Our proprietary wood finish system utilizes a combination of topcoats engineered for the various applications found in the furniture industry. It is exceptionally clear and durable, and allows the beauty of wood to show through. The durability, depth, clarity, and beauty of our wood finishes meet the high expectations of our customers, and meet or exceed indoor air quality (IAQ) standards. All colors and species are not available on all products. Please refer to front cover of price lists for availability of finishes.

CLEANING WOOD FINISH

Dust with damp cloth. Remove fingerprints or soiling with mild solution; 3 parts water with small amount of mild dish detergent. Apply solution with spray bottle, wipe clean and dry with soft cloth. Do not use furniture polishes containing oil, wax, or silicone, which can produce and oily film or haze.

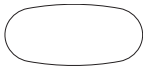
CLEANING LAMINATE

Dust with damp cloth. Remove fingerprints or soiling with mild solution; 3 parts water with small amount of mild dish detergent. Apply solution with spray bottle, wipe clean and dry with soft cloth. Note: Do not use furniture polishes containing oil, wax or silicone, which can produce an oily film or haze.

CLEANING GLASS

Dust with damp cloth. Remove fingerprints or soiling with glass cleaner; use any common glass cleaner on the market. Spray glass cleaner onto the glass and wipe clean using a soft cloth.

CLEANING SOLID SURFACE



Solid surface tops should be cleaned with warm soapy water, or ammonia-based household cleaner. Do not use window cleaner as they can leave a waxy build-up.

Metal Y Base Wire Management

Wire Management (WY) option available in vertical columns. When specified, a grommet access hole will be included below top plate and above horizontal stretcher.

- Grommet hole diameter is 1 ¼ in.
- Tube inner diameter is ~2 in.

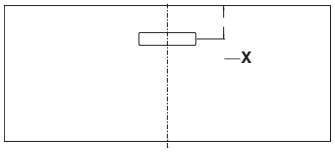
HOW TO SPECIFY

Gunlocke's Briefing Table Series has been designed to address the needs of the constantly changing multi-purpose conference area. This simple, intuitive design enables the user to efficiently manage the everyday demands of setting up and reconfiguring a meeting room. The nesting feature and flip top options provide a quick transition to storage with minimization of space. Briefing provides reconfigurable modularity and flexibility of use.

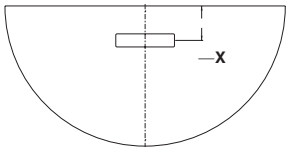
TABLE FUNCTIONALITY AND BASE MATERIAL

Briefing tables are available with both a fixed top and a flip top. The flip top incorporates a flip mechanism that allows the table to transition quickly to storage with minimization of space. Briefing metal bases are available in a polished aluminum finish and incorporate wire management capabilities.

MODESTY PANEL



Modesty panel option are available for both fixed and flip top Briefing Tables. Modesty panel will be 7 H" high and a H" shorter than the overall width of the specified top. All modesty panels are hinged and pivot out of the way when the flip top mechanism is actuated to vertical position.

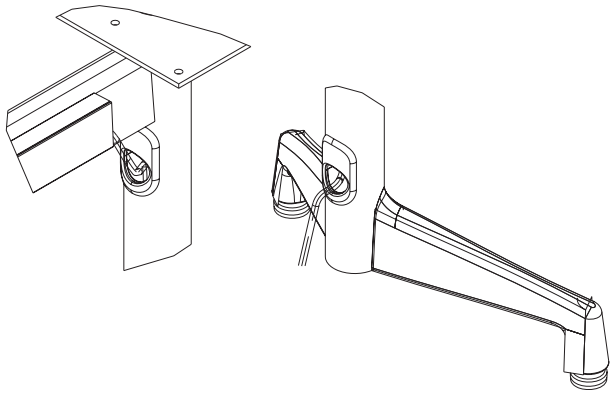


CONNECTIVITY

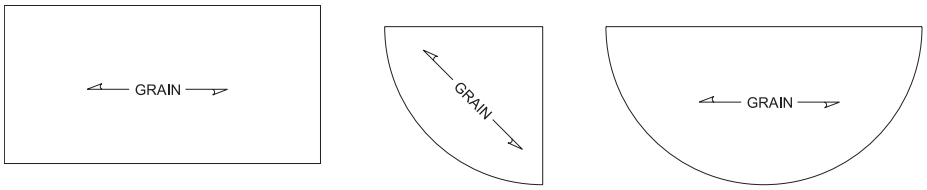
The Briefing table leg incorporates wire management capabilities. The leg channel serves to conceal power/data cords; the opening at the base of the cast leg allows plug passage to external power/data sources. Table top power/data access is offered in an exposed power option.

EXPOSED POWER /PORT LOCATION

Briefing tables are available with an exposed power cutout, rectangular in shape. The drawings below indicate the standard table top surface placement for the power. The exposed power drawings below indicate the standard top surface placement for the power. The exposed power units are always centered as shown, with distance from edge determined by the top shape specified.



top size	X
20"	5.75
24"	5.75
30"	7.375
36"	10.375

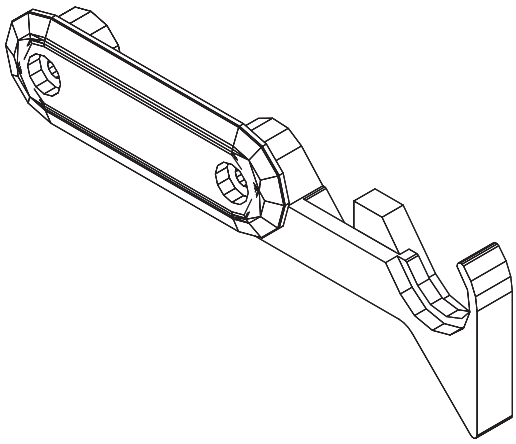


WIRE MANAGEMENT

The Briefing extruded metal horizontal support beam includes a plastic wire manager. The leg incorporates wire management capabilities by means of a removable grommet. The leg channel serves to conceal power/data cords; the opening at the base of the cast leg allows plug passage to external power/data sources.

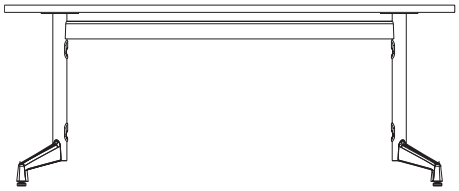
- Grommet hole diameter is 1 ¼ in.
- Tube inner diameter is ~2 in.

GRAIN DIRECTION

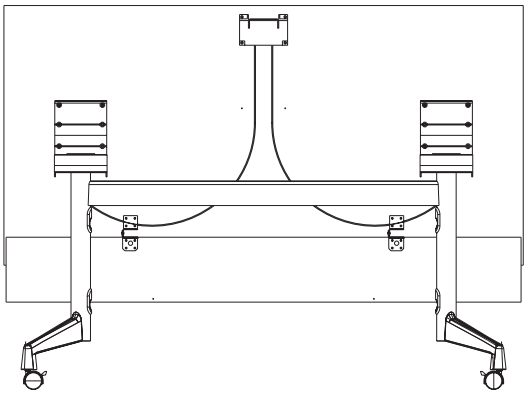


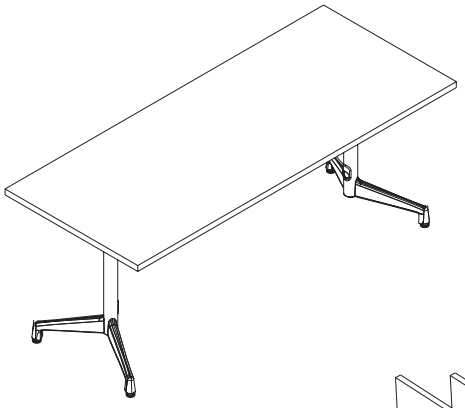
GRAIN DIRECTION GANGING CONFIGURATIONS

TABLE GANGING



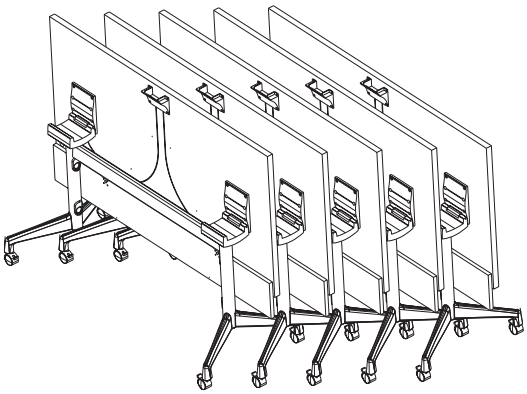
Briefing tables are available with an optional ganging device used to connect multiple tables. The ganging device swivels out of the way when not in use. Briefing tables are pre-drilled and include inserts to accept ganging devices.



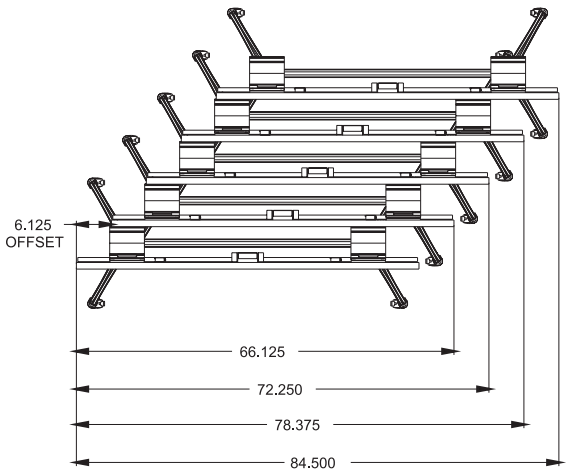


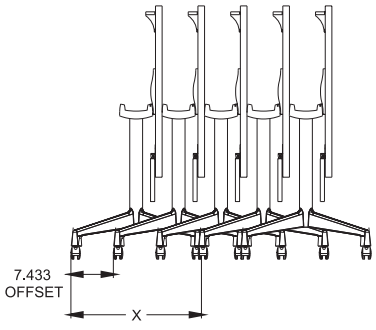
FLIP TOP NESTING

To address the needs of the constantly changing multi-purpose conference area, Briefing provides reconfigurability, modularity and flexibility of use. The simple, intuitive design enables the user to efficiently manage the everyday demands of setting up and reconfiguring a meeting room. The nesting feature and flip top options provide a quick transition to storage with minimization of space.



- Center of leg is always 8.875" from edge of worksurface.
- Based on tube thickness, this drives 7.75" from tube face to edge of worksurface.





The nesting mechanism releases the flip top and allows it to tilt and lock into place. The locking feature positively latches the table top into nesting position. Integral bumpers protect tables when in nested position.

PORT DOOR MATERIAL UPCHARGES:

SV Veneer **(Add $250 per cutout) Veneer doors ship with top**

Multi-piece veneer tops will not have port locations on seams. This will ensure the veneer door grain will best match the top. The result is that the port location for the "C2" option (2 tech cutouts) will not be equally spaced. They will fall in the outer locations of the "C3" option (3 tech cutouts).

Veneer doors are only available with veneer tops. Note: Gunlocke does not guarantee an exact finish match for veneer doors. Although the finish is a good match, they are not exact matches.

*Cable Cubbies for use with expandable base only.

PORT DOOR MATERIAL UPCHARGES:

SV Veneer **(Add $250 per cutout) Veneer doors ship with top**

Multi-piece veneer tops will not have port locations on seams. This will ensure the veneer door grain will best match the top. The result is that the port location for the “C2” option (2 tech cutouts) will not be equally spaced. They will fall in the outer locations of the “C3” option (3 tech cutouts).

Veneer doors are only available with veneer tops. Note: Gunlocke does not guarantee an exact finish match for veneer doors. Although the finish is a good match, they are not exact matches.

*Cable Cubbies for use with expandable base only.

PORT DOOR MATERIAL UPCHARGES:

SV Veneer **(Add $250 per cutout) Veneer doors ship with top**

Multi-piece veneer tops will not have port locations on seams. This will ensure the veneer door grain will best match the top. The result is that the port location for the “C2” option (2 tech cutouts) will not be equally spaced. They will fall in the outer locations of the “C3” option (3 tech cutouts).

Veneer doors are only available with veneer tops. Note: Gunlocke does not guarantee an exact finish match for veneer doors. Although the finish is a good match, they are not exact matches.

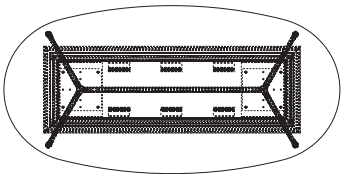
Ellipse Tops are recommended for use with Metal Y Bases for maximum leg clearance.



If Mitered Beam Assembly will NOT be used with
Metal Y Base, then use standard recommended base size.

GD2TEL4896-W
GG2YBS96-A

If Mitered Beam Assembly will be used with Metal Y Base,
then recommend using a 12" smaller Base and Beam Assembly
due to additional top support provided by Beam Assembly.

GD2TEL4896-W
GG2YBS84-A
GD2YBEAM84

Note: Above options are for cutout only, technology unit ordered separately on pages 89-98.

PORT DOOR MATERIAL UPCHARGES:

SV Veneer **(Add $250 per cutout) Veneer doors ship with top**

Multi-piece veneer tops will not have port locations on seams. This will ensure the veneer door grain will best match the top. The result is that the port location for the "C2" option (2 tech cutouts) will not be equally spaced. They will fall in the outer locations of the "C3" option (3 tech cutouts).

Veneer doors are only available with veneer tops. Note: Gunlocke does not guarantee an exact finish match for veneer doors. Although the finish is a good match, they are not exact matches.

PIGTAILS

*To make connections to devices under the table, Retractor Series have 6 feet (1.8 m) of pigtail from the exit of the cable retainer (see the illustration). Depending on the retractor mounting and the location of the devices, you may require patch cables to extend the reach of the pigtail.

If you need to connect to devices further than the pigtails allow, contact your Extron representative or go to www.extron.com for a full line of patch cables.

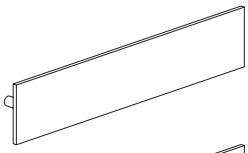
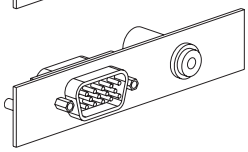
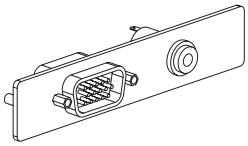
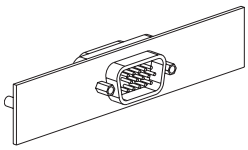
EXTRON TEAMWORK®

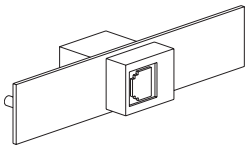
Extron TeamWork® offers a pre-configured collaborative system designed for fast, easy implementation with minimal setup. Allowing for groups of 4 to 6 users to share content by connecting the "Show Me" cable to a laptop or tablet. As soon as a signal is detected, power is automatically directed to the video display. Users can switch the display automatically to another device by pressing the "Share" button on the "Show Me" cable, and the switcher automatically displays the appropriate input on the video display. TeamWork® systems works with most flat panel displays, laptops, and tablets.

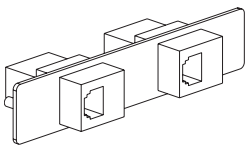


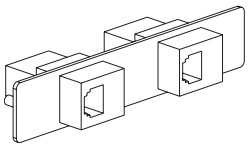












Extron TeamWork® system must be ordered directly from Extron. Visit www.extron.com or call 1-800-633-9876 for more information.

Gunlocke recommends an Extron APP double space cable organizer with TeamWork® to help keep the wires untangled and organized. Model AC-7054211.

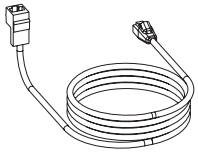
BYRNE DATA JACKS FOR EXPOSED POWER

	D	W	H	model number	list
HDMI	1	1	1/4	**ACEXP-HDMI-BK**	210

- HDMI Adapter insert, black
- Connects HDMI enabled electronics (laptops, etc.) to remote displays. Female / Female connection, 18" length.

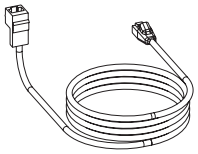
Note: Data adaptor plates are furnished with power units.



VGA	1	1	1/4	**ACEXP-VGA-BK**	210

- VGA Adapter insert, black
- Connects VGA1 enabled electronics (laptops, etc.) to remote displays. Male / Male connection, 120" length.

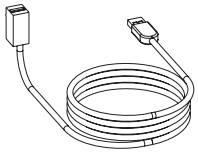
Note: Data adaptor plates are furnished with power units.



CAT5E	1	1	1/4	**ACEXP-CAT5E-BK**	210

- CAT5e Adapter insert, black
- Pre-terminated CAT5 cable. Provides remote access to network connections allowing surface access. Female / Male connection. 72" length.

Note: Data adaptor plates are furnished with power units.



CAT6E	1	1	1/4	**ACEXP-CAT6-BK**	210

- CAT6 Adapter insert, black
- Pre-terminated CAT6 cable. Provides remote access to network connections allowing surface access. Female / Male connection. 72" length.

Note: Data adaptor plates are furnished with power units.

USB	1	1	1/4	**ACEXP-USB-BK**	210

- USB-A Adapter insert, black
- Provides an extension, allowing surface access to USB. Female / Male connection. 72" length.

Note: Data adaptor plates are furnished with power units.

POWER CABLE KIT WITH 12 RECEPTACLE OUTLETS	244	**CVPWRKT12**	1,638

Example

- Provides enough receptacles for (2) technology trough options.
- Power cable kit must be specified with standard plug technology units. (Example: GD2PORTD-A quantity 2). Technology unit electric cords plug into receptacle outlets of power cable kit.
- Power cable kit is hardwired to power source

PRODUCT INFO

note:

- To be installed by certified electrician
- Convenient way to connect all power cords to a single power source
- Includes 10' power in feed conduit
- The power cable kit is rated for 20 amps per circuit allowing the use of 2 circuits with 2 line conductors, 1 neutral and 1 ground. The line conductors, neutral and ground are all 12 AWG. The kit can be wired in both single and 3-phase configurations, 240/ 120V, 208/ 120V, respectively.
- UL Listed

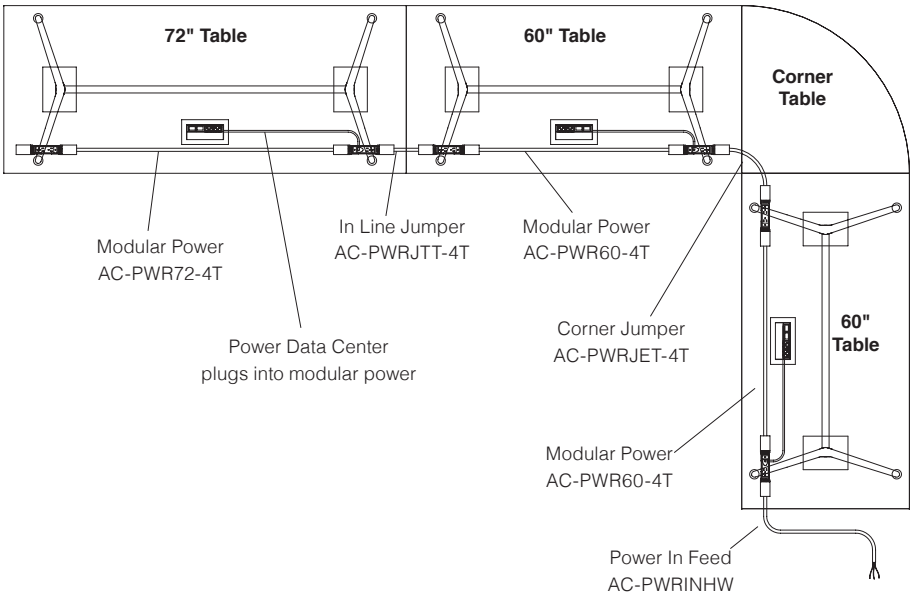
ELECTRICAL SYSTEM

Briefing Tables are available in 3 electrical in-feed options: corded standard plug, hardwire with quick disconnect, or hardwire. Installation and use of electrical systems, the number of receptacles per circuit, and connections to the building power supply should be in compliance with all local and national electrical codes. Verify code requirements before ordering. Wire harnesses and snap connectors are not allowed in Chicago. Customer must furnish electrical wiring components in cases where the Briefing electrical system does not meet code.

The ports offered in Briefing Tables can plug directly into a floor or wall outlet. However, if you plan to daisy-chain the tables or don't have access to power for each of the tables you can order the electrical system based on Byrne 4-Trac in addition to the ports or grommets. All the components of this system are UL listed (UL 183) with the exception of the standard plug power in-feed that is UL recognized (UL 1286).

All flexible parts are metal conduit with the exception of the last section of the power in feed with plug.

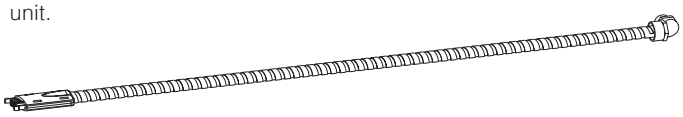


Please check with the local authorities for compliance with the electrical requirements for your market and always use a certified electrician for the installation.

HOW TO ORDER

1. Determine the required amps for the setup and decide if you are going to use one or two circuits. You need to use a certified electrician for circuit load estimates and install.
2. Select the Modular Power units for each of the tables. If you use 2 circuits order "Duplex Circuit 2", two per table and replace the "Circuit 1 duplex" that ships standard with the Modular Power on half of the total number of tables.
3. Select a power in-feed (plug, hardwire, rotating entry).

4-TRAC SYSTEM



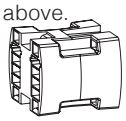
The 4-Trac electrical system is rated for 20amp per circuit however, according to the National Electrical Code for continuous use, one should budget for 16amp per circuit. The total length of the circuit should not exceed 300" and 13 duplexes. However, some units such as projectors, desktop computers and monitors can draw more current and limit further the number of units you can plug in a circuit. Please consult with your local electrician to determine the best solution for your needs.

