - – Consists of 20-gauge formed steel pan with textured and matte paint finish options.
  - – Tiles can be ported to support hardwired electrical receptacles.
- Fabric-Wrapped
  - – Smaller tiles are constructed with fabric wrapped around a steel pan.
  - – Larger tiles consist of fabric-covered NAUF (formaldehyde free) insulation including a 20-gauge steel pan for sound blocking. Fabric is glued to fiberglass.
  - – Tiles can be ported to support hardwired electrical receptacles.
- Veneer
  - – Consists of veneer-covered particle board core. Balanced construction with matching edge.
  - – Stratawood and natural veneer finish options.
  - – Natural veneer is only available as a monolithic tile or single tile (no grain matching).
  - – Tiles can be ported to support hardwired electrical receptacles.
  - – Grain runs vertical.
- Laminate
  - – Consists of laminate-covered particle board core. Balanced construction with matching edge.
  - – Tiles can be ported to support hardwired electrical receptacles.
  - – Grain runs vertical.
- Glass Markerboard
  - – Consists of ⅛" thick tempered, low iron, back-painted glass adhered to an aluminum frame structure to provide finished edge and support tile attachment clips.
  - – Optional magnetic backing can be added and requires use of rare earth magnets.
  - – Glass markerboard can be specified as part of a Beyond solid panel assembly or as a separate component to mount to drywall or other building material type.
  - – To the floor back painted markerboard solid tiles available as an ETO option only.
- Steel Markerboard
  - – Consists of polyester film co-laminated over a steel magnetic sheet in a smooth white finish.
  - – Dry erase magnetic writing surface.
- Integrated Glass Tile / Stacker
  - – Framed glass can be integrated into solid panels and become part of the solid panel assembly.
  - – All stacking tiles consist of framed glass and are not pre-assembled to the panel. Stacking panels are field-installed. For more information on stacking panels, please turn to page 152.
  - – See page 155 for additional details.

Framed and Solid Electrical and Data

Note that segment bars are counted from bottom to top, so Segment 1 is the first segment bar AFF.

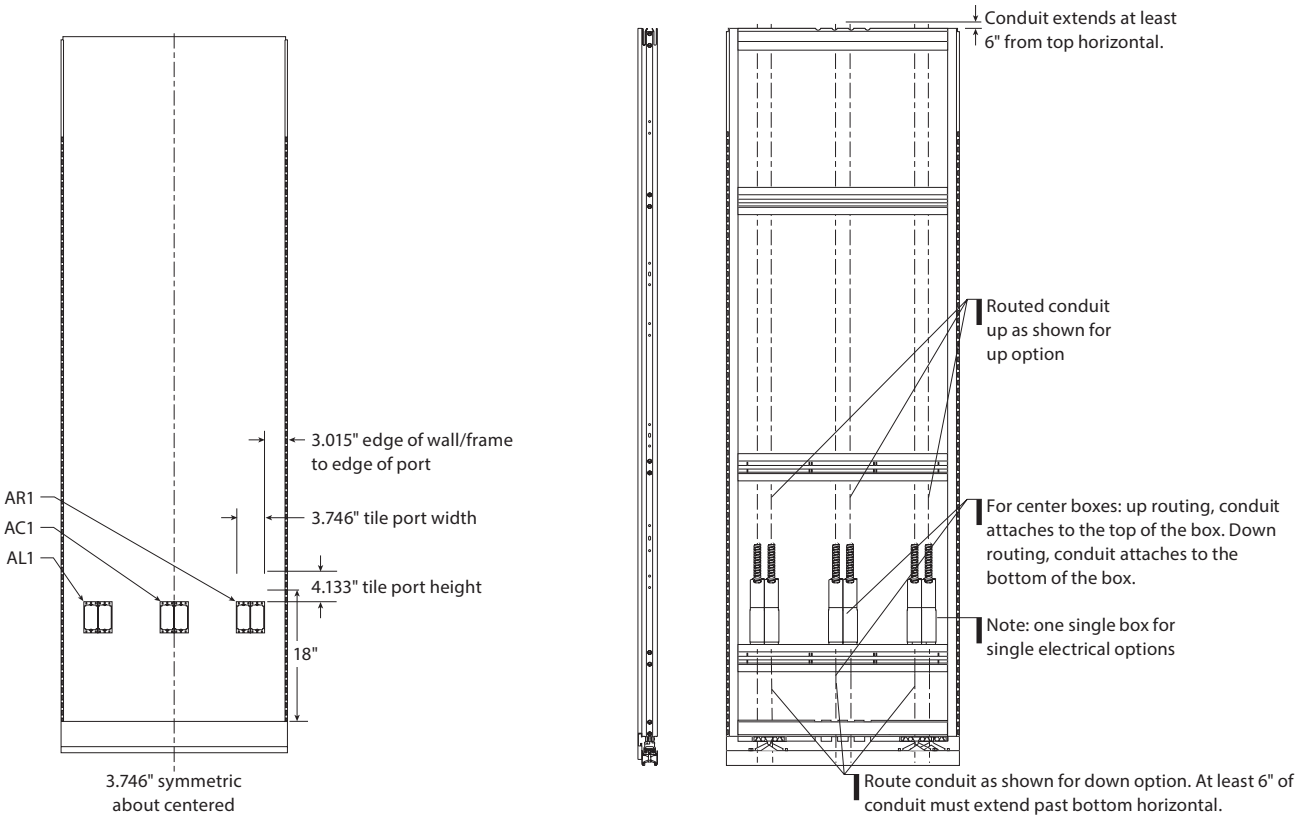
Segment 1 AFF Placement

- With standard base trim
  - 7¾" minimum AFF with junction box attached above the segment bar with horizontal options of Left / Center / Right / Custom position. Conduit can route up or down.
  - 13⁹⁄₁₆" minimum AFF with junction box attached below segment bar with horizontal option of Left / Center / Right / Custom position. Conduit can route up or down.
  - 16⁵⁄₁₆" minimum AFF with junction box attached above segment bar with horizontal option of Left / Center / Right / Custom position. Conduit can route up or down.
- With electrical base trim, the minimum allowed bar placement increases by 1". All other rules are the same.
- Maximum placement of Segment 1 is 46¾" AFF.



Top Segment AFF Placement

- To avoid interference with top channel, the top segment must observe the following minimum distances from the top:
  - 5¾" minimum distance from the ceiling / top for a junction box attached below the segment bar with horizontal options of Left / Center / Right position. Conduit can route up or down.
  - 13¼" minimum distance from the ceiling / top for a junction box attached above the segment bar with horizontal option of Left, Right or Center position. Conduit can route up or down.



Segment 2-8 AFF Placement - when not used as top segment

- These segments, when used between Segment 1 and the Top Segment, must follow these minimum dimensions:
  - 3½" minimum space between 2 adjacent segment bars
  - 9½" minimum space when there is 1 junction box located between the adjacent segment bars in the Center position
  - 12½" minimum space when there is 1 junction box located between the adjacent segment bars in the Left or Right position
  - 21" minimum space where there are 2 junction boxes with the same horizontal alignment above / below in Left, Right or Center position
- The maximum space between these segments is 42¾"
- TV segments ***CANNOT*** be used instead of a normal Horizontal for panel support or tile mounting
- A Non-TV Horizontal cannot be used to support a TV
- A TV Horizontal can have a junction box mounted to it
- No other horizontal (TV or non-TV) can be between the TV Horizontals that are for the same TV.
  - This also means that in a back-to-back scenario, when the TVs share only 1 TV Horizontal, the TV Horizontal for 1 TV must be above the shared horizontal, and the TV Horizontal for the other TV must be below the shared (or vice versa). They cannot both be below or above the shared TV Horizontal.

Single Junction Box with One Conduit Port Location: 18"H AFF:

Note: Electrical Ported Frames for Integrated Glass models all route conduit down.

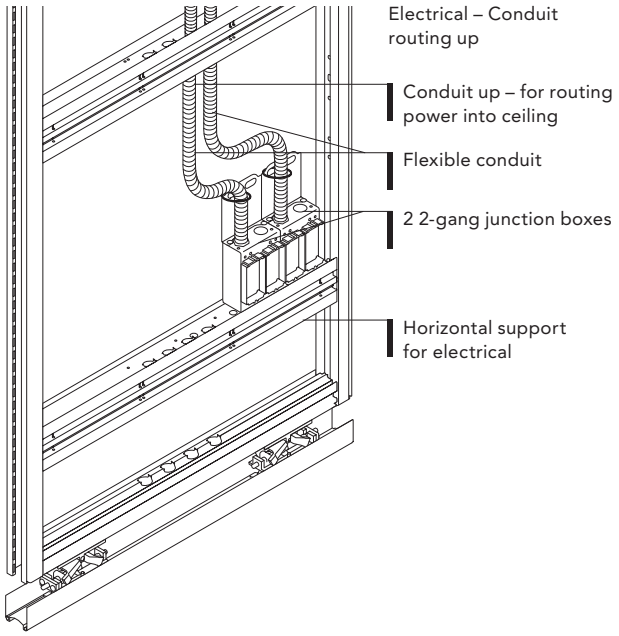
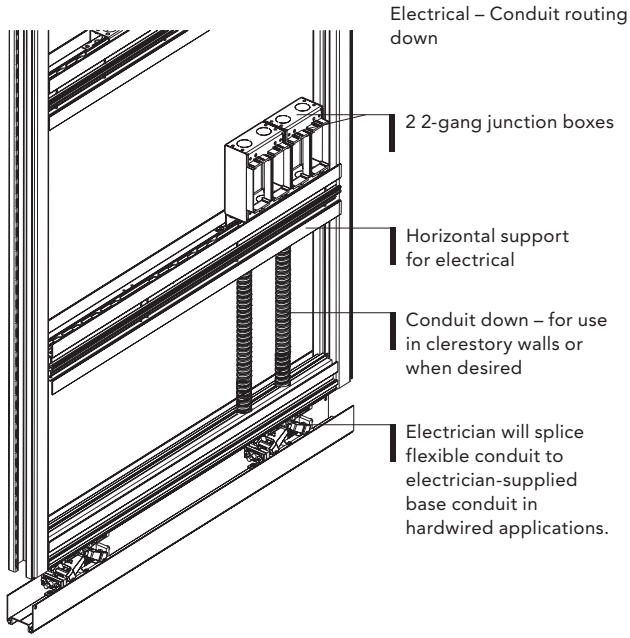
Panels & Trim

Solid Walls Ported Wall Frames and Tiles for Electrical Routing



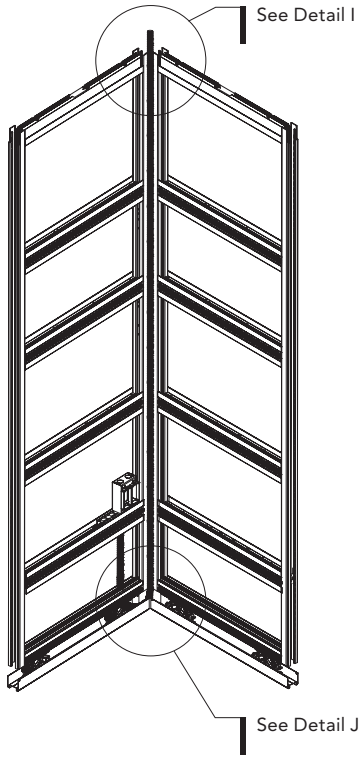
Electrical ported solid wall frames have junction boxes and conduit installed and allow for wiring without the removal of tiles. A pull string is routed through the conduit to allow the electrician to tie on the wire and pull through the conduit to the junction box.

Solid walls including the junction boxes, conduit, and connections are UL Listed under Sections and Units file number E465543. Conduit is UL Listed flexible metal conduit ½" trade size. Boxes are UL Listed metallic outlet boxes.

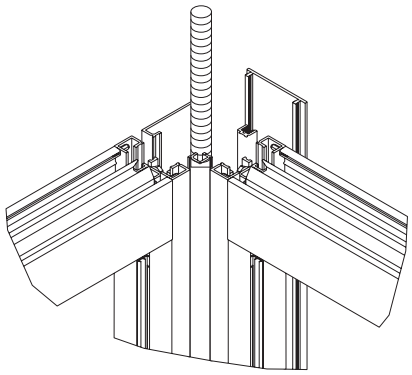


Conduit is installed in the factory to be extended 6" from top of panel. An additional 18" is coiled within the frame. Conduit can be extended in the field to a max of 24" from top of panel. Panels can be specified without conduit, with a price deduct, if an electrician is supplying their own conduit.

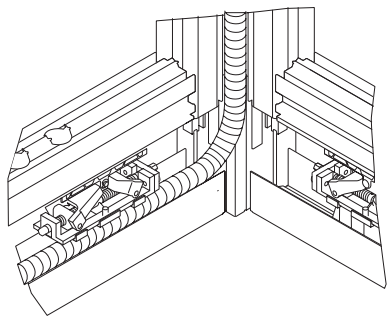
Conduit routing can be specified to route up through the top of the wall to support power routing from above. Conduit routing may also be specified to route down into the base channel to support power routing from below. When integrated glass tiles are used, conduit routing must route into the base channel. If power is coming from above, wiring can be routed through the posts and into the base channel in these situations.



Conduit Routing Up (specify Up option)



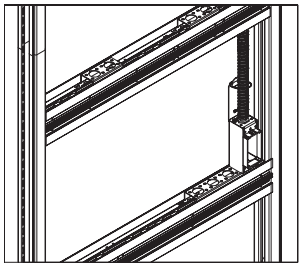
Conduit Routing Down (specify Down option)



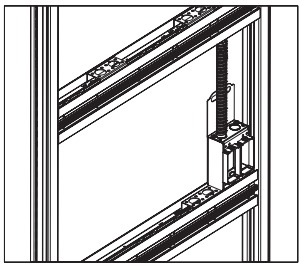
Wiring can be routed through wall channels and finished ends, and straight, two-way, and three-way posts to the floor. Wiring may not be routed through a four-way post. Posts with access trim are notched at the base to allow power and data to pass through. Other posts must be field-notched.

When feeding conduit past scissor lifts, conduit size will need to be reduced from ½" trade size due to space constraints.

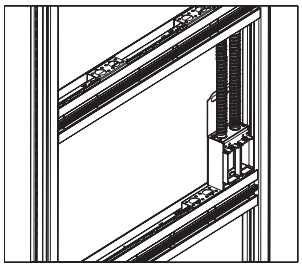
Detail I



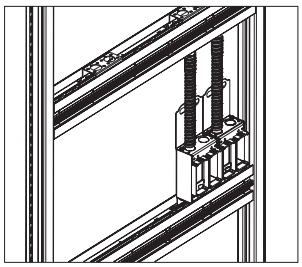
Detail J



Panels & Trim



Beyond® — Working with Framed / Solid Panels & Trim



Junction boxes are available in single, double, and quad options. Junction boxes are sized to accommodate industry-standard receptacles and faceplates allowing walls to use the same electrical components being used in the building.

- Single boxes have one conduit routing to the box.
- Double boxes have a choice of one or two conduits routing to the box.
  - Utilize two for separation of power and data.
- Quad boxes have two conduits routing to the box.
  - One conduit supports two receptacles for power.
  - One conduit supports the other two device locations for power or data separation.

Single with One Conduit

Double with One Conduit

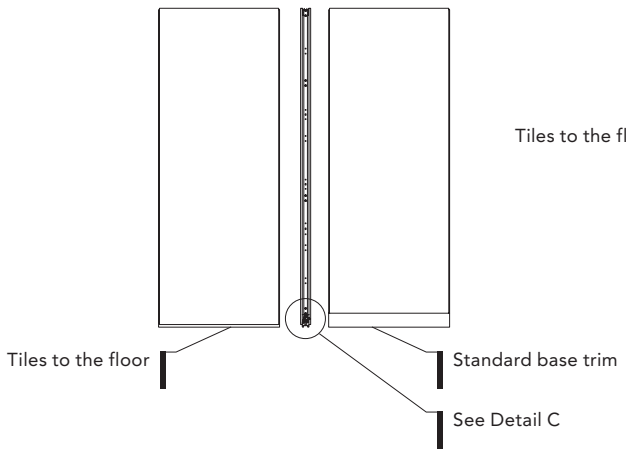
Double with Two Conduits

Quad with Two Conduits

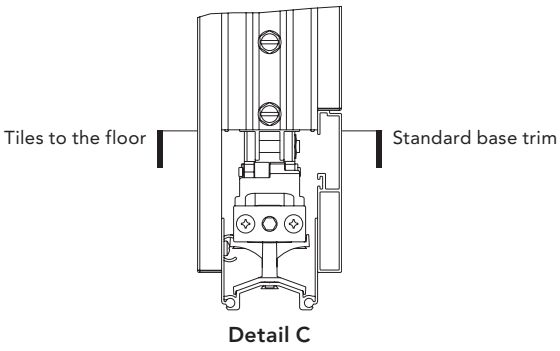
Electrical Ported Frames and Tiles are available with ports on one or both sides. Port locations are specified for Side A and Side B of the frame to identify port locations for each side. Ports can be located on the right, left, center of the frame, or custom. Centered ports are only available single sided. Left or right ports can be double sided (left side on both sides of the frame or right side on both sides of the frame).

Ports can be placed vertically and horizontally in 1/16" increments.

Each solid frame has horizontal supports for stability. Horizontal members are also used to hold junction boxes, which can hang above or below the segment bar.



There are some constraints to junction box location to avoid interference between segment bars needed for frame support and segment bars used to support junction boxes. Minimum distances also must be observed to avoid interference with the top and bottom horizontal members of the frame.



Note also that each frame can support conduits routing up or down, with a maximum of 8 total conduit. Conduit can be routed either up or down with a maximum of 4 conduit routed down. For example, if 6 conduit are used and 4 are routed down, then the remaining 2 must route up. Hardwired power available in solid panels 30"W and larger.

For a Recess Box with (or containing) junction boxes, the number of conduits needed will match the junction box quantity (if your recess box has 4 junction boxes, it will have 4 conduits going to it as well).

For a Recess Box that has conduit routed to it, *ALL* conduits for that recess box are routed the same direction, up or down. (It will not be allowed to have 2 go up and 2 go down from the same recess box.)

Tile Base

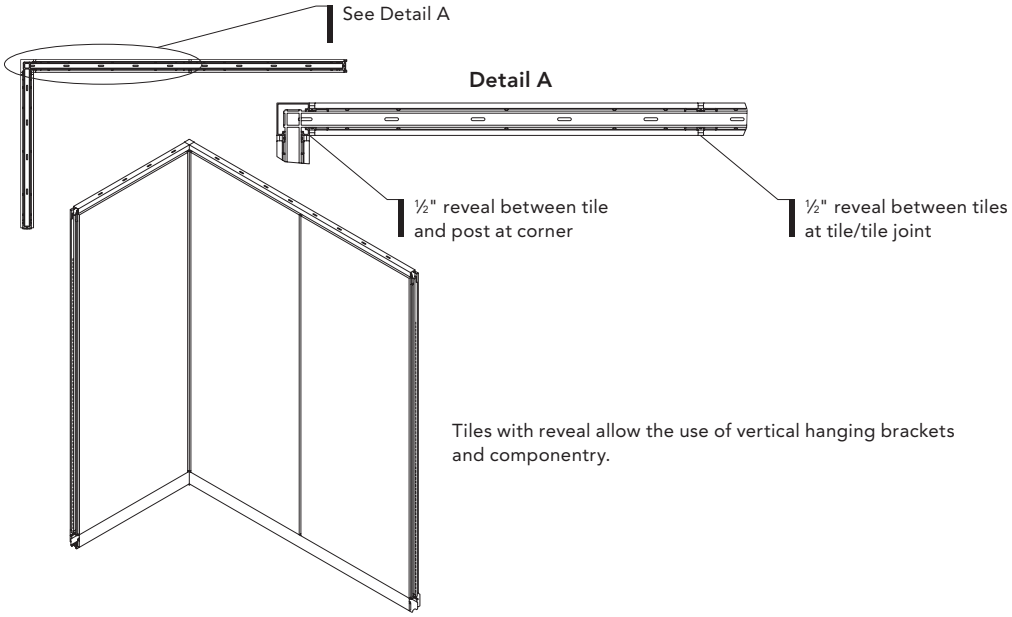
Detail C

- Solid tiles at the base of the panel can be specified with base trim or with tiles to the floor. Specifying with base trim is recommended for movability as the base trim can be removed for quick and easy access to the scissor-lift leveling mechanism. Specifying with tiles to the floor is recommended for a clean aesthetic when the visibility of the aluminum trim line at the bottom is not desired.
  - Tiles with Base Trim
    - Base trim option required for access to modular electrical when electrical base option is specified.
    - Panels specified with base trim install without removing tiles.
  - Tiles to the Floor
    - Not available with stacking or freestanding applications as the tile cannot be removed from the frame to level the panel.
    - Sized to include ¾" nominal reveal to allow for leveling.
    - Panels with the tiles to the floor will require the tile to be removed during installation and reconfiguration to provide access to the scissor-lift mechanism or to connect zippers.

Panels & Trim

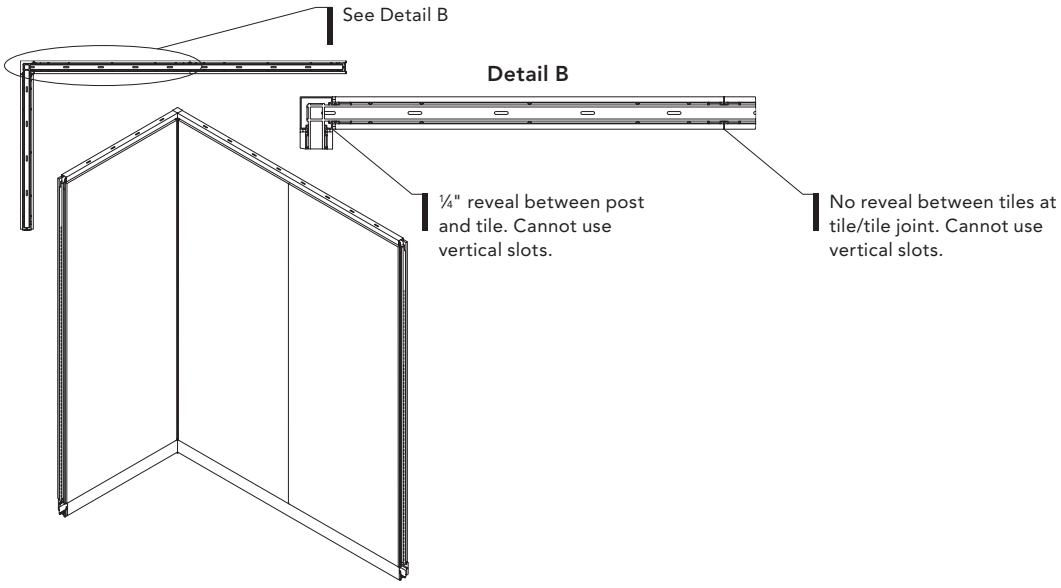
Tile Reveal Type

– Panels can be specified with tiles that have a visible reveal between each tile, or as butt-jointed tiles. Specifying with reveal is recommended for movability as the tiles can be easily moved with quick access to zippers, which fit into the tile reveal. Specifying butt-jointed tiles means the tiles are extended to cover the zipper reveal. This is recommended for a clean aesthetic when the visible zipper reveal.



– Tiles with Reveal

- Can be specified with a half-inch reveal between tiles for ease of installation and reconfiguration or with butt-jointed tiles for a clean aesthetic.
- Half-inch reveal is required for vertical furniture integration, stacking and freestanding.



– Butt-jointed Tiles

- Wall with the butt-joint tile option will require the tile(s) to be removed during installation and reconfiguration.

Tiles with Reveal:

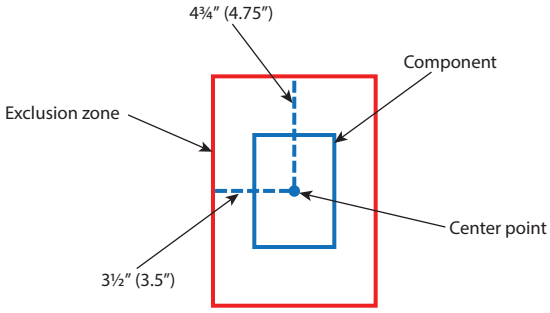
Butt-Jointed Tiles:

- Beyond Solid Segmentation Panel Rules.
  - – Segmentation patterns are parametric
  - – Up to 9 tiles can be specified on a solid panel
  - – Panel sides A and B may have different configurations as long as they don't interfere with each other
    - All tiles specified for a given side must be the same actual width
    - The selection of "with reveal" or "butt-jointed" applies to all tiles on assembled panel side
  - – Previous segmentation pattern codes will remain available as a starting point. Users will not be able to add/remove segments, but can move the segment bars to desired placements up/down.
  - – Tile Size Possibilities for non-ported tiles
    - Width - Exact Dimension
      - For Painted Steel, Veneer and Laminate Tiles: 8"W - 60"W in ¼" increments
      - For Fabric-Wrapped: 9"W - 60"W in ¼" increments
      - For Glass Markerboard: 12"W - 60"W in ¼" increments
      - For Steel Markerboard: 8"W-52"W in ¼" increments
    - Height - Exact Dimension
      - Painted Steel, Veneer, Laminate and Fabric-Wrapped Tiles: 6½"H - 118⅛"H in 1/16" increments. When a panel is 120"H nominally, a tile that's specified to the floor will be 118⅛"H.
      - Glass Markerboard and Steel Markerboard Tiles: 6½"H - 114¾"H
      - Note: Steel Markerboard is limited to 52" on one side. It is possible to specify greater than 52" in width up to 60"W, but the height would then be limited to 52"H.

Note that segment dimensions shown in the CET program are from AFF to the center of the segment bar for solid panels.

Panels & Trim

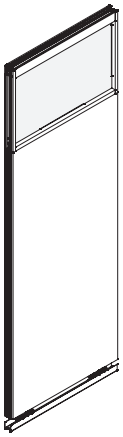
- Painted steel, veneer, laminate and fabric-wrapped tiles can be ported for receptacles to use with hardwired electrical panels. Tiles can have up to 8 ports in single, double, or quad applications. More than one j-box can be placed on the same side of a panel, although j-boxes cannot be back-to-back.
  - Tile Size Possibilities for Ported Tiles:
    - Width
      - For Laminate, Veneer, Painted Steel and Fabric Tiles: 30"W - 60"W in ¼" increments
    - Height
      - For Laminate, Veneer, Painted Steel and Fabric Tiles: 9¼"H - 118⅛"H in 1/16" increments
  - For placement of junction box and recess box within tiles, the following dimensions are required from the center of the outlet to the top or bottom of the tile:
    - Painted Steel
      - For heights up to 78"H: 4⅛"
      - For heights 78"H and higher: 4⅞"
    - Veneer and Laminate Tiles: 4⅛"
    - Fabric-Wrapped:
      - For heights up to 78"H: 4⅛"
      - For heights 78"H and higher: 4¾"
    - There must be 12¼" between junction box.
    - Similar to junction boxes, Recess Boxes cannot be back-to-back.



Edge Offset

Distance needed between the sides of the junction box/Recess box and the edge of the panel or tile (applies to all 4 sides of the tile). The offset is 3" and does not vary by the file type. (The top and bottom edge offset may be from the bottom/top of the tile when on the edge that is shared with another tile.)

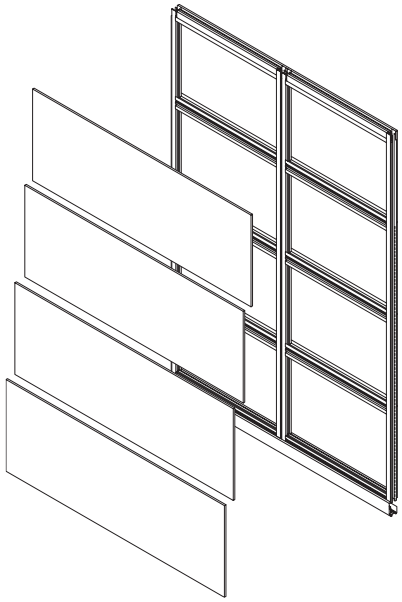
Exclusion Zones



Interference zones / Exclusion zones considerations

- An electrical junction box or recess box has an exclusion/interference zone around it. Similarly, conduit has an exclusion/interference zone around it.
- No other junction box or recess box may intrude into this zone on either the A or B side of the wall.
- Exclusion zones may not overlap.
- The zones may be above or below horizontals depending on mounting location and conduit direction, up/down.

- Single outlets and single switches have an exclusion zone height of 4¾" (4.75") and an exclusion zone width of 3½" (3.5") from the center of the component.
- Single outlet pair, double outlet, and double switches have an exclusion zone height of 4¾" (4.75") and an exclusion zone width of 5¼" (5.25") from the center of the component.
- Double outlet pairs have an exclusion zone height of 4¾" (4.75") and an exclusion zone width of 8⁹⁄₁₀" (8.9") from the center of the component.
- Vesa100 boxes have an exclusion zone height of 2⁹⁄₁₀" (2.9") and the exclusion zone width matches the width of the box.
- Vesa200 boxes have an exclusion zone height of 6¾" (6.75") and the exclusion zone width matches the width of the box.
- Vesa300 boxes have an exclusion zone height of 10¾" (10.75") and the exclusion zone width matches the width of the box.
- Vesa400 boxes have an exclusion zone height of 14⅔" (14.65") and the exclusion zone width matches the width of the box.
- If conduit is selected add 3½" (3.5") to the exclusion zone in the direction the conduit is ran.

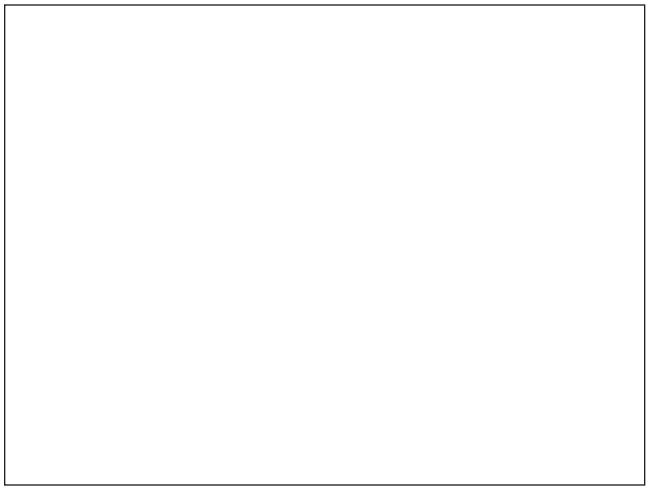


Solid Panels with Integrated Glass

Beyond framed glass can be integrated into Beyond solid panels. Framed glass should always be specified above any solid tiles on the panel. Note that overall panel height for a solid panel is 18"H - 120"H. There must be a minimum 18"H solid panel with tile(s) below the integrated glass.

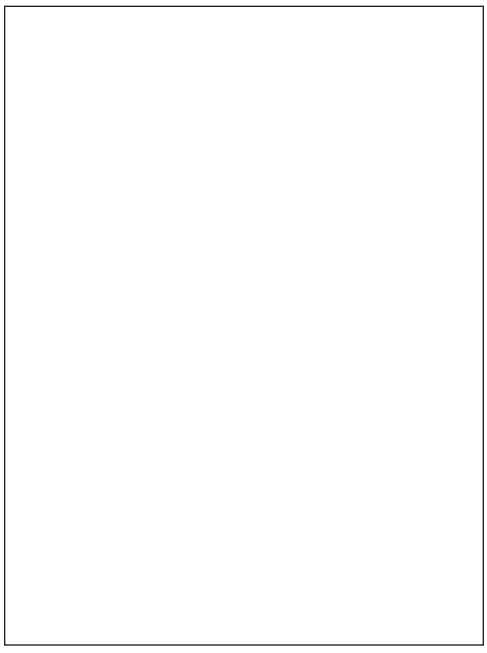
- Integrated Glass Tile Possibilities
  - Width:
    - 8"-60" in ¼" increments
  - Height:
    - 9½" - 102"H in ¼" increments
    - 10½" - 36⅛"H in ¼" increments with integrated mounting rail
- Specification Information:
  - When specified, framed glass will become part of the solid panel assembly.
  - Integrated glass utilizes uniform width vertical style on the frame.
  - Select from ¼" and ⅜" Beyond framed glass in a variety of colors and types.
  - Note that base model for integrated framed glass BY-STILEGLASS is the same base model as a framed glass stacker. See the following page for additional information about a framed glass stacker.

Solid Spanning Tiles



– Tiles can span across multiple frames. This can create a clean aesthetic such as when a markerboard tile spans across multiple frames when a seam is not desired within the markerboard. Spanning tiles are engineered-to-order.

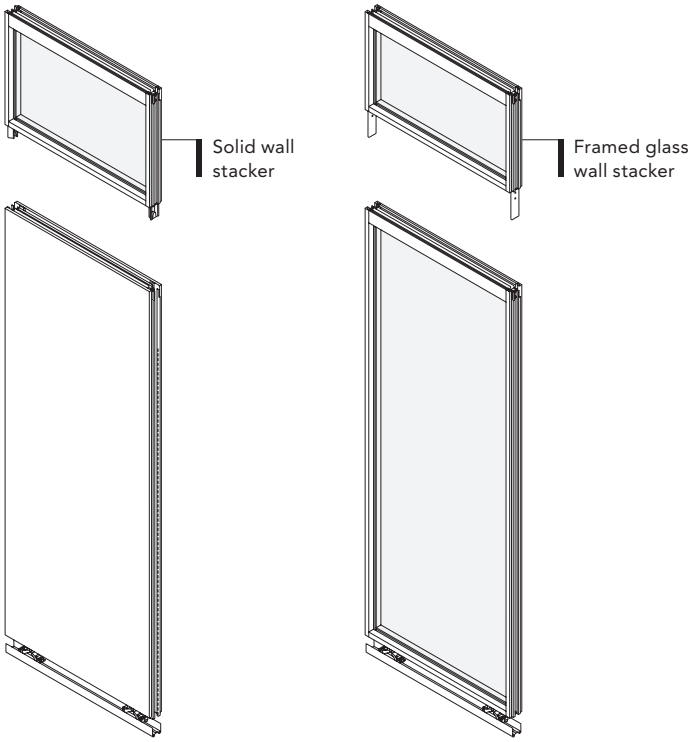
- Standard tiles mount vertically on a single wall frame.
  - Available in widths up to 120" wide x 52" high.
  - **Must be field-installed.**
  - Allsteel recommends utilizing frames of the same width for spanning so that tiles do not become handed tiles.
  - Spanning tiles must span to the edge of the frames where the vertical supports are located to provide light and sound seal.
  - Frames and tiles will ship separately and be installed in the field when spanning tiles are specified.
  - Spanning tile options will require the tile(s) to be removed during reconfiguration.
  - Spanning tackable fabric tiles are not possible due to the tile construction.



Panels & Trim

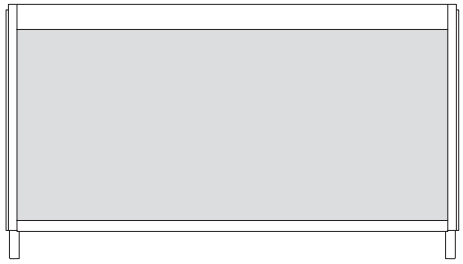
Beyond® — Working with Framed / Solid Panels & Trim

- For use in window sill application.
- Solid frame is standard, specify width up to face of sill.
- Solid tiles are engineered to order to overhang frame into sill, cut to fit in field. Engineered to order product request will include a set of two cuttable tiles, one for each side of the frame. Cuttable tiles are handed, maximum width is 60"W.
- Solid field cuttable tiles are wood, laminate, or painted.
- Recommend cuttable tiles not extend past frame more than 24". (Example: if solid cuttable tiles are 48"W, minimum solid frame is 24"W.)
- Specify solid window sill u-channel BY-FSSILLTRIM to finish off end of solid cuttable tiles. Trim is 120"L. Trim can be specified in stain anodized or painted finish.



Solid window sill u-channel BY-FSSILLTRIM

Engineered to order solid cuttable tile set



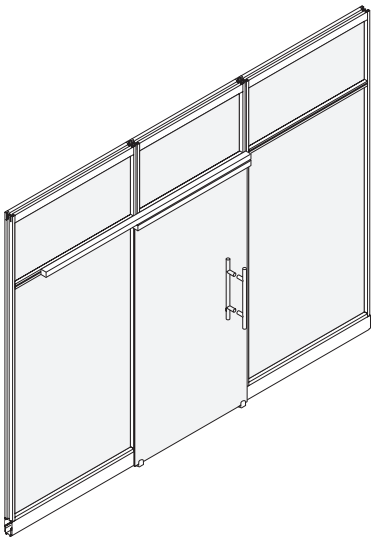
Stacking Panels

Stacking Glass on Solid Wall **Stacking Glass on Framed Glass**

- Add a framed glass stacking panel ("stacker") to framed glass, solid panels, and doors to extend the total height up to a maximum of 144"H. Stackers are field installed to the base panel.
- Stacker Dimension Possibilities
  - Width
    - 8" - 60"W in ¼" increments above a panel
    - 36" - 120"W in ¼" increments above single or double doors and freeways; up to 58" in height
    - Limited by door frame or freeway module width and minimum height. The freeway or frame plus stacker cannot exceed 144"H.
  - Height
    - 9½" - 120" in ¼" increments above a panel
    - 10½" - 36⅛" in ¼" increments above a panel with integrated mounting rail
  - Glass Thickness:
    - ¼"
    - ⅜"
- Available on Framed and Solid.
- Specification Information:
  - Framed glass panels specified with a stacker must utilize uniform width vertical style on the frame. Stacking panel construction consists of a uniform width vertical style frame surrounding a pane of glass.
  - Solid panel tiles must be specified with reveal as tiles would need removed to install zippers if specified as butt-jointed. Tiles cannot be removed once stacker is installed.
  - Solid panel tiles must be specified with base trim as tiles would need removed to level panels if tiles specified to the floor. Tiles cannot be removed once stacker is installed.
  - Utilize stacking posts with stacking panels. Stacking posts will be butt-jointed with the post below at the stacking segment height
  - Specify an additional set of zippers for the stacking section.
  - Solid walls must be removed from the run if a monolithic tile or top tile needs to be removed from a panel with a stacking segment.
  - Stackers do not come pre-attached to framed or solid panel and must be field-installed.
  - Note that the base model for framed glass stackers BY-STILEGLASS is the same base model as integrated framed glass on solid panels.
- Seismic applications cannot exceed 120" in total height.

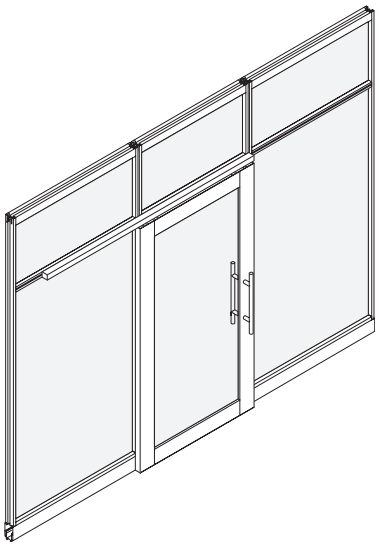
Framed and Solid Integrated Mounting Rail

Framed glass with standard rail



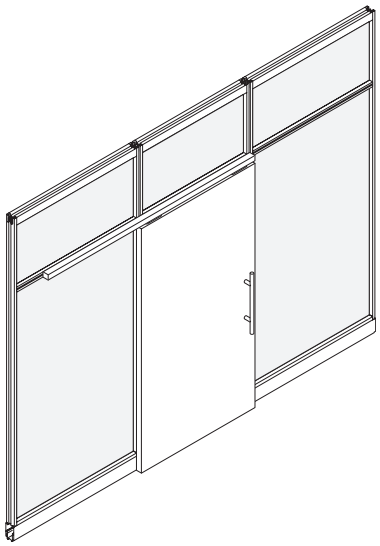
Framed glass with integrated mounting rail

Framed and solid panels can be specified with an integrated mounting rail horizontal bar. This integrated mounting rail can be used to attach a sliding door directly to the panels with a glass transom above. The sliding door is at a fixed height of 7ft. Order a sliding door frame with transom for this configuration. See Beyond Doors for details. It can also allow for TV-mounting that doesn't deface the solid tiles, Stride off-modular connection (for panels up to 57½"), and accessory hooks. See Furniture Integration and Technology Integration for details.



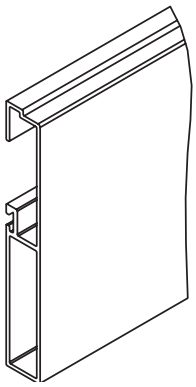
Note that the integrated mounting rail horizontal bar is slightly taller than the standard horizontal bar.

Specification Details:

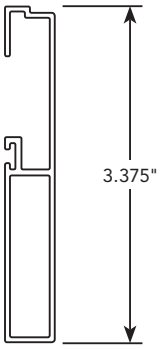


- The integrated mounting rail bar can be specified at 83⅞" AFF or higher on a framed or solid panel in 1/16" increments

Sliding Frameless Glass with Transom

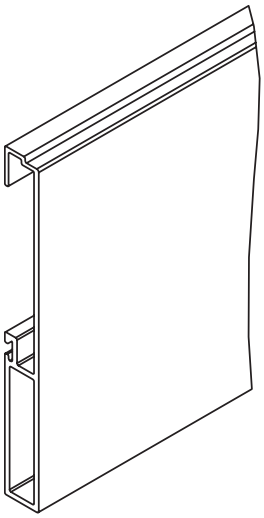


Sliding Aluminum Framed with Transom

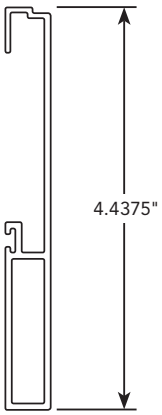


Sliding Solid with Transom

Base Trim



Standard



Profile View

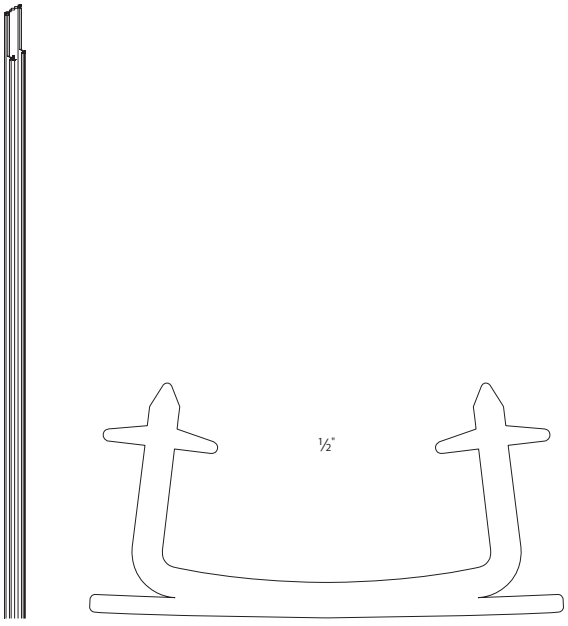
- Base trim connects to the base channel and is specified on both sides of a framed or solid panel.
- 3 5/8"H for trim itself.
- 4 3/16"H from finished floor to top of trim with nominal reveal of 3/4".
- Available in 96" or 120" lengths.
- CET adds 10% to standard height, non-ported base trim quantity for scrap.

Electrical Base Trim

Electrical

Profile View

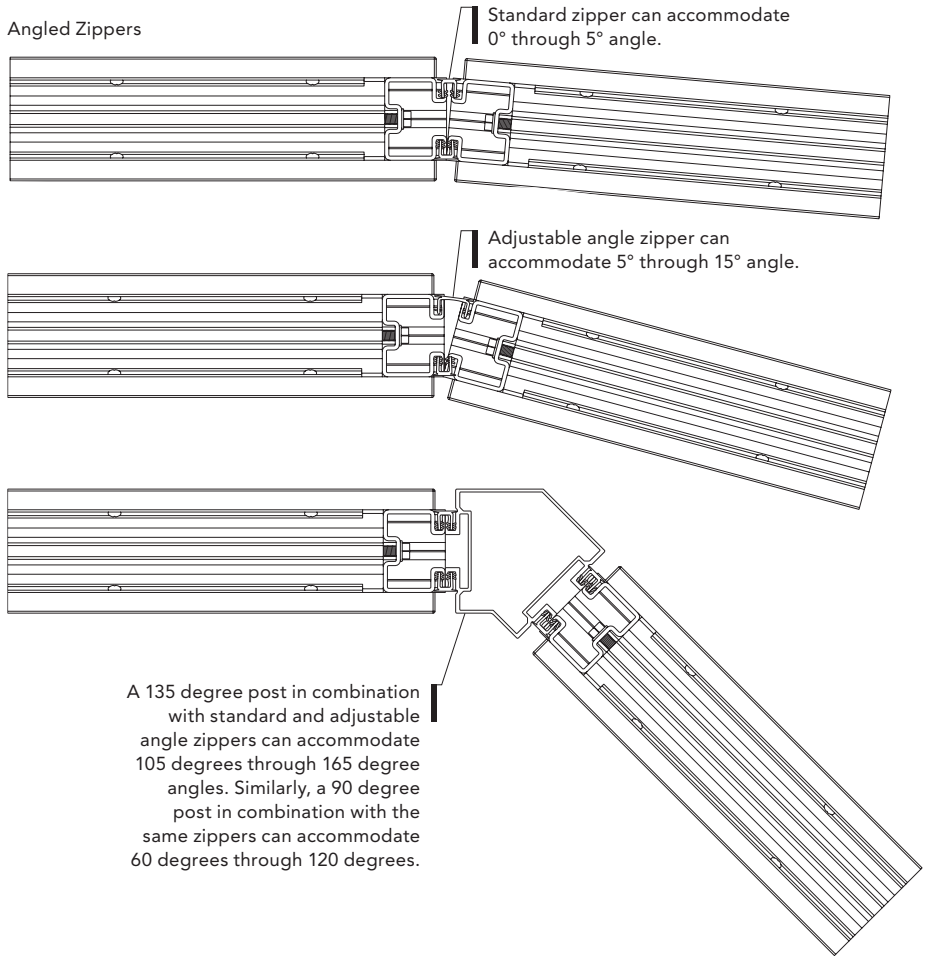
- Utilize the electrical base trim for projects with modular electrical in framed or solid panels. Base trim connects to the base channel and is specified on both sides of the panel. The electrical base trim is 1" taller than the standard, non-electrical trim.
- 4 5/8"H for trim itself.
- 5 3/16"H from finished floor to top of trim with nominal reveal of 3/4".
- Non-ported electrical base trim is available in 96" or 120" lengths.
- Framed and solid pre-ported base trim at 60 1/2"W is available for single or double receptacles.
- Can be utilized on panels with minimum width of 45".
- Base trim that is 48 1/2"W with QTY (2) additional data ports allows data to be placed to the right or left of the duplex receptacles. This is available for double receptacles only. Trim can be cut in the field so that one data port is removed if it's not used.
- Due to wall depth, back-to-back data modules should not be used. If required, it is recommended that extended data faceplates be used. Width is 48".
- All electrical and data ported trim for framed and solid panels comes with enhanced gasketing.
- CET adds 10% to electrical height non-ported base trim quantities for scrap.
  - CET adds 0% to electrical height ported base trim quantities for scrap.



Panels & Trim

Standard Zipper

Zipper



- Framed and solid panels are connected utilizing fast-installing co-polymer zippers. Zippers are used to connect framed panels to other framed panels and solid panels to other solid panels. Note that zippers are also used to connect frameless adapters to door frames or posts.
  - – Standard zippers are ½"W and can flex up to 5 degrees. Standard zippers do not add dimension to the overall wall run.
  - – Order single zippers or a bulk pack of QTY 75.
  - – Once 41 zippers are reached, the specification program will automatically specify a bulk pack of 75 zippers.

Adjustable Angle Zipper

– Adjustable angle zippers are 1"W and can flex up to 15 degrees. The adjustable angle zipper planning dimension is ½"W due to the zipper adding ½" to the overall wall run.

Zipper Adjustment Capability:

TV Mounting Guidelines for Solid Walls

There are multiple ways to mount a TV on Beyond product, including:

- Close Mount (BY-TVBRACKET.FMB)
- TV-Mount Bracket (BY-TVBRACKET.PLMB)
- Variable Height TV Mounting Plate (BY-TVBRACKET.VHMB) for use with bracket mount or close mount brackets
- Integrated Mounting Rail Mount (BY-TVBRACKET.IRMB)
- Post mount bracket for use with TV-Mount Bracket (BY-TVBRACKET.PLMB)
- Frameless glass mount bracket (BY-TVBRACKET.FGMB) to use with frameless glass privacy tiles

See the following pages for details. Solid walls need to be ordered with electrical porting capability per the TV mount style to provide power access for the TV. Brackets are available for order.

Several of the TV mounting solutions utilize the TV mounting bracket (model BY-TVBRACKET.PLMB) to provide the interface between the wall and the TV. Details are shown in each subsequent section.

Please note: Glass markerboard tiles cannot support TV mounting.

The TV mounting bracket supports the following:

- 32"–70" flat panel displays up to 165 pounds
- 10 to 0 degree tilt

Combination of brackets			VESA Pattern (W x H)

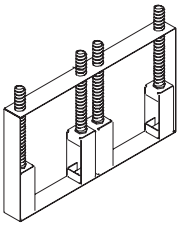
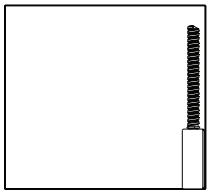
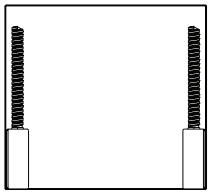
Recess Box Rules



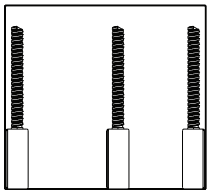
- For a Recess Box with (or containing) junction boxes, the number of conduits needed will match the junction box quantity (if your recess box has 4 junction boxes, it will have 4 conduits going to it as well).
  - Recess boxes can have 0-4 junction boxes specified.
- For a Recess Box that has conduit routed to it, *ALL* conduits for that recess box are routed the same direction, up or down. (It will not be allowed to have 2 go up and 2 go down from the same recess box.)
- Similar to junction boxes, Recess Boxes cannot be back-to-back.
- Vesa Patterns Supported
  - 200 x 200 mm
  - 300 x 300 mm
  - 400 x 200 mm
  - 400 x 400 mm



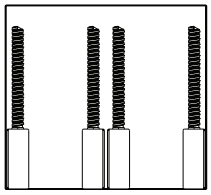
Recess box with Zero (0) junction boxes



Recess box with Two (2) junction boxes



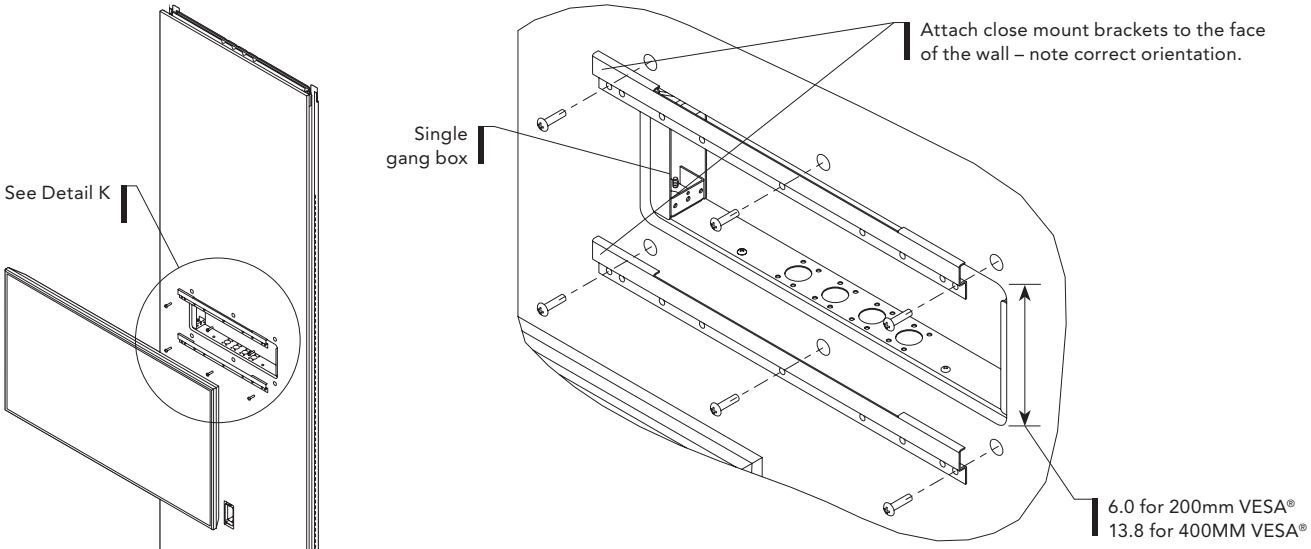
Recess box with Four (4) junction boxes



Vesa with One (1) junction box

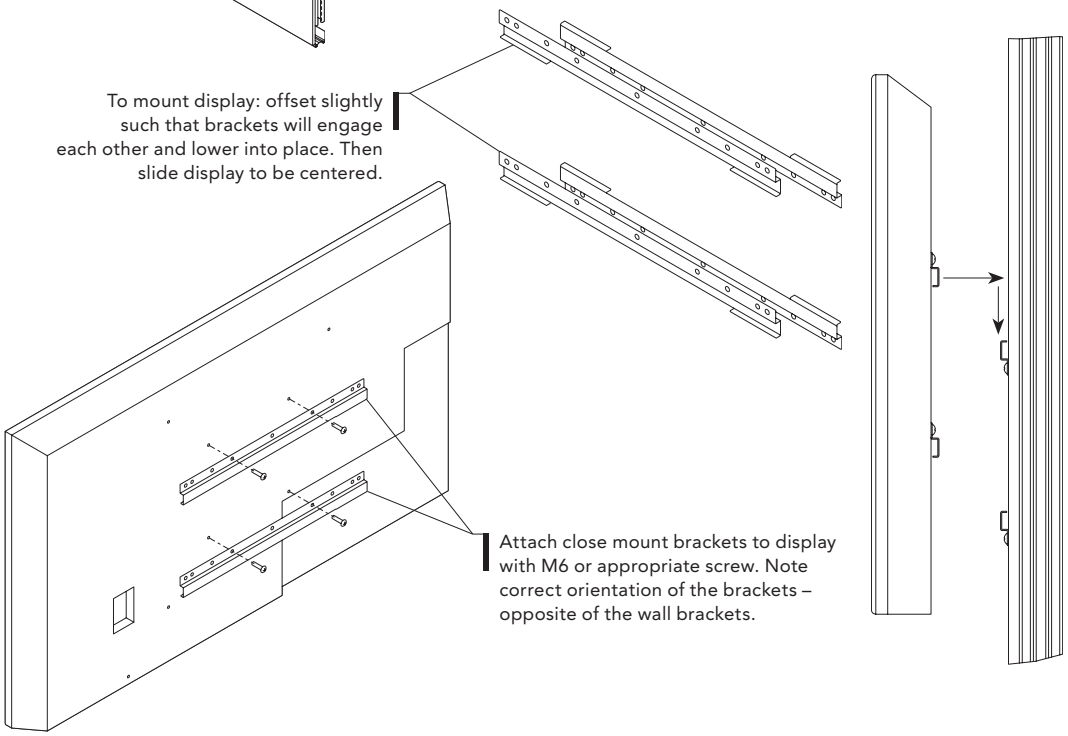
Vesa with Two (2) junction boxes

Vesa with Three (3) junction boxes



Vesa with Four (4) junction boxes

Solid Wall Close Mount TV Mounting

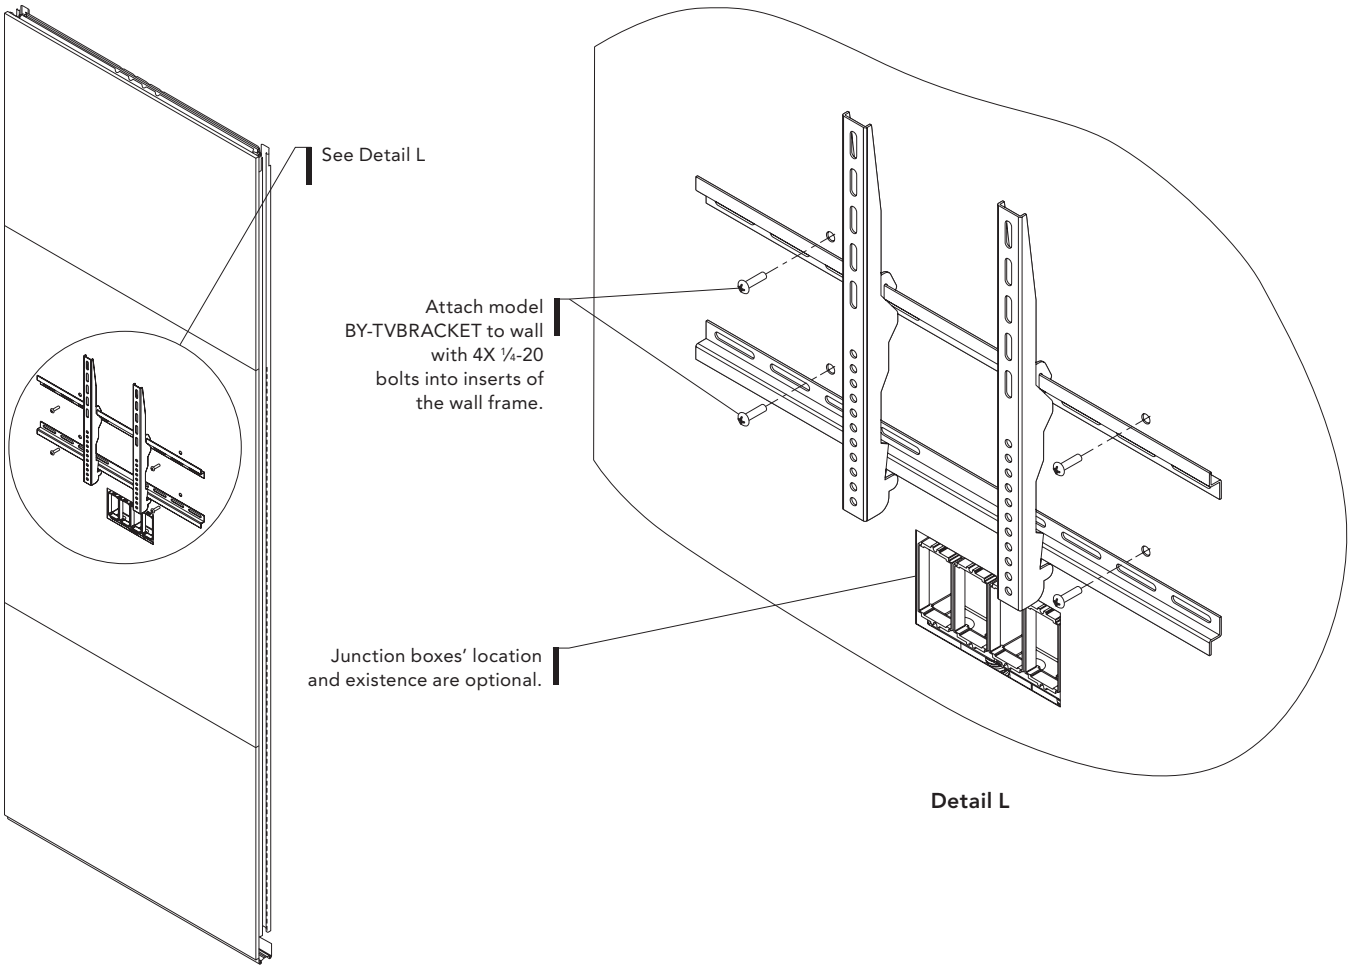


Close mount TV mounting attaches the TV as close as possible to the solid wall so that the only dimension extending from the wall is the thickness of the TV and the minimal bracket thickness. This style of TV mount requires the brand and model number prior to order. Mounting patterns on the back of TVs are in different locations depending upon the brand. Once the pattern location and desired height of the TV is determined, the solid wall will be designed to the specifications. A single junction box is mounted inside the wall cavity to provide a power chase to the TV. Conduit from the junction box is ½" trade size flex conduit. Wiring to be performed by a licensed electrician.

The following information is required for specification:

- Make and model of TV is recommended to ensure design intent is achieved
  - If this information is not available, then consider using a variable height mounting bracket for maximum placement flexibility because VESA mount patterns are not always centered on the TV.
- Mounting height to the vertical centerline of the TV AFF
- Mounting centerline location horizontally (location for centered, offset, spanning, etc.)
- Required electrical, cabling, and data needs, including conduit routing direction
- Glass markerboard tiles cannot accept port cutouts to support TV placement. If glass markerboard is requested, it is recommended to segment the tiles and use a tile material that accepts ports where the TV location will be.

Detail K

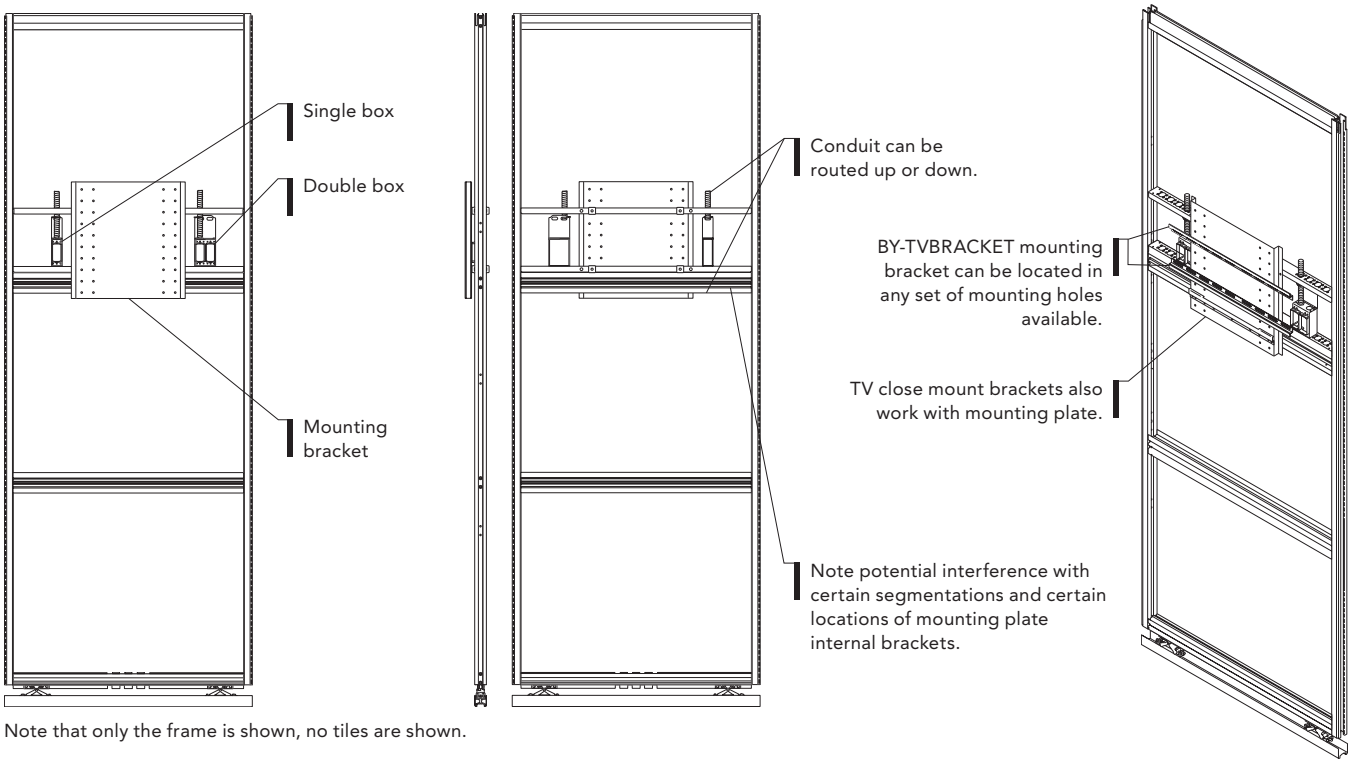


Solid Wall Bracket Mount TV Mounting

Bracket mount TV mounting attaches the TV to the solid wall utilizing a bracket to interface between the two. Mounting patterns on the back of TVs are in different locations depending upon the brand. Once the pattern location and desired height of the TV is determined, the solid wall will be designed to the specifications. The junction box size and location can be customized and will provide a power chase to the TV. Conduit from the junction box is ½" trade size flex conduit. Wiring to be performed by a licensed electrician.

The following information is required for specification:

- Make and model of TV
  – Specify a variable height mounting bracket; if not using a standard Allsteel bracket model to ensure the correct TV location is met.
- Mounting height to the vertical centerline of the TV AFF
- Mounting centerline location horizontally (location for centered, offset, spanning, etc.)
- Required electrical, cabling, and data needs, including conduit routing direction
- The bracket itself is a standard component.
- Glass markerboard tiles cannot accept port cutouts to support TV placement. If glass markerboard is requested, it is recommended to segment the tiles and use a tile material that accepts ports where the TV location will be.



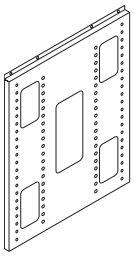
Detail L

Solid Wall TV Mount with Variable Height Mounting Bracket

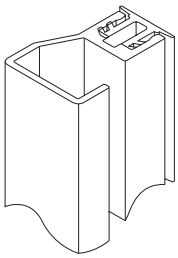
The variable height TV mount provides the most flexibility when mounting TVs and is recommended when the brand and model of the TV have not yet been selected. The mounting plate is to be located at the approximate centerline of the TV. The mounting plate has a set of holes on the 16" horizontal centerline to match the stud centerline used on most TV mounts. The holes are spaced 50mm or approximately 2" apart vertically to allow movement of the TV mount up and down. This hole pattern allows the attachment of the close mount bracket or the TV mounting bracket. These brackets then create the interface from the TV to the mounting bracket.

The following information is required for specification:

- Mounting height to the vertical centerline of the TV AFF
- Mounting centerline location horizontally (location for centered, offset, spanning, etc.)
- Required electrical, cabling, and data needs, including conduit routing direction
- A standard model BY-TVBRACKET mounting bracket or close mount bracket is required in addition to the panel.



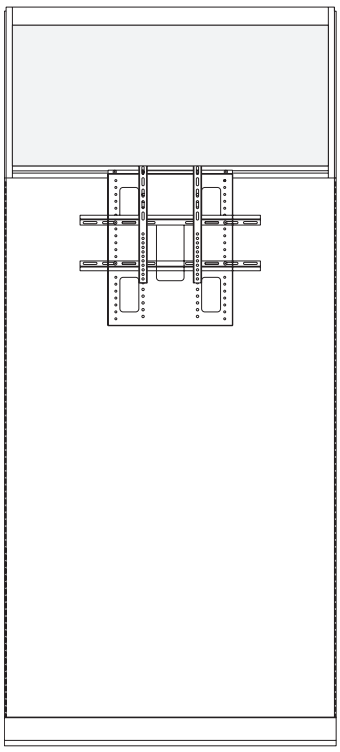
Note that only the frame is shown, no tiles are shown.

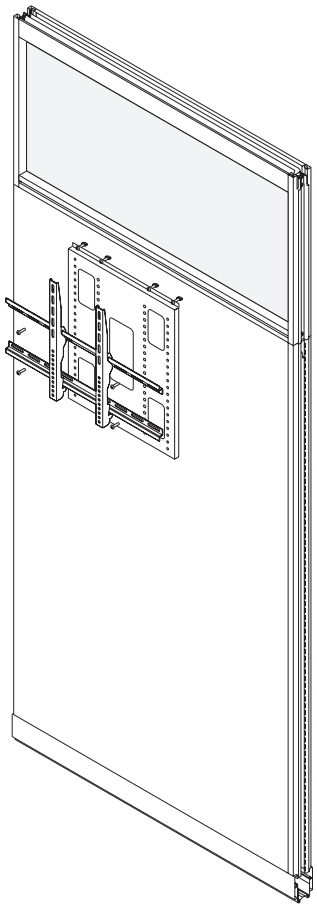


Solid Wall Integrated Mounting Rail TV Mount

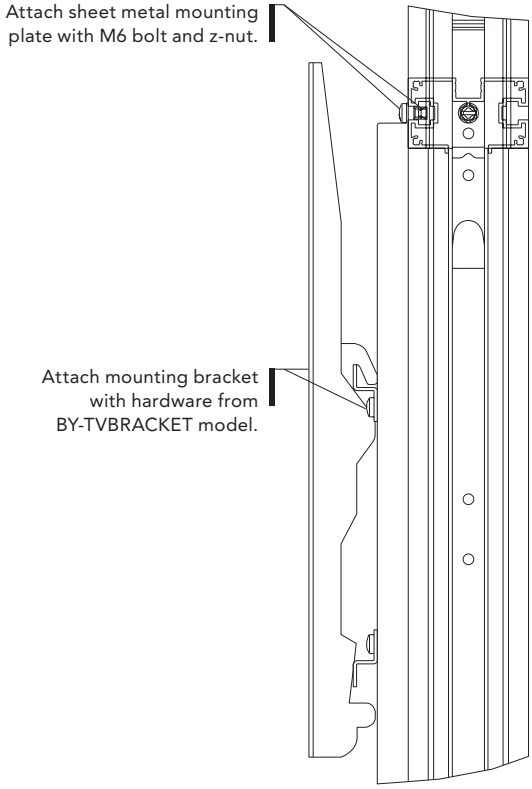
The integrated mounting rail TV mount utilizes the integrated mounting rail clerestory to support the TV. The TV mounting plate ties into the integrated mounting rail of the clerestory and allows the TV to be moved from side to side as desired. A TV bracket (model BY-TVBRACKET) is then used to provide the interface between the mounting plate and the TV. It is recommended to utilize the "with reveal" option along with the wire manager (model BY-FSWMANAGER) to provide cable management down to the standard receptacle locations in the panel. Optional posts are available to route power up to the TV height location. The plate provides cutouts for electrical access.

Electrical, cabling, and data needs are required.





Integrated Mounting Rail
TV Mounting Bracket



Wire Manager

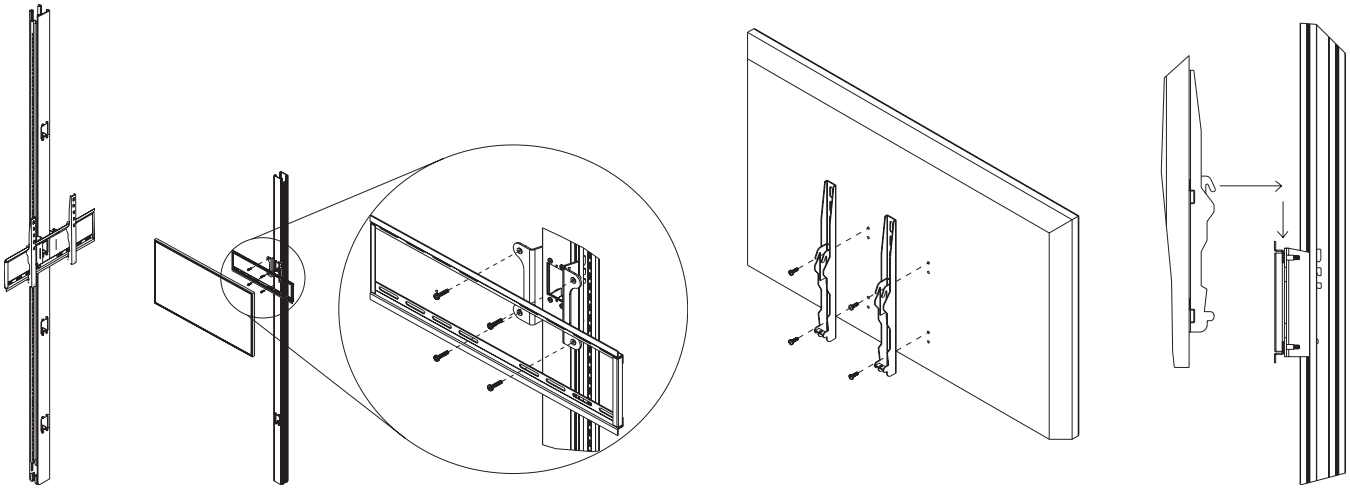
See page 197 for specification data

TV Mounting Guideline for Posts

To mount a TV to a post, a post mount bracket (BY-TVBRACKET.PMB) and a TV mount bracket (BY-TVBRACKET.PLMB) will both be needed.

Posts will need to be ordered with slotted standards for the post mount bracket to attach. There is a maximum of two TVs that can be mounted per post, one on each side.

Allsteel brackets can support 32"–70" flat panel displays up to 165 pounds.



- 10 to 0 degree tilt

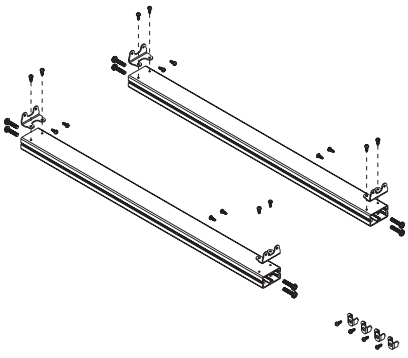
Post models that accept mounting are:

- BY-EPOST
- BY-EAPOST

The following information is required for specification:

- Make and model of TV is recommended to ensure design intent is achieved
- Mounting height to the vertical centerline of the TV AFF
- Required electrical, cabling, and data needs, including conduit routing direction

Retrofit TV Mounting Guideline for Solid Panels

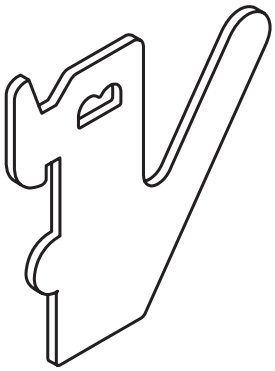


The retrofit TV Mounting kit (BY-TVKIT) is a field install option to retrofit an existing panel. TV Mounting brackets are not included and will need to be ordered separately.

Allsteel brackets can support 32"–70" flat panel displays up to 165 pounds.