POWER IN-FEED

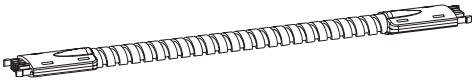
Power In-feed allows you to bring power from a floor or wall mounted power box. All of the 3 solutions below do not restrict the tables to connect in a certain sequence:

POWER IN-FEED HARDWIRE
This unit has 4-wires at one end and a modular connector at the other end.
The modular end connects to a duplex receptacle installed under the table top. This is a 20 amp, 2-circuit unit.

ROTATING POWER IN-FEED WITH QUICK DISCONNECT
This unit replaces a wall outlet to allow for quick disconnect from the wall. Can be used in place of the power in-feed hardwire if the code requires a hard wire connection to the building. This is a 20 amp, 2-circuit unit. Includes a 72" jumper, which connects to a duplex receptacle installed under the table top.



POWER IN-FEED WITH PLUG
This unit has a standard plug at one end and a modular connector at the other end. The modular end connects to a duplex receptacle installed under the table top. This is a 20 amp, 1-circuit unit; it will not fit in a 15 amp power outlet.



4-WIRE H CONNECTOR

This unit can be used when you need to bring power to a series of daisy chained tables somewhere else than the at the ends of the chain. This acts as a T-splitter and connects to 3 jumpers (two from the tables and one from the power source). This is usually used in conjunction with one of the 3 power solutions listed above.

JUMPER

Is used to connect: table-table, table-corner-table, H-connector to rotating power in feed.

MODULAR POWER

Attaches under the table top and stays with the top when the table is moved, flipped or nested. The unit has a power duplex at each end. The standard configuration is Circuit 1 only. Using a single circuit allows for non-sequential configuration but reduces the number of tables that can be daisy chained. If you need to connect more tables that share a single power in-feed you need to alternate the tables to include Circuit 2 (e.g. 4 tables in a row will be configure as follows: Table 1 C1, Table 2 C2, Table 3 C1, Table 4 C2). To alternate circuits you can buy the standard Modular Power for the table size you need and then buy separate Circuit 2 duplexes (you need 2 per table) and replace these in the field. You would also need to keep track of the tables sequence to make sure you alternate Circuit 1 and 2 – the tables become sequential now.

PRODUCT INFO

Note:
Type must be specified as part of model number.
W = Wood Veneer
L = Laminate
S = Solid Surface
G = Glass

Spec Tip
Technology selection for cutout only. Insert cutout option code from matrix on the next page.

Glass and solid surface units shipped as separate packages and require field assembly.

TO ORDER PLEASE SPECIFY THE FOLLOWING:

WOOD
1. **MODEL NUMBER + W**
2. **FSC**
3. **TOP FINISH + EDGE DETAIL**
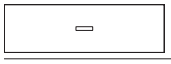
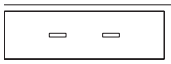
4. **TECHNOLOGY CUTOUT**

LAMINATE
1. **MODEL NUMBER + L**
2. **FSC**
3. **TOP FINISH**
4. **EDGE DETAIL**
5. **TECHNOLOGY CUTOUT**

SOLID SURFACE
1. **MODEL NUMBER + S**
2. **TOP FINISH**
3. **TECHNOLOGY CUTOUT**

GLASS
1. **MODEL NUMBER + G**
2. **TOP FINISH**
3. **TECHNOLOGY CUTOUT**





See inside front cover for required option codes

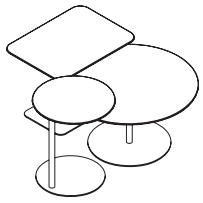
17H	• Top size 18" x 24" • Disc size 12" x 18"								
NESTING TABLE	30	30	15 1/2	**GM2NTRD30H15-** ⌊__⌋	3,204	3,526	3,846	3,157	3,832
15H	• Top size 30" Dia. • Disc size 18" Dia.								



Nested tables can be grouped together to create a collection with varying heights.

PRODUCT INFO

Top thickness:
Wood 3/4"
Laminate 3/4"
Glass 1/2"
Solid Surface 1/2"

Top includes inserts for connection to base.

Tops include a knife edge standard.

Units shipped as separate packages and require field assembly.

TO ORDER PLEASE SPECIFY THE FOLLOWING:

WOOD

1. **MODEL NUMBER + W**
2. **FSC**
3. **FINISH**
4. **TOP FINISH**
5. **HARDWARE OPTION**
   - **P71** Black
   - **PR6** Silver
   - **P8G** Matte Gold
   - **PJE** Pyrite
   - **PJW** Designer White
   - **P8X** Solar Black
   - **P8T** Titanium
   - **PJF** Bullseye
   - **P8M** Regatta
   - **PC** Polished Chrome (add $250)

LAMINATE

1. **MODEL NUMBER + L**
2. **FSC**
3. **FINISH**
4. **HARDWARE OPTION**
   - **P71** Black
   - **PR6** Silver
   - **P8G** Matte Gold
   - **PJE** Pyrite
   - **PJW** Designer White
   - **P8X** Solar Black
   - **P8T** Titanium
   - **PJF** Bullseye
   - **P8M** Regatta
   - **PC** Polished Chrome (add $250)

SOLID SURFACE

1. **MODEL NUMBER + S**
2. **FINISH**
3. **HARDWARE OPTION**
   - **P71** Black
   - **PR6** Silver
   - **P8G** Matte Gold
   - **PJE** Pyrite
   - **PJW** Designer White
   - **P8X** Solar Black
   - **P8T** Titanium
   - **PJF** Bullseye
   - **P8M** Regatta
   - **PC** Polished Chrome (add $250)

INTRODUCTION

The Gunlocke Company is dedicated to providing the finest products and service possible. This price list reflects that commitment. Included is a current listing of our casegood models.

Seating and Lounge are presented in a separate price list. Contact your Gunlocke Customer Services Representative for more information, (800) 828-6300.

Designed for easy use, each page of this price list, and the inside front cover fold out provide all information required to order a product correctly. Should additional information be needed, contact your Gunlocke customer service representative.

PRICING

Prices shown cover standard product specifications. Any changes or alterations, other than those listed, will be subject to an additional charge. Prices include cartoning and freight. Authorization and pricing must be secured in advance for orders or contracts calling for large quantities, indefinite quantities, or extended delivery dates. Prices are subject to change without notice; the most current prices are published on http://www.gunlocke.com.

ORDERING

To expedite order entry and to assure proper service,email or fax all orders directly to:

The Gunlocke Company
Attn: Order Entry
One Gunlocke Drive
Wayland, New York 14572
585-728-5111
585-728-8350 FAX
800-828-6300
www.gunlocke.com

Gunlocke will not be responsible for duplicate orders if purchase orders are left unmarked.

ACKNOWLEDGMENT

Each order will be acknowledged by Gunlocke. Customers should check each acknowledgment for accuracy and immediately notify Gunlocke of any discrepancies. The printed acknowledgment is the final agreement between The Gunlocke Company and the customer, superseding all previous communications regarding the order.

SPECIFICATION CHANGES

Gunlocke reserves the right to change specifications for the improvement of products at any time, without notice.

ORDER CHANGES

Gunlocke is not required to accept changes in orders after confirmation. Reasonable changes are subject to additional charges for labor, material and administrative costs.

Order changes of acknowledgment may result in re-scheduling of product.

RETURNED MERCHANDISE

No merchandise may by returned without prior authorization.

SHOWROOMS

For all showroom locations and tour information, please reference the showrooms page online at: www.gunlocke.com/inspiration/showrooms

CANCELLATIONS

Cancellation of orders cannot be accepted since every order is manufactured according to customer specifications.

STORAGE

If delivery cannot be made and products are ready, Gunlocke will transfer products to a storage facility and products will be invoiced at that time. The customer is responsible for storage charges and assumes and bears all risks associated with the storage of that product.

TERMS

Net 30 days from date of invoice. A service charge of eighteen percent (18%) per year or .0004931% per day, compounded monthly, will be added to balance due beyond the thirtieth day. Products are shipped FOB factory, freight prepaid and allowed. Title passes to purchaser and Gunlocke's responsibility ceases when shipment is accepted for transportation by a carrier. A full explanation of all payment terms is found on order and invoice forms.

ORDERING INFORMATION

1a. Intended use: The furniture on this schedule is intended for use by Government executives (or equivalent military rank) in the Executive, Judicial and Legislative Branches of the Federal Government. To help customers make a good purchasing decision based on their needs and budget, GSA has established four grades of furniture. Grade (1) includes furniture that tends to be the most expensive on this schedule, grade (2) furniture tends to be more moderately priced and grades (3) and (4) furniture tend to be affordably priced when compared to grades (1) and (2). Some pieces of furniture on this schedule may be significantly higher in price than GSA Traditional and Contemporary Executive Special Order Program furniture. The ordering agency or service is responsible for determining furniture appropriate for use in its offices which will fit within its budget and comply with applicable Federal or internal agency procurement regulations. Please see reverse for GSA terms and conditions.

GSA/FEDERAL CONTRACT INFORMATION:

Model numbers identified with the following verbiage “When purchased separately without a configurable TAA compliant end product, not on GSA contract” is to mean that these configurable parts or components:

- Have no functionality or capability without being integrated into an end product; and
- Are considered Open Market if purchased without a configurable TAA compliant end product.

Grade 1 All exposed solid parts such as top rims, base rails etc. (except decorative accents, inlays and painted parts) shall be the same species as the face veneer. Top and bottom edges of drawer fronts shall be solid wood in the same species as the face veneers. Drawer sides and backs shall be solid wood.

Grade 2 Exposed wood panel trim and trim on tops shall be the same wood species as the face veneer on the top. Some or all other exposed solid parts, such as base rails can be an alternative wood species (such as poplar or gum) different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be solid wood or veneer core plywood/laminated construction. Silea is grade 2.

Grade 3 Most or all exposed solid parts can be an alternative wood species (such as poplar or gum), different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be solid wood or veneer core plywood/laminated construction. Medley, Kennsington, Credentials, and all tables are grade 3.

Grade 4 Most or all exposed solid parts can be an alternative wood species (such as poplar or gum), different from the face veneers. Exposed, finished engineered wood core material such as MDF is acceptable only for the edges of drawer fronts. Drawer sides shall be composite wood material construction such as MDF. Trio is grade 4.

ITEMS ON GSA CONTRACT

Please note, in order to verify if an item is on GSA Contract or is “Open Market,” please use Compass quoting which is updated in real time with all GSA contract changes. If you need additional assistance, please contact your local sales representative.

12 YEAR WARRANTY

Subject to the limitations set forth below. The Gunlocke Company warrants to the original purchaser all product in this price list to be free from defects in material and workmanship for a twelve year period from the date of shipment. This 12-year warranty applies to all products sold and installed by a Gunlocke authorized agent for normal commercial single shift service. Gunlocke will repair, or at its option, replace defective merchandise, free of charge. The following components not manufactured by Gunlocke have the following warranties:

- **High wear components** such as casters and glides are warrantied for five years after date of shipment to original owner.
- **Electrical components** warrantied 10 years from date of manufacture with exception of lamps and ballasts which are not warrantied. This includes Fluorescent Tasklights.
- **LED tasklights** are warrantied for 3 years from date of shipment to original owner.
- **Drawer suspensions** are warrantied for lifetime of product after shipment to original owner.
- **Personal corners** including covering (leather) are warrantied for three years of single shift and normal use after shipment to original owner.
- **Height adjustable electrical components** are warrantied for five years of single shift and normal use after shipment to original owner.

Any non-standard material selected by the customer is not warrantied. Neither does this warranty apply to damage resulting from accident, alteration, or misuse, as well as damage from normal wear and tear such as dents, nicks, scratches, fading and improper maintenance. That is, Gunlocke's warranty is only valid if products are given proper use and care. Gunlocke assumes no responsibility for product damages resulting from improper installation or user modification.

WOOD FURNITURE

Wood owes its inherent beauty to variations in color, grain, and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next even though they are finished at the same time. Exposure to light and the aging process will cause a darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. The Gunlocke Company does not guarantee the exact matching of grain, pattern, and color.

These finishes do not cover any of the natural characteristics of the wood, including nature's colorations, pitch pockets, and the variations of steambent wood. Merchandise will not be replaced because of these natural variations.

It is expressly understood and agreed that the buyer's sole and exclusive remedy for any and all losses or damages resulting from nonconforming goods, or from any other cause, shall be repair or replacement of defective parts, and that Gunlocke shall not be liable for damages or injury to persons or property, nor for replacement of the entire commercial unit, if repair or replacement of defective parts can reasonably render the unit conforming.

All warranty claims must be made in writing by the original owner. Owner may be required to produce the invoice or other evidence to establish that a claim is within the warranty period. Warranty claims may be submitted on the Gunlocke website.

As stated and illustrated on the website, serial numbers are required to process a warranty claim. No person, firm or corporation is authorized to assume for Gunlocke any liability in connection with the sale or installation of Gunlocke products except as stated above.

All other warranties, expressed or implied, are excluded. Gunlocke shall not be liable for incidental or consequential damages of any sort.

Within the Continental USA, all orders above $20,000 list are shipped FOB factory, freight prepaid and allowed. All orders less than $20,000 list will be subject to a 5% list freight charge. Products shipped to Alaska and Hawaii FOB factory, freight prepaid and allowed to port of embarkation. Customer is responsible for freight charges from port of embarkation to final destination.

An anticipated shipping date is indicated on the order acknowledgment. Gunlocke cannot accept responsibility for shipping delays caused by outside sources or unforeseen problems. Delay of shipments requested by customers must be approved by Gunlocke. Any resultant storage charges will be charged to the customer.

Gunlocke may await completion of the entire order and ship all at once or may make partial shipments from time to time at its sole discretion unless the customer requests in writing that partial shipments are needed and Gunlocke approves the specific shipping schedule. Additional charges may apply.

Gunlocke is not liable for any delay or failure to deliver or perform due to strikes, lock-outs, or other labor or transportation difficulties, delay of sources or supply, accidents, fires, acts of God, or any other causes of like or unlike nature beyond the control of Gunlocke.

LIABILITY

Gunlocke products and their packaging are tendered to a transportation company only after passing rigid quality control inspection. At that time, title to the product is passed to the purchaser. However the transportation company assumes all liability from acceptance of shipment through its delivery. That is, Gunlocke's liability ceases at the time of shipment.

FILING OF CLAIMS

All claims for damage or loss must be submitted via our website within 15 days after receipt of merchandise. Do not return freight damaged merchandise to Gunlocke. Follow the steps below to expedite processing and resolution of claims.

For Visible Damage

1. Make damage notation on delivery receipt and have driver sign. Do not reject or refuse the shipment.
2. Immediately contact Gunlocke Traffic Department at 585-728-8268.
3. Hold damaged carton and all interior packing for carrier's inspection. These materials will be needed to substantiate the claim.

For Concealed Damage

1. Open cartons within 15 days of receipt and inspect.
2. Follow steps 2, and 3 as listed under Visible Damage.
3. Do not remove product from delivered destination.

For Loss

1. Be sure loss notation is made on delivery receipt and have driver sign.
2. Contact Gunlocke Traffic Department at 585-728-8268.

Should transportation company seek to limit its liability on concealed, loss, or damage claims, please contact Gunlocke's traffic department. After a thorough investigation of the claim, the traffic department will provide you with guidance in corresponding with the carrier.

Returned merchandise, regardless of delivery method, will not be accepted unless specifically authorized by Gunlocke.

For Damage or Loss of Parcel Post or UPS Shipment

Notify the Gunlocke traffic department immediately at 585-728-8268.

NORMAL DELIVERY

All normal ground transportation by Gunlocke will be made on a dock-to-dock basis. The Gunlocke traffic department will determine the recommended method of shipment according to the ship to destination. If the delivery on a shipment takes longer than 2 hours to be unloaded, an additional charge will be billed at $60/hour at 15 minute increments. Gunlocke reserves the absolute right to determine the method of shipping unless special delivery instructions have been previously approved.

Gunlocke will make every effort in honoring delivery requests as stated on orders. However, the Company shall have no liability for failure to deliver, perform or delay in delivery due to any cause outside the control of Gunlocke. The Company assumes no liability for costs incurred due to delayed or late deliveries.

If a guaranteed delivery time is needed please call Gunlocke Traffic Department at 585-728-8268 for a quote as additional charges will apply. Weekend or after hours deliveries are subject to additional charges.

WEEKEND DELIVERY

A $500 charge will apply on weekend delivery after 3:00 PM Friday through Sunday evenings.

DROP SHIP / JOB SITE DELIVERY

Orders under $50,000 list will incur a $125 charge for ship to locations other than a designated dealer warehouse.

INSIDE DELIVERY

Inside delivery must be noted on order. A minimum $100 charge will apply.

SPECIAL DELIVERY

Please contact the Gunlocke traffic department for special delivery services such as inside delivery, weekend or after hour deliveries, reconsignment or other special needs. These are billable services.

Gunlocke will make every effort in honoring delivery requests as stated on orders. However, the Company shall have no liability for failure to deliver, perform or delay in delivery due to any cause outside the control of Gunlocke. The Company assumes no liability for costs incurred due to delayed or late deliveries.

DOCK RESTRICTIONS

Gunlocke trailers are 53' x 102"; when attached to truck cab the total length is 75'. If delivery dock will not accommodate trucks of this sizes, the Gunlocke traffic department must be contacted prior to shipping. Alternate arrangements can be made; additional charges may apply.

CREDENTIALS CASEGOODS

Credentials is offered in three select veneers and two premium veneers. All exposed surfaces utilize select plain sliced Cherry, Maple or Walnut veneers or premium Quarter Cut Walnut or Rift Cut Oak veneers.

Specialty Finishes:

- Gunlocke so that a finish formulation can be developed to match the special finish and color.
- Review the approval sample provided by Gunlocke.
- Written approval and sign off is required for Gunlocke customer service.
- Once written approval and sign off is received, the special finish order will be acknowledged.

Note: See our Website at Gunlocke.com for special finish request forms.

All Casegoods & Tables Purchase Orders:

- 10% list upcharge per wood unit to base veneer option receiving special finish.
- $250 net formulation fee for special finish.

Note: This procedure and related costs apply to new and previously formulated special finishes. Special finish orders may receive additional lead time.

CREDENTIALS VENEERS

veneer 2 (select)
Plain Sliced Cherry
Plain Sliced Maple
Plain Sliced Walnut

veneer 3 (premium)
Quarter Cut Walnut
Rift Cut Oak

NOTE: For FSC Certified Product add "FSC" to beginning of finish option code. Example: FSCNC260. A 5% list upcharge will be applied per unit ordered with FSC option.

LOCKS & KEYING

Locks are standard on all below worksurface storage units. Two lock options are available. When the factory installed lock option is selected lock cores are installed at the factory. Note: when the random option is selected some units may be shipped with the same key number. When the field installed lock option is selected each unit is shipped with an empty lock cylinder. Locks are Silver or Black.

factory installed locks	option code
Option 1	
silver random keys	**RMS**
black random keys	**RMB**

Option 2	Specify a number between
SILVER Designated Keys	**100TAS - 150TAS**
BLACK Designated Keys	**100TA - 150TA**

Field installed locks are also available. When field installed locks are specified each unit is shipped with an empty lock cylinder. A separate line item must be ordered to receive the numbered lock cores for field installation. Field installed locks are available at an additional charge of $13 list per lock core.

Field installed lock core set, specify model # and key number (add $13 list per core):

	model number	Specify a number between
SILVER Designated Keys	**ACLCKFLD**	**100TAS - 200TAS**
BLACK Designated Keys	**ACLCKFLD**	**100TA - 200TA**

Note: Add $13 list per lock core.

ATTRIBUTE	FEATURE	ADVANTAGE
STYLE/DESIGN	Hand selected veneer	• Quarter cut walnut and plain sliced cherry, maple, and walnut • Rift cut oak
	Refined aesthetic	• Clean, modern design • Layering and various planes • Refined details • Integral wood pull or metal pull • Mitered worksurfaces with waterfall veneer • Optional locking on all units
	High end material selection	• Stone • Leather • Back painted glass • Stainless steel desk base • Dark bronze and champagne silver hardware
PLANNING FLEXIBILITY	Large breadth of line	• Numerous components can be used together to create a variety of planning requirements for size and storage
FUNCTIONALITY	Accessory track/trough system	• Provides sit-to-stand solution in office • Electric driven system with three preset heights • Height range of 29.5"-42" • Integrated in mitered wood base • Charcoal black metal shroud for clean aesthetic in up position
STORAGE	Soft close hardware	• Hidden bottom mount suspension on soft close drawers • Soft close hinges on all doors
	Cantilevered worksurfaces	• Provides unique aesthetic and conferencing end
	Magnetic tackzone	• Backpainted glass and wood tackzone provide magnetic surface for posting papers and magnetic accessories
	Hidden box drawers	• Provides clean lines and fewer fronts • Includes veneered front • Optional leather inserts
	Overhead door options	• Hinged, soft lift, or sliding door overheads
	Various pedestal options	• Drawers, doors, open shelves, printer storage, and trash can

FEATURES + ADVANTAGES

ATTRIBUTE	FEATURE	ADVANTAGE
TECHNOLOGY INTEGRATION	Wire management	• Worksurface trough with pencil lip • Flush grommet with door options
	Wall access	• Optional hinged wall access panels provide simple, clean wire management
	Lighting	• Standard high efficiency LED tasklighting • Recessed into bottom of overhead for clean aesthetic
	Worksurface power	• Power unit can be installed beneath grommet, in worksurface trough or in kneespace for easy access
SUSTAINABILITY	Design for the environment	• FSC certified products available • LEED IEQ 4.5 compliant finish • High percentage of recycled content: 66% post industrial and 9% post consumer yielding an RC value factor of 42% • Energy Efficient LED task lighting
DURABILITY	Drawer system	• Dowel construction—strength • Superior filing capability—extruded file rail integral to drawer • UV finish on drawers—scratch and chemical resistant • 5-sided drawers—can adjust or remove in field without unloading drawers
	12-year warranty	• Backed by Gunlocke's 12-year warranty

VENEERS

All exposed wood surfaces utilize select Plain Sliced Cherry, Maple, Walnut veneers or premium Quarter Cut Walnut, or Rift Cut Oak veneers. These veneers are carefully selected and slip matched to assure balance and consistency.