- 10 to 0 degree tilt

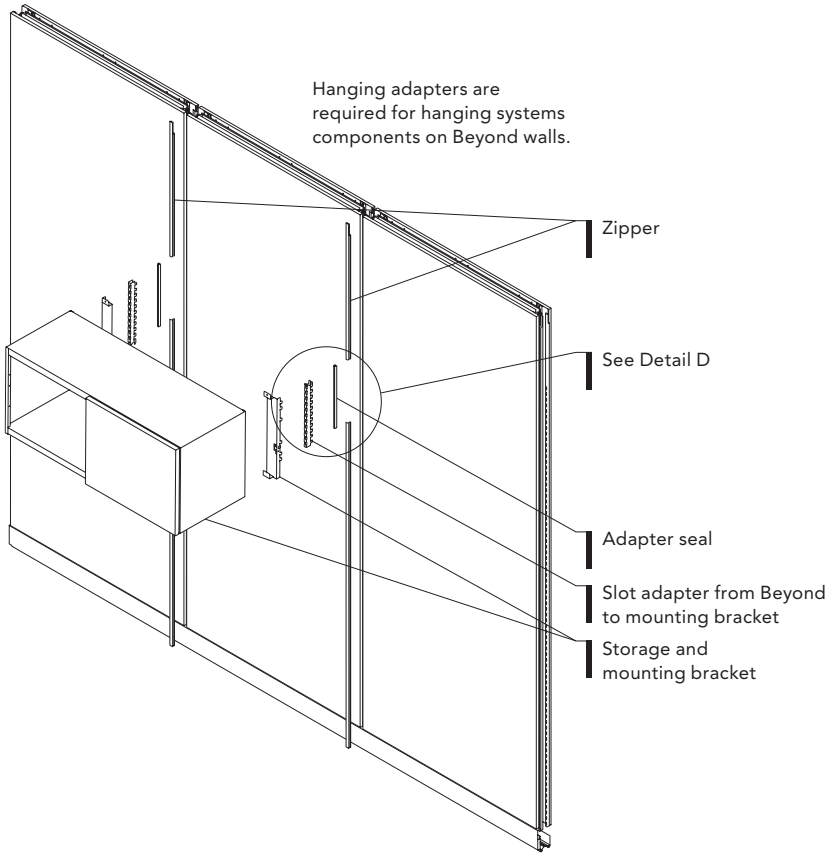
The kit includes:

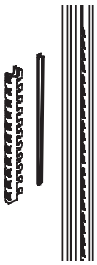


- Two (2) TV Segment Bars
- Two (2) L-Brackets, installed
- Hardware

Vertical Furniture Integration

Hanging Bracket





Accessory Hook

- All solid wall frames, posts, wall channels, and finished ends have an option to be specified with slotted standards (furniture integration) in the vertical reveal to provide furniture mounting capability. Vertical furniture mounting brackets must be specified to connect furniture components to the slotted standards in the solid wall frame.
  - Utilize Stride®/Terrace® furniture and components for vertical furniture integration.
  - The half-inch reveal option must be specified to allow for furniture mounting utilizing the vertical slotted standards.
  - Integration of furniture components meets applicable systems BIFMA 5.6 requirements.
  - Available in three sizes:
    - Worksurface bracket 3"H.
    - Small 8"H (niche mounting).
    - Large 11"H (overhead and cantilever mounting).
  - Accessory hooks are available to connect into the slotted standards adjacent to the zipper to provide a hook for picture mounting, coats, and accessories. Accessory hooks are a pack of quantity six.
  - Wood overheads and niches can be mounted to a Beyond panel of equal width for a modular design. An example is a 48"W overhead mounted to a 48"W Beyond panel.
  - Approach overheads can mount off module.
  - Metal overheads can be mounted on a Beyond panel of equal width or up to 18" narrower than the overhead when using an off-module kit. One side of the overhead must be mounted on module. An example of this is a 48"W overhead mounted to a 30"W Beyond panel.
  - Furniture can be positioned vertically on the panel in 1" increments.
  - Other manufacturers' furniture components may be capable of mounting to Beyond utilizing a custom adapter bracket. A sample of the furniture components to be mounted must be sent to Allsteel for the Tailored Products Group to review.
  - Brackets come in painted finishes. Specify Anodized Silver - PR0 to coordinate with Clear, Anodized frame.

Vertical Furniture Integration

Example of Vertical Furniture Integration:

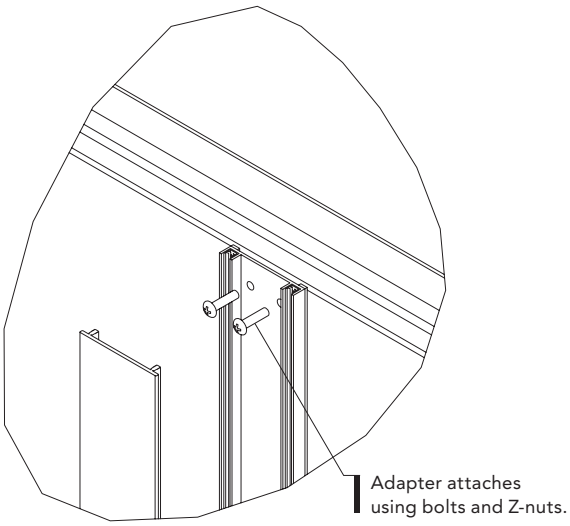
Off-Modular Adapter Stride® to Beyond – Integrated Mounting Rail



- Off-modular adapter utilizes the integrated mounting rail for framed glass or the integrated mounting rail clerestory for solid wall to connect the adapter.
- Designed for use with 30"H Stride® panels. Adapters to support additional heights available as an engineered-to-order (ETO) model.
- Allows limited routing of data cables.

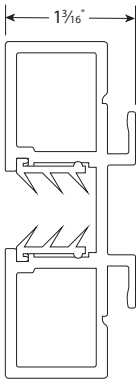
General Information

- Door components are ordered separately.
- Beyond doors are universal and work with Beyond frameless glass, framed glass, and solid panels.
- Doors have a maximum height of 120" and a minimum height of 86". The only exclusions are the 48"W module aluminum framed doors which have a maximum height of 108¾" and the single 7'H sliding door with transom which is at a fixed height of 7'H.
  - Heights are available in ¼" increments.
- Door module width varies by door type.
- Utilize an adjacent door wall channel when connecting a door directly to drywall.
- When connecting a door frame to frameless glass, a frameless glass adapter must be used. The adapters add ½" planning dimension per adapter.

Planning Dimensions



Swing Door Frame-to-Frameless Adapter

Swing Door Frame-to-Frameless Adapter

Sliding Door Frame-to-Frameless Adapter

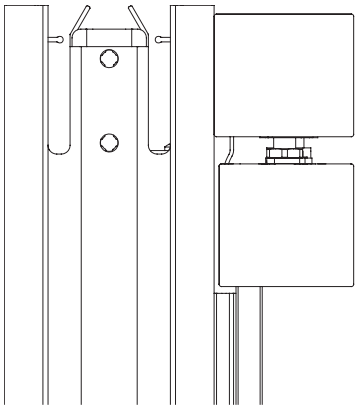
Sliding Door Frame-to-Frameless Adapter

- Doors specified at nominal height have a ½" planned clearance between the bottom of the door and the floor.
  - Door clearances should be confirmed on the job site with field measures for both the open and closed positions of sliding and swing doors.
- Doors can be specified as frameless glass, aluminum framed glass, or solid (veneer, laminate or painted wood).
  - Frameless glass doors are available in tempered clear and tempered low-iron.
  - Aluminum framed doors require specification of glass thickness, and glass type.
    - Specify ¼" or ⅜" glass.
  - Solid doors can be specified as veneer, laminate or painted wood.
    - See the Materials and Finishes section for finish selection details.
- Door frames are available in anodized aluminum or painted aluminum. See the Materials and Finishes section for finish selection details.

Sliding Doors

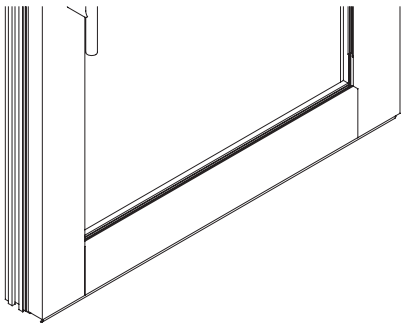
General Information

- Sliding doors can be mounted on the interior or exterior of the room.
- Adjacent panels of the following dimensions are required next to sliding doors to support the door track and to eliminate interference with another panel or door:
  - 42" door module requires a 36"W minimum adjacent panel.
    - Clearance is 33¾" on standard and 33¼" on full strike doors.
  - 48" door module requires a 42"W minimum adjacent panel.
    - Clearance is 39¾".
  - 78" door module requires a 33½"W minimum adjacent panel on both sides of the door.
    - Clearance is 63½".
- Sliding door tracks are available in two options.
  - Standard
  - Slow Close/Slow Open
    - Incorporates a motion-dampening mechanism to support soft closures and openings for sliding doors.
- Sliding doors utilize door pulls. See the Door Hardware pages of the Doors section for available options.
- Optional frameless glass sliding door trailing edge seals are available for improved acoustical performance.
  - Trailing edge seal is field-applied to the trailing edge of the frameless glass door with pre-applied adhesive tape.



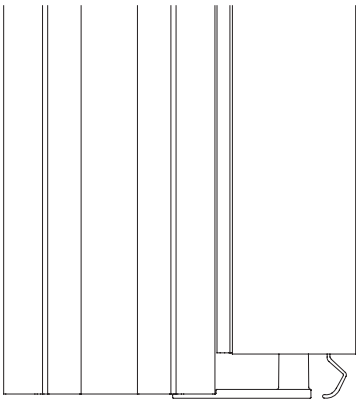
Trailing Edge Seal

Single Sliding Doors



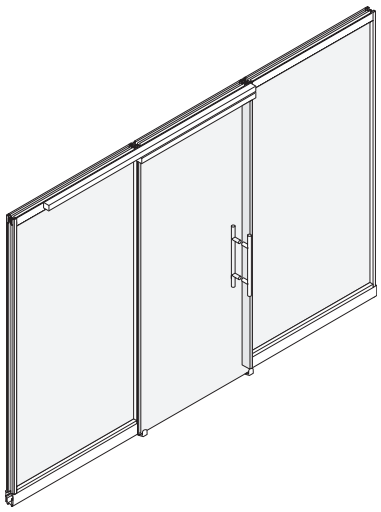
- Doors and door frames are non-handed.
- Available in two door module sizes.
  - 42" door module is available with all door types.
  - 48" door module is only available on aluminum framed and solid doors.
    - Maximum specified height of 108¾"
    - Single 7'H doors with transom can be utilized for heights above 108¾".
      - ⅜" glass thickness only available when specified at 7'H with transom. All other heights are available only with ¼" thick glass.
- Sliding doors can be locked by specifying the locking ladder pull options or specifying a full strike frame with locking into the frame.

Sliding Doors

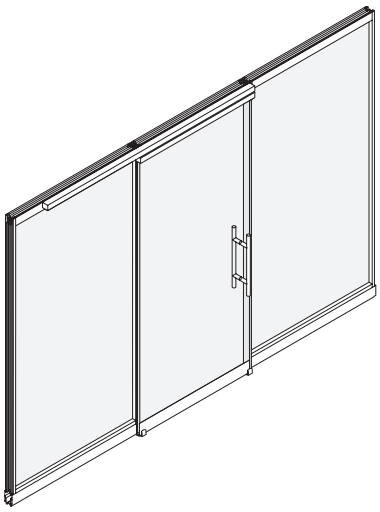


- Enhanced Acoustics
  - Enhanced acoustics are available on all sliding doors except thin aluminum framed glass.
  - The enhanced acoustical option includes a seal inside the sliding door track and a bottom seal to reduce sound transmission.
  - All doors specified after the launch of the acoustical enhancements can be retrofitted with bottom seals and track seals with a retrofit kit.
  - If enhanced acoustics are specified, this option will appear on the door frame and track bill of materials. It will appear on the aluminum framed door bill of materials. It will NOT appear on the frameless glass or solid door model bill of materials due to the acoustical enhancement components being included in the other models.

Sliding Door Track with Enhanced Acoustics

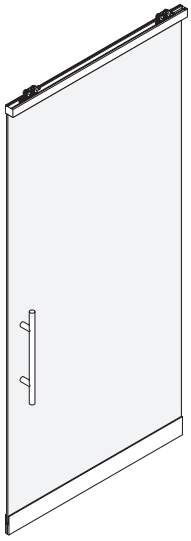


Aluminum Framed Door with Enhanced Acoustics



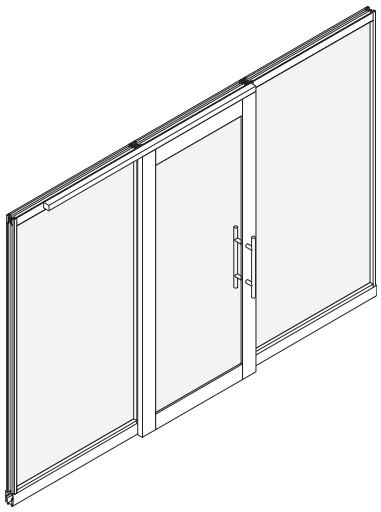
Solid Door with Enhanced Acoustics

Sliding Doors

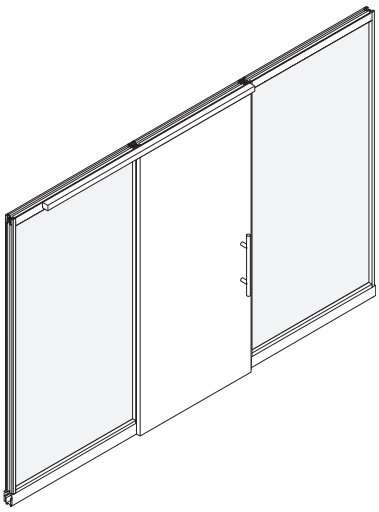


- Frameless glass standard sliding doors are also available with adjustable footers.
  - Adjustable footers attach to the bottom of the frameless glass doors and allow for +/– ½" adjustment. Footers can be adjusted down to minimize the space between the bottom of the door and the floor. Doors with footers specified at nominal height have a ¼" planned clearance between the bottom of the door and the floor.
    - Adjustment can occur after the door is hung in place for ease of installation.
    - Footer models are non-handed.
    - Specify the door model for adjustable footers and the footer model separately.
    - Footers work with full strike option on single sliding doors.

Sliding Frameless Glass



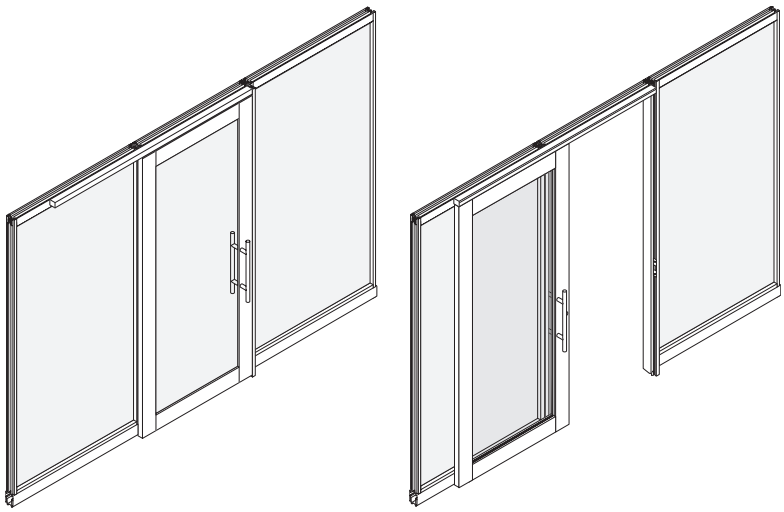
Sliding Frameless Glass with Adjustable Footer



Frameless Glass Door with Adjustable Footer

Profile View of Adjustable Footer

Sliding Aluminum Framed Glass

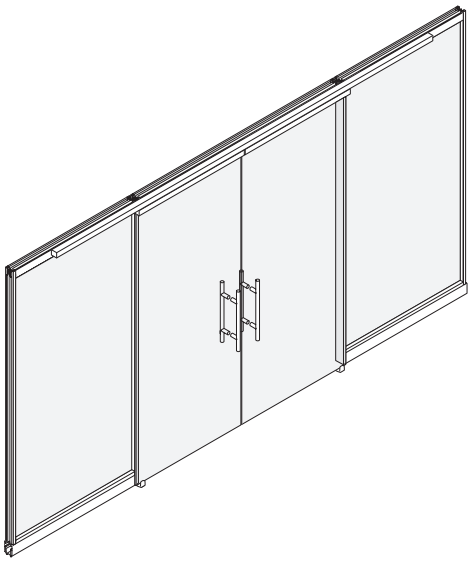


Sliding Solid

Sliding Doors

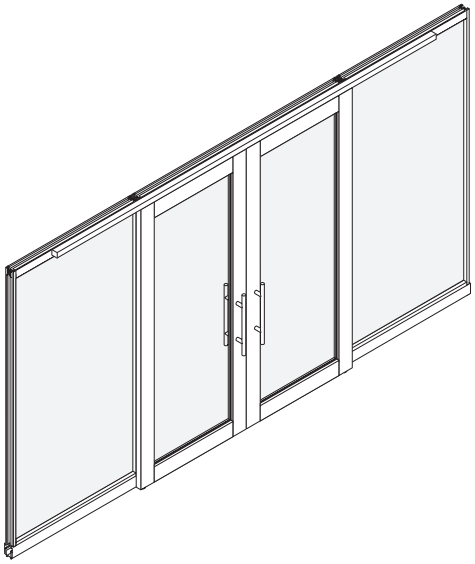
Single Sliding Doors - Full Strike Option

- A full strike frame can be used with sliding doors for locking purposes and/or to enhance acoustics.
- Doors are non-handed. Door frames are handed.
- Door frame models are dependent upon door type.
  - Frameless glass door frames
  - Aluminum framed glass or solid door frames
- Available in two door module sizes.
  - 42" door module is available with all door types.
  - 48" door module is only available in aluminum framed glass doors.
    - Maximum specified height of 108¾"
- Frameless glass full strike sliding doors are also available with adjustable footers.
- Full strike doors can be locked utilizing one of the following options:
  - Locking ladder pull
  - Door lock that locks into full strike frame. See Door Hardware on page 215 for details.



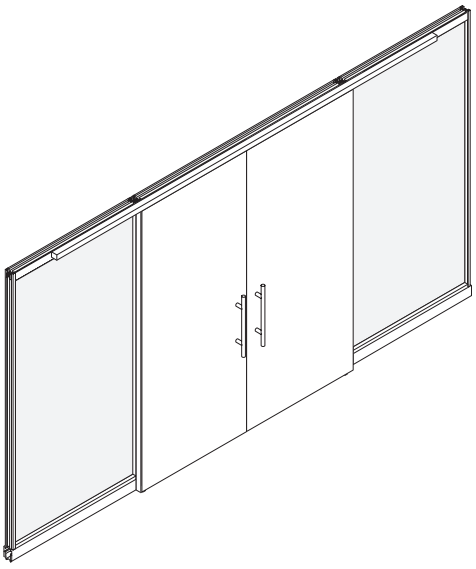
Closed Position Open Position

Full Strike Sliding Aluminum Framed Door with Lock

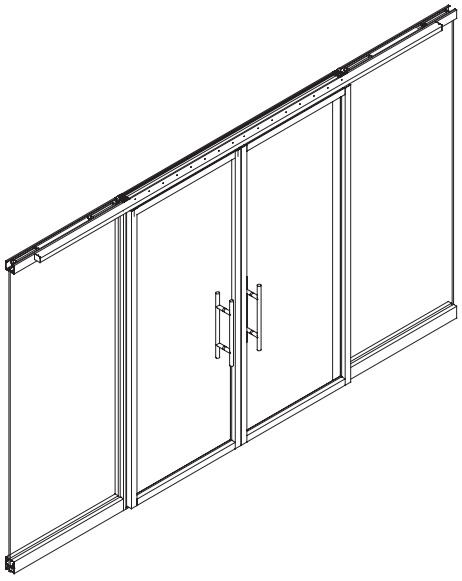


Sliding Doors

Double Sliding Doors



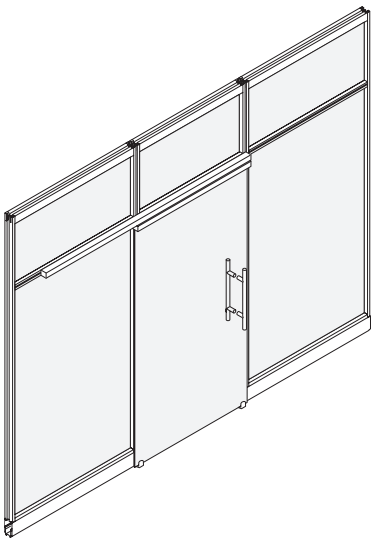
- 78" door module is available with all sliding door materials (frameless, aluminum framed glass, thin aluminum framed glass, solid).
- Specify double door models for doors, door frames, sliding door track, and mounting hardware.
- Order QTY (2) doors for double sliding door application.
- Frameless glass double doors incorporate a field-installed clear polymer edge to protect glass edges when the doors are closed.
- Double sliding doors can be locked by specifying two of the locking ladder pull options.
- Double sliding doors come with slow close/slow open door tracks.
- Blocking may be required above a double sliding door due to the weight of the door at the center of the header.



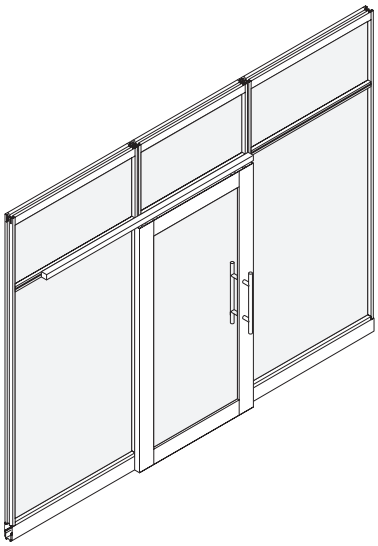
Sliding Frameless Glass, Double

Sliding Aluminum Framed, Double

Sliding Solid, Double

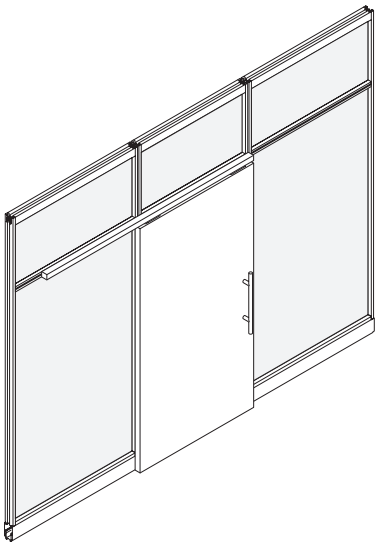


Sliding Thin Aluminum Framed, Double

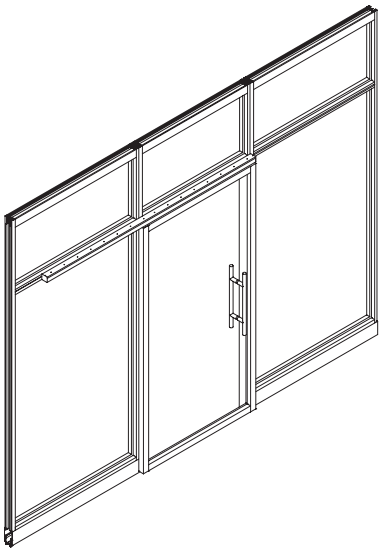


Sliding Doors

Single Sliding Doors under Transom



- Door is specified as a single 7'H door with transom. The door is a fixed height. Note that the door leaf is 85" and the frame is 84". The height of the frame model is from the top of the transom to the finished floor.
- Glass transom above door is available from 10¾" to 37⅞" in ¼" increments and in widths of 42" and 48".
- Doors and door frames are non-handed.
- Can only be used with framed glass and solid walls.
  – Must use integrated mounting rail when used with framed and solid walls.
- Door frames incorporate a glass transom or clerestory.
  – Specify ¼" or ⅜" glass for the transom/clerestory section.
  – Specify glass color. See Glass Types section for details.
- Available in two door module sizes.
  – Both 42" and 48" module doors are available with all sliding door types.
- Not available in full strike.
- 7'H sliding doors with transom can be locked by specifying a locking ladder pull.
- Can be specified with enhanced acoustics.

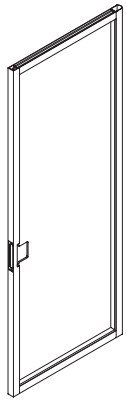


7'H Frameless Glass Sliding, Single with Transom*

7'H Aluminum Framed Glass Sliding, Single with Transom*

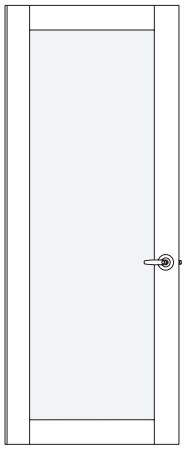
7'H Solid Sliding, Single with Transom*

7'H Thin Aluminum Framed Glass Sliding, Single with Transom



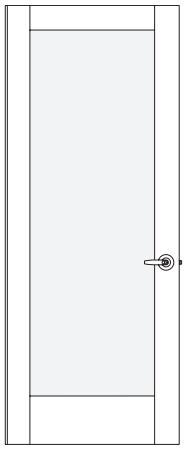
Pivot Doors

Swing Doors

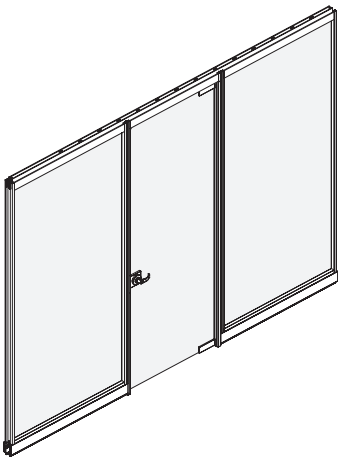


Swing doors on Beyond use two main mechanisms: center swing pivot and hinge. Center swing pivot doors offer greater flexibility as the strike plate on the partial strike frames can be reversed, allowing the door to be non-handed.

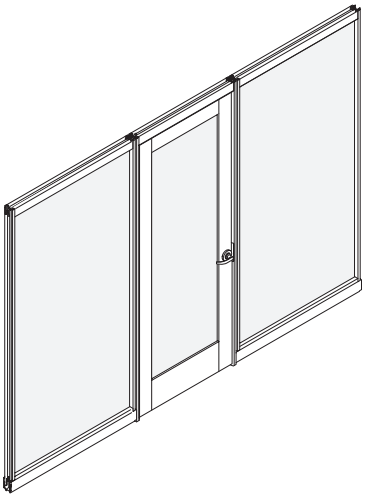
Center Swing Pivot Doors



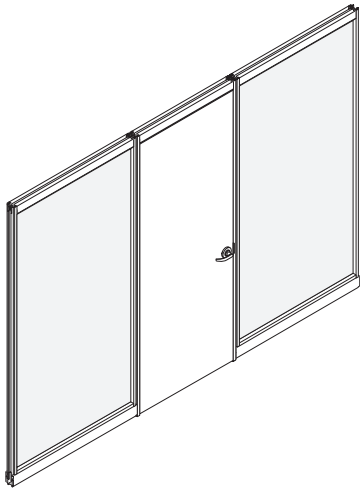
- All single center swing pivot doors utilize a 39" door module.
  - Clearance is 33¼" on solid and aluminum framed doors.
  - Clearance is 32½" on frameless glass center swing pivot from the hinge patch cover to the frame on frameless glass doors.
- Door frames for center swing pivot doors must be anchored to the floor to provide appropriate support for the door.
- Center swing pivot doors are non-handed.
- If specifying a swing door within the middle of a run, it is recommended to use a hinged option rather than a center swing pivot. The solid and aluminum framed hinged door allows for the full 180° swing where the door stop can be placed out of the walkway. However, the center swing pivot door is restricted to approximately 90° of opening.
- Center swing pivot doors come in frameless glass, aluminum framed glass, and solid (veneer, laminate and painted wood).
- Door frames are available in partial strike.
  - The strike plate for partial strike door frames can be reversed, allowing the door frame to be non-handed.
  - Frameless glass doors specified with a Ladder Pull use a frame with a standard strike.
- On frameless glass doors:
  - Mounting hardware is non-handed.
  - Top and bottom hinge patch cover includes high-density cast body.
  - Includes surface-mounted and floor-mounted center swing pivots.
- On aluminum framed glass doors, base rails are available in two options.
  - 5" base rail.
  - 10" base rail – required in some locations to comply with the Americans with Disabilities Act. This option is recommended unless it is known that the 5" base rail is approved for the installation location.
- Door levers are available in passage (non-locking) or standard format interchangeable core (SFIC) locking options.



2" Thin Aluminum Framed



5" Base Rail



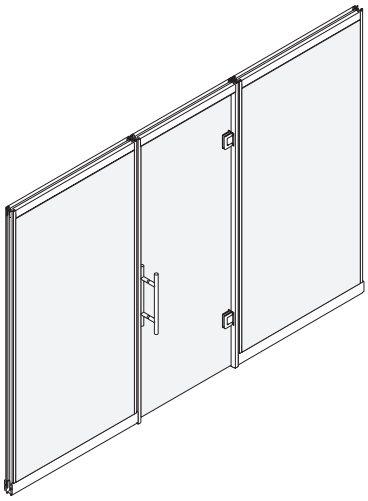
10" Base Rail

Frameless

Aluminum Framed Glass

Solid

- Frameless center swing pivot doors can be specified with ladder pulls. A magnetic catch must be specified along with a corresponding door and frame designed for door pulls.



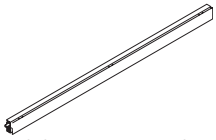
Hinged Doors

General Information

- All single hinged doors utilize a 39" door module.
  - Clearance is 33⅝" on solid or aluminum framed doors.
  - Clearance is 34⅛" on frameless glass hinged doors.
- All double hinged doors utilize a 75" door module.
  - Clearance is 67 13/16" on solid and aluminum framed doors.
  - Clearance is 68⅜" on frameless glass hinged doors.
- Door frames for hinged doors must be anchored to the floor to provide appropriate support for the door.
- Handedness
  - Frameless glass hinged doors and door frames are non-handed.
  - Aluminum framed and solid hinged doors and door frames are handed.
- If specifying a swing door within the middle of a run, it is recommended to use a hinged option rather than a center swing pivot. The solid and aluminum framed hinged door allows for the full 180° swing where the door stop can be placed out of the walkway. However, the center swing pivot door is restricted to approximately 90° of opening.

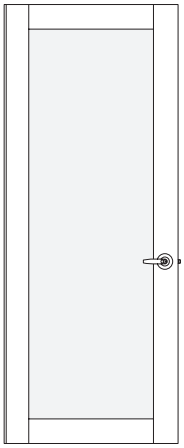
Hinged Frameless Glass Doors

- Doors swing 90 degrees both inward and outward. An optional strike bracket can be installed to prevent the outward or inward swing of the door.
- Hydraulic hinges provide self-closing mechanism.
  - Automatic closing from 0 to 80 degrees.
  - Adjustable closing speed.
  - Stops at +90- or –90-degree open position.
- Utilize ladder pull options for door hardware. See the Hinged Door Hardware pages of the Doors section for details.
- Frameless glass hinged doors can be locked by specifying the locking ladder pull options.
  - The frameless glass center swing pivot door levers may also be used as a custom hardware and custom door frame option to provide additional locking options for frameless glass hinged doors.



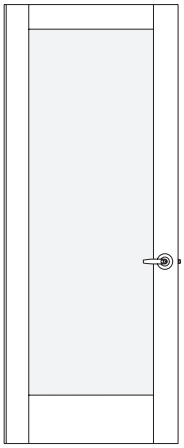
Hinged Frameless Glass

Hinged Doors



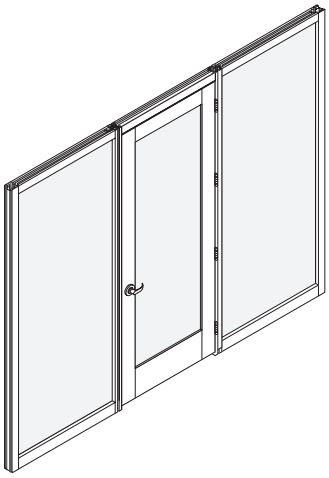
Hinged Aluminum Framed and Solid Doors

- Hinged solid and aluminum framed doors offer the most acoustic door solution with seals on three sides of the door including an optional drop seal to seal the fourth side.
  - Drop seal can be specified as an option in the door model for aluminum framed doors.
  - Drop seal for solid doors is a separate model.

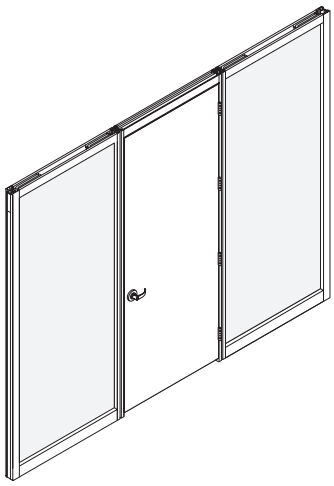


Solid Door Drop Seal

- Base rails on aluminum framed doors are available in two options.
  - 5" base rail
  - 10" base rail – required in some locations to comply with the Americans with Disabilities Act. This option is recommended unless it is known that the 5" base rail is approved for the installation location.



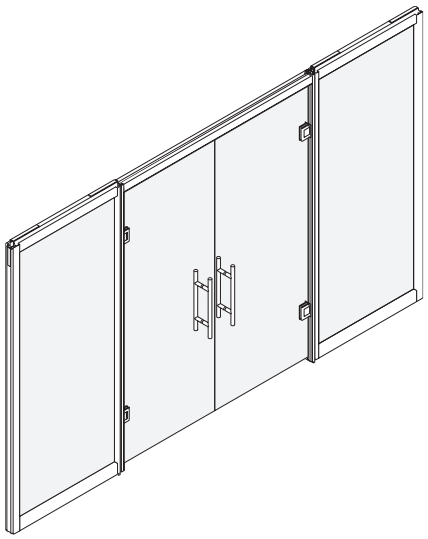
5" Base Rail



10" Base Rail

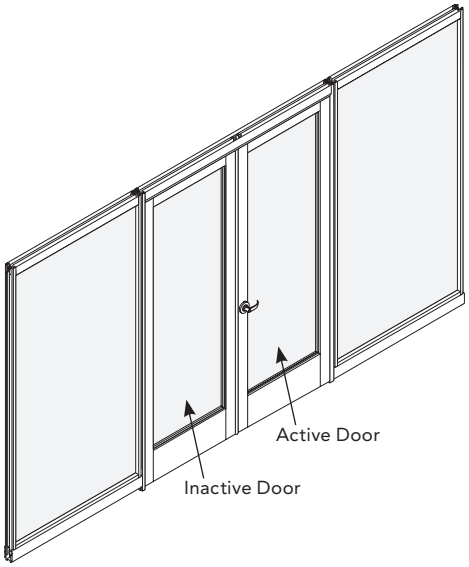
- Mounting hardware includes QTY (4) ball-bearing door hinges.
  - Square corner design
  - Measures 4" x 4"
- Door levers are available in passage or locking options.

Hinged Aluminum Framed



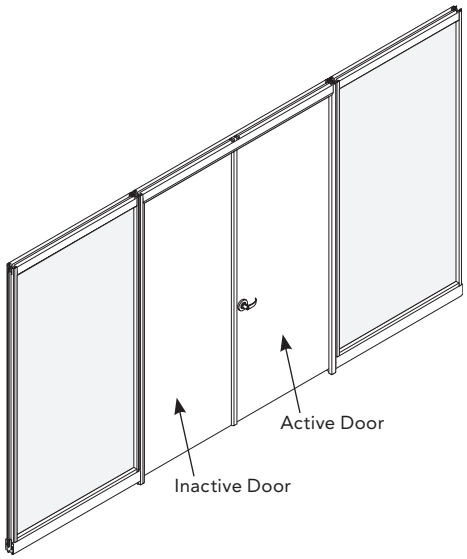
Hinged Solid

Hinged Doors



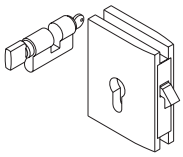
Double Hinged Doors

- Hinged Frameless Glass Double Doors
  - Utilizes the same components that are used on the single hinged frameless glass doors.
  - Order doors, door frames, and mounting hardware for double doors.
  - Order QTY (2) double frameless doors.
  - Doors swing 90 degrees both inward and outward. An optional strike bracket can be installed to prevent outward or inward swing of the door.
  - Hydraulic hinges provide self-closing mechanism.
  - Stops at +90- or –90-degree open position.
  - Available as a special without the hold-open feature for use with maglocks or other electronic access devices.
  - Double hinged frameless glass doors can be locked by specifying two of the locking ladder pull options.



Hinged Frameless Glass, Double

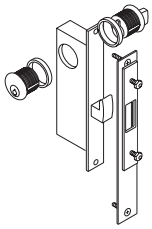
- Hinged Aluminum Framed and Solid Double Doors
  - Double doors are handed and require specifying the active door.
  - Order QTY (1) active and QTY (1) inactive door.
    - The active door opens and closes with a lever.
    - The inactive door utilizes a flush bolt latch connecting into the door frame to lock out swing. Disengage latch to open the door.
    - The inactive door also incorporates an astragal for the active door to close against, and provides a light and sound seal between the doors.
  - Door levers are available in passage or locking options.



Hinged Aluminum Framed, Double

Hinged Solid, Double

Lock for Full Strike Sliding Glass Doors



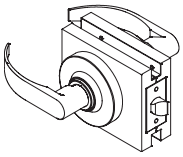
- Specify with ladder pull (12", 20", 49", or 60")
- Europrofile cylinder and thumb-turn lock actuation
- European-standard keyway
- Random keying
- Master keying and key alike are available by others.
- Silver finish available.

Door Lock for Full Strike Sliding Frameless Glass Doors

Lock for Full Strike Sliding Aluminum Framed Glass/Solid Doors

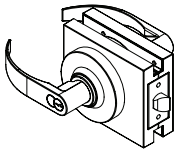
- Locks with mortise cylinder and thumb-turn lock actuation
- Schlage® C 5 pin keyway
- Key blank 35-100C or ilco 1145 or SC1
- Random keying
- LFIC and SFIC are available as a custom option.
- Master keying is available as a custom option.
- Silver finish available. Black finish available as custom option.

Door Lock for Full Strike Sliding Aluminum Framed Glass/Solid Doors



Door Hardware

General Information

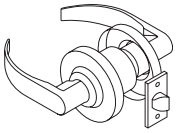


All exposed door hardware is available in silver or black. See Materials and Finishes section for more information.

Frameless Glass Door Levers

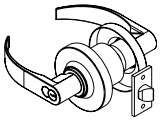
- For use with frameless glass door.
- Passage (non-locking), and locking with standard format interchangeable core (SFIC) lever options can be specified with Allsteel's glass pivot lever housing.

Passage



Locking with SFIC

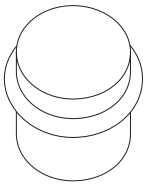
Aluminum Framed Glass and Solid Door Levers



- For use with aluminum framed glass and solid doors.

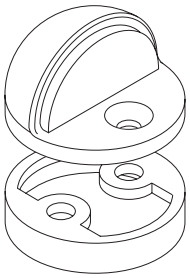
Passage

Locking



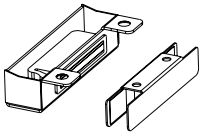
- Locking with SFIC
- Some manufacturers' cylinder-style locks can be used as a custom option.

Door Stops



Cylindrical Door Stop

- Door stop is floor-mounted
- Height is 1½".

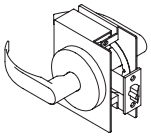


Dome Door Stop

- Door stop is floor-mounted
- Height is 1⅛" with optional spacer to increase height to 1½".

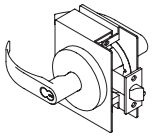
Magnetic Catch

- Painted to match trim finish. Specify Anodized Silver - PR0 to coordinate with Clear, Anodized door frame.
- For use with center swing pivot frameless doors when specified with a pull.



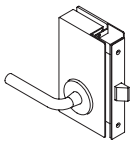
Thin Aluminum Framed Glass Levers

- For use with thin aluminum framed glass doors.



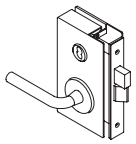
Cylindrical Style, Passage

- Non-locking
- Some manufacturers' cylinder-style levers can be specified as a custom option.



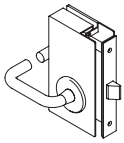
Cylindrical Style, Locking

- Locking with SFIC or locking with no core (coreless)
- Some manufacturers' cylinder-style locks can be specified as a custom option.



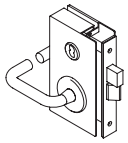
Mortise Style, Passage

- Non-locking



Mortise Style, Locking

- Locking with SFIC or locking less core (coreless)

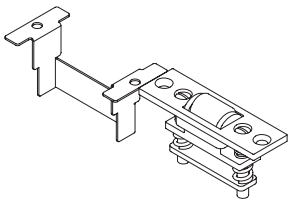


Mortise Style, Title 24, Passage

- Non-locking
- Title 24 compliant lever

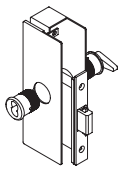
Mortise Style, Title 24, Locking

- Locking with SFIC or locking less core (coreless)
- Title 24 compliant lever



Thin Aluminum Framed Glass Hardware

- For use with thin aluminum framed glass doors.



Roller Latch

- For use with thin aluminum framed doors when specified with a pull.

Thin Framed Swing Door Lock

- For use with thin aluminum framed doors when specified with a pull.

Door Hardware

Ladder Pulls

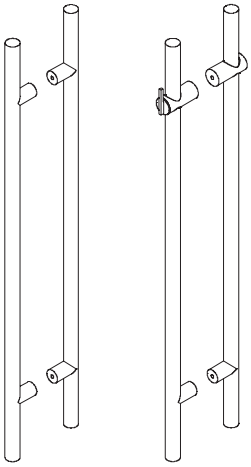
- Use with all frameless glass and thin aluminum framed glass doors
- Use with sliding wood / aluminum framed glass doors

12"H Ladder Pull

- ¾" diameter pull
- Brushed stainless finish
- Passage only

12"H Value Ladder Pull

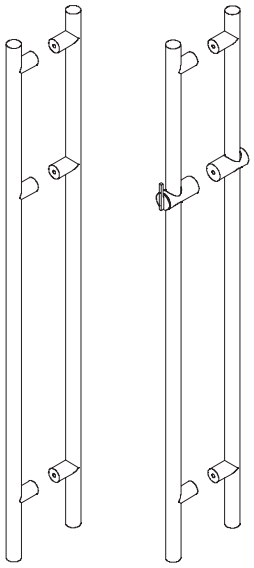
- 1" diameter pull
- Stainless steel finish
- Passage (non-locking) only



20"H Ladder Pull

- 1" diameter pull
- Anodized finish
- Passage only

49"H Ladder Pull



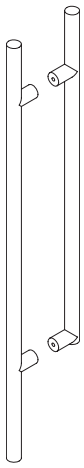
- 1⅜" diameter pull
- Anodized finish
- Passage option
- Locking option
  - Thumb-turn deadbolt lock is received into a floor socket.
  - Rim cylinder with SFIC format
  - SFIC core for field-keying to building requirements
  - Best E keyway
  - Random keying
  - Use SFIC for any custom keying requirements.
  - LFIC and other RIM cylinders are available as a custom option.
  - Master keying is available by others.

Passage | Locking with SFIC

60"H Ladder Pull

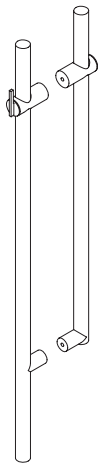
- 1⅜" diameter pull
- Anodized finish
- Passage option
- Locking option
  - Thumb-turn deadbolt lock is received into a floor socket.
  - Rim cylinder with SFIC format
  - SFIC core for field-keying to building requirements
  - Best E keyway
  - Random keying
  - Use SFIC for any custom keying requirements.
  - LFIC and other RIM cylinders are available as a custom option.
  - Master keying is available by others.

Passage | Locking with SFIC



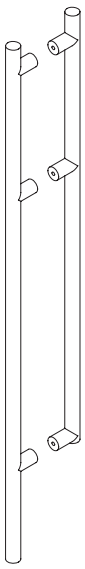
Electronic Locking

The optional electronic locking feature on Beyond thin framed doors offers keyless entry and remote access when integrated with building security systems and/or electronic card readers.

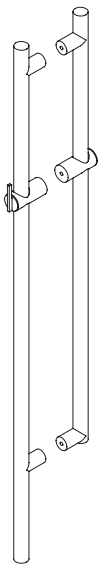


- For use with Beyond thin framed glass sliding doors & hinge doors only.
- Locking mechanism includes electronic flushbolt with integrated position sensor and a 14' wire to provide power-access to locking mechanism on door.
  - Hinge door model also includes concealed door loop to pass wire between door & door frame
- Electronic lock is offered as either Failsafe or Failsecure function
  - Failsecure Operation: In the case of a power outage, door will automatically lock. Recommended for high security applications only.
    - Note: There is no override feature provided with this lock, additional power supply recommended for this application.
  - Failsafe Operation: In the case of a power outage, door will automatically unlock. Recommended for life safety applications.
- In hinged, single-door applications, electronic lock will mount into the vertical strike side of the door and locks into the door jamb.
- In hinged, double-door applications, electronic lock will mount into header of the door and lock into the header of the door frame.
- In all sliding door applications, the electronic lock will mount into the header of the door frame and locks into the header of the door.
  - When specifying electronic locking on a sliding door, please note that the glass offset must be towards the door frame.
- It is recommended that a low-voltage security installer is responsible for wiring & integration of lock with building security system. Work with project manager to coordinate installation. Please note that this model includes the locking mechanism and other accessories outlined above only. Allsteel does not provide the building security system, card-readers, or exit devices and these items must be sourced separately.

Finish options:
Silver (satin stainless steel US32D)
Black (oxidized black + lacquer US19)
Manufactured by SDC



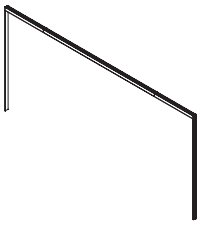
Accessibility Ladder Pulls



49"H Accessibility, Passage

49"H Accessibility, Locking

60"H Accessibility, Passage



60"H Accessibility, Locking

Accessibility ladder pulls are offered as a solution where required for ADA.

- Accessibility ladder pulls feature an asymmetrical design where the bottom of the ladder pull aligns with the bottom of the door on one side of the door but does not extend down to the bottom of the door on the opposite side.
- The thin frame door leaf has also been designed with an offset glass feature, designed to create a smooth surface on one side of the door with an offset on the opposite side of the door.
  - In swing-door applications, the smooth side of the glass offset will always be on the push side of the door.
- Although this product has been designed with input from ADA, Allsteel is not certified or licensed to enforce building code and it is the responsibility of the specifiers, architect, and/or design firm to ultimately ensure that the way that the product is being used or specified will meet local and state building codes within that specific jurisdiction.

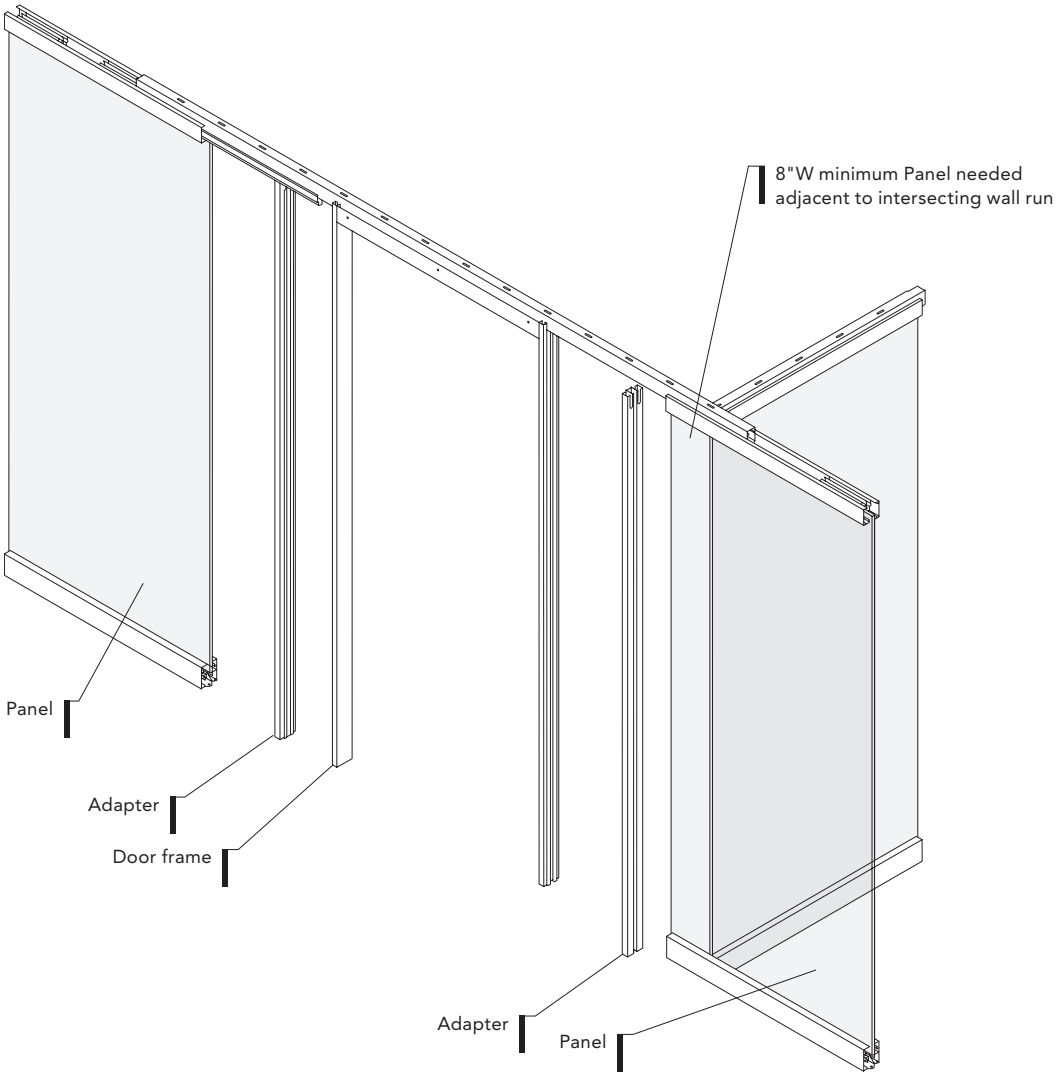
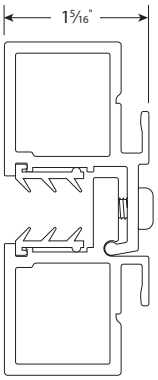
Frameless Wall Channel

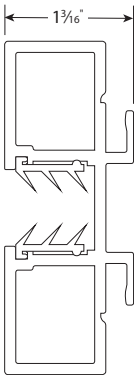


- Wall channels are used to connect frameless glass panels to drywall.
- Actual dimension of a wall channel is 2½"W.
- Planning dimension is 1½"W due to the glass nesting inside the wall channel so the wall channel only adds 1½" to the overall wall run.
- Wall channels offer +/– ¾" of adjustment.
- Specify at the same height as the adjacent frameless glass wall height.
- Wall channels for frameless glass consist of three main components. A u-channel with a foam gasket provides an acoustic seal and connects directly to the wall, utilizing the appropriate fasteners for the wall type. After the glass wall is installed, two covers interconnect with the u-channel to complete the installation. The covers incorporate a polymer extrusion to create an acoustic seal with the glass.



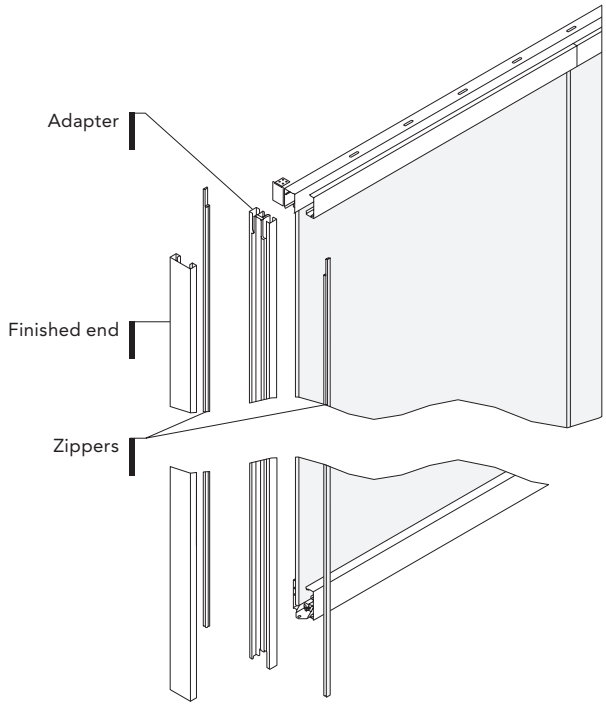
Frameless Adapters

- Adapters are used to connect frameless glass wall panels to posts, door frames, or solid wall panels.
- Actual dimension of a swing door frame-to-frameless adapter is 1 5⁄16"W.
- Actual dimension of a sliding door frame/post/solid wall-to-frameless adapter is 1 3⁄16"W.
- Planning dimension for both adapters is a ½" due to the glass nesting inside the adapter so that the adapter only adds a ½" to the overall wall run.
- Adapters offer +/– ⅛" of adjustment.
- Specify at the same height as the adjacent frameless glass wall height.
- Utilize the swing door frame-to-frameless adapter when connecting a frameless glass wall panel to center swing pivot or hinged door frames.
- Utilize the sliding door frame/post/solid wall-to-frameless adapter when connecting a frameless glass wall panel to sliding door frames, posts, or solid wall panels.
- Two zippers are used to connect each adapter to the post, door frame, or solid wall panel.



Frameless Adapter to Door Frame Example:

Connecting Frameless Glass to Solid and Doors

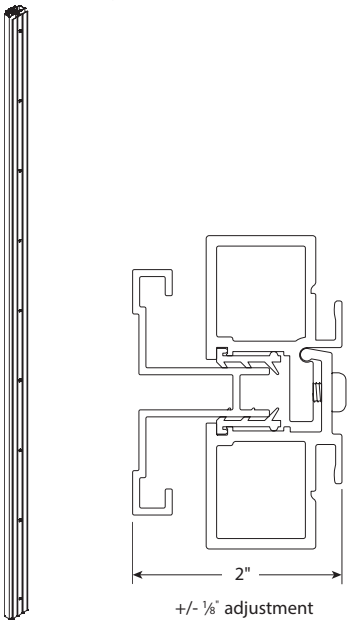


Swing Door
Frame-to-Frameless
Adapter

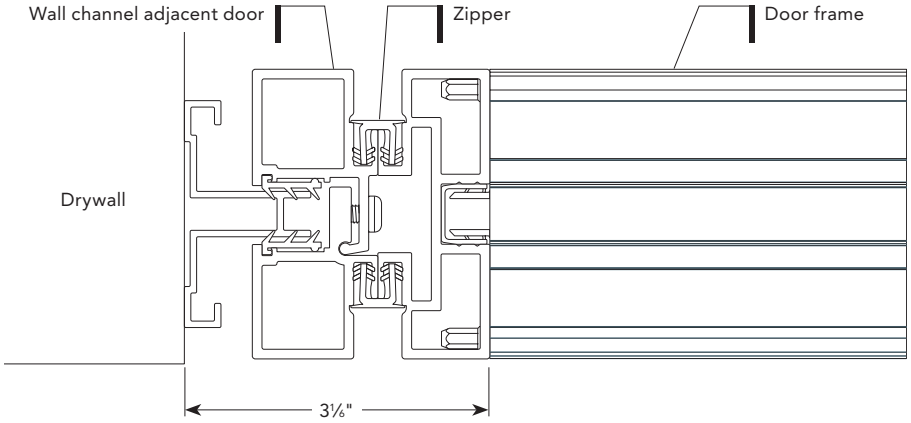
Sliding Door Frame/Post/Solid
Wall-to-Frameless Adapter

Frameless Finished End

Finished ends are utilized at the end of frameless, framed and solid wall runs that do not terminate into drywall.



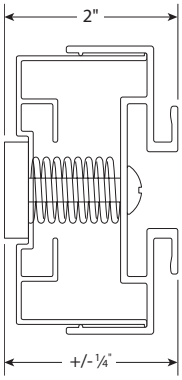
- Actual dimension of a finished end is 2 15/32"W.
- Planning dimension is 1¾"W due to the glass nesting inside the adapter.
- Finished ends offer +/– ⅛" of adjustment.
- The finished end model is comprised of a finished end and an adapter to connect to a frameless glass wall panel. The two parts are connected using two zippers.
- Specify at the same height as the adjacent frameless glass wall panel.



Connectors

Wall Channel Adjacent Door

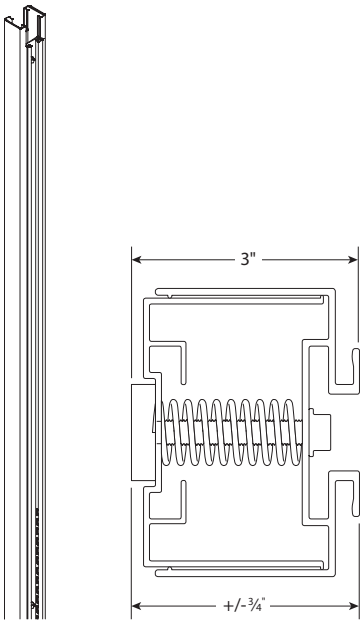
Planning Dimensions:



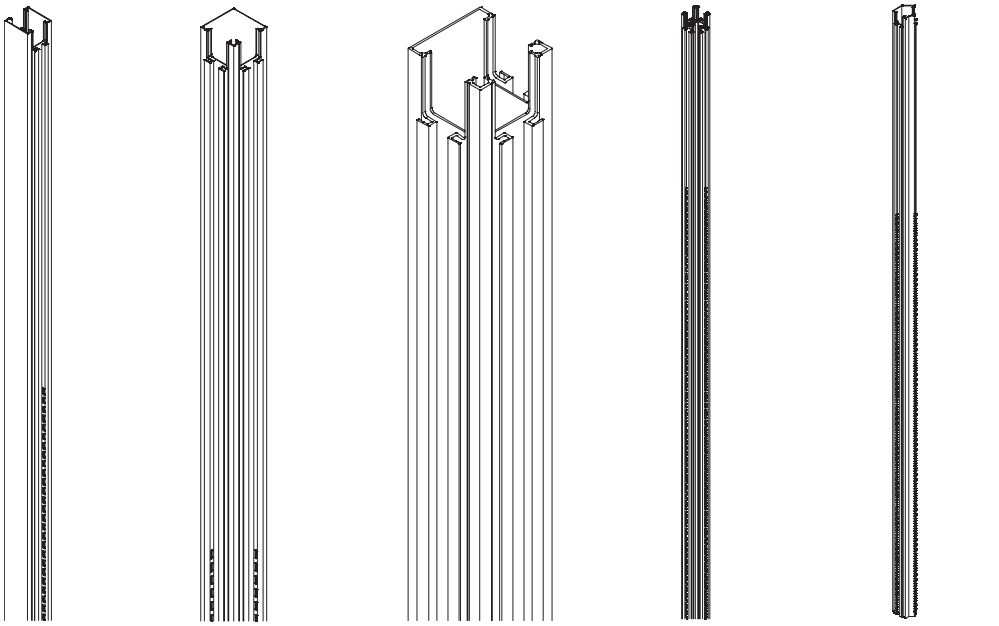
- Actual dimension of a wall channel is 2"W.
- Planning dimension is 2"W.
- Wall channels offer +/– ⅛" of adjustment.
- Specify at the same height as the adjacent door frame.
- Two zippers are used to connect the wall channel to the door frame.
- Wall channels for adjacent door applications consist of two components to connect the door frame to the wall. The first vertical extrusion is fastened to the wall using the appropriate fasteners. The second vertical extrusion clamps onto the first at the hard wall side. The opposite side is connected to the door frame using zippers. The two components fit together and allow adjustment for off plumb walls.

Wall channels can be used to connect framed and solid panels to drywall. Small wall channels can be used to create a more minimal aesthetic. Large wall channels can be used to allow for greater adjustment to accommodate drywall walls that are off plumb. A foam gasket, included with both wall channels, provides an acoustical seal and is pressure-fit to the wall.

Small Wall Channel



- Available from 18"-120".
- Actual and planning dimensions are both 2"W.
- Small wall channels offer +/– ¼" of adjustment.
- Specify at the same height as the adjacent panel.
- Two zippers are used to connect the wall channel to the adjacent framed or solid panel.
  - Base and stacking posts have been consolidated into single model.
    - Use "stacking" post for nominal heights above 120".
    - "Base" post height to match nominal height of base panel.
    - "Stacking" post height to match nominal height of stacking panel.

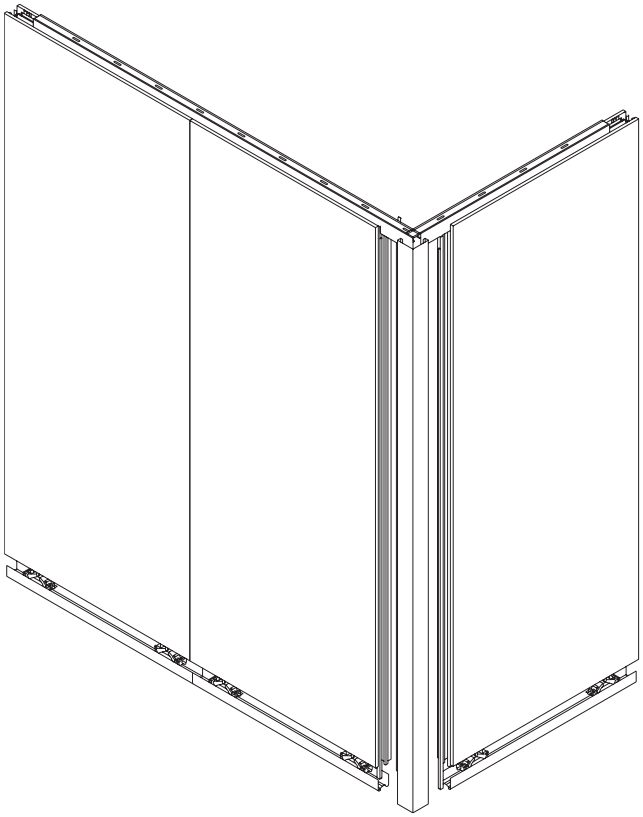


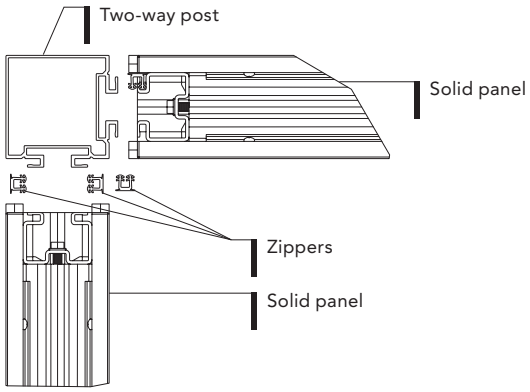
Connectors

Large Wall Channel

- Available from 18"-120".
- Actual and planning dimensions are both 3"W.
- Large wall channels offer +/– ¾" of adjustment.
- Specify at the same height as the adjacent framed or solid panel.
- Two zippers are used to connect the wall channel to the adjacent panel.
  - Base and stacking posts have been consolidated into single model.
    - Use “stacking” post for nominal heights above 120".
    - “Base” post height to match nominal height of base panel.
    - “Stacking” post height to match nominal height of stacking panel.

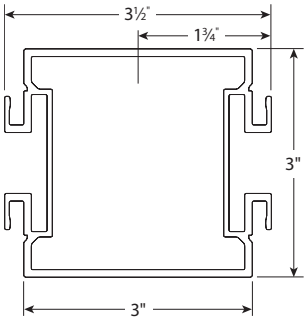
Posts



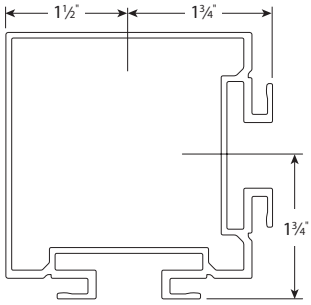


Straight | Two-Way | Three-Way | Four-Way | 135-Degree

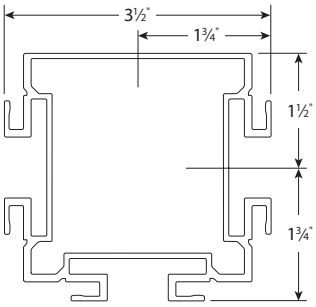
- Posts connect framed and solid panels when wall direction changes or terminates.
- Posts are available for the following connection types: straight (in-line), two-way (corner connection), three-way, four-way, and 135-degrees.
- Straight, two-way, and three-way posts can be specified with an access panel for access to electrical and data, which can then be routed through the post from the floor or ceiling. See Beyond Electrical for more information.
- Optional access posts with Stride® integration allow T connections with 30"H Stride® panels. Additional heights can be accommodated as a custom solution through Tailored Products.
- Dimensions
  - Available from 18" to 120".
  - Straight actual and overall planning dimension is 3½"W or 1¾"W from centerline.
  - Two-way actual and planning dimension is 1¾" from centerline.
  - Three-way actual and overall planning dimension is 3½"W or 1¾" from centerline.
  - 135° actual and planning dimension is 1¾"W from centerline.
  - If multiple panel heights are specified, posts can be ordered to the tallest nominal panel height and cut in the field to reduce installation efforts.
- Base and stacking posts have been consolidated into single model.
  - Use Stacking post for nominal heights above 120".
  - Base post height to match nominal height of base panel.
  - Stacking post height to match nominal height of stacking panel.

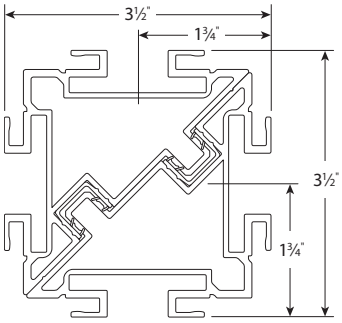


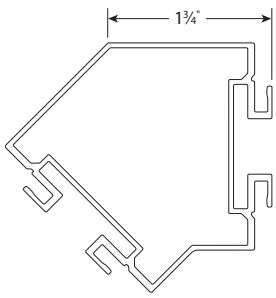
Connectors



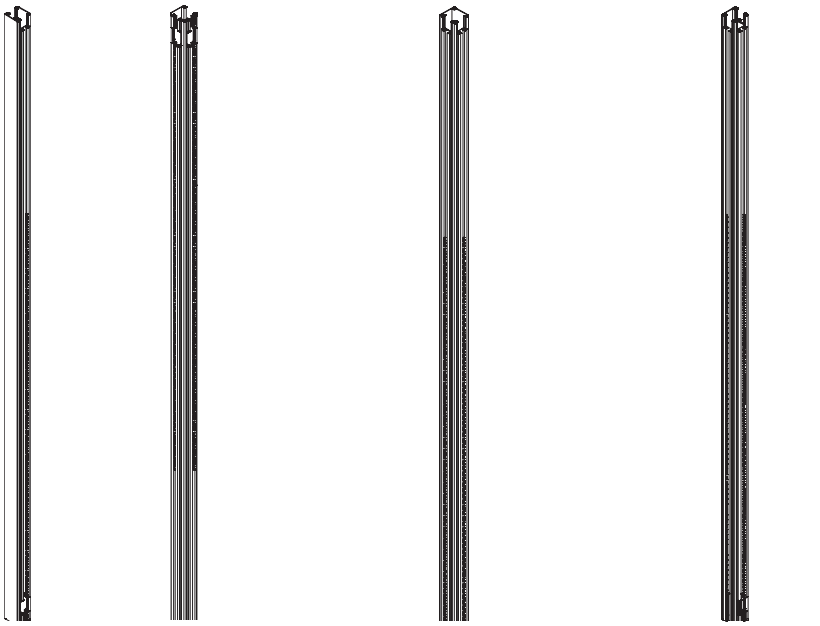
Example of a Corner Post Connection:

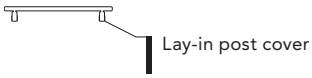




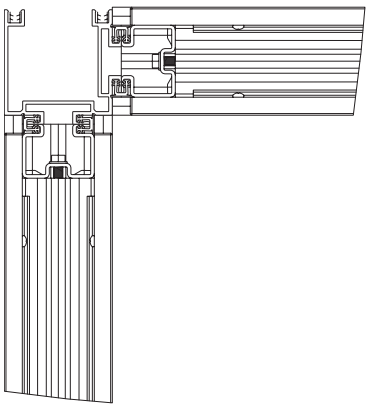


Planning Dimensions





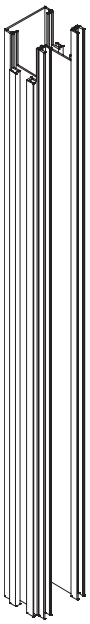
Posts with Access Trim:

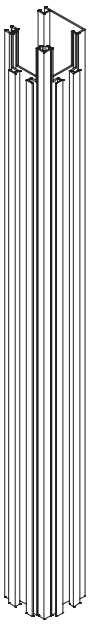


Beyond posts can be specified with a removable access cover to allow for easy access to data and electrical routing. Straight, two-way, and three-way access trim posts have a removable face to allow for routing of in-feed or data from ceiling. Posts with access trim can be specified with Beyond frameless using adapters to connect to the trim.

Straight | Two-Way, Left Hand | Two-Way, Right Hand | Three-Way

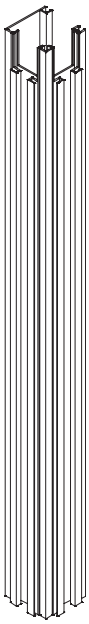
Example of Removable Access Cover:





Connectors

- Post with Access Trim
  - Base and stacking posts have been consolidated into single model.
    - Use “stacking” post for nominal heights above 120".
    - “Base” post height to match nominal height of base panel.
    - “Stacking” post height to match nominal height of stacking panel.
  - Height
    - Nominal height in 1/4" increments.
    - Panels: from 18" to 120" (previously down to 86").
    - Stacking panels: 9.5" minimum and for stacking panels with integrated mounting rail, minimum height is 10.5".



Stacking Posts with Access Trim:

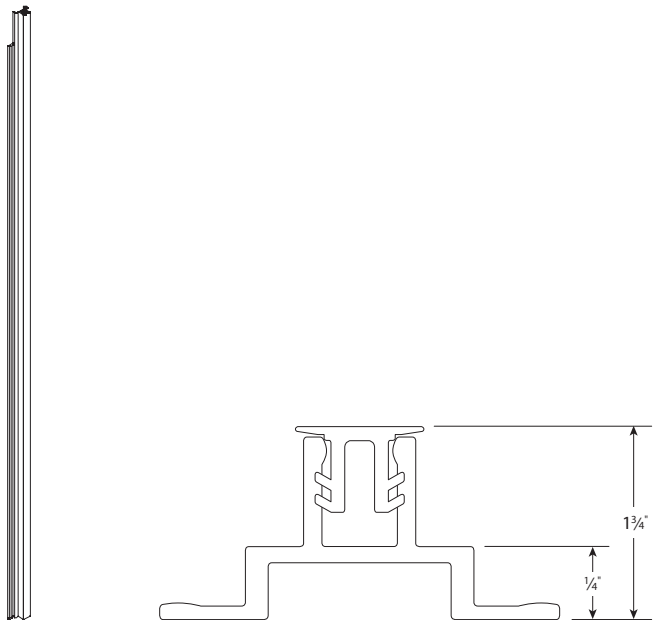
Left Hand

Three-Way

Hardwired Electrical Porting for Frameless Glass Walls

Frameless glass walls can be hardwired with power utilizing the in-line electrical post. Electrical posts ship with ports in the posts and junction boxes to be installed and wired by a certified electrician.

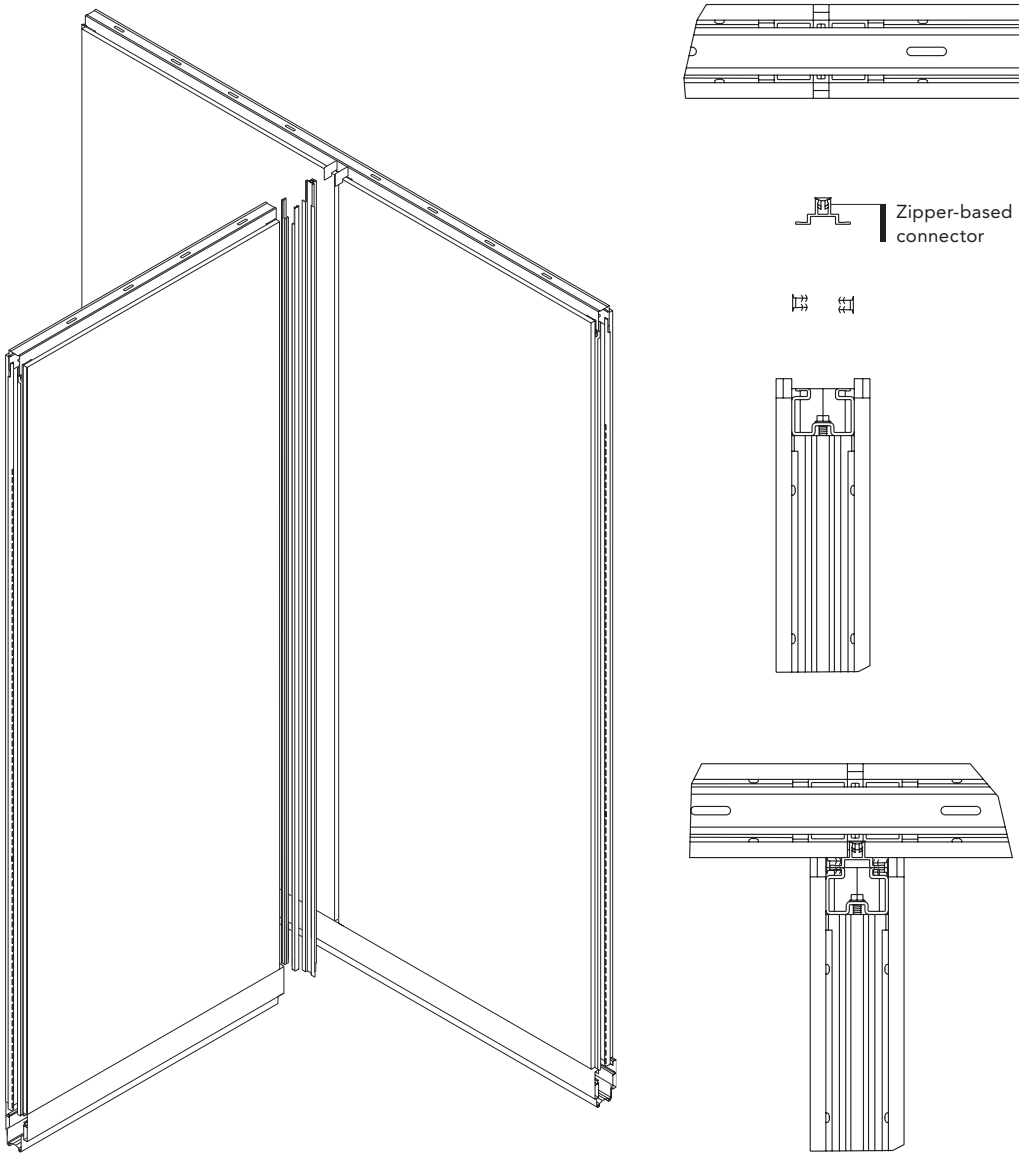
- Actual and planning dimension of an electrical ported post is 3½"W.
- Specify at nominal height for the run.



In-line electrical posts can connect directly to a door frame utilizing a zipper. They can connect to a frameless glass wall using a zipper and a frameless adapter.

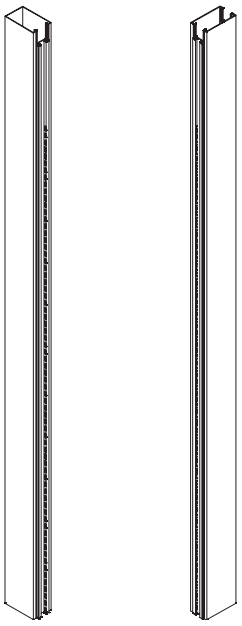
Porting is available at 18" AFF, 42" AFF, both 18" AFF and 42" AFF, or custom placement in 1/16" increments with a maximum of 4 total ports.