WOOD TOPS

Wood veneer tops feature a balanced 3-ply construction and are 1 1/2" thick. Each top has a 3/32" thick external solid-wood band on all sides.

Standard tops are constructed of 45 lb particleboard.

Tops connect to the chassis with wood screws through the inset top panel of the pedestals and steel angle brackets.

CHASSIS/PEDESTAL CONSTRUCTION

All wood pedestals are made with veneer end panels and fronts which are constructed with 3/4" thick balanced 3-ply panels. End panels are connected with an inset top, back, and bottom panel which is made of 3/4" thick 3-ply particle board. Panels are securely fastened together with cam fasteners in conjunction with solid wood dowels that are securely adhered with PVA (white polyvinyl acetate) glue. A 1 1/16"H x 2 7/16"W 3-ply particle board is mounted to the underside of the inset bottom panel. A threaded steel glide plate is attached to the hardwood stretcher to provide a durable connection between the glide and the bottom of pedestal. The glide plate is 10-gauge or 0.134" thick steel.

Steel glide plates are attached to single end panels with screws. End panels are pre-bored to accept the stem of the glide. The threaded steel glide plate provides a durable connection from glide to bottom of unit end panel.

Each unit is equipped with a minimum of four adjustable glides.

OVERHEAD/STORAGE CONSTRUCTION

All wood panels are constructed with 1" thick balanced 3-ply panels. The top, end, and bottom panels are securely fastened together with wooden dowels that are adhered with PVA (white polyvinyl acetate) glue. This construction method eliminates any visible assembly fasteners.

Wall mount cabinets are mounted to the wall with a spade and “Z” bracket attachment method. Steel barrel nuts and spade brackets are securely mounted through the back of wall mount cabinets. All units ship with a steel Z bracket. This bracket is mounted to the wall by field installers. Installers are responsible for selecting and supplying appropriate fasteners for wall conditions.

Units with hinged doors include 95° soft close hinges. Hinges are fully adjustable.

LAYERS UNITS

All layers runoffs and bridges include a wood box to sit on the low height credenza unit. Layers box includes a protective non-skid strip on bottom edge to protect lower worksurface. Layers units provide 7 3/4" of height difference.

GLIDES

Glides provide 1 1/8" of vertical leveling adjustment. Glide bottom is durable nonrust nylon.

DRAWERS

All drawers are constructed of four sides and a bottom, which are attached to a drawer front with screws for easy removal. Drawer fronts feature matched veneer within each pedestal set.

The drawer side material is vinyl-clad particleboard, finished with a roll-coated 7-level UV cured polyester/acrylic finish that provides a high level of chemical and scratch resistance. The drawers are fastened together at each corner with dowel joinery for maximum drawer strength. The bottom material is a 3-ply substrate consisting of medium density fiberboard core with a melamine face and backer.

Optional leather organization trays are available for all box drawers.

PULLS

Units are available in a continuous metal pull or an integral wood pull.

The drawer front on credenza and return pedestals overlay the worksurface for an uninterrupted appearance. The drawer front on the desk pedestals are below the worksurface to keep main worksurface clean.

Integral wood pull is on a 35° bevel and provides a seamless wood look to the station.

Continuous metal pull is an anodized aluminum pull available in a dark bronze or champagne silver finish. The metal pull on pedestal fronts aligns with metal pull on 24D closets. The metal pull on overhead doors aligns with metal pull on 18D closets.

SUSPENSIONS

Credentials casegoods utilizes zinc-coated steel, high-grade drawer suspensions which feature an integrated soft close mechanism. The suspensions are bottom mount and are concealed under the drawer body for a cleaner appearance when opening/closing drawers. Box drawer suspensions are 15" depth full extension and are load rated for 100 lb static load, 90 lb dynamic load. File and lateral file drawers are 18" depth full extension and are load rated for 150 lb static load, 135 lb dynamic load. Lateral files include an anti-tip mechanism that prevents more than one drawer from being opened at the same time.

HINGES

Units with hinged doors include 95° soft close hinges. Hinges are fully adjustable.

FILING

The file hanging system is an integral part of the drawer. A highly durable black plastic extrusion is securely fastened into a route on the top of the drawer. The plastic extrusion and steel folder rails allow side to side and front to back filing in file and lateral file drawers. The plastic extrusion was designed to promote optimum filing capacity within the drawer while providing a durable, reliable and maintenance free filing system. (See filing capability section for technical information on drawer dimensions.)

LOCKS

Silver or black face locks are optional on all desks, credenzas, returns, modular pedestals, and storage units. Each pedestal is independently locked. Lock plugs are either factory or field installed.

KEYING

Keying is available either factory or field installed. Factory installed keying offers two options: random or designated. When the random keying option is selected an arbitrary key number will be assigned to the unit. Note: some furniture units may have like key numbers when random keying is selected. When the designated keying option is selected a key number must be specified between 100TAS-150TAS for silver lock core and 100TA-150TA for black lock cores. All keys are solid brass. When the field installed keying option is selected, a lock cylinder will not be included in the furniture unit.

WIRE MANAGEMENT

Wire management capabilities include optional worksurface grommets and worksurface troughs. Chassis include wire cutouts in kneewell for seamless wire management between pedestals and adjoining units.

Trough worksurfaces provide a 1" wire management gap on the back edge of the worksurface. An anodized aluminum pencil lip is included with each trough worksurface. The tackzone sits below the worksurface on the top edge of the pedestal end panels. A trough worksurface is REQUIRED for all tackzone applications.

Under worksurface wire managers (Model #ACWM) are sold separately to conceal wires between pedestals. These units house and manage wire horizontally around a station.

Wall access is accommodated in credenza, bridge and return units. Two options are available. (1) No modesty panel provides direct access to wall. (2) The hinged access panel option provides access to the wall as needed, creates a cavity behind the panel to mount a power strip (not provided) and houses cords behind panel. The panel hinges and clips on and off to provide occasional access as needed.

POWER UNIT

A power unit may be ordered separately to add integrated power to the station. The unit includes 3 power outlets – 2 power outlets on top surface and 1 power outlet on the end. Ships with 6 ft power cord with standard plug. UL listed.

The unit can be mounted in various applications: 1) to bottom of worksurface beneath grommets, 2) to bottom of worksurface in trough opening, 3) as power strip inside wall access panels or kneespace.

GROMMET

3.250" x 5.875" rectangular grommet. Grommet bezel is inset flush to top of worksurface. Includes a hinged door that is on a dampening hinge for smooth open/close. Door material may be specified as wood veneer or back painted glass.

LIGHTING

Recessed low-profile LED overhead lighting is standard and INCLUDED in all overhead cabinets. They do NOT need to be purchased separately. LED lighting provides high efficiency, low energy lighting with a long life. All LED light strips are encased in a silver aluminum extrusion and include a built-in microswitch to turn the light on/off. Lights are field installed. All units include a 10' cord with a standard plug. Light temperature is 3200K.

MONITOR ARM

Monitor arm is EVO2. Monitor arm is silver finish. Monitor arm can be mounted inside grommet hole, desktop trough, or clamped to edge of desk.

Product specs are listed below:

Vertical range: +/- 5.2" from horizontal

Horizontal range: 18.6"

Rotation: 360° at two joints, 180° from center

Monitor tilt: 90° up, 20° down from center

Monitor pivot: Landscape to portrait

Monitor compatibility: VESA monitor compatible - 75mm & 100mm VESA adapters included

Cable management: Cables are managed beneath arm

Mounting options: Desk clamp, grommet mount, or trough mount

Monitor weight: 7-20lbs

ACCESSORIES

All accessories include imbedded magnets and can be positioned anywhere on wood tackzone and back painted glass tackzone. The accessories provide quick access to files, pencils, and other work utensils. Units are painted standard white, muslin, and black to match glass colors.

PERSONAL CORNER + DESKPADS

Personal corners can be used between two perpendicular worksurfaces to create an ergonomic corner for user. Deskpads are used in-line. All units are wrapped in leather or vinyl. The bottom surface has a felt lining to protect the worksurface. The chassis is made from 10-gauge aluminum. Personal corners are 36"W x 12 1/2"D. Deskpads are 36"W x 18"D. Units are designed to fit over 1 1/2" thick worksurfaces. Desk inlays are Dolce faux leather and are available in three colors.

ORGANIZATIONAL TRAYS

Leather organization trays can be used in box drawers and in cubby of 1H overheads. All units are wrapped in leather. The bottom surface has a protective felt lining.

STAINLESS STEEL BASE

Stainless steel base units include a brushed stainless base. Unit is constructed of 1 1/2" square stainless steel tubing. Units are fully welded for seamless construction.

Three top options are available –
1) wood top, 2) stone top, 3) back painted glass top. Units with a wood top are rabbetted into base with a 1/2" top exposed on all sides. Back painted glass tops and stone tops include a recessed plywood subtop for glass/stone. Stone tops include a template for stone so it can be purchased locally.

TACKBOARDS

Tackboards are constructed of 7/8" thick material comprised of a 1/8" thick hardboard glued in between a layer of 3/8" thick pressboard on each side. The fabric is precisely aligned and fitted to the tackboard and adhered to the rigid hardboard with staples.

A trough worksurface is REQUIRED for all tackzone applications.

BACK PAINTED GLASS

Doors and tackzone back painted glass units are captured by an extruded aluminum mitered frame which is powder coated to match. Frame is 3/4" thick and 1 3/4" high. The frame is low profile allowing only 1/16" visible frame around the perimeter of the glass from the front view. Back painted glass is 4mm thick and is available on doors, and in the “tackzone" of overhead storage. Tackzone glass units are magnetized with a steel backer. These units can also act as a whiteboard with use of dry-erase markers. 6 magnets are included with each magnetized whiteboard.

Worksurfaces and desktop inserts in back painted glass are frameless and are acid etched to eliminate fingerprinting.

A trough worksurface is REQUIRED for all tackzone applications.

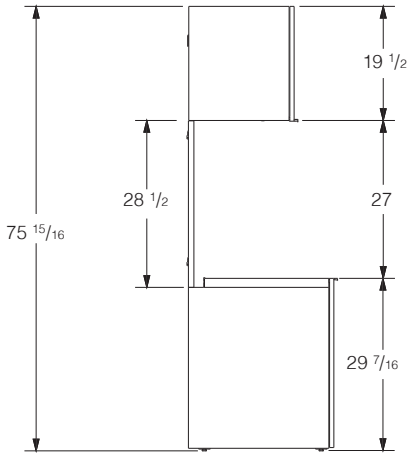
CLEANING BACK PAINTED GLASS

All back painted glass should be cleaned with a soft lint free cloth and non-ammonia based cleaner only.

FINISH

Natural veneer is subject to nature's quality control. Each species will exhibit differences in grain pattern and tone. This is to be expected and, in fact, contributes to the beauty and individuality of each product. Flat Cut veneers emphasize the variations of wood by exhibiting cathedrals in the grain pattern. Quarter Cut and Rift Cut veneers are a premium cut that maintains variations in the grain but without cathedral patterns. Stratawood is a natural, FSC®-certified reconstituted veneer that is designed to exhibit a consistent grain pattern and is available in either a straight grain or cathedral pattern.

Our proprietary wood finish system utilizes a combination of topcoats engineered for the various applications found in the furniture industry. It is exceptionally clear and durable, and allows the beauty of wood to show through. The durability, depth, clarity, and beauty of our wood finishes meet the high expectations of our customers, and meet or exceed indoor air quality (IAQ) standards. All colors and species are not available on all products. Please refer to front cover of price lists for availability of finishes.



CLEANING FINISH

Regular dusting and occasional cleaning are recommended to maintain your wood finish. To clean, dampen a soft cloth with luke warm water and gently wipe the wood in the direction of the grain. A mild solution of Murphy’s oil soap and water may also be used. Avoid cleaners with oil, waxes, or silicones as they may create a hazy look.

Modular Return – short grain

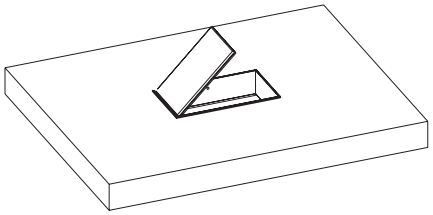
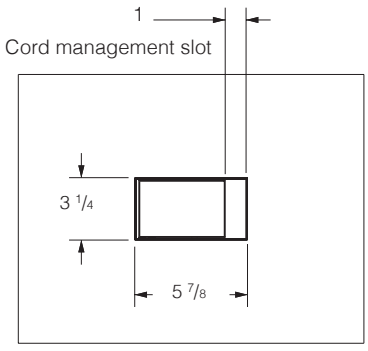
WORKSURFACE GROMMETS

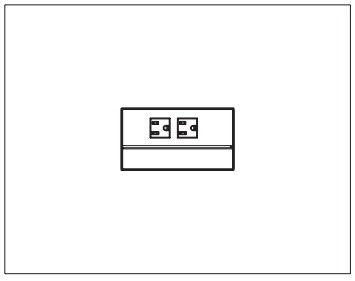
Credentials worksurfaces are available with an optional grommet.



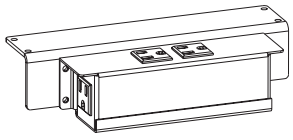
- Grommet is recessed into worksurface and includes a dampening mechanism for smooth open / close.
- Grommet door cover is available in veneer or back painted glass.
- A 1" slot is included for cords and/or monitor arm clamps.



Grommet shown in Single Pedestal Desk with Monitor Arm

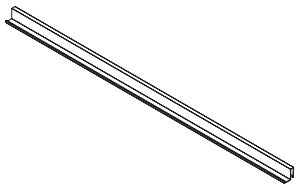


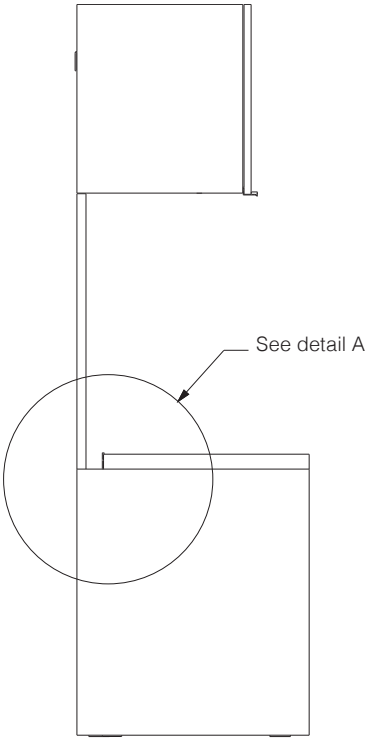
Grommet door closed



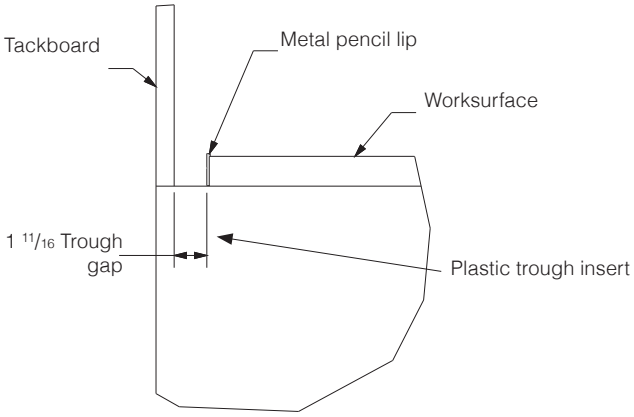
Grommet door open

Grommet dimensions



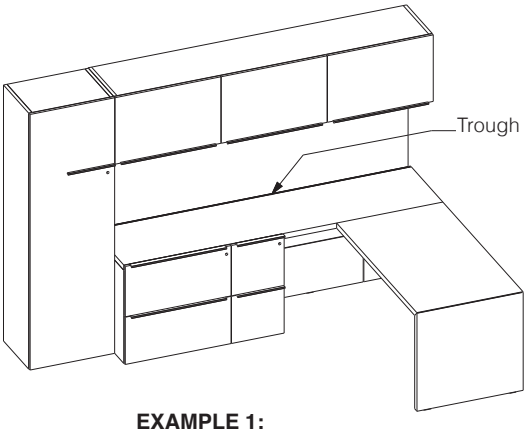


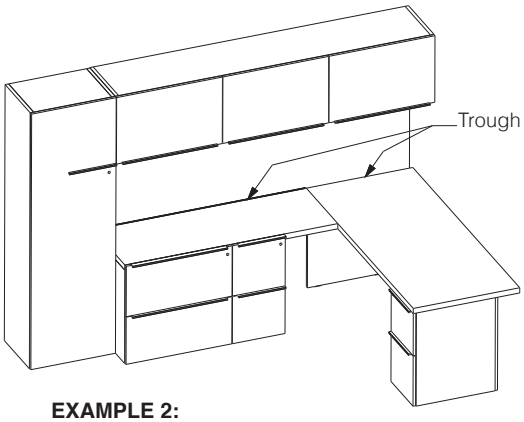
Top view shown with power unit – ACPWRT. *(De-emphasized)*
ACPWRT must be ordered separately
(shown without door)



The worksurface trough is integral to the design and configuration of the product.

- The trough provides a 1 $^{11}/_{16}$" gap for cords, power access, and monitor arm clamping.
- All trough worksurfaces include a metal pencil lip.
- The tackzone is recessed into trough area – below worksurface level and sits on end panel of pedestal/chassis.
- Plastic Trough Insert is required and must be ordered separately across entire length of trough (see page 97 to order).





DETAIL A

A trough worksurface is REQUIRED in ALL tackzone applications.

- The trough can be on a single worksurface or span across multiple units.
- In situations where the trough spans multiple units, each individual unit MUST be specified with a trough worksurface.

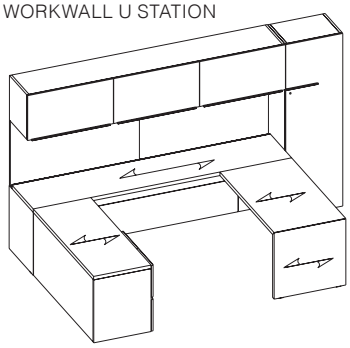
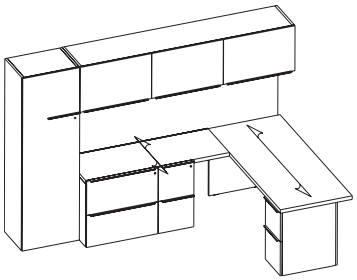
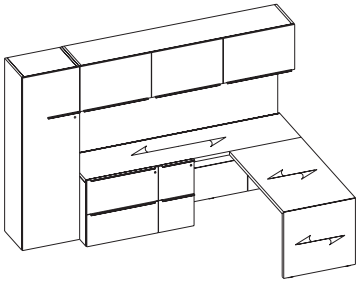
STEP 1: SELECT CONFIGURATION



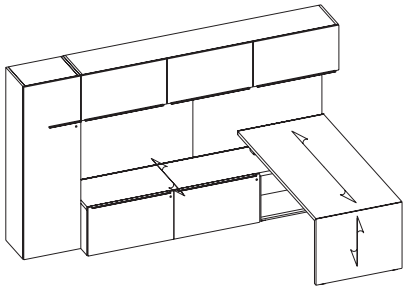
FREESTANDING DESK



U STATION



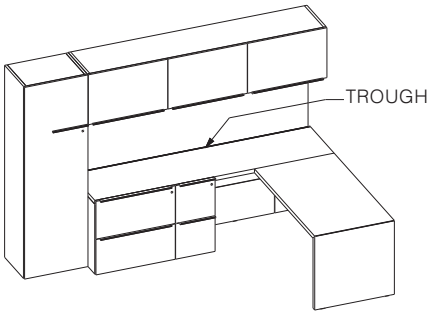
WORKWALL U STATION

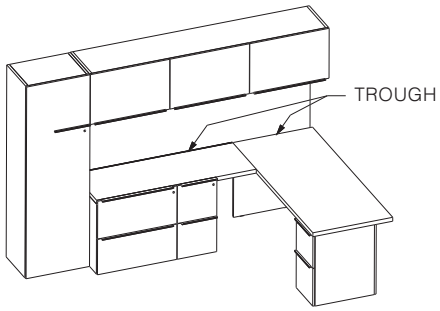


L STATION

WORKWALL L STATION

LAYERS WORKWALL L STATION





STEP 2: BEGIN WITH DESKING COMPONENTS

- Desk, extensions, runoffs, and full bank credenzas are unitized
- Credenzas and returns are built from modular components which must be specified separately

STEP 3: BE SURE TO SPECIFY TROUGH LOCATIONS ALONG ENTIRE LENGTH OF TACKZONE

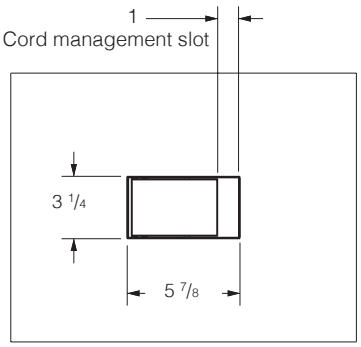
- Plastic Trough Insert is REQUIRED and must be ordered separately across entire length of trough

STEP 4: ADD FREESTANDING STORAGE

- Lateral files, bookcases, closets, storage box, and utility cabinets

STEP 5: ADD OVERHEADS AND TACKZONE

- Fabric tackboard, magnetic glass whiteboards, and wood tackzones are available
- Recessed tasklights are INCLUDED with all overhead cabinets



STEP 6: INSERT ACCESSORIES

- Leather box drawer inserts, power units, magnetic accessories, monitor arms, etc.

STEP 7: OFFICE # OPTION

- An office # option is included on all models ("OFC1" through "OFC199")
- Each individual office must be specified with its own unique office #
- All components for each office must be specified with the same office # option

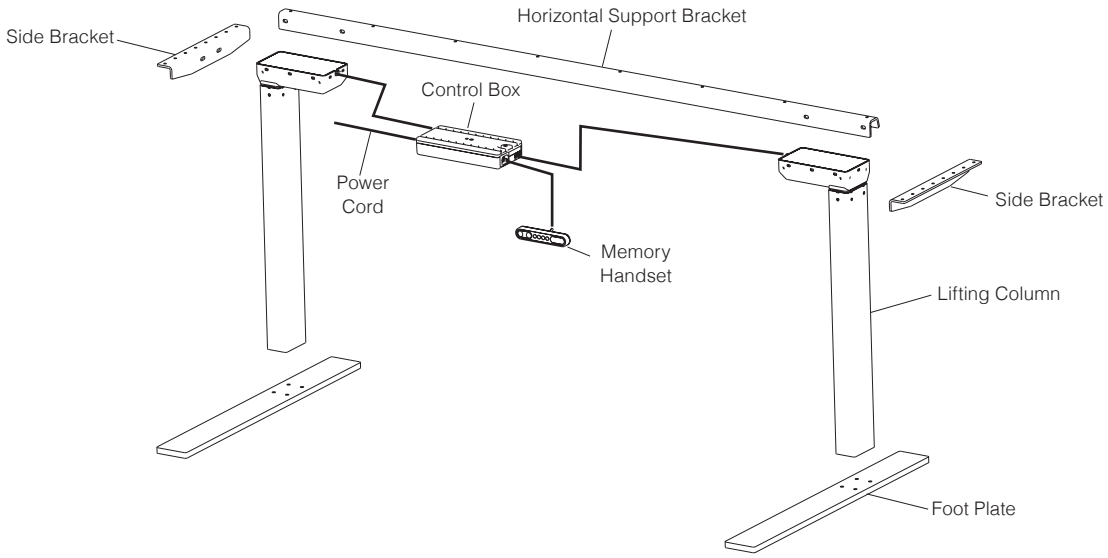
HEIGHT ADJUSTABLE WORKSURFACES

Worksurfaces are actual widths. A 1” clearance gap is required for any height adjustable top on all sides. Moving worksurfaces can collide with other components. It is important to ensure free range of motion prior to operating the table. Please contact Gunlocke’s Tailored Solutions department (GUNTS) for special worksurface size requirements if standard models do not provide 1” gaps. Adjacent worksurfaces need to be self supporting. A wall mount bracket may be used.



HEIGHT ADJUSTABLE BASE

Electric height adjustable base unit is available in a 2-Stage lifting column with an offset C-Leg design. The height adjustable base is a compact 2-part lifting column. A lifting column is an electric linear actuator integrated into a stable guide. The sophisticated motor system is completely hidden inside the column. The control box is powered by 110-120V /60Hz. Standby power is 0.1 Watts. Height range is 29" to 45". Lifting columns are rated for 225 lbs. dynamic load per column and are connected to tops using steel support brackets. Pedestals taller than 24 H” when placed under the height adjustable table will limit range in lowest position.

HEIGHT ADJUSTABLE COMPONENTS

Height adjustable components include:

- Qty (2) height adjustable lifting columns
- Qty (1) control box
- Qty (5) keypad options from basic to premium
- Qty (2) cables connecting lifting columns to control box
- Qty (1) standard plug power cable to connect control box to power source

- Unit is free-floating on lower credenza worksurface
- Includes pencil lip on end of unit

PRODUCT INFO

Stainless base is 1.5" square stainless tube with brushed finish

1.5" worksurface is rabbeted into stainless base assembly - H" top thickness is visible on all sides

Short grain veneer on worksurface

TO ORDER PLEASE SPECIFY THE FOLLOWING:

1.		**MODEL NUMBER**
2.		**FINISH**
3.		**TOP FINISH TYPE**
4.		**MODESTY**
5.		**GROMMET**
6.		**PENCIL LIP COLOR (LAYERS ONLY)**
7.		**OFFICE #**

See set 2 below for grommet option codes

No Grommet **GN**
Left **GL** ___ (Add +$219)

___ = add grommet bezel color and door finish to complete option pick.

SV = silver bezel, veneer door
BV = black bezel, veneer door
WG = silver bezel, white glass door
MG = silver bezel, muslin glass door
BG = black bezel, black glass door

Example: **GLSV** = left grommet, silver bezel, veneer door

See inside front cover for required option codes

	24	72	1 1/2	**GA2RWR2472-W**	2,421	2,640

PRODUCT INFO

Short grain veneer on worksurface

TO ORDER PLEASE SPECIFY THE FOLLOWING:

1.		**MODEL NUMBER**
2.		**FINISH**
3.		**TOP FINISH TYPE**
4.		**GROMMET**
5.		**OFFICE #**

See inside front cover for required option codes

See set 5 below for grommet option codes

No Grommet	**GN**
Left	**GL** ___ (Add +$219)
Right	**GR** ___ (Add +$219)
Left & Right	**GB** ___ (Add +$436)

___ = add grommet bezel color and door finish to complete option pick.

SV = silver bezel, veneer door
BV = black bezel, veneer door
WG = silver bezel, white glass door
MG = silver bezel, muslin glass door
BG = black bezel, black glass door

Example: **GCSV** = center grommet, silver bezel, veneer door

Example

GA2RWR2442-W.NC215.OP.GN.OFC1

GA2RWR2442-W	NC215	OP	GN	OFC1
MODEL NUMBER	**FINISH**	**TOP FINISH**	**GROMMET**	**OFFICE #**

RETURN WORKSURFACES

Trough back

TROUGH BACK

Trough

D	W	H	model number	veneer 2	veneer 3
24	42	1 1/2	**GA2RWR2442T-W**	1,871	2,041
24	48	1 1/2	**GA2RWR2448T-W**	1,968	2,147
24	54	1 1/2	**GA2RWR2454T-W**	2,073	2,261
24	60	1 1/2	**GA2RWR2460T-W**	2,181	2,378
24	66	1 1/2	**GA2RWR2466T-W**	2,296	2,505
24	72	1 1/2	**GA2RWR2472T-W**	2,421	2,640

- Trough back units are required when a tackzone spans over the back of the worksurface
- Trough units include a metal pencil lip

NOTE: Plastic Trough Insert is REQUIRED and must be ordered separately across entire length of trough.

PRODUCT INFO

EXAMPLE A

EXAMPLE B

Trough insert is required across the entire length of trough.
EXAMPLE A: 108" back edge of credenza = 108" Trough Insert
EXAMPLE B: (72" back edge of return) + (36" LH end of desk) - (6" Desk overhang) = 102" Trough Insert

NOTE: overhang only needs to be deducted from overall length for single pedestal desks

PRODUCT INFO

Trough insert is black plastic

- Dimensioned from full height trough worksurface to bottom of overhead.
- A trough worksurface is required for ALL tackzone.
- Tackboards listed on this page are all standard "railroad".

PRODUCT SPECIFICATIONS:

STANDARD

The fabric on all Gunlocke tackboards is applied in a railroad fashion.

- Tackboard widths less than or equal to 96" are one piece
- Tackboards greater than 96" are two piece and the fabric is pattern matched
- When ordering individual wall mount tackboards to be placed side by side, the fabric pattern will be random matched. If a fabric pattern match is required, contact Gunlocke Bid/Quote for a special quote.

SPECIAL

Fabric applied "up the roll" is a special application. Please see guidelines below and contact Gunlocke Bid/Quote for a special quote.

- Fabrics used on tackboard 48" and under in width can be applied "up the roll"
- Tackboards greater than 48" in width can only be applied railroaded, due to fabric height limitations

PRODUCT INFO

See yards listed above for COM fabric requirement

102, 108, and 120 wide tackboards are 2-piece

- **NOTE:** Quantity 6 magnets are included with each unit 72"W and less. Quantity 12 magnets are included with each unit 84"W and greater. Magnets can also be ordered separately.

PRODUCT INFO

TO ORDER PLEASE SPECIFY THE FOLLOWING:

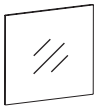
1. _____ **MODEL NUMBER**
2. _____ **GLASS COLOR**
3. _____ **OFFICE #**

NOTE: Whiteboards are GSA (TAA) compliant standard.



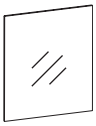
See inside front cover for required option codes

Example

GAATGW30-GSA.WH.OFC1

GAATGW30-GSA	WH	OFC1
MODEL NUMBER	**GLASS COLOR**	**OFFICE #**

TOP OF 1 HIGH OVERHEAD



MAGNETIC

D	W	H	model number	select
3/4	30	48	**GAATGW1H30-GSA**	3,984
3/4	36	48	**GAATGW1H36-GSA**	4,557
3/4	42	48	**GAATGW1H42-GSA**	4,858
3/4	48	48	**GAATGW1H48-GSA**	5,386

- Dimensioned from trough worksurface to top of 1 high overhead (or 5 high storage)
- A trough worksurface is required for ALL tackzone.

TOP OF 2 HIGH OVERHEAD

MAGNETIC

D	W	H	model number	select
3/4	30	56 1/2	**GAATGW2H30-GSA**	4,557
3/4	36	56 1/2	**GAATGW2H36-GSA**	4,858

RECESSED LED TASKLIGHTS

Replacements

	D	W	H	model number	list
RECESSED LED TASKLIGHTS					
	5/8	24	5/8	**ACLED24-R**	897
	5/8	54	5/8	**ACLED54-R**	1,250
	5/8	72	5/8	**ACLED72-R**	1,892

Tasklights are INCLUDED with all overhead cabinets.
They do NOT need to be purchased separately.

- LED lighting provides high efficiency, low energy lighting with a long life.
- All LED light strips are encased in a silver aluminum extrusion and include a built-in microswitch to turn the light on/off.
- Lights are field installed.
- All units include a 10' cord with a standard plug.
- Tasklights are recessed into bottom panel of overhead cabinet.
- Light temperature 3200K

Price & Specification Guide 2026

Prices Effective May 1, 2026

Limited Lifetime Warranty

Our unwavering commitment to our customers compels us to care, and our dedication to quality is just one of the ways we show our customers how much they mean to us.

We recognize that keeping up with the pace of change requires having products that work as hard as the people who use them. That's why each of our products is rigorously tested and certified to meet the highest industry standards.

In the unlikely event that any Allsteel product or component covered by the Allsteel Warranty should fail under normal workplace use because of defective material or workmanship, Allsteel promises to fix it. Because taking care of *people* is how Allsteel takes care of business.

For information on Allsteel's warranty coverage, visit AllsteelOffice.com.

Specification and Price List

Effective May 1, 2026

- Software support packages furnished to the customer, either by Allsteel® or by another source, which support the sale of Allsteel products are superseded by printed price lists.
- Prices are subject to change without notice. All orders are subject to prices in effect at the time of order.
- Please refer to your Allsteel Dealer Sales and Discount Policies for order placement information, terms and conditions.
- Additional copies of this Specification and Price List are available upon request from Allsteel Literature Fulfillment at 1-866-255-7833.
- Ordering information appears at the bottom of each product page complete with examples on how to specify. Fabric and finish pages are referenced at the bottom of product pages.

This publication is available as an interactive or downloadable PDF at www.allsteeloffice.com.

GSA/FEDERAL CONTRACT INFORMATION:

Model numbers identified with the following verbiage "When purchased separately without a configurable TAA compliant end product, not on GSA contract" is to mean that these configurable parts or components:

- Have no functionality or capability without being integrated into an end product; and
- Are considered Open Market if purchased without a configurable TAA compliant end product.

ITEMS ON GSA CONTRACT

Please note, in order to verify if an item is on GSA Contract or is "Open Market," please use Compass quoting which is updated in real time with all GSA contract changes. If you need additional assistance, please contact your local sales representative. For more information visit: https://www.allsteeloffice.com/insights/sustainability/product-certifications.

COM Program

Allsteel understands that customers may at times want to specify fabrics outside of Allsteel's standard fabric offering. Our COM program was designed to make specifying COMs on Allsteel products a simpler, friendlier, and hassle-free process. This process is simple and easy to use, and is described below under "Allsteel to Supply (ATS)." If a Dealer wishes to manage the COM process themselves, they can do so by following guidelines under "Dealer to Supply (DTS)". **ATS is the preferred method for all COM fabrics.** With ATS, Company will provide acknowledgment based upon planned date of receipt of COM fabric and manage the entire process. DTS is allowed if Company does not have access to the supplier. **DTS may cause order delays and is strongly discouraged.** Find out more about Allsteel's COM process by emailing our COM Department at **allsteelcomteam@allsteeloffice.com**.

Allsteel to Supply (ATS):

1. Select the fabric you wish to use and check the COM Search on our Website at: AllsteelOffice.com/Design Resources/ Textiles & Finishes/COM Search or COM Search quick link. You will need to have the COM supplier's name, fabric pattern name, and color name to search for approved fabrics.
2. If your fabric is listed as an approved fabric, you may place your order directly with Allsteel Customer Support. Please use the fabric code (e.g., S216426XP) from the COM Test Request on your order in the place of the standard fabric code.

   If your fabric is not listed as approved, you will need to select the "Request COM Test" link on the COM Search website. If your fabric is not listed as approved, you may request a "Dealer to Supply" code. Select the "Request COM Test" link on the COM Search website. Your name, company name and email will be prepopulated fields. The secondary email, project name, and bid/contract number are optional information. The supplier, pattern, and color will show a list by clicking in the box and entering the first letter of the name and these are free form text boxes. Once that information is entered click add. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.) Then click submit.
3. An email will be sent to the to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: Testing materials requested, in testing, and final approval/denial with price grade and fabric code. It's rare actual test yardage is required. Testing is mainly done by reviewing the attributes of the fabric. The testing process takes approximately 48 hours. Written COM price quotes hold pricing for 90 days after issue date.
4. Once the fabric has been approved by Allsteel, enter your order directly with Allsteel Customer Support. Allsteel will purchase all COM fabric directly from the COM suppliers and schedule for production.

   In the event that the Dealer decides to cancel a COM fabric order, the Dealer is responsible for the cost of the fabric plus a handling charge that is equal to 10% of the fabric cost.

Dealer to Supply (DTS):

1. Select the fabric you wish to use and check the COM Search on our Website at: AllsteelOffice.com/Design Resources/ Textiles & Finishes/COM Search or COM Search quick link. Or call Allsteel Customer Support to see if the fabric you have chosen has already been tested and approved on the product you are interested in.

   You will need to have the COM supplier's name, fabric pattern name, and color name for this inquiry.
2. If your fabric is not listed as approved, you may request a "Dealer to Supply" code. Select the "Request COM Test" link on the COM Search website. Your name, company name and email will be prepopulated fields. The secondary email, project name, and bid/contract number are optional information. The supplier, pattern, and color will show a list by clicking in the box and entering the first letter of the name and these are free form text boxes. Once that information is entered click add. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.) Then click submit.
3. An email will be sent to the to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: Testing materials requested, in testing, and final approval/denial with price grade and fabric code. It's rare actual test yardage is required. Testing is mainly done by reviewing the attributes of the fabric. The testing process takes approximately 48 hours.
4. Make sure to use a "Dealer to Supply" COM code (e.g., S216426ZP) and place your order directly with Allsteel Customer Support.
5. All "Dealer to Supply" orders will be charged Grade 4 pricing for seating, Grade 3 for Gather, and Grade D pricing for panels. Dealers will pay for the COM fabric separately.
6. All "Dealer to Supply" fabric must be sent on a fabric roll. Estimate the yardage required by using the yardage requirements listed in the price list by model. For questions please contact Allsteel Customer Support.
7. Place your fabric order directly with the COM Supplier with instructions for the fabric to be sent on a fabric roll to:

   HNI Textile Distribution Center
   COM Production Yardage — PO Number
   Docks 20-22
   301 Mulberry Avenue
   Muscatine, IA 52761

Information that MUST be included in the packing slip attached to the DTS fabric:

1. Dealer's Purchase Order number to Allsteel
2. Allsteel's Tracking number for the COM fabric
3. Dealer Name
4. Yards of Fabric

If the fabric shipment does not match the correct fabric and yardage, Allsteel will notify the Dealer for resolution.

If Allsteel receives fabric with incorrect labeling or fabric yardage that cannot be linked to an Allsteel furniture order, Allsteel will hold the fabric for up to 4 weeks. After 4 weeks Allsteel will dispose of the fabric. There are no exceptions to this policy.

Specific to DTS orders - The customer should send only the amount needed for the order. Excess yardage, or yardage not attached to an order will be disposed of at Allsteel's discretion.

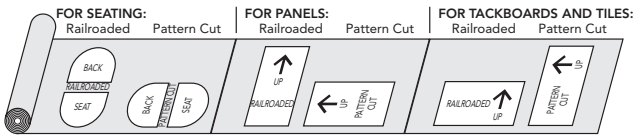
Any canceled orders are subject to cancellation charges up to the full value of the Allsteel product canceled. Allsteel will determine the actual cancellation charge at the time the cancellation is requested.

8. For additional details on "Dealer to Supply" fabric refer to your Allsteel terms and conditions.

Additional Policy Information:

The company assumes no responsibility for the overall appearance, flammability, normal durability, colorfastness, or any other quality standards. The company reserves the right to reject a COM if the quality of the COM is not satisfactory for the product. Should this occur, the customer will be notified with an explanation when the issue is found.

The company is not responsible for fabric that has become obsolete at the COM supplier, that is of poor quality, or that is delivered late to the manufacturer from the COM supplier.



All cancellations or changes to COM orders are subject to Company approval. Because of the nature of COM, special fabrics, finishes, and structural modifications, products ordered as specials and then canceled prior to shipment are subject to cancellation costs up to the full value of the product canceled. The company determines the actual cancellation charge at the time the cancellation is requested. Upon approval, a cancellation number is issued to the Customer.

Purchase orders will not be accepted or entered unless the testing process is complete with positive results.

If all testing has been previously completed, re-testing is only necessary if fabric is to be used on a different product, or pattern direction has changed from that previously approved.

Previous test results can be obtained by a customer on the COM Search on our Website or by calling Allsteel Customer Support.

All COM fabric will be applied to seating and panel systems Pattern Cut unless Railroad Cut is requested and approved on the COM Test Request. Any fabrics approved as a width pass, the dealer is responsible for clarifying Railroad Cut on orders containing items that are too large to support the Pattern Cut of a fabric application (any items larger than 48" high or wide).

Fire Retardant

The Dealer is responsible for ensuring that the COM fabric is certified to meet all flame retardant requirements.

For more information, please contact Allsteel Customer Support.

YARDAGE REQUIREMENTS FOR FABRIC WITH REPEATS — FOR USE ON GATHER™ PRODUCTS

Fabric Width	Plain Fabric	2"– 14" Repeat	15"– 19" Repeat	20"– 27" Repeat	28"– 36" Repeat
54"	0	+15%	+20%	+25%	+30%
53"	+6%	+19%	+24%	+28%	+36%
52"	+13%	+23%	+28%	+33%	+38%
51"	+19%	+26%	+31%	+36%	+41%
50"	+25%	+30%	+35%	+40%	+45%
49"	+30%	+35%	+40%	+45%	+50%
48"	+35%	+40%	+45%	+50%	+55%
47"	+45%	+50%	+55%	+58%	+65%

Depending upon the pattern repeat, it may be necessary to pattern cut the fabric. This will require 10% additional fabric.

To calculate multiple repeats (vertical and horizontal), add each repeat for total yardage required. For example for a fabric width of 54": 7" vertical requires 15%, 15" horizontal requires 20% total additional yardage required equals 35% (15% + 20%). Therefore, if your chair requires 2 yards of fabric, multiply 2 by 35%. Then 2.7 yards will be yardage required.

Special Paint & Stain Policy

Allsteel at its own discretion may modify its standard products with non-standard paint and stain colors to meet specific needs. Dealer is required to submit a special paint or stain request via the COM Search on our Website. A sample of the non-standard paint or stain color desired will be required for matching. Pricing, lead time, and order information will be provided at the time of approval.

- For each new requested stain or paint, there will be a $500 net fee to cover supplier costs to match the special item.
- For existing, previously-approved stains or paints, there is no $500 matching fee, however, there is a sample chip fee of $175 net for stains and $100 net for paints.
- Samples, preferably at least 3" x 5" chips, of the exact color desired should be sent to the Allsteel Tailored Products Group. Paint matches require (3) sample chips and stain matches require (3) sample chips. Please mail these sample chips to the address below and reference the Special Item Request Number from Tailored Solutions.

  Allsteel Inc.
  Attn: COM Team
  505 Ford
  Muscatine, IA 52761

- Allsteel will color match the sample and send control samples to the address provided in the request. Dealer will review Allsteel's color match and approve by signing the back of the sample chip. Send the signed sample back to the Allsteel Tailored Products Group.
- Special paints will be assigned a paint price grade.
- Orders will not be accepted until Allsteel receives the Dealer's written approval on the color match.
- Extended lead times will apply on orders containing special paints or stains.
- Due to manufacturing techniques, materials, and quality issues, some exclusions will apply and some matches may be declined.

Important Notes

- Natural veneer is subject to nature's quality control. Differences in grain and color are naturally occurring variations and cannot be controlled by the manufacturer and cannot be considered as product defects. Natural veneer has the characteristics and beauty of a living organism; with its own variations of grain, growth, and color patterns. For these reasons, Natural veneer is preferred by many for its warmth and personal characteristics.
- Color changes will occur over time when wood is exposed to light. For this reason, when new product is ordered as an addition to existing product, there will be color variances between the old and new product. Please remember when specifying new product that although the species of veneer will be the same, additional product is being manufactured from a different tree. It may take several months for the new furniture to mature to the color level of existing product. Even with this maturation process the additional product will not be an exact match.