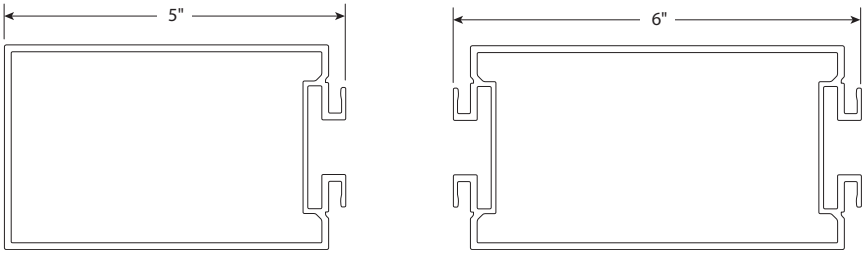
- 18" AFF indicates 18"H to the centerline of the receptacle above finished floor.
- 42" AFF indicates 42"H to the centerline of the receptacle above finished floor.
- In-line Electrical Ported Post
  - Height:
    - Nominal height in 1/4" increments.
    - Panels: from 30" to 120" (previously down to 86").
    - Stacking panels: 9.5" minimum and for stacking panels with integrated mounting rail, minimum height is 10.5".
  - Port Locations and Quantities – Port locations are parametric in 1/4" increments (previously only 18" and 42"). Port locations must fall within rules outlined below:
    - Single port - 30" height minimum without modular electrical in the base.
    - 4" port height minimum without modular electrical in the base.
    - 8.25" port height minimum with modular electrical in the base.
    - 4.75" minimum distance between ports center-to-center with conduit routing away from other port.
    - 12.75" minimum distance between ports center-to-center with conduit routing towards the other port.
    - Port Dimension 2"W and 3"H
    - Double port - 42" height minimum for double port.
    - Recommended port placement:
      - 18" for under surface/ADA power
      - 30" for above surface power
      - 42" light switch height
  - Standard and stacking posts have been combined into one base model.



Connectors

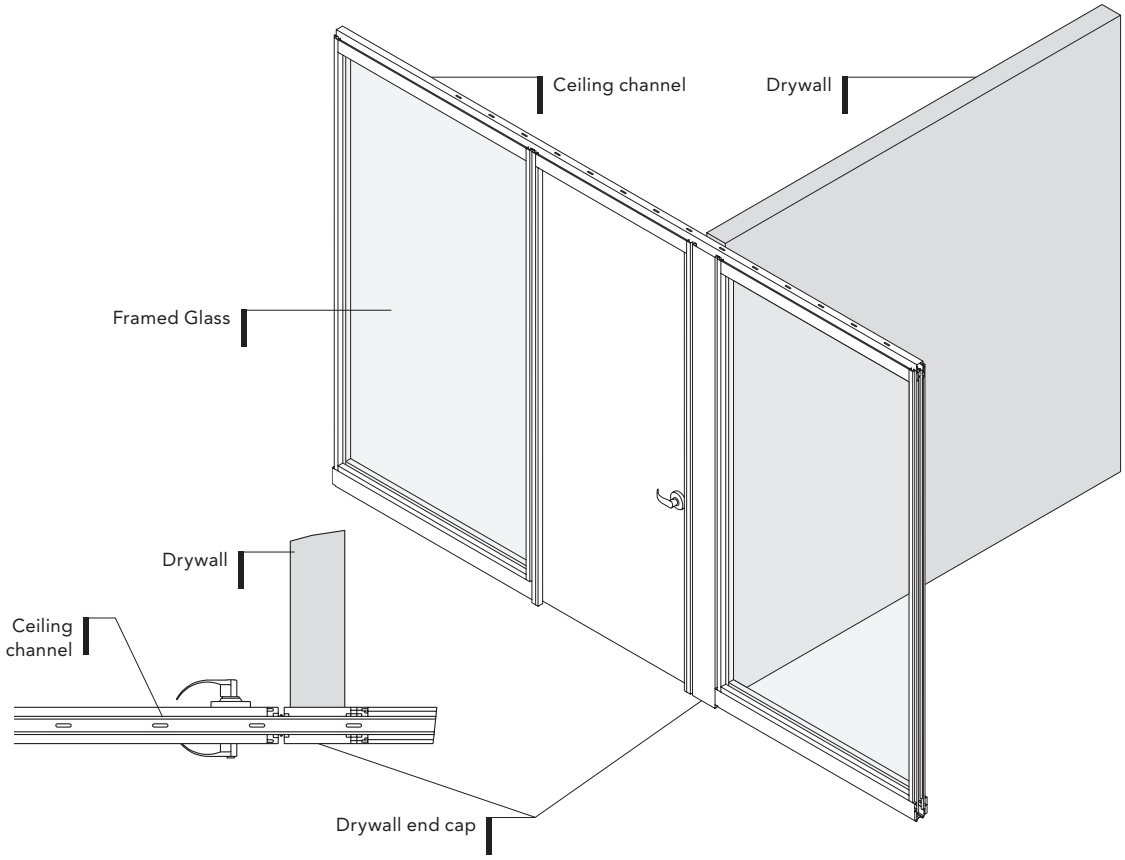
Zipper-Based Connector



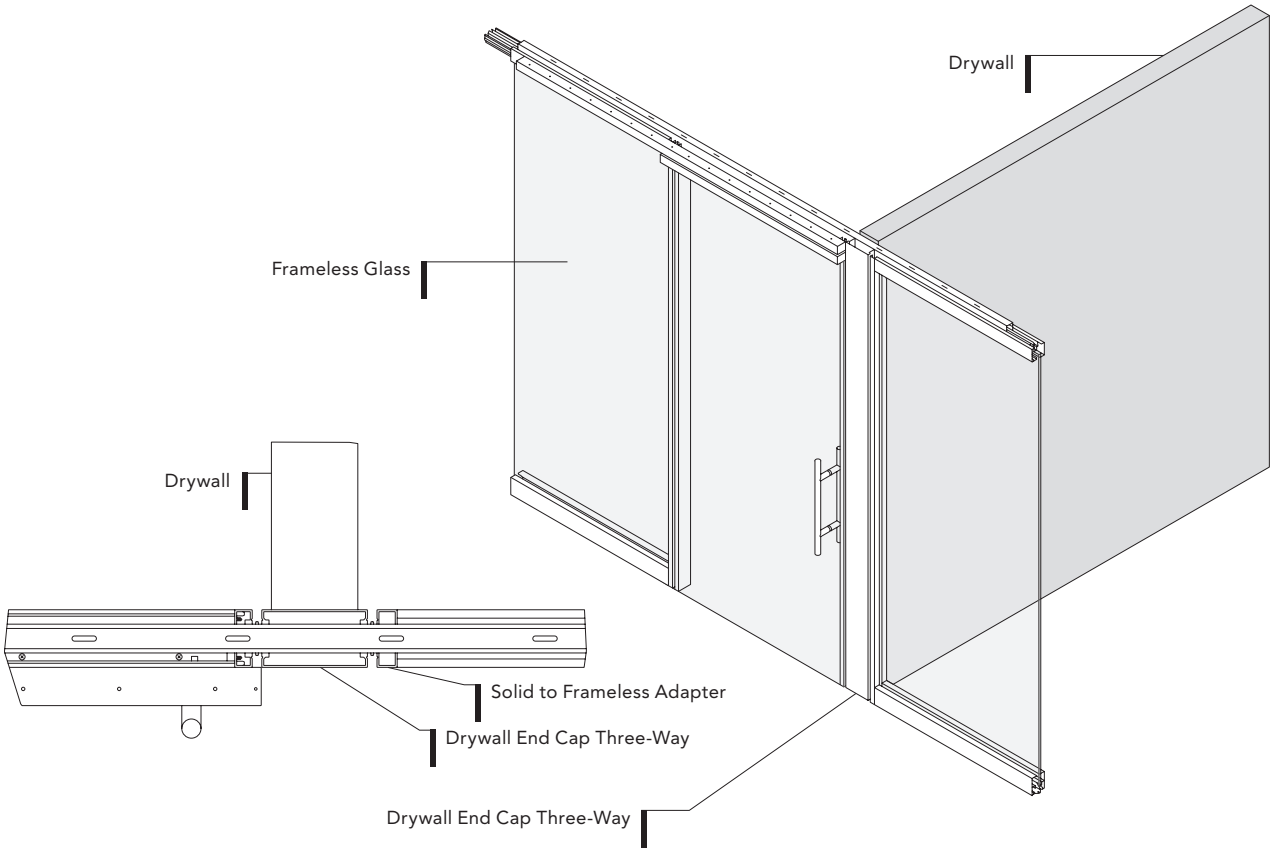


- Zipper-based connectors allow walls to connect into a zipper reveal to eliminate the need for a post with framed glass and solid walls.
  - Zipper reveals must be located directly across from each other to connect walls on both ends of the run.
  - Allows the ability to add a wall to an existing layout without interruption of adjacent panels.
  - Provides flexibility to quickly relocate and reconfigure walls with minimal disruption.
  - Must utilize "with reveal" and with base trim options on solid walls.
  - Can only be used at a zipper junction with two panels. Cannot not be used at a zipper junction with a door.
  - Planning dimension is 1¾"W from centerline or ¼" from face of perpendicular wall as the zipper-based connector adds ¼" to the overall wall run.

Example of Zipper-Based Connection with a Solid Wall:



Drywall End Caps



- Drywall end caps are used to create a clean, continuous look across a wall run. Two-way drywall end caps are used at the 90° connection and three-way drywall end caps are used at a three-way connection where drywall connects perpendicularly to Beyond (typically as a demising wall). The end of the Beyond wall terminates in a drywall end cap post that extends to cover the width of the drywall.
- Drywall end caps should be planned so the end of the drywall end cap post aligns with the face of the perpendicular drywall.
  - The 6" wide three-way post is engineered to accommodate drywall widths up to 5½". They should be planned so the centerline of the post aligns with the centerline of the perpendicular drywall. Contact Architectural Products Engineering prior to shop drawing completion if specifying a door adjacent to a drywall end cap with a ladder pull or non-standard lever set for the door hardware to ensure the door will open a full 90 degrees.
- Drywall end caps are non-defacing. One full height length strip of foam tape is installed to provide an acoustic seal at the demising drywall condition. Allsteel will also supply a piece of foam for the top gap between the ceiling channel and the drywall. Perpendicular drywall should be held back 3⅛" from the front face/trim of the Beyond wall. This allows for 3" wall depth +⅛" for walls that may not be plumb – the ⅛" space will be sealed with foam tape.
- Drywall end caps connect to door frames, posts, framed glass panels, and solid panels via zippers and to frameless glass utilizing a solid-to-frameless adapter.
- Dimensions
  - Actual and planning dimensions of a two-way drywall end cap are 5" wide.
  - Actual and planning dimensions of a three-way drywall end cap are 6" wide.
  - Specify at the nominal height determined for a run.
  - If multiple panel heights are specified, end caps can be ordered to the tallest nominal panel height and cut in the field for ease of installation.

Example of Drywall End Cap Connection - Framed Glass

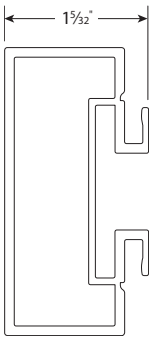
Example of Drywall End Cap Connection - Frameless Glass

Connectors

Finished Ends

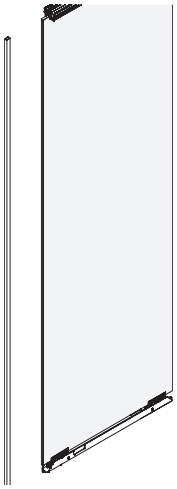
Finished ends are utilized at the end, framed and solid wall runs that do not terminate into drywall.

Uniform Finished End



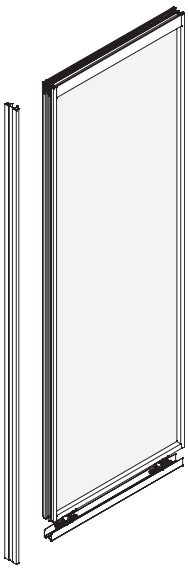
Uniform Finished End with Stride® Connection

Uniform Finished End - Stacking Post



- The actual dimension of a framed and solid finished end is 1 5/32" in depth. Planning dimension is 1¼".
- The actual and planning dimension of a finished end with Stride Connection is 1½".
  - Allows mounting of 30" high Stride® panel at the end of a Beyond run. Additional heights can be accommodated as an engineered-to-order (ETO) model.
  - Allows data or power in-feed to be from the ceiling into the Stride® panel.
- Specify at the nominal height determined for the run. If multiple panel heights are specified, framed and solid finished ends can be ordered to the tallest nominal panel height and cut in the field for greater ease of installation.

Planning Dimensions



When facing obstructions in the field, a window sill u-channel can be ordered for Beyond frameless panels to accommodate the obstruction. For solid panels, a field-cuttable solid tile can be ordered.

- BY-FGSILLTRIM - Frameless Window Sill U-Channel

- BY-FSSILLTRIM - Solid Window Sill U-Channel

Connectors

Installation Kits

- Installation kits should be specified on all Beyond projects.
  - Specify QTY (1) Beyond Installation Kit (BY-KIT) for every 150 linear feet.
  - Each kit includes additional parts and hardware useful for installation of many different applications. Examples of items included are:
    - VHB tape for use with frameless glass vertical fillers
    - Straight splice kits for ceiling channel
    - Door guides for sliding or swing doors
    - Various pieces of hardware such as washers, flat heads, bushings, etc.
    - White sponge to clean fabric tiles
- A Hard Surface Installation Kit (BY-HSKIT) should be specified (in addition to the Beyond Installation Kit) when installing on top of noncarpet flooring like wood, tile, or laminate.
  - Specify QTY (1) kit for every 50 linear feet.
  - Each kit includes a 50 foot roll of gasket tape used under the floor channel when installing.

Touch Up Paint

- Touch up paint should be specified with every painted project.
- Touch up paint can be ordered in a bottle with a brush or as a spray.
- Specify QTY (1) touch up paint kit for every 1,000 linear feet.

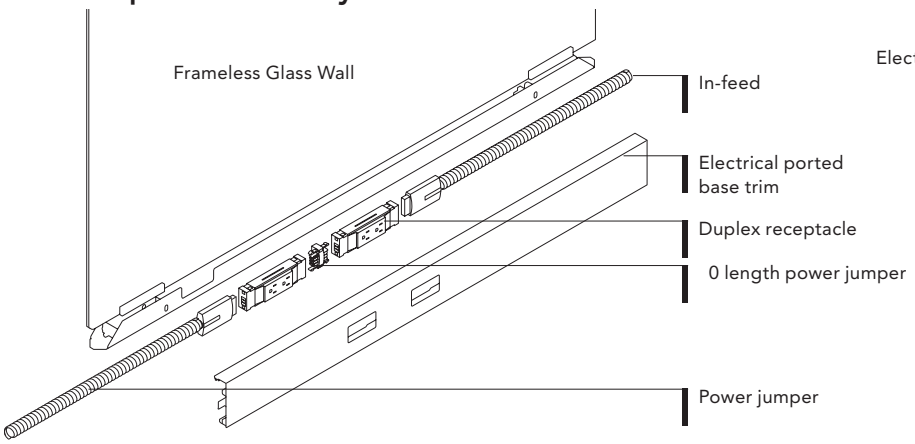
Electrical & Data

Beyond frameless panels offer two options for routing power.

- Modular electrical in the base.
  – Frameless Panels: 4-wire, 2-circuit system.
- Ported for hardwired electrical.
  – Frameless Panels: Ported post with junction boxes.

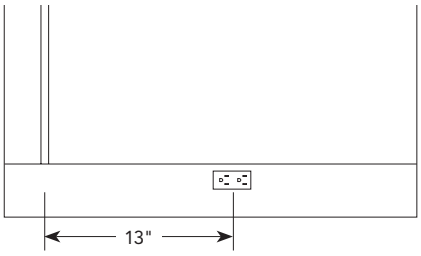
Modular Electrical for Frameless Glass Walls

The 4-wire electrical system is a UL183-listed 2-circuit non-dedicated electrical system.



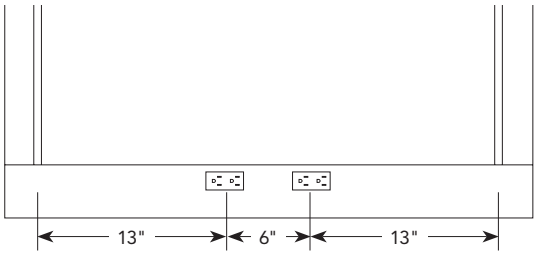
This electrical system has two hot wires, a shared neutral wire, and a shared ground wire. Each circuit is rated at 20 amps.

A maximum of 13 duplex receptacles is permitted per circuit. Each receptacle is rated at **15 amps**. Consult your electrician to ensure the planned electrical load is within permissible limits.



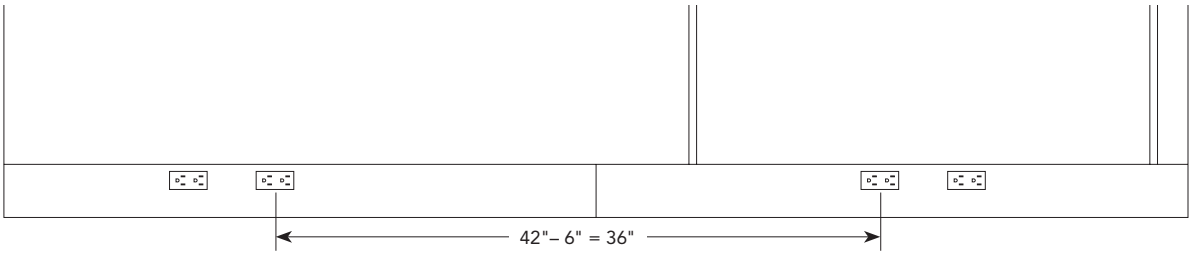
1. Determine location, quantity, and circuit number for duplex receptacles and power entry.
2. Electrical in-feed delivers power from building to system.
3. Power jumpers connect together duplex receptacles.

Modular power assembly for Frameless Glass walls:



- Single power receptacles can be used on frameless glass walls that are 26" wide or wider.
- Double power receptacles can be used on frameless glass walls that are 32" wide or wider. When connecting double power receptacles, specify the 0 length power jumper (model BFG-AE4-DJ0S) to connect the receptacles together.
- Maximum of 13 circuits per infeed. Beyond frameless 4-wire power is 2 circuits, so would be 26 receptacles maximum per infeed. With Beyond framed / solid 8-wire power is 3 or 4 circuits, so would be 39 or 52 receptacles maximum per infeed.

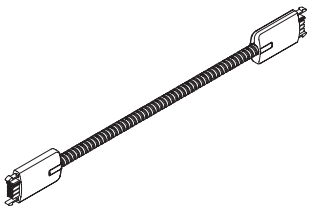
- The receptacles and power jumpers attach to and route through the base trim. Utilize the ported base trim model to provide access to receptacles. The centerline of the receptacle must be located a minimum of 13" from the edge of the wall to prevent interference with the scissor-lift assembly.



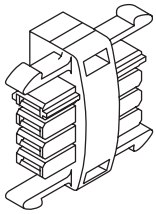
Single Receptacle

Double Receptacle

- Jumper length for connecting duplexes on separate walls is determined by the width of the receptacle centerline to receptacle centerline minus 6".



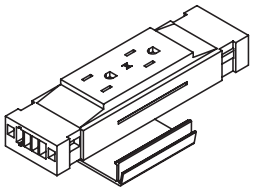
- Both sides of a frameless glass wall may be powered but requires a separate in-feed on each side of the glass.
- Modular power may not be used with low-profile base trim.
- It is the customer's responsibility to ensure that the installation of the electrical components meets all local and national building codes and all other applicable regulations.



Electrical & Data

4-Wire Electrical Components

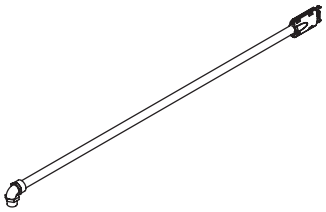
Power Jumpers



Power Jumper

0"W Power Jumper

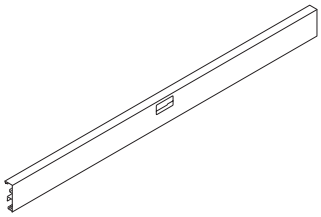
- UL Listed 4-wire electrical system.
- Ability to route and conceal power in frameless glass base trim.
- Length of jumper is determined by the distance from centerline to centerline of the connecting receptacles minus 6 inches.
- A 0 length jumper is used to connect receptacle to receptacle in a double receptacle application.



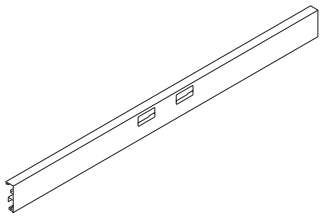
Duplex Receptacles

Duplex Receptacle

- 4-wire receptacles are ordered separately for circuit 1 or 2. Please see the materials and finishes section for finish options for frameless electrical components.
- 4-wire in-feed cable or jumper plugs directly into each end of a 4-wire duplex receptacle.
- 4-wire receptacle adds 6" to length of electrical run.



Electrical In-feed Cable

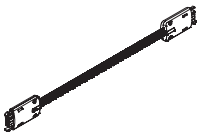


Base Electrical In-feed Cable

- Feed into the base trim through a field-ported hole in the top or the face of the base trim or from the ceiling through a wall channel, post or finished end.
- UL 183 listed to be exposed.
- Select quantity of in-feed cables depending on individual power requirements.
- Separate in-feeds are required when powering both sides of a frameless glass wall.

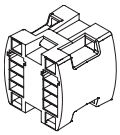
Frameless Base Trim with Electrical/Data Ports

Single Receptacle



Double Receptacle

See page 178 for specification data



- Ported base trim is the same height as standard base trim.
- Ported base trim allows access to duplex receptacles or data ports.
- Available in single and double receptacle options.
- 48" in length.
- Mounting clip(s) are included to secure receptacle to the base trim.

Male-to-Male Jumper, 4-Wire

- Utilize to connect standard jumpers as a splice connection to lengthen a run.
- It is recommended that a maximum of (1) connector is used for optimal power through the cabling.

H-Connector, 4-Wire

- Connects two 4-wire duplexes with a minimum distance between them.
- Allows splitting-off of another jumper to power other runs off the same in-feed.

Electrical & Data

Data for Frameless Glass Walls

The frameless glass base trim can accommodate minimal routing of data wires. An AMP data port extender is required to install the data faceplate and jack in the base trim. The following data port extenders can be ordered from AMP:

- 1933468-1 (Black)
- 1933468-2 (Light Almond)
- 1933468-4 (Nema® Gray)

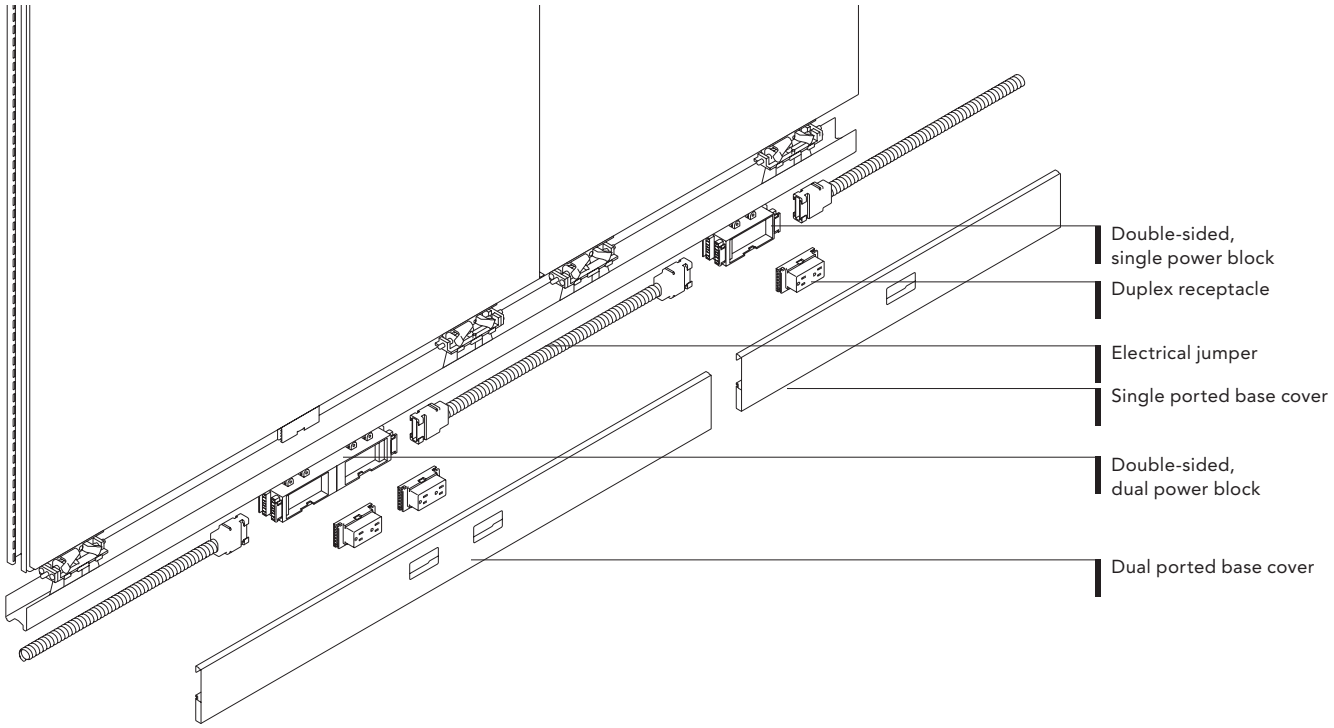
Limited data wires (maximum 1 on each side) can run past the electrical in the base trim. It is recommended to keep data cabling to a minimum in frameless glass walls.

For privacy tiles "to the base," the bottom rail overlaps the base trim. Depending on the data faceplate used, it may interfere with the snap feature.

Modular Electrical for Framed Glass and Solid Walls

Beyond framed glass and solid walls offer a choice of two modular electrical systems:

- Four-circuit, 3+1
- Four-circuit, 2+2

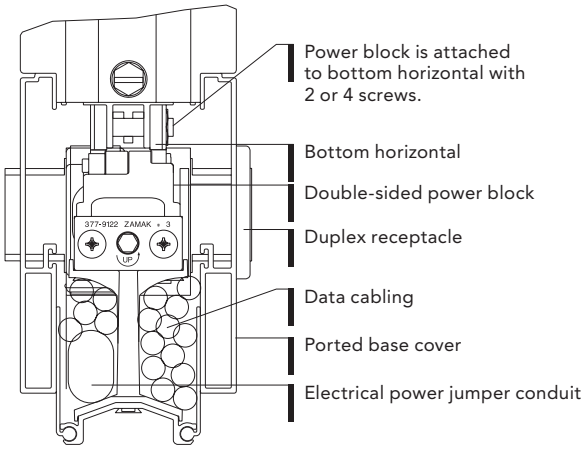


Both systems utilize an 8-wire electrical system, rated at 20 amps per circuit (16 amps plan-able U.S. and 15 amps Canadian). This is the same system used in Allsteel panel systems. Power can route from Beyond and connect to an Allsteel panel system.

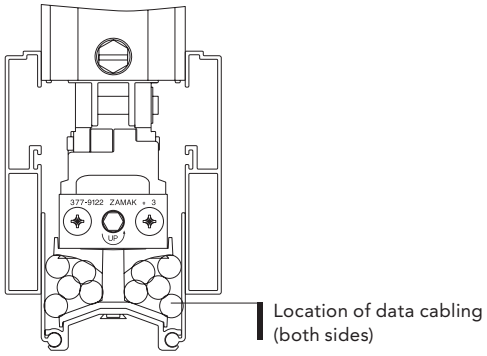
Beyond framed glass and solid wall modular electrical components are UL 183 Listed. Electrical components are also CSA certified.

Installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords and extension cords must not be routed through cable openings in the walls.



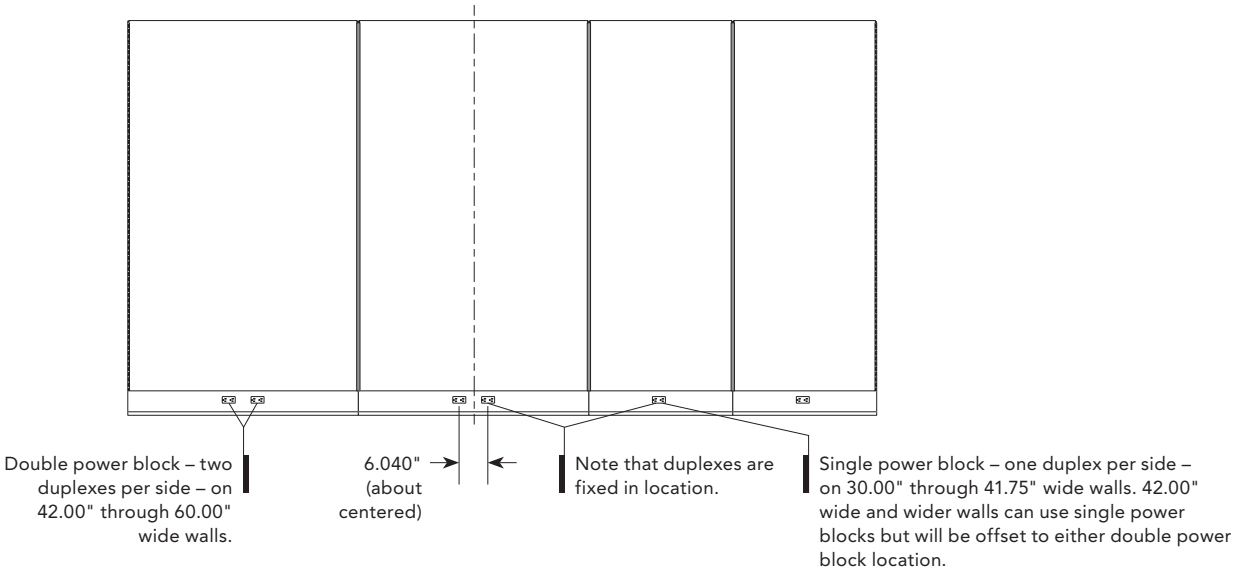
Modular power assembly for Framed Glass and Solid Walls:



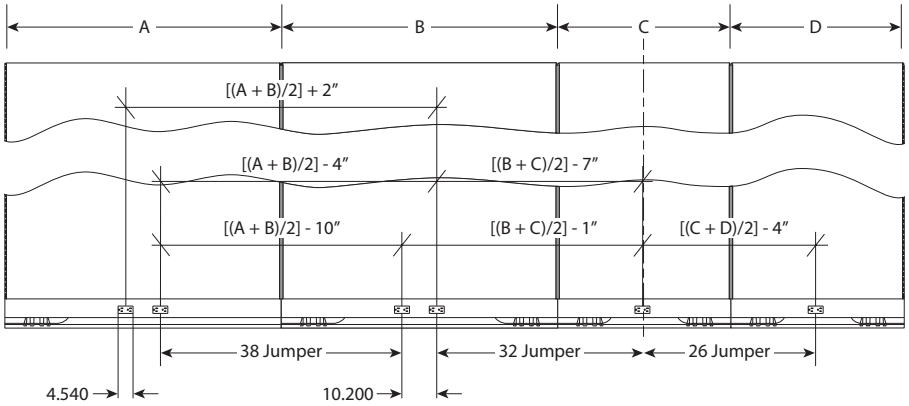
Electrical & Data

Electrical base assembly with cable capacity:

- The base pathway allows continuous voice and data lines to run through and between walls without interruption. Lay-in is provided in the base of framed glass and solid walls. Cables will need to be routed through posts.
- Cable capacity is as follows (based on 60% fill ratio of .25" diameter cables):
  - Standard base without electrical: 10 cables
  - Electrical base without electrical: 24 cables
  - Electrical base with electrical conduit on one side: 17 cables



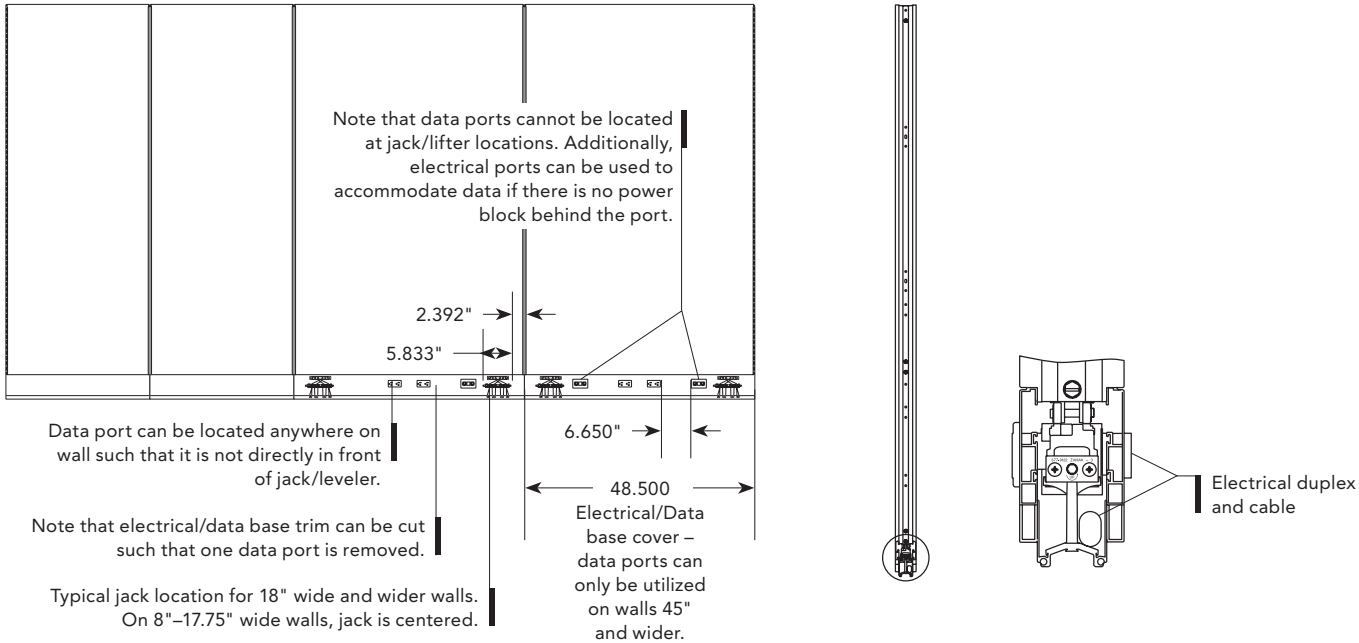
Electrical Base



Standard Base

Power blocks are available with single or double receptacle locations:

- Can only be used with framed glass and solid walls specified with the Electrical Base option.
- Posts with access trim are notched at the base to allow power and data to pass through. Other posts must be field-notched.
- Power blocks allow use of duplexes on both sides of the base but do not require them on both sides. Similarly, a double power block does not require duplexes in both or either location.



Power jumper length calculations:

Modular power jumpers between power blocks are calculated as follows:

- From double power block to double power block (42" wide and wider walls)
  Jumper length (inches) = [(Wall A width + Wall B width) / 2] – 10.
- From single power block to single power block (30" wide through 41.75" wide walls)
  Jumper length (inches) = [(Wall C width + Wall D width) / 2] – 4.
- From double power block to single power block (30" wide through 41.75" wide wall adjacent to a 42" wide and wider wall)
  Jumper length (inches) = [(Wall B width + Wall C width) / 2] – 7.
- Note that if there is an additional wall between the power blocks, add that width to the width of the jumper required.
- When calculating power in-feeds, allow 48" of overall length to remain in the ceiling for attachment to building electrical.
- Additionally, a jumper can run from a single power block to a single power block on a wall wider than 42" (typically for a double power block). These can be in a similar location; far locations or closer locations and will have different jumper lengths for each option.
- If a jumper crosses a post, add 3" to the length of the jumper.

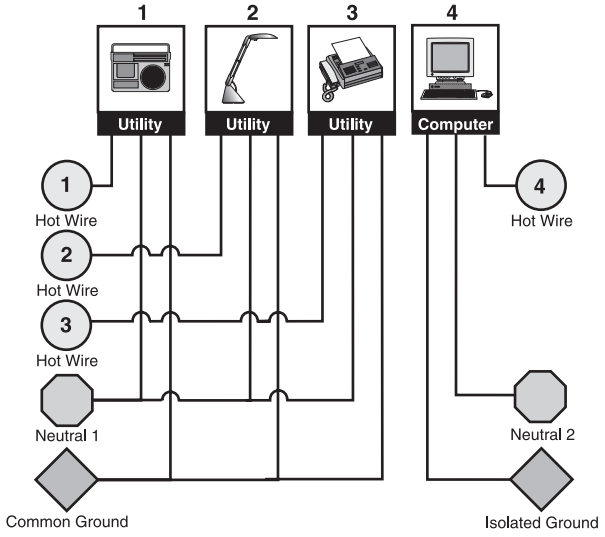
Electrical and Data Ported Base Trim Details:

Electrical & Data

Beyond® — Working with Framed and Solid Electrical & Data

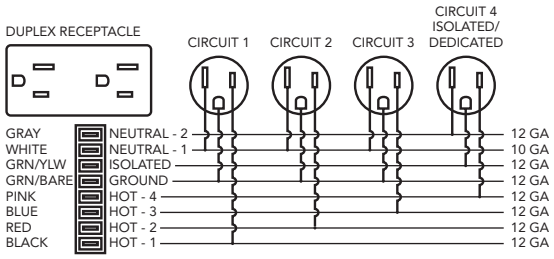
When specifying modular electrical:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - Four-circuit system (4 Hot/2 Neutral/2 Ground)
     – 3+1 option
     – 2+2 option
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of Isolated, Isolated/Dedicated, and Separate Neutrals circuits.
4. Specify appropriate Power Harnesses.
5. Determine the location, quantity, and type of Power In-feeds needed.



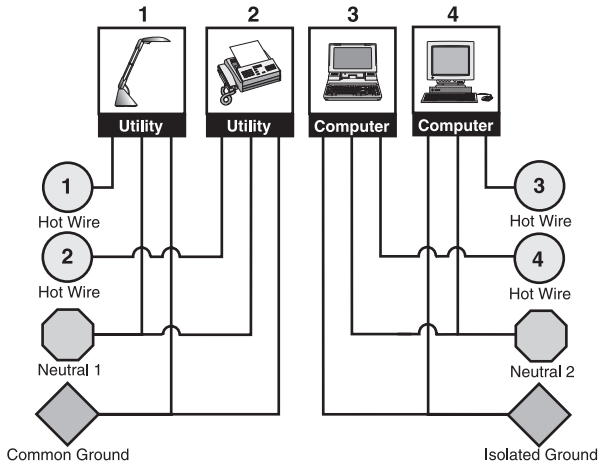
ASHRAE® 90.1 is an Energy Standard that requires some portion of receptacles in an office or workstation be controlled by an automatic control device. This device will switch off power to the controlled circuit(s) when the space is not occupied. Receptacles that are in a switched circuit must be marked per the standard. It is the customer's responsibility to ensure that the specification and installation of the electrical components meets all local and national building codes and all other applicable regulations.

- Utilize modular electrical 2+2 for ASHRAE® 90.1.
  – Live circuits: 1 and 2
  – Switched circuits: 3 (BFS-877517) and 4 (BFS-877509)
  – Control device in the building wiring
- Maximum of 13 circuits per infeed. Beyond framed / solid 8-wire power is 3 or 4 circuits, so would be 39 or 52 receptacles maximum per infeed.

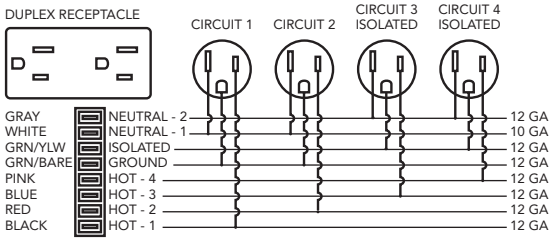


Flexconnect™ Electrical System Options

The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end users. This proven system delivers four circuits for every power in-feed in either a 3+1 or 2+2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights, and other peripherals. Both the 3+1 and 2+2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.



Four-circuit, 3+1 Receptacle Option



The 3+1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the three common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.

Four-circuit, 2+2 Receptacle Option

The 2+2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Electrical & Data

Beyond Receptacle Usage					
Two 8-wire, 20-amp (15-amp Canadian) electrical systems are offered					
Electrical System	Circuitry	Receptacle Capacity			
Four-circuit 4 Hot/2 Neutral/2 Ground	**3+1**	Common Circuit-1 **BFS-877501**	Common Circuit-2 **BFS-877502**	Common Circuit-3 **BFS-877503**	Iso/Dedicated Circuit-4 **BFS-877504**
	2+2	Common Circuit-1 **BFS-877501**	Common Circuit-2 **BFS-877502**	Isolated Circuit-3 **BFS-877506**	Isolated Circuit-4 **BFS-877504**

(1) Circuit 2 (one of the three common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.

Examples of Component Usage based on the *Office Equipment Typical Load Values* Chart

Power Option 3+1

Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers

Utility Circuits 1, 2, 3: Height-adjustable tables and ancillary items

Power Option 2+2

Dedicated Circuit 3: 4 desktop computers with 2 monitors each; or 10 laptop computers

Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers

Utility Circuits 1, 2: Height-adjustable tables and ancillary items

Power Option 3 (Circuit-separate neutrals)

Dedicated Circuit 3: 4 desktop computers with 2 monitors each; or 10 laptop computers

Utility Circuits 1, 2: Height-adjustable tables and ancillary items

Circuit Usage

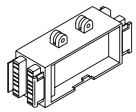
Strategy 1

Circuits to Equipment

Assign specific uses for each of the circuits. For example:

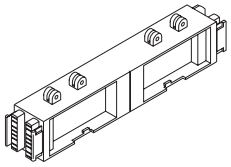
- Circuit 1 – Calculators, Fans, etc.
- Circuit 2 – Task Lights
- Circuit 3 – Monitors
- Circuit 4 – CPUs

Strategy 2



Circuits to Offices

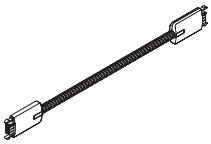
Assign specific offices to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.



Modular Electrical Components

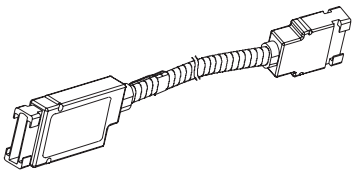
Power Blocks

- Specify a single centered power block for walls 30" wide to 41¾" wide.
- Specify an offset single or centered double power block for walls 42" wide to 60" wide.
- Power blocks are double sided and provide power access to both sides of the wall. Power may be accessed on a single side only if not needed on both sides of the wall.
- Connections at both ends of the power block allow power distribution in either direction.
- Power blocks attach with screws to pre-milled holes in the wall frame.



Single Power Block

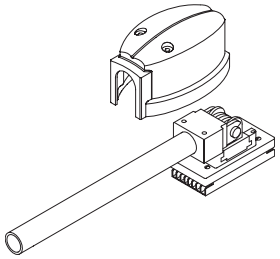
Double Power Block



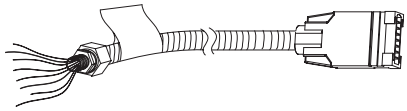
Power Jumper Cables

- Electrical jumper cables connect power from power block to power block.
- Post width (3") must be added to the power jumper cable length when crossing a post condition.

Electrical & Data



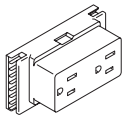
Pass-Thru without Power Block



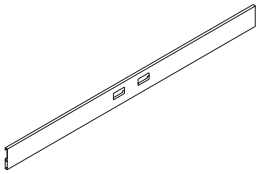
Electrical In-feeds

- Power in-feed cables deliver power from the building to the wall's electrical system.
- In-feed cables are housed in conduit to separate the electrical system from communication and data lines.
- Select the quantity of base or ceiling in-feed cables depending on individual power requirements.
  - Sealtight Base Pathway Power In-feed
    - Attaches to any receptacle opening in the base pathway.
    - A heavy rubber sheathing shields conduit, allowing in-feed to be exposed.

Base Power In-Feed

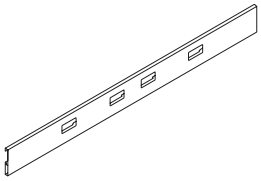


Ceiling Power In-Feed



- Connects to a powerblock and travels in the base pathway and up through a post or wall channel to above the ceiling. An electrician will then connect to the building power supply.
- Most codes permit flex conduit to be exposed after installation. Verify code requirements before ordering for an exposed application.

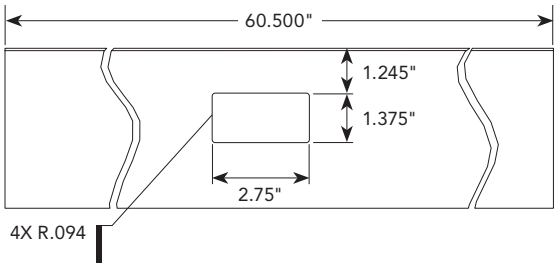
Duplex Receptacles



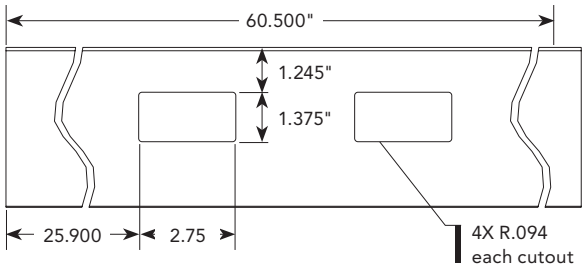
- Duplex receptacles snap into power blocks.
- Available in multiple colors. See the Materials and Finishes section for available color options.
- Each receptacle is labeled to indicate which circuit it will be connected to: 1, 2, 3, or 4.
- Specify duplexes to support either 3+1 and 2+2 electrical systems.
- Duplexes for switched receptacles are marked as required by ASHRAE® 90 and must be specified as switched receptacles.

Base Trim with Electrical/Data Ports

Electrical Ported Base Trim

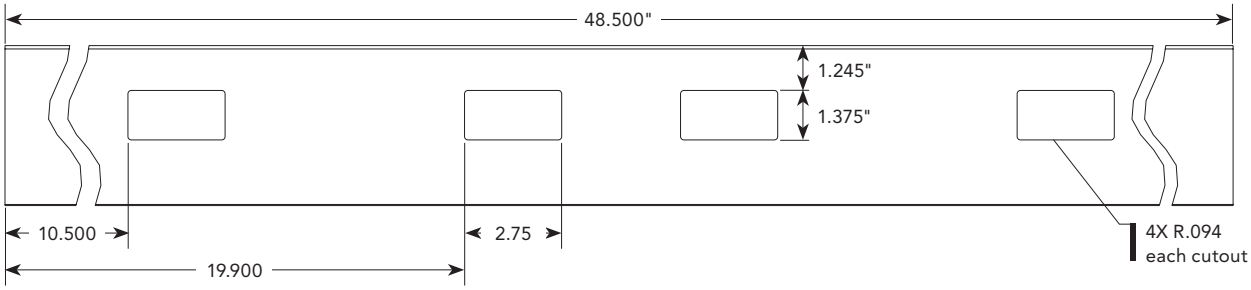


Electrical and Data Ported Base Trim



See page 157 for specification.

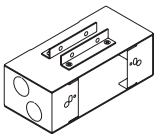
- Utilize the electrical base trim for projects with modular electrical. Base trim connects to the base channel and is specified on both sides of the panel. The electrical base trim is 1" taller than the standard, non-electrical trim.
- 4 5/8" H for trim itself.
- 5 3/16" H from finished floor to top of trim with nominal reveal of 3/4".
- Non-ported electrical base trim is available in 120" lengths only.
- Framed and solid pre-ported base trim at 60 1/2"W is available for single or double receptacles.
- Double port & data is available for panels greater than 45"W. It is not recommended on panels greater than 48"W in width.
- Base trim that is 48 1/2"W with QTY (2) additional data ports allows data to be placed to the right or left of the duplex receptacles. This is available for double receptacles only. Trim can be cut in the field so that one data port is removed if it's not used.
- Due to wall depth, back-to-back data modules should not be used. If required, it is recommended that extended data faceplates be used. Width is 48".
- All electrical and data ported trim for framed and solid panels comes with enhanced gasketing.



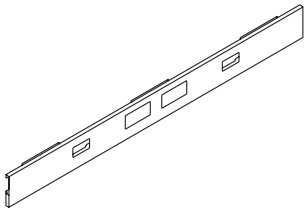
Single Port:

Double Port:

Double Port + Data:



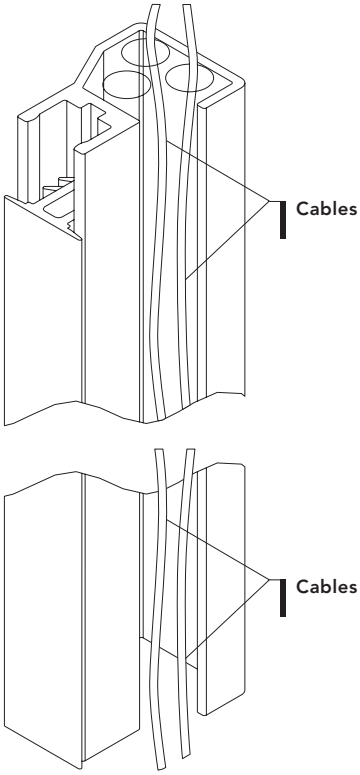
Electrical & Data



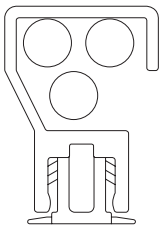
Base Channel Junction Box

For Chicago Code compliance, utilize the base channel junction box for electrical in the base channel with the hardwire box and box trim. Customer must furnish conduit, wiring and receptacles.

The Hardwired box consists of a UL Listed junction box that mounts in electrical base height framed glass or solid walls base area. These boxes are field-installed and wired. They are shipped as single-sided configuration and can convert to dual-sided by removing the plate on the rear of the box. Requires use of specific base trim made for this box. It is configured for dual boxes on 48" wide panels with data cutouts. It can be cut to be used for other configurations.



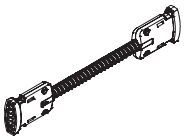
Hardwired box for base



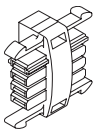
Utilize 48"W electrical trim ported for double receptacles only with additional data ports when utilizing a hardwired box. This allows data to be placed to the right or the left of the duplex receptacles. The data port not used is field cut off of the trim prior to installing on wall.

See page 294 for specification detail.

Wire Managers



Full View



Profile View

- Wire managers are 78" in length and can be field-cut to the size needed to manage cabling.
- Cables are fed into the reveal on the side and can manage up to QTY (3) ¼" diameter cables.
- Can be used with both framed glass and solid wall.
- Wire managers are press-fit into a zipper reveal.
  – Requires "with reveal" option for solid walls.

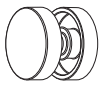
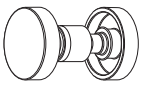
Frameless Privacy Tile System

Privacy tiles can be added to frameless glass applications to add visual privacy. There are two ways to add privacy tiles to the system — through rail-mounting or through button-mounting. Both methods are described in the following pages. All applications of frameless privacy tiles and distraction markers must use tempered perforated glass to support the hanging tiles.

- Perforated glass wall panels are available in standard widths of 40", 42", and 48".
- Glass must be perforated to accept privacy tiles or distraction markers.
- Perforated glass wall panels can be rotated to have perforations on either edge at install (non-handed).
- Perforation patterns are designed to accept specific privacy tile configurations and are available in both single and double sets.

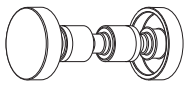


Button-Mounted Privacy Tiles



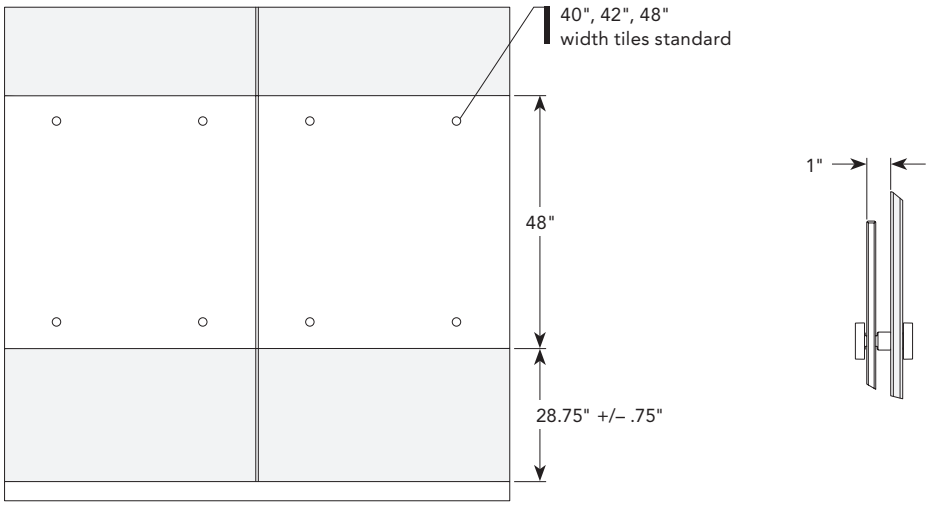
Rail-Mounted Privacy Tiles

Button-Mounted



- The button-mounted privacy tile system suspends glass tiles from buttons attached through perforations in the glass.
  - Note that button-mounted privacy tiles cannot be adjacent to a frameless wall channel or frameless adapter due to glass installation issues (wall channels and adapters cannot accept the privacy tile glass).
- Buttons are available in the following configurations:
  - Single-sided to suspend a tile on one side of the frameless perforated glass wall.
  - Double-sided to suspend tiles on both sides of the frameless perforated glass wall.
  - As distraction markers or to fill a perforation when privacy tiles are removed.

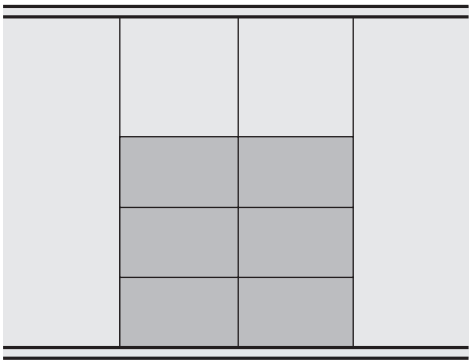
Distraction Marker



Single-Sided Button

Double-Sided Button

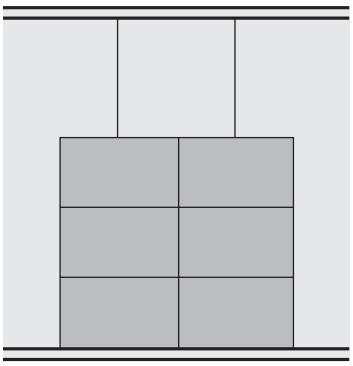
Button-Mounted Tiles:



Frameless Privacy Tile System

Rail-Mounted

- The rail-mounted privacy tile system utilizes a wall tile kit and tiles that attach to rails mounted to frameless perforated glass panels.
  - Privacy tiles are available in a variety of materials including veneer, laminate, fabric, and markerboard glass. Markerboard glass for the rail-mounted privacy tile system is laminated. For custom colors, please contact Allsteel prior to submitting a special request.
  - Rail-mounted privacy tiles must always be used in double-sided applications, meaning that privacy tiles must be installed on both sides of the glass.
- Rail and trim kits include the extrusions and support rails to hang the tiles from the frameless perforated glass panels.
  - Kits are available in 80", 84", and 96" widths. Kits are 1⅗" deep and install flush with the face of the base trim.
    - Fabric, veneer, and laminate tiles always require QTY (2) tiles in width (i.e., QTY (2) 40"W tiles are required for the 80"W tile kit).
    - Markerboard glass tiles are produced in full widths with QTY (1) tile.
  - Rail and trim kits include extrusions that wrap the exterior edge of the wall tiles to produce a finished edge.
  - Individual rails mount through the glass perforations and the tiles clip to these rails. The rails contain an integral channel that also supports shelves.
    - Shelves are available in glass.
- Multiple privacy tile kits may be mounted adjacent to each other but only with floating or "with modesty" options. Not allowed with "to the base" options.
  - When mounting adjacent privacy tile kits, wall panel widths must be the same width dimension.
- Overhead mounting is not allowed.
- TV Mount height trim kits are available for hanging a television on frameless privacy tiles. Hard-surface tiles must be used behind the television. Fabric or markerboard tiles are available on the opposite side of the television. See Technology integration for more details.
- Frameless Privacy Tiles – Rail-Mounted
  - To order rail-mounted privacy tiles, perforated glass, a privacy tile kit, and tiles need to be ordered.
    - Rail-mounted will be available in existing configurations:
      - Single
      - Single with Modesty
      - Double to the Base
      - Double Floating
      - Double with Modesty
      - Triple to the Base
      - Markerboard
      - Markerboard with Modesty
      - Triple to the Base with Markerboard
      - TV Mount Height
      - TV Mount Height with Markerboard
    - Specification rules:
      - Panel heights can go down to 86". The exception is the privacy tile configuration for TV mount height. 95" is the minimum panel height.
      - Tile widths and heights are unchanged.
      - Perforated glass panel is separate base model.

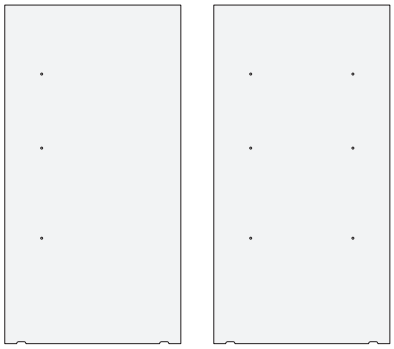


Frameless Privacy Tile System

- Rail-mounted privacy tiles can be specified in two- or three-panel modules.
  - **Two-Panel Module**
    - The two-panel module is best for movability and flexibility.
    - In this application, privacy tile kits are on module with two frameless perforated glass panels. The tile kit width must match the sum of the two panels (i.e., 84" tile kit mounts on module with QTY (2) 42"W panels).
    - Utilize the double perforation patterns for both panels.

Example of Two-Panel Module (Triple to the Base)

  - **Three-Panel Module**
    - The three-panel module creates a unique aesthetic.
    - In this application, privacy tile kits are centered on the middle frameless perforated glass panel and extend halfway into each adjacent panel.
    - Utilize the double perforation patterns for the center panel.
    - Utilize the single perforation patterns for the panels adjacent to the center panel.



Example of Three-Panel Module
(Triple to the Base)

Frameless Privacy Tile System

Glass Perforation Patterns

- Perforation patterns are available in single (one vertical set of perforations) and double (two vertical sets of perforations) applications.
  - A single perforation set is used when only one side of the wall panel needs to be perforated. Rail-mounted tiles specified using the three-panel module utilize single perforation sets on the outer two frameless glass wall panels with double perforation sets on the center middle frameless glass wall panel.
    - Specify single on the panels to the left and right of the middle segment.
    - Single perforation patterns provide one set of perforations 10" from both sides of the glass.
  - A double perforation set is used when the two-panel module is specified for rail-mounted privacy tiles or for the middle segment of the three-panel module.
    - Double perforation patterns provide two sets of perforations 10" from both sides of the glass.
    - Privacy tiles must use tempered glass.

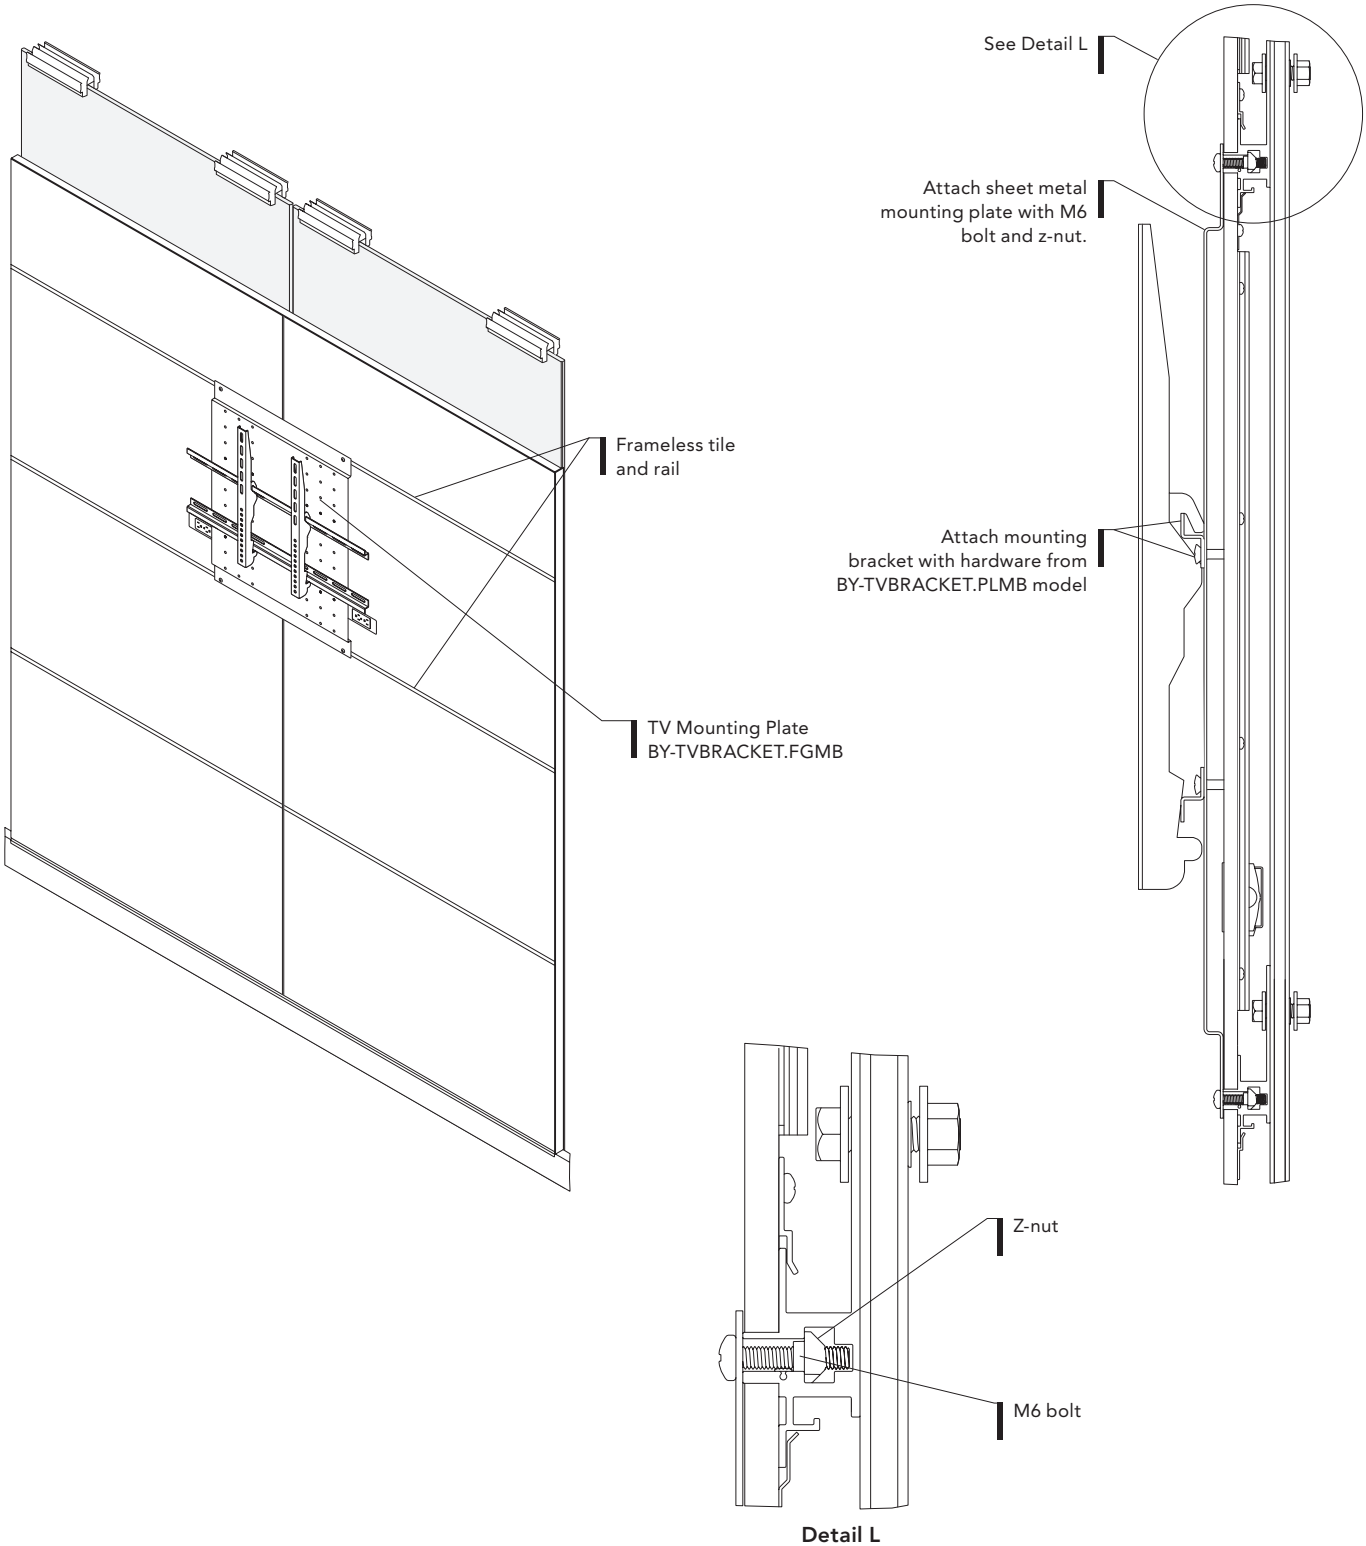
Frameless Technology Integration

TV Mounting on Frameless Glass Privacy Tiles

Utilize the TV mount height privacy tile kit to add a TV to frameless glass walls.



Frameless Glass Walls 4-Trac Duplex Mounting:

- Specify the TV mount height or TV mount height with markerboard configurations (see following pages for details).
- Utilizes perforated frameless glass walls with the 7S or 7D perforation patterns.
- Frameless glass 4-wire, 2-circuit modular electrical is required to route electrical behind the privacy tiles to bring power to the TV. Specify in-feed, jumpers, and receptacles.
  - For adding two receptacles, specify a 24" jumper to connect the two together.
- Privacy tiles must be hard surface (stratawood veneer or laminate) to support the TV mount. Fabric or glass tiles cannot be used on the side where the television is mounted. Laminate or veneer tiles can be specified with an electrical port in the bottom-right of bottom-left corner to support electrical and data requirements as needed.
- Specify the TV mounting plate and grommet (model BY-TVBRACKET.FGMB) and TV bracket (model BY-TVBRACKET.PLMB).
- To jump from an H-connector or receptacle in base to receptacle behind TV, specify a 90" L-jumper.

Working with Beyond Viz

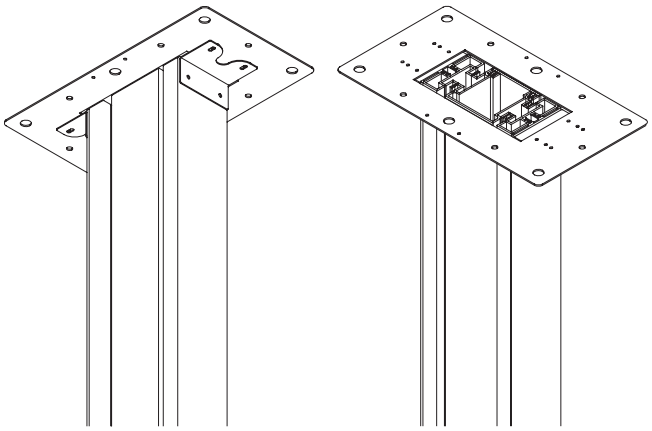
Beyond Viz is a markerboard screening application that allows users to reclaim vertical real estate for collaborative use by creating visual persistence and zones for teams. These markerboard screens come in a variety of sizes with a new post option for incorporating modular electrical.

- Viz Markerboard Module
  - Order markerboard and markerboard trim in the following dimensions (nominal dimension of the markerboard):
    - Width options: 48", 54", 60", 66", 72", 78", 84", 90", 96", 102", 108", 114", 120"
    - Markerboard Height options: 48", 54", 60"
  - Glass Finish: 1/4" Low-Iron, Magnetic, White Markerboard
  - Trim: All Beyond trim finishes

All Beyond Viz markerboard screens must be connected to a post on both sides utilizing Beyond zippers. Posts must be anchored to the floor and ceiling. Brackets attach to posts which are then anchored into place. If under ceiling grid, posts must be anchored above the grid which may involve cutting through ceiling tiles. Multiple Viz screens can be connected together using zippers that connect the screens to posts. Inline, two-way and three-way connections are possible. Note that there are options for post bracketry that coordinate with the post type and installation scenario. Utilize QTY (2) zippers for each connection point to connect Viz trim to post. All trim and posts utilize standard Beyond trim finishes.

- Posts
  - Utilize standard Beyond posts with access trim for inline, two-way, or three-way connections
  - A new inline post option is available for hardwired electrical. Post comes with an option to incorporate hardwired electrical with a port for a receptacle at 18" AFF on one face with a removable faceplate on the opposite side of the post.
  - A new inline post option is available for modular electrical. Post comes with a port for a receptacle at 18" AFF on one face and removable faceplate on the opposite side of post.
    - Utilizes 4-wire, 2-circuit electrical (note: this is also known as the Beyond Frameless modular electrical system)
    - Duplex receptacle should be specified at 18"AFF
      - Circuit 1 or 2
      - Standard 2-circuit duplex finishes
      - Ceiling infeed connection only
  - Mounting Brackets
    - Specify QTY (1) mounting bracket per post. Bracket model contains brackets for the floor and ceiling for (1) post.
    - For an inline post, there are two types of mounting brackets – a flat bracket model and a u-channel bracket model. These model descriptions describe the bracket installed at the top of the post, but note that each model comes with brackets for the top and bottom of the post. The flat bracket model contains (1) flat bracket for the ceiling and (1) u-channel bracket for the floor. The u-channel bracket model contains (2) u-channel brackets for use at the ceiling and floor.
    - For a two-way or three-way post, specify an L and T bracket model. This model contains (1) L/T plate that installs at the top of the post and (1) u-channel bracket that installs at the bottom of the post.
  - Zippers
    - Utilize standard Beyond zippers to connect posts to Viz screens
    - QTY (2) zippers required to connect Viz trim to (1) post

Viz

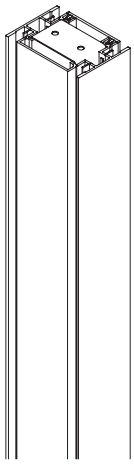


- Finished Ends
  - Posts that do not connect to a Viz markerboard screen on both sides must be specified with a finished end.
  - Two options for finished ends
    - Uniform finished end — the actual dimension is 1 15/32"W. Planning dimension is 1¼"W. Height is available 86" - 120" in ¼" increments. Height is available 12" - 48" in ¼" increments for stacking.
    - Narrow finished end — the actual dimension is 9/16"W. Planning dimension is ⅛"W. Height is 120".
    - If intent is to have width of marker board trim and width of finished end match, specify uniform finished end.
- To add finished ends to posts with stackers:
  - When using the uniform finished end, specify QTY (1) finished end for the full height post and QTY (1) stacking finished end for the stacking post. Both the full height and stacking finished end models are standard Beyond models.
  - For the narrow finished end, specify (2) narrow finished ends. One finished end will be utilized on the full height post and the other finished end will be cut to size in the field to fit on the stacking post.
- Stacking Posts
  - To bring markerboard modules to heights above 10ft, utilize stacking posts. Stacking posts are standard Beyond models that range from 2ft to 4ft, allowing Viz modules to grow to 14 ft overall.
  - Inline, two-way and three-way stacking posts with access trim are possible
  - Stacking posts must be connected to posts via splice kits
  - Specify QTY (1) splice kit per stacking post
  - Viz stacking trim must be specified (ETO-AP-BY-VIZSTRIM) to finish off the Viz module when stacking posts are specified. Stacking trim comes in 10ft lengths. QTY (1) can be utilized for (1) markerboard module. Trim can be cut to size in the field and installed on both sides of the inside of the Viz module to finish the stacking posts.

Bracketry: Inline Posts

Top Connection

Flat Bracket

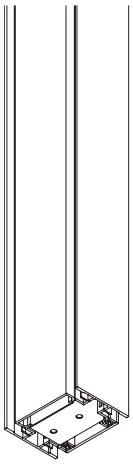


The flat bracket can encompass post or sit flush with top of inline post. Two L-shaped brackets attach to the flat bracket to connect the bracket to the inline post and can rest above or below the flat bracket. Bracket works with inline posts and with uniform and low profile finished ends.

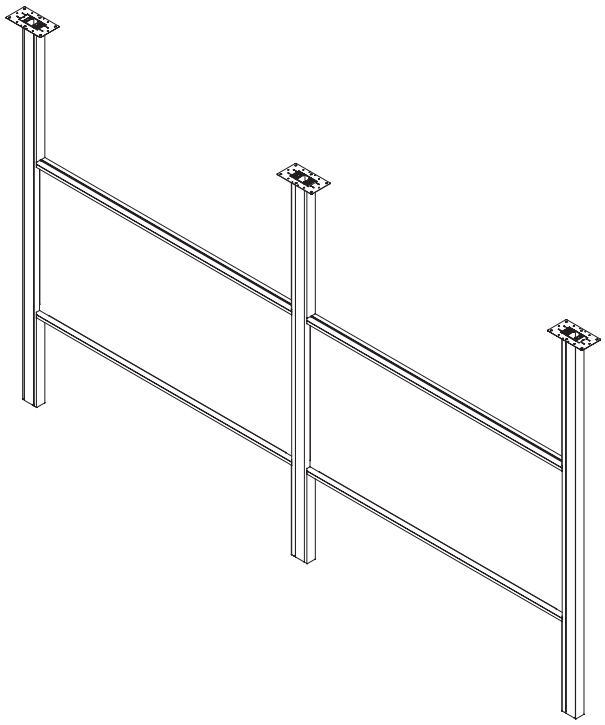
Flat Bracket

U-Channel Bracket

The u-channel bracket can be used at the ceiling connection. U-channel bracket slides into the top of the post, is secured in place, and sits 1⁄16" proud of the top of the inline post to allow for installation. Bracket works with uniform and low profile finished ends.



U-Channel Bracket

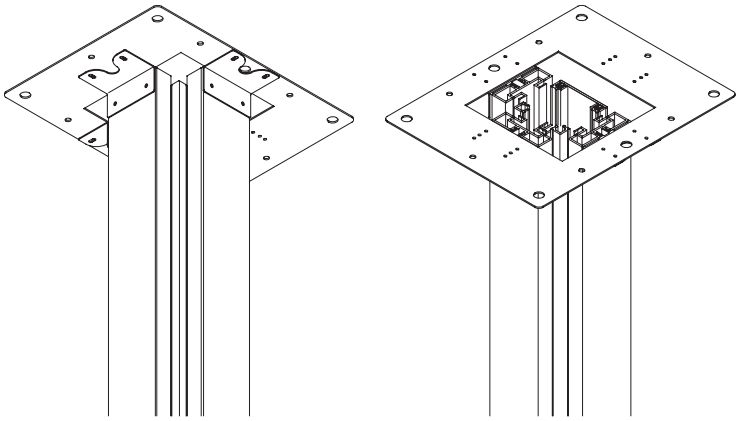


Bottom Connection

U-Channel Bracket

The u-channel bracket must always be used at the floor connection. U-channel bracket slides into the bottom of the inline post, is secured in place, and sits 1⁄16" proud of the bottom of the inline post.

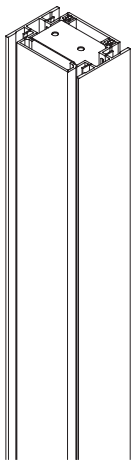
U-Channel Bracket



Bracketry: Two- & Three-Way Posts

Top Connection

Flat Bracket

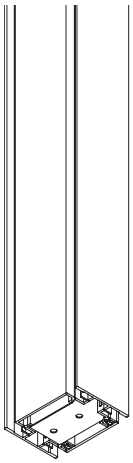


The flat bracket for an L,T connection can encompass posts or sit flush with top of post. Two L-shaped brackets attach to the flat bracket to connect the bracket to the two-way or three-way post and can rest above or below the flat bracket. Bracket works with uniform and low profile finished ends.