Special Laminate Policy

The Company at its own discretion may modify its standard products with non-standard laminates to meet specific needs. Contact the Allsteel Tailored Products Group for pre-approved Wilsonart, Formica, Nevamar and Pionite laminates and pricing for special laminates. When requesting a special laminate please supply manufacturer, along with name and pattern number of laminate.

- Extended lead times will apply on orders containing special laminates.
- Due to manufacturing techniques, materials, and quality issues, some product exclusions will apply and some requests may be declined.

Veneer Care Instructions

Veneer worksurfaces feature the Gunlocke® finishing system. The finishing system is a process that begins with the application of stains, which promote exceptional depth and clarity. Next the worksurface receives a specialized coating that provides exceptional durability and chemical resistance. The remaining surfaces receive a top coat. These finishing processes ensure depth, clarity, color consistency and durability throughout the product.

Caring for your veneer finish:

- General maintenance procedures entail wiping clean the entire surface with a clean, water dampened soft cloth once per week (be sure to wipe with the grain)
- Murphy's® Oil Soap may be used as a general purpose type cleaner with warm water to clean tops.
- The finish may also be polished with Guardsman® Furniture Polish (contains no waxes or silicones) to provide renewed luster.
- Be sure to wipe up all spills immediately. Do not allow spills to dry.

Wood owes its inherent beauty to variations in color, grain and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next even though they are finished at the same time. Exposure to light and the aging process will cause a darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. Allsteel does not guarantee the exact matching of grain, pattern and color.

Allsteel Open Line Laminate Program

The Open Line Laminate (OLL) program makes it even easier for a customer to tailor their Allsteel product for a custom look. Select Allsteel furniture products accommodate hundreds of graded-in high-pressure laminates (HPL) from the leading laminate manufacturers' open lines.

Laminates that are currently available in the program can be viewed in specification tools.

Requests to add laminates to the standard specials program can be submitted through the CET Specials Integration tool as well as Community.

Matching edge options are not available offered for laminates in the OLL program. When selecting a laminate please select an edge option from the Allsteel standard offering. If a matching edge is required a modification request can be submitted through the CET Specials Integration tool as well as Community.

Due to manufacturing techniques, materials, quality issues of varying laminates, and minimum order quantities some product exclusions will apply, and some requests may be declined.

Extended lead times may apply on orders containing special laminates.

Contact the Tailored Products Group for questions or additional information regarding pre-approved laminates and pricing.

Allsteel
Phone: 888-255-7833 Option 4.2
Email: ASITPG@allsteeloffice.com

For edge band recommendations from the Allsteel standard offering, please email the HNI Workplace Colors, Materials and Finishes team at allsteelfinishes@allsteeloffice.com.

Allsteel edge samples can be ordered through the Allsteel literature Website, https://www.AllsteelOffice.com.

Everyday Advantage®

New terms and conditions for EDA:

1. Orders must clearly state “Everyday Advantage Order” and include the appropriate Everyday Advantage contract number:
   - Everyday Advantage Std-0125, Everyday Advantage Canada-0127
2. Everyday Advantage orders are not eligible for bid pricing.
3. Program discounting includes the complete Optimize, Further, and Terrace systems lines, private office solution, Approach and Involve storage. This program also includes Acuity, Access, Evo, Inspire, Lyric, Mimeo, Nimble, Quip, Relate, Seek, and Svelte, seating. Altitude, Aware, and Structure tables are also available, along with Align pedestals, lockers and metal storage and Essentials pedestals, and Radii storage lines. In addition, Extensions ergonomic accessories and lighting are part of the standard offering. All other product not called out is available for order on the contract but will receive standard discounting of 55%–65%.
4. All textiles and finishes except for veneer and some wood finishes are available, depending on quantity and selection, and may have extended lead times.
5. Everyday Advantage orders are not limited to a minimum or maximum.
6. All orders ship based on standard lead times. Large-quantity orders of like products may be subject to longer lead times.
7. Standard freight terms apply.
8. If driver assistance is needed, standard driver assist charges will be added at time of order entry.

Allsteel Inc. reserves the right to amend or terminate this program at anytime with 30 days written notice. Allsteel is not liable for service delays caused by force majeure (circumstances beyond Allsteel's control).

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

Forest Stewardship Council (FSC) is a non-profit organization devoted to encouraging the responsible management of the world's forests. FSC sets high standards that ensure forestry is practiced in an environmentally responsible, socially beneficial, and economically viable way. Allsteel received its FSC Chain of Custody certification in 2010 and can offer FSC Certified products. Select wood-based products can be ordered as FSC certified, either by choosing the FSC option or selecting an FSC laminate or veneer finish at the time of order. For more information, please contact Customer Support at 888-255-7833. (FSC Trademark license code: FSC-CO14704.)

NOTE: Refer to individual product pages for upcharges.

FIT

Building Horizontally with Fit Panels

Method 1—Opposing Returns

Method 2—Single-Sided Returns

Important planning guidelines: For adequate stability, one of two methods of stabilization must be adhered to:

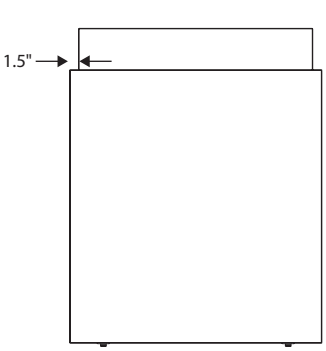
Method 1 — Opposing returns

- A parent run must be a minimum of 60" and a maximum of 144" between return panels. The parent run must have a minimum of two return panels running in opposing directions on each end of run.
- Dual-sided return panels must be a minimum of 60" combined width.
- Return panels must not be any more than 30" lower than the height of the parent panel run.
- Panel height measurement includes integrated glass, if used.

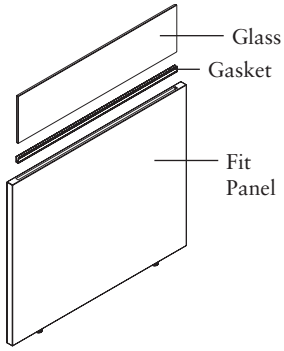
Method 2 — Single-sided returns

- A parent run must be a minimum of 60” and a maximum of 144” between return panels.
- A parent run less than or equal to 84”W must have a minimum of two return panels totaling 60” in combined width For every 7½” drop in panel height, 6” must be added to the minimum combined return length.
- A parent run greater than 84”W must have a minimum of two return panels totaling 84” in combined width.
- Return panels must not be any more than 30” lower than the maximum height of the parent panel run.
- Panel height measurement includes integrated glass, if used.

Panels for Use with Glass

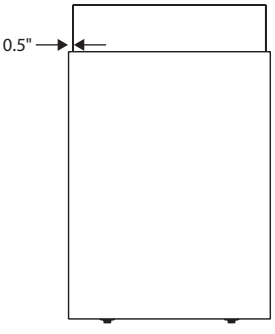


- Panels match construction of non-glass panels but have a routed top edge.
- Glass mounts directly into the panel route via a gasket.
- Single end panel routing is inset by ½" from each end of the panel and requires glass to be the same as the panel width, see image.
- Spine, Mid, and Split End panel routing is inset around 1½" from each end of the panel, exact distance will vary with panel type. These panel types require glass to be 3" shorter than the panel width.
- Glass is available in 3 colors: Clear, Frosted, and Smoked.
- Glass height is available in 7½"H, 13"H, and 15"H.
- Glass is available on all panel widths.
- Specify glass models separately from panel models.
- Glass Panels at 30"W and under are not UL listed.



Panel Construction

- Made of 1⅛" board with HPL laminate.
- Can be specified with matching or contrasting edge.
- Edge band is 2mm ABS.
- Available in woodgrain or solid laminates.
- Woodgrain laminates can be specified with vertical grain up to 54"W. Horizontal grain is available on all sizes.
- Grain matching is not available.
- Fit Panels offer 2½" leveling capability.
- Available with and without the integrated glass option. Panels for use with glass offer a routed top edge.
- Glass is specified separately.
- Fit Panels for use with glass have separate model numbers.
- Laminate on Fit Panels is not grain matched.



Panel Dimensions

- Depth: 1⅛"
- Nominal widths: 18", 24", 30", 36", 42", 48", 54", 60", 66", 72", 78"**, and 84"** (actual width dimension will vary based on panel type, see Panel Specification page for details)
- Heights*: 30", 35", 42½", 50", 57½"
- Glass Heights: 7½", 13", 15"
- Leveling Glides: 2½" Range
  *with levelers fully retracted
  **Panels 78"W and wider require the use of a stiffener shelf or tube

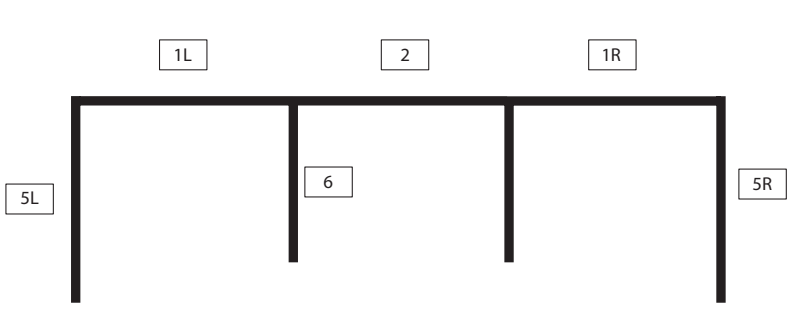
Standard Single Panel with Glass

Single End Panel with Glass

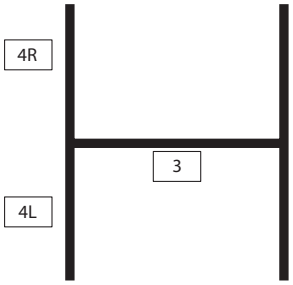
Specifying Fit Panels – Full Model Logic

Panels 18", 24", 30", and 36"W are available in the following configurations:

- Mid Wing, No Power Below Worksurface – 'MDWPW'
- Mid Wing, No Power Below HAT – 'MDWPH'



Panels 42", 48", 50", and 54"W are available in the following configurations:



- Mid Wing, No Power Below Worksurface – 'MDWPW'
- Mid Wing, No Power Below HAT – 'MDWPH'
- Left-Hand Split End, No Power – 'LPEPN'
- Right-Hand Split End, No Power – 'RPEPN'

Panels 60"W, 66"W, 72"W, 78"W, 84"W are available in the following configurations:

- Left-Hand Single-Sided End, Single-Side Power Below WS – 'LSESW'
- Left-Hand Single-Sided End, Single-Side Power Below HAT – 'LSESH'
- Right-Hand Single-Sided End, Single-Side Power Below WS – 'RSESW'
- Right-Hand Single-Sided End, Single-Side Power Below HAT – 'RSESH'
- Left-Hand Split End, Single-Side Power Below WS – 'LPESW'
- Left-Hand Split End, Single-Side Power Below HAT – 'LPESH'
- Left-Hand Split End, No Power – 'LPEPN'
- Right-Hand Split End, Single-Side Power Below WS – 'RPESW'
- Right-Hand Split End, Single-Side Power Below HAT – 'RPESH'
- Right-Hand Split End, No Power – 'RPEPN'
- Left-Hand End Spine, Single-Sided Power Below WS – 'LESSW'
- Left-Hand End Spine, Single-Sided Power Below HAT – 'LESSH'
- Left-Hand End Spine, Dual-Sided Power Below WS – 'LESDW'
- Left-Hand End Spine, Dual-Sided Power Below HAT – 'LESDH'

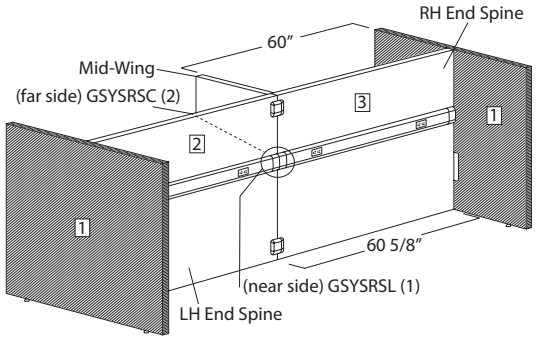
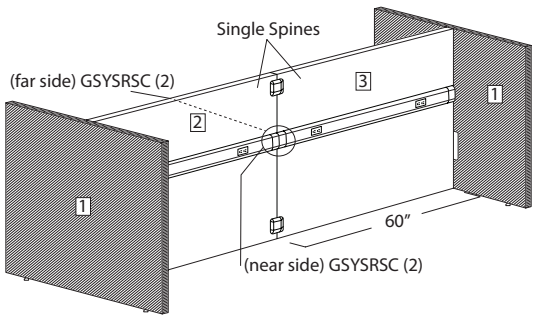
Specifying Fit Panels

- When specifying Fit Panels, the base model indicates the height and modular width needed. Model logic is 'GSYS' then 'height' then 'width.' (e.g., a 50"H by 72"W panel would be GSYS5072)
- The first dot option indicates the panel type (where the panel is located within the typical) and power options. (e.g., GSYS5072.MSPDW (Mid Spine, Power Below Worksurface, Wall))
- When a Single-sided End panel is ordered, a separate connector must be specified (GPLTBK) with any Allsteel standard paint color.
- When Split End panels are ordered, a separate connector must be specified (GSYSCONSE) with any Allsteel standard paint color.
- Due to the lack of connectors spacing out the panels, the true width of Fit panels must accommodate panel overlap. To allow for modular interior worksurface dimensions, the option codes must indicate how much overlap is needed, which is done by specifying 'panel type' explained below.
- Spine panels must be the tallest panels in the run. No variable height along the spine panel run is allowed.

Panel Type Options are below:	True Panel Widths (ex: 72"W)	Glass Widths
Mid Wing = "MDW"	Exact width (72")	3" Undersized
Left Hand Split End = "LPE"	1/2 panel width overlap (72.56"W)	3" Undersized
Right Hand Split End = "RPE"	1/2 panel width overlap (72.56"W)	3" Undersized
Left Hand Single-Sided End = "LSE"	1 panel width overlap (73.125" W)	Same width as panel
Right Hand Single-Sided End = "RSE"	1 panel width overlap (73.125" W)	Same width as panel
Right Hand End Spine = "RES"	1/2 panel width overlap (72.56"W)	3" Undersized
Left Hand End Spine = "LES"	1/2 panel width overlap (72.56"W)	3" Undersized
Mid Spine = "MSP"	1 panel width overlap (73.125" W)	3" Undersized
Single Spine = "SGS"	Exact width (72")	3" Undersized



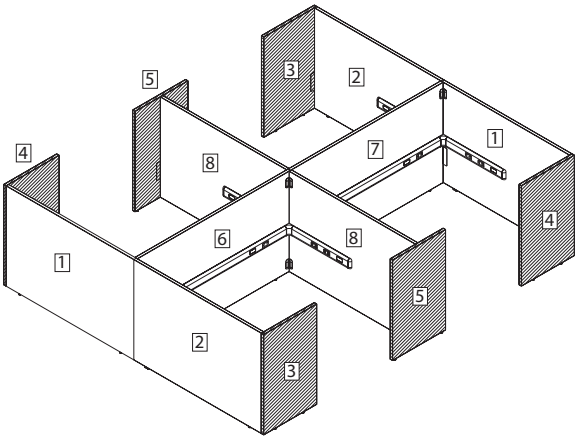
FIT



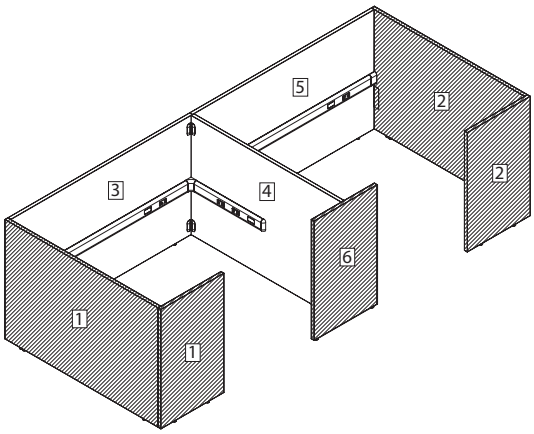
- For Non-Powered End Panels (Single or Dual-Sided), Gallery-to-Gallery 'L' or 'T' Models should be used. Gray panels indicate Gallery-to-Gallery.
- GTEMP model is required for connecting Gallery-to-Gallery Panels to Fit panels.

Note: 24"W, 27"W, and 30"W T Gallery-to-Gallery panels with 4 rounded corners of any height are not to be specified in freestanding applications as they do not pass all stability tests due to their limited width.

SIZING DIFFERENCES IN SINGLE SPINES VS. RIGHT HAND/LEFT HAND END SPINES



- Left-Hand and Right-Hand End Spines are .56" wider than Single Spines (SGS) to accommodate exact dimensions inside a workstation area when, for example, a Mid-Wing is added to create separation between workstations in a longer parent run.
- If adding a Mid-Wing to a Parent Run, utilize Left-Hand and Right-Hand Panels for exact dimensions inside of workstations. The shorter Straight Corner Rail Connector, GSYSRSC (requires qty. 2, 1-packs), must be used to close gaps between the power rail and Mid Wing. If not utilizing a Mid Wing in Left-Hand/Right-Hand End Spines, the longer Straight In-Line Connector, GSYSRSL (requires qty. 1, 2-pack) must be used to close gap in power rail across Parent Run.
- If not adding Mid-Wing to any side of a Parent Run, exact width Single Spines are recommended to maintain exact dimensions inside work station area(s). The shorter Straight Corner Rail Connector, GSYSRSC (requires qty. 2, 1-packs) must be used to close gap in power rail across Parent Run.



1. GThhww (Gallery-to-Gallery T Panel)
2. GSYShhww.LESDW (Left Hand End Spine)
3. GSYShhww.RESDW (Right hand End Spine)

- Gallery-to-Gallery Panels can also be connected to Fit Wing or End panels as an additional return. Gray panels indicate Gallery-to-Gallery.
- GTEMP model is required for connecting Gallery-to-Gallery Panels to Fit panels.

1. GSYShhww.RPESW (Right Hand Split End)
2. GSYShhww.LPESW (Left Hand Split End)
3. GLhhwwL (Left Hand Gallery-2-Gallery L)
4. GLhhwwR (Right Hand Gallery-2-Gallery L)
5. GThhww (Gallery-2-Gallery T)
6. GSYShhww.LESDW (Left Hand End Spine)
7. GSYShhww.RESDW (Right Hand End Spine)
8. GSYShhww.MDWDW (Mid Wing)

1. GLhhwwL (Left Hand Gallery-2-Gallery L)
2. GLhhwwR (Right Hand Gallery-2-Gallery L)
3. GSYShhww.LESSW (Left Hand End Spine)
4. GSYShhww.MDWDW (Mid Wing)
5. GSYShhww.RESSW (Right Hand End Spine)
6. GThhww (Gallery-2-Gallery T)

WHEN TO USE "SGS" MODELS

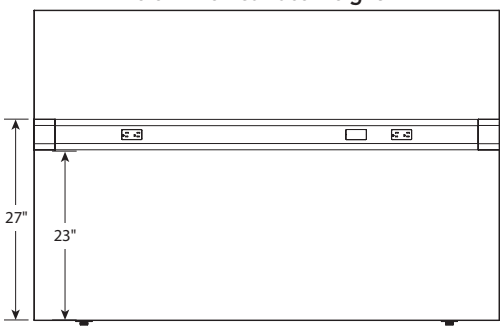
Traditional 4-station benching with fixed surfaces

Reception style station

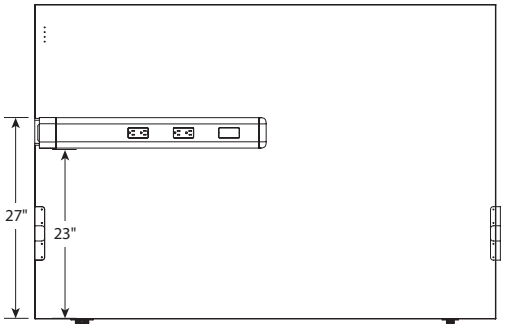
Gallery-to-Gallery Panels (page 536)

- Gallery-to-Gallery Panels connect to Fit panels and are available in L-, T-, and Nonsymmetrical T- configurations.
- When specifying Gallery-to-Gallery Panels, the installation template (GTEMP) is required. The recommendation is 1 template for every 30 panels. Templates are reusable.
- Gallery-to-Gallery Panels cap over Fit panels and are oversized by 1⅛" to maintain true interior dimensions.
- Gallery-to-Gallery Panels must be of equal or lower height than the Fit panel attached. The Gallery-to-Gallery Panel cannot be taller than the adjacent panel. If this is required, please reach out to TPG for a custom solution.
- Panel construction is the same as Fit panels.
- Can be specified with matching or contrasting edge.
- Woodgrain laminates can be specified with vertical grain up to 54"W. Horizontal grain is available on all sizes.
- Gallery-to-Gallery Panel widths are available in 3" increments from 18"W to 30"W and in 6" increments from 30"W to 78"W.
- Gallery-to-Gallery Panels offer 2½" leveling capability.
- Overall heights line up with adjacent panel.
- Available with and without the integrated glass option.
- Glass is specified separately.
- Gallery-to-Gallery Panels for use with glass have separate model numbers.
- Gallery-to-Gallery Panels are secured with an inset flat bracket under a painted metal cover at the base and a hidden top connection.
- If Fit Panel L- connectors are preferred at Gallery-to-Gallery attachments for aesthetic reasons, they may be added.
- L- and Nonsymmetrical T- panels are handed.
- Additional support is required after every 60" in panel width (i.e., return panel, storage or worksurface tie-in, panel bracket, or foot).
- Nonsymmetrical T- panels are specified in the format GTyyxxzz. Substitute yy as panel height, xx and LH nominal length, and zz and RH nominal length.

Specifying Fit Panels
Following the 'Panel Type', the option code includes a power specification.

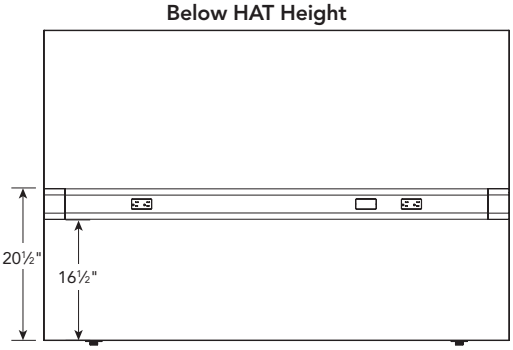


Power options for Spine Panels are below:
- Single-Sided Power Below Worksurface = "SW"
- Single-Sided Power Below HAT = "SH"
- Dual-Sided Power Below Worksurface = "DW"
- Dual-Sided Power Below HAT = "DH"

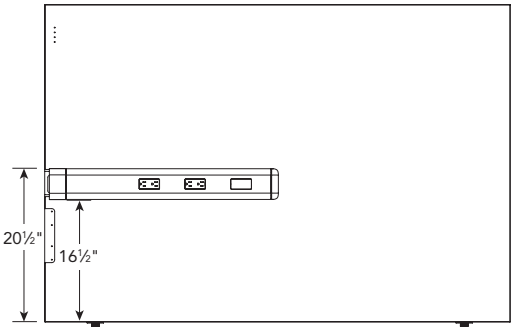


Power options for End Panels are below:
- No Power = "PN"
- Single-Sided Power Below Worksurface = "SW"
- Single-Sided Power Below HAT = "SH"

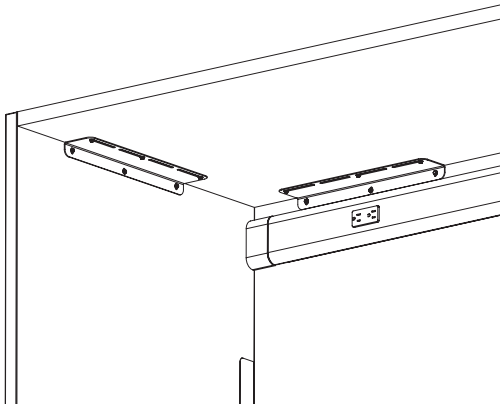
Power options for Mid-Wing Panels are below:
- No Power Below Worksurface = "PW"
- No Power Below HAT = "PH"
- Left-Handed Single-Sided Power Below Worksurface = "LW"
- Left-Handed Single-Sided Power Below HAT = "LH"
- Right-Handed Single-Sided Power Below Worksurface = "RW"
- Right-Handed Single-Sided Power Below HAT = "RH"
- Dual-Sided Power Below Worksurface = "DW"
- Dual-Sided Power Below HAT = "DH"



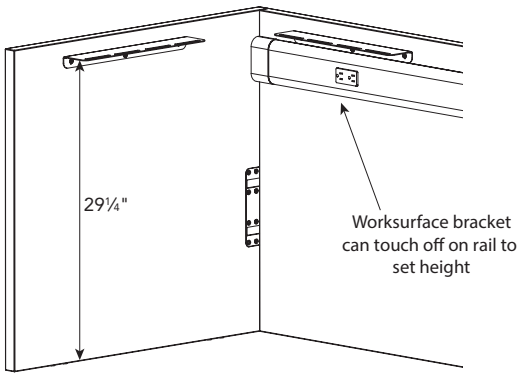
Electrical Rail (page 50)
- Panels 60"W and larger can be specified with integrated power.
- Rail offers 2 receptacle locations and an optional knock-out location for data.
- Includes attachment hardware for mounting onto the panel.
- Rail protrudes 1" from the face of the panel, with receptacles protruding an additional ¼". Note any potential interference with workstation components.
- Rails must be specified to cover electrical components when using a powered panel.
- Spine panels require the rail to be specified at the same width as the panel.
- Powered Wing or End panels require a return rail since power is only integrated within the first 36" past the spine.
- Rails can be specified as single- or dual-sided.
- Can be painted any Allsteel Standard Paint color.
- Electrical can be placed at two different heights on the panel face, Below Worksurface and Below HAT, see dimensions below. Rail models are the same regardless of height.
- Below Worksurface is intended for use below fixed worksurfaces or above low storage.
- Below HAT is intended for use below a Height-Adjustable table.
- Ordering two single-sided rail models is not a substitute for one dual-sided model, and vice-versa.

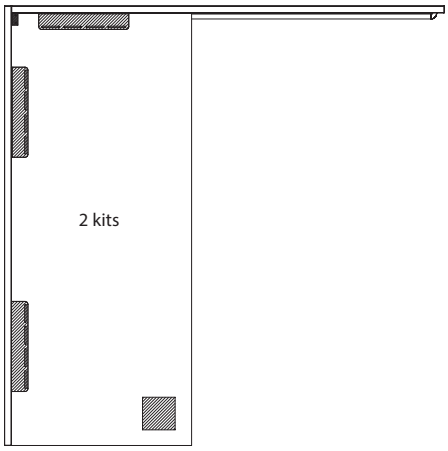


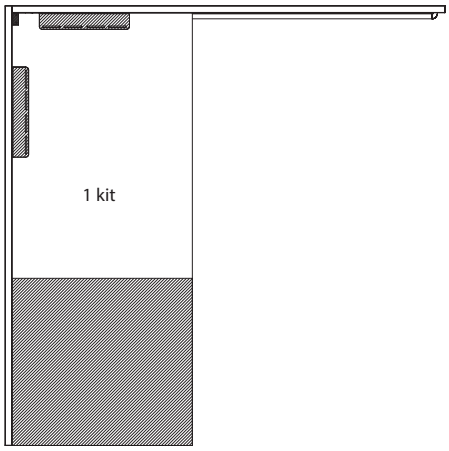
Below Worksurface Height



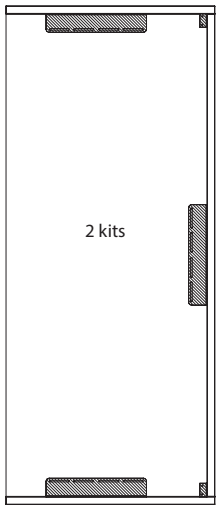
Below HAT Height



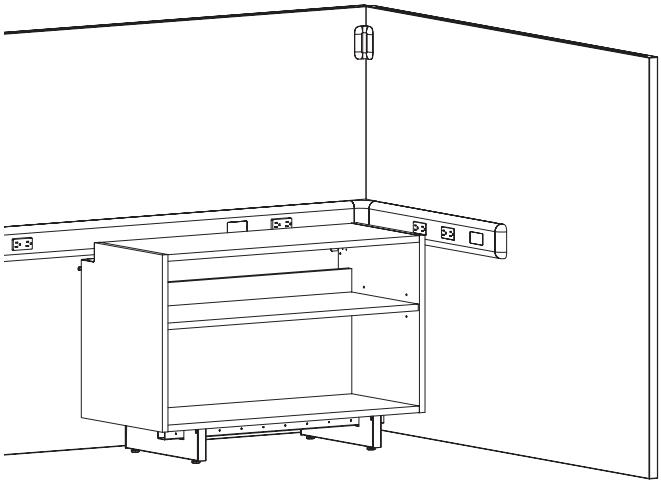




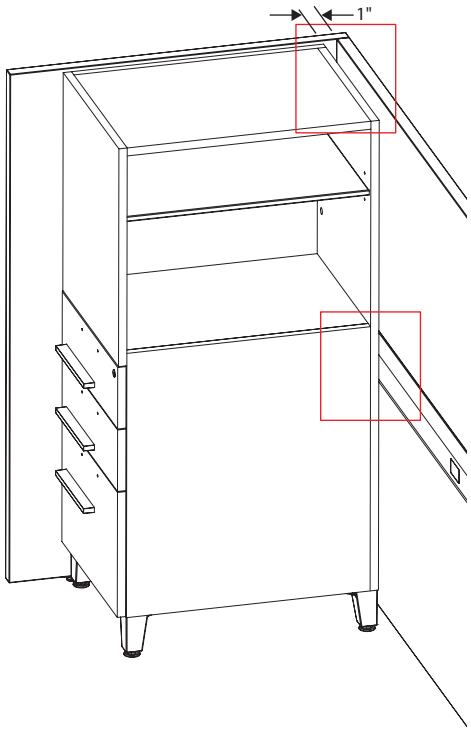
Worksurface Mounting Bracket (page 49)



- Used to mount a fixed-height worksurface to a Fit panel.
- Can be painted any Allsteel Standard Paint color.
- A worksurface stiffener is required for surfaces 60"W or greater.
- One bracket kit (GWSBK) is required for each worksurface corner attached to Fit panels.
- Sized to fit above a Below Worksurface power rail location and locate the top of a fixed worksurface at 29¼" above the floor. Or can be installed at any available height.
- When using a 30"H spine with a below worksurface rail, a worksurface or storage must be mounted at any panel-to-panel connection.
- Worksurface sits flush with FIT panels. For mounting desk mounted accessories (Monitor arms, Power Modules, etc.) please specify either grommets in worksurface or use special undersized worksurface through the 9120 program.



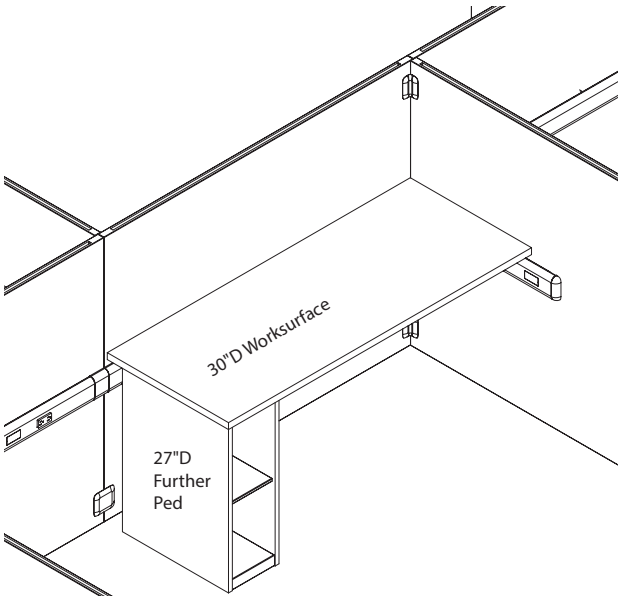
Storage Ganging Kits (page 49)

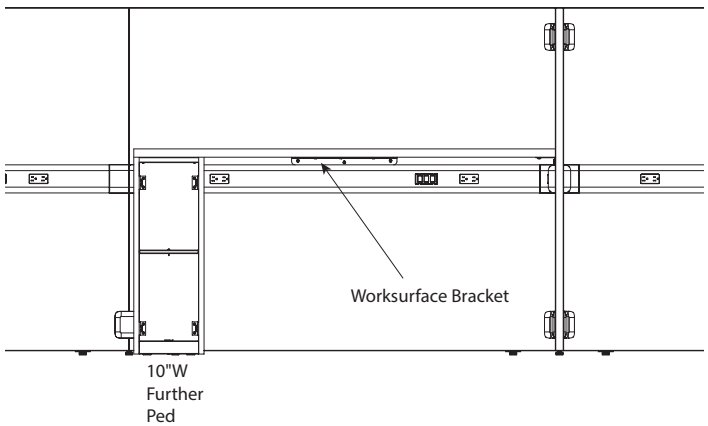


- The laminate storage ganging kit (GSGKL) is used to connect a Fit panel to a laminate storage unit.
- The metal storage ganging kit (GSGKM) is used to connect a Fit panel to a metal storage unit.

Credenzas & Towers

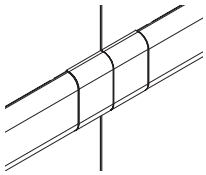
- Approach low credenzas w/ trough and Align low credenzas sit below rail. (Below Worksurface height only.)
- Rail will offset taller storage, like towers, from panel by 1".
- Infeed housing will interfere with storage units when placed in the same corner.

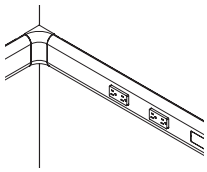


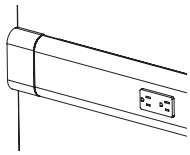


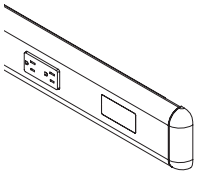
NOTE: A topper used on an Approach credenza may interfere with the ability to plug into the rail. Credenza will need to be offset from the panel.

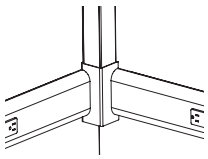
Support Pedestals

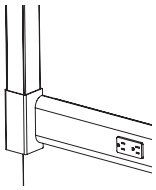


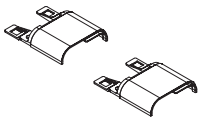


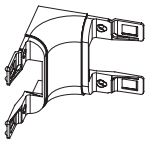


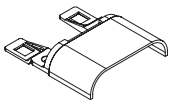


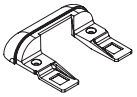


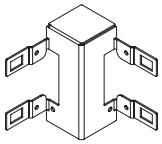


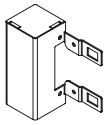






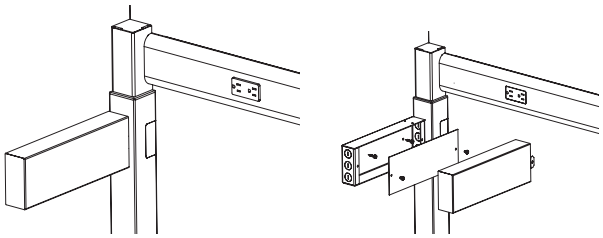






- Further, Involve, and Align support pedestals match height of worksurface brackets and can be recommended for worksurface support.
- Cannot use full-depth support storage that matches worksurface depth due to rail interference.

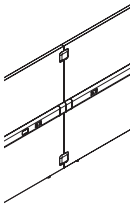
Rail Connectors (page 50)

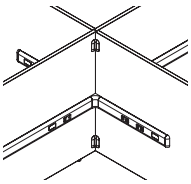


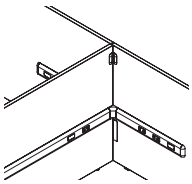
- Rail connectors must be used at BOTH ends of each rail to create the proper transition.
- Rail connectors are painted metal and can be painted to match the rail color.

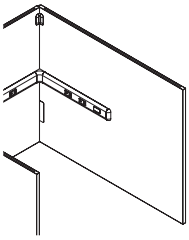
					
					
GSYSRSL Straight In-Line Connection (No Mid Panel between Spine Panels)	**GSYSRL** L-Connection (Between Powered Spine and Powered Wing)	**GSYSRSC** Straight Corner Connection (Between Powered Spine and Non-Powered Wing)	**GSYSREC** End Cap (At the end of any Return Rail)	**GSYSRPL*** L- Infeed Connection (Infeed between Powered Spine and Powered Wing)	**GSYSRPS*** Straight Corner Infeed (Infeed between Powered Spine and Non-Powered Wing)

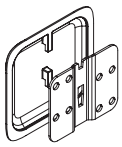
*Models replace GSYSRL or GSYSRSC

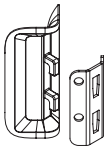


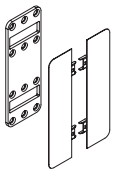


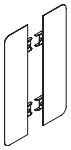




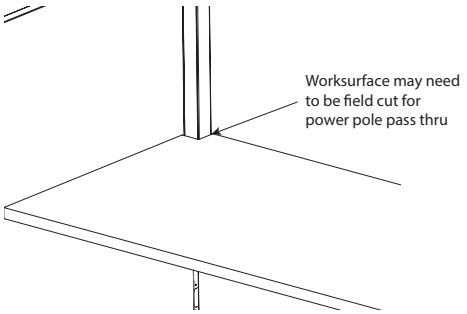




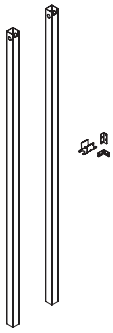




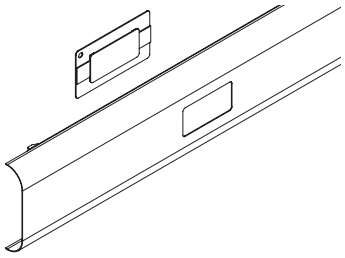
Rail Hardwire Infeed Connectors (page 50)



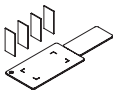
- Rail Hardwire infeed connectors are for use where a hardwired infeed comes into the rail.



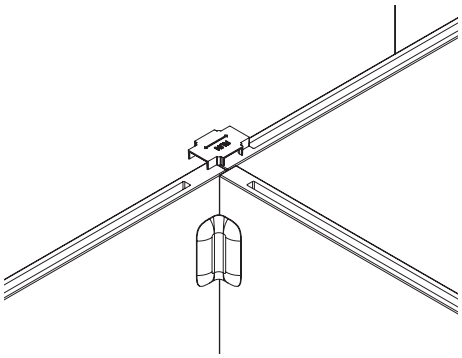
Panel Connectors (page 49)

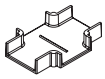


- Panel connectors must be used at each panel connection

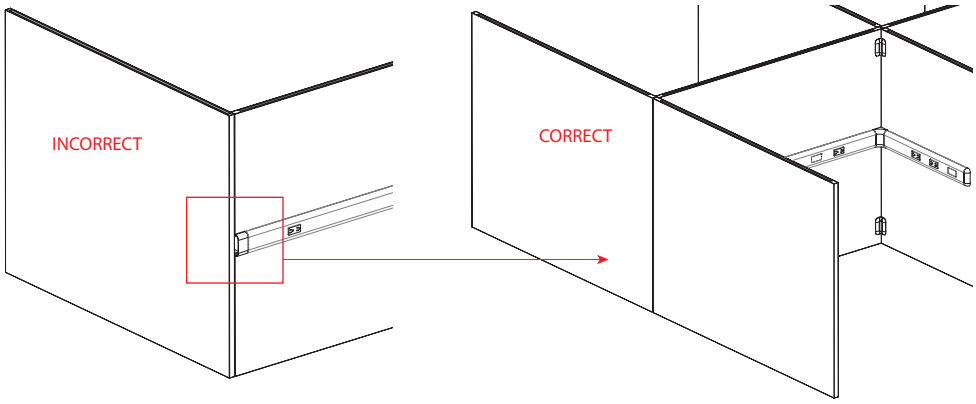
GSYSCONS Straight In-Line Connection (No Mid Panel between Spine Panels) No In-line panel connector is needed if 1 or more wing panels are connected to the spine at the panel intersection	**GSYSCONL** L-Connection (Between Spine and Mid Wing) Each Mid Panel requires 2 kits – unless storage is ganged at the base, then 1 kit is needed	**GSYSCONSE** Split Panel connection at the End of the Run (Split panels also require 1 L-Bracket kit GSYSCONL to be specified)	**GPLTBK** Single Powered Panel connection at the End of the Run (Single Powered panels also require 1 L-Bracket kit GSYSCONL to be specified)

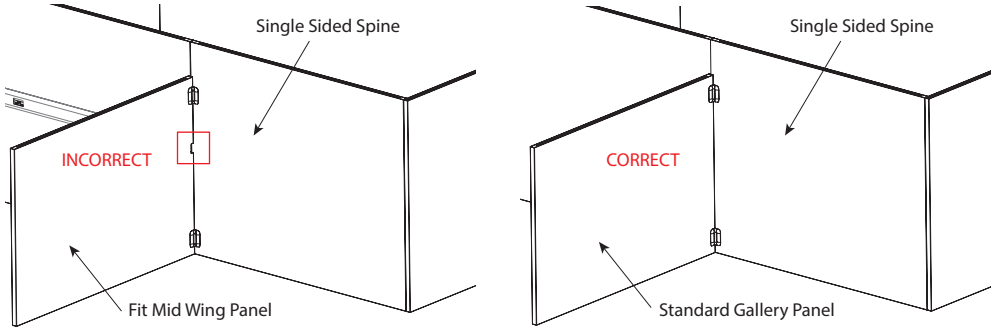




Power Pole (page 67)
- Ceiling power pole for use with ceiling in-feeds.
- Ceiling power poles connect to the rail inside of workstation, in this instance a mounted worksurface or HAT may need to be field-cut to accommodate. (See image at right.)
- Below HAT Power Pole is used to shroud a base or wall in-feed as it connects into a Below HAT Rail Height.
- Below Worksurface Power Pole is used to shroud a base or wall in-feed as it connects into a Below Worksurface Rail Height.
- Power Pole height is 13 feet.

Rail Port Cover (page 67)
- Offered in a 2- or 12-pack.
- Used to cover a port location in a rail when a receptacle is not needed.
- Can be painted any Allsteel Standard Paint color.

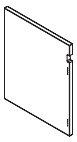




Installation Template (page 49)
- At least one required at installation, recommended that at least one is ordered per project.

Specifying Fit Panels

- Panels under 60"W are not available with power.
- Panels 60"W and greater are available with single- or dual-sided power.
- Spine panels are only available 60"W or greater and must be specified with power.
- Specify L- or T- Gallery-to-Gallery Panels when power is not needed in a single-piece end panel.
- Split End panels may be specified with or without single-sided power.
- When power is not needed in Mid Wing Panels, they must be specified with No Power AND the spine power height in order to allow electrical components to pass through the panel. Power can be specified at the Below Worksurface or Below HAT heights.
- A dual-sided powered spine must have an end panel that extends both directions:



- When using a mid wing on the EXTERIOR face of a single-sided powered spine, use a standard Gallery Panel. Connectors must be field-measured.