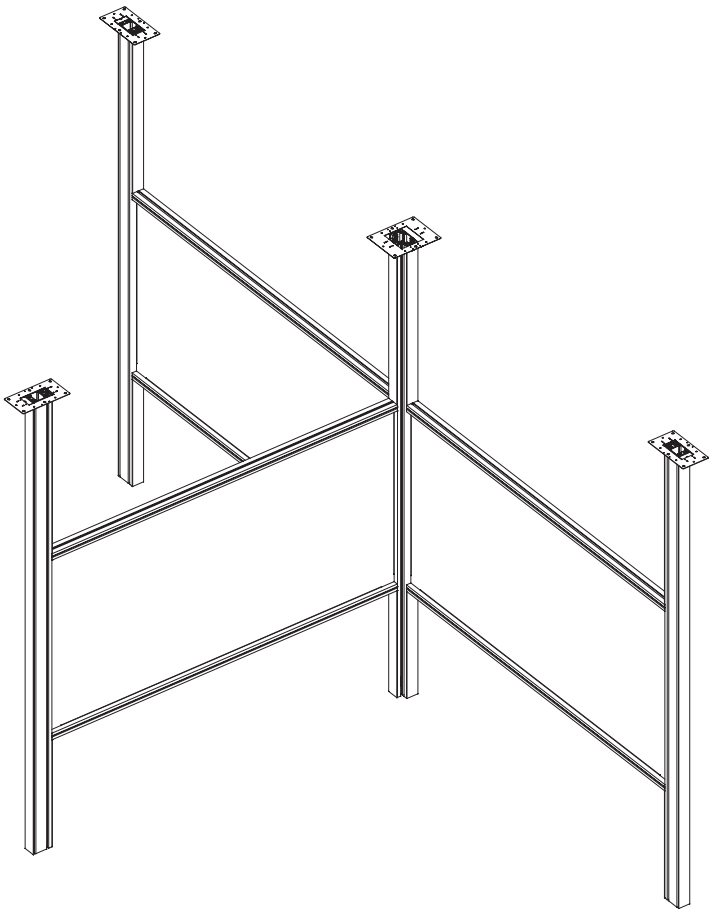
Three-Way Post

U-Channel Bracket

The u-channel bracket can be used at the ceiling connection. U-channel bracket slides into the top of the post, is secured in place, and sits 1/16" proud of the top of the inline post to allow for installation. Bracket works with uniform and low profile finished ends.



U-Channel Bracket

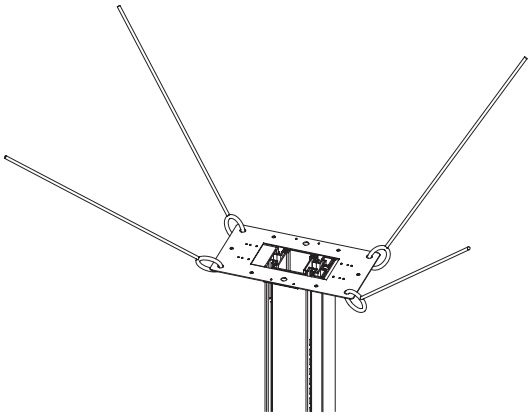


Bottom Connection

U-Channel Bracket

The u-channel bracket must always be used at the floor connection. U-channel bracket slides into the bottom of the post, is secured in place, and sits 1/16" proud of the bottom of the post.

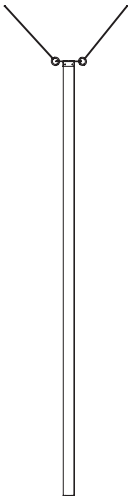
U-Channel Bracket



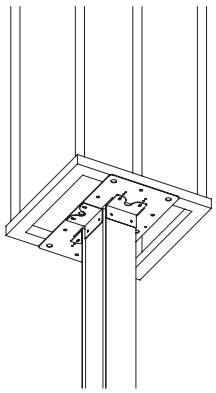
Attachment Methods & Materials

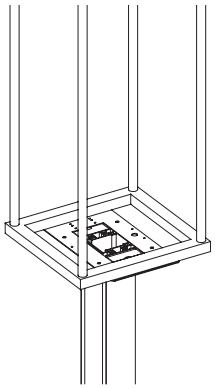
The project architect is ultimately responsible for code compliance to International Building Code and other code requirements. Viz posts must be anchored to the floor and ceiling. When utilizing u-channel brackets into a soffit, blocking is required.

Top Connection



Flat Bracket

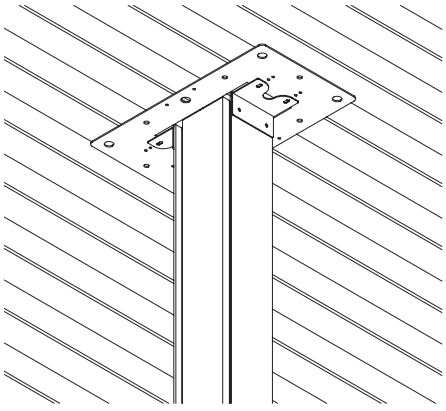




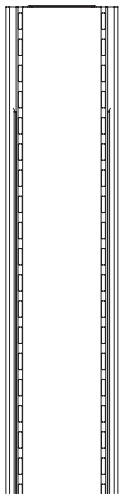
Attaching splay wire to ceiling bracket

Splay wire can attach to bracket holes. A minimum of (4) wires required per bracket. 3/32" diameter aircraft cable 7x19 strand core recommended. Attach to eyebolt with medium duty wire rope thimble.

Post can also be attached to deck using kickers.



Building trapeze around obstruction to ceiling bracket

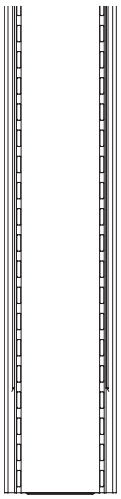


Unistrut material can be attached to Viz flat bracket to work around an overhead obstruction.

Attaching bracket directly to building structure

Bracket can attach directly to building structure – to the ceiling deck or to an alternative structure.

U-Channel Bracket



Attaching u-channel bracket to building structure/ soffit

Blocking is required when utilizing u-channel bracket under soffit. A minimum of 1/2" (0.5") is needed on either side of each screw. Bracket sits 1/16" proud of the post.

Attachment Methods & Materials

Bottom Connection

U-Channel Bracket

Attaching u-channel bracket to floor

The u-channel bracket must be anchored into the floor. Bracket sits 1/16" proud of the post.

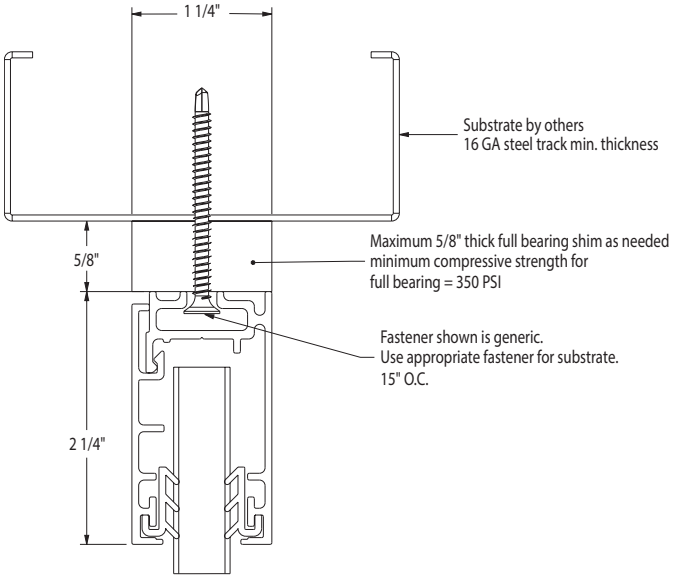
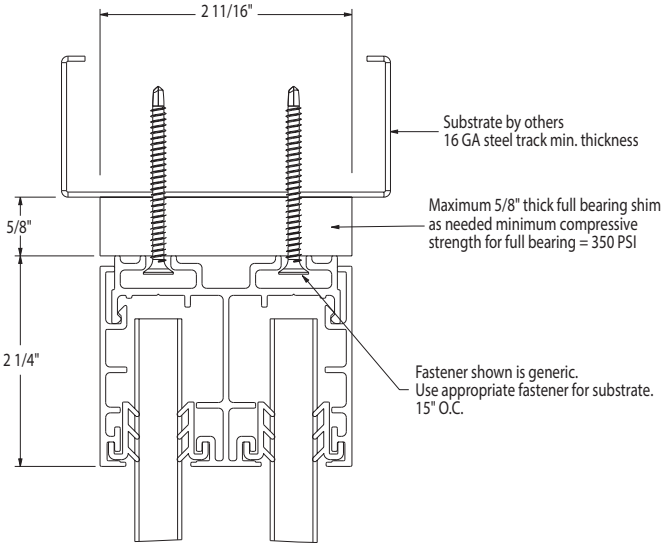
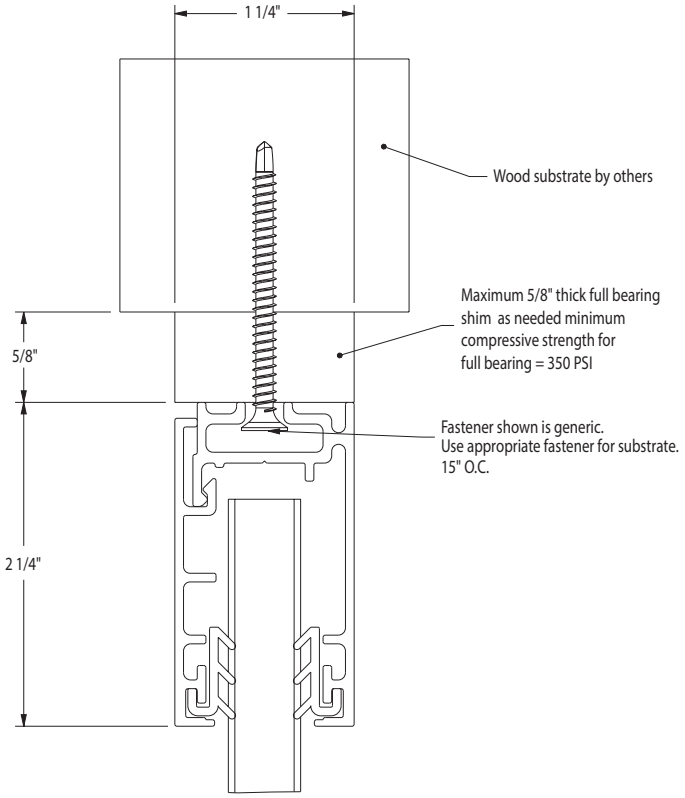
Panels, Trims, & Connectors



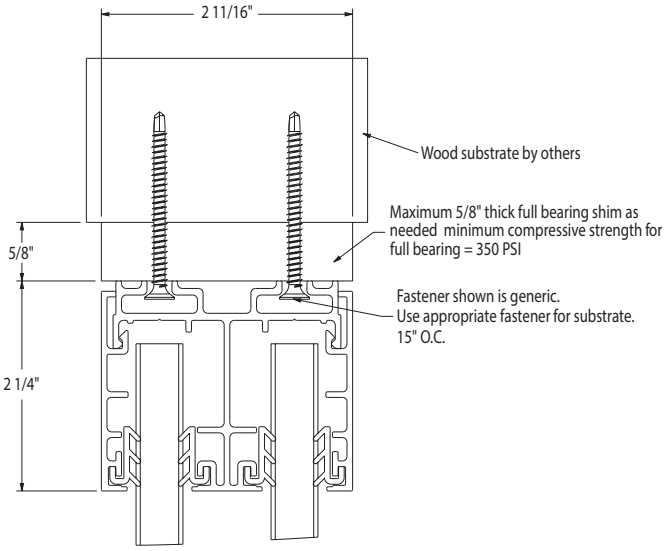
Requirements for a Steel Bulkhead

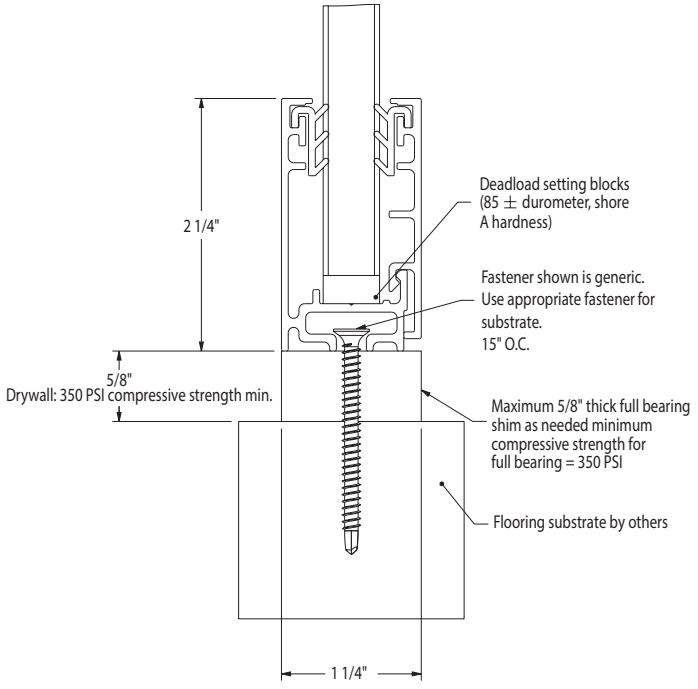


Note: Anchors supplied by installation partners.

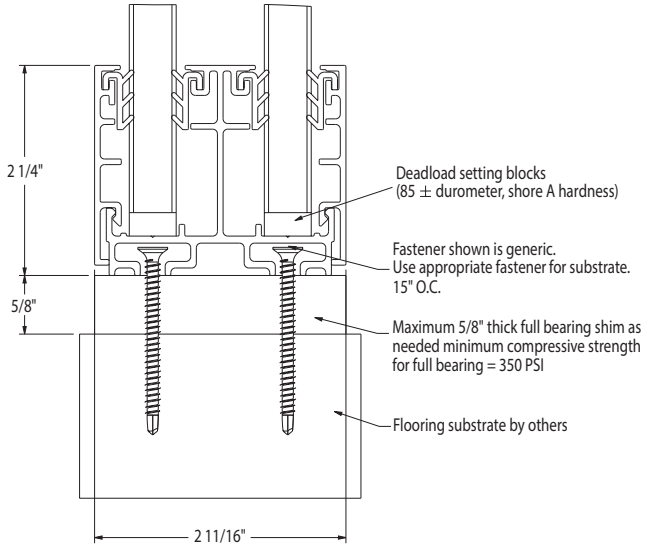


Requirements for a Metal Stud Bulkhead



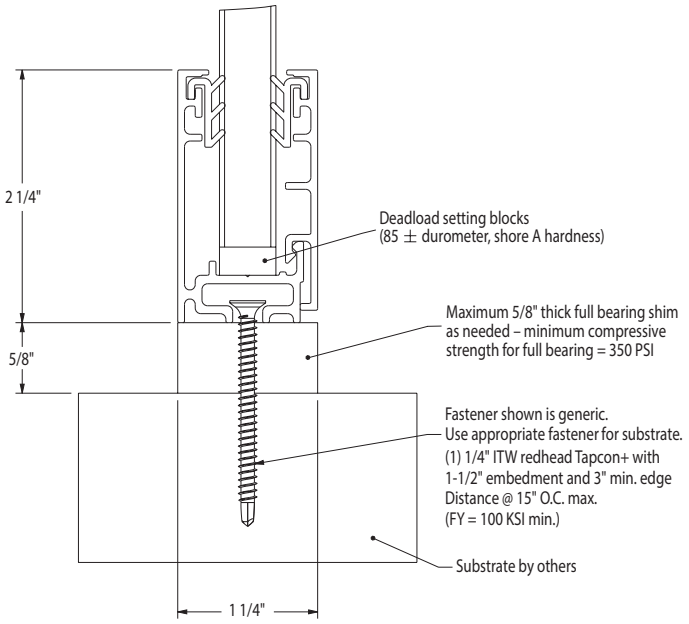


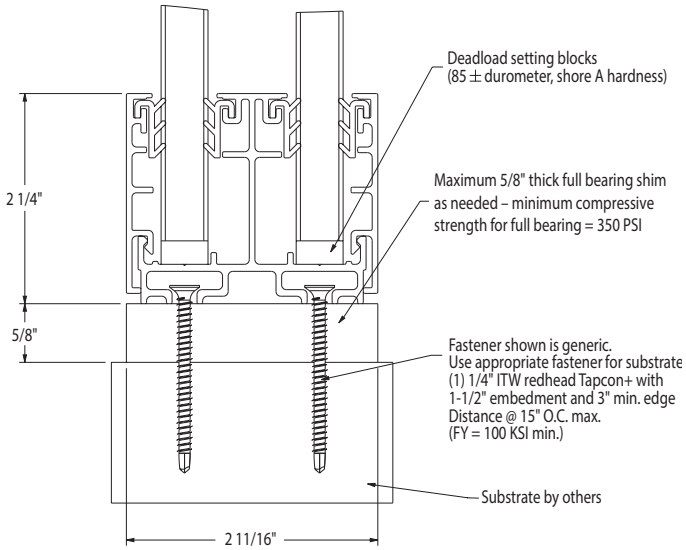
Note: Anchors supplied by installation partners.



Requirements for a Wood Bulkhead

Requirements for a Wood Floor





Note: Anchors supplied by installation partners.

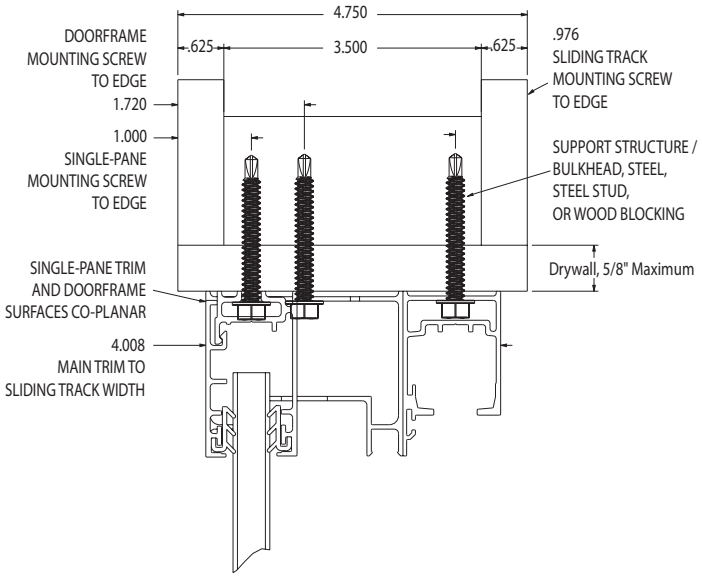
Panels, Trims, & Connectors

Requirements for a Concrete Floor

Note #1: Anchors supplied by installation partners.

Note #2: For post tension concrete applications, please consult with the architect prior to specifying.

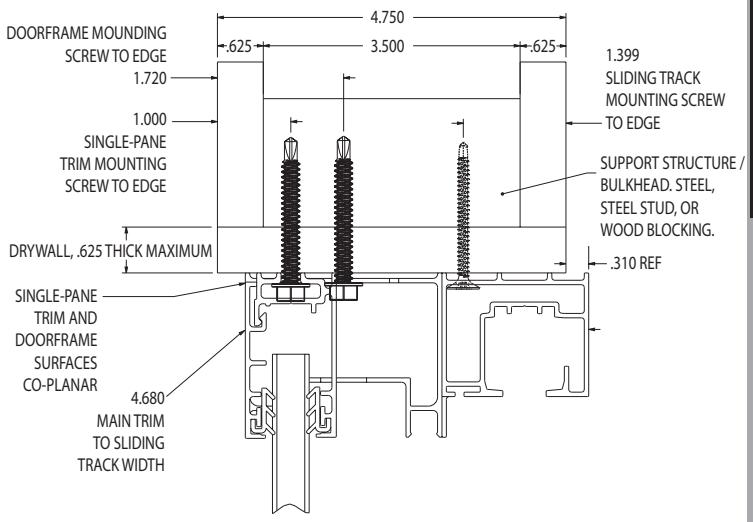
Requirements for a Sliding Door



For Dimension sliding doors, headers/soffits should be built with minimum requirements in mind. Reference dimensions are not required.

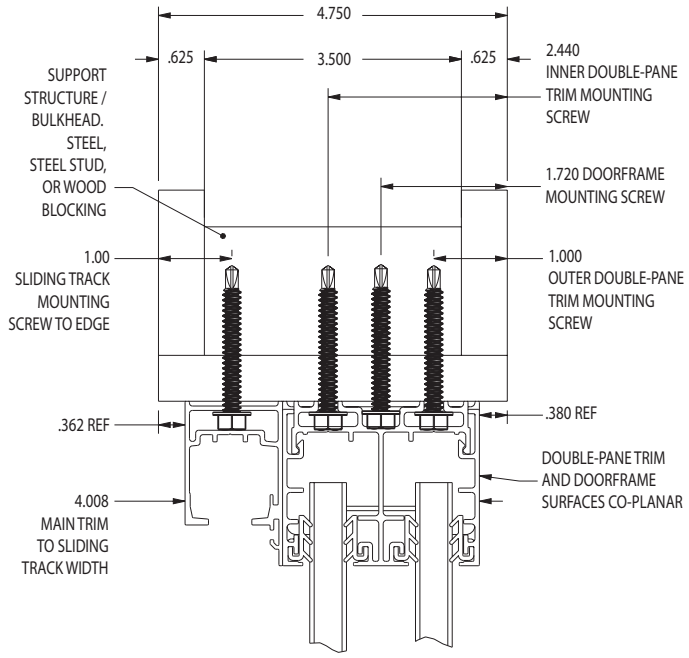
Allsteel recommends the removable portion of trim be oriented to outside of room and sliding doors always be placed on inside of room. The sliding door should be placed opposite the side of the removable trim.

Minimum bulkhead structure requirements for Dimension sliding door.

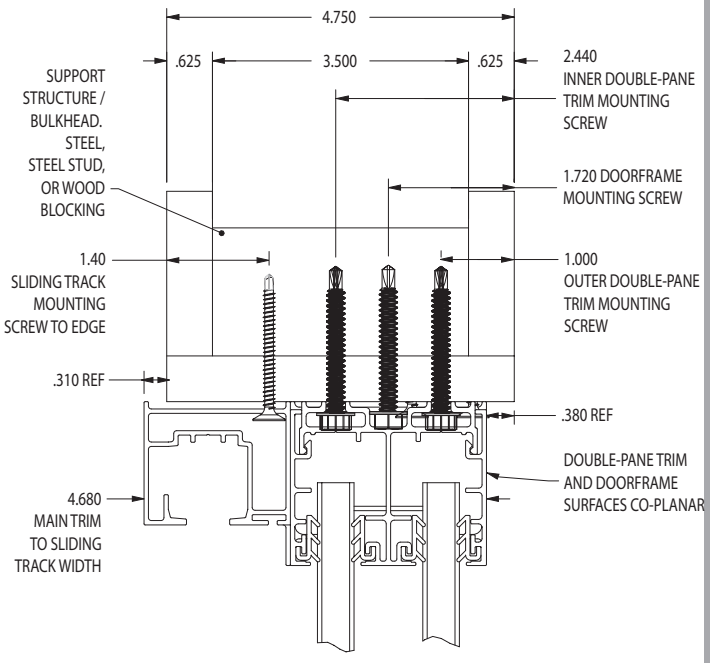


Frameless Glass Sliding Door

FRAMELESS GLASS SLIDING DOOR ON SINGLE-PANE SYSTEM



Thin Frame Aluminum Sliding Door



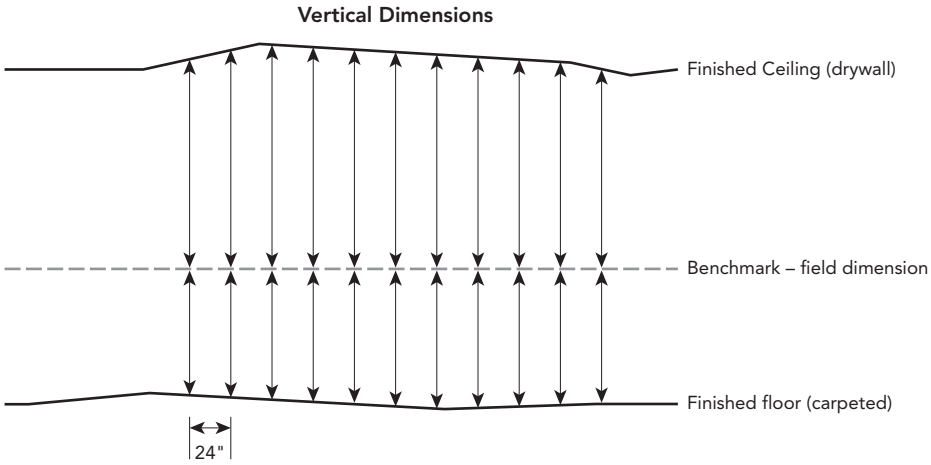
THIN-ALUMINUM FRAMED SLIDING DOOR ON SINGLE-PANE SYSTEM

FRAMELESS SLIDING DOOR ON DOUBLE-PANE SYSTEM

FRAMELESS SLIDING DOOR ON DOUBLE-PANE SYSTEM

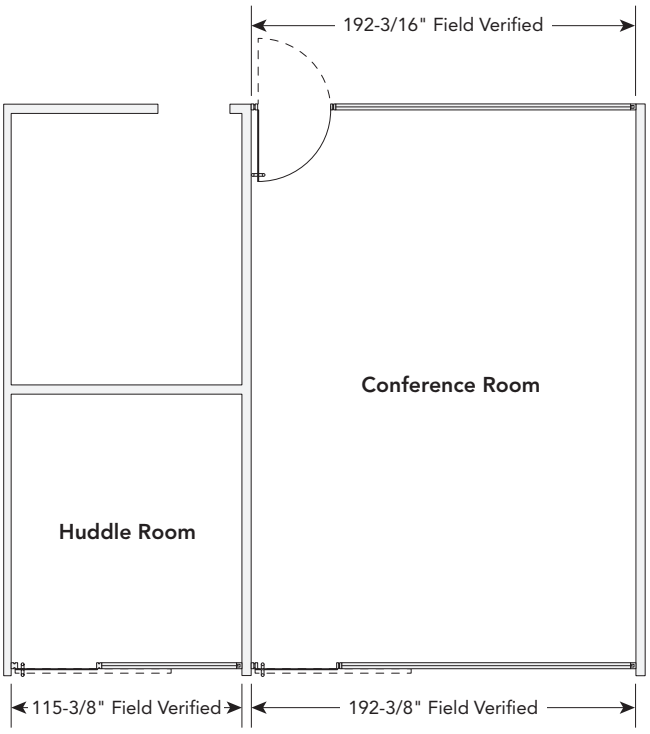
Panels, Trims, & Connectors

Dimension requires the header/soffit/bulkhead to be designed to support the weight listed below.



Ceiling Height	Door Type	Single or Double	Door Unit Width (inch)	Approx. Aluminum weight supported by header per foot	Door Leaf Type	Door Leaf Glass Thickness (inch)	Approx. Weight of Door Leaf
120	Slider	Single	43.725	1 to 2 lbs/foot	Glass	0.375"	185 lbs.

Note: Stand-alone glass units and center swing pivot doors need to support the weight of the aluminum only at the header or approximately 1 to 2 lbs/foot. The center swing pivot door's weight is dispersed to the floor. Hinged doors are supported through the vertical which takes load to floor.



Field Measurements

Field measurements are used to determine the nominal floor to ceiling height and accurately specify glass heights. For more information on field measurements, please see the Dimension installation guide.

For vertical dimensions, it is recommended that measurements are taking from the benchmark to the floor and to the ceiling every 24" when using Dimension.

For horizontal dimensions, it is recommended that opening dimensions from finished drywall to finished drywall are taken while using Dimension.

Panels, Trims, & Connectors

Step 1
Confirm seismic design category.

Step 2
Verify that product limitations and site restrictions have been met.

Step 3
Provide architect of record with Dimension's standard seismic package from Allsteel
- Standard package is free
- Drawings are not stamped

If local code authority requires stamped drawings, dealers must:
1. Provide Allsteel with additional information for the engineering firm to complete stamped shop drawings
2. OR work with local engineer of record to create a stamped package

The project architect is ultimately responsible for code compliance including seismic requirements.

Allsteel has created guidelines regarding the sale and installation of Dimension in seismic zones. Before selling Dimension in a seismic zone, it's important to know which seismic zone the project is in as well as the building category. Dimension has been evaluated for seismic design categories C-F through a third-party engineering firm, where glass deflection was tested using computer analysis. Product installation is restricted to seismic risk categories I, II and III. Please consult the project architect for more details.

Please contact your Allsteel PM or Wall BDM with further questions.

Documentation

Allsteel provides a standard seismic package for Dimension. This standard package is not stamped. There is no cost to obtaining this package and it is available on our Website or through your Allsteel PM. This package should be provided to the Architect of Record.

Upfront Proposal Pricing

In some situations, local code authorities may require additional documentation including stamped drawings. Below are two options for obtaining stamped drawings that may carry additional costs. Allsteel is not responsible for covering these additional costs. It is recommended that dealer partners include verbiage in their proposal to the customer that notifies the customer of the potential of these additional costs.

Option 1) Provide Allsteel with additional information for the engineering firm to complete stamped shop drawings. For a small fee, Rice Engineering can create site-specific stamped drawings. To receive site-specific stamped drawings, the dealer will need to provide the following details to the Allsteel Project Manager:

1. Project Name
2. Location (City and State)
3. Structural Notes if available
4. Specifications if available
5. Building Type (Hospital, Store, Office, School, etc.)
6. Final Shop Drawings and Bill of Materials: Include plan/elevation view and wall height
7. Optional: Substrates at the Head and Sill

Option 2) The engineer of record for the project can take site-specific calculations and incorporate these calculations into the package they submit.

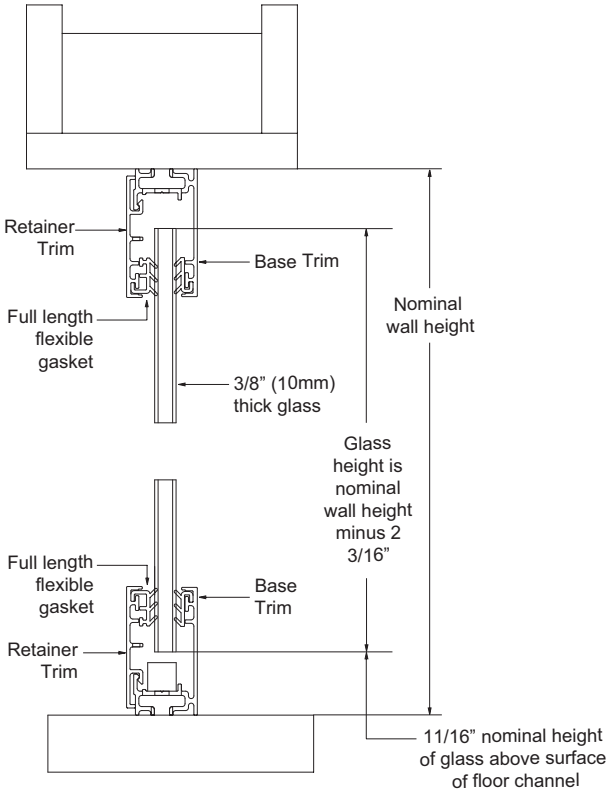
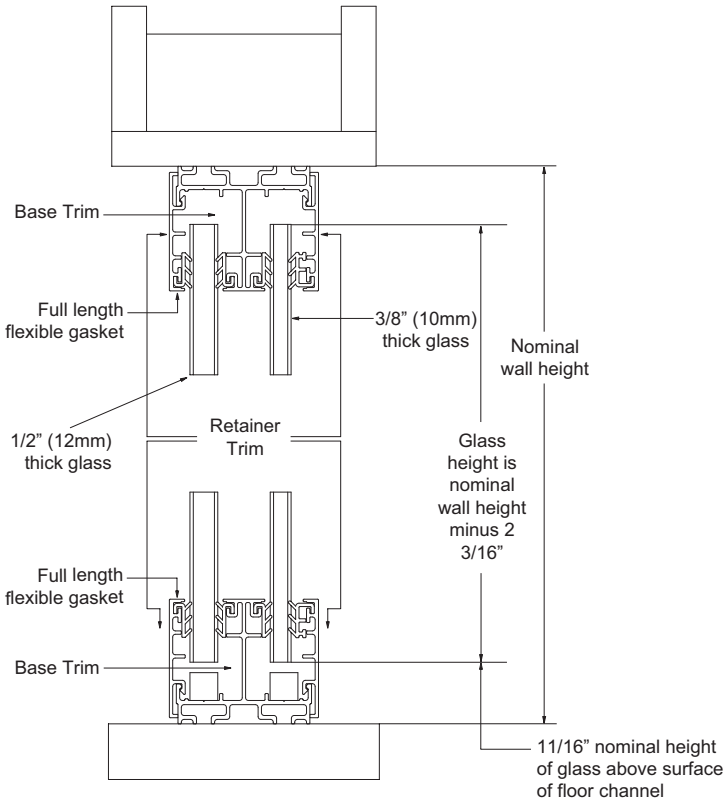
Panels, Trims, & Connectors



Frameless Glass Panels

- Thicknesses
  - ⅜" (10mm)
  - ½" (12mm)
- Dimensions
  - Height:
    - 18"–120" in 1⁄16" increments
  - Width:
    - 6½"–42" up to 120"H in 1⁄16" increments
    - 42 1⁄16"–48" up to 108"H in 1⁄16" increments
- Type
  - Tempered or Laminated
- Finish
  - See **Dimension Glass Finishes**

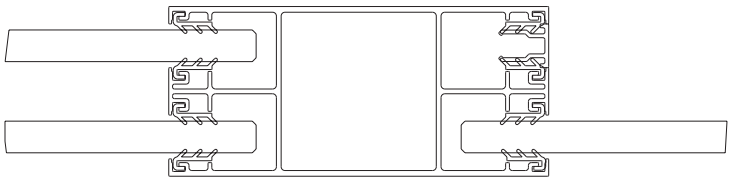


Trim

Dimension features a universal two-piece trim profile that is the same at the floor, ceiling, and wall. Trim is separated out into two components, base trim and retainer trim – these components are used together but specified as separate models to simplify site coordination and installation. The two-piece trim design allows for non-progressive installation, front loading of glass, and ease of leveling.

- Dimensions
  - Single channel – 2¼"H x 1¼"D
  - Double channel – 2¼"H x 2 11⁄16"D
  - Sold as 120"L straight extrusions that are cut-to-length and, if applicable, mitered on site to accommodate two-way or three-way connections
- Finish
  - Clear anodized or powder coat painted finish
  - See **Dimension Trim Finishes**

Single Channel Trim

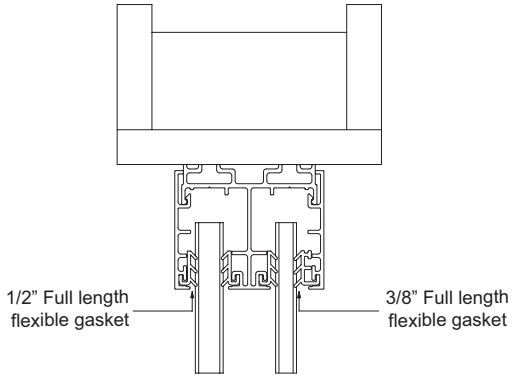


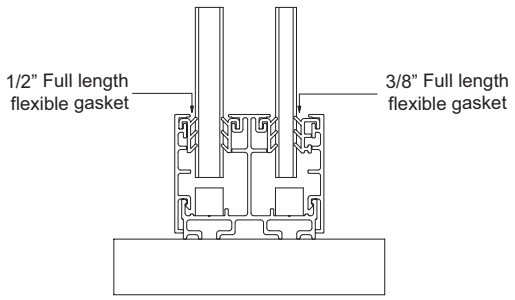
Double Channel Trim

Panels, Trims, & Connectors

Base Trim

- Serves as Dimension's connection point to base building
- Used both horizontally and vertically
- Offered as single channel (DM-USCBTRIM) or double channel (DM-UDCBTRIM)
- Single channel accommodates ⅜" (10mm) or ½" (12mm) glass thicknesses
- Double channel accommodates either ⅜" (10mm) glass in both channels, ½" (12mm) glass in both channels, or ⅜" (10mm) glass in one channel and ½" (12mm) glass in the other channel
  - When specifying mixed glass thicknesses in double channel trim, the space must be drawn to ensure the intended glass thickness is located on the exterior channel. For optimal acoustic performance and improved site coordination, the use of ½" glass on the exterior is recommended.
- Alternatively, double channel trim can also accommodate a single pane of glass, with a trim channel filler (DM-TCFILLER) used to fill the empty channel of both the trim and the door frame (see **Working with Door Frames** for more information). This allows for future flexibility via the ability to convert from single glazed to double glazed applications on day 2 utilizing the same double channel trim.
  - The trim channel filler is used at fly-by applications when the fly-by is being used as a location to transition from single glazed to double glazed. In these applications, the fly-by should be specified as a double glazed fly-by and the trim channel filler will be used on the single glazed side in order to fill the empty channel in the fly-by.





- Horizontal trim models are specified at a rate of two (2) models per 10 linear feet
- A 10% scrap allowance is applied to the total quantity of all horizontal trim models
- No scrap allowance is applied to the total quantity of vertical trim models

Panels, Trims, & Connectors

Retainer Trim

- Attaches to Dimension base trim to secure glass within channel
- Separate models depending on whether the trim is being used in a horizontal orientation at floor or ceiling (DM-HRTRIM) or vertical orientation at wall start (DM-VRTRIM)
- When used with single channel horizontal or vertical trim, one (1) retainer trim is needed per one (1) base trim (1:1)
- When used with double channel horizontal or vertical trim, two (2) retainer trims are needed per one (1) base trim (2:1)
- Retainer trim specification is dependent on glass thickness – the gasket shipped with ⅜" retainer trim is slightly larger to accommodate for the thinner glass profile
- A 10% scrap allowance is applied to the total quantity of all horizontal trim models

Tolerance & Leveling

- Dimension trim has an overall vertical building accommodation range of 1", this includes:
  - +/- ½" of variation at the floor
  - +/- ½" of variation at the ceiling
- Dimension trim can accommodate +/- ½" of variation at the wall.

Installation Kit

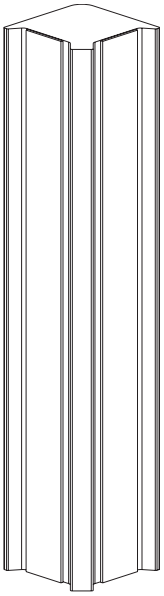
- Dimension is leveled via setting blocks that are included in the installation kit (DM-INSTALLKIT). CET automatically adds one (1) installation kit for every 200LF of single glazed wall specified or 100LF of double glazed wall specified.
- Each installation kit includes 400 setting blocks total, 100 each of four different sizes – 1/16", ⅛", ¼" and ½".

Panels, Trims, & Connectors

Connectors

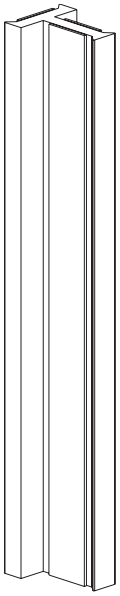
Adjacent Dimension frameless glass panels are connected to each other using vertical fillers (DM-FGFILLER). Connection types supported including straight (inline), two-way, and three-way. Each vertical filler model comes with material to connect two (2) adjacent pieces of glass so single glazed panels will require one (1) vertical filler every place that panels meet; double glazed panels will require two (2) vertical fillers every place that panels meet. All vertical fillers are 120" and cut-to-length in the field.

Straight (Inline) Connectors



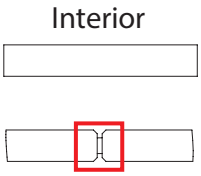
- Clear VHB tape is used for straight connections
- VHB tape is not dependent on glass thickness – same size is used regardless of whether ⅜" or ½" glass is being specified

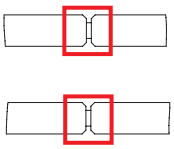
Two-Way (Corner) and Three-Way Connectors

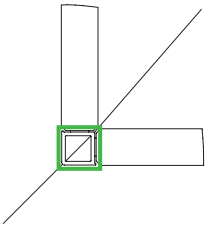


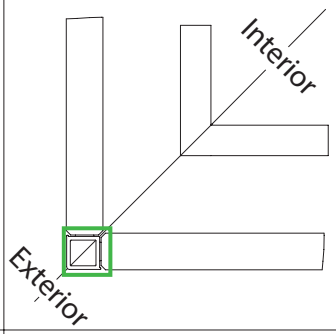
- Clear polycarbonate connectors are used at two-way and three-way connections
- Two-way and three-way connectors are dependent on glass thickness – different sizes will be sent depending on whether ⅜" or ½" glass is being specified
- A 10% scrap allowance is applied to the total quantity of all filler models
- Please note that when a double-glazed three way connection is specified with ½" glass on the exterior channel and ⅜" glass on the interior panel, the panel separating adjacent rooms will utilize ⅜" glass in both channels, resulting in reduced STC performance.

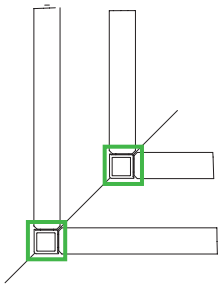
Straight connector

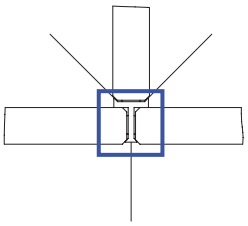


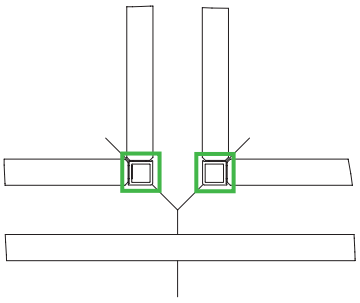










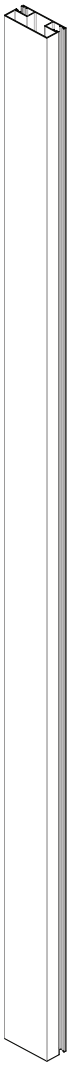


Two-Way connector

Three-Way connector

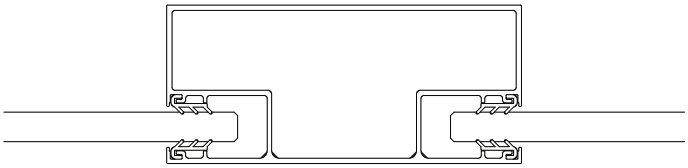
Panels, Trims, & Connectors

– The panel type being specified (single glazed, double glazed, or single glazed in double channel trim) will determine the type and quantities of vertical fillers needed to support different connection types.
  - Three-way corners (most commonly used in a set-back application) will not be offered if single glazed in double channel panels are being specified.
  - Please note that the connection type in application will not always match the orientation of the vertical filler, for example, a three-way corner being specified with double glazed panels will require two (2) two-way vertical fillers and, depending on the application, may also require one (1) straight vertical filler.



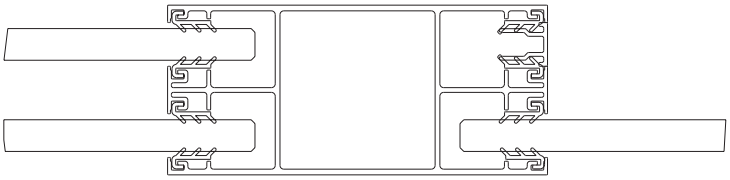
Straight Filler Two-Way Filler Three-Way Filler	Single Glazed	Offset Single Glazed	Double Glazed
Straight (Inline) Connection			
Two-Way Connection			
Three-Way Connection		Not Offered	

Panels, Trims, & Connectors



Drywall Fly-By

Drywall fly-by posts (DM-FLYBY) are used as an inline transition when a storefront is used against a demising drywall. Fly-by posts may be specified as either single channel or double channel.



- If trim on both sides of fly-by is single channel, specify single channel.
- If trim on both sides of fly-by is double glazed in double channel, specify double channel.
- If trim on both sides of fly-by is single glazed in double channel trim, specify double channel. Add two (2) trim channel fillers (DM-TCFILLER) for each fly-by to fill the additional channel(s).
- If trim on one side of fly-by is single channel and the other side is double channel (being used as a transition), specify double channel. Add one (1) trim channel filler (DM-TCFILLER) for each fly-by to fill the additional channel.
- One or both sides of fly-by may also be a door frame adjacent wall start

Working with Touch Up Paint

Touch-up paint is recommended to conceal any minor scratches or exposed edges that may have been caused while field-cutting trim.

- One (1) kit is recommended for every 1,000LF of wall
- Kits are sold either as a 0.5 oz. bottle with brush (APTK) or a 12 oz. spray can (ARSLCC)
- Finish specified should match trim finish
  - If anodized trim is being specified, it is recommended to order PR0 paint

Frameless Glass Panel, Tempered

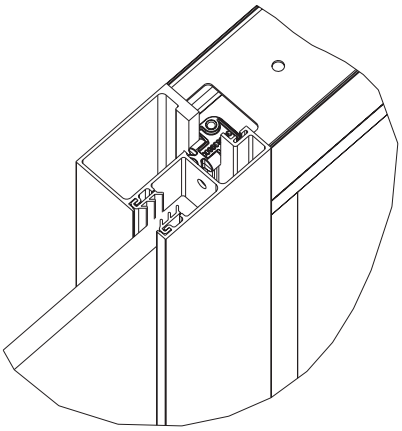
Working with Door Frames

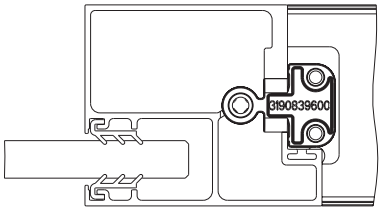
General Information

Dimension door frames were designed to integrate seamlessly with the adjacent glass panel(s). Each frame includes two vertical members and one horizontal member. Each vertical member is designed with either 1 or 2 glass channels. Distinct frame types are available for hinged (DM-HDFRAME), pivot (DM-PDFRAME), and sliding doors (DM-SDFRAME), ensuring proper alignment with the specific hardware requirements of each door type.

Regardless of door type, door frames will always be handed due to the channel(s) in the door frame verticals. While the door frame is handed, this does not automatically require the door leaf to be handed as well.

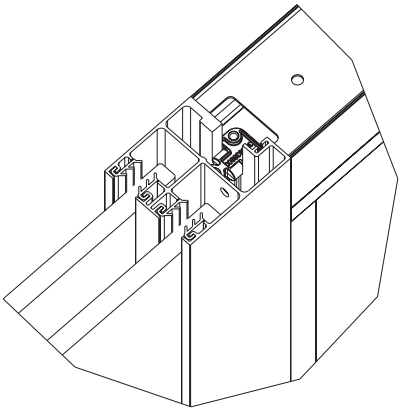


Finish

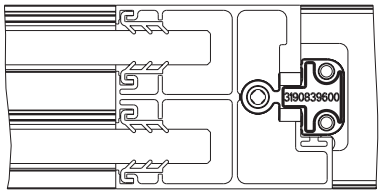


- Clear anodized or powder coat painted finish
- See **Dimension Paint Finishes**

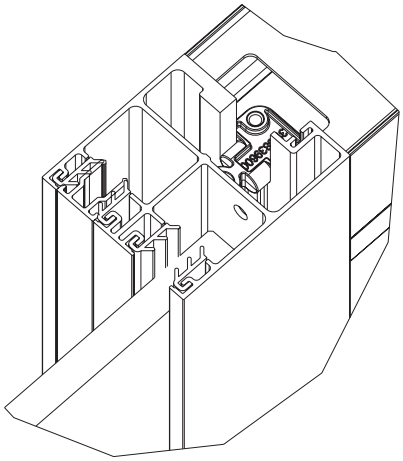
Door Frame Adjacent Conditions



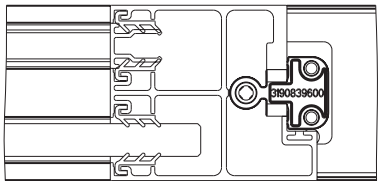
Due to the integration of glass within the frame vertical, door frames require specification indicating both the connection type and glass thickness directly adjacent to the door frame on both the left hand and right hand sides. CET will automatically populate this information based on your drawing.



If single channel trim is being specified directly adjacent to a door frame, CET will select either Single Channel Trim ½" or Single Channel Trim ⅜" depending on the glass thicknesses specified. Single channel frame verticals are designed to accept a single pane of glass.



If double channel trim is being specified directly adjacent to a door frame, CET will specify Double Channel Trim ½"-½", Double Channel Trim ⅜"-⅜", or Double Channel Trim ½"-⅜" depending on the glass thicknesses specified. Double channel frame verticals are designed to accept two panes of glass. This includes when double glazed in double channel trim or single glazed in double channel trim is being specified.

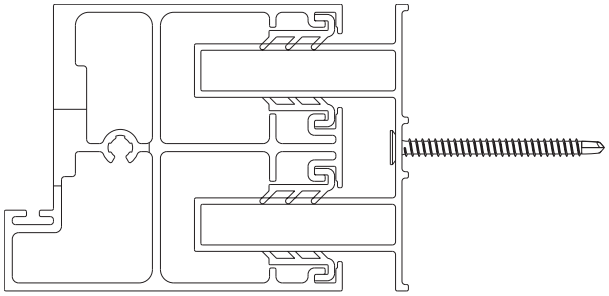


Doors

When used with single glazed in double channel trim, a trim channel filler (DM-TCFILLER) must be specified to fill the unused channel on the frame vertical.

If a door frame is being used directly adjacent to either the base building or a fly-by post, CET will specify Base Building or Fly-By as the door frame adjacent value.

Door frames should not be used as a transition point to change panel types or glass thicknesses. As a result, door frame left hand and right hand adjacent values must match unless Base Building or Fly-By is being specified, in which case one or both values will be Base Building or Fly-By.



Door Frame to Drywall Connector

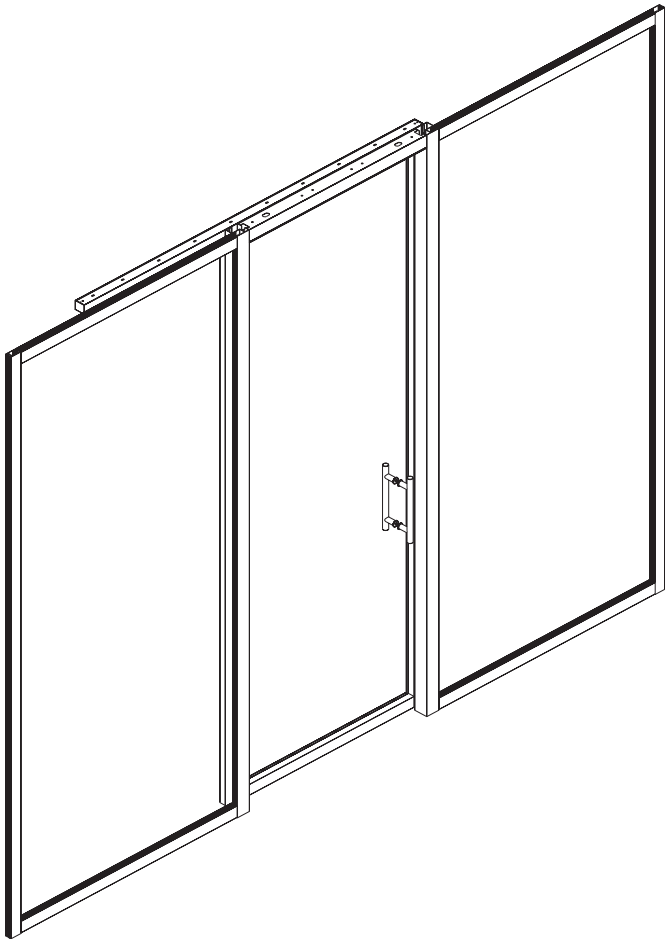
When specifying a door directly adjacent to a demising wall or a fly-by post, use a door frame to drywall connector (DM-DWCHANNEL). This interface is designed to minimize parts and maintain a low-profile aesthetic.

The drywall connector is designed to interface directly with the door frame via two protrusions, simulating double glazed glass, regardless of whether the application is single glazed or double glazed. CET will always specify the adjacent door frame vertical as a double channel vertical.

Door frame to Drywall connector

Connection between door frame and Drywall Connector

Working with Sliding Doors



Prior to syncing to Compass, CET will display DM-SUDINGDOOR. After syncing to Compass, all necessary components will be displayed.

The sliding door model (DM-SLIDINGDOOR) will include all necessary components of the doorway, always including:

- Sliding Door Frame (DM-SDFRAME)
  - Quantity 1 always included
- Sliding Door Leaf(s) (DM-FGSDLEAF, DM-TALSDLEAF, DM-SLDSDLEAF)
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified
- Sliding Door Track (DM-SDTRACK)
  - Quantity 1 always included
- Handle Hardware (DM-LADDER)
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified

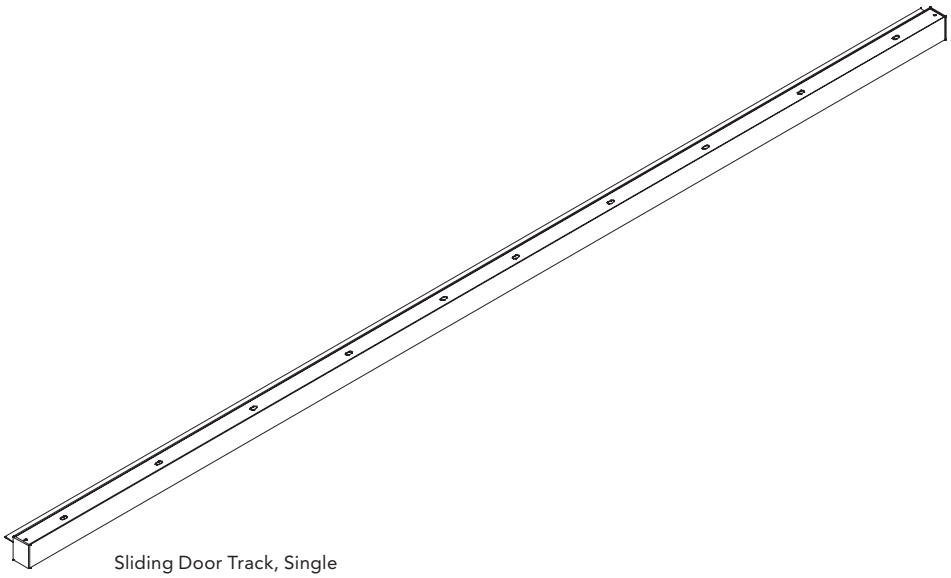
Depending on the door options selected, the sliding door model will sometimes include the following models:

- Drywall to Door Frame Connector (DM-DWCHANNEL)
  - Quantity 1 if door frame is adjacent to drywall or a fly-by post on 1 side, Quantity 2 if door frame is adjacent to drywall or a fly-by post on both sides
- Sliding Door Lock (DM-SLIDINGLOCK)
  - Quantity 1 included if frame-locking is selected with a ladder pull on a thin aluminum framed door
- Sliding Door Electronic Lock (DM-SLIDINGELECLOCK)
  - Included if electronic locking is specified on a thin aluminum framed door
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified

Dimensions

- Height
  - 84" to 120" in ¼" increments
- Width
  - Single Door Module:
    - 42½"W
      - 33⅜" clear opening for frameless glass
      - 32⁵⁄₁₆" clear opening for thin aluminum framed and wood
    - 48½"W
      - Offered for thin aluminum framed and wood only
      - 38⁵⁄₁₆" clear opening
  - Double Door Module: 82"W
    - 66¾" clear opening for frameless glass
    - 64⁵⁄₁₆" clear opening for thin aluminum framed and wood

Sliding Door Site & Clearance Requirements



- Blocking is required above the header to support the weight of the sliding door. Please see site requirement pages **xx-xx** for more details.

Adjacent glass panels of the following minimum widths are required next to sliding doors to both hang the door track and allow clearance for the sliding door to open and close:

- Single Door Module 42½"W: 36" minimum adjacent panel on one side of door frame
- Single Door Module 48½"W: 42" minimum adjacent panel on one side of door frame
- Double Door Module 82"W: 33½" minimum adjacent panel on both sides of the door frame

Sliding Door Performance

- Sliding door tracks (DM-SDTRACK) are offered with an optional slow close feature, which incorporates a motion-dampening mechanism to support soft closures and openings for sliding doors.
- Sliding door guides help align the sliding door leaf with the frame when operating the door. Different door types are equipped with different styles of guides
  - Leading edge guides are included with single thin aluminum framed and wood sliding doors. These guides are factory-installed in the door leaf.
  - Leading edge and trailing edge floor-mounted door guides are included with frameless glass sliding doors frames and are field-installed.

Sliding Door Track, Single

Doors

There are three sliding door styles offered within Dimension:

Frameless Glass

- Hand:
  - Door Leaf: Non-handed
  - Door Frame: Left or Right
- Handle Type: Ladder Pull; see **Door Hardware** for more information
- Lock Options:
  - Floor-locking via locking ladder pull
  - Passage
- Strike Style: No Strike
- Finish
  - Glass Type: Tempered Only
  - Glass Thickness: 3/8" Only
  - Glass Finish: Clear or Low Iron, See **Dimension Glass Finishes**

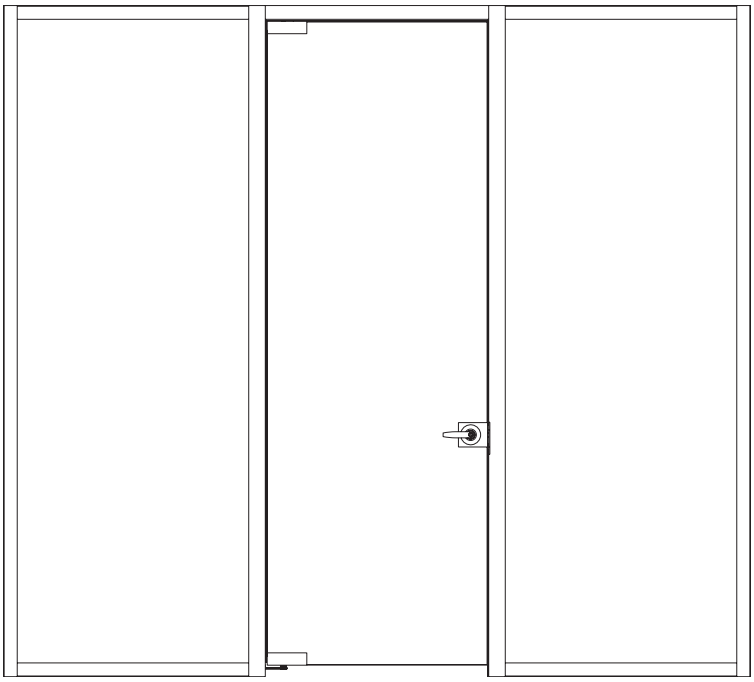
Solid/Wood

- Hand:
  - Door Leaf: Non-handed
  - Door Frame: Left or Right
- Handle Type: Ladder Pull; see **Door Hardware** for more information
- Lock Options:
  - Floor-locking via locking ladder pull
  - Passage
- Strike Style: No Strike
- Finish: Wood doors may be specified in a variety of veneer, laminate, or painted wood finishes
  - Veneer: See **Dimension Veneer Finishes**
  - Laminate: See **Dimension Laminate Finishes**
  - Painted Wood: See **Dimension Painted Wood Finishes**

Thin Aluminum Framed

- Hand: Left or Right
  - Thin aluminum framed sliding door leaves are handed due to an offset glass feature, designed to create a smooth surface on one side of the door with an offset on the opposite side of the door
- Handle Type: Ladder Pull; see **Working with Door Hardware** for more information
- Lock Options
  - Floor-locking via locking ladder pull
  - Frame-locking via sliding door lock
    - In single door applications the sliding lock engages into the full strike
    - In double door applications the sliding lock engages into the adjacent door
  - Electronic Locking
  - Passage
- Strike Style
  - Full Strike
    - Must be specified if a sliding door lock is being used
  - No Strike
- Finish
  - Door Finish: Clear anodized or powder coat painted finish, See **Dimension Paint Finishes**
  - Glass Type: Tempered Only
  - Glass Thickness: 3/8" Only
  - Glass Finish: Clear or Low Iron, See **Dimension Glass Finishes**

Working with Pivot Doors



Prior to syncing to Compass, CET will display DM-PIVOTDOOR. After syncing to Compass, all necessary components will be displayed.

The pivot door model (DM-PIVOTDOOR) will include all necessary components of the doorway, always including:

- Pivot Door Frame (DM-PDFRAME)
  - Quantity 1 always included
- Pivot Door Leaf (DM-FGPDLEAF)
  - Quantity 1 (Single only)
- Pivot Mount Hardware (DM-PIVOTHW)
  - Quantity 1 (Single only)
- Handle Hardware (DM-LADDER or DM-LEVER)
  - Quantity 1

Depending on the door options selected, the pivot door model will sometimes include the following models:

- Drywall to Door Frame Connector (DM-DWCHANNEL)
  - Quantity 1 if door frame is adjacent to drywall or a fly-by post on 1 side, Quantity 2 if door frame is adjacent to drywall or a fly-by post on both sides
- Magnetic Door Catch (DM-MAGCATCH)
  - Quantity 1 included if a ladder pull is specified
- Cylindrical Door Stop (DM-CYLSTOP)
  - Included if cylindrical door stop is specified
  - Quantity 1
- Dome Door Stop (DM-DOMESTOP)
  - Included if dome door stop is specified
  - Quantity 1

Doors

General Information

The Dimension pivot door offering is limited to a single frameless glass door only.

Dimensions

- Height
  - 84" to 120" in ¼" increments
- Width
  - Single Door Module: 39"
    - 32¾" clear opening

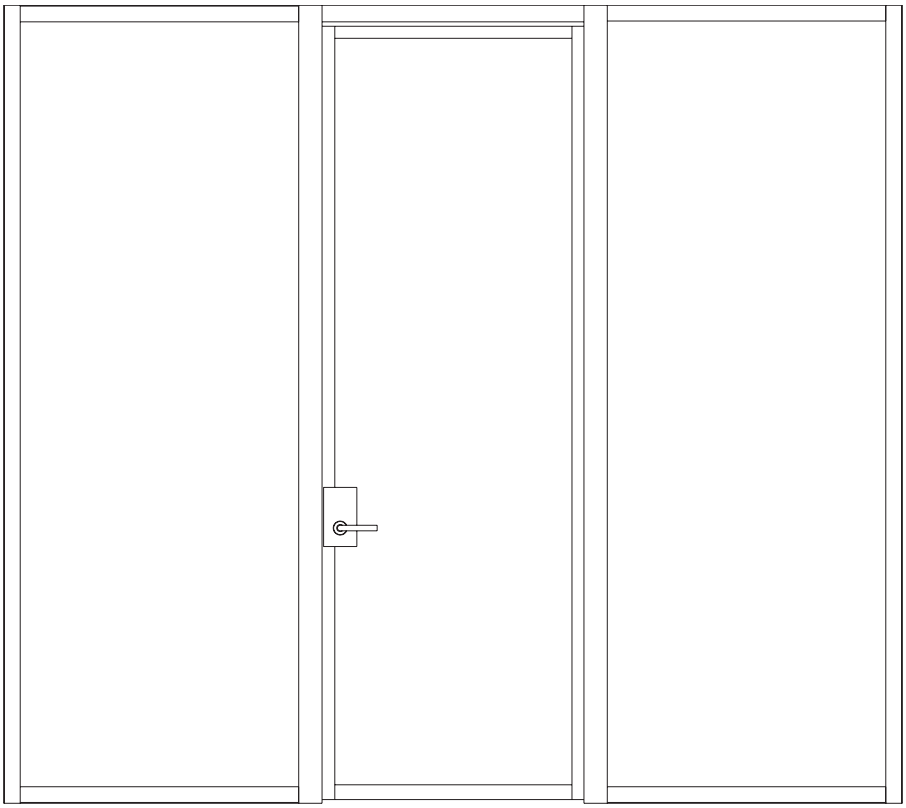
Frameless Glass Pivot Door

- Door Module: Single Door Only
- Hand:
  - Door Leaf: Non-handed
  - Door Frame: Left or Right
  - The strike plate for partial strike door frames can be reversed, allowing both the door leaf and frame to be non-handed
- Handle Type: Cylindrical Lever or Ladder Pull; See **Working with Hardware** for more information
- Lock Options
  - Floor-locking via locking ladder pull
  - Frame-locking via locking cylindrical lever
  - Passage
- Latch Type
  - Magnetic Catch (if Ladder Pull is specified)
  - Lever Latch (if Cylindrical Lever is specified)
- Strike Style
  - Partial Strike (if Cylindrical Lever is specified)
  - No Strike (if Ladder Pull is specified)
- Finish
  - Glass Type: Tempered Only
  - Glass Thickness: ½" Only
  - Glass Finish: Clear or Low Iron, See **Dimension Glass Finishes**

Working with Hinged Doors

Hinged doors are offered with a variety of door and hardware options to meet security, aesthetic, privacy, and acoustic requirements. Hinged doors are available as frameless glass, thin aluminum framed, or solid wood door styles.

Prior to syncing to Compass, CET will display DM-HINGEDDOOR. After syncing to Compass, all necessary components will be displayed.



The hinged door model (DM-HINGEDDOOR) will include all necessary components of the doorway, always including:

- Hinged Door Frame (DM-HDFRAME)
  - Quantity 1 always included
- Hinged Door Leaf(s) (DM-SLDHDLEAF, DM-FGHDLEAF, DM-TALHDLEAF)
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified
- Hinge Mount Hardware (DM-HINGEDHW)
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified
  - Type of hinges supplied varies depending on door and closure style specified
- Handle Hardware (DM-LEVER, DM-LADDER, DM-MLEVER)
  - Quantity 1 included if single door is specified OR active/inactive double door is specified, quantity 2 included if active/active double door is specified

Depending on the door options selected, the hinged door model will sometimes include the following models:

- Drywall to Door Frame Connector (DM-DWCHANNEL)
  - Quantity 1 if door frame is adjacent to drywall or a fly-by post on 1 side, Quantity 2 if door frame is adjacent to drywall or a fly-by post on both sides
- Swing Door Lock (DM-SWINGLOCK)
  - Quantity 1 included if frame-locking is selected with a ladder pull on a thin aluminum framed door
- Hinged Door Electronic Lock (DM-HINGEDELECLOCK)
  - Included if electronic locking is specified on a thin aluminum framed door
  - Quantity 1 included if single door is specified OR active/inactive double door is specified, quantity 2 included if active/active double door is specified
- Roller Latch (DM-ROLLERLATCH)
  - Included if a ladder pull is specified on a wood or thin aluminum framed door
  - Quantity 1 included if single door is specified OR active/inactive double door is specified, quantity 2 included if active/active double door is specified
- Manual Flushbolt (DM-FLUSHBOLT)
  - Quantity 1 included for inactive leaf if an active/inactive double door is specified
- Cylindrical Door Stop (DM-CYLSTOP)
  - Included if cylindrical door stop is specified
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified
- Dome Door Stop (DM-DOMESTOP)
  - Included if dome door stop is specified
  - Quantity 1 included if single door is specified, quantity 2 included if double door is specified

Doors

Dimensions

- Height
  - 84" to 120" in ¼" increments
- Width
  - Single Door Module: 39"
    - 33⅝" clear opening for thin aluminum framed and wood
    - 34⅜" clear opening for frameless glass
  - Double Door Module: 75" (33⅜" clear opening)

Double Door Function

Double hinged doors require a selection for Double Door Function, which defines how both doors are intended to be used in a double doorway. If a double door is specified, designers will select whether the doorway should be active/active or active/inactive.

- Active/Active
  - Indicates that both doors are intended to be regularly used
  - Both leaves will be prepped for handle hardware
- Active/Inactive
  - Indicates that only one door is intended to be regularly used
  - Inactive leaf will include a manual flush bolt latch that connects the leaf into the door frame header to prevent swing
  - Inactive leaf will not be prepped for handle hardware
  - Inactive leaf will include astragal for the active door to close against, this provides a light and sound seal between the doors

Frameless Glass Hinged Doors

- Door Module: Single Door Only
- Hand:
  - Door Leaf: Non-handed
  - Door Frame: Left or Right
- Hardware
  - Hinges: Self-Closing Hinges Only; See **Working with Hardware** for more information
  - Handle Options: Cylindrical Lever or Ladder Pull; See **Working with Hardware** for more information
  - Lock Options:
    - Frame-Locking via locking cylindrical lever
    - Floor-Locking via locking ladder pull
    - Passage
- Strike
  - No Strike (if Ladder Pull is specified)
  - Partial Strike (if Cylindrical Lever is specified)
- Finish
  - Glass Type: Tempered Only
  - Glass Thickness: ½" Only
  - Glass Finish: Clear or Low Iron, See **Dimension Glass Finishes**

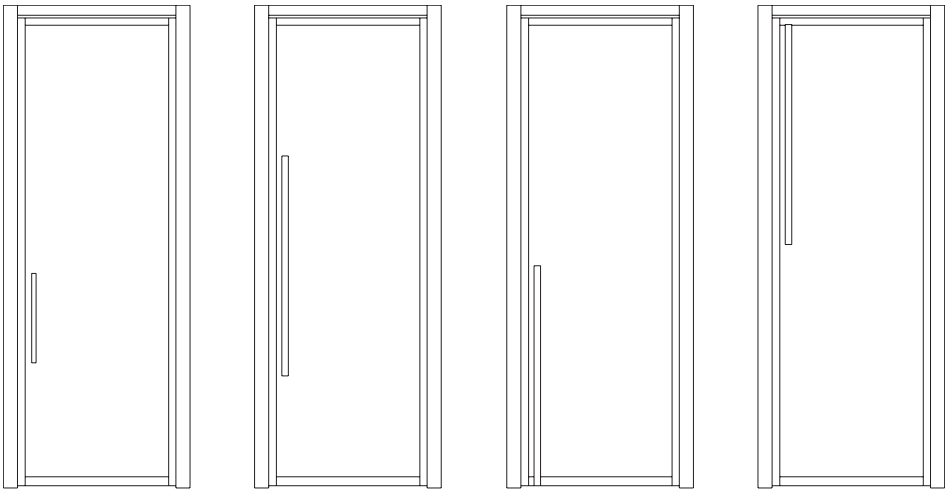
Thin Aluminum Framed Hinged Doors

- Door Module: Single or Double Door
- Hand: Left or Right
  - Thin aluminum framed hinged door leaves are handed due to an offset glass feature, designed to create a smooth surface on one side of the door with an offset on the opposite side of the door
  - The smooth side of the glass offset will always be on the push side of the door to support meeting ADA building code
- Floor Treatment: Drop Seal or No Undercut Treatment
- Hardware:
  - Hinges: Standard or Self-Closing; See **Working with Hardware** for more information
  - Handle Options: Cylindrical Lever, Mortise Lever, or Ladder Pull; See **Working with Hardware** for more information
  - Lock Options:
    - Frame-Locking via locking cylindrical lever
    - Frame-Locking via locking mortise lever
    - Frame-Locking via swing door lock (if specified with ladder pull)
    - Floor-Locking via locking ladder pull
    - Electronic Locking
    - Passage
- Strike: Full Strike Only

Doors

- Finish:
  - Door Finish: Clear anodized or powder coat painted finish, See **Dimension Paint Finishes**
  - Glass Type: Tempered Only
  - Glass Thickness: 3/8" Only
  - Glass Finish: Clear or Low Iron, See **Dimension Glass Finishes**

Solid/Wood Door Leaf



- Door Module: Single or Double Door
- Hand: Left or Right
- Floor Treatment: Drop Seal or No Undercut Treatment
- Hardware:
  - Hinges: Standard or Self-Closing; See **Working with Hardware** for more information
  - Handle Options: Cylindrical Lever or Ladder Pull; See **Working with Hardware** for more information
  - Lock Options:
    - Frame-Locking via locking cylindrical lever
    - Floor-Locking via locking ladder pull
    - Passage
- Strike: Full Strike Only
- Finish: Wood doors may be specified in a variety of veneer, laminate, or painted wood finishes.
  - Veneer: See **Dimension Veneer Finishes**
  - Laminate: See **Dimension Laminate Finishes**
  - Painted Wood: See **Dimension Painted Wood Finishes**

Working with Door Hardware

Dimension features a variety of standard hardware options to meet a range of aesthetic, function, and security needs. However, Allsteel is able to support a much broader range of custom hardware solutions through our Tailored Products Group – including different lever or handle options, a variety of lock cylinder options, and non-standard finishes. If options outlined below do not meet your needs, please engage that team for alternate solutions.

Ladder Pulls (DM-LADDER)

- Ladder pulls are available on any door style
- Finish: Silver (SIL) or Black (BLK)
- Ladder pulls are available to be placed in different locations on the door leaf
  - Justified to strike: The ladder pull is centered at 38" AFF
  - Justified to center: The ladder pull is centered on the vertical mid-point of the door leaf
  - Justified to bottom: The bottom of the ladder pull is aligned to the bottom of the door leaf
  - Justified to top: The top of the ladder pull is aligned with the top of the door leaf

Justified to Strike | Justified to Center | Justified to Bottom | Justified to Top

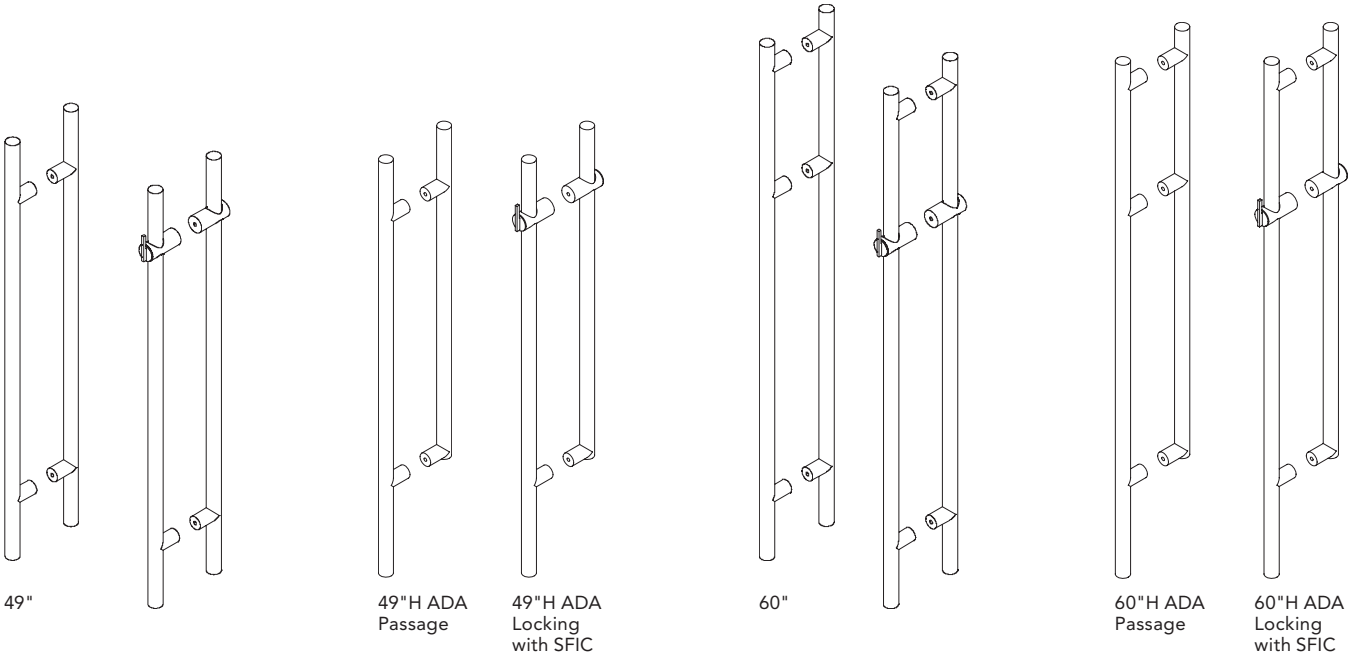
12" Value Ladder Pull

- 1" Diameter
- Lock Option: Passage only
  - If locking is desired, a swing lock, sliding lock, or electronic lock may be added if a Thin Aluminum Framed door is being specified
- Finish: Silver (SIL) or Black (BLK)

12"

20" Ladder Pull

- 1" Diameter
- Lock Option: Passage only
  - If locking is desired, a swing lock, sliding lock, or electronic lock may be added if a Thin Aluminum Framed door is being specified
- Finish: Anodized Satin Silver (SIL) or Anodized Satin Black (BLK)

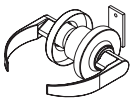


20" Ladder Pull

Doors

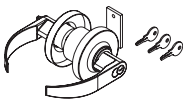
49" and 60" Ladder Pull

- 1⅜" Diameter
- Offered as either standard or accessibility, with accessibility pulls featuring an asymmetrical design with intent of supporting ADA building code
- Lock Option:
  - Passage
  - Floor-Locking with SFIC (small format interchangeable core)
    - Thumb-turn deadbolt lock is received into a floor socket
- Finish: Anodized Satin Silver (SIL) or Anodized Satin Black (BLK)



Accessibility ladder pulls are offered on doors as a solution where required for ADA.

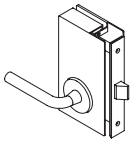
- Accessibility ladder pulls feature an asymmetrical design where the bottom of the ladder pull aligns with the bottom of the door on one side of the door, but does not extend down to the bottom of the door on the opposite side.
- The thin frame door leaf has also been designed with an offset glass feature, designed to create a smooth surface on one side of the door with an offset on the opposite side of the door.
  - In swing-door applications, the smooth side of the glass offset will always be on the push side of the door.
- Although this product has been designed with input from ADA, Allsteel is not certified or licensed to enforce building code and it is the responsibility of the specifiers, architect, and/or design firm to ultimately ensure that the way that the product is being used or specified will meet local and state building codes within that specific jurisdiction.



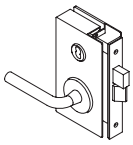
Levers

Cylindrical Lever (DM-LEVER)

- Available on all pivot and hinged door types
- Model includes both the lever and patch housing, if needed
  - The housing is only used with frameless glass and thin aluminum framed doors
- Lock Option:
  - Passage
  - Locking with SFIC
  - Locking with SFIC, Less Core
- Finish:
  - Lever: Silver (SIL) or Black (BLK)
  - Patch Housing: Powder coat painted finish, See **Dimension Paint Finishes**
    - For frameless glass doors the housing will be painted to match the lever
    - For thin aluminum framed doors, the housing will be painted to match the door trim

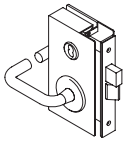


Cylindrical Lever, Passage



Cylindrical Lever, Locking with SFIC

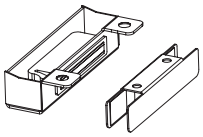
Mortise Lever (DM-MLEVER)



- Available on thin aluminum framed hinged doors only
- Model consists of the lever and housing
- Lever is available in two options:
  - Straight lever
  - Return lever (California Building Code Title 24 Compliant)
- Lock Options:
  - Passage
  - Locking with SFIC
  - Locking with SFIC, Less Core
- Finish:
  - Lever: Silver (SIL) or Black (BLK)
  - Patch Housing: Powder coat painted finish, See **Dimension Paint Finishes**
    - For thin aluminum framed doors, the housing will be painted to match the door trim

Passage, Straight Mortise Lever

Locking, Straight Mortise Lever



Locking, Return/Title 24 Mortise Lever

Doors

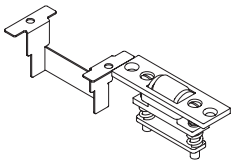
Swing Door Hardware

Magnetic Catch (DM-MAGCATCH)

- For use with pivot frameless doors when specified with a pull to keep the door closed
- Finish: Powder coat painted finish, See **Dimension Paint Finishes**

Magnetic Catch

Manual Flush Bolt (DM-FLUSHBOLT)



- For use with inactive hinged thin aluminum framed or solid leaf in an active-inactive double door module to lock out swing
- Finish: Silver (SIL) or Black (BLK)

Manual Flushbolt

Roller Latch (DM-ROLLERLATCH)

- For use with hinged thin aluminum framed or solid leaf when a door is specified with a ladder pull to keep the door closed
- Finish: Powder coat painted finish, See **Dimension Paint Finishes**

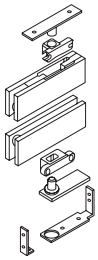
Roller Latch

Cylindrical Door Stop (DM-CYLSTOP)

- Floor mounted
- Height is 1½"
- Finish: Silver (SIL) or Black (BLK)

Cylindrical Door Stop

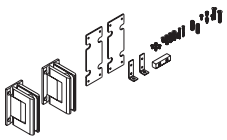
Dome Door Stop (DM-DOMESTOP)



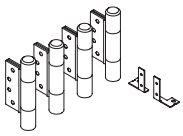
- Floor-mounted
- Height is 1⅛" with optional spacer to increase height to 1½"
- Finish: Silver (SIL) or Black (BLK)

Dome Door Stop

Pivot Door Mounting Hardware (DM-PIVOTHW)



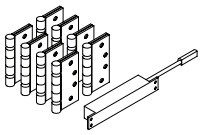
- Pivot doors utilize center swing pivot mounts that can swing through the frame
- Includes top/bottom pivot mechanisms concealed by a rectangular patch
- Finish: Black (BLK) or Silver (SIL)



Pivot Door Mounting Hardware, Frameless Glass

Hinged Door Mounting Hardware (DM-HINGEHW)

- Hinges are dependent on the style of hinged door being specified and whether self-closing is selected (if applicable)
- Self-Closing Hinges for Frameless Glass Doors
  - Hydraulic, dual-swing hinges swing 90 degrees both inward and outward, an optional strike bracket is included and can be installed to prevent the outward or inward swing of the door
  - Hinges feature automatic closing from 0 to 80 degrees with an adjustable closing speed
  - Hinges feature hold-open stops at +90 or -90 degrees
  - 2 hinges per door leaf
  - Finish: Black (BLK) or Silver (SIL)
- Self-Closing Hinges for Thin Aluminum Framed and Wood Doors
  - Hydraulic hinges can be specified with or without a hold open feature; however, once specified, this feature cannot be changed in the field
  - Hinges are handed
  - 4 hinges per door leaf
  - Finish: Black (BLK) or Silver (SIL)
- Standard (Non Self-Closing) Hinges for Thin Aluminum Framed and Wood Doors
  - 4" x 4" hinges feature a square corner design
  - 4 hinges per door leaf
  - Finish: Black (BLK) or Silver (SIL)

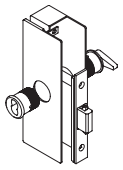


Hinged Door Mounting Hardware, Frameless Glass

Self-Closing Hinges

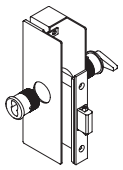
Hinged Door Mounting Hardware, Single Aluminum Framed/Wood

Hinged Door Mounting Hardware, Double Aluminum Framed/Wood



Doors

Locks

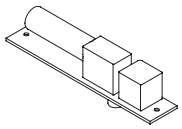


Sliding Door Lock (DM-SLIDINGLOCK)

Swing Door Lock (DM-SWINGLOCK)

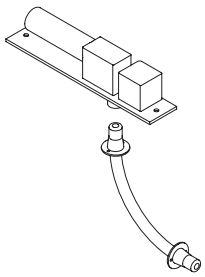
- For use with Dimension thin aluminum framed glass sliding doors & hinged doors when a passage Ladder Pull is being specified
- Includes SFIC lock, patch housing, and cylinder
- Lock Options:
  - Locking with SFIC
  - Locking with SFIC, Less Core
- Finish:
  - Lock: Silver (SIL) or Black (BLK)
  - Patch Housing: Powder coat painted finish, See **Dimension Paint Finishes**
    - For thin aluminum framed doors, the housing will be painted to match the door trim

Sliding Door Lock



Hinged Door Lock

Electronic Locks



Hinged Door Electronic Lock (DM-HINGEDELECLOCK)

Sliding Door Electronic Lock (DM-SLIDINGELECLOCK)

- For use with Dimension thin aluminum framed glass sliding doors & hinge doors only
- Locking mechanism includes electronic flushbolt with integrated position sensor and a 14' wire to provide power-access to locking mechanism on door
  - Hinge door model also includes concealed door loop to pass wire between door & door frame
- Electronic lock is offered as either Failsafe or Failsecure function
  - Failsecure Operation: In the case of a power outage, door will automatically lock. This is recommended for high security applications only.
    - Note: There is no override feature provided with this lock, additional power supply recommended for this application.
  - Failsafe Operation: In the case of a power outage, door will automatically unlock. This is recommended for life safety applications.
- In hinged, single-door applications, electronic lock will mount into the vertical strike side of the door and locks into the door jamb
- In hinged, double-door applications, electronic lock will mount into header of the door and lock into the header of the door frame
- In all sliding door applications, the electronic lock will mount into the header of the door frame and locks into the header of the door.
  - When specifying electronic locking on a sliding door, please note that the glass offset must be towards the door frame.
- It is recommended that a low-voltage security installer is responsible for wiring & integration of lock with building security system. Work with project manager to coordinate installation.
- Please note that this model includes the locking mechanism and other accessories outlined above only. Allsteel does not provide the building security system, card-readers, or exit devices and these items must be sourced separately.
- Finish: Silver (Satin Stainless Steel US32D) or Black (Oxidized Black + Laquer US19)

Price & Specification Guide 2026

Prices effective May 1, 2026

Limited Lifetime Warranty

Our unwavering commitment to our customers compels us to care, and our dedication to quality is just one of the ways we show our customers how much they mean to us.

We recognize that keeping up with the pace of change requires having products that work as hard as the people who use them. That's why each of our products is rigorously tested and certified to meet the highest industry standards.

In the unlikely event that any Allsteel product or component covered by the Allsteel Warranty should fail under normal workplace use because of defective material or workmanship, Allsteel promises to fix it. Because taking care of *people* is how Allsteel takes care of business.

For information on Allsteel's warranty coverage, visit AllsteelOffice.com.

Specification and Price List

Effective Date May 1, 2026

- Software support packages furnished to the customer, either by Allsteel® or by another source, which support the sale of Allsteel products are superseded by printed price lists.
- Prices are subject to change without notice. All orders are subject to prices in effect at the time of order.
- Please refer to your Allsteel Dealer Sales and Discount Policies for order placement information, terms and conditions.
- Additional copies of this Specification and Price List are available upon request from Allsteel Literature at 1-866-255-7833.
- Ordering information appears at the bottom of each product page complete with examples on how to specify. Fabric and finish pages are referenced at the bottom of product pages.

This publication is available as an interactive or downloadable PDF at www.allsteeloffice.com.

ITEMS ON GSA CONTRACT

Please note, in order to verify if an item is on GSA Contract or is "Open Market," please use Compass quoting which is updated in real time with all GSA contract changes. If you need additional assistance, please contact your local sales representative. For more information visit: https://www.allsteeloffice.com/insights/sustainability/product-certifications.

GSA/FEDERAL CONTRACT INFORMATION:

Model numbers identified with the following verbiage "When purchased separately without a configurable TAA compliant end product, not on GSA contract" is to mean that these configurable parts or components:

- Have no functionality or capability without being integrated into an end product; and
- Are considered Open Market if purchased without a configurable TAA compliant end product.

COM Program

Allsteel understands that customers may at times want to specify fabrics outside of Allsteel's standard fabric offering. Our COM program was designed to make specifying COMs on Allsteel products a simpler, friendlier, and hassle-free process. This process is simple and easy to use, and is described below under "Allsteel to Supply (ATS)." If a Dealer wishes to manage the COM process themselves, they can do so by following guidelines under "Dealer to Supply (DTS)". **ATS is the preferred method for all COM fabrics.** With ATS, Company will provide acknowledgment based upon planned date of receipt of COM fabric and manage the entire process. DTS is allowed if Company does not have access to the supplier. **DTS may cause order delays and is strongly discouraged.** Find out more about Allsteel's COM process by emailing our COM Department at **allsteelcomteam@allsteeloffice.com**.

Allsteel to Supply (ATS):

1. Select the fabric you wish to use and check the COM Search on our Website at: AllsteelOffice.com/Design Resources/ Textiles & Finishes/COM Search or COM Search quick link. You will need to have the COM supplier's name, fabric pattern name, and color name to search for approved fabrics.
2. If your fabric is listed as an approved fabric, you may place your order directly with Allsteel Customer Support. Please use the fabric code (e.g., S216426XP) from the COM Test Request on your order in the place of the standard fabric code.

   If your fabric is not listed as approved, you will need to select the "Request COM Test" link on the COM Search website. If your fabric is not listed as approved you may request a "Dealer to Supply" code. Select the "Request COM Test" link on the COM Search website. Your name, company name and email will be prepopulated fields. The secondary email, project name, and bid/contract number are optional information. The supplier, pattern, and color will show a list by clicking in the box and entering the first letter of the name and these are free form text boxes. Once that information is entered click add. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.) Then click submit.
3. An email will be sent to the to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: Testing materials requested, in testing, and final approval/denial with price grade and fabric code. It's rare actual test yardage is required. Testing is mainly done by reviewing the attributes of the fabric. The testing process takes approximately 48 hours. Written COM price quotes hold pricing for 90 days after issue date.
4. Once the fabric has been approved by Allsteel, enter your order directly with Allsteel Customer Support. Allsteel will purchase all COM fabric directly from the COM suppliers and schedule for production.

   In the event that the Dealer decides to cancel a COM fabric order, the Dealer is responsible for the cost of the fabric plus a handling charge that is equal to 10% of the fabric cost.

Dealer to Supply (DTS):

1. Select the fabric you wish to use and check the COM Search on our Website at: AllsteelOffice.com/Design Resources/ Textiles & Finishes/COM Search or COM Search quick link. Or call Allsteel Customer Support to see if the fabric you have chosen has already been tested and approved on the product you are interested in.

   You will need to have the COM supplier's name, fabric pattern name, and color name for this inquiry.
2. If your fabric is not listed as approved you may request a "Dealer to Supply" code. Select the "Request COM Test" link on the COM Search website. Your name, company name and email will be prepopulated fields. The secondary email, project name, and bid/contract number are optional information. The supplier, pattern, and color will show a list by clicking in the box and entering the first letter of the name and these are free form text boxes. Once that information is entered click add. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.) Then click submit.
3. An email will be sent to the to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: Testing materials requested, in testing, and final approval/denial with price grade and fabric code. It's rare actual test yardage is required. Testing is mainly done by reviewing the attributes of the fabric. The testing process takes approximately 48 hours.
4. Make sure to use a "Dealer to Supply" COM code (e.g., S216426ZP) and place your order directly with Allsteel Customer Support.
5. All "Dealer to Supply" orders will be charged Grade 4 pricing for seating, Grade 4 for Social Collaborative, and Grade D pricing for panels. Dealers will pay for the COM fabric separately.
6. All "Dealer to Supply" fabric must be sent on a fabric roll. Estimate the yardage required by using the yardage requirements listed in the price list by model. For questions please contact Allsteel Customer Support.
7. Place your fabric order directly with the COM Supplier with instructions for the fabric to be sent on a fabric roll to:

   HNI Textile Distribution Center
   COM Production Yardage — PO Number
   Docks 20-22
   301 Mulberry Avenue
   Muscatine, IA 52761

Information that MUST be included in the packing slip attached to the DTS fabric:

1. Dealer's Purchase Order number to Allsteel
2. Allsteel's Tracking number for the COM fabric
3. Dealer Name
4. Yards of Fabric

If the fabric shipment does not match the correct fabric and yardage, Allsteel will notify the Dealer for resolution.

If Allsteel receives fabric with incorrect labeling or fabric yardage that cannot be linked to an Allsteel furniture order, Allsteel will hold the fabric for up to 4 weeks. After 4 weeks Allsteel will dispose of the fabric. There are no exceptions to this policy.

Specific to DTS orders - The customer should send only the amount needed for the order. Excess yardage, or yardage not attached to an order will be disposed of at Allsteel's discretion.

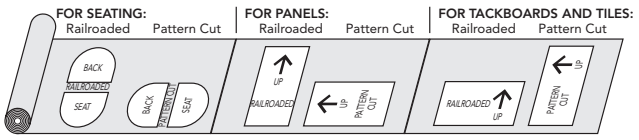
Any canceled orders are subject to cancellation charges up to the full value of the Allsteel product canceled. Allsteel will determine the actual cancellation charge at the time the cancellation is requested.

8. For additional details on "Dealer to Supply" fabric refer to your Allsteel terms and conditions.

Additional Policy Information:

The company assumes no responsibility for the overall appearance, flammability, normal durability, colorfastness, or any other quality standards. The company reserves the right to reject a COM if the quality of the COM is not satisfactory for the product. Should this occur, the customer will be notified with an explanation when the issue is found.

The company is not responsible for fabric that has become obsolete at the COM supplier, that is of poor quality, or that is delivered late to the manufacturer from the COM supplier.



All cancellations or changes to COM orders are subject to Company approval. Because of the nature of COM, special fabrics, finishes, and structural modifications, products ordered as specials and then canceled prior to shipment are subject to cancellation costs up to the full value of the product canceled. The company determines the actual cancellation charge at the time the cancellation is requested. Upon approval, a cancellation number is issued to the Customer.

Purchase orders will not be accepted or entered unless the testing process is complete with positive results.

If all testing has been previously completed, re-testing is only necessary if fabric is to be used on a different product, or pattern direction has changed from that previously approved.

Previous test results can be obtained by a customer on the COM Search on our Website or by calling Allsteel Customer Support.

All COM fabric will be applied to seating and panel systems Pattern Cut unless Railroad Cut is requested and approved on the COM Test Request. Any fabrics approved as a width pass, the dealer is responsible for clarifying Railroad Cut on orders containing items that are too large to support the Pattern Cut of a fabric application (any items larger than 48" high or wide).

Fire Retardant

The Dealer is responsible for ensuring that the COM fabric is certified to meet all flame retardant requirements.

For more information, please contact Allsteel Customer Support.

YARDAGE REQUIREMENTS FOR FABRIC WITH REPEATS — FOR USE ON SOCIAL COLLABORATIVE PRODUCTS

Fabric Width	Plain Fabric	2"– 14" Repeat	15"– 19" Repeat	20"– 27" Repeat	28"– 36" Repeat
54"	0	+15%	+20%	+25%	+30%
53"	+6%	+19%	+24%	+28%	+36%
52"	+13%	+23%	+28%	+33%	+38%
51"	+19%	+26%	+31%	+36%	+41%
50"	+25%	+30%	+35%	+40%	+45%
49"	+30%	+35%	+40%	+45%	+50%
48"	+35%	+40%	+45%	+50%	+55%
47"	+45%	+50%	+55%	+58%	+65%

Depending upon the pattern repeat, it may be necessary to pattern cut the fabric. This will require 10% additional fabric.

To calculate multiple repeats (vertical and horizontal), add each repeat for total yardage required. For example for a fabric width of 54": 7" vertical requires 15%, 15" horizontal requires 20% total additional yardage required equals 35% (15% + 20%). Therefore, if your chair requires 2 yards of fabric, multiply 2 by 35%. Then 2.7 yards will be yardage required.

Special Paint & Stain Policy

Allsteel at its own discretion may modify its standard products with non-standard paint and stain colors to meet specific needs. Dealer is required to submit a special paint or stain request via the COM Search on our Website. A sample of the non-standard paint or stain color desired will be required for matching. Pricing, lead time, and order information will be provided at the time of approval.

- For each new requested stain or paint, there will be a $500 net fee to cover supplier costs to match the special item.
- For existing, previously-approved stains or paints, there is no $500 matching fee, however, there is a sample chip fee of $175 net for stains and $100 net for paints.
- Samples, preferably at least 3" x 5" chips, of the exact color desired should be sent to the Allsteel Tailored Products Group. Paint matches require (3) sample chips and stain matches require (3) sample chips. Please mail these sample chips to the address below and reference the Special Item Request Number from Tailored Solutions.

  Allsteel Inc.
  Attn: COM Team
  505 Ford Ave.
  Muscatine, IA 52761

- Allsteel will color match the sample and send control samples to the address provided in the request. Dealer will review Allsteel's color match and approve by signing the back of the sample chip. Send the signed sample back to the Allsteel Tailored Products Group.
- Special paints will be assigned a paint price grade.
- Orders will not be accepted until Allsteel receives the Dealer's written approval on the color match.
- Extended lead times will apply on orders containing special paints or stains.
- Due to manufacturing techniques, materials, and quality issues, some exclusions will apply and some matches may be declined.

Important Notes

- Natural veneer is subject to nature's quality control. Differences in grain and color are naturally occurring variations and cannot be controlled by the manufacturer and cannot be considered as product defects. Natural veneer has the characteristics and beauty of a living organism; with its own variations of grain, growth, and color patterns. For these reasons, Natural veneer is preferred by many for its warmth and personal characteristics.
- Color changes will occur over time when wood is exposed to light. For this reason, when new product is ordered as an addition to existing product, there will be color variances between the old and new product. Please remember when specifying new product that although the species of veneer will be the same, additional product is being manufactured from a different tree. It may take several months for the new furniture to mature to the color level of existing product. Even with this maturation process the additional product will not be an exact match.

Special Laminate Policy

The Company at its own discretion may modify its standard products with non-standard laminates to meet specific needs. Contact the Allsteel Tailored Products Group for pre-approved Wilsonart, Formica, Nevamar and Pionite laminates and pricing for special laminates. When requesting a special laminate please supply manufacturer, along with name and pattern number of laminate.

- Extended lead times will apply on orders containing special laminates.
- Due to manufacturing techniques, materials, and quality issues, some product exclusions will apply and some requests may be declined.

Everyday Advantage®

New terms and conditions for EDA:

1. Orders must clearly state “Everyday Advantage Order” and include the appropriate Everyday Advantage contract number:
   - Everyday Advantage Std-0125, Everyday Advantage Canada-0127
2. Everyday Advantage orders are not eligible for bid pricing.
3. Program discounting includes the complete Optimize, Further, and Terrace systems lines, private office solution, Approach and Involve storage. This program also includes Acuity, Evo, Inspire, Lyric, Mimeo, Relate, Seek, and Svelte, seating. Altitude, Aware, and Structure tables are also available, along with Align pedestals, lockers and metal storage and Essentials pedestals, and Radii storage lines. In addition, Extensions ergonomic accessories and lighting are part of the standard offering. All other product not called out is available for order on the contract but will receive standard discounting of 55%–65%.
4. All textiles and finishes except for veneer and some wood finishes are available, depending on quantity and selection, and may have extended lead times.
5. Everyday Advantage orders are not limited to a minimum or maximum.
6. All orders ship based on standard lead times. Large-quantity orders of like products may be subject to longer lead times.
7. Standard freight terms apply.
8. If driver assistance is needed, standard driver assist charges will be added at time of order entry.

Allsteel Inc. reserves the right to amend or terminate this program at anytime with 30 days written notice. Allsteel is not liable for service delays caused by force majeure (circumstances beyond Allsteel's control).

Measurements based on BIFMA G1-2013 guidelines. Many of the measurements are taken from the compressed seat (dotted horizontal line) and the tangent lumbar apex (dotted vertical line).

ANSI — (American National Standards Institute) ANSI is a private, non-profit organization (501(c)3) that administers and coordinates the U.S. voluntary standardization and conformity assessment system.

Asynchronous — High-performance seating control system with three levers to modify adjustments on the chair for a more customized fit:
- Angle of back relative to seat
- Tilt (free float or infinite locking)
- Forward tilt of seat

ASTM Standards — (American Society for Testing and Materials) is an international standards group that develops and publishes technical standards for many products, materials, and services.

BIFMA — (Business and Institutional Furniture Manufacturer's Association) Produces voluntary standards for manufacturers of office furnishings. These standards are intended to provide a common basis for the evaluation of safety, durability, dimensions, ergonomics, and the structural adequacy of the specified furniture.

CAL TB117-2013 — Method used to test open flame resistance of components of upholstered furniture. This test is done with a lighted cigarette placed in crevices of mock-up components.

CFC — (Chlorofluorocarbons) CFCs are broken down by strong ultraviolet light in the stratosphere and release chlorine atoms that then deplete the ozone layer. CFCs are commonly used as refrigerants, solvents, and foam blowing agents.

COL — (Customer's Own Leather)

COM — (Customers Own Material) See pages 6-7.

Ergonomic — The coordination of the design of a product with the capacities and requirements of the user.

HFES — (Human Factors and Ergonomics Society) A membership-based organization whose mission is to promote the discovery and exchange of knowledge concerning the characteristics of human beings that are applicable to the design of systems and devices of all kinds.

Knee Tilt — A seating control that pivots about a point underneath the knee (towards the front of the seat) to reduce pressure on the back of the legs when reclining.

Memory Foam — Viscoelastic foam developed by NASA that retains the shape impressed upon it to reduce pressure points and distribute the load on the seat more evenly.

NFPA261 — Method of test for determining resistance of mock-up upholstered furniture material assemblies to ignition by a smoldering cigarette. This test is done with a lighted cigarette placed in crevices of mock-up components.

NFPA266 — Method of test for fire characteristics of upholstered furniture exposed to flaming ignition source. This is a full-scale test of mock up. Equivalent to CAL133

Pneumatic — Operated by compressed air in a tool or machine

Powder Coat — Dry paint electrostatically charged for better adhesion to parts and baked on for a durable finish.

Recyclable — Able to be reclaimed and re-used into another value-added product.

Recycled — Made from post-industrial or post-consumer waste products.

Synchro-Tilt — A seating control where the chair back reclines at a prescribed ratio in relation to seat angle. Allows user to recline while keeping seat cushion relatively level to the floor.

Urethane — Synthetic plastic; any of a group of thermoplastic polymers that are used in resins, coatings, insulation, adhesives, foams, and fibers.

Weight-Activated — A seating control that has the recline tension engineered into the chair so that the chair recline tension will automatically vary depending on the weight of the user reclining the chair.

Wyzenbeck Testing — Method of testing the abrasion resistance of a fabric utilizing a cotton duck or wire mesh that is rubbed, back and forth (a double rub), over the fabric.

Acuity is a chair that enhances any environment, any body. Designed in collaboration with Bruce Fifield of Milan-based Design Continuum Italia, Acuity is designed with Italian sensibility and Allsteel ingenuity. Its design and ergonomics work seamlessly while the controls are intuitive. Acuity is elegant and pleasing to the eye, as anything inessential has been stripped away, leaving behind only a purity of form.

Acuity is level®2 certified and has achieved SCS Indoor Advantage™ Gold Certification. Acuity is designed and manufactured to have minimal impact on both the physical and social environment, made with no PVC components and has a recycled content of 28%-37%, depending on chair base selected.

KEY FEATURES

AcuFit®

Acuity provides ideal ergonomics, instantly. We used the latest anthropometric databases, high-tech modeling, and intense observation to understand just what a body needs. You'll feel it the minute you sit – snug support and contoured cushioning that conforms to your body and stays with you throughout the day. No matter what size you are or how you work, Acuity adapts, automatically.

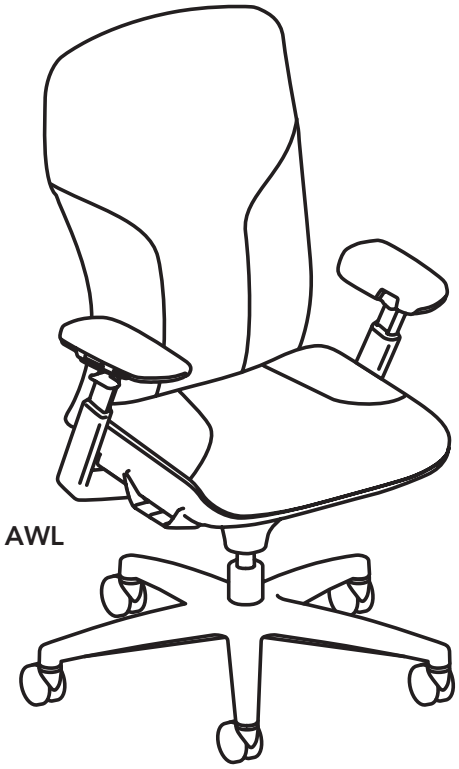
Weight-activated mechanism

A ground-breaking, weight-activated mechanism built into the chair's structure does two things critical to effective ergonomics: automatically adjusts recline tension in response to the user's weight; and, keeps the seat and back moving smoothly together during recline, thereby maintaining perfect balance, body angle, and focus.

Hybrid seat cushion

A unique combination of materials provides properties critical to comfort. A molded foam base with additional memory foam offers softness when you first sit along with greater support over time. This translates into instant comfort, the elimination of pressure points, and a healthy sitting experience over every hour of the day.

Conforming mesh back



Form creates function with a back designed to provide ideal ergonomics for bodies of every shape and size. The mesh carrier mirrors the shape of the human spine, offering snug support to the shoulders, lumbar area, and everywhere in between, simultaneously and continuously. In addition, the structure and materials of the yoke have inherent dynamic properties that promote healthy posture by allowing just the right amount of flex and body movement.

Intuitive Controls

Fine-tuning the fit is critical to optimizing ergonomics and improving personal comfort. Acuity's controls are well-marked, easy-to-find tabs, located along the sides of the seat so they're simple to see, use, and understand. Now you'll never have to get out of your seat or fuss with paddles and knobs to adjust your chair.

AWL

Materials and Finishes
Acuity has been designed to complement any interior design, any organizational aesthetic. Purity of form, sensual lines, and a slender profile let it make a supportive statement to every environment, every body. Choose from several classic colors for chassis, base, caster, mesh carrier, and mesh and a wide variety of standard upholstery options.

Optional Upholstered Jacket
Dress for success with a slip on jacket that offers premium appeal in conference areas, private offices, or the boardroom. Elegantly tailored with a simple snap closure and seven stitches per inch, architects and interior designers can choose from jackets in leather options. Remove the jacket and you're back to mesh for everyday flexibility, anywhere in the office.

Casters
Black dual-wheel hard tread casters for carpet are standard.

Optional multi-surface casters provide smooth functioning on any surface, from a carpeted conference room to polished concrete. Finishes that match bases in standard black, graphite, or polished aluminum give Acuity head-to-toe elegance.

Fully Adjustable Arms
Intuitive controls let you find any of the eight arm positions. A single lever releases the arms to slide up or down; a button right where the thumb naturally lands lets you move the arm pad inward or outward, forward or backward. You can also pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

Fixed Arms
Provide basic support for people who face a varied work day. Fixed arms limit adjustability and maintain aesthetics in conference room settings. Acuity's Fixed T Arms are 100% cast aluminum.

Materials
- All upholstery foams are CFC-free.
- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering information.
- Flammability code compliance of Allsteel textiles and seating is listed on pages 15-17. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013. Allsteel must test a complete chair to supply a certificate with CTB 133.

Acuity meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Acuity is warranted for multiple shifts and users up to 300 lbs.

OPTIONS — ACUITY:

Armrests:
- **W** Fully Adjustable Arms
- **F** Fixed Arms
- **A** Armless

Jacket:
- **M** (None)

Chassis:
- **G** Graphite Chassis
- **S** Silver Chassis
- **W** Brilliant White (limited to Titanium frames)
- **P** Polished Aluminum Chassis

Back Frame/Mesh:
- **GC** Graphite Carrier/Clay Mesh
- **GD** Graphite Carrier/Dusk Mesh
- **TL** Titanium Carrier/Lustre Mesh
- **TM** Titanium Carrier/Mist Mesh

Fire Code:
- **NO** Standard Upholstery, No Fire Code

Base:
- **P71** Black Polymer Base
- **P85** Graphite Painted Aluminum Base ($174 extra)
- **PR6** Silver Painted Aluminum Base ($174 extra)
- **PQ8** Brilliant White Painted Aluminum Base ($174 extra)
- **PAL** Polished Aluminum Base ($258 extra)

Pneumatic Cylinder:
- **2** Standard; allows 5" of travel
- **3** Short; non-standard 3½" of travel to meet BIFMA G1-2002

Casters:
- **H** Black Dual-Wheel Hard Tread for carpet
- **B** Black Multi-Surface ($118 extra)
- **T** Titanium Multi-Surface ($118 extra)
- **P** Polished Aluminum Multi-Surface ($158 extra)

Upholstery:
See pages 24-25 for Centurion model.
See page 12 for other upholstery selections.
See pages 15-17 for colors and codes
▲ Indicates upholstery available for Acuity jacket

Jacket — Acuity jacket models are subject to creases and gathers. Selection includes a subset of the Standard Options to optimize customer satisfaction.

NOTE: Not all options listed above are available on all models. See pages 24-25 for options by model.

- Features and adjustments on all Acuity models: Conforming Mesh Back, AcuFit® Tilt Lock with Recline Tension, Seat Depth, and Pneumatic Adjustment

(See page 126 for COM pricing on Grades 9-22)

How to specify —

Select the Model Number from above.

1st Option:

Select the Frame/Mesh Color:

GC Graphite/Clay Mesh
GD Graphite/Dusk Mesh
TL Titanium/Lustre Mesh
TM Titanium/Mist Mesh

(Brilliant White models limited to Titanium frame finish. **VATWMG** model limited to Graphite/Dusk.)

2nd Option:

Select the Fire Code:

NO

3rd Option:

Select the Base Color:

P71 Black Polymer
P85 Graphite Painted Aluminum ($174 extra)
PR6 Silver Painted Aluminum ($174 extra)
PQ8 Brilliant White Painted Aluminum ($174 extra)
PAL Polished Aluminum ($258 extra)

(**VATWMG** model limited to **P71** Black Polymer)

Examples: **VATWMGGDNO.P71.2.H.CU10**

See page 12 for selections.
See pages 6-7 for COM guidelines.

(**VATWMG** model limited to **CU** Centurion upholstery)

Acuity side chairs provide an ideal solution for busy work areas such as training rooms, gathering areas, informal conferencing, cafés, and more. With a stackable design and pivoting back, Acuity side chairs provide the perfect combination of versatility and unexpected comfort.

MODELS AND OPTIONS

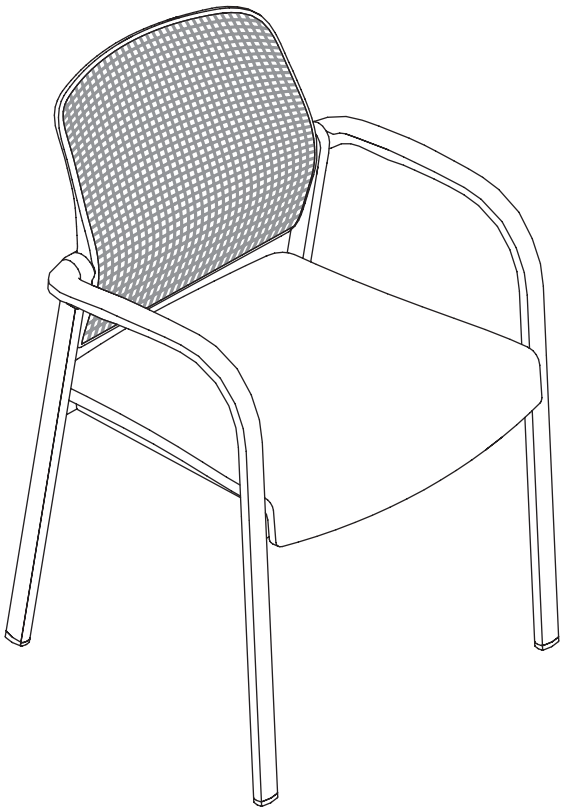
Acuity offers side chair models with mesh backs in two frame colors.

Side chairs feature **arm and armless models** with casters or glides.

Glides are available in nylon, nickel-plated, or felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

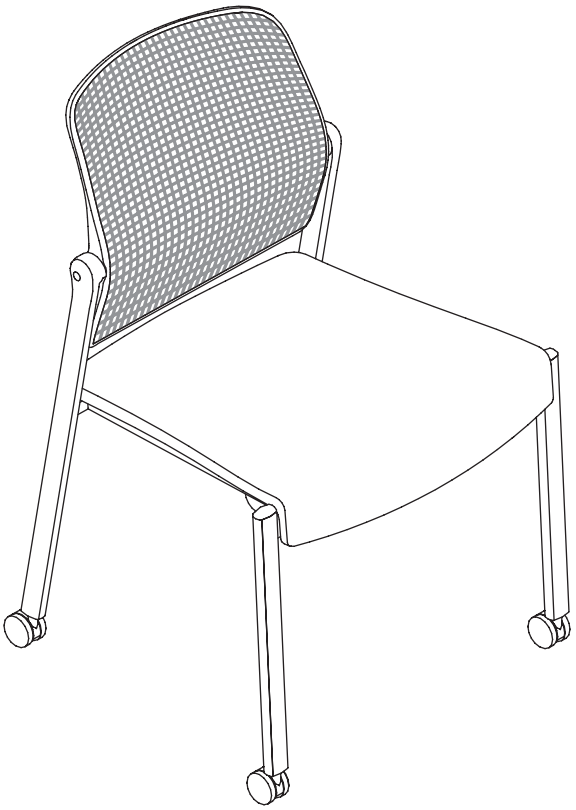
Multi-surface casters are also available.

Chairs ship up to four per carton to minimize waste.



CONSTRUCTION

Steel frames and structural moldings create a durable design that performs in a variety of environments.



Seat upholstery is easily field replaceable allowing users to extend the lifecycle of the chairs.

Multi-purpose side chairs **stack up to 4-high** on the floor.

Acuity mesh chairs feature Acuity Mesh. This construction provides responsive, conforming back support and an open, airy aesthetic.

ACM-MUGO — Mesh Back and Upholstered Seat

ACM-MUCA — Mesh Back and Upholstered Seat

UPHOLSTERY AND CONTOURING

Acuity side chairs feature a pivoting back that provides unexpected comfort in any application. The **pivoting back** provides support while encouraging movement that makes for healthy sitting. The **backrest** features a contoured lumbar support to help relieve stress on the back. Added movement and support allow the Acuity multi-purpose side chair to go from project conference rooms to teaming areas to training rooms with ease.

The upholstered seat features a generous 2" of high-resiliency molded foam padding for comfort and long-term support.

All upholstery foams are **CFC-free**.

All **COMs/COLs** must be approved for upholsterability or applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.

Flammability code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Acuity meets the requirements set forth in ANSI/BIFMA X5.1-2011. Acuity side chairs are warranted for users up to 300 lbs.

OPTIONS — ACUITY MULTI-PURPOSE SIDE:

Versions include arm and armless models with glides or casters with an upholstered seat and mesh back.

Back Type:
- **M** Mesh

Clarity offers a clean, simple design that preserves only the essential elements of form and function. Designed in collaboration with BMW Group DesignworksUSA, Clarity combines a pure, honest aesthetic that transcends the floor plan with an unexpected comfort that anticipates your every posture.

Form
The streamlined design creates a unique visual interest that inspires your imagination without distracting your focus. Clarity's frame and base are constructed of aluminum, offering superior quality and durability. Wherever you work, it goes.

Function
The continuous mesh seat and back offer instant comfort and support with minimal adjustment. You can sit upright. Side sit. Turn around. Or lean over the back. With no fussing and less fine-tuning. Anywhere you go, and any way you sit, it works.

Versatility
Because form and function are simplified, Clarity adapts to any space you're in, as well as any type of work you're doing. From focused heads-down work to engaged collaboration to active lounging. It's always a reflection of the space it's in and the people who use it.

C5OMFC

DESIGN FEATURES

Clarity seating is engineered to support a variety of work, conference, and lounge applications that share a simple, intuitive, and active design.

Fixed Arms

Provide basic support for users engaging in a variety of tasks throughout the day. Arms come with protective urethane arm pads. Fixed arms limit adjustability but provide consistent aesthetics in conference room settings.

Arm Covers

Sleeves are made of ⅛" thick santoprene and are available in G Graphite or T Titanium.

Pneumatic Seat Height Adjustment

Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users.

Base/Casters/Glides

Work chair bases are a five-star design, C5 models are aluminum and polymer base work models are composite. Dual-wheel casters are available in hard tread for carpet.

Materials

- All models meet CAL133.
- All COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CAL TB117-2013. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.
- Clarity is warranted for multiple shifts and users up to 300 lbs.

WORK/CONFERENCE/STOOL KEY FEATURES

Evo chairs feature weight-activated recline so there's no additional tension adjustment. Intuitive controls, along with specially sculpted and formulated seat foam, create a comfortable sitting experience for wherever and however people work.

Mesh backs

Premium mesh, available on work chairs and stools, designed and woven with monofilament and multifilament yarns to provide superior comfort and an enhanced aesthetic. Mesh back chairs are available in five mesh colors.

3D technical knit

3D Technical Knit material aligns the practical sophistication of mesh with the refined visual and softness of an upholstered back. Evo's precision-crafted knit, available on work chairs and stools, is produced with zero waste manufacturing, and constructed of SEAQUAL® ocean waste yarns. Knit back chairs are available in three colors.

Arms

Evo's open arm design allows for multiple sitting postures and remain lateral when reclining for maximum support. Options for work and conference models: 4D adjustable arms, height-adjustable arms, fixed aluminum arms (in polished or painted finishes), or armless.

4D adjustable arms

Evo's 4D arms are fully adjustable in height, width, depth, and can pivot to provide optimal support. Pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

Height-adjustable arms

Provides height adjustments for optimal support of elbows and shoulders while keyboarding or conferencing while providing ease of entry/exit.

Fixed aluminum arms

Provide basic support for users engaging in a variety of tasks throughout the day. Arms come with protective black, flint, titanium or salt urethane arm pads to match the specified frame finish. Fixed arms limit adjustability but provide consistent aesthetics in conference room settings.

Fixed arm finish will coordinate with the finish selected for the 5-star base. Base finishes for fixed arm models include polished aluminum and multiple painted aluminum options. Painted component upcharge will vary based on paint selected.

Evo chairs with fixed arms must be specified with an aluminum base.

See page 37 for paint colors, codes, and pricing for painted aluminum.

Accent stitching

Accent stitching, available in nine colors, offers a way to make a design statement on work and conference models.

Back support

Contoured frame provides integrated lumbar support for upright back support. Optional adjustable lumbar can be added at any time and offers a 4" range of adjustment.

Up-front controls

Integrated, up-front controls are easy to access, use, and contribute to an overall clean aesthetic.

Height-adjustable footring

Evo work stools feature an adjustable footring that travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

Base and casters

Work chair bases are a five-star design. Dual-wheel casters are available in hard tread for carpet, or multi-surface for any floor surface.

Elevated style options available with 40 painted aluminum base finishes for fixed arm and armless models.

See page 37 for paint colors, codes, and pricing for painted aluminum.

CARBON NEUTRAL MODELS

As part of Allsteel's commitment to sustainability, select Evo models are carbon neutral - utilizing offsets from forestation projects counterbalancing the product's carbon footprint. These task seating models will include "CN" at the end of the base model. For more information, please visit the Evo spotlight page on AllsteelOffice.com.

SIDE CHAIR KEY FEATURES

Evo offers side chair models in four frame colors with mesh backs in five colors. Side chairs feature arms with casters or glides. Glides are available in nylon, nickel-plated, or felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces. Multi-surface casters are also available. Chairs ship up to three per carton to minimize waste. Evo Side chair can be stacked up to four high.

MATERIALS

All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.

Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.

Evo meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Evo is warranted for multiple shifts and users up to 350 lbs.

Evo Side Chair is warranted for users up to 300 lbs.

How to specify —

Select the Model Number from above.

For Carbon Neutral Models, ensure that CN is included at the end of the base model selected.

DWW – ____ . ____ . ____ . ____ . ____ . ____ . ____ . ____ .

1st Option:
Select the Frame Color:
- **BLK** Black
- **E9** Flint (add $98)
- **ST** Salt (add $98)
- **TI** Titanium (add $50)

2nd Option:
Select the Mesh Color for Work Chairs *(if applicable)*:
- **C** Clay
- **D** Dusk
- **L** Lustre
- **M** Mist
- **N** Navy

2nd Option:
Select the Knit Color for Work Chairs *(if applicable)*:
- **EKT01** Aluminum
- **EKT02** Algae
- **EKT03** Blue Ocean

3rd Option:
Lumbar for Work Chairs *(if applicable)*:
- **L** Yes ($62 extra)
- **N** No

4th Option:
Select the Cylinder *(if applicable)*:
- **2** Standard, 5" of Travel
- **3** Short, 2½" of Travel

5th Option:
Select the Base Color *(if applicable)*:
- **BLK** Black
- **E9** Flint
- **ST** Salt
- **TI** Titanium
- **PAL** Polished Aluminum ($177 extra)

See page 37 for painted aluminum colors, codes, and upcharges.

How to specify —

Select the Model Number from above.

For Carbon Neutral Models, ensure that CN is included at the end of the base model selected.

1st Option:

Select the Frame Color:

- **BLK** Black
- **E9** Flint (add $98)
- **ST** Salt (add $98)
- **TI** Titanium (add $50)

2nd Option:

Select the Mesh Color for Work Stools *(if applicable)*:

- **C** Clay
- **D** Dusk
- **L** Lustre
- **M** Mist
- **N** Navy

2nd Option:

Select the Knit Color for Work Stools *(if applicable)*:

- **EKT01** Aluminum
- **EKT02** Algae
- **EKT03** Blue Ocean

3rd Option:

Select the Lumbar:

- **Y** Yes ($62 extra)
- **N** No

4th Option:

Select the Cylinder:

- **4** Stool, allows 10" of travel

5th Option:

Select the Base Color:

- **BLK** Black
- **E9** Flint
- **ST** Salt
- **TI** Titanium
- **PAL** Polished Aluminum ($177 extra)

See page 37 for painted aluminum colors, codes, and upcharges.

Inspire is designed to support a multitude of higher education environments. In Allsteel's second collaboration with Bruce Fifield of Milan-based Design Continuum Italia, Inspire responds to the specific needs of today's dynamic learning environments. Incorporating automatic comfort technologies, students can now stay comfortable longer promoting active, engaged learning.

Inspire has achieved SCS Indoor Advantage Gold Certification and level® 2 certification. Inspire is designed and manufactured to have minimal impact on both the physical and social environment, made with no PVC components, and ranges in percent recyclable from 59% to 98%.

KEY FEATURES

TriFit™ Comfort Technologies

Inspire encourages interaction and involvement through unrestricted freedom of movement. The TriFit technology incorporates seat suspension, back recline, and seat flexure in a non-mechanical system that allows users to move freely and learn comfortably.

Breadth of Line

Today's learning environments are extending beyond the classroom. Spaces are needed that invite interaction and support collaboration. With Inspire's broad statement of line, versatile spaces are created not only in classrooms, but also in active learning environments – cafés, libraries, labs, and team project rooms – throughout campus.

Lasting Performance

Higher education environments mandate lasting performance. With Inspire's 4-sided welded steel frame construction, it creates a durable design that withstands active environments. The back recline and seat movement technologies are robust and non-mechanical to provide long-lasting, quiet use.

MODELS AND OPTIONS

Inspire models are available with arms or armless. Arm models feature a non-flexible arm cap for durability in high-use environments.

Seat and back upholstery options are available on all models. Upholstery can be field-installed and is field-replaceable.

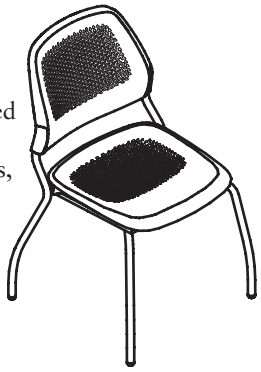
MATERIALS AND FINISHES

Polymer shells are offered in eight energizing colors and are made from recyclable material.

Trisect seating upholstery provides a high performance, sustainable fabric option to complement the eight polymer shell colors. This EIP antimony-free fabric incorporates Greenshield finish. Additional upholstery options also available.

- All upholstery foams are CFC-free.
- All COMs/COLs must be approved for upholsterability and applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.
- Allsteel fabrics and foam meet requirements for CAL TB117-2013. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.
- Flammability code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Inspire meets the requirements set forth in ANSI/BIFMA X5.1-2017. Inspire is warranted for multiple shifts and users up to 300 pounds. Inspire four-leg stack and sled base chairs ship two per carton. All other models ship one per carton. Work chairs and work stools ship fully assembled. Model numbers and pricing are per chair.



Seating — Multi-Purpose

4-Leg Multi-Purpose

4-Leg Multi-Purpose chairs can stack five high.

Glides are available in nylon, nickel-plated steel, or nylon with felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated steel glides are recommended for carpet. Nylon with felt glides are recommended for wood, tile, or high-sheen floor surfaces.

Multi-surface casters are also available.

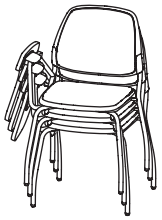
4-Leg Tablet Arm

4-Leg Tablet Arm chairs can stack three high.

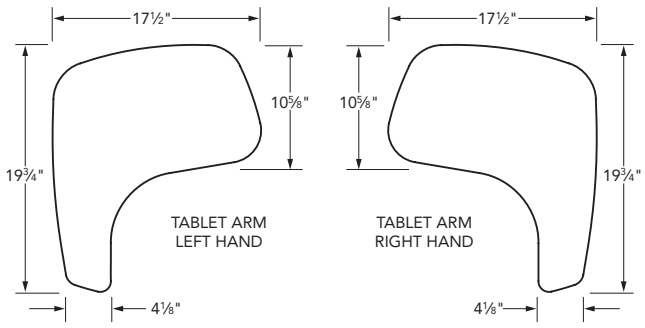
Tablets are field-installed to the chairs.



Tablet material consists of ¾" thick 11-ply laminated Baltic Birch plywood.

Flip-and-fold tablet option provides 6 degrees of lateral rotation in the use position to accommodate a wider range of user types. It also flips up 90 degrees and rotates back 180 degrees to store when a tablet is not needed.

Glides are available in nylon, nickel-plated steel, or nylon with felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments.



Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

Multi-surface casters are also available.

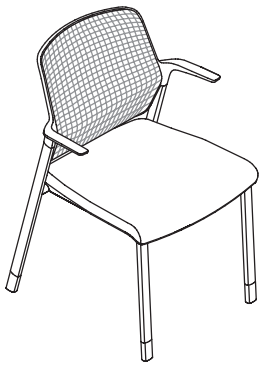
Seating — Work/Stool/Large & Tall/Side/Multi-Purpose



The Lyric family of seating provides a multitude of choices. Make a serious statement with subdued colors or create a fun and playful vibe with a bold mix of mesh and upholstery. Lyric's comfort and intuitive functionality, paired with its simple but striking lines, make it perfect from the workstation to the training room to the conference room.

DESIGN FEATURES

Choose the options specific to your needs.

Basic synchro control adjustment
Manual crank tension with knob and an upright lock.

Enhanced synchro-tilt control
Manual crank tension adjustment with easily reached lever and three locking positions for the back.

Weight activated control
Automatic tension control with an upright lock and tilt limiter.

Mesh Backs
Mesh back chairs are available in six mesh colors.

Optional adjustable lumbar support
Lyric provides automatic lumbar support. To accommodate personal preference, an optional external lumbar support can be added at any time with 4" range of adjustment.

4D fully adjustable arms
Lyric's 4D arms are fully adjustable in height, width, depth, and can pivot to provide optimal support. Pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

2D adjustable arms
Provides height and width adjustments for optimal support of elbows and shoulders while keyboarding or conferencing while providing ease of entry/exit.

Fixed arms
Provide basic support for users engaging in a variety of tasks throughout the day. Fixed arms limit adjustability but provide consistent aesthetics in conference room settings.

Pneumatic seat height adjustment
Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users. Stools offer 10" of travel.

Seat depth adjustment
Allows seat cushion to manually adjust front to back.

Base and casters
Work chair and stool bases are a five-star design. Dual-wheel casters are available in hard tread for carpet, or multi-surface for any floor surface.

Materials
- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions. Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric only tests such as CTB117.
- Lyric meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Lyric is warranted for multiple shifts and users up to 300 lbs.

Height-Adjustable Footring
Travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

DESIGN FEATURES

An economical solution, suited for larger and taller people who perform a variety of tasks. Lyric Large & Tall is warranted for multiple shifts and users up to 400 lbs.

Enhanced synchro-tilt control

Manual crank tension adjustment with easily reached lever and three locking positions for the back.

Mesh Backs

Mesh back Large & Tall chairs are available in Black mesh.

2D adjustable arms

Provides height and width adjustments for optimal support of elbows and shoulders while keyboarding or conferencing while providing ease of entry/exit.

Fixed arms

Provide basic support for users engaging in a variety of tasks throughout the day. Fixed arms limit adjustability but provide consistent aesthetics in conference room settings.

Pneumatic seat height adjustment

Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users.

Base and casters

Bases are a five-star design. Dual-wheel casters in multi-surface for any floor surface.

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric only tests such as CTB117.
- Lyric LT meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Lyric LT is warranted for multiple shifts and users up to 400 lbs.

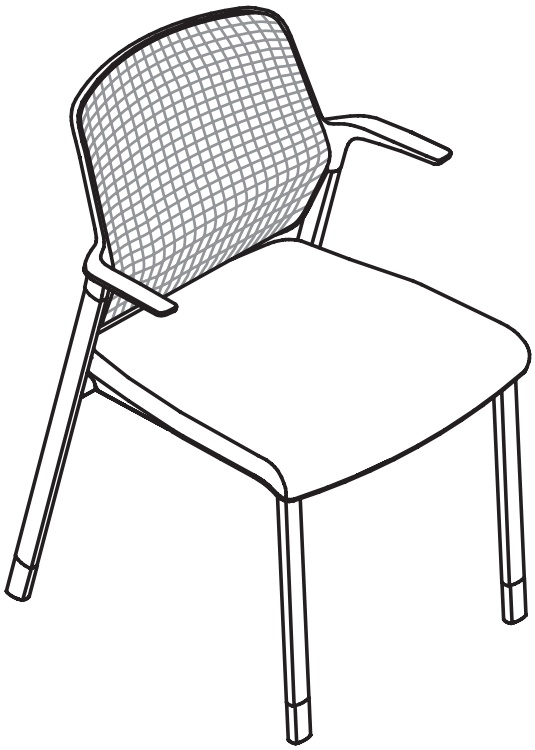
Wherever they are, invite visitors to sit in style with options like an upholstered or mesh back, adding comfort and style to any location.

KEY FEATURES

The waterfall seat front reduces pressure points and the intuitive back design offers built-in lumbar support. Lyric side chairs can be stacked up to four high.

MODELS AND OPTIONS



Lyric side chair models with back types in mesh or upholstered mesh, and in two frame colors. Side chairs feature arm models with casters or glides.

Glides are available in nylon, nickel-plated, or felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces. The versatile multi-surface casters are designed for use on hard or soft surfaces.

Chairs ship up to three per carton to minimize waste.

MATERIALS

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric only tests such as CTB117.
- Lyric side chairs are warranted for users up to 300 lbs.

Lyric multi-purpose chairs go with the flow of your business. They're light, yet durable, so you can easily shift from one meeting to the next. Stow some away for the department lunch and learn. Then pull more off a stack to set up for the all-company awards celebration. Choose a bright shell color to create a bold look, or play it safe with a neutral color that blends seamlessly with your space. For whatever awaits, write the next line with Lyric, the family of chairs that fit everywhere.

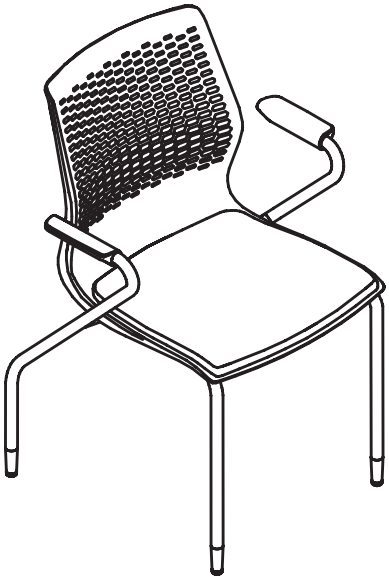
KEY FEATURES

The perforated back on Lyric multi-purpose chair provides ventilation and distributed support. The waterfall seat front reduces pressure points and the intuitive back design offers built-in lumbar support.

MODELS AND OPTIONS

Arm and armless models available. Shell color options from sophisticated to playful and leg options from sled-base to four-legged with casters or glides.

Glide options include nylon, polycarbonate, nickel-plated, or felt. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

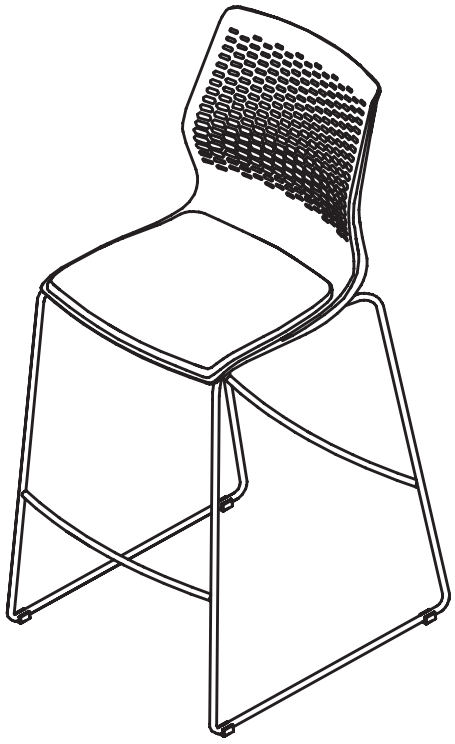


Multi-surface casters are also available on four leg models and are designed for use on hard or soft surfaces.

Lyric 4-Leg Multi-Purpose chairs offer the ability to stack up to four chairs high on the floor.

Lyric Wire Stacker Multi-Purpose chairs offer the ability to stack up to ten high on the floor.

Chairs ship up to four per carton to minimize waste. Model numbers and prices are per chair.



Lyric multi-purpose chairs are warranted for users up to 300 lbs.

Mimeo seating from Allsteel is designed to move with you. Created for today's active workplace, active workstyles, and active sitting, Mimeo is responsive and supportive of your every move. It hugs you. Embraces you. Envelops you. No matter your task. No matter your size or shape. Mimeo becomes one with you.

Designed in partnership with Bruce Fifield of Studio Fifield, Milan, Italy

Visually moving.
Mimeo's distinctive design and smart use of materials make a strong visual impact. It's appropriately scaled to impress and inspire across an open floorplan without overwhelming the environment. Comfortably moving from one space to the next, it brings style and character wherever it's used.

Always the right fit.
Mimeo's lightweight and intuitive design adapts to any type of work you're doing. Experience immediate and lasting comfort for focused work, as well as in project rooms and open desking areas where activities change day to day or hour to hour. Mimeo is ideal for highly active and collaborative workstyles and enhances every space.

Uncompromised comfort and support.
Mimeo's enveloping shape and dynamic back maintain constant contact with you, reducing and evenly distributing pressure points across the entire frame. No matter how you sit or move, the weight-activated motion adjusts automatically. Your whole body is supported. And each user, regardless of size, shape, or posture, has the same supportive experience.

A new standard in weight activation
Mimeo's recline tension has been engineered to automatically adjust to the specific needs and body weight of each user without the need for manual adjustment.

The innovative weight-activated chair motion delivers the appropriate amount of tension for full recline, upright sitting, and every posture in between. As you effortlessly recline, the seat lifts your bodyweight, which modifies the amount of tension accordingly. The result is a personalized, balanced recline that allows for comfortable and healthy movement for any body, in any posture.

MIW-KWNO

MIS-KWNO

DESIGN FEATURES

Mimeo's innovative back-pattern design provides integrated lumbar support while accommodating every movement. The generous seat width and slightly curved arms invite unrestricted movement and comfort for all postures and body types. Mimeo is lightweight and easy to transport with an integrated back handle, bringing function to any space, effortlessly.

IntelliForm™ back technology

Exclusive technology combines the benefits of the compliant, polymer back with flex wings, supportive uprights, and the soft, breathable Mimeo mesh material. The innovative back design and carefully selected materials have been engineered to deliver personalized comfort for each user, even as they move and change postures. The polymer back is highly pliable, allowing the material to flex and move along with the user.

Optional adjustable lumbar support

Mimeo provides automatic lumbar support. To accommodate personal preference, an optional external lumbar support can be added at any time with 4" range of adjustment.

4D adjustable arms

Mimeo's open arm design moves with you as you recline to support your arms in a variety of postures. Adjustments in four directions allow support during work tasks, and the ability to position arms close to the body.

Pneumatic seat height adjustment

Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users. Stools offer 10" of travel.

Base and casters

Work chair bases are a five-star design. Dual-wheel casters are available in hard tread for carpet, or multi-surface for any floor surface.

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.
- Mimeo meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Mimeo is warranted for multiple shifts and users up to 300 lbs.

Height-Adjustable Footring

Travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

8th Option:

Select the Seat Upholstery:

See page 12 for selection.
See pages 15-17 for colors and codes.
See pages 6-7 for COM guidelines.

O6 is a task chair that answers the ergonomic demands and needs put forth by the user while addressing the mental well-being that is usually left behind in today's seating world. The workplace is about people and the furniture should be an extension of those individuals, not the other way around. O6 is the culmination of research that has deemed comfort, ergonomics, and fresh design language as keys to win.

KEY FEATURES

O6 chairs feature weight-activated recline so there's no additional tension adjustment. Intuitive controls, along with specially sculpted and formulated seat foam, create a comfortable sitting experience for wherever and however people work.

Customization

O6 allows for a wide range of color optionality. The O6 family is offered in two different meshes, totaling 29 distinct mesh colors. Coupled with 4 frame colors to choose from, O6 offers users the chance to make a design statement throughout their workspace.

4D Fully Adjustable Arms

O6's 4D arms are fully adjustable in height, width, depth, and can pivot to provide optimal support. Pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

2D Adjustable Arms

Provides height and width adjustments for optimal support of elbows and shoulders while keyboarding or conferencing while providing ease of entry/exit.

Pneumatic Seat Height Adjustment

Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users. Stools offer 10" of travel.

Seat Depth Adjustment

Allows seat cushion to manually adjust front to back.

Height-Adjustable Footring

Travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

Optional Adjustable Lumbar Support

To accommodate personal preference, an optional external lumbar support can be added at any time with 4" range of adjustment.

Base and Casters

Work chair bases are a five-star design. Dual-wheel casters are available in hard tread for carpet, or multi-surface for any floor surface.

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.
- O6 meets the requirements set forth on ANSI/BIFMA X5.1-2017 and BIFMA G1-2013. O6 is warranted for multiple shifts and users up to 300 lbs.

The Pli task seating portfolio provides distinctive performance and exceptional simplicity of movement. The innovative auto-fitting design enables each user to experience maximum ergonomic support for extended use without performing a series of multiple, complex adjustments. Sit, move, reach, work, and Pli adjusts to the movements and contours of each user.

KEY FEATURES

The crucial criterion for wellness is a seating portfolio that combines the ergonomic support you need with the comfort you should never be without. Every one of the Pli chair models adapts to dynamic user movements with simplicity and responsiveness, ensuring a seated posture that is both healthful and comfortable.

Minimal Adjustments

The distinctive 4-point seat suspension system ensures that Pli creates multi-position support without painstaking manual adjustments. Sit, and Pli conforms to you. The intuitive and easy height-adjustment control enables Pli to accommodate nearly every user stature. One adjustment is all you need to make.

Back Support

Each Pli seating model offers flexible and responsive edgeless back support that transcends rigid perimeters, moving with the movements of the user. The conforming mesh back offers support to the lumbar area throughout the sit.

2D Adjustable Arms

Provides height and width adjustments for optimal support of elbows and shoulders while keyboarding or conferencing while providing ease of entry/exit.

Fixed Arms

Provide basic support for users engaging in a variety of tasks throughout the day. Arms come with protective black, flint, titanium or salt urethane arm pads to match the specified frame finish. Fixed arms limit adjustability but provide consistent aesthetics in conference room settings.

Pneumatic Seat Height Adjustment

Regulates height of work chair relative to the floor. Standard 5" of travel accommodates average to tall users. Stools offer 10" of travel.

Height-Adjustable Footring

Travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

Base and Casters

Work chair bases are a five-star design. Dual-wheel casters are available in hard tread for carpet, or multi-surface for any floor surface.

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.
- Pli is warranted for multiple shifts and users up to 300 lbs.
- Pli meets the requirements set forth in ANSI/BIFMA X5.1-2011.

Relate combines everything you want into a single collection of seating. A synchronous mechanism and a unique pivoting back provide exceptional ergonomics for more people at more tasks. Active adjustments allow you to control and customize your seating tension and support relative to any task. Replaceable high-wear parts encourage you to repair rather than replace your chairs. And, the full line of models makes coordinating office seating simple.

KEY FEATURES

Relate's Body Adaptive Control™ combines a weight-sensing synchronized tilt mechanism with a pivoting back, resulting in improved pressure distribution, superior back support, and movement for healthy sitting.

Synchronized Tilt

The synchronized tilt motion keeps the user's head level when reclining to improve mental focus and productivity, while reducing neck and eyestrain.

Pivoting Back

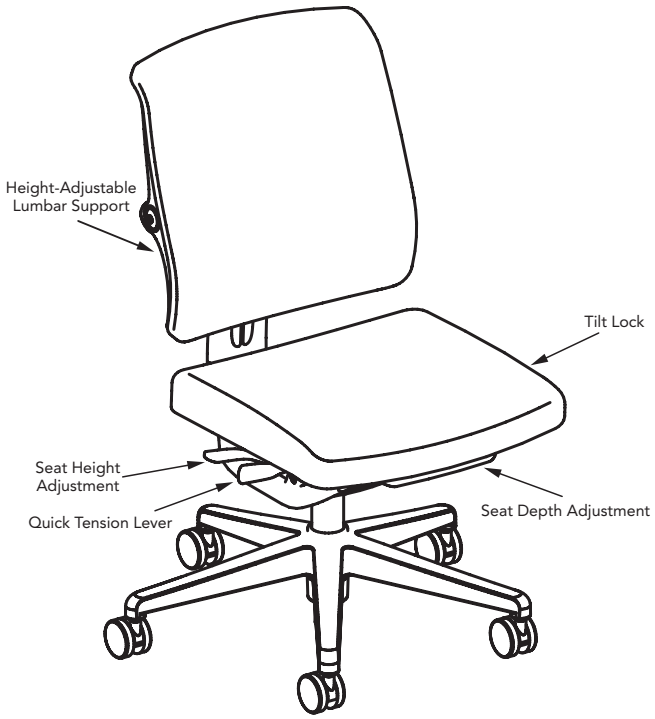
The position of the pivoting back aligns with the natural position of the spine. This alignment keeps the spine supported in its proper curvature, which increases comfort. The adaptive, pivoting motion provides continuous back support while encouraging movement. Movement while sitting replenishes the spinal discs with nutrients, which reduces fatigue and keeps discs healthy.

Quick Tension™ Lever

Features 5 settings to quickly adjust from low to high tension. Allows for frequent adjustment throughout the workday to provide custom support for different tasks.

Height-Adjustable Lumbar Support

Allows users to adjust lumbar support anywhere within a 4" range on upholstered and mesh work/conference chairs. Lumbar support on mesh chairs can be adjusted asynchronously.



Pneumatic Seat Height Adjustment

Regulates height of chair relative to the floor.

- Standard cylinder with 5" of travel accommodates average or tall users.
- Optional short cylinder with 3½" of travel keeps chair closer to the floor for shorter users, allowing all models to meet BIFMA G1-2002 solutions for VDT users.

Seat Depth Adjustment

Adjusts from front-to-back, within a 3" range, to accommodate different leg lengths.

RL-UHA — Upholstered High-Back

Fully Adjustable Arms
Arms are fully adjustable in height, width, depth, and can pivot to provide optimal support. Pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

DESIGN FEATURES
Relate seating is engineered to last a lifetime, simplify maintenance, and reduce costs.

Base/Casters
Base is composite five-star structure. Specific models are available in polished aluminum. Dual-wheel casters feature hard tread for carpeted floors or soft tread for smooth floors.

Link Mesh
Relate's Link Mesh is a leno weave with a polyester elastomeric and a polyester fill yarn. This construction provides responsive, conforming back support and an open, airy aesthetic. Link Mesh is 100% recyclable.

Materials
- All upholstery foams are **CFC-free**.
- All **COMs/COLs** must be approved for upholsterability or applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.
- **Flammability** code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Relate meets the requirements set forth in ANSI/ BIFMA X5.1-2011 and BIFMA G1-2013. Relate is warranted for multiple shifts and users up to 300 lbs.

Relate work chairs with adjustable arms ship knocked down.

OPTIONS — RELATE WORK/CONFERENCE:
Versions include High-Back models in mesh or upholstery with adjustable arms, fixed C arms, or without arms.

Back Type:
- **M** Mesh (only available in High-Back)
- **U** Upholstered

Overall Size:
- **H** High-Back

Armrests:
- **P** Fully Adjustable Arms
- **A** Armless

Pneumatic Cylinder:
- **2** Standard, allows 5" of travel
- **3** Short, 3½" of travel to meet BIFMA G1-2002 *(De-emphasized)*

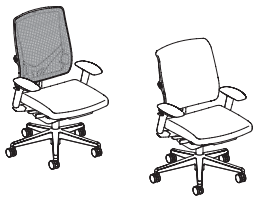
Casters:
- **0** 2½" Black Dual-wheel Hard Tread for carpet
- **1** 2½" Black Dual-wheel Soft Tread for smooth surfaces ($74 extra)

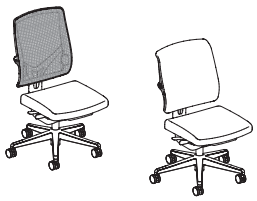
Lumbar:
- **L** Height-Adjustable

Aluminum Option: (Aluminum models only — see pages 96-97)
- **A1** Aluminum Base

Aluminum Finish:
- **PAL** Polished Aluminum (Aluminum models only)

Frame Color:
- **CBK** Charblack





Mesh Color: (for Mesh Backs Only)
Available on Charblack (**CBK**) *frames*
- **LKM01** Carbon
- **CM21** Clay

Upholstery:
See page 12 for other upholstery selections.
See pages 15-17 for colors and codes

NOTE: Mesh and upholstery work/conference chairs feature upholstered seats.

- Features and adjustments on Relate models:
  Synchro-Tilt, Pivot Back, Seat Depth, and Pneumatic Adjustment.

(See page 129 for COM pricing on Grades 9-22)

Relate offers a full line of seating in complementary finishes making it simple to coordinate seating for the entire office. The Relate work stool is the perfect solution for anyplace where work happens at a standing height position. Relate work stools feature all of the same intuitive, ergonomic adjustments as the Relate work/conference chair.

KEY FEATURES

Relate's Body Adaptive Control™ combines a weight-sensing synchronized tilt mechanism with a pivoting back, resulting in improved pressure distribution, superior back support, and movement for healthy sitting.

Synchronized Tilt

The synchronized tilt motion keeps the user's head level when reclining to improve mental focus and productivity, while reducing neck and eyestrain.

Pivoting Back

The position of the pivoting back aligns with the natural position of the spine. This alignment keeps the spine supported in its proper curvature, which increases comfort. The adaptive, pivoting motion provides continuous back support while encouraging movement. Movement while sitting replenishes the spinal discs with nutrients, which reduces fatigue and keeps discs healthy.

Quick Tension™ Lever

Features 5 settings to quickly adjust from low to high tension. Allows for frequent adjustment throughout the workday to provide custom support for different tasks.

Height-Adjustable Lumbar Support

Allows users to adjust lumbar support anywhere within a 4" range on upholstered and mesh work stools. Lumbar support on mesh work stools can be adjusted asynchronously.

Pneumatic Seat Height Adjustment

Regulates height of stool relative to the floor. Includes extended range height pneumatic cylinder with 10" of vertical travel.

Seat Depth Adjustment

Adjusts from front-to-back, within a 3" range, to accommodate different leg lengths.

Height-Adjustable Footring

Travels 8" to ensure users have comfortable support of their feet and legs. The footring has a 20" diameter.

Fully Adjustable Arms
Arms are fully adjustable in height, width, depth, and can pivot to provide optimal support. Pivot the front of the arm pads inward to move in closer to your desk and offer support while working.

DESIGN FEATURES
Relate seating is engineered to last a lifetime, simplify maintenance, and reduce costs.

Base/Casters
Base is composite five-star structure. Dual-wheel casters feature hard tread for carpeted floors or soft tread for smooth floors.

Link Mesh
Relate's Link Mesh is a leno weave with a polyester elastomeric and a polyester fill yarn. This construction provides responsive, conforming back support and an open, airy aesthetic. Link Mesh is 100% recyclable.

Materials
- All upholstery foams are **CFC-free**.
- All **COMs/COLs** must be approved for upholsterability or applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.
- **Flammability** code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Relate meets the requirements set forth in ANSI/BIFMA X5.1-2011 and BIFMA G1-2013. Relate Work Stools are warranted for multiple shifts and users up to 300 lbs.

Relate multi-purpose side chairs provide an ideal solution for busy work areas such as training rooms, gathering areas, informal conferencing, cafés, and more. With a stackable design and pivoting back, Relate side chairs provide the perfect combination of versatility and unexpected comfort.

MODELS AND OPTIONS

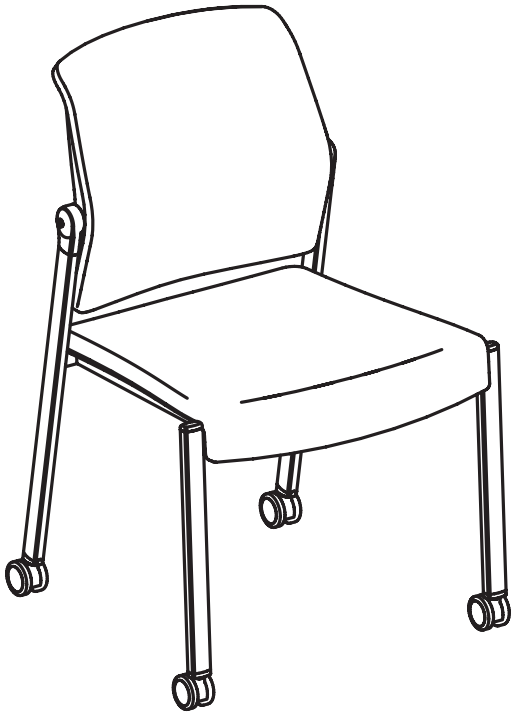
Relate offers side chair models with **back types** in mesh, upholstery, and wood in three frame colors.

Side chairs feature **arm and armless models** with casters or glides.

Glides are available in nylon, nickel-plated, or felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

Multi-surface casters are also available.

Chairs ship up to four per carton to minimize waste.



CONSTRUCTION

Steel frames and structural moldings create a durable design that performs in a variety of environments.

Seat and back upholstery are easily field replaceable allowing users to extend the lifecycle of the chairs.

Multi-purpose side chairs **stack up to 4-high** on the floor.

Mesh chairs feature Link™ Mesh. **Link Mesh** is a leno weave with a polyester elastomeric and a polyester fill yarn. This construction provides responsive, conforming back support and an open, airy aesthetic. Link Mesh is 100% recyclable.

RLM-UUCA — Upholstered Back and Upholstered Seat

UPHOLSTERY AND CONTOURING

Relate multi-purpose side chairs feature a pivoting back that provides unexpected comfort in any application. The **pivoting back** provides support while encouraging movement that makes for healthy sitting. The **backrest** features a contoured lumbar support to help relieve stress on the back. Added movement and support allow the Relate multi-purpose side chair to go from project conference rooms to teaming areas to training rooms with ease.

The upholstered seat features a generous 2" of high-resiliency molded foam padding for comfort and long-term support.

All upholstery foams are **CFC-free**.

All **COMs/COLs** must be approved for upholsterability or applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.

Flammability code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Relate meets the requirements set forth in ANSI/BIFMA X5.1-2011. Relate side chairs are warranted for users up to 300 lbs.