- When submitting a request to TPG, the full dot option logic must be provided.

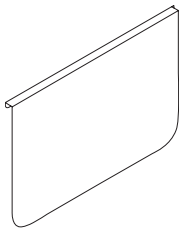
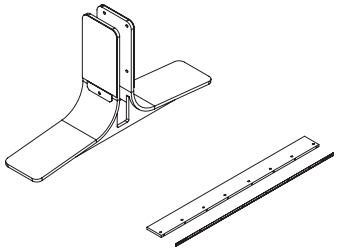
How to specify —	*1st Option:*
Select the Model Number from above.	**Paint:** P1 P2 P3 See page 20 for finishes.
G _____ .	_____

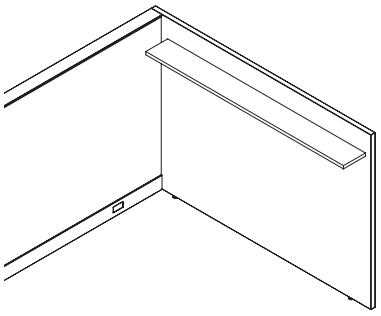


Examples: **GSYSRRDS.PJW**

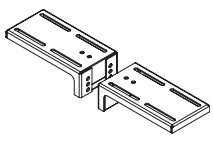


Tackboards (page 54)
- Provides tackable surface.
- Comes with steel-painted trim.
- Available in the following heights: 15", 22½"
- Available in the following *widths: 24", 30", 36", 42", 48", 54", 60"
  *Nominal widths, true width is undersized by ½"
- Depth of .45"
- Mounts directly to Fit Panel. Mounting hardware included. Will deface the panel.

Magnet or Marker Boards (page 54)
- Provides writable and magnetic surface when painted in marker board paint.
- Provides magnetic surface, NON-writable, when painted in other Allsteel paint colors.
- Available in the following heights: 15", 22½"
- Available in the following *widths: 24", 30", 36", 42", 48", 54", 60"
  *Nominal widths, true width is undersized by ½"
- Depth of .45"
- Mounts directly to Fit Panel. Mounting hardware included. Will deface the panel.

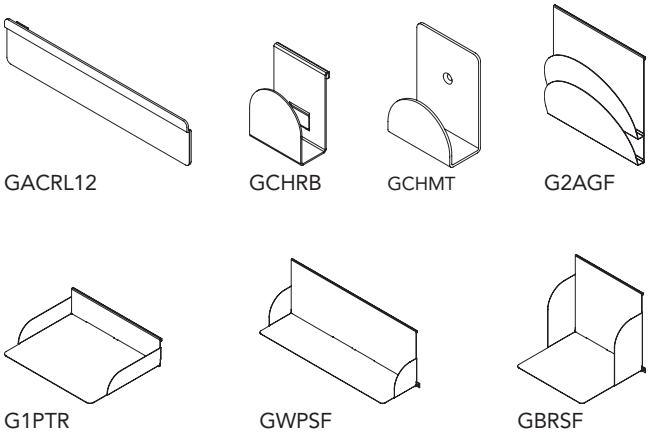


Hanging Magnet or Marker Boards (page 54)
- Hangs over Fit panel or sits on top of worksurface.
- Provides writable and magnetic surface when painted in marker board paint.
- Provides magnetic surface, NON-writable, when painted in other Allsteel paint colors.
- Cannot be installed back-to-back when hanging in the same location.
- Available in 30"W and in two heights: 20"H and 26"H.



Fit Panel Foot (page 54)
- Single foot provides rigidity to large wing panel.
- Available in any textured Allsteel paint.
- Foot extends 9" from either side of the panel.

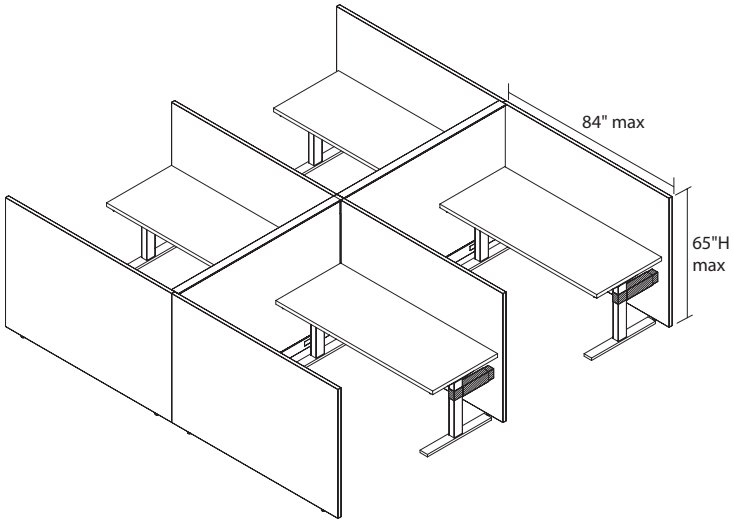
Floating Laminate Shelves (page 55)
- 6" depth.
- ¾" thickness.
- Constructed of HPL laminate with 0.8mm ABS edgebanding.
- Available in solid or horizontal woodgrain laminate.
- Available with contrasting or matching edge.
- Widths available every 6" from 12" to 78"W.
- Widths from 54" to 78" satisfy a stiffener requirement and are meant to be mounted to a panel that is 6" wider than the shelf.
  (e.g., 84"W panel would accept a 78"W stiffener shelf.)
- Shelves narrower than 54"W do not act as a stiffener.
- Shelf stiffeners must be installed above the power rail to function as a stiffener.



Wall Start (page 49)
- Wall Starts are 1⅛" by 1⅛" rectangular mounting posts that are meant to affix a Fit panel to a permanent building wall.
- Wall starts add 1⅛" to panel run.
- Attachment hardware not included.
- Must be specified at the same height as the connecting panel.

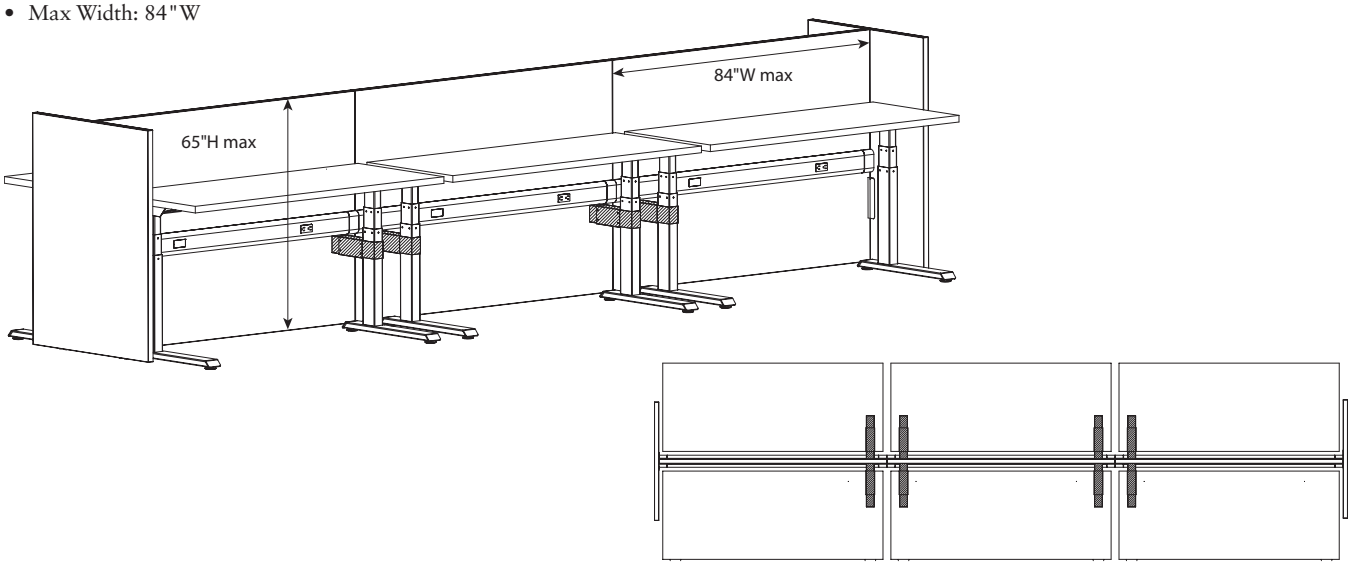
Countertop Brackets (page 56)
- Includes attachment hardware.
- Countertops are flush with the top of the panel and can be flush with the ends of the panel or shorter than the panel width.
- For straight countertops, two countertop brackets must be ordered.
- For corner countertops, three countertop brackets must be ordered.
- Will deface the panel.

Accessory Rail and Paper Management (page 55)



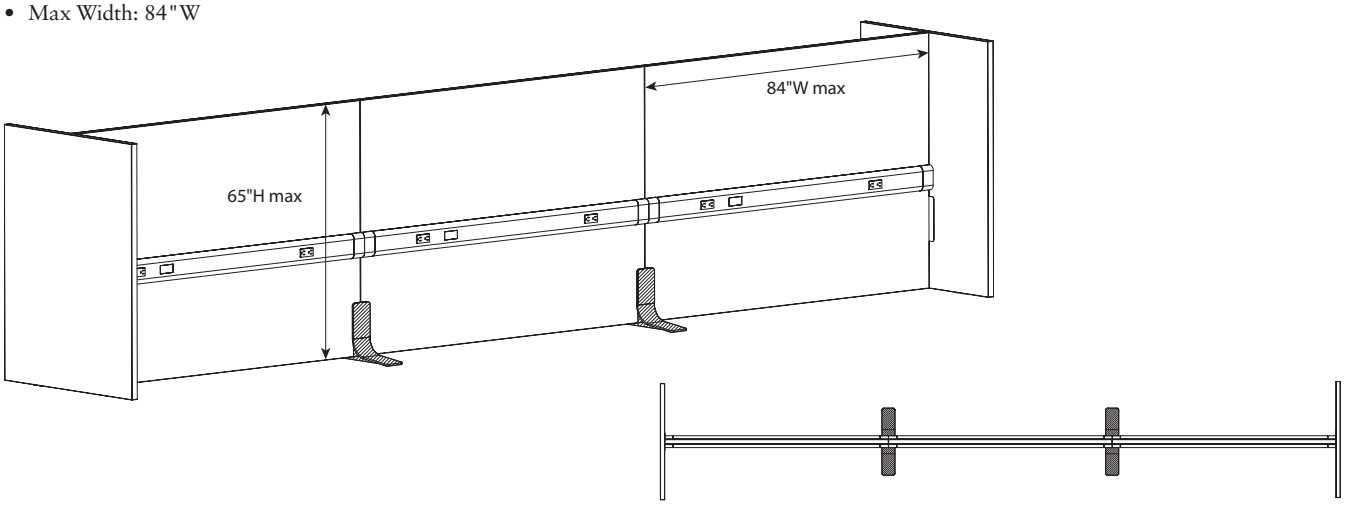
- Accessory Rail provides mounting for paper management accessories, listed below.
- Rail is 2.6"H and is available in the following widths: 12", 18", 24", 30", 36".
- Rails can be installed in any location on the Fit panel and can be placed in-line to span panel length.
- Rail height when installed cannot exceed the height of the panel.
- Rail and accessories can be painted any standard Allsteel paint color.
- Mounts directly to the Fit panel, attachment hardware included.
- Extensions accessories are NOT compatible with the accessory rail.
- These accessories are compatible with tool tiles.
- Includes a rail cover to hide hardware and provide magnetic surface.
- Compatible Rail Accessories:
  - Coat Hook (Rail-based, a mounted version is also available to attach directly to the panel)
    - Rail Based dimensions: 4"x 3"x 1¾"
    - Mounted dimensions: 4"x 3" x 1½"
  - Angle File (Triple, Dual, and Single heights)
    - Depth of 2"
    - Heights: Triple = 15⅓", Dual = 12⅓", Single = 9⅓"
  - Paper Tray (Triple, Dual, and Single heights)
    - Depth of 10"
    - Heights: Triple = 9⅓", Dual = 6⅓", Single = 3⅓"
  - Personal Shelf
    - 9⅓" x 24" x 10⅔"
  - Binder Shelf
    - 12⅓" x 12" x 11⅓"

Height-Adjustable Table Tie-In Brackets (page 55)

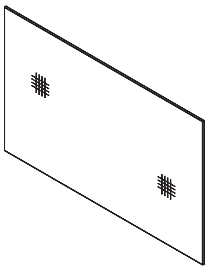


- Improves panel rigidity. Does not function as a panel stability solution.
- AGBKT to be specified for connection to a T-leg HAT.
- AGBKC to be specified for connection to a C-leg HAT.
- Reusable mounting template is required and must be ordered separately (AGBKTMP).
- Brackets telescope to account for 24" and 30" worksurface depths and screen attachments.
- A6 C-legs with a 30"D worksurface and a screen must be specified with T-leg brackets.
- NOTE: Wire chain cannot be installed on the same leg as the HAT tie-in bracket.

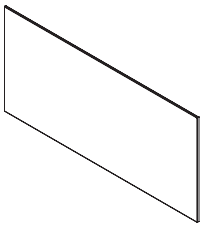
Max Height (with Glass): 65"H
Max Width: 84"W; No top size restrictions



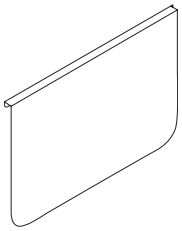
Dual-Sided Panel Bench
- Can be created using HAT brackets or Fit Panel Feet. Cannot be single-sided. No maximum run length.



Height-Adjustable Table Tie-In Brackets (page 55)
- Max height (with Glass): 65"H
- Max Width: 84"W



Fit Panel Feet (page 54)
- Max height (with Glass): 65"H
- Max Width: 84"W



For specification information see pages 23-53.

Floor infeed electrical connection

Electrical Systems

Fit Electrical Systems

Fit offers a choice of three electrical systems:

- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals

- See pages 62-63 for a detailed explanation of each electrical system.
- All 3 systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian)
- Fit panels and electrical components are UL listed. Electrical components are also CSA certified.
- Installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through panels.

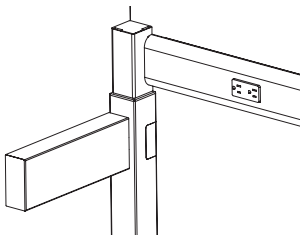
Hardwire Junction Box – New York Code (page 66)

- Hardwire (New York Code) junction box is used when local electrical codes require hardwire entry.
- Separate junction boxes must be specified for single- or dual-sided power.
- For use with hardwire power infeed shrouds, models GSYSHWBH & GSYSHWBW.
- Unit must connect to a power or pass-thru harness positioned in the rail of an adjacent panel.
- Customer to furnish all cabling and wiring from power entry to power source.
- Junction box can be positioned at any 90-degree panel connection with an adjacent rail.
- Must order housing model U8SBKNY1 for junction box.

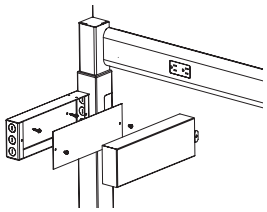
Hardwire Wiring Harness – Chicago Code (page 67)

- The junction box must connect into power harness within rail through a hardwire power infeed shroud at a 90-degree panel connection with an adjacent rail.
- Hardwire receptacles connect into standard mounting locations within rail.
- Power entry can be routed from the ceiling, via a Fit power pole, or from the floor into a junction box model.
- For single-sided applications use junction box A871500. For double-sided application use junction box 877600. Must order junction box housing model U8SBKCH separately in both cases.

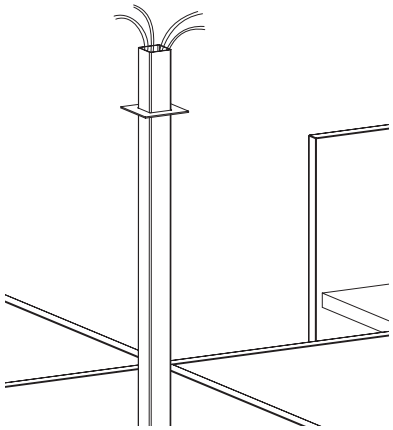
Electrical Infeeds



- Power infeed cables deliver power from building to panel's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communication and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.
- When using sealtight infeeds, an additional H-clip is needed to connect the infeed to the power harness, ordered separately.
- When bringing in an infeed from outside the station, adjust the leveling glides up to allow the infeed cable to fit under the panel.



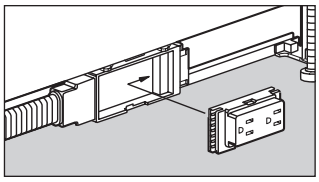
Ceiling Power Infeed (page 66)

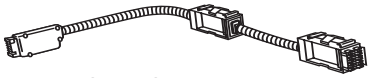


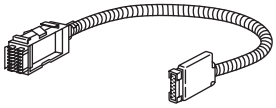
- Ceiling power infeed connects to a prewired electrical harness in the rail pathway, traverses through an adjacent panel, and terminates in the junction box at the top of the integrated power pole.
- Use power pole model GSYSPP.
- Most codes allow flex cables to be exposed after installation. Verify code requirements before ordering for exposed application.

Integrated Power/Communication Pole (page 67)

- Integrated power pole accommodates ceiling power infeed and communication/data lines.
- Provide capacity for routing power infeed and cables to the power rail.
- Conduit of the infeed cables serves as the division of electrical and communication cabling.
- Installs into Below Worksurface or Below HAT rail heights in a 90-degree panel connection.
- Single cavity with removable cover.
- Height: 13', Outside Dimension: 2" square.
- When using a ceiling power infeed, consider that the infeed must connect into an electrical harness.
- To power the prewired electrical system, from a ceiling power source, a ceiling infeed cable must be purchased separately.

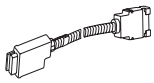






Power Harnesses and Pass-Thru Harnesses

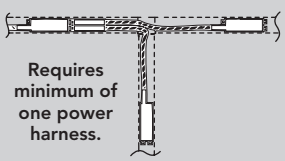
Electrical power harnesses are used to distribute power in Fit panels. Harness power blocks snap directly onto brackets in base pathway. Power blocks on electrical power harness and pass-thru harness accept duplex receptacles.



Electrical Power Harness

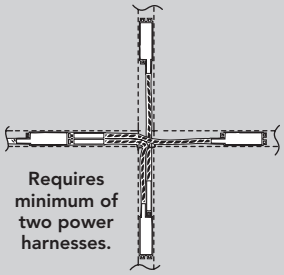
Electrical Pass-Thru Harness With Power Block

Electrical Pass-Thru Harness Without Power Block



Electrical Power Harnesses (page 65)
- Electrical power harnesses are used to distribute power in panels.
- Fit electrical can only be located at one location.
- Specify harness length to match panel width.
- Connectors at both ends of power harnesses allow power distribution in either direction.
- Harness power blocks snap directly onto brackets in the rail.

Electrical Pass-thru Harness With Power Block (page 65)
- Electrical pass-thru harnesses with power block have capacity to handle one duplex receptacle on each side of the panel when exposed.
- Specify harness length to match panel width.
- Power harnesses accept one duplex receptacle per panel side.

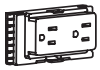


Electrical Pass-thru Harnesses Without Power Block (page 65)
- Specify harness length to match panel width.
- Electrical pass-thru cables distribute power through any panel(s) where receptacles are not required. Cable length cannot be stretched.

All electrical power harnesses and pass-thru harnesses will stretch 3½", allowing them to span "T", "X", and "S" extended straight connections.

Note: "T" intersections require a minimum of one power harness and "X" intersections requires a minimum of two power harnesses.

Requires minimum of one power harness.



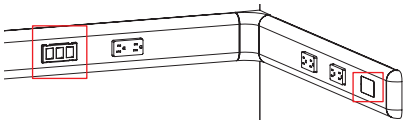
Requires minimum of two power harnesses.

Use of a ceiling infeed at this location requires an additional power harness.

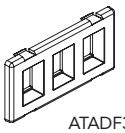
FIT

Receptacles

Duplex Receptacle

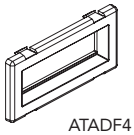


Receptacle Color Recommended to Coordinate with Paint Color



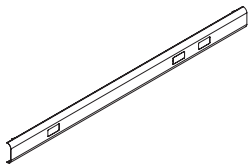
Paint Color	Receptacle Color
Designer White — PJW	Designer White — DW
Carob — P52	Black — E4
Champagne Metallic — PR5	Muslin — EU
Cinder — P7Q	Brownstone — EY
Fossil — P28	Flint — E9
Gunmetal Metallic — PR3	Brownstone — EY
Platinum Metallic — PR2	Loft — EV
Salt — P8C	Silver — ES
Titanium — P8T	Silver — ES

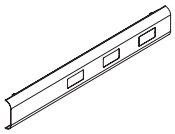
Duplex Receptacles (page 66)
- Duplex receptacles snap into power blocks of power harnesses or pass-through harnesses with blocks.
- Duplexes are available in multiple colors. See page 70 for finishes.
- Each receptacle is labeled to indicate which circuit it will be connected to: 1, 2, 3, or 4.
- Duplexes are model specific to support either 3+1 and 2+2 electrical infeed; or have an "A" suffix and are design to support a three-circuit separate neutral electrical infeed.

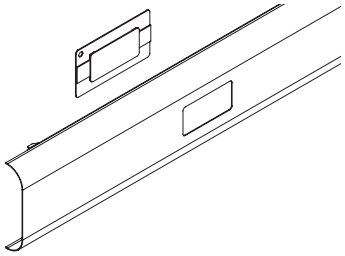


Single- vs Dual-Sided
- Different receptacles are required for single vs dual-sided power, see page 66 for models.