OPTIONS — RELATE MULTI-PURPOSE SIDE:

Versions include arm and armless models with glides or casters in an upholstered seat and mesh, upholstered, or wood back.

Relate 4-Leg Stools are the perfect solution for any application where people prefer a standing height position such as cafés, standing height workstations, touchdown areas, and coffee bars. Similar to the side chair, Relate 4-Leg Stools feature a pivoting back for exceptional comfort and support.

RLC-WUGA —
Wood Back

MODELS AND OPTIONS

Relate 4-Leg Stools are available with mesh, upholstered or wood backs. Four-legged stools feature arm and armless models with glides.

Glides are available in nylon, nickel-plated, or felt options. Nylon glides are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

CONSTRUCTION

Steel frames and structural moldings create a durable design that performs in a variety of environments.

Seat upholstery is easily field replaceable allowing users to extend the lifecycle of the chairs.

UPHOLSTERY AND CONTOURING

Relate 4-Leg Stools feature a pivoting back that provides unexpected comfort in any application. The **pivoting back** provides support while encouraging movement that makes for healthy sitting. The **backrest** features a contoured lumbar support to help relieve stress on the back.

The upholstered seat features a generous 2" of high-resiliency molded foam padding for comfort and long-term support.

All upholstery foams are **CFC-free**.

All **COMs/COLs** must be approved for upholsterability or applicable fire code compliance prior to order entry. See COM ordering instructions on pages 6-7.

Flammability code compliance of Allsteel textiles and seating is listed on page 12. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Relate meets the requirements set forth in ANSI/BIFMA X5.1-2011. Relate four-legged stools are warranted for users up to 300 lbs.

OPTIONS — 4-LEG STOOL:

4-Leg Stools are available in arm or armless models with glides, an upholstered seat and wood back.

Back Type:
- **M** Mesh

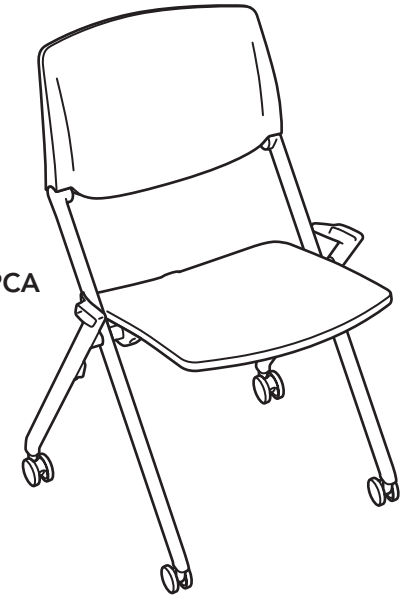
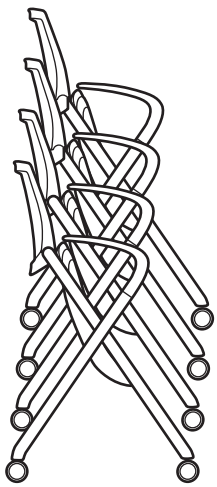
Seating — Multi-Purpose

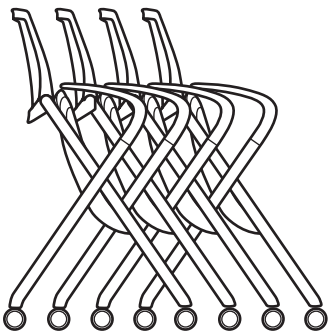


Seek®

Seek is a multi-purpose chair designed for today's ever-changing corporate environments that require durability, versatility, and beauty. Its light-weight mobile design is ideal for multi-purpose settings such as adjunct teaming areas, conference rooms, classrooms, training rooms, and cafés.



The idea has always been to provide seating that one can sit in...not on. Seek achieves this with a deceptively simple design that conforms to the shape and movement of each user's body. Its pivoting back allows for natural shifts in posture while intuitively distributing lumbar support. The contoured seat reduces pressure points and evenly distributes weight for long-term comfort. So sit back, relax, and let Seek do all the work.



K-MUCO

K-PPCA

MODELS AND OPTIONS

With Seek, extended periods of sitting are refreshingly comfortable. Designed to move with the body and minimize pressure points, Seek conforms to each user's body movement, so no matter how they sit — or how long they stay — they stay comfortable.

Weight-assisted pivot back technology intuitively provides balance and lumbar support for ergonomic recline.

Contoured seat design distributes weight evenly, stabilizing the sitting bones during forward and reclined comfort. Universal fitting, Seek comfortably accommodates 95% of users.

Arm and armless models available. The curved shape of the arms accommodates differences in elbow height. The downward curve helps when approaching worksurfaces.

Casters or glides are available. Glide options include nylon, nickel-plated, or felt. The versatile multi-surface casters are designed for use on hard or soft surfaces.

Seek offers the ability to stack, to nest, and to nest the stacks for optimum space efficiency. The seat folds up so multiple chairs nest together like grocery carts. Four nested chairs can move or store together in a discrete 37-inches of space. Each additional nested chair adds 5⅛" of depth. Multiple chairs can stack up to four high in a space of 53"H x 28"W x 22"D. Each additional stack of nested chairs adds 15" of depth.

A Seek stack height of 4 chairs is recommended for storage density that allows the stacks to nest together. A maximum stack height of 6 chairs should not be exceeded when transporting the stacks of chairs.

Chairs ship two per carton to minimize waste. Model numbers and prices are per chair.

CONSTRUCTION

The solid construction meets or exceeds industry standards for performance. Seek's flexible molded-polymer backrest facilitates heat-reducing airflow. Optional mesh back lets light and air through for added comfort.

Seek's polymer shells are made from recyclable color-matched polymers with UV resistance to preserve colorfastness and ensure long-term durability. Allsteel paint finishes (for frames) are formulated for optimum hardness and chip resistance.

Seek meets the requirements set forth in ANSI/BIFMA X5.1-2011. Seek is level®2 certified. Seek is warranted for multiple shifts and users up to 300 lbs. Its lightweight construction makes it easy to move.

Allsteel fabrics and foam meet requirements for CAL TB117-2013. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Notes

Svelte is a modern, multi-functional office chair that brings refined, yet affordable, sophistication across a variety of applications. Sophistication shouldn't have to be expensive, and quality can be affordable. Svelte gracefully alleviates the disparity between low-cost and luxury with an elegant design that possesses an aesthetic as slender as the stack of cash to afford it. Combine that with its ability to consistently perform across almost any office setting, and it only adds to its value. Svelte meets the requirements set forth in ANSI/BIFMA X5.1-2013. Svelte is warranted for multiple shifts and users up to 300 lbs.

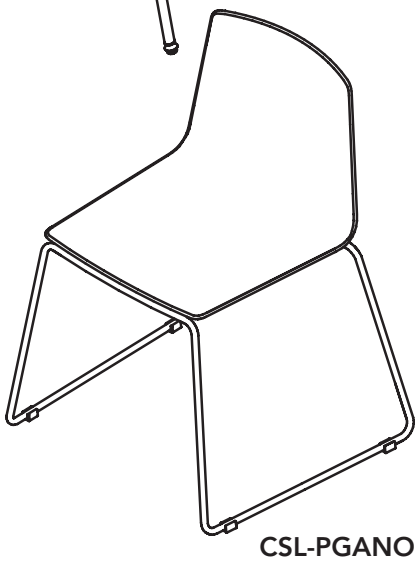
Introducing Vicinity, the newest addition to Allsteel's Social Collaborative collection of furniture.

Your next great idea happens here.

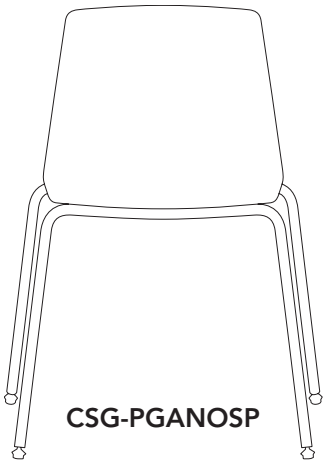
The cafeteria has evolved from a small, back-of-office nook to a vibrant, front-and-center space for planned and impromptu meetings, or for giving guests a taste of your company's culture. Vicinity meets these needs with the flexibility to fit more spaces around your office and a style that's distinctively yours. It's perfect for creative breaks, standing meetings, relaxed eating, or heads-down work.

The best ideas are born from connection. Vicinity gives you the space you need to discover what's possible.



Choose from multiple color and finish combinations to fit the style of your office.

Simple, clean lines serve as the calling card for your company's personality.



Lightweight pieces are easy to move and utilize for whatever your office needs.

MODELS AND OPTIONS

Vicinity seating is available as seated, counter, or standing heights, with formed wire-frame or tube legs. Vicinity seating is produced using material-efficient processes; little waste is generated during the manufacture of these chairs and what is generated can be recycled into new components. The seating bases all contain at least 25% post-consumer recycled content.

Glides are available in nylon or polycarbonate, nickel-plated or steel, and felt or rubber. Nylon glides or polycarbonate are recommended for hard surfaces, commercial carpet, and damp environments. Nickel-plated and steel glides are recommended for carpet. Felt glides are recommended for wood, tile, or high-sheen floor surfaces.

Vicinity offers 8 different polymer shell colors and nine frame finish colors. 4-Leg and sled base chairs stack up to 10 chairs high in 44"H. Chairs ship up to four per carton to minimize waste. Model number and prices are per chair.

Vicinity meets the requirements set forth in ANSI/BIFMA X5.1-2017. Vicinity is warranted for multiple shifts and users up to 300 lbs.

OPTIONS — CHAIRS / STOOLS

- **SG** 4-Leg Chair
- **SL** Sled Base Chair
- **CS** Counter Stool
- **BS** Bar Stool

Social Collaborative — Seating Collections

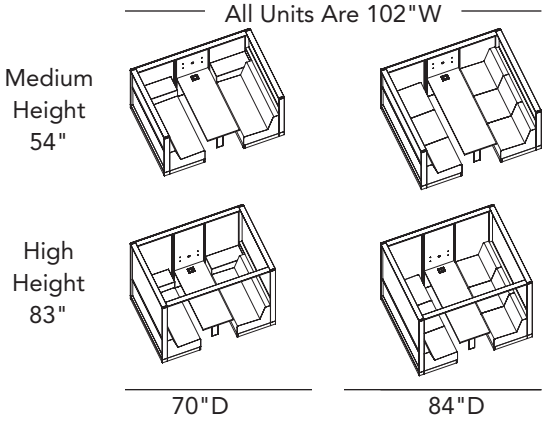
The best work happens when the right people come together in the right space. A space that facilitates uninterrupted thought and sets team members up for everyday office victories.



Meet Clubhouse, the newest addition to Allsteel's Social Collaborative collection of furniture.

It's where seating, surface and seclusion come together. Clubhouse is easy to set up in any space and fits however your team works. Its framed design serves a dual purpose: promoting collaboration while reducing outside distractions by communicating to others that work is happening inside.

Great things happen in your go-to place. That's the beauty of Clubhouse – the get-together getaway space.

AVAILABLE CONFIGURATIONS

Clubhouse is available in three unique configurations that span between two different heights. Optional console components provide ancillary worksurface support, media wall applications support technology and a wide array of fabrics and finishes allow for creative expression.

APPLICATION

Like its sister products, Clubhouse addresses the modern workplace's need for flexibility in an open office design. By forming — not filling — a room, Clubhouse creates a secluded space within any place:

- The brainstorm retreat.
- A private area for the job interview.
- The temporary office for writing that memo to the boss.

KEY FEATURES

Spatial Delineation

- Microarchitectural-like frame forms a 3D boundary and creates a space within a space.
- Semi-translucent back and side screening elements visually establish privacy and communicate unavailability

Extended Use Comfort

- Soft seating provides long-term comfort for small to mid-sized groups.
- Optional console and storage components provide ancillary work surface support.

Support for Technology

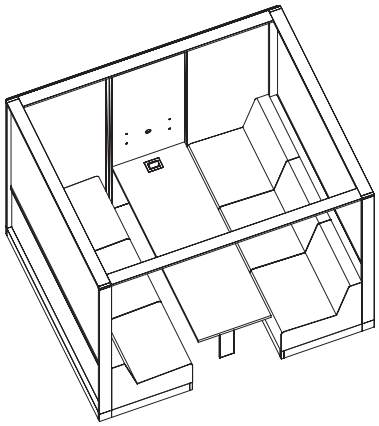
- Optional media wall and table support digital content sharing and power distribution.
- Integrated power within console and storage pieces further enable the usage of technology.

CONSTRUCTION

The construction of Clubhouse meets or exceeds industry standards for performance.

- Aluminum vertical uprights and horizontal extrusions are robust yet maintain a stream-line design.
- Back and side screens are made from durable polyester yarns. Screens are securely fastened across the top and a magnetic connection across the bottom allows the screen not to be damaged if impacted.
- Seating and console units are constructed of fabric covered foam with a plywood core.

ELECTRICAL

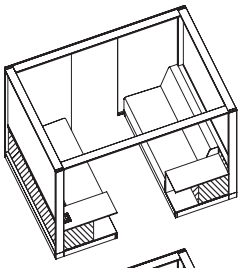


Electrical is to be separately specified and can be integrated within media walls and console components. Standard, Chicago and New York electrical-coded models are available for specification throughout each of the previously indicated items.

When a media wall electrical assembly is specified, table top power integration is automatically included.

Console power integration is only available on a single side of a Clubhouse configuration and is to be called out during the specification process.

Please refer to page 146 for additional information on electrical and power for Clubhouse.



NOTE: Clubhouse Typicals can be found at https://www.allsteeloffice.com/design-resources/idea-starters

Clubhouse with Table and Media Wall, power ready.

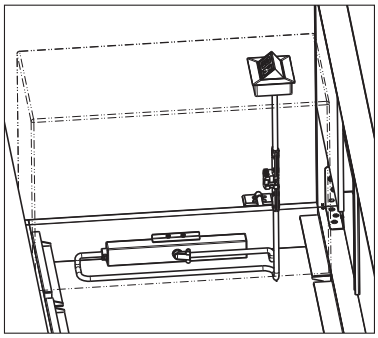
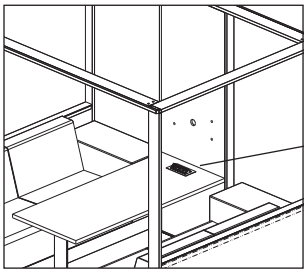
CONSOLE AND STORAGE ELECTRICAL

Console and storage Clubhouse units that are "power ready" require electrical module kits to be ordered separately based on local requirements. Select either Standard, Hardwire, or New York standard kits. Consult with your local electrician for the unit that is in compliance with local and national electrical codes. Verify code requirements before ordering. Chicago requires hardwiring. Exposed power module (shown) consists of one simplex receptacle and one USB hub for powering two devices.

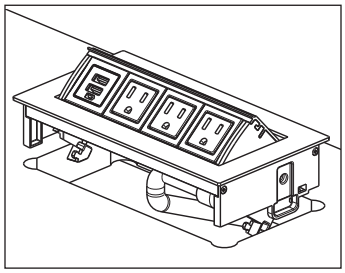
Standard Kit



Hardwire Kit

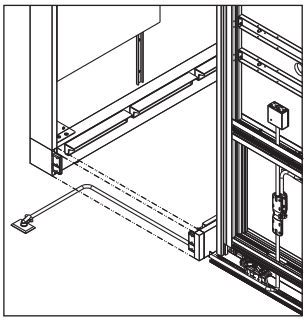


Standard Electrical Kit for Clubhouse "power ready" console or storage units comes with one power module with 72" cord, H-connector, and a 72" sealtight infeed cable. The infeed cable can be connected to a power monument located within the plinth base on the side where the powered console or storage unit is located; or it can be routed under the plinth base to an external power monument as shown above.

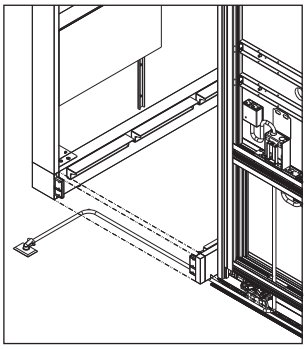


Hardwire Electrical Kit for Clubhouse "power ready" console or storage units comes with one power module with a 110" of flex cable. The infeed cable can be connected to a power monument located within the plinth base on the side where the powered console or storage unit is located; or it can be routed under the plinth base to an external power monument as shown above.

New York Electrical Kit for Clubhouse "power ready" console or storage comes with one power module, H-connector, and cable to New York infeed box which can be attached to the inside surface of plinth base.

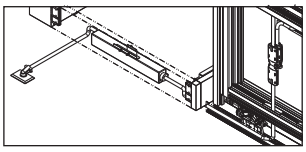


MEDIA WALL ELECTRICAL



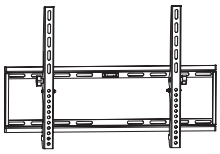
Media Wall Clubhouse units are "power ready" and require electrical module kits to be ordered separately based on local requirements. Select either Standard, Hardwire, or New York Standard kits. Consult with your local electrician for the unit that is in compliance with local and national electrical codes. Verify code requirements before ordering. Chicago requires hardwiring. Exposed power module (shown above) consists of three simplex receptacles and a USB hub for powering two devices.

Standard Electrical Kit for Clubhouse "power ready" media wall units comes with one external power module (described above), one internal power module with two simplex outlets to power monitor and accessory, H-connector, and a 72" sealtight infeed cable.



The infeed cable for Standard or Hardwire electrical can be connected to a power monument located within the plinth base on either side of unit; or it can be routed under the plinth base to an external power monument as shown above.

Hardwire Electrical Kit for Clubhouse media wall units comes with one external power module (described above), one internal power module with 72" cord and two simplex outlets to power monitor and accessory, H-connector, and a 72" flex infeed cable.



New York Electrical Kit for Clubhouse media wall units comes with one external power module (described above), one internal power module with 72" cord and two simplex outlets to power monitor and accessory, H-connector, and cable to New York infeed box which can be attached to the inside surface of plinth base (shown at right).

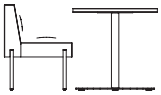
- Blank spaces indicate that a product has not yet been tested or that it failed.
- Contact Allsteel Customer Support for other flammability code approvals.

• **Available upholstery option**

Jetty:Mod supports individual and group activities in cafes, atriums, and walkways while also influencing and directing circulation patterns. Its modern, modular, and can be modified to fit whatever the installation requires.

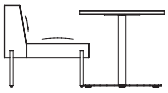
Jetty:Mod was designed to focus on work geometry and how to properly support you. Making sure to have proper sit depth and posture. There are two different versions or dimensions. The lounge version is 30" wide by 30" deep and you sit 18" off of the floor. This allows for more trust conversations to happen or to relax for the day. The work version is 24" wide by 24" deep and you sit 19.5" off of the floor. This will allow for a more upright position to do active work.



Lounge
18"H x 30"D x 30"W

Work
19.5"H x 24"D x 24"W

WORK GEOMETRY



It is important to determine whether the clearances between work mode/lounge mode and table are large enough to allow for an individual's legs to be positioned under the table and yet not too large as to result in awkward upper body positions when using the worksurface.

WORK POSTURE & STANDARD HEIGHT TABLE

When specifying the work posture Jetty:Mod it is recommended to pair with standard height tables that provide 9"-10" of leg clearance.

Standard Table Height: 28"-29.75"

LOUNGE POSTURE & CONTINENTAL HEIGHT TABLE

When specifying the lounge posture Jetty:Mod it is recommended to pair with continental height tables that provide 8.5"-10" of leg clearance.

Continental Table Height: 25"-27.75"

MODELS AND OPTIONS

Jetty:Mod is comprised of seating, arms, tables, screens, legs and connectors that allow you to create an array of configurations.

The seating includes Ottomans, Single Seats and Backs, Half-Backs, Serpentine Ottoman and Serpentine Seat and Back units.

Arms include Tailored Arms, Box Arms and Bolster Arm.

Tables are connected or an accessory to the overall configuration. These include Connecting Tables, both full and half, Serpentine Tables, End Caps, Shared Arm, Tablet Table and Coffee Table.

Screens provide privacy in any space. There are 4 different lengths of screens that can be attached to seating and tables.

Legs and connectors coincide with the work or lounge version.

APPLICATIONS

This sofa system supports applications for private offices, work islands, booths, individual workspaces and banquettes.

MATERIALS

All COMs/COLs must be approved for upholsterability. See pages 6-7 for COM ordering instructions.

Serpentine

*Rule: Serpentine units need to have a leg at each connection point wherever there is the biggest radius. At the smallest radius, you will need a leg every 2 units. Where there isn't a leg, you can use a serpentine in-line connector.

General Guidelines When Working With Jetty:Mod

SEATING

Corner Units - BPLCS, BPLCM, BPLWCS, BPWCM

- Corner unit is used to make an L-application and should not be used to end a run
- Corner unit needs to be specified with 1-Corner connecting leg and 1-Post leg. (BPLCRPL and BPWCRPL)

Calf Rest - BPLCR

- Calf Rest can only be used with the lounge version of Jetty:Mod
- It is recommended to placed at the front of the sofa unit it is being attached to, and should be placed either to the right or the left of the unit. This will depend on what the application is.
- Calf Rest is attached with 2 brackets to the bottom of the sofa unit, and then comes with 2 post legs that will go at the end to support

Serpentine Units - BPLSWS, BPLSWM, BPLSNS, BPLSNM, BPLSO, BPWSWS, BPWSWM, BPWSNS, BPWSNM, BPWSO

- Serpentine units need to have a leg at each connection point wherever there is the biggest radius. At the smallest radius, you will need a leg every 2 units. Where there isn't a leg, you can use a serpentine in-line connector.

See specifying examples below

What to Specify:
4 Serpentine Wide at Back (BPLSWS)
4 End Leg with Metal Cover (BPLELC)
4 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 30 (BPSIC30)

What to Specify:
4 Serpentine Wide at Back (BPLSNS)
4 End Leg with Metal Cover (BPLELC)
4 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 30 (BPSIC30)

What to Specify:
2 Serpentine Wide at Back (BPLSWS)
2 Single Seat and Back (BPLSS)
4 End Leg with Metal Cover (BPLELC)
2 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Leg 15 (BPLSIL15)
2 Serpentine In-Line Connector 15 (BPSIC15)

What to Specify:
2 Serpentine Wide at Back (BPLSNS)
2 Single Seat and Back (BPLSS)
4 End Leg with Metal Cover (BPLELC)
2 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Leg 15 (BPLSIL15)
2 Serpentine In-Line Connector 15 (BPSIC15)
Note: This can also be done using the work version

What to Specify:
4 Serpentine Wide at Back (BPLSWS)
1 Serpentine Connecting Table (BPCTO30)
4 End Leg with Metal Cover (BPLELC)
6 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 30 (BPSIC30)

What to Specify:
4 Serpentine Wide at Back (BPLSNS)
1 Serpentine Connecting Table (BPCTO30)
4 End Leg with Metal Cover (BPLELC)
6 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 30 (BPSIC30)

What to Specify:
2 Serpentine Wide at Back (BPLSWS)
2 Single Seat and Back (BPLSS)
1 Serpentine Connecting Table (BPCTO30)
4 End Leg with Metal Cover (BPLELC)
4 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 15 (BPSIC15)

What to Specify:
2 Serpentine Wide at Back (BPLSNS)
2 Single Seat and Back (BPLSS)
1 Serpentine Connecting Table (BPCTO30)
4 End Leg with Metal Cover (BPLELC)
4 Serpentine In-Line Leg 30 (BPLSIL30)
2 Serpentine In-Line Connector 15 (BPSIC15)

HOW TO SPECIFY JETTY:MOD

EXAMPLE #1
- (3) BPLSS - Lounge Single Seat and Back
- (1) BPLB - Lounge Bolster Arm
- (1) BPLBL - Lounge Box Arm Left
- (1) BPLBR - Lounge Box Arm Right
- (4) BPLEL - Lounge End Leg for Attaching
- (4) BPLSIC - Lounge Straight In-Line Connector

EXAMPLE #2
- (1) BPLSS - Lounge Single Seat and Back
- (1) BPLCR - Lounge Calf Rest
- (1) BPBSCR30 - Lounge Screen 30"
- (1) BPBSCR45 - Lounge Screen 45"
- (1) BPCT15 - Half Connecting Table 15" x 30"
- (1) BPTT - Swivel Tablet
- (4) BPLELC - Lounge End Leg with Metal Cover
- (2) BSSICC - Short In-Line Connector

Note: One pod is specified, multiply by 3 for total

EXAMPLE #3
- (10) BPLSWS - Lounge Serpentine Wide at Back
- (5) BPLCTO30 - Lounge Serpentine Connecting Table
- (4) BPLELC - Lounge End Leg with Metal Cover
- (23) BPLSIL30 - Lounge Serpentine In-Line Leg 30
- (5) BPSIC30 - Serpentine In-line Connector 30

EXAMPLE #4
- (2) BPLSS - Lounge Single Seat and Back
- (1) BPCT30 - Connecting Table 30" x 30"
- (4) BPLELC - Lounge End Leg with Metal Cover
- (4) BPLSIL - Lounge Straight In-Line Leg

EXAMPLE #5

- (6) BPLSS - Lounge Single Seat and Back
- (2) BPLB - Lounge Bolster Arm
- (1) BPLTL - Lounge Tailored Arm Left
- (1) BPLTR - Lounge Tailored Arm Right
- (2) BPTT - Swivel Tablet
- (1) BPTE60 - Lounge End Cap 60"
- (8) BPLEL - Lounge End Leg for Attaching
- (8) BPLSIC - Lounge Straight In-Line Connector

EXAMPLE #6

- (6) BPLSS - Lounge Single Seat and Back
- (1) BPLSWS - Lounge Serpentine Wide at Back
- (1) BPLSNS - Lounge Serpentine Wide at Back
- (1) BPLCTO30 - Lounge Serpentine Connecting Table
- (2) BPTE30 - Lounge End Cap 30"
- (2) BPTS30 - Lounge Shared Arm
- (4) BPLEL - Lounge End Leg for Attaching
- (4) BPLSIC - Lounge Straight In-Line Connector
- (10) BPLSIL30 - Lounge Serpentine In-Line Leg 15
- (2) BPSIC15 - Serpentine In-line Connector 15

ARMS

Tailored Arms - BPLTL, BPLTR, BPWTL, BPWTR
- Tailored Arms can only be used at the end of the run, not in between units

Box Arms - BPLBL, BPLBR, BPWBL, BPWBR
- Box Arms can only be used at the end of the run, not in between units

Bolster Arms - BPLB, BPWB
- Bolster Arms can only be used in between units that have a seat and back. It is recommended to not be used with an ottoman

TABLES

Connecting Tables - BPCT30, BPCT24
- Connecting tables can go in between seating units and at the end of a run
- If a connecting table is in between 2 seat units, it will need 4 in-line legs (BPLSIL or BPWSIL) at each connection point between the units
- If a connecting table is placed at the end of a run, it will need 2 in-line legs (BPLSIL or BPWSIL) and then 2 end legs with a metal cover. You need a point of connection for the connecting tables

Half Connecting Tables - BPCT15, BPCT12
- Half connecting tables can go in between seating units and at the end of a run
- If a half connecting table is in between 2 seat units, it will need 2 in-line legs (BPLSIL or BPWSIL) at 2 of the connection points and the 2 short in-line (BSSICC) connectors at the other 2 connection points
- If a half connecting table is placed at the end of a run, it will need 2 short in-line connectors (BSSICC) and then 2 end legs with a metal cover. You need a point of connection for the half connecting tables

Serpentine Connecting Tables - BPCTO30, BPCTO24
- Serpentine connecting tables can go in between seating units and at the end of a run
- If a serpentine connecting table is in between 2 linear seat units, it will need 4 serpentine in-line legs (BPLSIL15 or BPWSIL15) at each of the connection points
- If a serpentine connecting table is in between 2 serpentine units, it will need 4 serpentine in-line legs (BPLSIL30 or BPWSIL30) at each of the connection points
- If a serpentine connecting table is in between 1 serpentine unit and 1 linear unit, the linear to serpentine will have a different leg compared to the serpentine to serpentine connection. You will need to specify 2 serpentine in-line legs (BPLSIL30 or BPWSIL30) and 2 serpentine in-line legs (BPLSIL15 or BPWSIL15)

Corner Connecting Tables - BPCCT30, BPCCT24
- Corner table is used to make an L-application and should not be used to end a run
- Corner unit needs to be specified with 1-Corner connecting leg and 1-Post leg. (BPLCRPL and BPWCRPL)

Notched Tables - BPNT30, BPNT15, BPNT24, BPNT12
- When pairing legs with notched tables, follow same guidelines that are used for connecting and half connecting tables
- It is recommended that you put a tablet arm within the notches. Items that we do not recommend are bolster arm, arms and the shared arm

End Caps - BPTE30, BPTE60, BPTE24, BPTE48
- End caps should be used at the end of a run, connecting into the end legs for attaching (BPLEL or BPWEL)
- The longer end caps are used to span across two units that are back-to-back

Shared Arms - BPTS30, BPTS24
- Shared arms are recommended to be used in between 2 seat and back units (serpentine or linear)

Swivel Tablet - BPTT
- Swivel tablet can go at the end of the run or in between units (serpentine or linear)

Coffee Table - BPCT2445
- Coffee table should be used on its own as a stand alone coffee table

LEGS, CONNECTORS AND METAL PIECES

You will need to specify two legs or connectors at each connection point. For example, if you have a two-seat sofa, you would need to specify two in-line connectors where the sofa units meet and then four end legs (two at one end and two at the other end of the sofa).

Straight In-Line Connectors - BPLSIC, BPWSIC
- Straight in-line connectors are used to connect 2 linear units together, both seating and tables
- Swivel tablet, bolster arm and shared arm can be inserted into the in-line connectors

End Legs for Attaching - BPLEL, BPWEL
- End legs for attaching are used at the end of a run
- Tailored arms, box arms and tablet arm can be inserted into the end legs at the end of a run

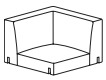
End Legs with Metal Cover - BPLELC, BPWELC
- End legs with the metal cover are used at the end of a run where nothing will be inserted or attached to them

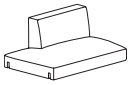
Corner Post Legs - BPLCRPL, BPWCRPL
- Corner post legs are to be used with corner seating and tables
- When corner units are used, 2 corner post legs will need to be specified

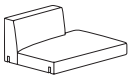
Serpentine In-Line Connector - BPSIC15, BPSIC30
- BPSIC15 should be used when connecting a linear unit to a serpentine unit
- BPSIC30 should be used when connecting a serpentine unit to a serpentine unit

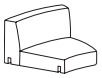
NOTE: Leg required every 3 seats in a straight-line configuration

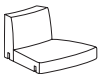
Serpentine In-Line Leg - BPLSIL15, BPLSIL30, BPWSIL15, BPWSIL30
- BPLSIL15 and BPWSIL15 should be used when connecting a linear unit to a serpentine unit
- BPLSIL30 and BPWSIL30 should be used when connecting a serpentine unit to a serpentine unit











4 Unit Beam Connector - BP4UC
- The 4 unit beam connector can be used to connect 4 linear units together without having to put a leg in between
- This cannot be used with serpentine units

Short In-Line Connector - BSSICC
- Short in-line connector should be used when connecting a single seat and back unit to a half connecting table, and should be placed in between those units

Coat Hanger - BPCH
- The coat hanger can be placed on the back of seat and back, half back and serpentine units

SCREENS

Screens - BPBSCR30, BPBSCR45, BPBSCR24, BPBSCR36
- The 30" and 45" screens should be paired with the lounge version, and the 24" and 36" should coincide with the work version
- Screens are attached to the bottom of the seat and tables
- Screens can go on the back and sides of seating units. Screens can be attached to the back of the tables, but cannot attach to the sides of them.
- They cannot be used in between units

Jetty:Mod electrical will be attached to the underside of the sofa. Electrical includes the Triplex system that has jumper kits, corded infeed, hardwire infeed and H-Connectors. Jumper kits, corded infeed and hardwire infeed are available at various lengths to support an array of configurations. Miki undermount units plugged into the Triplex system and placed at the front of the sofa. The Miki undermount power module has 1 simplex and 2 USB outlets.

It's the customer's responsibility to ensure that installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply meets all local and national electrical codes.

GUIDELINES WHEN WORKING WITH ELECTRICAL FOR JETTY:MOD

Miki Undermount - APWRMOD1UWM *(De-emphasized)*

- The Miki undermount consists of 1 simplex and 2 USB outlets
- Miki undermount power modules can be placed at the front of seat and table units. It cannot be placed where there is a support leg.
- 72" corded Miki undermount power modules can be specified on their own if the Jetty:Mod layout is placed along a wall with building power close enough to reach or within proximity of floor outlets.
- Miki can also be paired with the Triplex system to route a series of electrical components for larger Jetty:Mod configurations and/or if a hardwired in-feed is required/ desired.

Triplex Circuit 1 Jumper Kit - ATPKIT48, ATPKIT60, ATPKIT72

- Triplex Jumper Kits include 4-Trac Triplex Raceway available in lengths of 48", 60" and 72", conduit clamps and Triplex receptacle mounting bracket
- It is recommended to position the jumpers in the middle of the seat or table units that the electrical is going under

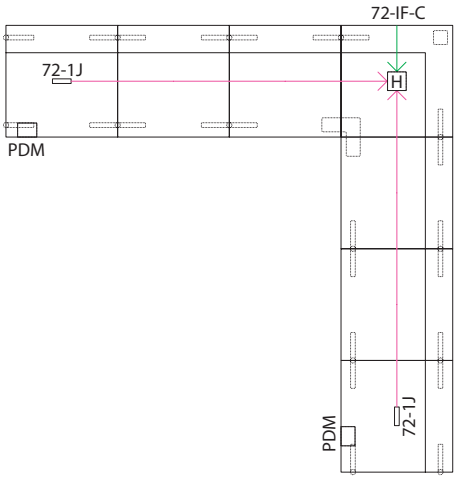
Triplex Circuit 2 Jumper Kit - ATPKIT482, ATPKIT602, ATPKIT722

- Triplex Jumper Kits include 4-Trac Triplex Raceway available in lengths of 48", 60" and 72", conduit clamps and Triplex receptacle mounting bracket
- It is recommended to position the jumpers in the middle of the seat or table units that the electrical is going under

Triplex Corded Infeed - ATPCIF48, ATPCIF72

- Triplex Corded Infeed includes a straight corded infeed with a straight 15 amp plug that is available in 48" and 72". Also available is an H-Connector with a mounting bracket.

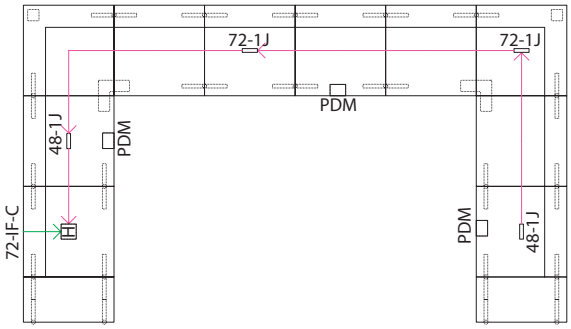
Triplex Hardwire Infeed - ATPHWIF72



- Triplex Hardwire Infeed includes a straight hardwire infeed that is available in 72" and an H-Connector

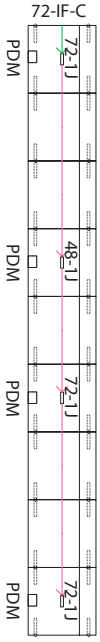
Triplex H-Connector - ATPSPLIT

- H-Connectors are used to connector jumpers that will go in different directions whether that's a 90 degree turn or serpentine configurations



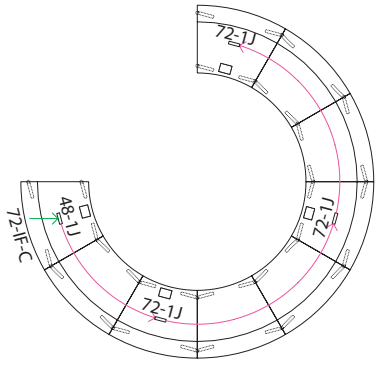
ELECTRICAL EXAMPLE 1 — L-SHAPE

- ATPCIF48 – 48" Triplex Corded Infeed (1)
- ATPKIT48 – 48" Triplex Circuit 1 Jumper Kit (2)
- APWRMOD1UWM – Miki Undermount (2) *(De-emphasized)*



ELECTRICAL EXAMPLE 2 — U-SHAPE

- ATPCIF72 – 72" Triplex Corded Infeed (1)
- ATPKIT72 – 72" Triplex Circuit 1 Jumper Kit (2)
- APWRMOD1UWM – Miki Undermount (3) *(De-emphasized)*



ELECTRICAL EXAMPLE 3 — LINEAR

PARALLEL

Introducing Parallel, a collection of soft seating and coordinating tables that adapts to a variety of spaces. Parallel is at home in reception areas and collaborative workspaces, accommodating different functions while maintaining a consistent aesthetic. With HBF Textiles, Allsteel fabrics, or a designer's own material, Parallel provides a canvas to make a strong first impression anywhere it's used.

Designed in partnership with Chris Adamick.

Club Plus Lounge

DESIGN FEATURES

Functional Versatility

Flexible and functional, Parallel soft seating can be considered a workhorse in helping meet a company's workplace needs, whether it be casual conference areas, lobby and reception settings, or collaborative hubs.

The variety of sizing and features allows Parallel to adapt from reception to collaborative areas throughout a workspace. The clean lines work well with current and future furniture settings. Generous sizing and thoughtful comfort considerations make the sit comfortable for five minutes or two hours.

Design Versatility

Cutting a sleek profile with tapered ellipse legs and a slim, stylistic reveal, Parallel is intended to work with your favorite Allsteel platforms without overpowering the space. The sharp tailoring of the upholstery paired with the dual-density foam means comfort without sacrificing aesthetics.

The Parallel club chair, club plus lounge, and modular sofa options, as well as the coordinating side and coffee tables, enable a diverse array of setups, from structured stylized formal, to a warmer domesticated corporate vibe, to flexible collaborative in combination with other Allsteel products. A variety of upholstery materials and frame colors celebrates beautiful form while telling a strong design story.

Wide Arms

6" wide arms with high-density foam allow for a comfortable surface for device usage, and the optional removable sleeve accessory, available in three finishes, makes a stable worksurface on the arm. Designed for comfort but also with the intent that all surfaces are sitting surfaces, Parallel is built to handle perching on the arms and back.

Design Nuances

- Legs – Ellipse, tapered shape set to the very edge of the frame
- Reveal – Slim reveal around the entire perimeter
- Tailored upholstery – Available with a channeled design detail for a more refined aesthetic

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.

Tables (page 194)

- Available with laminate, veneer or solid surface tops.
- Leg finish option includes painted (color specified) or polished chrome.

RECHARGE

• **Available upholstery option**

• Allsteel fabrics and foam meet requirements for CTB117.
• Blank spaces indicate that a product has not yet been tested or that it failed.
• Contact Allsteel Customer Support for other flammability code approvals.

Designed in partnership with Chris Adamick, Recharge includes soft seating pieces and tables that can be integrated for private, public, or collaborative settings.

MODELS AND OPTIONS

Recharge seating is available in four different options: Pouf, Bench, Bench with Bolster, and Bench with Bolster and Screen. Bolsters are available as full width, half-width, and as corner units providing a large array of configurations.

Recharge Tables can stand alone or allow connection of seating components to create straight or 120-degree configurations. Power options are also available.

APPLICATIONS

Use Recharge as booths, micro-environments or bench seating in café areas, lobbies, open plan, atrium spaces, or reception areas.

KEY FEATURES

Recharge modular lounge seating is constructed of fabric covered foam with upholstery-grade FSC plywood core and box joints.

Each bench has glides that can be adjusted up to 2".

MATERIALS

- All COMs/COLs must be approved for upholsterability. See pages 6-7 for COM ordering instructions.

OPTIONS — MODULAR LOUNGE SEATING

Description:

Bench — Single or Double width seats (no back bolster)

Bench with Bolsters — Single or Double width seats with full, half, or corner bolsters

Bench with Bolsters and Screens — Single or Double width seats with full, half, or corner bolsters and full width or full width and 3/4 side screens.

Poufs (mini ottomans) — Round or Square seat

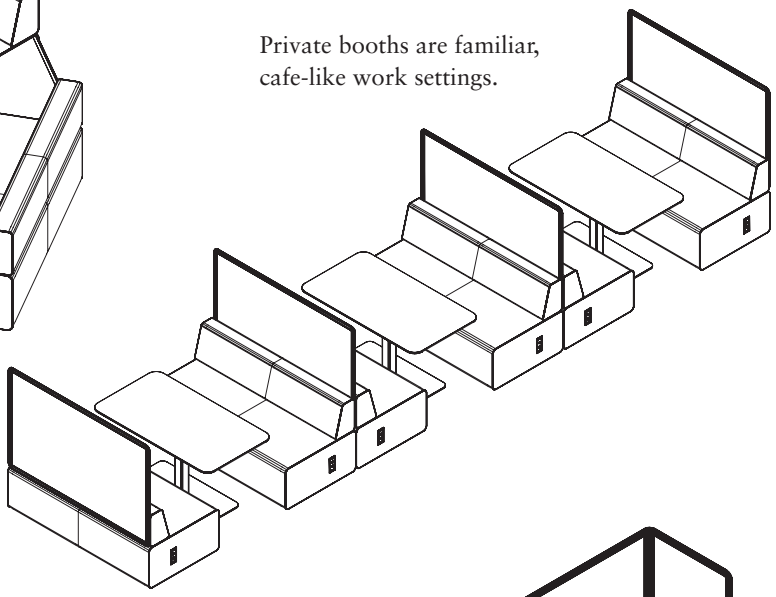
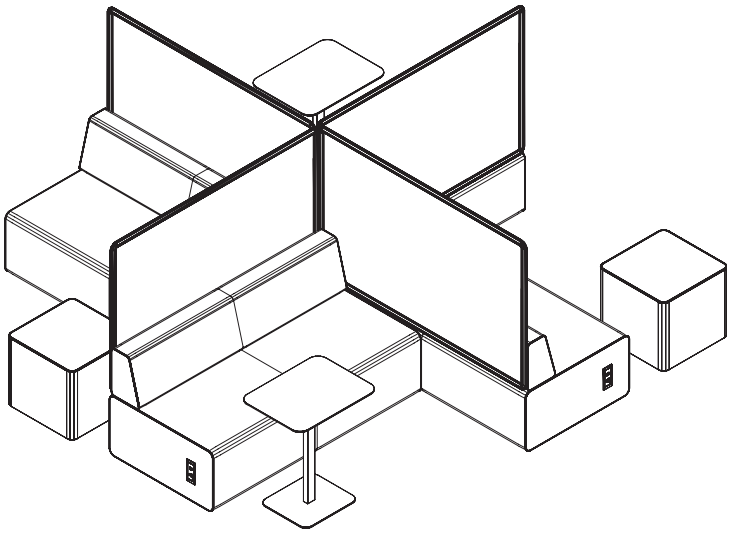
OPTIONS — ELECTRICAL

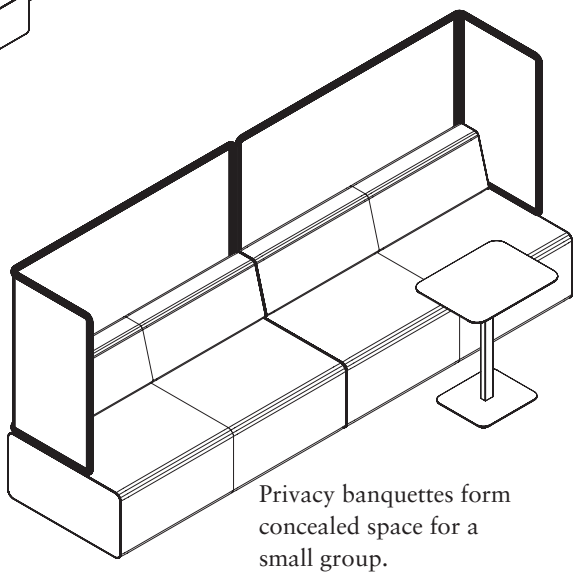
Description:



Electrical ports are available on seat benches and connector tables with corded, 4-Wire Kits, or hard wire options. See pages 208-209 for specifications and examples. See page 219 for electrical components.

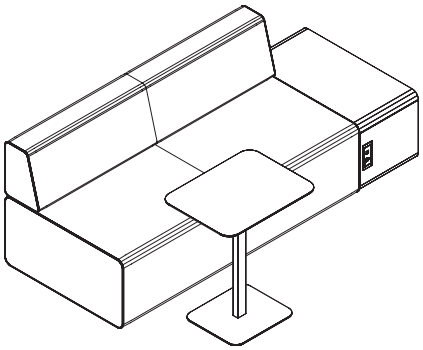
A full gallery of typicals can be found on our website: **https://www.allsteeloffice.com/design-resources/idea-starters**. *Each typical includes a complete BOM with current pricing, downloadable CAD files, and PDFs of each drawing.*



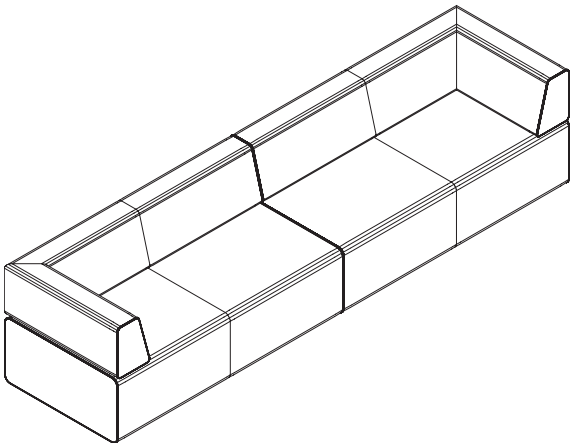


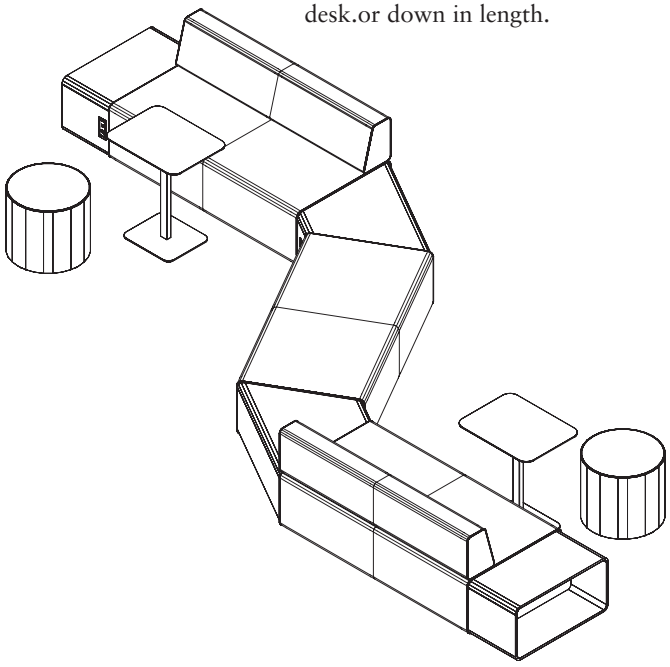
Crescent lounges create alternative meeting spaces.

Private booths are familiar, cafe-like work settings.

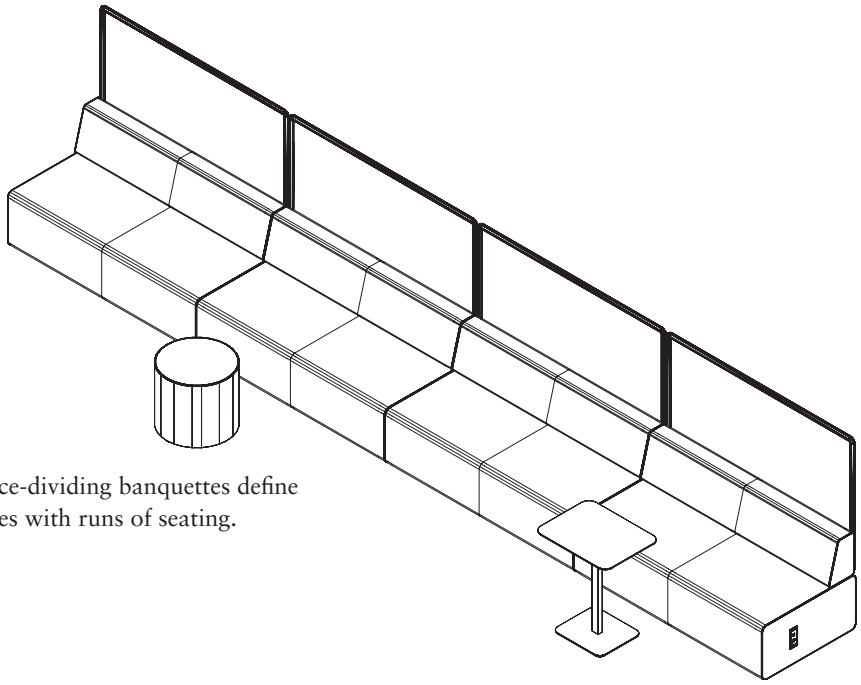


Clusters provide seating options and power for common spaces.



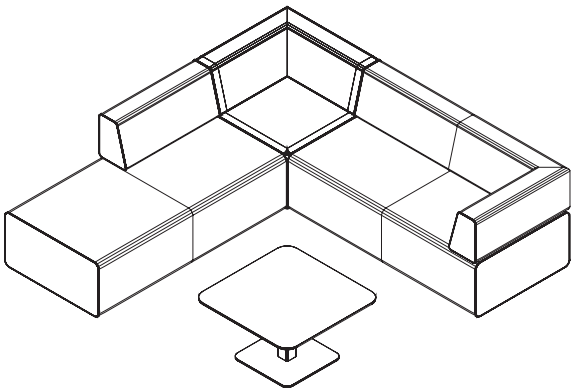


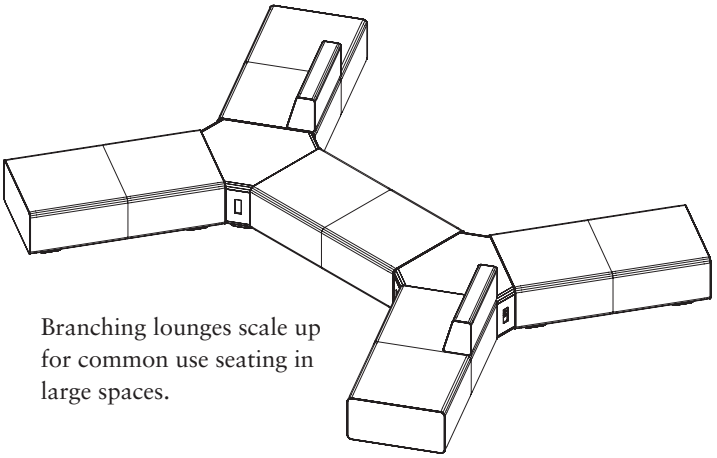
Privacy banquettes form concealed space for a small group.



Sofas offer space to think away from the desk.

Sectional sofas easily scale up spontaneous work beyond the desk.or down in length.





Sectional sofas easily scale up or down in length.

Space-dividing banquettes define zones with runs of seating.

Sectional return sofas turn 90 degree corners.

Branching lounges scale up for common use seating in large spaces.

POWER-READY MODELS

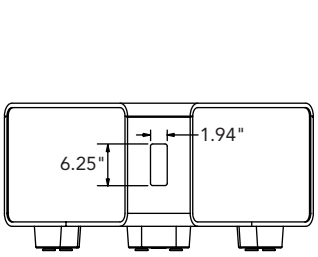
Power-ready Recharge models have a cut-out on the front right side of the lower tier (see to the right) that will accept a Rise Power Port (ordered separately). The opening is 6.25"W x 1.94"H.

All connector tables come with or without an electrical cutout in them. The 120° x 3 Connector Table has three electrical cutouts, while the 120° x 2 and Straight Connector Tables have one electrical cutout. Electrical components need to be ordered separately from the units.

Four power options are available:

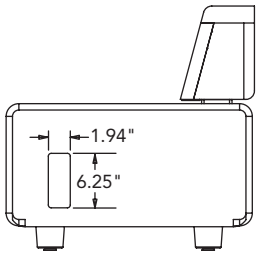
- Straight Cord – plugs a single unit into a standard outlet
- Braided Cord – plugs a single unit into a standard outlet with a visually aesthetic cord
- Hardwire – connects a single unit to power source by a licensed electrician
- Interlink IQ – connects multiple units to a power source

It's the customers responsibility to ensure that installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply meets all local and national electrical codes.



INTERLINK IQ

Interlink IQ provides the ability to use on 15-amp infeed starter and power up to 8 power modules and/or jumpers. Up to 8 connections are possible on one Interlink infeed. A 40' maximum run, or no more than 8 units, whichever comes first, are possible to daisy chain through Interlink IQ. Interlink IQ provides a visual indicator of system status. LED illuminates green when you are connected and ready to plug in. A red light indicates you have linked too many units.



Electrical components listed on page 219.

STEPS FOR ORDERING RECHARGE 4-WIRE POWER KITS:

1. Determine the number and location of powered ports in configuration. A maximum of thirteen Recharge ports can be connected on one Infeed.
2. Order one 4-Wire Power Port for each powered Recharge Unit.
3. Order one Infeed Kit. Each Infeed Kit includes H-Connector which can power either:
   - 3 Recharge units
   - 2 Recharge units and 1 Jumper
   - 1 Recharge unit and 2 Jumpers
   - 3 Jumpers
4. Determine if Jumper with H-Connector Kits are needed for connecting multiple powered Recharge units.
   - A Jumper Kit is required if the distance between the H-Connector on the end of Infeed or Jumper is greater than 72” to the Power Port cutout on the Recharge unit.
   - Jumper Kits are available in 42" and 72" lengths.
   - Infeeds and Jumpers can’t plug directly into Power Port.

Upholstery Expectations

Due to the inherent characteristics of some upholstery materials, such as coated textiles, some wrinkles may show on the wingback headrest for Retreat. Additionally, some wrinkles may appear once material has become more relaxed over time.

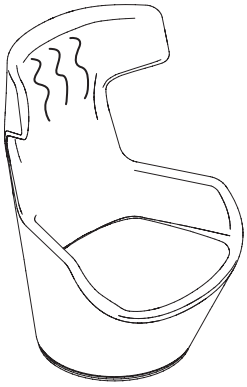
- Allsteel fabrics and foam meet requirements for CTB117.
- Blank spaces indicate that a product has not yet been tested or that it failed.
- Contact Allsteel Customer Support for other flammability code approvals.

• **Available upholstery option**

Retreat Lounge is a space-defining collection that supports real work in often underutilized spaces. It defines areas for small groups, provides privacy for individuals, and offers visual consistency in space planning. The lounge collection includes wing-back, high-back, and low-back chairs, and a matching ottoman.

Retreat Executive, Conference and Side seating extends premium comfort throughout meeting and private office spaces with its iconic design know from the Retreat lounge collection. The soft, organic shape of Retreat speaks to multiple generations of leaders, while creating a timeless and cohesive aesthetic that does not overwhelm the space or user.

DESIGN FEATURES



Retreat is a space defining lounge collection that supports real work in often underutilized spaces. It defines space for small groups, provides privacy for individuals, and visual consistency in planning and varied elevations.

Arms

Arm height is specific for comfort or laptop placement.

High-Back and Wing-Back

High-back protects back of head and wing-back provides added visual privacy. Relaxed tailoring is normal and expected in the upper headrest of the wing back (see illustration below).

Base Options for Chairs

Select between fixed, swivel, or return-to-center base.

Materials

- All COMs/COLs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- Allsteel fabrics meet requirements for CTB117. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CTB117.

OPTIONS

Chair Type:

VERW	Wing-Back Upholstery
VERH	High-Back Upholstery
VERL	Low-Back Upholstery

RISE LOUNGE

Rise transforms any space into a meeting space. It is tiered and modular upholstered seating that allows a number of people to gather without taking over an entire room.

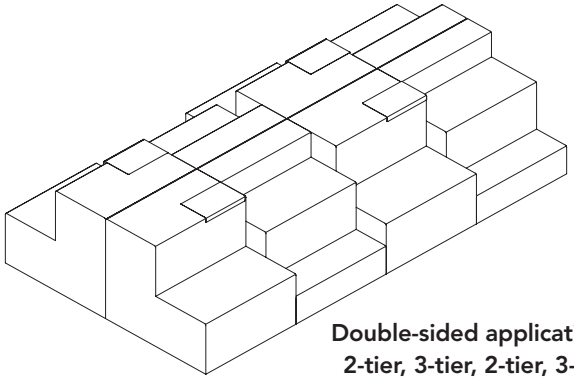
Single-sided application:
3-tier, 2-tier, 3-tier, 2-tier

MODELS AND OPTIONS

Rise is designed as building blocks that can be combined into a variety of configurations. Rise is available as non-powered or power-ready. Rise is not intended for use as stairs.

APPLICATION

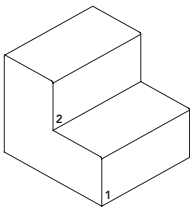
Use Rise back-to-back or side-by-side against a wall in atriums, open plan areas, brainstorming/huddle rooms, conference room, cafés, waiting areas, or lounges.



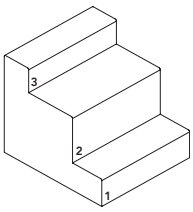
KEY FEATURES

Rise is constructed of fabric covered foam with upholstery-grade FSC plywood core, box joint, and corner block construction.

Rise has glides that are adjustable up to 2".



Ganging brackets with screws are included for connecting multiple units. Two brackets are required to connect two Rise units together. Soft Wall requires a special ganging bracket S922GB if it is not put between two units.

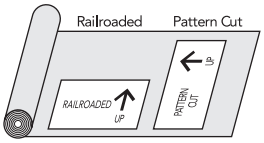


Double-sided application:
2-tier, 3-tier, 2-tier, 3-tier

DIMENSIONS

RISE 2-TIER

2-Tier — 34"H x 36"W x 40"D
2-Tier Corner* — 34"H x 40"W x 40"D
Tiers 1 and 2 — 17"H x 20"D



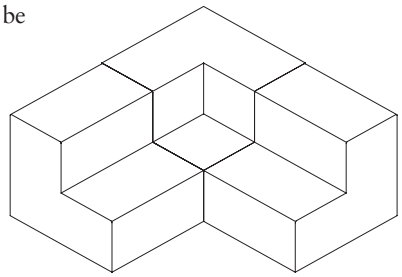
RISE 3-TIER

3-Tier — 34"H x 36"W x 40"D
Tier 1 — 9½"H x 12"D
Tier 2 — 16"H x 18"D
Tier 3 — 8½"H x 10"D

***NOTE:** Dimension of unit may not fit through standard door, check installation site prior to ordering.

MATERIALS

The outside cover on Rise is fully upholstered. Rise can be specified in a solid color or two-tone on selected models.



- Due to the dimension of the seat Rise fabric will be pattern cut.
- All upholstery foams are CFC-free.
- All COMs must be approved for upholsterability or applicable fire code compliance prior to order entry. See pages 6-7 for COM ordering instructions.
- **Flammability** code compliance of Allsteel textiles and seating is listed on page 14. COM/COL manufacturers supply certificates of compliance for fabric-only tests such as CAL TB117-2013.

Rise is warranted up to 300 lbs per unit.

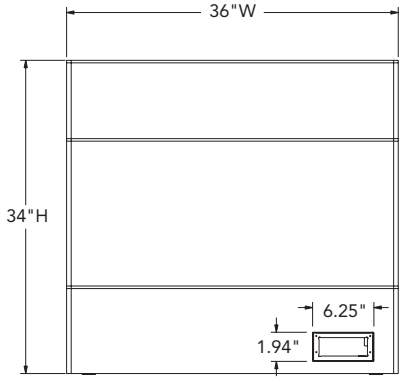
See page 14 for upholstery selections.
See pages 15-17 for colors and codes.

CORNER MODELS

Corner Rise models are available in two-tier models and are 40"W x 40"D. Units can be specified in a solid color or two-tone.

Corner Application:
2-Tier, 2-Tier Inside Corner, 2-Tier

POWER-READY MODELS



Power-ready Rise models have a cut-out on the front right side of the lower tier (see below) that will accept a Rise Power Port (ordered separately). The opening is 6.25"W x 1.94"H.

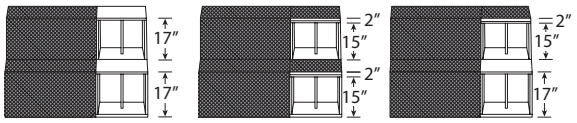
Rise Power Ports are UL listed and 2 power simplexes and a combo USB-A + USB-C. 1 power simplex is rotated 90 degrees to accommodate various plug styles. Four power options are available:

- Straight Cord — plugs a single unit into standard outlet
- Braided Cord — plugs a single unit into a standard outlet with a visually aesthetic cord
- Hardwire — connects a single unit to power source by a licensed electrician
- Interlink IQ — connects multiple units to a power source

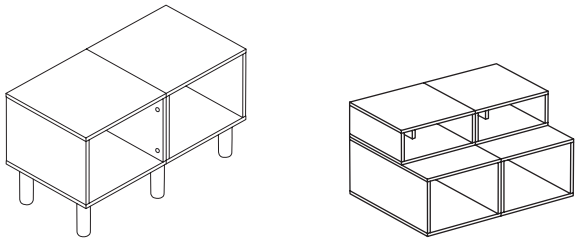
It's the customer's responsibility to ensure that installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply meets all local and national electrical codes.

Front View of 3-Tier Rise Unit

INTERLINK IQ



Interlink IQ provides the ability to use one 15-amp infeed starter and power up to 8 power modules and/or jumpers. Up to 8 connections are possible on one Interlink infeed. A 40' maximum run, or no more than 8 units, whichever comes first—are possible to daisy chain through Interlink IQ. Interlink IQ provides a visual indicator of system status. LED illuminates green when you are connected and ready to plug in. A red light indicates you have linked too many units.

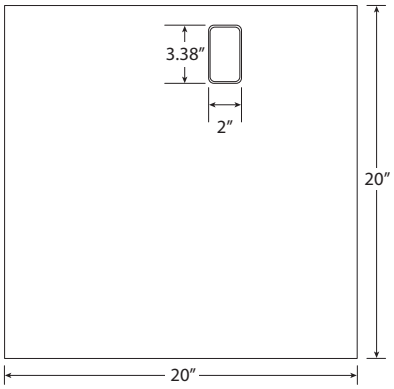


Electrical components listed on page 255.

BOXES

Boxes can be utilized with Rise Lounge, Rise Platform Lounge, or as freestanding units with glides or platform legs. 4 glides used per box. When specified with Rise Lounge, follow the below guide for dimensional alignment.

To minimize scratches, it is recommended to use the laminate box instead of veneer in Rise Lounge applications when pads are not specified on top of a box.

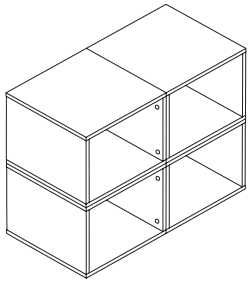


BOX STACKING

- Boxes can be stacked up to 68" high.
- Boxes can either be stacked directly on top of one another or stacked in an offset tier. When stacked, boxes should only be placed on top of boxes that are the same size or bigger.

POWER READY BOXES

Boxes that accept power have an optional power cutout that can be specified. Power module is purchased separately with model AUPWRMOD or AURNDPWRMOD.



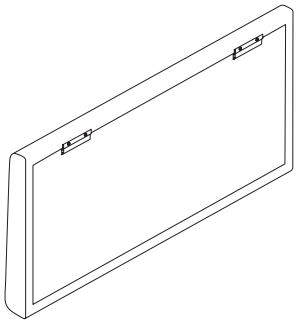
Bottom View of 20"W x 20"D Box

PLANTERS

Planters can be utilized with Rise Lounge, Rise Platform Lounge, or as freestanding units with glides to act as a space divider. 4 glides used per box.
*Plant liners purchased separately. Recommended size is 8"W x 28"D x 9"H.

BOX/PLANTER GANGING

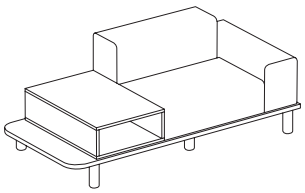
- Required: Boxes stacked on top of one another. 2 ganging bolts (CDBBGB) per connection.
- Required: Boxes/Planters stacked on top of the Platform Lounge. 4 mounting bolts (CDBPMB) per connection.
- Optional: Boxes positioned side to side. 2 ganging bolts (CDBBGB) per connection. Ganging and mounting hardware is purchased separately.



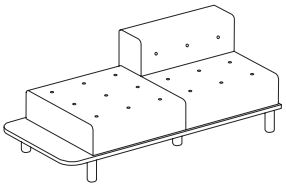
BOX PADS

Box pads can be placed on top of boxes to provide an additional seat. Box pads come standard with an anti-skid bottom to prevent the cushion from sliding when in use. Box pads can be optionally secured to boxes with wood screws. Wood screws ship standard with the pad.

BACKRESTS



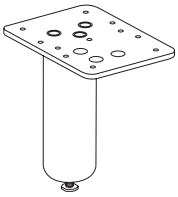
Backrests maximize spaces when square footage is limited. The backrests are mounted to walls with a z-bracket attachment. Z-bracket ships standard with the back rest.
It is recommended to hang a backrest with the bottom of the backrest near the top of the seated surface.



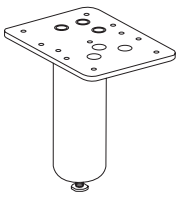
Back View of Backrest with Z-Bracket Installed

RISE PLATFORM LOUNGE

Rise Platform Lounge provides elegant solutions for touchdown work areas and reception spaces. Featuring a wide selection of laminate platforms sizes, the Platform Lounge cushions, boxes, and planters can be arranged to create tailored work environments.

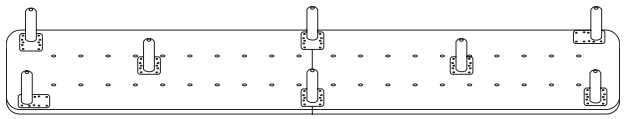


PLATFORM



The platform is available in laminate only with the choice of a rectangular or soft corner end. The soft corner end creates an 8" offset hang that provides a place for personal belongings. The platform depth is 1½" deeper than the cushions and boxes, which provides a ¾" offset at the front and the back of the lounge, highlighting the texture and material of each component.

PLATFORM LEGS

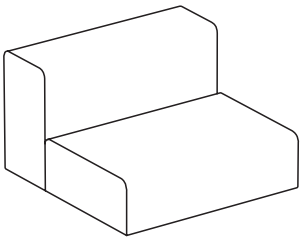


- 40"W or less – platforms require 4 legs (CDLWK4).
- 48"W or greater – platforms require 5 legs (CDLWK5).
- Platforms positioned in sequence can use shared legs (see below).
- Legs can be positioned in either a center or corner mount depending on the location of the legs under the platform predetermined by set pilot holes. Center or corner mount type is not specifiable and will be configured during installation.

Center Mount

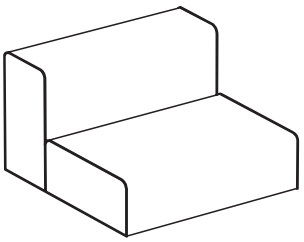
Corner Mount

Underside View of Platform Showing Leg Positioning and Mounting Hole Location for Cushions/Planters/Boxes



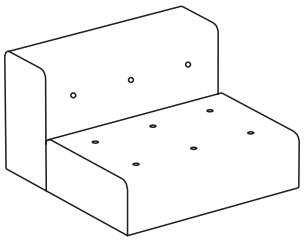
PLATFORM LOUNGE CUSHIONS

The Platform Lounge cushions consist of four base models that can be utilized on top of the rectangular or soft corner end platform. The Platform Lounge cushions can span across two platforms when shared platform legs are utilized. Platform Lounge cushions must be mounted to the platform. Mount hardware ships standard with the cushions.



CUSHION STITCH DETAILS

The box pads, backrests, and Platform Lounge cushions are available in 3 stitch details. These stitch details include plain, contrast welt, and button tufted*.



*Button Tufted is not available on the low armrest.

Adaptive Tables

Admix™ is an innovative table system designed to be easily adaptable and flexible to meet the needs of collaborative teams and hybrid settings. Inspired by light-scale tables, this user-friendly table system provides the functionality and application range of a training table that is effortlessly reconfigurable. With teamwork being at the forefront of today's office environment, Admix™ offers ancillary components with thoughtfully executed technology support for collaborative work in the office and equitable hybrid meetings.

APPLICATION

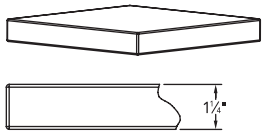
Full collection that offers countless configuration options to support the various types of collaborative meetings.

- Collaborative Spaces
  - Conference
  - Project rooms
  - Makers space
  - Open Collaborative
- Learning Spaces
  - Reconfigurable tables
  - Training rooms
- Digital Meetings
  - Equitable for in person and view from camera
  - Proper viewing angles and viewing distance

SPECIFICATION CHOICE

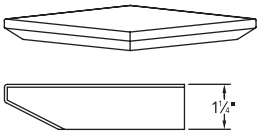
Range of shapes, sizes, and configurations to meet the needs of any space available in an array of materials.

1. **Choose your top**
   - Shapes, sizes
2. **Choose your base**
   - 4 heights available: continental, standard, counter, bar
   - Footrests
   - Shelving options
   - Caster/glide/wheelbarrow
3. **Choose your style**
   - Veneer, laminate, metal finishes
4. **Choose your technology**
   - Power integrated into tables
   - Mobile powered satellite tables
   - Wire management under surface and vertically down leg
   - Braided cord wrapped around wire hook



KEY FEATURES

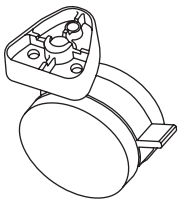
Feature rich product that supports user choice to adapt to the needs of highly collaborative teams and video conference settings.



- Interchangeable caster/glide
- Telescoping base
- In surface and under mount power
- Braided cord power units
- Footrest standard on counter and bar height
- Media tops and media walls
- Homebase accessories - bag hook, desk mat, tray
- PET wire manager
- Tables with shelving
- Organic top shapes

OPTIONS

All tops are available in veneer or laminate with a flat or knife edge.

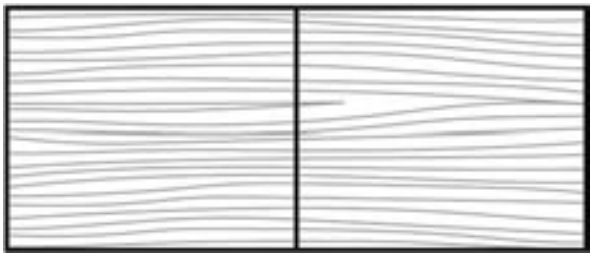


Flat Edge

Knife Edge

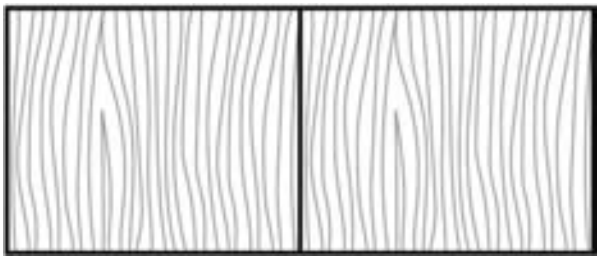
Tables can be specified with 4 casters, 4 glides, or a wheelbarrow setup (2 casters, 2 glides). Casters are available in silver or black. The caster and glide are integrated into a casting at bottom of leg to provide interchangeability over the life of the product.

Casters



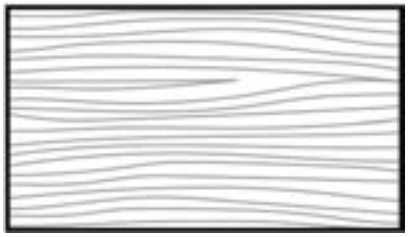
Glides

LAMINATE TOPS

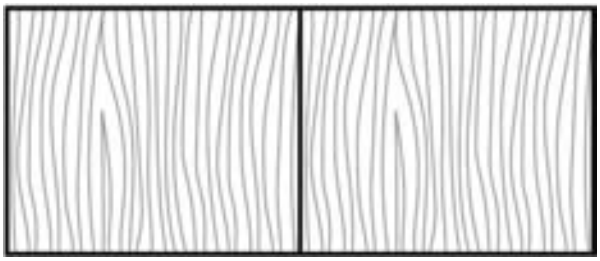


SINGLE-PIECE TOPS – Woodgrain laminates as standard product are always oriented with the grain direction running parallel to the length of the table top.

TWO & THREE PIECE TOPS – Tops longer than 96". Woodgrain laminates as standard product are always oriented with the grain direction running parallel to the length of the tabletop. Please note that 2-piece tops, in woodgrain colors, will not have exact grain alignment in the center where the two halves meet, a reasonable match can be expected. Allsteel cannot guarantee a grain match on tables that are 60"W. Woodgrain laminates will be aligned within ⅜" across seams unless otherwise noted in the price guide pages.



SPECIAL TOPS – Specials for wide tables. Woodgrain laminates as specials wider than 60" are always oriented with the grain direction running parallel to the seam of the tabletop. Allsteel will create best match grain alignment but cannot guarantee a perfect match along the seam between the pieces of laminate on two and three piece tops.



VENEER TOPS

SINGLE-PIECE TOPS – All veneer single piece tops are oriented with the grain direction running parallel to the length of the table top.

MULTI-PIECE TOPS – All veneer multi-piece piece tops are oriented with the grain direction running parallel to the seam of the table top.

UNDER MOUNT POWER & IN SURFACE BEZEL MOUNT POWER

Power unit available in an under mount or in surface bezel mount installation. In surface requires cutout to be specified in worksurface. Cut out size is 1.938" x 6.313".

Units come standard with 2 power simplexes and a combo USB-A + USB-C. 1 power simplex is rotated 90 degrees to
accommodate various plug styles.

Standard plug is 10ft cord length, Hardwire conduit is 6ft, and Braided cord is 10ft length. Interlink IQ option also available for daisy chain applications.

IN SURFACE TECH MODULE

Power unit requires cutout to be specified in worksurface. Units available with Extron plates or data plates to accommodate various Audio/Video requirements. Cut out size is 5.025" x 11.094".

Corded

Corded models plug directly into an outlet and cannot plug into other corded power modules. In order to plug into other units the units need to be hard-wired.

Hardwire

Hardwire models are provided with 10 feet of sealtight cable. Customers must furnish junction boxes, conduit, and additional wire to be in compliance with local and national codes.

Qi charging is available on Corded and Hardwire versions.

- Includes 3 Qi charging coils (5 watts each) for wireless charging.
- Units have LED indicator lights below the lid's surface.
- Units house power and charging USB inside. All units are Qi certified.

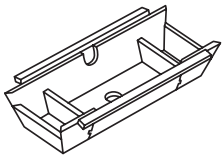
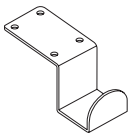
PET UNDERSURFACE WIRE MANAGER



Made from 100% PET and provides a warmer, softer feel for a wire manager solution. 12mm thickness in dark grey color. Ends open for easy wire management and to allow the wire manager to sit directly under an external stiffener bar.

Attaches to bottom of worksurface with screws through flanges. Access door opens for easy access to inside of unit. Interior height approx 4" and trapezoid shape allows for interior width from 4" at bottom to 6" at top of unit. Interior dimensions also allow for it to mount under an insurface bezel mount power unit.

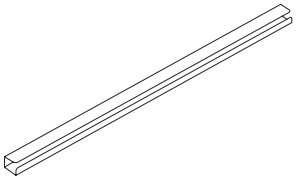
Available in 18", 36", and 48" widths. Multiple units may be used in combination on larger tables — recommend 3-12" between units when placed end to end. Unit is optional and must be ordered separately.



Designed for the Environment

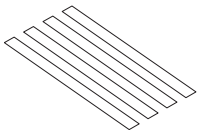
- Low VOC
- HPD
- Cal 01350 Emissions Compliant
- Rapidly renewable content
- Prop 65 Compliant
- Declare Compliant
- Red List Compliant
- No FR Additives
- No Conflict Minerals

DUAL PURPOSE WIRE HOOK / BAG HOOK



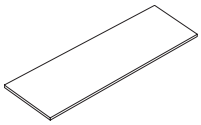
The dual purpose wire hook / bag hook is ideal for reconfigurable environments with mobile tables. Intended to be used with a braided cord where the cord can be easily wrapped up. Max load capacity is 20lbs. Unit is optional and must be ordered separately.

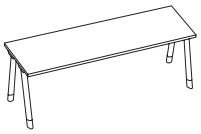
METAL VERTICAL WIRE MANAGER



The vertical wire manager is bent sheet metal and attaches to inside of leg with double stick tape. Unit is powder coated in all Admix™ metal colors to allow it to match the chosen leg color. Interior dimensions are approximately 1" x 1" with 1 side partially open for wires to be easily routed to inside of unit.

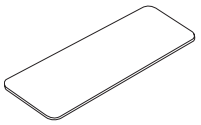
Unit is optional and must be ordered separately.





VELCRO STRAP VERTICAL WIRE MANAGER

Model ships with quantity 4 velcro straps. Ideal for light duty braided cord applications or standard plug units where cord is visible. Not recommended for hardwire conduit. Made from 11" long x 0.75" wide two-side hook and loop velcro. Unit is optional and must be ordered separately.



- Top and Base ordered separately. Telescoping tops intended to be used with telescoping bases.
- Option for cutout only, order power units separately.
- Reference page 292 for cutout locations.
- Available in veneer or laminate tops, flat edge only.
- Edgeband color option specified separately for laminate.
- Tops ship with pilot holes for locating base.
- Telescoping inset range per side: 60"W = 8.75", 66"W= 10.0", 72"W = 11.0", 78"W = 12.0", 84"W = 12.0"
- Base includes external stiffeners for tops, telescoping rail system and threaded knob to lock down by hand.
- Base ships knocked down.
- Telescoping tables not for use with accessory tray ATLADM-ACCTRAY due to rail system.

Example: **ATLADM-TMRRECL3660F.X.LDW1.DW.GN**

- Order base separately.
- Option for cutout only, order power units separately.
- Reference page 292 for cutout locations.
- Available in veneer or laminate tops, flat or knife edge.
- Edgeband color option specified separately for laminate.
- Tops ship with pilot holes for locating base.
- For use with bases on pages 307-308.
- Tops 120" or greater are 2 piece. Adjoining seams are not edgebanded.

Example: **ATLADM-BFMEDIAM4848L.P71.GLD**

- Must be attached to the wall. Not for freestanding applications. Z brackets included for wall mounting.
- Top and bottom are 2 piece and require field assembly. Fabric panel also ships unassembled.
- Center panel on lower cabinet is a hinged door for access to wires and outlets.
- A vertical cavity exists from the hinged door to the fabric panel cutout to manage wires. Wire cavity is 4.25"D x 15.0"W with a grommet pass through from top to bottom halves.
- Table attached models include an angle bracket to support end of table and a grommet cutout to manage cords from bottom of table top to inside of media wall.
- Floating media walls can be mounted at desired height in field.
- Fabric panel attaches to media wall with Z brackets. TV mount GATVMB can be attached directly to face of the fabric panel. A low profile non-articulating TV mount should be used.
- Fabric panel is 60"W x 40"H and intended for use with flat screen TV's 55" and smaller.
- Center cutout in fabric panel is 10"W x 10"H to manage wires into media wall.

- Top and Base ordered separately.
- Available in veneer or laminate tops, flat or knife edge.
- Edgeband color option specified separately for laminate.
- Tops ship with pilot holes for locating base.
- Base includes:
  Qty 3 — undermount power units daisy chained together with 20ft braided standard plug cord.
  Qty 1 — wire hook for braided cord.
  Qty 1 — low metal shelf 11" off the floor.
- Specified paint color on base applies to table legs, metal shelf, and wire hook.

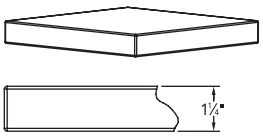
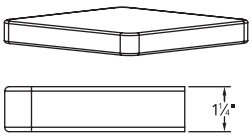
FSC Certified Wood at Allsteel

See page 328 for more information.



Aware Collection

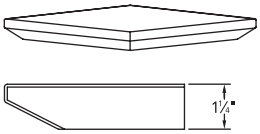
Allsteel designed a flexible and comprehensive collection of active learning furniture. The Aware Collection consists of buffet and recycle credenzas, mobile and wall-hung marker boards, and unique shaped table tops that offer a timeless design. Look to the Aware Collection brochure for full details.



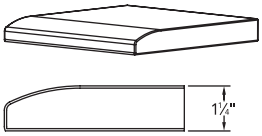
Materials and Edge Treatments

Aware tables offer functional flexibility and aesthetic versatility to provide one, simple solution for the entire office. The broad selection of materials and finishes ensure that the tables look beautiful in any application.

Laminate Edges

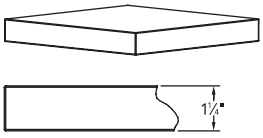


Flat Edge



T-Mold*

Fluid Form Edge



Knife Edge — All 4 Sides

Eased Edge — Front Side Only

Veneer Edge

Square Edge

T-mold tops will have a ¾" radius on all corners.

24"D or 30"D Knife edge rectangle tops feature a shaped edge on all four sides. Eased edge tops feature a shaped edge on one side.

Allsteel Fluid Form is an advanced surface material that offers a seamless solid base layer with protective coating. Its seamless 3-dimensional edge profile eliminates the need for edge banding or T-mold making it ideal for horizontal surfaces.

FSC Certified Wood at Allsteel

Forest Stewardship Council® (FSC) certification promotes the sustainable harvesting of forests worldwide. The FSC program sets requirements for the management of the forest and for everyone that handles the wood from forest to product. Allsteel has an FSC Chain of Custody and can provide FSC certified products to customers who choose to order them. FSC products can contribute to LEED projects. To order FSC products, the "FSC" option must be selected in the model code at time of order. For more information, please contact Customer Support at 888-255-7833.

FSC Trademark License code FSC-C014704.

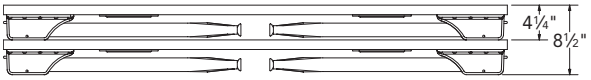
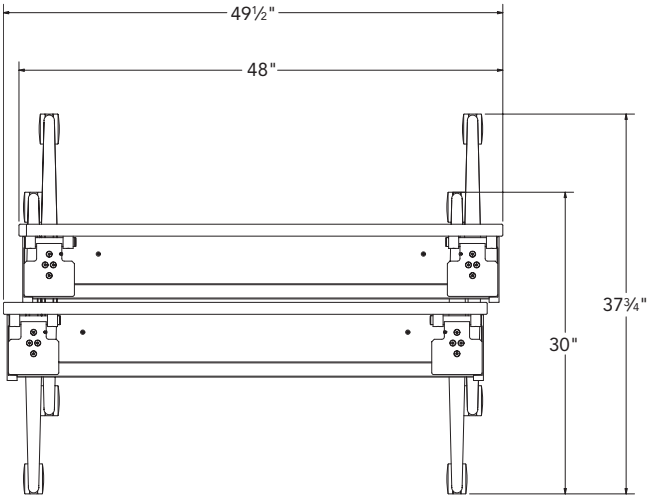
Space Requirement Guidelines



Tables:

- 24"–30"W per person depending on materials
- 4' between tables
- Breakout Rooms 10–12 sq. ft. per person
- Computer Training 20 sq. ft. per person



Space Savings With Nesting Tables

1. Start with table size in nested position:
   18"D table = 18"D
   24"D table = 24"D
   30"D table = 30"D
   36"D table = 36"D
2. Add 7¾"D for each additional nested table (no additional required if modesty panel is attached).
   Example: A 24"D table in nested position is 24"D.
   Add 9 additional nested tables
   (9 x = 69¾"D).
   Depth requirement for ten nested tables is 93¾"D.
3. Add 1½"W for each additional nested T-Leg table to the width of the widest table. Maximum 6" additional width. (3"W for V-Leg; maximum 12" additional width)
   Example: Ten 72"W tables are nested.
   72" + 6" = 78"W
4. Total space for 10 nested tables above is 93¾"D x 78"W.
5. Space saved by nesting is over __ square feet.
6. Table height of Aware nested tables:
   18"D table = 37⅞"H nested
   24"D table = 41⅞"H nested
   30"D table = 44⅞"H nested
   36"D table = 47⅞"H nested

POWER/DATA PORT CUTOUTS FOR AWARE TABLES

When specifying Aware tables, grommets or power/data port cutouts may be specified for power/data. Grommets are available in plastic or oval (shown at right). If cutouts are specified, a pop-up power/data port must be specified for use in the cutout. Cutouts are unfinished and cannot be used as grommet openings. The chart below indicates which grommet or cutout options are available on Aware tables.

Code	Position
AGO	No grommets or cutouts.
AG1	Single grommet, centered left to right, 2"from back of surface.
AG2	Pair of grommets, approximately 3" in from each side, 2" from back of surface.
ATC	One cutout for Pop-up Power, centered left-to-right and front-to-back. Only on 30"D and 36"D tables. Do not specify on folding or nesting tables.
ATE	One cutout for Pop-up Power, centered left-to-right, 2" in from back of surface.

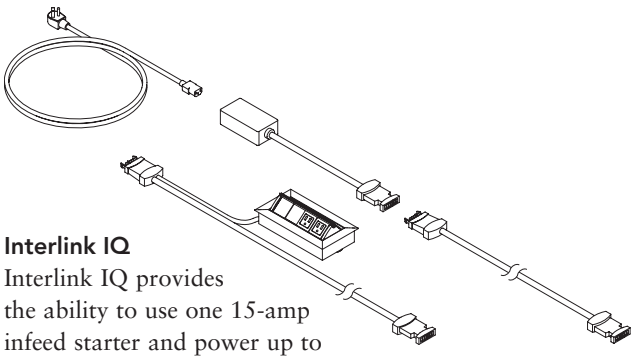
AWARE

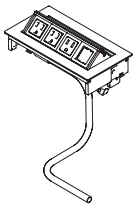


ELECTRICAL OPTIONS

Aware Tables offer three power options: Corded, Interlink IQ, or Hardwire. Installation and use of electrical systems, the number of receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national electrical codes. Verify code requirements before ordering. Chicago requires hard wiring. Chicago and New York do not permit use of Interlink IQ components.

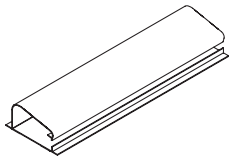
Corded

Corded models plug directly into an outlet. Corded modules cannot plug into other corded power modules. In order to plug into other units the unit would need to be hardwired. When routing corded models to a wall outlet, the maximum amount of cord that can be exposed outside of the furniture is 6 feet. (New York, check local code.)

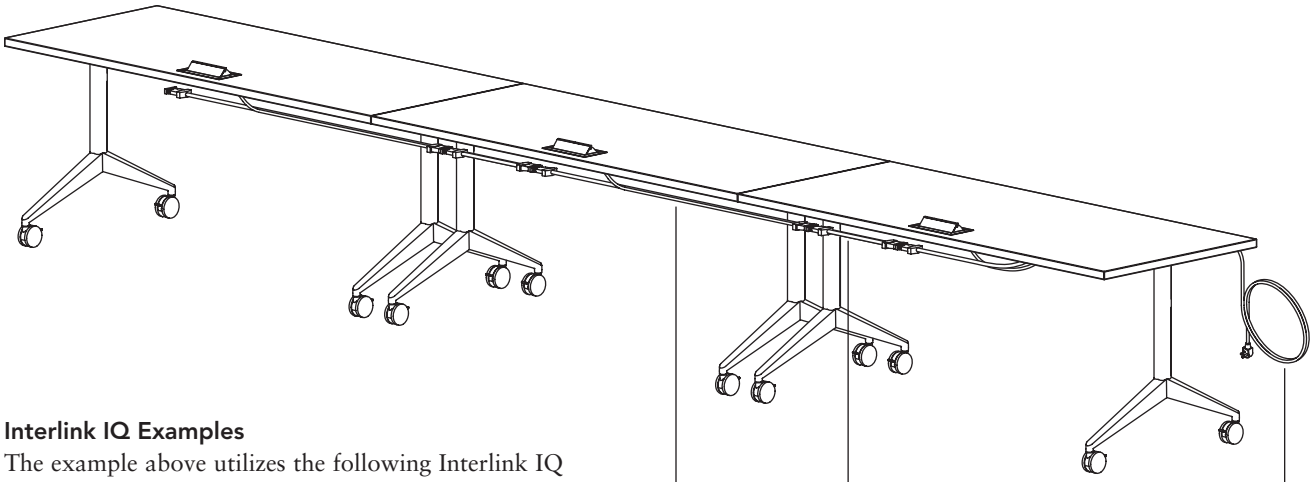


Interlink IQ

Interlink IQ provides the ability to use one 15-amp infeed starter and power up to 8 power modules (including jumpers) off of one infeed starter. Interlink IQ provides a visual indicator of system status. LED illuminates green when you are connected and ready to plug in. A red light indicates you have linked too many units. See page 331 for examples of multiple tables using Interlink IQ components.



Hardwire



Hardwire models are provided with 10' of sealtight cable. Customer must furnish junction boxes, conduit, and additional wire to be in compliance with local and national electrical codes.

Wire Trough

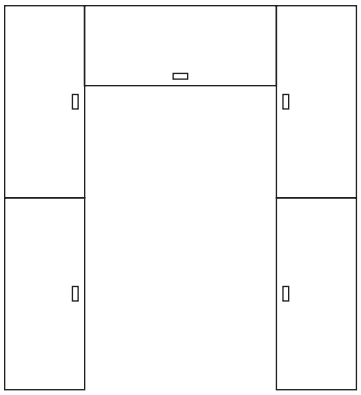
Attach wire trough as needed to the underside of tables to support cords.

Interlink IQ Examples

The example above utilizes the following Interlink IQ components to power three 72"W Aware tables:

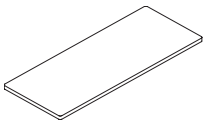
3 – Interlink IQ 60" Power Harnesses model number: AW4QH60P (provides two AC power receptacles per unit)

2 – Interlink IQ 36" Jumpers model number: AW4QJ36



1 – Interlink IQ Starter model number: AW4QBI

The example below utilizes the following Interlink IQ components to power five 72"W Aware tables:



5 – Interlink IQ 60" Power Harnesses model number: AW4QH60P (provides two AC power receptacles per unit)

2 – Interlink IQ 36" Jumpers model number: AW4QJ36

1 – Interlink IQ Starter model number: AW4QBI

- Order folding legs separately — see options on page 335.
- Specify grommet location, type, and color — see page 331.
- Eased edge tops feature shaped edge on front side.
- Optional electrical components, wire trough, modesty panel, and ganging hardware ordered separately — see pages 352-354.

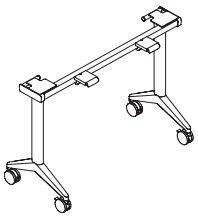
Aware® Leg Options for Trapezoid and Half-Round Table Tops



- Order Top separately — see options on page 348. "T" suffix top for T-legs and "V" suffix top for V-legs.
- Leg finish options include painted (color specified) or polished. Legs require some assembly.
- All casters are urethane tread locking casters. Choice of Black or Silver.
- Legs are sold in pairs. Nesting models include beam.
- Legs below with top from previous page creates seated height 29"H table. Glides provide ½" of adjustment.

S *Shippable by small-package carrier.*

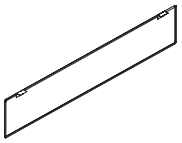
Modesty Panels:



- 9¾"H x ⅛"D.
- Modesty panel must be removed from tables prior to folding.
- Tables may be nested with modesty panel attached to table. Nesting depth of additional tables does not increase.
- Modesty panel is undersized by 9⅜" from width of table top.
- Nesting V-leg models require one size smaller modesty panel than T-leg. Example: 42"W Nesting V-leg table requires AW4HM36. See below.

Universal Hook

Mounts to underside of worksurface and provides storage for bags, coats and purses. Hooks can be used as a horizontal wire manager under worksurface.

Ganging Bracket

- One-step tool-free operation.
- Tables have pre-drilled holes for proper installation and alignment of ganging mechanism.
- Includes two ganging links and two screws. Recommend one package of 2 brackets per table.
- Ganging brackets will not work with knife edge surfaces.

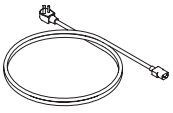
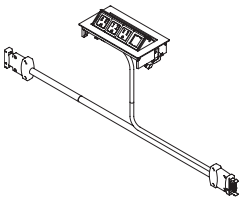
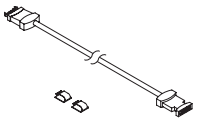
Wire Trough
- Accepts cords for routing
- Wire trough adheres and screws to underside of table surface



Wire Manager Covers
- Attaches to leg and conceals power, voice, and data cables.
- Will not work on large T folding legs.
- Cable capacity shown on page 331.



Power/Data Ports
- Corded has 10' cord and plug.
- Hardwire has 10' cord.



Interlink IQ Electrical Modules
- Pluggable, single circuit electrical system
- UL recognized as a powered table system and meets the requirements of UL 962
- Interlink IQ modules require a minimum of one Interlink IQ starter.
- A maximum of 8 Interlink IQ power modules (including jumpers) can be "daisy chained" together in any combination off of one 15-amp infeed starter.
- System status indicator:
  – Red light indicates too many units connected
  – Green light indicates appropriate use
- All models include wire management clips and hardware
- Power harness includes 60" cord and 11" tail. Daisy chained tables in line over 60"W require 36" jumper between modules.

S *Shippable by small-package carrier.*

- 2- and 3-Bay credenzas ship fully assembled.
- Available in solid and woodgrain laminate colors. You can select one laminate for the case and a second laminate for the front doors and back panels. Credenza top including front edge is the same color as the case.
- Painted mesh in Designer White, Flint, or Silver at top and bottom of the front and back sides of unit provides passive ventilation.
- Edge guards on mesh and wire manager protects cords and fingers.
- Grommet models feature square Silver metal grommet.
- Six leveling glides on 72"W, four glides on 48"W. Leveling range is 1".
- Credenzas are constructed from ¾" thick high-pressure laminated particleboard with 1 mm edge banding and European cam-and-pin construction.
- Units are shipped with either lock cores removed or as non-locking. Core removable lock option allows key numbers to be easily changed in the field. Cores available in the Systems, Casegoods, & Space Division price list on page 947. Note: Middle cabinet on 3-Bay units do not lock.
- Shelves are painted metal. Base shelves are secured, except center shelf in 72"W credenza.
- Interior bay dimensions are 22"W x 28⅛"H x 22⅜"D. Secured bottom shelves are 19"D to account for ventilation and wire management. Rated for 50 lbs.
- Removable back(s) snap on for easy component installation.
- Bottom wire management channel runs entire width of credenza.
- Optional top hung drawers (8½"H) use full extension slides; limit of one drawer per bay. Drawers cannot be used in same bay with AV rack, waste pullout, and will limit size of refrigerator.
- Slide out A/V storage rack features EIA spacing with twelve usable rack spaces.
- Units ship with one adjustable shelf per bay. Shelves are adjustable in 6" increments.
- Additional metal shelves are field-installed using supplied template, maximum of three per bay.

- 2- and 3-Bay credenzas ship fully assembled.
- Available in solid and woodgrain laminate colors. You can select one laminate for the case and back, and a second laminate for the front doors. Credenza top including front edge is the same color as the case.
- Painted mesh in Designer White, Flint, or Silver at bottom of the front side of unit matches buffet credenza.
- **Waste bins and inserts are not included** with Recycle Credenzas. Recommend 25 gallon waste bins 17" x 17" x 28"H by Tough Guy, Rubbermaid, Continental, or Safco. Order inserts separately.
- Credenzas are constructed from ¾" thick high-pressure laminated particleboard with 1 mm edge banding and European cam-and-pin construction.
- Front plates and optional inserts are metal.
- Septums in 3-Bay units provide separation and support.
- Units come with 3 of each label with 57"W units; and 2 of each label with 36"W units. Silver and white units come with Black labels; Flint comes with White labels.
- Back is inset ⅞" for easy handling and flush fit against wall.
- Leveling glide range is 1".

- Mobile marker boards are available in porcelain or laminated glass.
- Mobile tack boards are two-sided with platinum fabric and silver frames.
- Feet are 24"D x 3"H on 50"H and 30"D x 3"H on 72"H units. The low profile foot fits under most footed panels and storage.
- Foot design allows multiple boards to be nested.
- Mobile boards have two locking casters.
- Boards are shipped with feet unattached in same package.
- Porcelain boards are two-sided white, magnetic, and can be used for projection. Smooth, dry-erase porcelain surface for easy writing and clean erasing. Low odor markers are not recommended.
- Laminated glass boards are two-sided white, non-magnetic. For best results use bold marker colors. Low odor markers are not recommended.
- Marker and eraser holder comes with suction cups for attachment.
- Optional hooks are designed to hold large easel pads with slots.

- Wall-hung marker boards are available in porcelain or back painted glass.
- Porcelain boards are white, magnetic, and can be used for projection. Smooth, dry-erase porcelain surface for easy writing and clean erasing. Low odor markers are not recommended. Slim frame design, front of frame is 5/32". Frame is anodized aluminum with mitered corners and extends ¾" from the wall.
- Porcelain boards can hang either vertical or horizontal. Galvanized steel Z-brackets are included. Wall fasteners not included.
- Glass boards are white, back painted glass that are easy to clean and erase. Constructed with ¼" tempered safety glass with beveled corners, polished edges, and a steel back. Boards are magnetic. Frameless, floating mounted board extends ½" from wall. For best results use bold marker colors. Low odor markers are not recommended.
- Wall-hung boards are designed to easily attach to a solid wall without exposed hardware for an integrated appearance.
- Hanging instructions provided. See glass note below.
- Marker and eraser holder comes with suction cups for attachment.

36"H x 48"W	**AW4WB3648G**	95	3.4	**$ 4070**

Note: If multiple boards are being installed on the same wall, use caution when positioning glass panels next to each other. Due to the weakest point of tempered glass being along the edges, the edges should be protected as much as possible. To insure a successful installation, leave a gap of one quarter inch between boards to prevent damage to the glass. Allsteel will not be held responsible for damage caused by improper installation.

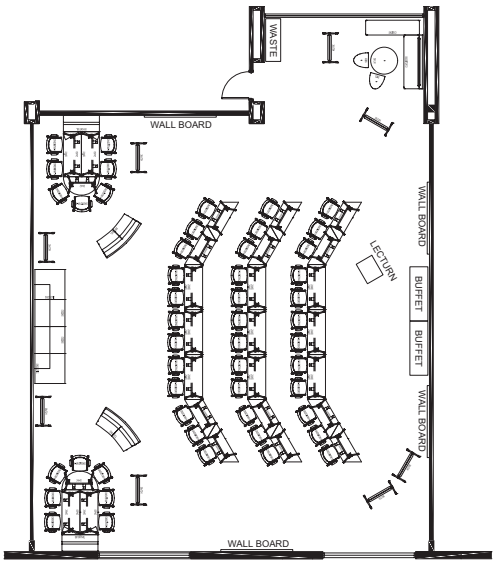
Setting the table for change.



Today's corporate training room can take many forms, including lectures, brainstorms, and breakouts – sometimes requiring multiple transformations in a single day. Whether you're planning for an hour-long meeting or an aggressive all-day agenda with various room changes, the Aware collection can easily create the space you need right now and adapt to create the space you'll need in a few hours.

These colors are intended to be an inspirational option for the trending market. Product application is limited and color availability is approximately two years to coincide with evolving workplace trends.

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

Horizontal surfaces to be full-fill, ClearTech finish.

The beauty of wood is the natural variation of grain patterns and colors that make each piece unique. This variation is also influenced by lighting conditions, orientation of mated parts, and varying acceptance of the finishing process. The varying colors and physical characteristics naturally occur in all wood species but are most pronounced in lighter colored woods, and are especially evident in natural finishes.

NOTE: Refer to individual product pages for upcharges.

FSC Certified Wood at Allsteel

See page 328 for more information.

Harvest Classic Table
120"W x 48"D Full Top with 29"H Non-Powered Base

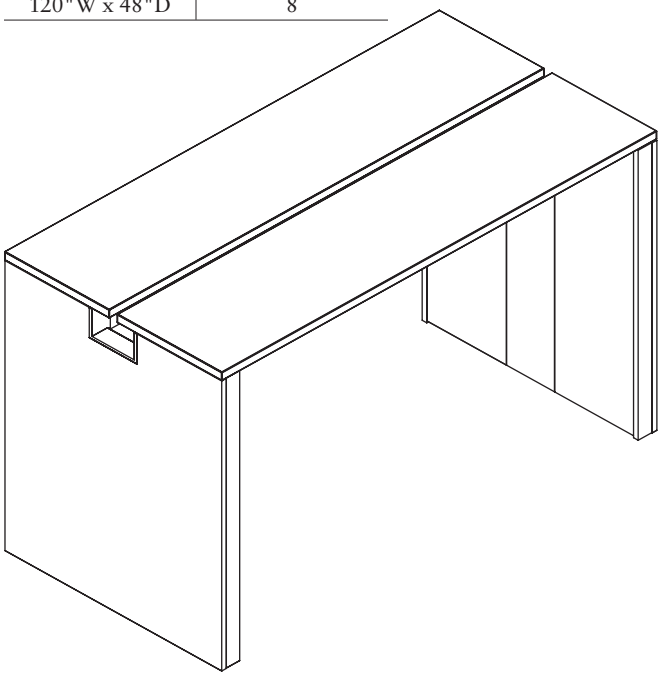
Harvest™

Harvest brings all the collaborative potential of a multi-purpose table to the corporate environment. It's welcoming. Useful. It invites conversation and interaction whenever people meet up. So it's easy to Harvest the best ideas.

MODELS AND OPTIONS

Select the seated table height models for meeting and conference rooms or touchdown areas. Or specify a standing-height version for project spaces or cafés. Harvest Classic includes an optional split top that facilitates cord management and power/data hubs that allow for easy access to technology. The sliding doors in the technology trough not only provide easy access to cords from below, but are painted to add an accent color to the space. A solid top can be specified when technology access isn't as critical. Harvest tables are available in laminate or veneer.

APPLICATIONS



Place Harvest tables in cafés, atrium spaces, libraries, open-plan areas, and conference rooms.

KEY FEATURES

Harvest Classic tables are offered in a variety of sizes with power and data capability. Inspired by gathering spaces where people like to talk and share, like the dining room table or coffee area in the office, it invites conversation and interaction whenever people meet up.

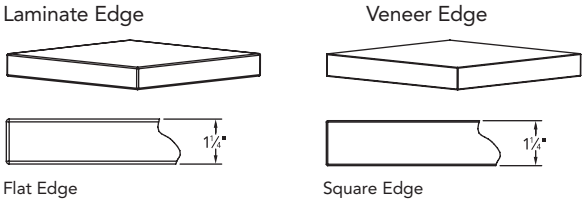


TABLE CAPACITIES

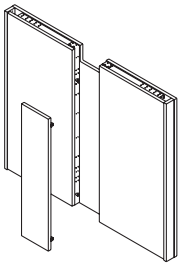
Table Top	Seating Capacity
72"W x 36"D	4
72"W x 42"D	4
72"W x 48"D	4
96"W x 36"D	6
96"W x 42"D	6
96"W x 48"D	6
120"W x 36"D	8
120"W x 42"D	8
120"W x 48"D	8

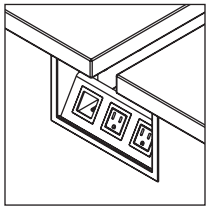
72"W x 36"D Split Top with 42"H Powered End Panel Base

MATERIALS AND FINISHES



CLEARANCE DIMENSIONS

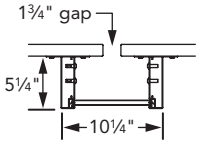
Between Bases



End panel bases are 3"D making clearance between bases 6" less than the width of top:

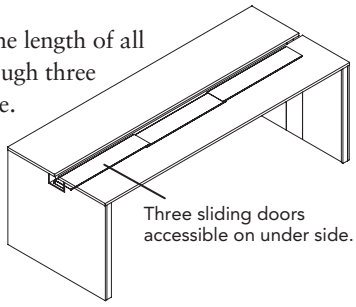
- 72"W top has 66" clearance
- 96"W top has 90" clearance
- 120"W top has 114" clearance

End Panel Bases



All end panel bases have a hidden center channel 7"W x 1½" D for routing cables from floor to trough. The end panel access door can be mounted flush to bottom for a clean aesthetic or rotated to provide a one-half inch offset to allow for additional cord and cable clearance.

Powered end panel models feature cutouts for mounting a power/data hub and align with end panel center channel and the technology trough of top. Full tops (without split) can be used with powered end panels. Cutout is finished with a PR6 Silver bezel.



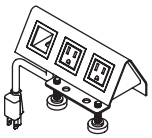
Split Tops

Split tops provide a 1¾" gap for routing cords and power adapters. Inside technology trough dimensions are 7"W x 3¾"D.

Wire Trough and Beam

A recessed wire trough runs the length of all table tops. It is accessible through three sliding doors on the under side. Sliding doors can be easily removed for cleaning.

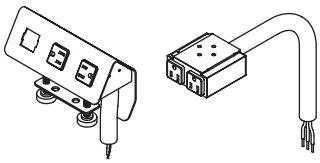
Center trough with beam is 10¼" wide and extends 5¼" below top. Clearance under top and under trough:



29"H End Panels provide 28¼"H / 23"H
42"H End Panels provide 40¾"H / 35½"H

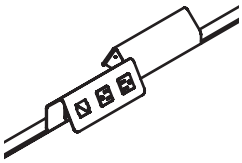
Distance from front edge of surface to trough:

36"D Top is 12⅞"D
42"D Top is 15⅞"D
48"D Top is 18⅞"D



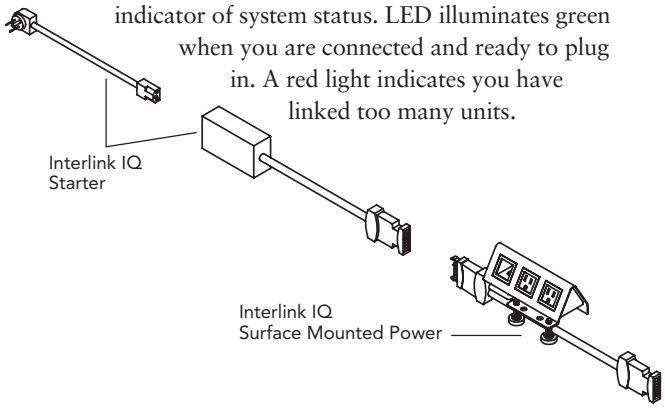
ELECTRICAL OPTIONS

Harvest Classic Tables offer three power options: Corded, Interlink IQ, or Hardwire. Installation and use of electrical systems, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes. See matrix on page 365 for suggested cord length requirements. Verify code requirements before ordering. Chicago requires hard wiring. Chicago and New York do not permit use of Interlink IQ components.

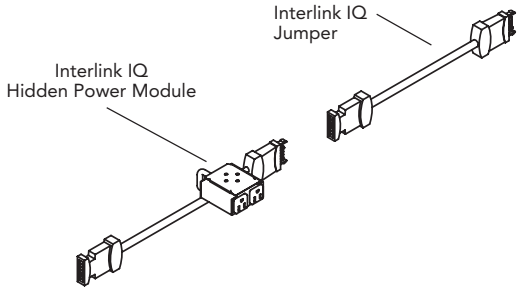


Corded

Corded models plug directly into an outlet and can be mounted back-to-back. Corded modules cannot plug into other corded power modules. In order to plug into other units the unit would need to be hardwired. When routing corded models to a wall outlet, the maximum amount of cord that can be exposed outside of the furniture is 6 feet. (New York, check local code.)



Hardwire

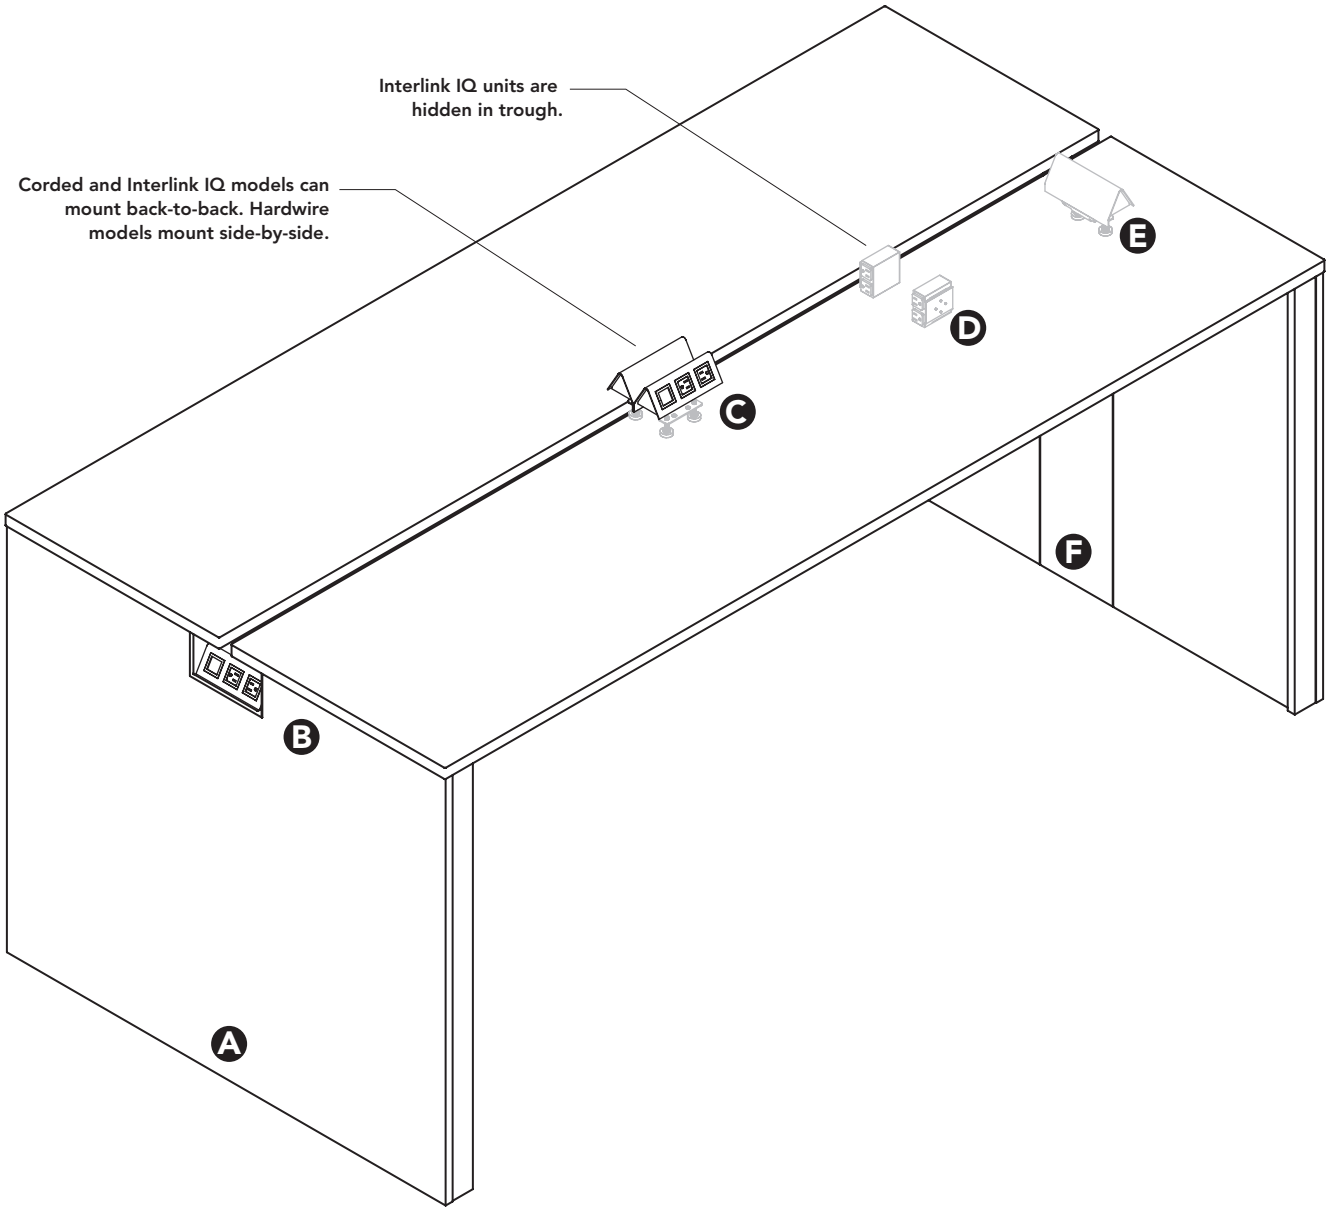


Hardwire models are provided with 20' of sealtight cable. Customer must furnish junction boxes, conduit, and additional wire to be in compliance with local and national electrical codes. Hardwire surface mounted modules cannot mount back-to-back and require units to be mounted side-by-side (see below).

Interlink IQ

Interlink IQ provides the ability to use one 12-amp infeed starter and power up to 8 power modules (including jumpers) off of one infeed starter. Interlink IQ provides a visual indicator of system status. LED illuminates green when you are connected and ready to plug in. A red light indicates you have linked too many units.

Interlink IQ Examples:



Example #1 – 120" Harvest Classic table with full top, power needed in end panels

- (1) **S913P06LS** – 6' Interlink IQ starter
- (2) **S913PLE** – Interlink IQ end panel power module
- (1) **S913P05LJ** – Interlink IQ Jumper

Example #2 – Two 120" Harvest Classic tables with split tops, power needed in end panels and throughout table

- (1) **S913P06LS** – 6' Interlink IQ starter
- (2) **S913PLE** – Interlink IQ end panel power module
- (4) **S913PLM** – Interlink IQ surface mounted power module
- (2) **S913HPLE** – Interlink IQ Hidden power module

Harvest Classic Electrical Routing

General Rules

- Corded power modules cannot plug into other corded power modules. Corded modules can plug into hardwired modules.
- Corded power running to a wall outlet is limited to 6' of cord exposed outside of the furniture. (New York, check local code)
- An Interlink IQ Starter is required for Interlink IQ components and can support a maximum of 8 power modules (including jumpers) in any combination.
- Chicago requires hardwire. Interlink IQ can not be used in Chicago or New York.

- All models below include rectangle top and beams with bottom access sliding doors to create a technology trough. Order the same depth end panel bases separately on page 367.
- Laminate tops have a flat edge that is color coordinated. Veneer tops have a matching square edge.
- Beams with sliding doors are painted metal and available in P1, P2, or P3 paint colors.

HARVEST

- Models below include two end panel bases and connecting hardware. Order matching depth tops that include beams and doors separately on page 366.
- Laminate end panel bases have a flat edge that is color coordinated. Veneer bases have a matching square edge.
- All end panel bases have a 7"W x 1½" D hidden center channel for routing cables from floor to trough.
- Powered end panel bases are power and data ready. Order electrical and data modules and cables separately. See page 368.
- Powered end panel base has cut-out for mounting end panel power/data module and space in the trough for routing cables.
- Non-Powered end panel bases do not have cut-outs.

- Harvest Classic tables offer three power options: Corded, Interlink IQ, or Hardwire.
- Corded models plug directly into an outlet. Corded modules cannot plug into other corded power modules.
- When routing corded models to a wall outlet, the maximum amount of cord that can be exposed outside of the furniture is 6'. (New York, check local code)
- In order to plug corded models into other units the unit would need to be hardwired.
- Interlink IQ modules require a minimum of one Interlink IQ Starter.
- A maximum of 8 Interlink IQ Power Modules (including jumpers) can be "daisy chained" together in any combination off of one 12-amp infeed starter.
- Interlink IQ provides a visual indicator of system status. LED illuminates green when you're connected and ready to plug in.
- Hardwire models are provided with 20' of sealtight cable.
- In hardwire applications customer must furnish junction boxes, conduit, and additional wire to be in compliance with local and national electrical codes.

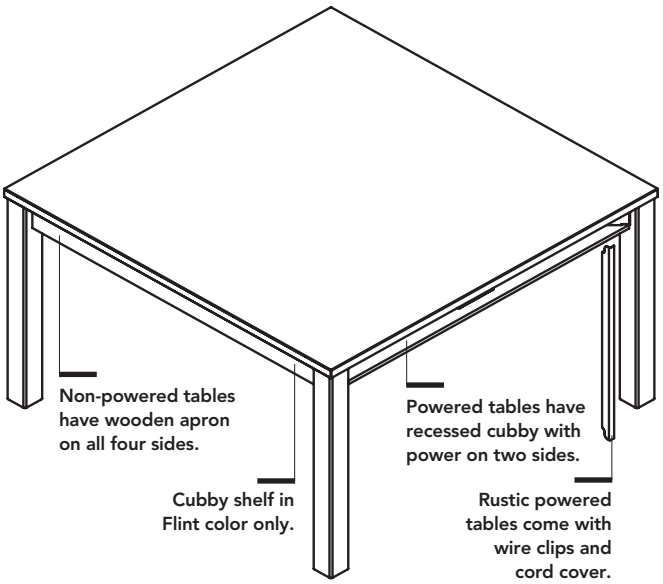
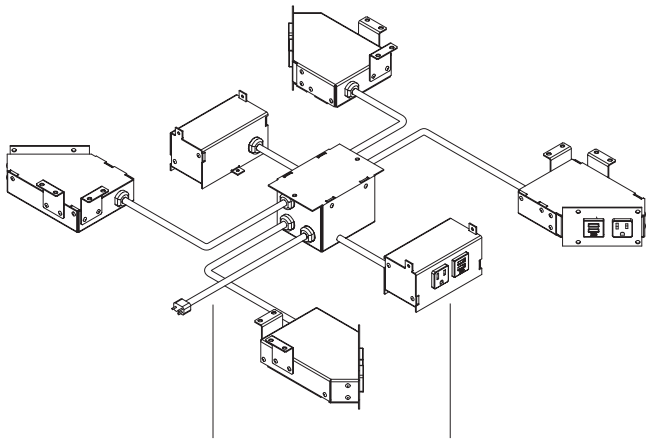
Examples: **S913P06CE S913P06LS S913P20HE**



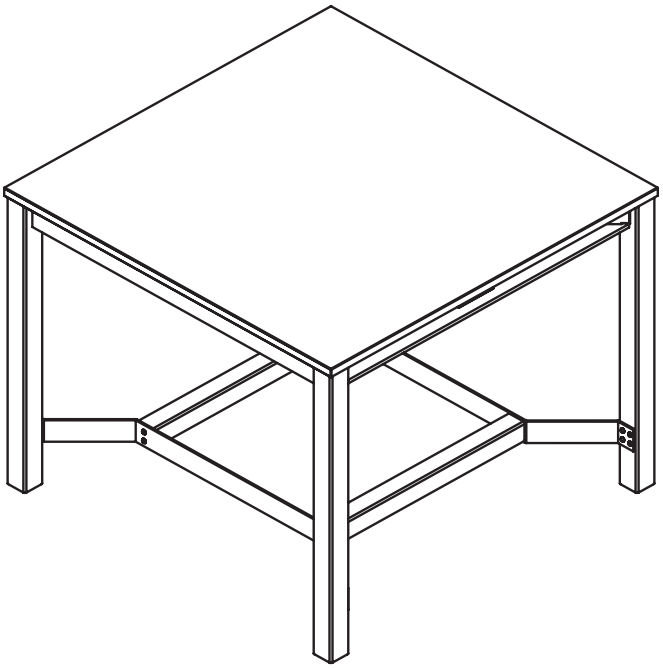
The Harvest Rustic table is designed to help you feel at ease hosting gatherings of all kinds. Seated- and standing-height tables are perfect for everything from the brainstorm to the weekly donut club. All the necessities of the office mixed with an appealing, familiar aesthetic. Bring your team together around the Harvest Rustic table.

MODELS AND OPTIONS

Harvest Rustic offers three wood finish options for the legs to mix and match a wide selection of laminate top finishes or select a rustic plank top in matching finish. Perfect for cafés, atriums, open-plan areas, and collaboration spaces.



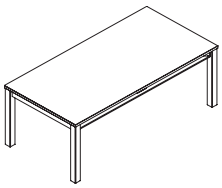
Choose between seated- and standing-height tables, square and rectangular shapes. Standing-height tables have a footrest for added comfort.



Harvest Rustic powered tables include built-in power and USB capabilities to power equipment.

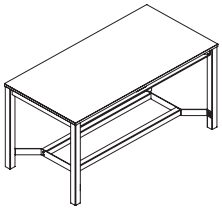
POWERED TABLES

Each table includes six simplex electrical outlets and six double USB ports (illustrated below) that are recessed at 6 locations within the 12"D x 3"H cubbies located just below table top on the two longest sides. Cubby area provides ample room for power supplies, excess cord, phone, and other paper, binders, or supplies — keeping the table top clear for the work at hand.



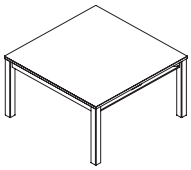
NON-POWERED TABLES

Non-powered models feature a wooden apron on all four sides of the table (no cubbies). Without cubbies, non-powered tables cannot be easily converted to powered tables.



The beauty of wood is the natural variation of grain patterns and colors that make each piece unique. This variation is also influenced by lighting conditions, orientation of mated parts, and varying acceptance of the finishing process. The varying colors and physical characteristics naturally occur in all wood species but are most pronounced in lighter colored woods, and are especially evident in natural finishes.

Note: *Harvest Rustic Plank worksurfaces will have natural markings and imperfections. Please contact Customer Support for additional information.*



- Table comes complete with laminate or plank top with flat edges, solid wood legs — 29"H seated or 42"H standing height, painted metal support structure, and electrical — assembly required.
- Each powered table includes 6 simplex electrical outlets and 6 double USB ports recessed within the 12"D x 3"H cubbies located just below table top on the two longest sides. See page 369.
- See page 371 for non-powered tables.
- Cubby shelf color is not specified and comes in Flint.
- Electrical is corded with plug; for hardwired add "HW" suffix and $200 upcharge. Cord to power is 10' long from center of table top.
- Rustic powered tables come with wire clips and painted metal wire management cover for routing cable down table leg. Cover attaches with double faced tape.

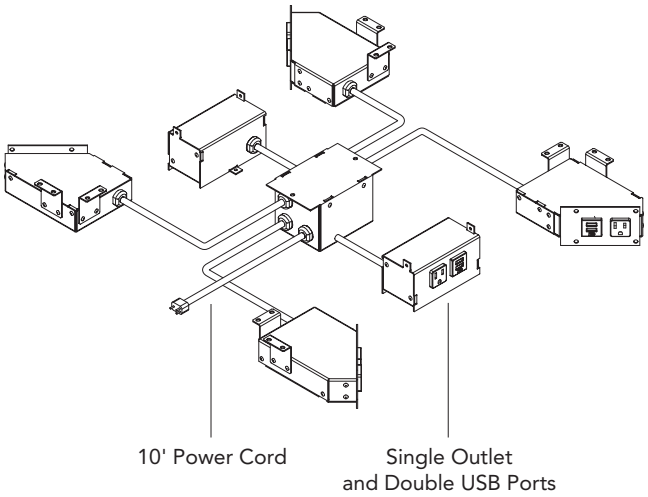
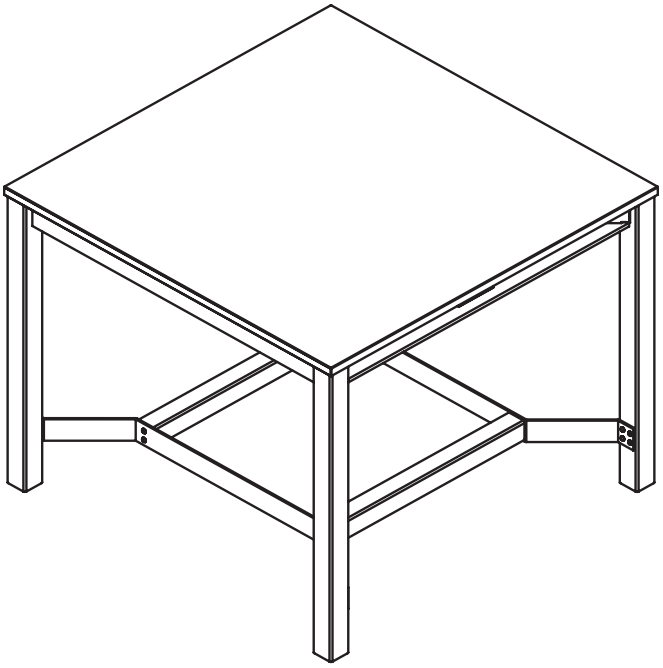
The Harvest Metal table is designed to help you feel at ease hosting gatherings of all kinds. Seated- and standing-height tables are perfect for everything from the brainstorm to the weekly robotics club. All the necessities of the office mixed with an appealing, familiar aesthetic. Bring your team together around the Harvest Metal table.

MODELS AND OPTIONS

Harvest Metal offers numerous painted options for the metal legs to mix and match a wide selection of laminate and veneer top finishes. Perfect for cafés, atriums, open-plan areas, and collaboration spaces.



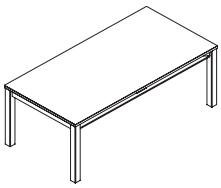
Choose between seated- and standing-height tables, square and rectangular shapes. Standing-height table has a footrest for added comfort.

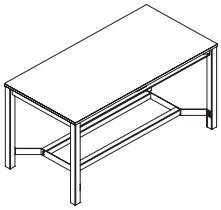


Harvest Metal powered tables include built-in power and USB capabilities to power equipment.

POWERED TABLES

Each table includes six simplex electrical outlets and six double USB ports (illustrated below) that are recessed at 6 locations within the 12"D x 3"H cubbies located just below table top on the two longest sides. Cubby area provides ample room for power supplies, excess cord, phone, and other paper, binders, or supplies — keeping the table top clear for the work at hand.





NON-POWERED TABLES

Non-powered metal models feature cubbies, but without any knock-outs for receptacles. Non-powered tables cannot be easily converted to powered tables.

- Table comes complete with laminate or veneer top, painted metal legs — 29"H seated or 42"H standing height, support structure, and electrical — assembly required.
- Each powered table includes 6 simplex electrical outlets and 6 double USB ports recessed within the 12"D x 3"H cubbies located just below table top on the two longest sides. See page 372.
- See page 374 for non-powered tables.
- Cubby shelf color is not specified and comes in Flint.
- Electrical is corded with plug; for hardwired add "HW" suffix and $200 upcharge. Cord to power is 10' long from center of table top.
- Tables come with painted metal wire management cover for routing cable down table leg. Cover attaches with double faced tape.

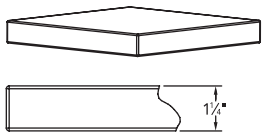
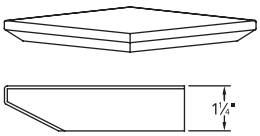
Structure rounds out the Allsteel table offering and supports a wide array of applications, from conference rooms to café settings and everything in between.

The tables are adaptable and interchangeable for use in multiple spaces. The combination of rich details and durable design creates an experience out of any activity at the office while elevating culture and brand. A variety of tabletop shapes, edges, bases, and finishes ensures a consistent aesthetic throughout the entire floorplan.



MODELS AND OPTIONS
Structure is available in five heights and 14 top shapes.

APPLICATION
Use in open meeting areas, dedicated collaboration rooms, neighborhood spaces, cafés, large and smaller conference rooms, libraries, and lounge areas.



KEY FEATURES
Range of shapes, sizes, and configurations to meet the needs of any space available in an array of materials.

MATERIALS AND EDGE TREATMENTS
Woodgrain laminates will be aligned within ⅜" across seams unless otherwise noted in the price guide pages.

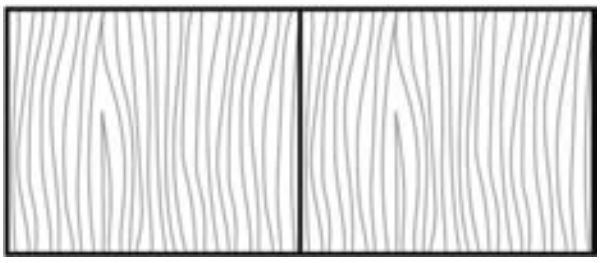
GRAIN DIRECTION AND ALIGNMENT



SINGLE-PIECE TOPS – Woodgrain laminates as standard product are always oriented with the grain direction running parallel to the length of the tabletop.

TWO- & THREE-PIECE TOPS – Tops longer than 96". Woodgrain laminates as standard product are always oriented with the grain direction running parallel to the length of the tabletop. Please note that two-piece tops, in woodgrain colors, will not have exact grain alignment in the center where the two halves meet, a reasonable match can be expected. Allsteel cannot guarantee a grain match on tables that are 60"W.

SPECIAL TOPS – Specials for wide tables. Woodgrain laminates as specials wider than 60" are always oriented with the grain direction running parallel to the seam of the tabletop. Allsteel will create best match grain alignment but cannot guarantee a perfect match along the seam between the pieces of laminate on two- and three-piece tops.

RECOMMENDED COORDINATE COLORS

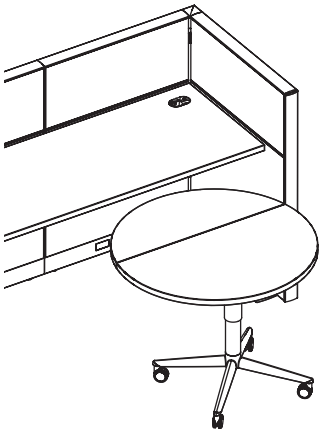
For Plastic Grommets on Laminate specify the same color used for the edge color; or the following plastic grommet color based on edge selected:

Natural Maple, Fawn Cypress, Natural Recon ..... Muslin EU
Phantom Charcoal ..... Flint E9
Phantom Ecru ..... Loft EV
Portico Teak ..... Fossil EH
Shaker Cherry ..... Black E4
Skyline Walnut ..... Flint E9

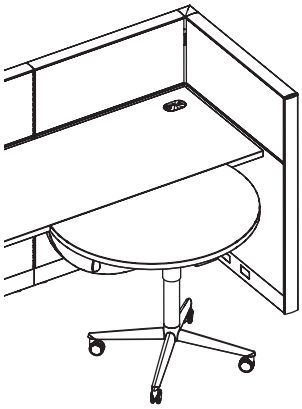
For Plastic Grommets on Fluid Form specify either same color as painted legs/base; or the following plastic grommet color based on Fluid Form selected:

Auburn Cherry ..... Black E4
Natural Maple ..... Muslin EU

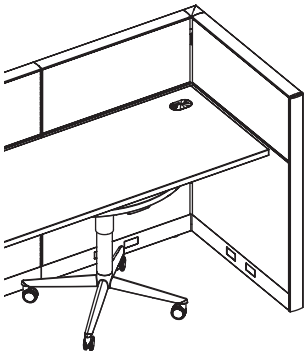
For Plastic Grommets on Veneer the color is predetermined based on finish selection.



All Maple veneers ..... Muslin EU
All Cherry, Walnut and Dark Rift Cut Oak veneers ..... Black E4



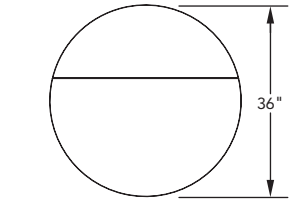
Forest Stewardship Council (FSC) is a non-profit organization devoted to encouraging the responsible management of the world's forests. FSC sets high standards that ensure forestry is practiced in an environmentally responsible, socially beneficial, and economically viable way. Allsteel received its FSC Chain of Custody certification in 2010 and can offer FSC Certified products. Select wood-based products can be ordered as FSC certified, either by choosing the FSC option or selecting an FSC laminate or veneer finish at the time of order. For more information, please contact Customer Support at 888-255-7833. (FSC Trademark license code: FSC-CO14704.)

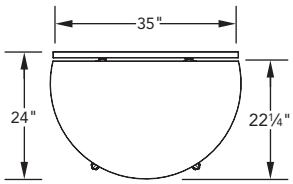


All of Allsteel's tables are level® 2 certified to the ANSI/BIFMA e3 Furniture Sustainability Standard. See www.levelcertified.org for more information.

NOTE: Refer to individual product pages for upcharges.

Structure Adaptive Tables convert any space into a meeting space.
Adaptive Tables feature a self-centering drop leaf and height-adjustable tabletop to provide a solution that quickly lifts, lowers, and docks to adapt to spontaneous changes in work and space requirements.





Add Workspace to Existing Worksurfaces

Adaptive Tables feature a self-centering drop leaf and height-adjustable tabletop allowing the tables to effortlessly dock next to existing worksurfaces. Simply drop the leaf, adjust the height, and dock. The drop leaf is designed to tuck under the worksurface while docking to provide a seamless transition from worksurface to table.

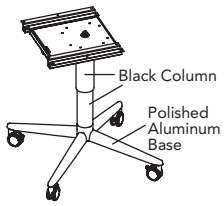
Adaptive tabletops are 36"W with the drop leaf up and 22¼"W with the drop leaf down. The bases are 28" in diameter.

Round
w/Drop Leaf Up

Round
w/Drop Leaf Down

Store Tables Beneath Existing Worksurfaces

Adaptive Tables tuck beneath existing worksurfaces by adjusting the height. Adaptive Tables feature a gas cylinder to provide quiet, smooth movement. Simply pull the height-adjustment lever and push down on the center of the tabletop to lower the height of the table.



To raise the height of the table, simply pull the height-adjusting lever beneath the edge of the tabletop and the table will automatically rise. Release the height-adjustment lever to set the table height. Adaptive Tables adjust from 26"H to 33"H.

Convert Table Position from Docked to Freestanding

Adaptive tables quickly convert from a docked position to freestanding by simply pulling the drop leaf up. The self-centering mechanism ensures that the base remains in the center of the tabletop whether the drop leaf is up or down.

Combine Table Surfaces and Base Finishes

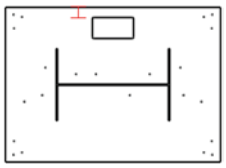
The wide variety of material options and base finishes allow Adaptive Tables to integrate seamlessly into any space. Tabletops are available in laminate, with Flat Edge or Knife Edge treatments. Cast aluminum table bases are available with painted or polished aluminum finishes. Polished Aluminum models feature black vertical columns.

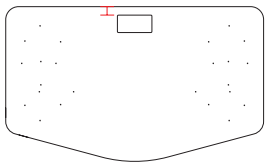
Structure tables exceed BIFMA Standards and are backed by the Allsteel lifetime warranty. Die-cast and extruded aluminum components are lightweight, yet highly durable. The self-centering drop leaf has a maximum load capacity of 125 pounds.

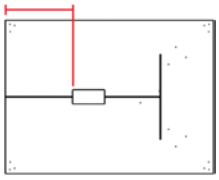
IN-SURFACE POWER

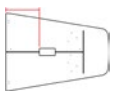
Corded

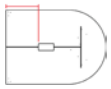
Corded models plug directly into an outlet and cannot plug into other corded power modules. In order to plug into other units the units need to be hard-wired. When routing corded models to a wall outlet, the maximum amount of cord that can be exposed outside of the furniture is 6 feet.

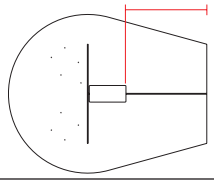






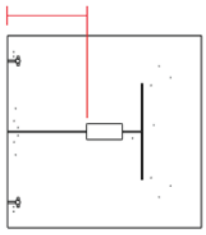


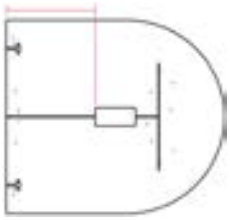


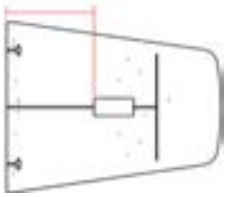


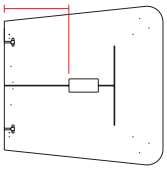
Hardwire

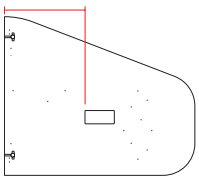
Hardwire models are provided with 10 feet of sealtight cable. Customers must furnish junction boxes, conduit, and additional wire to be in compliance with local and national codes.

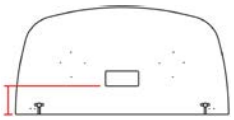


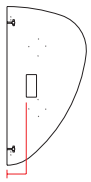












Qi charging is available on Corded and Hardwire versions.

- Includes 3 Qi charging coils (5 watts each) for wireless charging.
- Units have LED indicator lights below the lid's surface.
- Units house power and charging USB inside. All units are Qi certified.
- Cut-outs are centered on single-piece tops.
- Cut-outs are available for round, square, and soft square tops 54" or greater.
- Cut-outs are aligned with the shape of the table.

.C0 - No Cut Out

- Order Base Separately.
- Order power units separately.
- Tops ship with pilot holes for locating supports.
- Reference page 382 for cutout locations.
- Middle seams on multi-piece tops are not edgebanded.
- External stiffeners are included with top models when required.
- Available in laminate (flat or knife edges).
- For 72" to 84" tops, the woodgrain direction runs parallel with the seam and will have greater alignment variations.

- Order Base Separately.
- Order power units separately.
- Tops ship with pilot holes for locating supports.
- Reference page 382 for cutout locations.
- Middle seams on multi-piece tops are not edgebanded.
- External stiffeners are included with top models when required.
- Available in laminate (flat or knife edges).
- For 72" to 84" tops, the woodgrain direction runs parallel with the seam and will have greater alignment variations.

- Middle seams on multi-piece tops are not edgebanded.
- Boomerang is comprised of 2 pieces.
- 60"D tops may have greater woodgrain alignment variation across the seam.
- Order Base Separately.
- Order power units separately.
- Tops ship with pilot holes for locating supports.
- External stiffeners are included with top models when required.
- Available in laminate (flat or knife edges).
- Grommet cutouts on 2 piece tops will be centered based on the individual piece.

STRUCTURE

- Table Media Mount is used to mount a television to a tabletop when not against a wall. Mounting hardware is provided for television sizes 32 to 50 with VESA Mounts of 100x100 to 200x200; for some televisions, additional hardware is required.
- The Wire Management Covers snap on to legs. See wire capacity on page 384.
- Wire basket models include basket and two vertical hanging supports made of .148" dia. steel wire.
- Verticals must be placed 18" or more apart from one another and must be within 15" from each end of the basket. Can hold a maximum load of 25 lbs.
- Table media mount, AMPTTMM, can only be used with the Structure Media Round/ Square Pedestal Base Kit found on page 425.

FSC Certified Wood at Allsteel

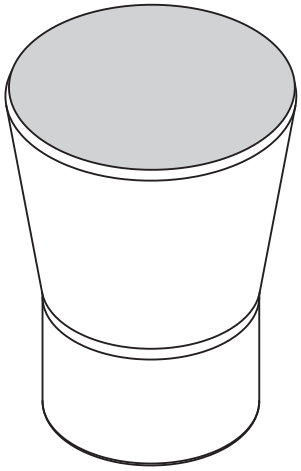
See page 328 for more information.

Tables — Occasional

The spun aluminum Belong occasional tables offer needed horizontal surfaces for small group meeting areas while providing a pleasing aesthetic.

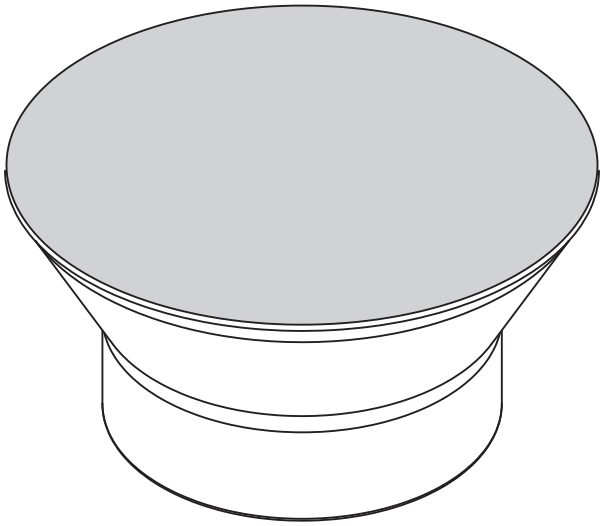
MODELS AND OPTIONS

The sculptural curved shape and lightweight design are available in two sizes — Coffee (16"H x 32" diameter) or Side (21"H x 16 diameter). The Belong tops are available in laminate, veneer, or glass with painted pan.



APPLICATION

Place in lounge and reception areas, small conference and huddle rooms, media and library areas, and cafés.



KEY FEATURES

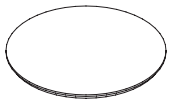
Belong offers ample horizontal writing surface as a side table next to a chair or bench, or as a small coffee table surrounded by seating. Its organic hourglass shape provides legroom for users to sit up close when using laptops or tablets.

Belong Side Table

Belong Coffee Table

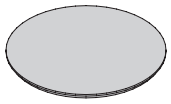
Tables — Occasional

Belong Side Tables



- Feature a 16" diameter top.
- Available in with four top finishes: laminate, glass, and veneer.
- Belong Side Table Base is 21"H.
- Specify top and base separately.

Belong Coffee Tables



- Feature a 32" diameter top.
- Available in three top finishes: laminate, glass with painted pan, and veneer.
- Belong Coffee Table Base is 16"H.
- Specify top and base separately.

Extensions™

Extensions — Introduction

Extensions accessory line by Allsteel is designed to help you create your own space.

- **Create a personalized space**

  Each person works differently, different work styles require different tools. As our workplace needs shift from paper filing to personal storage, the tools that support us day-to-day need to adapt to the changing ways we are expected to work. Whether it's the need for paper filing, a place to plug a charger in, or a small shelf for trinkets, Extensions help you bear it all.

- **Create a comfortable space**

  Encourage wellness and peace of mind while you work with Extensions. Whether by clearing valuable desk space, routing cords out of the way, powering your technology, or illuminating tasks with a gentle glow, this full line of work tools help you stay calm and in control of your workspace.

- **Create an empowered space**

  Without all the right tools you need to succeed, having a productive workday can feel like an impossible task. With a full line of ergonomic, organization, illumination, power, and wire management tools, Extensions put the right tools within reach, allowing you to get your work done seamlessly and efficiently.

- **Organization tools**

  Embracing organization work tools can help add efficiency and excitement to your daily workflow. Durably made but thoughtfully designed to help you organize and store the tools you need throughout your day, Extensions organizational tools help you find that perfect place for anything.

- **Ergonomic tools**

  Ergonomics is more than just comfort, it's flexibility and safety. The adjustable keyboard options allow users to maintain and vary comfortable wrist and arm positions throughout the day, whether typing or mousing. Monitor Arms offer versatile adjustability while providing optimum comfort for the eyes, neck, and shoulders.

- **Illumination tools**

  Sleek and flexible, our lighting components offer you several choices. Recessed task lights conserve space and feature electronic ballast for longer bulb life and cooler operating temperature. LED tasklights' slim design blends in with its surrounding while utilizing energy-efficient LED technology.

- **Power/Data tools**

  At the heart of every workspace is a power module that keeps you plugged-in and running throughout the day. These indispensable accessories provide wired or wireless connectivity anywhere and everywhere you could possibly need it, transforming your workplace into a hub of activity.

- **Wire Management tools**

  Eliminate the cord clutter under your desk with our extensive wire management offering. Allsteel wire management accessories effortlessly weave wires out of the way and clear your workspace with ease. Both free-standing and height adjustable, table-integrated solutions ensure that your space stays as clear as your workflow.

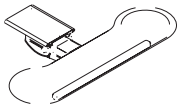
AKTSHORT Keyboard Support (page 456)

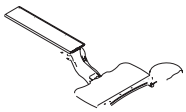
- Lift and lock intuitive height adjustment.
- Compatible with Altitude Height Adjustable Tables
- Positive and negative tilt for best ergonomic positioning.
- +10°/-20° tile adjustment and 360° rotation provides support of neutral position of shoulders, arms and wrists while accommodating multiple working postures.
- Surpasses ANSI/BIFMA standards.
- Black powder coat finish.
- Patented secondary slide and unique arm design provide minimal footprint.

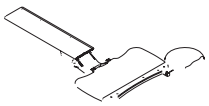
AKTMID and AKTLONG Keyboard Support (page 456)

- Lift and lock intuitive height adjustment.
- Positive and negative tilt for the best ergonomic positioning.
- +10°/-20° tilt adjustment and 360° rotation provides support of neutral position of shoulders, arms, and wrists while accommodating multiple working postures.
- Non-handed mouse tray can be moved from right hand to left hand side.
- Surpasses ANSI/BIFMA standards.
- Black powder-coat finish.

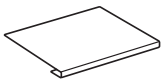
Keyboard Spacer Kit (page 456)







- Keyboard Spacer Kit required for mounting under Altitude worksurfaces.
- Kit provides ten spacers and hardware for mounting keyboard supports beneath an external worksurface support channel.
- Spacers are 2⅛"H providing more room beneath surface for mounting.



CPU Hammock (page 456)

- Features 360-degree swivel with an 11" track.
- Load capacity is 75 lbs.
- CPU must be minimum of 3¼"W with maximum dimension of 64" in perimeter.
- Handy adjustment tool stores within unit.
- Safety feature prevents accidental release of straps and straps can be adjusted while CPU is installed.
- Can be used on Height Adjustable Tables as long as it is attached with spacer model AKMH. Take into account required leg room for users.

For specification information see page 455.

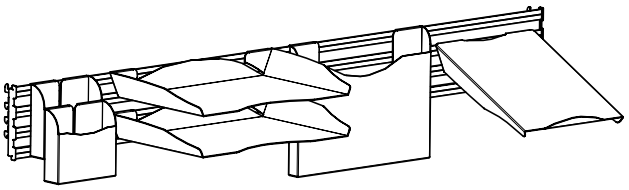
Model AWCS

How to specify —

Select the Model Number from above.

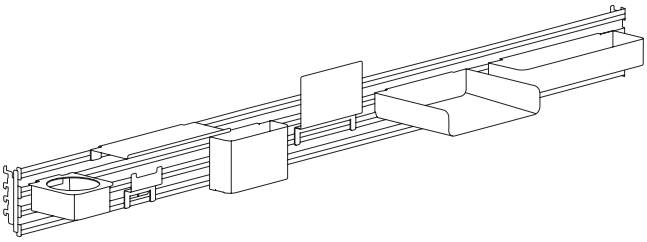
Examples: **AKMH ACPU1**

S *Shippable by small-package carrier.*



Allsteel's tool rail works in conjunction with a variety of accessories. Modular accessories free up worksurface space and provide orderly storage that is well within reach. Units can be arranged and rearranged to respond to changing workflow. The work tools that attach to the tool rail are:

- Mail Box
- Folder Holder
- Phone Caddy
- Binder Bin
- Tool Box
- Clip Caddy™
- Sidebar™ Personal Shelf
- Paper Wave™
- Cup Holder
- Hook
- Hanging File Holder
- Magnetic Picture Holder
- Small Bin
- Small Shelf
- Small Tray

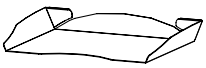


Additional accessories that work with the **tool rail work tools** aesthetically are:

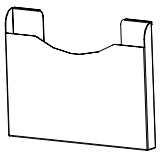
- Bookends
- Freestanding Mail Box

Coat hooks, marker boards and center drawers round out the organization offering.

Tool rail, shown above, is height-adjustable in 1" increments using slots in panels or metal hutch. Tool rail shown with two tool boxes, two mail boxes, folder holder, and phone caddy. Folder holders and binder bins extend below a tool rail. Paper Wave and contents extend above a tool rail.

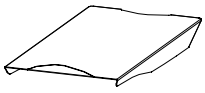


Tool rail, shown with cup holder, small shelf, hook, small bin, magnetic picture holder, small tray, and hanging file holder.

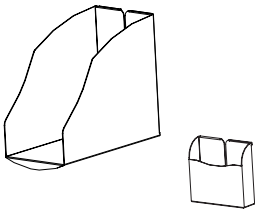


Tool Rails and Work Tools (page 465)
- Sturdy aluminum extrusion with steel support construction.
- Powder coated for durable finish.
- Use to hang Extensions tools. Cannot be used to support monitor arms.
- Suggested weight capacity not to exceed 80 lbs.
- Consideration needs to be given to height of tools and location of worksurfaces.
- For use with Terrace® and Optimize™ systems.
- 5" high rail (widths coordinate with panels).
- Attachment via vertical reveals.
- Can be hung from wall track. Good solution for above copiers.
- Systems tool rail is off-modular — can be used on a panel of equal width or one size smaller.
- May span two panels of appropriate size, i.e., 60"W Tool Rail on two 30"W panels.

NOTE: The Work Tools are NOT compatible with the Gallery Panel Accessory Rail; they are only compatible with the Tool Rail and the Stride & Terrace Tool Tiles.



Tool Rail for Hutches (page 465)
- Will work on Universal, Terrace, and Optimize system hutches produced after July 2, 2000 and Align™ metal hutches.
- Sturdy aluminum extrusion with steel support construction.
- Powder coated for durable finish.
- Use to hang Extensions tools. Cannot be used to support monitor arms.
- Suggested weight capacity not to exceed 80 lbs.
- Consideration needs to be given to height of tools and location of worksurfaces.

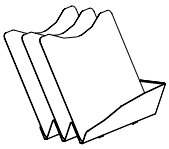


Mail Box (page 466)
- Holds standard letter-size paper and inter-office envelopes.
- Minimal horizontal intrusion.

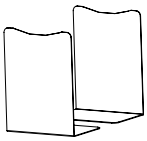
Folder Holder (page 466)
- Holds manila envelopes.
- Is capable of hanging on other folder holders to maximize space.
- Stores vertically for easy access to files.

Phone Caddy (page 466)
- Holds telephone at optimum ergonomic angle.
- Wire management cut-outs.
- Accommodates standard phone sizes.

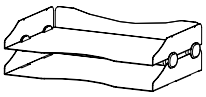
Binder Bin (page 466)
- Holds folders, binders, and manuals.



Tool Box (page 466)
- Holds pencils and other writing utensils, large post-it notes, and other desk top accessories.

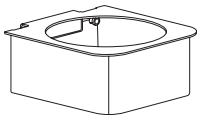


Clip Caddy™ (page 466)
- Holds paper clips and other small objects.

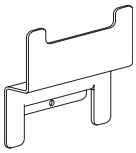


Sidebar™ Personal Shelf (page 466)
- Holds office supplies and personal effects.

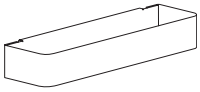
Paper Wave™ (page 466)
- Provides 3 fully divided slots for organizing files.
- Keeps papers from "bowing" at bottom.



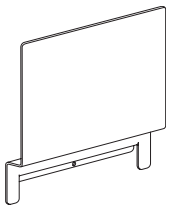
Bookends (page 466)
- Can be used on shelves or in cabinets.
- Used to hold books, binders, and catalogs upright.



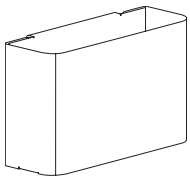
Freestanding Mail Box (page 466)
- Incorporates similar aesthetic to mounted Mail Box.
- Mounting brackets allow for free access from front and back.
- Sold in pairs of two; will stack up to eight high.
- Individual mail box dimension = 1¾"H.
- Stacking brackets are black.



Coat Hook APMC6 (page 466)
- Hangs directly into slotted Terrace® or Optimize™ panel frame.
- Use for coat or bag.
- Package of six.
- Available in black only.

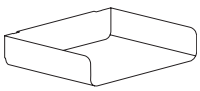


Cup Holder (page 467)
- Holds most cups and thermoses. Weight capacity is 5 lbs.

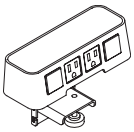


Hook (page 467)
- Hangs small personal effects such as headphones, keys, or hand wallets. Weight capacity is 10 lbs.

Hanging File Holder (page 467)
- Hangs files and folders from hanging file clips. Hanging file clips not included. Weight capacity is 5 lbs.

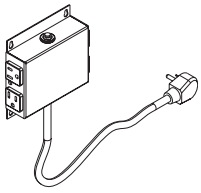


Magnetic Picture Holder (page 467)
- Allows for pictures to be hung via magnets. Magnets not included. Weight capacity is 5 lbs.

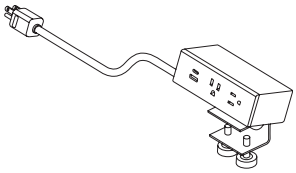


Small Bin (page 467)
- Houses office supplies or other personal effects such as pencils, pens, sticky notes, journals, etc. Weight capacity is 5 lbs.

Small Shelf (page 467)
- Provides additional shelf storage in workstation and displays office supplies or personal effects. Weight capacity is 5 lbs.

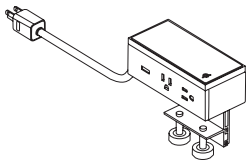


Small Tray (page 467)
- Holds office supplies and other personal effects. Weight capacity is 5 lbs.



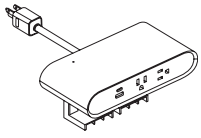
ACPWRMOD

Power/Data Module — Clamp On Worksurface (page 473)
- On-surface mounting option, fits on any worksurface with a 4" overhang.
- 10' straight power cord only. UL Listed.
- Includes adapters to allow use of commercially available data terminals or blanks to fill unused openings. Many of the AMP, AT&T, Krone, Leviton, and most commercial data terminals can be used.
- Available in Fog only.

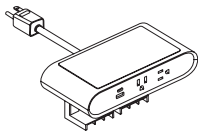


APWR4TAP

Power Module — Under Worksurface, Quad Tap (page 473)
- Under surface mounting can be used under any surface with a 5" x 5" x 1.5" clearance.
- 10' straight power cord only, no specification needed.
- 4 receptacles, unit is black finish only, no specification needed.

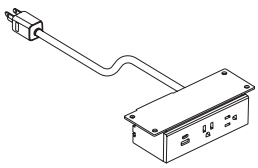


APWRMOD.AC.S

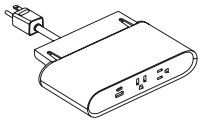


APWRMOD.QA.S

Power Modules — Clamp On Worksurface, Rectangular (page 473)
- Worksurface clamp can be used on any surface with a 2½" overhang.
- Must be installed at time of initial worksurface installation if installing between a worksurface and panel.
- 10' straight power cord only. UL Listed.
- The USB hub allows simultaneous powering of 2 receptacles, 1 USB-A device, and 1 USB-C device. The USB hub is a charger only, no ability to connect to a PC. The charging capacity is limited and may not charge all devices.
- Four wire management "P-Clips" included with mounting hardware.
- Specify "QA" for Qi compatible wireless charging on AWPRMOD. USB-C port no longer included when wireless charging specified.
- Available in Snow and Storm finishes.

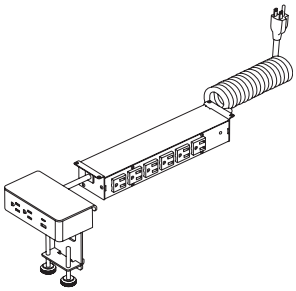


ARNDPWRMOD.QA.S



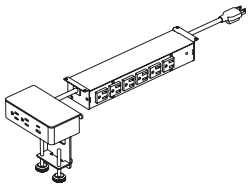
ARNDPWRMOD.AC.S

Power Modules — Clamp On Worksurface, Round (page 473)
- Worksurface clamp can be used on any surface with a 2½" overhang.
- Must be installed at time of initial worksurface installation if installing between a worksurface and panel.
- 9' straight power cord only. UL Listed.
- The USB hub allows simultaneous powering of 1 USB-A device and 1 USB-C device. The USB hub is a charger only, no ability to connect to a PC. The charging capacity is limited and may not charge all devices.
- Specify "QA" for Qi compatible wireless charging on ARNDPWRMOD.
- Available in Snow and Storm finishes.



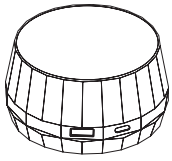
AUPWRMOD.AC.S

Power Module — Under Worksurface, Rectangular (page 473)
- Under surface mounting can be used on any surface with a 5" clearance.
- Power cord choices include 10' Straight, 5' Interlink, 10' Hardwire, and 10' Chevron Fog & Storm Braided cords. All are UL listed.
- Four wire management "P-Clips" included with mounting hardware.
- Available in Snow, Storm, and Black finishes.

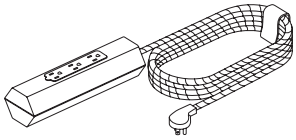


AURNDPWRMOD.AC.S

Power Module — Under Worksurface, Round (page 473)
- Under surface mounting can be used on any surface with a 5" clearance.
- 9' straight power cord only. UL Listed.
- Available in Snow, Storm, and Black finishes.



AABPWRMOD.AC.Q



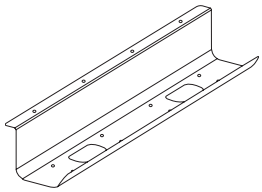
AABPWRMOD.AC.S

Power Module — Above/Below Worksurface (page 473)
- Above/Below power module provides access to power on the desktop and below the worksurface.
- Desktop mount can be used on any surface with a 6"W x 3"D clearance along the worksurface edge.
- Under surface mounting can be used with a 12"W x 3"D x 2"H clearance under the surface.
- Plugs will take additional depth (approx. 3").
- Two wire management “P-Clips” included with mounting hardware.
- Below worksurface power strip supplies six grounded A/C receptacles, desktop unit supplies two receptacles, 1 USB-A port, and 1 USB-C port.
- Desktop and under worksurface units are connected by a 2' long straight cord and cannot be disconnected.
- Power cord choices include a 6' straight cord or a coiled cord that is 6' long uncoiled, approximately 8" long coiled (compressed).
- Desktop unit available in White and Gray finishes.
- Under worksurface unit available in black only, no specification needed.
- UL 962A and UL 111 Listed. UL 1310 Recognized.

APWRPCK

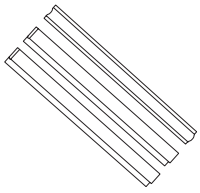
Power Module — Sit-On Worksurface, Puck (page 474)
- Unit sits on top of a worksurface.
- Includes 5' DC Connector cord, transformer block, and 6' AC straight cord for 11' of total cord length. UL 1310 Listed.
- Unit allows for simultaneous powering of 1 USB-A and 1 USB-C device.
- Unit is a charger only, no ability to connect to a PC other than to charge.
- Available in White and Silver finish only, no specification needed.

APWRSTRP



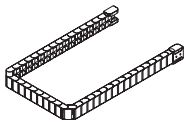
Power Strip — Sit-on-Surface, Wood (page 474)
- Unit sits on top of a worksurface.
- 10' Braided cord in White nylon, leather cord management strap included. UL Listed.
- Ultra-low profile 45 degree flat plug.
- 3 grounded power outlets.
- Solid Ash Wooden housing, no specification needed.

AVSTA3PWR



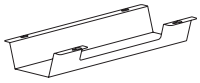
Vesta Mobile Power (page 474)
- 3 AC power simplex, 1 dual USB-A, 1 USB-C configuration.
- 10' Retractable power cord, UL Listed.
- Unit weighs 13 lbs.
- For cordless, battery-powered unit, please contact the Tailored Product Group (TPG).
- Available in Snow, Storm, Black, and Fog. Separate finish options available for outside and inside of unit.

Cable & Wire Management



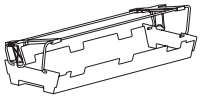
AJTRGH24 or AJTRGH36

Cable Management Tray (page 475)
- Attaches under the worksurface to contain cables.
- Metal tray shelf is 4" deep. Can hold electrical power strip and/or surge protector.
- 24" and 36" lengths, use multiple units for larger worksurfaces.
- Attachment hardware included, paint option is black only.
- Zip tie attachment points located in base of tray. Zip ties not included.
- Limited paint offering. Available in all Grade P1 and Grade P2 paint finishes for Altitude Bases with the exception of Night Bronze (P8B).



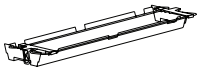
AWRSTRIP

Wire Management Strips/Channels (page 475)
- Self adhesive backing to attach to panels and underside of worksurfaces.
- Flexible strips allow cabling to enter/exit and can be contained inside the strips' cavities.
- Includes two wire management profiles. Smaller profile allows for qty. 3, .3" diameter cords, has area of .32 in^2. Larger "J" shaped profile allows for qty. 10, .3" diameter cords, has area of 1.14 in^2.



A9CLWMC or WKSWMC

Cord Management Chains (page 475)
- Works with Approach and Altitude A6-units.
- Used to route and conceal power/data cables from control box and other devices. Includes all mounting hardware and a plate to secure to a leveling glide.
- Houses 6 cables at 0.300" diameter.
- Made of plastic chain with plastic attachment brackets at each end.
- Specify WKSWMC for 58" chain. Only comes in Black finish.
- Specify A9CLWMC for 36" chain. Comes in Black, White, and Silver.
- Has two connecting points: Top section connects underneath a worksurface and bottom section can connect underneath power rails or to panel raceways using double-sided tape. Hardware included.

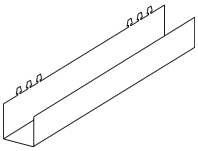


APWRTRGH17 or
APWRTRGH36

Under Worksurface Trough (page 475)
- Used to conceal wires and control box below worksurfaces. Trough can be configured at various height/width combinations to meet capacity needs. Ships flat and is bent to desired shape.
- On 48"W and 54"W worksurfaces use one 17"W trough. 54"W has space to use 2 – 17"W, if necessary.
- On 60"W, 66"W, and 72"W worksurfaces use the 36" trough.
- On 84"W worksurface use 2 – 17"W troughs.

AFDTRGH20

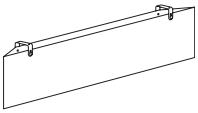
AFDTRGH32



Flip-Down Wire Trough (page 475)
- Mounts beneath a worksurface. Used to conceal extra cord slack and power strips.
- May be used in conjunction with quad tap unit APWR4TAP to reduce the number of cords routed from a worksurface to a beam.
- For any worksurface less than 58"W, a 20"W Flip-Down Trough is recommended.
- For worksurfaces 58"W and wider, a 20"W or 32"W Flip-Down Trough may be used.
- Flush-mount Radii Storages are not recommended to use in conjunction with Flip-Down Trough.
- Only AKTSHORT keyboard tray is recommended for use in conjunction with the Flip-Down Trough.

ALEGCHASE26

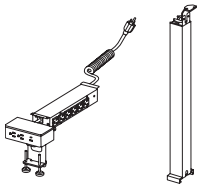
O-Leg Chase (page 476)
- Works with O-Legs from Allsteel Approach.
- Matches leg profile on models WKTBTL2824 and WKTBTL2830.
- Magnetically aligns and adheres itself to the inside of the leg and allows for user to reposition and adjust wires as needed without the use of tools.
- Metal chase measures 26"H, can fit qty. 12, .3" diameter cords. Has cross section area of 1.56 in^2.
- Available in standard metal paint finishes.



Cable & Wire Management

AMPCHASE

Panel Mounted Wire Chase (page 476)
- Attaches between panels on Stride, Terrace, and Optimize via a slotted standard.
- Designed to sit below a worksurface and provide additional cord management from the base rail to beltline/under-worksurface height.
- Available in standard metal paint finishes.

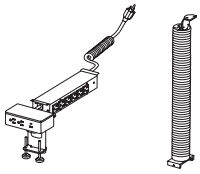


AWIRECLT

Metal Wire Cleat (page 475)
- Supplied with screws and VHB tape for attachment to various surface types.
- For wood/particle board/MDF surfaces, use screw attachment.
- For painted metal/glass/non-porous surfaces, use VHB tape.
- Example use cases:
  1) Used alongside telescoping/fabric HAT wire chases to secure excess length of cord at plug-end.
  2) Secured to wall next to TV monitor in meeting room to manage HDMI cable when not in use.
  3) Screwed underneath worksurface to provide quick and easy management of excess length of cords and cabling.

APWRMODEST36 or
APWRMODEST48

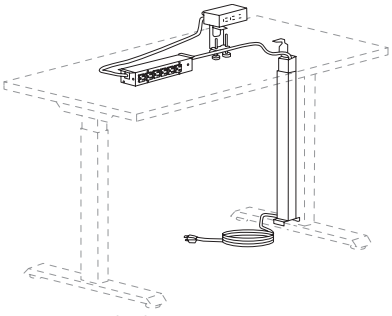
Fabric Power Modesty (page 477)
- Fabric Power Modesty presents as modesty panel hanging by leather straps under a worksurface; inner compartment conceals cords and power strips as a wire management application.
- Recommended worksurface width pairings:
  1) 48-60"W Desk — Use APWRMODEST36 Centered.
  2) 66-72"W Desk — Use APWRMODEST48 Centered or APWRMODEST36 offset.
  3) 84"W Desk — Use APWRMODEST48 offset.
- Modesty fills 11.5 inches below the bottom of the worksurface with space for cords to enter/exit between the worksurface and the top of the Power Modesty.
- Two entry/exit points for cords are located at the bottom of the Power Modesty unit.
- Modesty panel is designed to present as a thin modesty panel from the front, but provides 3" depth cavity for wires, power strips, etc.
- Maximum weight capacity for Power Modesty is 25 lbs.
- Modesty panel not to be used to store electronics that require airflow for thermal management (computers).
- Users can access interior of panel (to modify wire placement) via “wings” on either side of product, secured via user-operable Velcro connection.
- Users may also dismount Power Modesty from leather straps by unlooping leather straps from button attachments.
- Leather straps on Power Modesty always come in medium brown color.
- Power Modesty available in Appoint, Binary, Centurion, Noble, Reflections, Disperse, and Spin fabric series.



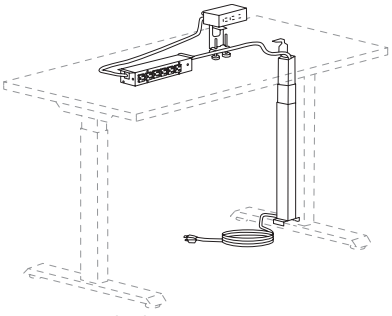
Cable & Wire Management

AHATPWRMOD2S or
AHATPWRMOD3S

Metal Telescoping HAT Wire Management (page 477)

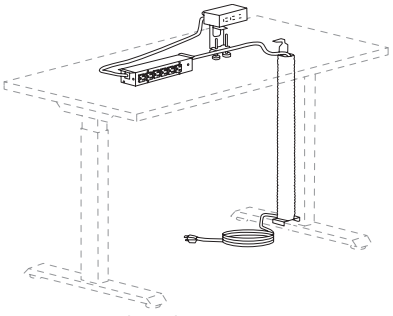


- Separate models available for use on either 2-Stage or 3-Stage Altitude A6 Tables. Not compatible with Altitude A3, A5, or A8.
- Equipped with 2-Stage or 3-Stage Telescoping Wire Chase and custom Above/Below Power Module intended for cord management on 2- and 3-Stage height adjustable tables.
- Telescoping chase includes a unique Above/Below Power Module and is NOT compatible with any other power module.
- Above/Below Power Module supplies 6 grounded A/C receptacles below the worksurface and 2 receptacles, 1 USB-A, and 1 USB-C port above the worksurface on the desktop unit. Desktop power module available in White and Gray finishes, below-worksurface power strip only available in black only.
- Telescoping Chase available in the same paint finishes as the Altitude height adjustable bases except for "Nickel."
- To match Metal Telescoping Chase to HAT base, specify matching paint color as HAT base. To match Telescoping Chase to a "Nickel" HAT base, specify "Platinum Metallic," or "PR2."
- Two "P-Clips" included for wire management between desktop power module and under worksurface power strip.

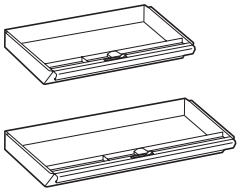


AHATPWRMODF

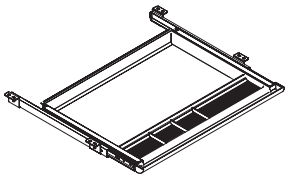
Fabric Elastic HAT Wire Management (page 477)



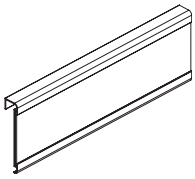
- Model compatible for use on either 2-Stage or 3-Stage Altitude A6 Tables. Not compatible with Altitude A3, A5, or A8.
- Equipped with Fabric Elastic Wire Chase and custom Above/Below Power Module intended for cord management on 2- and 3-Stage height adjustable tables.
- Fabric Elastic Chase includes a unique Above/Below Power Module and is NOT compatible with any other power module.
- Above/Below Power Module supplies 6 grounded A/C receptacles below the worksurface and 2 receptacles, 1 USB-A, and 1 USB-C port above the worksurface on the desktop unit.
- Desktop power module available in White and Gray finishes, below-worksurface power strip only available in black only.
- Fabric Elastic Chase available in Light, Medium, and Dark fabric finishes.
- Includes a metal foot and an under worksurface mounting bracket to attach Fabric Elastic Chase along the side of a HAT leg.
- To match metal brackets to HAT base, specify matching paint color as HAT base. To match brackets to a "Nickel" HAT base, specify "Platinum Metallic," or "PR2."
- Two "P-Clips" included for wire management between desktop power module and under worksurface power strip.



2-Stage Metal Telescoping HAT Wire Management

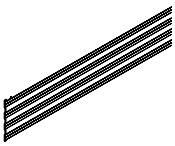


3-Stage Metal Telescoping HAT Wire Management

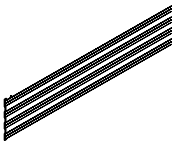


2 or 3-stage Fabric Elastic HAT Wire Management

Metal Center Drawers (page 468)
- All metal center drawers feature pencil trays with three compartments for storage.
- Center drawers will not fit in center of 24"D worksurfaces which are wider than 60" due to location of center support bracket.
- For locking specifications, see pages 1045-1046 in the Systems, Casegoods, & Space Division price list.
- Ball-bearing slide suspension.



Polymer Center Drawer - ACD1 (page 468)
- 20½"W x 17"D x 2"H
- Available in black only
- Made from ABS.
- Minimum clearance for mounting: 23"W x 16¼"D x 2"H.
- Retracts on 16" ball-bearing slides.
- Can be used on worksurfaces with Height Adjustable Bases as long as it is attached with spacer model AKMH.
- Can store up to 25 lbs.



Name Plate (page 466)
- Comes in a 10-pack.
- Metal backer installs under a Terrace or Optimize top cap, can be used with frameless glass.
- Cover is a transparent polycarbonate insert.
- Full plate is 8½"W x 2⅝"H.

For specification information see pages 457-458.

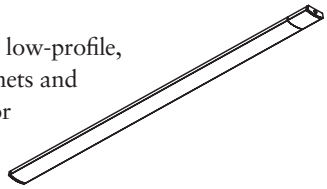
Allsteel Extensions offers Illumination in three styles — Undercabinet LED Light, Wand Light, and Splitty Light.

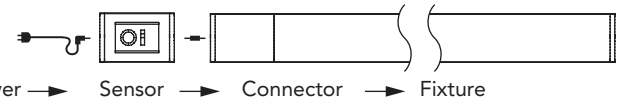


Recessed Undercabinet LED Light

Recessed task lights conserve space and provide an efficient solution for illuminating the workplace. All models are equipped with LED strips.

Recessed task light models mount under storage cabinets or shelves to provide optimal space utilization. Models are available in two styles and three sizes to correspond with the width of the cabinet or shelf. Task lights with a fused plug are available to meet Chicago electrical code.

Undercabinet LED Light



The Undercabinet LED Light is a low-profile, linear solution for overhead cabinets and shelves and is an ideal solution for painted wood storage. It utilizes energy-efficient LED technology which provides a long life. The Undercabinet LED Light provides the opportunity to mount the fixture where light is needed most.

The Undercabinet LED Light features a metal trough reflector with diffuser lens. The light has a sleek ½" thick profile and provides two options for mounting, either magnetically or with hardware. Undercabinet LED Lights can be daisy-chained.

Optional undercabinet occupancy sensor is available which will automatically turn off the fixture after 30 minutes of no detection and back on immediately as the user re-enters the detection range using Passive Infrared (PR) sensor technology. Unit features 360° lens with 90° outward detection angle, providing a 36" coverage diameter at 18". Occupancy sensor comes with connector and is required to be connected in the sequence shown below. Connect occupancy sensor to a light, or first light in daisy chain to control all linked lights.

CONNECTION SEQUENCE*

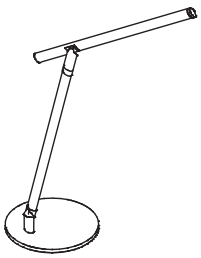
*Cannot deviate from this sequence

Recessed Task Lights (page 471)

- Black Metal Construction with 9' long black cord attached to right rear corner of the fixture.
- LED strip comes installed within light.
  –50,000 hour life span
  –120V-277V
  –CCT 4000K
  –CRI 80+
- Includes 4 cord retainer clips.
- Shorter width models can be used on wider overheads, shelves and hutches.
- On/Off switch provides individual control of tasklight within the workstation.
- Daisy chain models require a master control model — 10 fixtures maximum.
- RECOMMENDATION: Provide a separate circuit for task lights to ensure proper, long-term operation.

Undercabinet LED Lights (page 471)

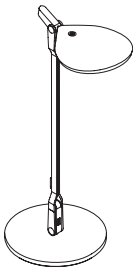
- Low profile energy-efficient LED task light for use with overhead storage cabinets and shelves.
- 20W power supply for 10W 17" unit (.166 amps).
- 20W power supply for 20W 31" unit (.166 amps).
- 60W power supply for daisy-chain starter units (.5 amps). Must order one starter unit for each daisy-chain application.



LED Light Combinations Must Not Exceed 60W in Combination	Power Usage
6X 17"	60W
3X 31"	60W
1X 31" + 4X 17"	60W
2X 31" + 2X 17"	60W

- The combinations that could max out 60W are featured above. *Daisy chained units have a power limit of 60W from one power entry. 17W units use 10W and 31W units use 20W.*
- Specify up to 5 additional 17" interconnect units (ALED17UJMP30) to daisy-chain together with 17" daisy-chain starter fixture (ALED17U60).
  Example: Daisy-chain 4 – 17" undercabinet LED lights:
  Specify: 1 ALED17U60
  Specify: 3 ALED17UJMP30 with 10" jumper cord
- Specify up to 2 additional 31" interconnect units (ALED31UJMP30) with 10" jumper cords to daisy-chain together with 31" tasklight (ALED31U60); or 17" daisy-chain starter fixture (ALED17U60).
- 3500K color temperature.
- 131 footcandles at 18" on ALED31U; 76 footcandles at 18" on ALED17U.
- Magnetic or screw-mount option — attachment hardware included.
- On 20 watt models, power drive is attached to plug: allow 1⅞"D space at outlet.
- On 60 watt models, power drive brick is in center of cord.
- Includes 3 cord retainer clips.
- Meets California Title 24 Energy Efficiency Standards.
- "Instant On" switch with infinite dimming cycle from 100% to 15% with the last state memory, allowing the user to set their desired level of lighting.
- Fixture automatically turns off after 10 hours of use to reduce unwanted energy use.
- Optional occupancy sensor automatically turns off all interlinked fixtures after 30 minutes of no detection and back on immediately when detection is found.

Overhead Length	Suggested LED Sizes
24	17
30	17
36	17
42	31
48	17 + 17
60	31 + 17
72	31 + 31
Note: LED lights may need to be positioned along length properly to allow jumping to additional overheads. Suggested sizes above are recommendations for single overheads to provide as much light along length of overhead as possible.	



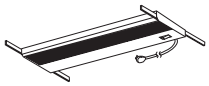
The suggested sizes factor in 4 inches of room for the power inlet and occupancy sensor (optional).

Wand™ Task Light

Wand freestanding task light offers a clean, simple design along with powerful LED technology to illuminate the workspace. The swivel base and arm tilt allow users to position the light just where they need it. The 7.7 watt LED light offers efficiency and long life, providing up to 25 years of daily use. The slim, sleek design makes it easy to integrate into any workspace. Wand task light is 97% recyclable. Occupancy sensor and/or charging models available.

Splitty Task Light

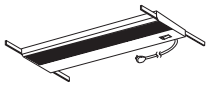
Splitty's organic and modern design compliments the workstation while also bringing rich features to the user. In addition to illuminating the space, Splitty can also be a teleconferencing tool through Splitty's 360-degree light head adjustment and soft touch, continuous dimming. Integrated charging allows for small personal device charging crucial to the modern worker's workplace toolkit while minimizing clutter within the station. Optional clamp or tool tile mounts available as accessories.



Wand LED Freestanding Task Light (page 472)

- Available in Silver or White. 9'4" cord is Silver.
- Full range dimming from 100% – 10% with last state memory.
- Uses 5W at highest setting and as low as 1 watt at its lowest setting, providing 75 to 12.7 footcandles of light, respectively (16" above worksurface).
- 7½" round swivel base and 16½"H tilt arm allow versatile positioning of the 13" lampshade.
- Designed for 50,000 hours of life.
- Color Temperature: 3500K. Color Rendering Index (CRI): 80.
- Materials: aluminum arm and lampshade, steel base.
- Weight: 4.4 lbs. 97% recyclable, 76% post-consumer.
- Certifications: UL and CUL. TAA compliant.
- Occupancy sensor available with automatic shut-off after 15 minutes if no motion is detected.
- USB model features USB-A (1), USB-C (1) charging within base of unit.
- USB model also features occupancy sensor. 7.5W (A) & 18W (C) power consumption.

Splitty Task Light (page 472)



- Available in Silver, White, or Black (accessories available in silver only).
- Cord is 12' long.
- Cord is silver when black or silver finish specified, white when white light is specified.
- Soft touch on/off, dimming.
- Continuous dimming (100% –3%) with last state memory.
- 5.8W of energy consumption. 7W at highest setting, 0.6W at lowest.
- 5" 360-degree swivel light head, 6.54" round swivel base and 17"H arm. Arm has full 180 degree rotation and 360 degree swivel.
- Designed for 60,000 hours of life.
- Color Temperature: 3500K, Color Rendering Index: 90.
- Materials: aluminum, plastic.
- USB-A has 5W of power consumption.
- USB-A (1) charging at bottom of light arm stem. Charging feature compatible for any mounting method.
- Clamp mount compatible with surfaces ¼" –2¼" thick.
- Tool tile mount has 1⅛" adjustment range, minimum slot height of 5/16".

For specification information see pages 469-470.

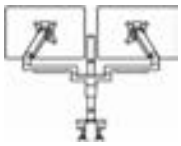
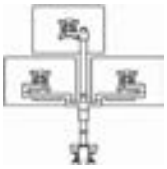
Pivot Standard Weight Monitor Arms





- Adaptable and adjustable to user preference the Pivot monitor arm offers a slim and refined design coupled with easy fingertip adjustment.
- Multiple points of adjustment including 360 degree swivel with optional 180 degree lockout, 18.75" extension, and 10" of height adjustment.
- Monitor tilts +25/-25 degrees.
- Standard weight arms utilize a tension spring that allows for effortless adjustment of monitors to proper ergonomic positions.
- Tension adjustment at multiple points allows for proper adjustment for monitors weight between 6-17 lbs.
- Model includes grommet and worksurface mounting options.
- Desk clamp mounts require ⅞" –2" thick surfaces; grommet mount requires hole diameter of 3/16" to 2" wide and accommodates up to 2" thick surfaces.
- Integrated cable management included with each model. Black models ship with all black cable management pieces, Silver models ship with grey wire management but optional white pieces ship in the box and can be installed on site.
- Dual monitor arm supports up to 25" wide monitors. Wider monitors may require use of optional slider mount model.
- Pivot arms are VESA 75mm and 100mm compatible.
- Quick release feature simplifies monitor installation and changes.

Pivot Slider Mount

- Provides 11.8" of horizontal movement.
- Allows for wider monitors to be used on dual monitor arms and sit flush side by side.
- Not compatible with Pivot Heavy Duty Series.

Pivot Heavy Duty Series

- Adaptable and adjustable to user preference the Pivot monitor arm offers a slim and refined design coupled with easy fingertip adjustment.
- Multiple points of adjustment including 360 degree swivel with optional 180 degree lockout, 20.75" extension, and 12" of height adjustment.
- Monitor tilts +25/-25 degrees.
- Tension adjustment at multiple points allows for proper adjustment for monitors weight between 8-35 lbs.
- Model includes grommet and worksurface mounting options.
- Desk clamp mounts require ⅞" –2" thick surfaces; grommet mount requires hole diameter of 3/16" to 2" wide and accommodates up to 2" thick surfaces.
- Integrated cable management included with each model. Black models ship with all black cable management pieces, Silver models ship with grey wire management but optional white pieces ship in the box and can be installed on site.
- Dual monitor arm supports up to 2 monitors weight 4-17.5 lbs each.
- Pivot arms are VESA 75mm and 100mm compatible.
- Quick release feature simplifies monitor installation and changes.

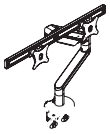
Pivot Post Series

- Adaptable and adjustable to user preference the Pivot monitor arm offers a slim and refined design coupled with easy fingertip adjustment.
- Multiple points of adjustment including 360 degree swivel with 21" extension and 10.6" of height adjustment.
- Monitor tilts +25/-25 degrees.
- Tension adjustment at multiple points allows for proper adjustment for monitors weight between 6.5-17 lbs per arm.
- Model includes grommet and worksurface mounting options.
- Desk clamp mounts require ⅞" –2" thick surfaces; grommet mount requires hole diameter of 3/16" to 2" wide and accommodates up to 2" thick surfaces.
- Integrated cable management included with each model. Silver color option with grey wire management only.
- Dual monitor arm supports up to 25" wide monitors. Wider monitors may require use of optional slider mount model.
- Single and dual models have a post height of 17.7"; Triple monitor model has a post height of 27.5".
- Pivot arms are VESA 75mm and 100mm compatible.
- Quick release feature simplifies monitor installation and changes.

Pivot Counterweight Kit

- Counterweight Kit to be used with monitors weighing less than 6 lbs.
- Gray color only.
- Counterweight weighs 1 lb. 6 oz.

Pivot Conversion Kits



- Kit allows user to transform single monitor arm (Standard, Heavy Duty, or Post) into Dual Arm configuration
- Available in black and silver, Post arm only available in silver
- Required wire management included
- Once assembled, will aesthetically emulate dual configuration of chosen arm

Cleaning instructions are listed on the back of our fabric cards and are available in written form upon request.

CLEANING CODES

D Dry clean only.
L Clean with warm water and mild soap, using clean cloth, as soon as possible.
P Clean with detergent and water or perchlorethylene.
R Detailed recommended cleaning and/or disinfecting procedures are available upon request.
S Only pure, water-free solvents may be used. CAUTION: Use of water-based or detergent-based solvents may cause shrinking and/or permanent water stains.
SM Same as S. Do not brush.
SW Clean with water-based cleaning agents, foam or pure water-free solvents (Energine, Carbona, Renuzit, or other similar products). Vacuuming or light brushing is recommended to prevent dust and soil buildup.
W Water-based cleaning agents or foam may be used.
WS See SW.
X Brush or vacuum only.
XS Brush and vacuum only, NO liquid cleaners.

CLEANING VINYL

Vinyl-coated fabrics are perhaps the most maintenance-free fabrics ever produced and certainly will provide exceptional service life if given proper care. Almost all vinyl manufacturers now provide information concerning the necessary cleaning procedures for their products. In reality, all care and maintenance instructions are the same for all coated fabrics regardless of their manufacturing origin.

Everyday soil — A gentle mixture of any mild soap and warm water will generally dissipate most common soil from the surface. Using a soft cloth, wash the area to be cleaned and rinse. If stubborn dirt remains, such as a stain embedded in the grain of the vinyl, use a soft brush, and if necessary, a touch of cleaning powder. In both situations, rinse and dry with a soft cloth.

Gum — Remove as much chewing gum as possible prior to the application of Naptha or Kerosene, worked in with a soft cloth. If gum cannot be removed, ice may be used to harden the gum so that it separates itself from the vinyl surface. (This same method is also useful in removing wax.)

Ink Spots — You must work quickly! Magic Marker, India ink, and ballpoint pen immediately will affect pigments, and, for the most part, are difficult to remove. It is recommended that a solution of water and rubbing alcohol be applied and gently rubbed on the spot as soon as possible. Hair sprays containing alcohol are sometimes effective in emergencies for removing ink.

Nail Polish and Polish Remover — These products will immediately damage vinyl surfaces and, to retard further damage, should be carefully wiped clean.

Paint — Try to remove as soon as possible. It is not recommended that any paint removers or brush cleaners be used. Clean oil-based paints with a soft clean cloth and Naptha. To clean latex-based paints, use the same method as recommended for everyday soil.

Tar, Asphalt, Etc. — Petroleum-based products will stain all vinyl if allowed to stand too long. Clean as soon as possible with a cloth followed by the immediate application of Kerosene or Naptha.

Products are now on the market that are manufactured to enhance the beauty and service life of all vinyl. However, by using the methods described above with sensible care and attention, the consumer should enjoy years of satisfaction and pride with any vinyl-coated fabrics.

CLEANING LEATHER

Because leather is a natural product, it needs very little or no care during normal usage.

Spots and Spills — Wipe excess liquid up immediately with a clean, absorbent cloth or sponge. If necessary, use clean lukewarm water only and let dry naturally. If water is used, clean the entire area where the spot occurred. An example would be the entire seat cushion or the entire arm. Do not dry wet areas with hair dryers, etc.

Stubborn Spots and Stains — Use a mild, non-detergent cleaner such as bar or Ivory soap. Apply the soap to a clean, wet sponge and wash, then rinse well. Allow to dry naturally.

Butter, Oil, or Grease — Wipe excess butter, oil or grease off of the leather with a clean dry cloth, then leave it alone as the spot should dissipate into the leather in a short period of time. Do not apply water or try to wash a butter, oil, or grease spot.

DO NOT USE saddle soap, cleaning solvent, furniture polish, oils, varnish, abrasive cleaners, soaps, window cleaner, or ammonia water.

Allsteel, as an HNI company, adheres to the HNI Enterprise Sustainability Policy of 2008 and its related procedures. The Design for the Environment Procedure directs the product design process to consider potential environmental impacts of the product; including materials selection, packaging and transport, product use, and design for disassembly at the end of the product's useful life. The Manufacture for the Environment Procedure sets goals related to energy efficiency, waste recycling, air emissions reductions, worker safety, water efficiency, increased renewable energy, and chemical reductions.

The Enterprise Sustainability Policy sets goals and measures results, driven by the ANSI/BIFMA e3 Furniture Sustainability Standard and evaluated in the 3rd party certification called level®. Rigorous quantitative evaluation criteria cover four categories: materials, energy and atmosphere, human and ecosystem health, and social responsibility. The audit process evaluates the individual products, the manufacturing site(s), and the corporation. Allsteel's furniture is level 2 and level 3 certified to the standard. (ANSI is the American National Standards Institute, an organization that directs the transparent development process of national standards.)

In addition, Allsteel's products support requirements of LEED (Leadership in Energy and Environmental Design), the green building rating system. Whether a customer seeks to achieve LEED certification or just obtain the benefits without certification, Allsteel's products meet the standards set forth in LEED. Allsteel is proud to support sustainability initiatives in the building industry as a member of the U.S. Green Building Council (USGBC).

Allsteel complies with the Federal Trade Commission Part 260 Guide for the Use of Environmental Marketing Claims. Our third-party certifications support our environmental statements and our credibility. Third-party certification involves an independent assessment declaring that specified requirements pertaining to a product, process or management system have been met. Allsteel's third party certifications include BIFMA level® 2, SCS Indoor Advantage™ Gold, and FSC®. Select products are Cradle to Cradle Certified™ Bronze and/or have third party certified Environmental Product Declarations.

Nearly all of Allsteel's products are level 2 or level 3 and Indoor Advantage Gold certified. FSC® certified products are available; check price lists for details.

INTRODUCTION

The Gunlocke Company is dedicated to providing the finest products and service possible. This price list reflects that commitment. Included is a current listing of our casegood models.

Seating and Lounge are presented in a separate price list. Contact your Gunlocke Customer Services Representative for more information, (800) 828-6300.

Designed for easy use, each page of this price list, and the inside front cover fold out provide all information required to order a product correctly. Should additional information be needed, contact your Gunlocke customer service representative.

PRICING

Prices shown cover standard product specifications. Any changes or alterations, other than those listed, will be subject to an additional charge. Prices include cartoning and freight. Authorization and pricing must be secured in advance for orders or contracts calling for large quantities, indefinite quantities, or extended delivery dates. Prices are subject to change without notice; the most current prices are published on http://www.gunlocke.com.

ORDERING

To expedite order entry and to assure proper service,email or fax all orders directly to:

The Gunlocke Company
Attn: Order Entry
One Gunlocke Drive
Wayland, New York 14572

585-728-5111
585-728-8350 FAX
800-828-6300
www.gunlocke.com

Gunlocke will not be responsible for duplicate orders if purchase orders are left unmarked.

ACKNOWLEDGMENT

Each order will be acknowledged by Gunlocke. Customers should check each acknowledgment for accuracy and immediately notify Gunlocke of any discrepancies. The printed acknowledgment is the final agreement between The Gunlocke Company and the customer, superseding all previous communications regarding the order.

SPECIFICATION CHANGES

Gunlocke reserves the right to change specifications for the improvement of products at any time, without notice.

ORDER CHANGES

Gunlocke is not required to accept changes in orders after confirmation. Reasonable changes are subject to additional charges for labor, material and administrative costs.

Order changes of acknowledgment may result in re-scheduling of product.

RETURNED MERCHANDISE

No merchandise may by returned without prior authorization.

SHOWROOMS

For all showroom locations and tour information, please reference the showrooms page online at: www.gunlocke.com/inspiration/showrooms

CANCELLATIONS

Cancellation of orders cannot be accepted since every order is manufactured according to customer specifications.

STORAGE

If delivery cannot be made and products are ready, Gunlocke will transfer products to a storage facility and products will be invoiced at that time. The customer is responsible for storage charges and assumes and bears all risks associated with the storage of that product.

TERMS

Net 30 days from date of invoice. A service charge of eighteen percent (18%) per year or .0004931% per day, compounded monthly, will be added to balance due beyond the thirtieth day. Products are shipped FOB factory, freight prepaid and allowed. Title passes to purchaser and Gunlocke's responsibility ceases when shipment is accepted for transportation by a carrier. A full explanation of all payment terms is found on order and invoice forms.

ORDERING INFORMATION

1a. Intended use: The furniture on this schedule is intended for use by Government executives (or equivalent military rank) in the Executive, Judicial and Legislative Branches of the Federal Government. To help customers make a good purchasing decision based on their needs and budget, GSA has established four grades of furniture. Grade (1) includes furniture that tends to be the most expensive on this schedule, grade (2) furniture tends to be more moderately priced and grades (3) and (4) furniture tend to be affordably priced when compared to grades (1) and (2). Some pieces of furniture on this schedule may be significantly higher in price than GSA Traditional and Contemporary Executive Special Order Program furniture. The ordering agency or service is responsible for determining furniture appropriate for use in its offices which will fit within its budget and comply with applicable Federal or internal agency procurement regulations. Please see reverse for GSA terms and conditions.

GSA/FEDERAL CONTRACT INFORMATION:

Model numbers identified with the following verbiage “When purchased separately without a configurable TAA compliant end product, not on GSA contract” is to mean that these configurable parts or components:

- Have no functionality or capability without being integrated into an end product; and
- Are considered Open Market if purchased without a configurable TAA compliant end product.

Grade 1 All exposed solid parts such as top rims, base rails etc. (except decorative accents, inlays and painted parts) shall be the same species as the face veneer. Top and bottom edges of drawer fronts shall be solid wood in the same species as the face veneers. Drawer sides and backs shall be solid wood.

Grade 2 Exposed wood panel trim and trim on tops shall be the same wood species as the face veneer on the top. Some or all other exposed solid parts, such as base rails can be an alternative wood species (such as poplar or gum) different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be solid wood or veneer core plywood/laminated construction.

Grade 3 Most or all exposed solid parts can be an alternative wood species (such as poplar or gum), different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be solid wood or veneer core plywood/laminated construction. Credentials is grade 3.

Grade 4 Most or all exposed solid parts can be an alternative wood species (such as poplar or gum), different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be composite wood material construction such as MDF. Silea and Briefing are grade 4.

ITEMS ON GSA CONTRACT

Please note, in order to verify if an item is on GSA Contract or is “Open Market,” please use Compass quoting which is updated in real time with all GSA contract changes. If you need additional assistance, please contact your local sales representative.

For more information visit:
https://www.allsteeloffice.com/insights/sustainability/product-certifications.

12 YEAR WARRANTY

Subject to the limitations set forth below. The Gunlocke Company warrants to the original purchaser all product in this price list to be free from defects in material and workmanship for a twelve year period from the date of shipment. This 12-year warranty applies to all products sold and installed by a Gunlocke authorized agent for normal commercial single shift service. Gunlocke will repair, or at its option, replace defective merchandise, free of charge. The following components not manufactured by Gunlocke have the following warranties:

- **High wear components** such as casters and glides are warrantied for five years after date of shipment to original owner.
- **Electrical components** are warrantied 10 years from date of manufacture with exception of lamps and ballasts which are not warrantied. This includes Fluorescent Tasklights.
- **LED tasklights** are warrantied for 3 years from date of shipment to original owner.
- **Drawer suspensions** are warrantied for lifetime of product after shipment to original owner.
- **Personal Corners** including covering (leather) are warrantied for three years of single shift and normal use after shipment to original owner.
- **Height adjustable electrical components** are warrantied for five years of single shift and normal use after shipment to original owner.

Any non-standard material selected by the customer is not warrantied. Neither does this warranty apply to damage resulting from accident, alteration, or misuse, as well as damage from normal wear and tear such as dents, nicks, scratches, fading and improper maintenance. That is, Gunlocke's warranty is only valid if products are given proper use and care. Gunlocke assumes no responsibility for product damages resulting from improper installation or user modification.

WOOD FURNITURE

Wood owes its inherent beauty to variations in color, grain, and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next even though they are finished at the same time. Exposure to light and the aging process will cause a darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. The Gunlocke Company does not guarantee the exact matching of grain, pattern, and color.

These finishes do not cover any of the natural characteristics of the wood, including nature's colorations, pitch pockets, and the variations of steambent wood. Merchandise will not be replaced because of these natural variations.

It is expressly understood and agreed that the buyer's sole and exclusive remedy for any and all losses or damages resulting from nonconforming goods, or from any other cause, shall be repair or replacement of defective parts, and that Gunlocke shall not be liable for damages or injury to persons or property, nor for replacement of the entire commercial unit, if repair or replacement of defective parts can reasonably render the unit conforming.

All warranty claims must be made in writing by the original owner. Owner may be required to produce the invoice or other evidence to establish that a claim is within the warranty period. Warranty claims may be submitted on the Gunlocke website.

As stated and illustrated on the website, serial numbers are required to process a warranty claim. No person, firm or corporation is authorized to assume for Gunlocke any liability in connection with the sale or installation of Gunlocke products except as stated above.

All other warranties, expressed or implied, are excluded. Gunlocke shall not be liable for incidental or consequential damages of any sort.

Within the Continental USA, all orders above $20,000 list are shipped FOB factory, freight prepaid and allowed. All orders less than $20,000 list will be subject to a 5% list freight charge. Products shipped to Alaska and Hawaii FOB factory, freight prepaid and allowed to port of embarkation. Customer is responsible for freight charges from port of embarkation to final destination.

An anticipated shipping date is indicated on the order acknowledgment. Gunlocke cannot accept responsibility for shipping delays caused by outside sources or unforeseen problems. Delay of shipments requested by customers must be approved by Gunlocke. Any resultant storage charges will be charged to the customer.

Gunlocke may await completion of the entire order and ship all at once or may make partial shipments from time to time at its sole discretion unless the customer requests in writing that partial shipments are needed and Gunlocke approves the specific shipping schedule. Additional charges may apply.

Gunlocke is not liable for any delay or failure to deliver or perform due to strikes, lock-outs, or other labor or transportation difficulties, delay of sources or supply, accidents, fires, acts of God, or any other causes of like or unlike nature beyond the control of Gunlocke.

LIABILITY

Gunlocke products and their packaging are tendered to a transportation company only after passing rigid quality control inspection. At that time, title to the product is passed to the purchaser. However the transportation company assumes all liability from acceptance of shipment through its delivery. That is, Gunlocke's liability ceases at the time of shipment.

FILING OF CLAIMS

All claims for damage or loss must be submitted via our website within 15 days after receipt of merchandise. Do not return freight damaged merchandise to Gunlocke. Follow the steps below to expedite processing and resolution of claims.

For Visible Damage

1. Make damage notation on delivery receipt and have driver sign. Do not reject or refuse the shipment.
2. Immediately contact Gunlocke Traffic Department at 585-728-8268.
3. Hold damaged carton and all interior packing for carrier's inspection. These materials will be needed to substantiate the claim.

For Concealed Damage

1. Open cartons within 15 days of receipt and inspect.
2. Follow steps 2 and 3 as listed under Visible Damage.
3. Do not remove product from delivered destination.

For Loss

1. Be sure loss notation is made on delivery receipt and have driver sign.
2. Contact Gunlocke Traffic Department at 585-728-8268.

Should transportation company seek to limit its liability on concealed, loss, or damage claims, please contact Gunlocke's traffic department. After a thorough investigation of the claim, the traffic department will provide you with guidance in corresponding with the carrier.

Returned merchandise, regardless of delivery method, will not be accepted unless specifically authorized by Gunlocke.

For Damage or Loss of Parcel Post or UPS Shipment

Notify the Gunlocke traffic department immediately at 585-728-8268.

NORMAL DELIVERY

All normal ground transportation by Gunlocke will be made on a dock-to-dock basis. The Gunlocke traffic department will determine the recommended method of shipment according to the ship to destination. If the delivery on a shipment takes longer than 2 hours to be unloaded, an additional charge will be billed at $60/hour at 15 minute increments. Gunlocke reserves the absolute right to determine the method of shipping unless special delivery instructions have been previously approved.

Gunlocke will make every effort in honoring delivery requests as stated on orders. However, the Company shall have no liability for failure to deliver, perform or delay in delivery due to any cause outside the control of Gunlocke. The Company assumes no liability for costs incurred due to delayed or late deliveries.

If a guaranteed delivery time is needed please call Gunlocke Traffic Department at 585-728-8268 for a quote as additional charges will apply. Weekend or after hours deliveries are subject to additional charges.

WEEKEND DELIVERY

A $500 charge will apply on weekend delivery after 3:00 PM Friday through Sunday evenings.

DROP SHIP / JOB SITE DELIVERY

Orders under $50,000 list will incur a $125 charge for ship to locations other than a designated dealer warehouse.

INSIDE DELIVERY

Inside delivery must be noted on order. A minimum $100 charge will apply.

SPECIAL DELIVERY

Please contact the Gunlocke traffic department for special delivery services such as inside delivery, weekend or after hour deliveries, reconsignment or other special needs. These are billable services.

Gunlocke will make every effort in honoring delivery requests as stated on orders. However, the Company shall have no liability for failure to deliver, perform or delay in delivery due to any cause outside the control of Gunlocke. The Company assumes no liability for costs incurred due to delayed or late deliveries.

DOCK RESTRICTIONS

Gunlocke trailers are 53' x 102"; when attached to truck cab the total length is 75'. If delivery dock will not accommodate trucks of this sizes, the Gunlocke traffic department must be contacted prior to shipping. Alternate arrangements can be made; additional charges may apply.

VENEERS

All exposed wood surfaces utilize flat cut, rift cut, or straight grain Stratawood (FSC reconstituted veneer), flat cut Cherry, Maple, Walnut veneers, quarter cut Walnut, or Rift Oak veneers. Stratawood veneer is made from rapidly renewable wood veneer, which provides a repeatable grain pattern. Stratawood veneers are available in flat cut Cherry, flat cut Walnut, or Rift Oak at veneer 1 pricing and in straight grain Cherry, Maple, Walnut, Oak, Silver Oak, or Washed Walnut at veneer 2 pricing. Veneers can be specified in vertical or horizontal orientation. All veneers are carefully selected and matched to assure balance and consistency.

SPECIALTY FINISHES

- Submit a color sample block (minimum size 3" x 3") to Gunlocke so that a finish formulation can be developed to match the special finish and color.
- Review the approval sample provided by Gunlocke.
- Written approval and sign off is required for Gunlocke Customer Service.
- Once written approval and sign off is received, the special finish order will be acknowledged.

Note: See our Website at Gunlocke.com for special finish request forms.

All Casegoods & Tables Purchase Orders:

- 10% list upcharge per wood unit to specified veneer option receiving special finish.
- $250 net formulation fee for special finish.

* See cross reference above for Gunlocke wood / paint finish match. Although these are good matches, they are not exact matches due to grain pattern and sheen variation from laminate to veneer. They coordinate throughout a floorplate, but we recommend they not be utilized in the same office.

Note: Gunlocke does not guarantee an exact finish match to the plastic laminates listed above.

Locks are standard on all below worksurface storage units. Closets and overhead storage are optional locking.

STANDARD OPTIONS

- **Random Keying:** Key(s) arbitrarily assigned and installed at the factory. Factory installed locks are silver.

  Note: When the random option is selected, some units may be shipped with the same key number.

- **Omit Lock Core:** The factory will omit lock cores. Removable lock core kits with specific key numbers must be ordered to facilitate keying alike in the field. A lock program must be specified. Field installed locks are available in Matte Silver, Black, Pyrite, Matte Gold, and Designer White.

KEYING

Random Matte Silver Keying (Factory Installed)	**STD**	
Omit Lock Core (Field Installed)	**OMT**	(If option is chosen, a field installed lock program must be specified)

LOCK PROGRAM (FIELD INSTALLED ONLY)

Random Keying	**X**
Specified Keying	**X101 - X225**
Sequential Keying	**SEQ/101 - SEQ/225**

KEYING COLOR (FIELD INSTALLED ONLY)

Matte Silver	**MTS**
Black	**BLK**
Matte Gold	**MGD**
Pyrite	**PYT**
Designer White	**PJW**

REPLACING LOCK CORES

- Lock must be in the unlocked position.
- Insert core removal key and pull core straight out.
- Insert new core with core removable key, hold core into lock and withdraw core removal key.
- Retain original core for future use.

For field installed locks, the "Omit Lock Core" option must be chosen. Then, specify lock model based on total quantity of lock cores within each office. To ensure ease of ordering for a variety of situations, lock cores can be specified in 3 ways – Random, Specified or Sequential.

LOCKING MODELS	DESCRIPTION	LIST
GLKFE1	1 core, 2 keys	$20
GLKFE2	2 core, 2 keys	$25
GLKFE3	3 core, 2 keys	$31
GLKFE4	4 core, 2 keys	$36

Note: When purchased separately without a configurable TAA compliant end product, not on GSA contract.

Note: One core removal key minimum per order. One additional core removal key per 25 lock cores will be shipped.

MASTER KEY

One key available to authorized dealers **GLKMSTR** **$13**

Note: When purchased separately without a configurable TAA compliant end product, not on GSA contract.

KEY NUMBERS 101-225 ARE AVAILABLE.
Orders without key numbers will be specified at random.

RANDOM KEYING (FIELD INSTALLED)

The Random Keying option is provided for instances where there are multiple orders or phases to a project and the offices need to be keyed alike but the key numbering is not required. With the random keying option, key numbers are not specified. However, the core kits will be in sequential order from a random starting point.

RANDOM KEYING EXAMPLE

• There are 18 offices which have 3 black locks that need to be keyed alike, but the key number is not important.

Model String:

GLKFE3.	**BLK.**	**X.**	**18**
Model	*Color*	*Program*	*# of Offices*

SPECIFIED KEYING (FIELD INSTALLED)

The Specified Keying option is provided for instances where there is a specific key number desired for all of the cores ordered.

SPECIFIED KEYING EXAMPLE

• There are 6 offices which have 2 silver locks that need to be keyed alike with the key number 202.

Model String:

GLKFE2.	**MTS.**	**X202.**	**6**
Model	*Color*	*Program*	*# of Offices*

SEQUENTIAL KEYING (FIELD INSTALLED)

The Sequential Keying option is provided for instances when there are multiple orders or phases to a project and it is imperative that key numbers are not duplicated..

SEQUENTIAL KEYING EXAMPLE

• A multiple phase project has 100 offices - 60 in the first phase with 4 locks, 40 in the second phase with 3 locks. No key number can be duplicated.

Model String (First Phase):

GLKFE4.	**PYT.**	**SEQ/101.**	**60**

Model String (Second Phase)

GLKFE3.	**PYT.**	**SEQ/161.**	**40**
Model	*Color*	*Program*	*# of Offices*

VENEERS

All exposed wood surfaces utilize flat cut, rift cut, or straight grain Stratawood (FSC reconstituted veneer), flat cut Cherry, Maple, Walnut veneers, quarter cut Walnut, or Rift Oak veneers. Stratawood veneer is made from rapidly renewable wood veneer, which provides a repeatable grain pattern. Stratawood veneers are available in flat cut Cherry, flat cut Walnut, or Rift Oak at veneer 1 pricing and in straight grain Cherry, Maple, Walnut, Oak, Silver Oak, or Washed Walnut at veneer 2 pricing. Veneers can be specified in vertical or horizontal orientation. All veneers are carefully selected and matched to assure balance and consistency.

VENEER TOPS

Wood veneer tops feature 3-ply construction and are comprised of a premium 1.125" thick substrate. Tops are available with an optional square or knife edge profile. Square edge tops are 45 lb. density particleboard and knife edge tops are premium MDF construction. Tops are faced with premium veneer and backed with a polymer resin impregnated moisture resistant material. Multi-piece tops are connected with 1/8" thick plastic splines for vertical alignment and steel mechanical fasteners for horizontal alignment to firmly connect the tops end to end. Rectangular tops utilize solid wood edgebands that are species matched except for Rift Cut Oak which is paired with solid ash hardwoods. Non-rectangular tops utilize matching 1mm edgebands that are doubled up for added durability for total thickness of 2mm.

LAMINATE TOPS

The standard laminate offering includes solid and woodgrain laminates from Wilsonart. Laminate tops feature a high pressure laminate (HPL), a balanced 3-ply construction and are comprised of a 1.125” thick substrate. Tops are available with a square edge and are made with 45 lb. density particleboard. Laminate tops have a 2mm matching vinyl edgeband on all sides. Chassis and storage components feature a thermally fused laminate (TFL). For complete technical specifications, visit www.wilsonart.com.

SOLID SURFACE TOPS

Solid surface tops with plywood subtops are a total of 1 1/2" thick. Tops are constructed with 1/2" solid surface material applied to premium 1" plywood. The solid surface has a matte finish. The plywood subtop is 1" thick, faced and backed with a phenolic backer for a balanced construction. Sub top edges are beveled and painted black. Multi-piece subtops are connected with 1/8" thick plastic splines for vertical alignment and steel mechanical fasteners for horizontal alignment to firmly connect the subtops end to end.

BACK PAINTED GLASS TOPS

Back painted glass tops with plywood subtops are a total of 1 1/2" thick. The back painted glass top is 1/2" thick low tempered iron with the top surface soft acid etched. Glass edge is square, aris polished. The plywood subtop is 1" thick, faced and backed with a phenolic backer for a balanced construction. Sub top edges are beveled and painted black. Multi-piece subtops are connected with 1/8" thick plastic splines for vertical alignment and steel mechanical fasteners for horizontal alignment to firmly connect the subtops end to end.

BACK PAINTED GLASS DOORS & WHITEBOARDS

Back painted glass doors and whiteboards are captured by an extruded aluminum mitered frame. The frame is low profile allowing only 1/16" visible frame around the perimeter of the glass from the front view. Back painted glass is 4mm thick and whiteboard applications include a steel backer for use with magnets. Back painted glass used in vertical applications has a clear glossy finish for use as a writable surface. These units can be used with dry-erase markers. 6 magnets are included with each whiteboard. Whiteboards are mounted to the wall with a z-bracket connection.

TECHNOLOGY PORTS

Recessed in table top, unit is available as double door and single door port. Cover flips up to access power and data ports. Veneer tops are available with wood, a powder coat finish or polished aluminum doors. Laminate, back painted glass and solid surface tops are available with a powder coat finish or polished aluminum door option. Hinged port doors are on a dampening hinge for smooth open/close. Wood port doors are a close veneer match to top, but not an exact match. The sheet metal port assembly that houses the power and Extron components is black powder coated sheet metal. Power units are powder coated sheet metal enclosure and rated for 15 amp, 125 volt with circuit breaker. Units can be specified with 10’ grounded standard plug or 6’ hardwire conduit option. Unit is field installed. UL Listed. Each USB simplex includes (2) 1 amp USB ports.

- Double port units include (6) simplex power/USB power outlets and (2) double space Extron AAP plates or (4) single space Extron AAP plates.
- Single port units include (3) simplex power/USB power outlets and (1) double space Extron AAP plate or (2) single space Extron AAP plates.

Extron units are ordered separately. For complete specifications on the Extron AAP plates reference the Extron website, Architectural Connectivity http://www.extron.com/product/index.aspx.

50" TECHNOLOGY TROUGH RECESSED IN TABLE TOP

Unit is 11 5/16" D x 49 3/8" W, powder coated in your choice of silver, black, pyrite, matte gold or designer white finish. Includes (2) nominal 10"sliding doors. Doors are elevated ½" to accommodate cords entering and exiting wire access opening. Each standard unit includes (12) AC power outlets, (20) jack openings, (2) AAP Extron blank plates. Each 50" trough includes (4) power enclosures that contain (3) simplex receptacles per enclosure. Each enclosure is rated for 15 amp, 125 volt with circuit breaker. Units can be specified with 10' grounded standard plug or 6' hardwire conduit option. Each 50" trough includes (4) power supply cords. Numerous jack options available, see ordering page for available options. Unit is field installed. UL Listed

PERIMETER POWER

Perimeter Power units are available in three sizes and are offered as surface mount, under worksurface mount, and clamp mount units. Available in black, white or silver, power units incorporate a combination of power, USB power, and data integration. Each enclosure

is rated for 15 amp, 125 volt. Units can be specified with 10' standard plug or 6' hardwire conduit option. Unit is field installed. Standard plug and hardwire units are UL listed. Daisy chain units are UL recognized. Check local codes for acceptance. USB charging ports are 2.1 amps per port. For information on each model, reference the “Power Units” page in the price book.

TRIO BEZEL MOUNT POWER

Available in black, white or silver, power units incorporate a combination of power, USB power, and data integration. Each enclosure is rated for 15 amp, 125 volt. Units can be specified with 10' standard plug or 6' hardwire conduit option. Unit is field installed. Standard plug and hardwire units are UL listed. Daisy chain units are UL recognized. Check local codes for acceptance. USB charging ports are 2.1 amps per port.

TECH MODULE POWER

Available in black or silver, power units incorporate a combination of power, USB power, data integration and QI wireless charging option. Each enclosure is rated for 15 amp, 125 volt. Units can be specified with 10' standard plug or 6' hardwire conduit option. Unit is field installed. UL Listed. USB charging ports are 2.1 amps per port.

Qi charging is available on Corded and Hardwire versions.

- Includes 3 Qi charging coils (5 watts each) for wireless charging.
- Units have LED indicator lights below the lid's surface.
- Units house power and charging USB inside. All units are Qi certified.

CABLE CUBBY

The Extron Cable Cubby® Series is the AV industry’s gold standard for conference table AV connectivity, AC power, and cable management. Units include an 9.5' power cord. These sophisticated yet durable, furniture-mountable enclosures blend seamlessly with any furniture and room décor, virtually disappearing into the surface when closed. Cable Cubby Series enclosures are engineered for fast assembly and installation on the job site. A simple, elegant integrated clamp system secures Cable Cubby Series enclosures to the furniture surface without the need for tools or additional parts. These versatile modular enclosures accommodate Extron Retractor Series or Retractor Series XL patented, variable-speed cable retraction modules, AV cables, or AAP™ AV Connectivity Modules. They can be easily customized to your exact needs using the online Extron Cable Cubby Builder. In addition, Extron has unique enclosures that best accommodate high end environments and special circumstances when cutting into the surface is not an option.

POWER CABLE KIT

Convenient way to connect all power cords to a single power source. Unit includes 10' power in feed conduit. The power cable kit is rated for 20 amps per circuit allowing the use of 2 circuits with 2 line conductors, 1 neutral and 1 ground. The line conductors, neutral and ground are all 12 AWG. The kit can be wired in both single and 3-phase configurations, 240/120V, 208/120V, respectively. UL Listed, to be installed by certified electrician.

METAL X / Y BASES

Metal X and Y bases are constructed of cast aluminum feet mounted to a 2.25" diameter steel column. The cast feet are bolted to the steel column. Top plates are welded to the steel column. Y bases include an extruded aluminum horizontal stretcher mounted at same height as feet, which is also bolted to the column. All components ship knocked down for field installation. (See base dimension and floor monument locations for additional information) Optional wire management grommets may be specified. When option is specified an oval cutout is included in the column below the top plate and above the feet connection. A plastic grommet cover is included in the cutouts. Cast aluminum feet and extruded aluminum horizontal stretchers are polished aluminum and steel columns are chrome finish. Powder coat finish options are also available. An optional extruded aluminum beam assembly may be added to Y bases for horizontal wire management beneath the top to each column. The beam assembly is required for larger bases. The beam consists of extruded aluminum 1 1/2"W x 3" H beam in a powder coat finish. All beams include standard plastic wire managers mounted along the inside face of beams. Base ships knocked down.

METAL RIBBON BASES

Ribbon bases are constructed of 3/8" thick x 3" wide steel. All welds are buffed and polished for a seamless aesthetic. The top frame is constructed of 1.5" wide x 3" high steel tubing. The top frame assembly is powder coated and welded to the base below to provide a strong durable base assembly. (See base dimension and floor monument locations for additional information.) Ships fully assembled. Available in a powder coat or polished stainless finish.

MITER BASES

Miter bases are constructed of 3/4" thick 3-ply veneer panels or painted MDF. Outer panels are mitered in corners and securely fastened together with a clamex connector and 1.5" steel vertical tubing for added strength. Removable wire management panels are connected with spring clips. Steel beam attachment brackets and screws included to attach base to aluminum frame. Bottom is open for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) Each base assembly includes 2 extruded aluminum beams running along the length. The beams and bases are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3" H beam in a powder coat finish. All beams include standard plastic wire managers mounted along the inside face of beams. Bases are available in veneer MDF. Bases and beams ships knocked down.

MITER HEIGHT ADJUSTABLE BASES

Miter bases are constructed of 3/4" thick 3-ply veneer panels or painted MDF. Outer panels are mitered in corners and securely fastened together with a clamex connector and 1.5" steel vertical tubing for added strength. Removable wire management panels are connected with spring clips. An integrated steel structural assembly is designed into the base to tie together the aluminum beams, height adjustable motors, and the miter base. Bottom is open for managing wires from floor monument to table top. (See base

dimension and floor monument locations for additional information) Each base assembly includes 2 extruded aluminum beams running along the length. The beams, height adjustable components, bases are assembled via integrated steel assembly prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3" H beam in a powder coat finish. All beams include standard plastic wire managers mounted along the inside face of beams. Bases are available in veneer MDF. Bases and beams ships knocked down. Height adjustable components include:

- Qty (4) height adjustable lifting columns
- Qty (1) control box
- Qty (1) memory handset with 3 pre-set buttons, up/down buttons, and digital height readout.
- Qty (4) 6' cables connect lifting columns to control box
- Qty (1) 10' standard plug power cable to connect control box to power source

Lifting columns are rated for 225 lbs dynamic load per column. Height range is 29" to 45". Each control box is powered by 120V / 60Hz. 4 lifting columns may draw approximately 3.31 amps total maximum under full load. Standby power is 0.1W.

EXPANDABLE BASES

Expandable bases are constructed of 3/4" thick 3-ply veneer, laminate, or painted MDF panels. Panels are securely fastened together using cam-lock fasteners and dowels and 1.5" steel vertical tubing for added strength. The base includes inner panels that can be repositioned using bolts into an insert to gain additional wire management and floor core capacity within the base. Removable wire management panels are connected with spring clips. Bottom is open for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) Each base assembly includes 2 extruded aluminum beams running along the length. Steel beam attachment brackets and screws included to attach base to aluminum beams. The beams and bases are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3" H beam in a powder coat finish. All beams include standard plastic wire managers mounted along the inside face of beams. Bases are available in veneer or laminate MDF. Bases and beams ships knocked down.

TAPER BASES

Taper bases are constructed of 1/8" plywood bent panels and 3/4" thick MDF. Panels are securely fastened together with steel angle brackets, wood screws, and solid wood sticks. Removable wire management panel connected with keku fasteners. Steel beam attachment brackets and screws included to attach base to aluminum frame. Bottom includes cutout for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) Each base assembly includes 2 extruded aluminum triangular beams running along the length. The beams and bases are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3"H beam, silver or black. Beams are assembled at ends, with steel angle brackets and screws. All beams include standard plastic wire managers mounted along the inside face of beams. Ships knocked down.

GEO BASE

Geo base is constructed of 3/4" thick 3-ply panels. Panels are securely fastened together with mini-fix connectors, wood biscuits and steel angle brackets. Removable wire management panel connected with keku fasteners. Panel includes routed reveal along top edge for easy removal. Steel attachment bracket and screws included to attach base to aluminum frame. Bottom includes 3" x 11" cutout for managing wires from floor monument to table top. Bottom of base elevated 2 3/8" from floor to accommodate height of floor monument. (See base dimension info for additional information)

LEG BASES

Leg bases are constructed of 1 1/2"W x 3"H steel tubing. The leg is hollow for wire management with an access hole on the inside top of the leg. The bottom of the leg has a beveled cutback and open for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) Each base assembly includes 2 extruded aluminum beams running along the length. The beams and bases are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3"H beam in a powder coat finish. All beams include standard plastic wire managers mounted along the inside face of beams. Leg Bases are available in chrome or a powder coat finish. 4 legs are included on bases up to 120"W. Larger bases include a veneer, paint, or laminate wire management center base with a removable access door. On smaller table tops (rounds, soft square tops) each individual leg screws through top plate to the bottom of the top. An optional veneer, paint, or laminate wire management center base with a removable access door may be ordered separately on larger tops to cover floor cores. Bases and beams ships knocked down.

CYLINDER AND HALF CYLINDER BASES

Inner material consists of a wood composite tube. Top and bottom panels are a 3/4" particleboard glued and pinned to the composite tube. Top and bottom panels include appropriate cutouts for routing wires from the top to the floor for wire management models. The cylinder core is faced with a 2-ply material utilizing an outer plain sliced select veneer on a 1/28" popular cross band. This 2-ply face material is attached to the cylinder care with permanent bond PVA glue. A 3/4" sub-top is attached to the base with screws and provides an attachment method to connect the base to the top. The sub-top is pre-bored for screws for easy attachment to top. Glides with 1 1/8" of adjustment are included for leveling.

TRAINING TABLES

Available in wood or laminate tops. Training Tables are available with a flip top base on casters or a fixed top base on glides. Bases are constructed of aluminum feet mounted to a 2.25" diameter steel column. The cast feet are bolted to the steel column. Top plates are welded

to the steel column. Includes an extruded aluminum horizontal stretcher below the top plate for lateral support, which is also bolted to the column. All components ship knocked down for field installation. The flip mechanism is bolted to each top plate. The flip top base includes a single handle that activates a plastic coated steel cable connected to a folding mechanism that allows the top to pivot 90 degrees to facilitate nesting. The mechanism locks the top in the horizontal and vertical position and the handle must be compressed to unlock. Optional wire management grommets may be specified in the vertical columns. When option is specified an oval cutout is included in the column below the top plate and above the feet connection. A plastic grommet cover is included in the cutouts. Cast aluminum feet and extruded aluminum horizontal stretchers are polished aluminum and steel columns are chrome finish. Base ships knocked down. Modesty panels connect to bottom of the worksurface with a hinged metal steel bracket which allows the panel to pivot and remain in a vertical position when the table is flipped up for nesting. Corner Tops are designed to be used in conjunction with rectangular tops to create U-configurations. The 90 degree corners are attached in the field with metal steel brackets and threaded knobs that attach to the steel inserts on the bottom of the worksurface for easy removal without tools. Connection hardware included with corner unit. Rectangular, Hexagon, and Half Round Tops include steel threaded inserts that are located on bottom of all tops to mount removable ganging mechanism. Ganging mechanism must be ordered separately.

OCCASIONAL TABLES

Occasional table tops are available in wood or laminate and are 1/2" thick. Tops are 3-ply construction on a MDF substrate and are profiled with a knife edge. Bases are constructed of a 1 1/4" diameter solid steel column bolted to a 3/16" disc base. Bases are available in a range of powder coat finishes or polished chrome. Base ships knocked down.

CREDENZAS ON RIBBON BASE

Available in low seated, standard, and buffet heights. Credenza chassis are made with veneer end panels and fronts which are constructed with 3/4" thick balanced 3-ply panels. Panels are securely fastened together with cam fasteners in conjunction with pressed hardwood biscuits are securely adhered with PVA (white polyvinyl acetate) glue. Credenza tops are ordered separately. Wood and laminate tops are 3/4" thick. Back painted glass and solid surface tops are 1/2" thick. Ribbon Base Credenzas include a 3/8" thick x 3" wide powder coat or polished stainless steel foot that runs front to back on unit. The foot raises the credenza 4 3/16" off the floor. All hinged doors include touch latches. All adjustable shelves are standard doors. Each unit is equipped with a minimum of four adjustable glides.

CREDENZAS TO FLOOR

Available in standard and buffet heights. Credenza chassis are made with veneer end panels and fronts which are constructed with 3/4" thick balanced 3-ply panels. Panels are securely fastened together with cam fasteners in conjunction with pressed hardwood biscuits that are securely adhered with PVA (white polyvinyl acetate) glue. Credenza tops are ordered separately. Wood and laminate tops are 3/4" thick. Back painted glass and solid surface tops are 1/2" thick.

- (SP1) Storage Pedestal with Shelf – 1 adjustable shelf. Hinged door front can be left or right handed depending on specified location. Standard height internal dimensions – 21 1/2"D x 22 1/2"W x 26 1/4"H, Buffet height internal dimensions – 21 1/2"D x 22 1/2"W x 32 1/2"H.
- (SP4) Drawer Storage Pedestal – 4 extendable drawers behind a hinged door. Hinged door front can be left or right handed depending on specified location. Box drawers are mounted on soft close suspensions. Box drawer internal dimensions are 14"D x 19 5/16"W x 3 1/4"H.
- (SPU) Utility Pedestal - Includes a vented back panel. May be used for AV Rack, Refrigerator or Trash/Recycle bin (ordered separately. Standard Height Internal Dimensions 21 1/2"D x 22 1/2"W x 26 1/4"H. Buffet Height Internal Dimensions 21 1/2"D x 22 1/2"W x 33 1/4"H.

MEDIA TABLES

Available in wood, laminate, back painted glass, and solid surface tops. Media wall is constructed of 3/4" thick 3-ply veneer panels. Outer panels are mitered in corners and securely fastened together with clamex connectors and solid wood sticks are glued in corners for added strength. Removable wire management panels are connected with keku fasteners. Steel beam attachment brackets and screws included to attach base to aluminum frame. Bottom is open for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) The face of the media wall includes a 10"H x 12 3/8"W cutout for managing TV cables. TV mount is NOT included. Designed for use with low-profile, fixed TV wall mount brackets - non-articulating. The TV mount is field installed to the face of the media wall. The media wall is 54"W and is for use with 50" flat screen TV's and smaller. Each base assembly includes 2 extruded aluminum triangular beams running along the length. The beams, base, and media wall are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3"H beam, silver or black. Beams are assembled at ends with steel angle brackets and screws. All beams include standard plastic wire managers mounted along the inside face of beams. In freestanding applications, a back painted glass whiteboard with steel backer is attached to back of media wall. See whiteboard specs for additional information. A metal Y base may be substituted in place of miter base. Ships knocked down.

BAR HEIGHT COLLABORATIVE TABLE BASES

Available in wood, laminate, back painted glass, and solid surface tops. Wood and laminate tops are 1 1/2" thick with the edge rabitted to 1/2" visible thickness over base and 1" concealed into base. Back painted glass and solid surface tops are 1/2" thick with 1" plywood subtop. Miter bases are constructed of 3/4" thick 3-ply veneer panels or painted MDF. Outer panels are mitered in corners and securely fastened together with clamex connectors and solid wood sticks are glued in corners for added strength. Removable wire management panels are connected with keku fasteners. Steel

beam attachment brackets and screws included to attach base to aluminum frame. Bottom is open for managing wires from floor monument to table top. (See base dimension and floor monument locations for additional information.) Each base assembly includes 2 extruded aluminum triangular beams running along the length. The beams and bases are assembled prior to installing the table top. This allows the top to be installed last preventing damage to the table top. The beam consists of extruded aluminum 1 1/2"W x 3"H beam, silver or black. Beams are assembled at ends with steel angle brackets and screws. All beams include standard plastic wire managers mounted along the inside face of beams. Ships knocked down.

DRAWERS

All drawers are constructed of four sides and a bottom, which are attached to a drawer front with screws for easy removal. Drawer fronts feature matched veneer within each pedestal set. The drawer side material is 3-ply 12mm vinyl wrapped particleboard and are miterfold construction. The bottom material is a 3-ply substrate consisting of vinyl wrapped high density fiberboard core.

SUSPENSIONS

Suspensions utilize cold rolled steel, zinc plated, high-grade drawer suspensions. Box drawers are full extension, featuring precision steel ball bearings for a smoother, quieter range of motion and are load rated for 120lbs. File drawers are full extension, featuring precision steel ball bearings for increased weight capacity and are load rated for 120 lbs. Lateral file suspensions are load rated for 150lbs. and include an anti-tip mechanism that prevents both drawers from being opened at the same time. All suspensions are soft close and are warranted for the lifetime of the product.

HINGES

Doors with metal pulls include a 105° hinge with an integrated soft-close mechanism. Doors with touch latch utilize a 110° hinge. Hinges are fully adjustable.

LOCKS AND KEYING

Locks are standard on all desks, credenzas, returns, modular pedestals, and storage units. Locks are optional on closets and overhead cabinets. Each pedestal is independently locked. Keying is available either random (factory installed), or omit (field installed). When “Random Keying” is chosen, the factory will assign key(s) arbitrarily. Factory installed lock cores will be matte silver. When “Omit Lock Core” is chosen, the factory will omit lock cores and locks will be field installed. A keying program must be chosen - Random, Specified, or Sequential – to specify keys. Field installed locks will be available in matte silver, black, pyrite, and matte gold.

FINISH

Natural veneer is subject to nature’s quality control. Each species will exhibit differences in grain pattern and tone. This is to be expected and, in fact, contributes to the beauty and individuality of each product. Flat Cut veneers emphasize the variations of wood by exhibiting cathedrals in the grain pattern. Quarter Cut and Rift Cut veneers are a premium cut that maintains variations in the grain but without cathedral patterns. Stratawood is a natural, FSC®-certified reconstituted veneer that is designed to exhibit a consistent grain pattern and is available in either a straight grain or cathedral pattern.