Data Components

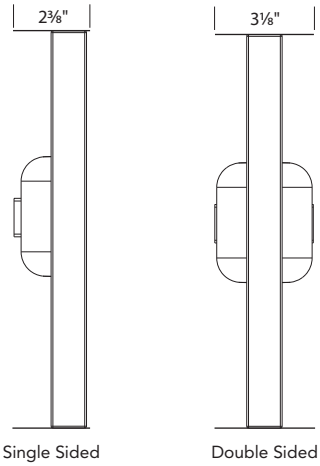




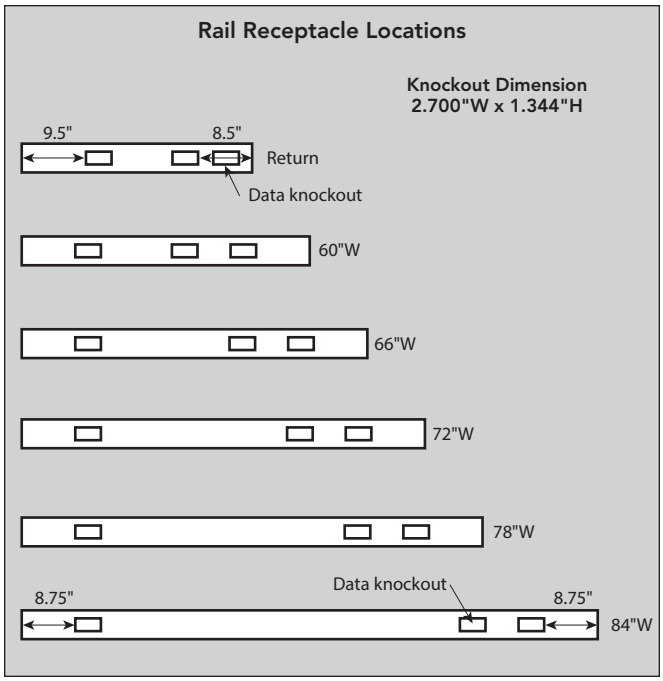


ATADF3

ATADF4



Data Faceplates (page 67)
- Fit not only provides space for voice and data cables, it also offers several means of mounting commercially available voice and data components.
- Commercially available modular data faceplates can be mounted in vacant rail receptacle openings.
- Due to rail depth, back-to-back data modules should not be used. Rail knockouts must be located on opposite sides in dual-sided applications.



Fit Rail Covers (page 50)
- Features additional knockout (offset) for improved utilization of power and data. Knockouts are 2.7"W and 1.344"H.
- Two power cutouts are available per powered panel for receptacle placement. Port covers are available (ordered separately) for unused receptacle locations.

Rail Port Cover (page 67)
- Offered in a 2- or 12-pack.
- Used to cover a port location in a rail when a receptacle is not needed.

Single Sided Double Sided

FIT

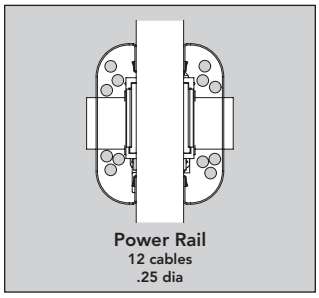
Circuit Usage

Strategy 1

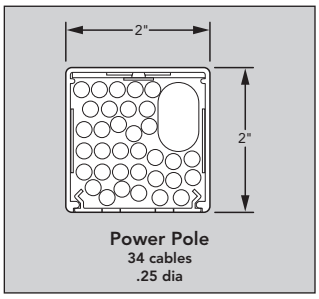
Circuits to Equipment

Assign specific uses for each of the circuits:

- For example, in a four-circuit system:
  Circuit 1 — Calculators, fans, etc.
  Circuit 2 — Task lights (could be wired to wall switch)
  Circuit 3 — CRT or flat screen monitors
  Circuit 4 — CPUs



Strategy 2



Circuits to Workstations

Assign specific workstations to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.

Rails are non-handed, so the data knockout may be installed on the left- or right-hand side of the panel. **NOTE:** Data may not be installed back-to-back in dual-sided applications.

Lay-in Cable Capacity

- The Fit power rail allows continuous voice and data cables to run through and between panels without interruption.
- The rail accepts up to 12 voice/data cables (¼" dia) at 60% fill when electrical system shares the rail.
- Cable capacity of the Fit power pole is 3.3 sq. in. for a total capacity of 34 cables of ¼" diameter.
- Cables can enter/exit rail through the ceiling power pole or the base infeed power pole.

Note: Cable quantities listed are at 60% fill ratio.

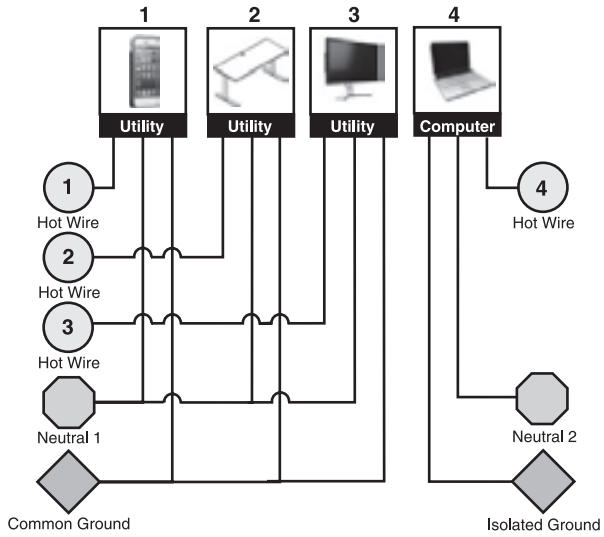
Electrical & Data

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - The four-circuit system (4-Hot/2-Neutral/2-Ground)
     - 3 + 1 option
     - 2 + 2 option
   - The three-circuit system (3-Hot/3-Neutral/2-Ground)
   - The eight-circuit system (back-to-back four-circuit systems)
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of isolated, isolated/dedicated, and separate neutrals circuits.
4. Specify appropriate power harnesses* and pass-thru cables.*
5. Determine the location, quantity, and type of power infeed needed.

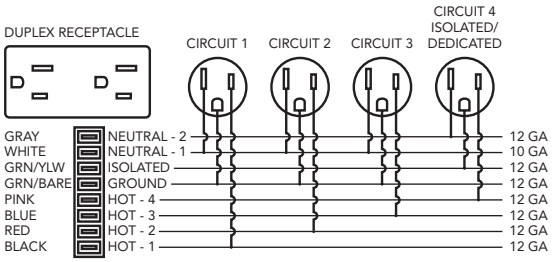
* Select power harness models (A8712XX), pass-thru cables (A8710XX), and pass-thru harness (A8711XX) with the last two digits corresponding with the panel width into which the component is to be positioned. The initial cable length can be stretched approximately 3" to transverse "T", "X", "L", and extended straight connectors.

Flexconnect™ Electrical System Options



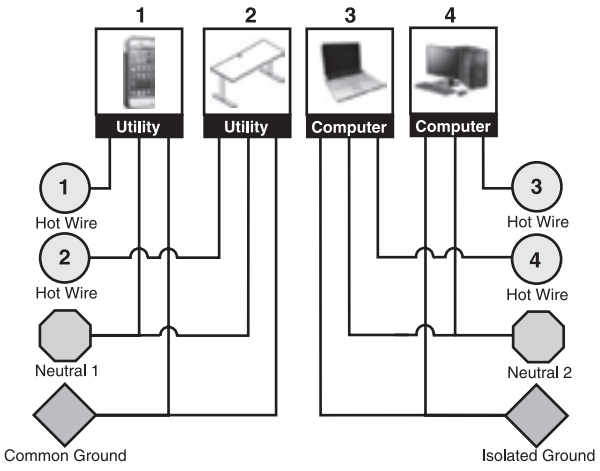
The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an “A” suffix and appear in a gray box in this pricer.

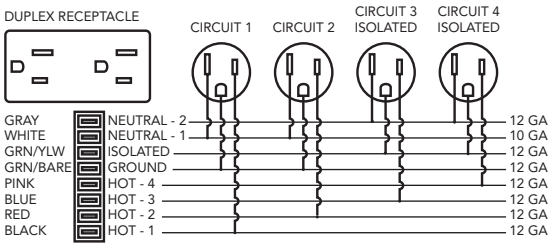


All three systems utilize an eight-wire electrical system rated at 20 amps per circuit (15 amps Canadian). Fit panels and electrical components are UL listed and CSA certified.

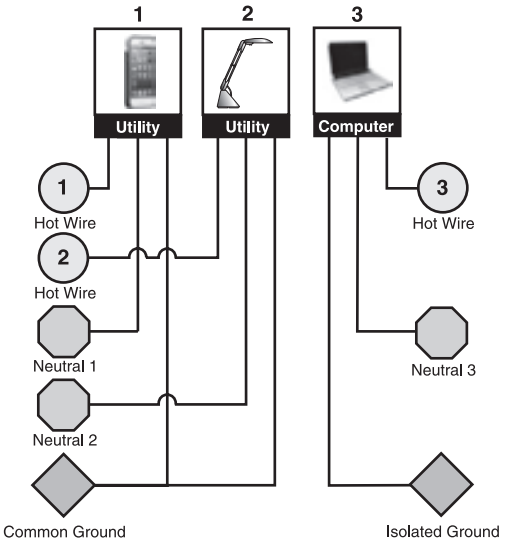
Reference the Office Equipment Typical Load Values matrix on page 64.



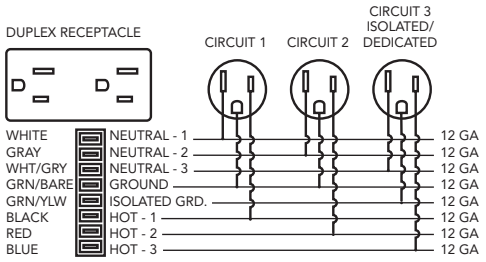
Four-circuit, 3 + 1 Receptacle Option



The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.



Four-circuit, 2 + 2 Receptacle Option



The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Three-circuit, separate neutrals

The three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/ dedicated. The three-circuit components have model numbers with an "A" suffix.

Fit System Receptacle Usage

Two 8-wire, 20 amp (15 amp Canadian) electrical systems are offered					
Electrical System	Circuitry	Receptacle Capacity			
Four-circuit 4-Hot/2-Neutral/2-Ground	**3 + 1**	Common Circuit-1 **A871501 A877501**	Common Circuit-2 (1) **A871502 A877502**	Common Circuit-3 **A871503 A877503**	Iso/Dedicated Circuit-4 **A871504 A877504**
	2 + 2	Common Circuit-1 **A871501 A877501**	Common Circuit-2 **A871502 A877502**	Isolated Circuit-3 **A871506 A877506**	Isolated Circuit-4 **A871504 A877504**
Three-circuit 3-Hot/3-Neutral/2-Ground	**w/separate neutrals**	Common Circuit-1 **A871501A A877501A**	Common Circuit-2 **A871502A A877502A**	Iso/Dedicated Circuit-3 **A871503A A877503A**	N/A

(1) Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.
(2) A87150x models are for single sided applications and A87750x models are for dual sided applications.

Notes:

- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.
- Components of the two systems are keyed differently to prevent components of one system being connected to components of another system.
- Allsteel Model Numbers are printed on the UL labels, and components are color-coded to provide visual identification of the different components.
- Four-circuit components have black plastic parts.
- Three-circuit components have rust-colored terminal ends and receptacle backs are rust colored.

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

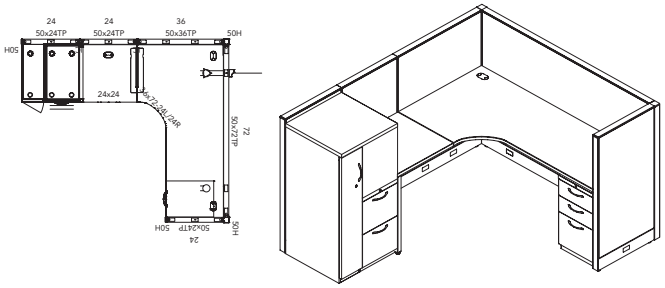
Optimize "U" Station 8' x 8'



Provides seated privacy with ample storage and worksurface space.

Optimize "L" Station 7' x 6'

Storage tower allows lower panel height for an open feeling.

OPTIMIZE

Visit https://www.allsteeloffice.com/design-resources/idea-starters to view these typicals and more.

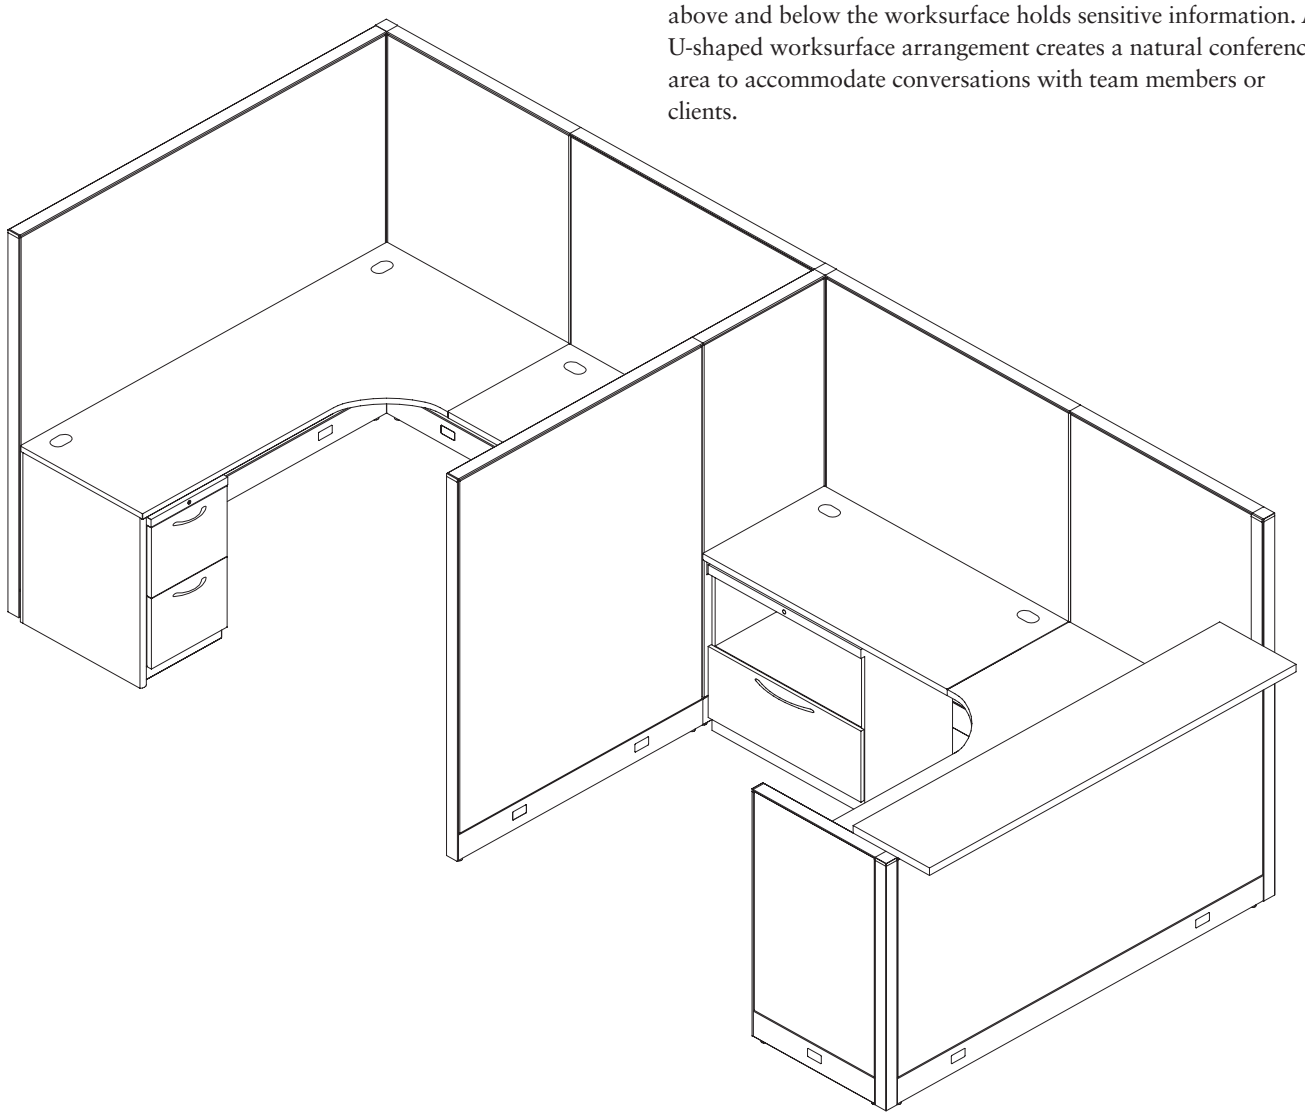
Workstations made easier.

Whether you're outfitting a call center, creating teaming areas, replacing a reception desk, or adding new stations for managers, Allsteel can help you make the most of your office with Optimize. By bringing together panels, worksurfaces, and storage in one cohesive offering, we've made it easy for you to create efficient, well-designed spaces. All you have to do is configure these quality components to fit the needs of everyone in your office. Let us show you how.

Optimize makes a good first impression.

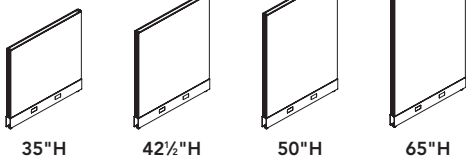
In areas open to the public, choose panels, worksurfaces, and storage to define space and keep projects organized. In this reception/shared workspace, a transaction countertop welcomes guests and worksurfaces below provide ample space for computers and paperwork.

We help you put it all together.



An open configuration with lower panels and a small footprint is perfect for people who perform the same function and need to share information throughout the day. Optimize benching can utilize tool rails and monitor arms to keep items off the desktop. An integrated D-shaped worksurface makes it easy for workers to come together to collaborate and then quickly return to their personal work areas.

As work changes, Optimize changes with you.



Optimize helps workers adjust workstyles throughout the day, from concentrated work to team brainstorming. In team areas, each person can have ample privacy, roomy storage with overhead bins, as well as a spacious worksurface for individual tasks. When it's time to collaborate, a table within the workspace and mobile pedestals that double as seating make it easy to come together.

Make the most of your space.

With Optimize panels, worksurfaces, and storage, you can create stations that feel like private offices. Higher panels promote privacy along the aisle while glass stackers near windows bring natural light into the space. Plenty of enclosed, lockable storage above and below the worksurface holds sensitive information. A U-shaped worksurface arrangement creates a natural conference area to accommodate conversations with team members or clients.

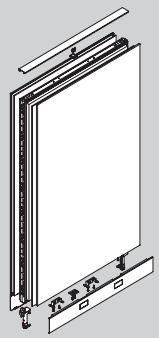
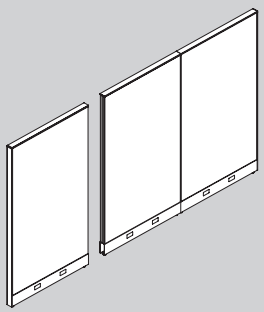
Frame Dimensions (Actual)

Depth: 2⅛" (use 2¼" to calculate intersections in length of panel run)



Widths: 20", 24", 30", 36", 42", 48", 60", 72"

Heights: 34¼", 41¼", 49¼", 64¼" (with levelers fully retracted)

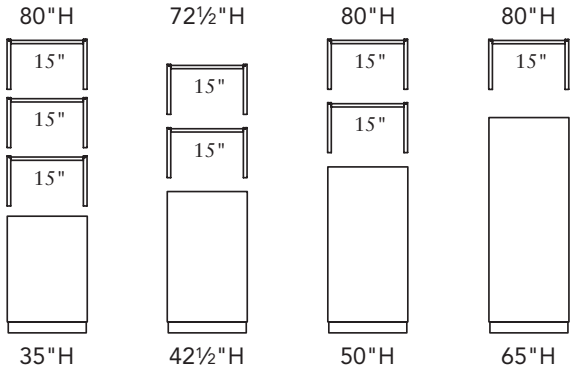


Leveling Glides: 2⅛" range

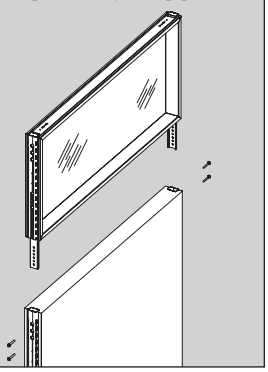
Stacking Panels: 15"H fabric and glass, 30"H glass

Frameless Glass Screens: 7½"H, 15"H

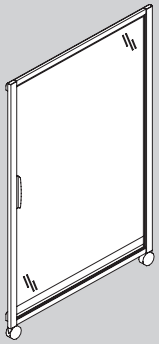
Panel frames are shipped with base pathway covers installed. Top trim is specified separately.



In-line connections between panels in a continuous run are accomplished with an in-line connector kit.



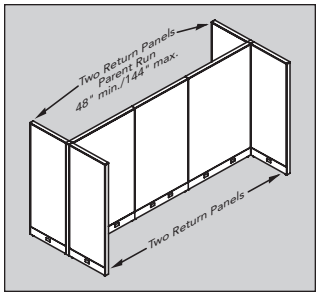
Tackable Panels (pages 78-79)

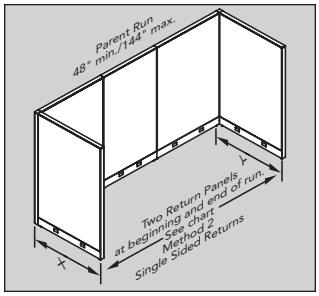


- Specifications: 4-sided, welded tubular steel panel frame.
- Panel frames include and are shipped with base pathway covers installed. Top trim is specified separately for all panel frames.
- Hardware included with connector kits.
- Available in 4 heights and 8 widths — add ⅜" for each panel vertical end trim.
- Panel frames can be leveled up to 2⅛". Actual panel height varies depending on position of leveling glides.
- Direct connections between same height frames in a continuous run are accomplished with provided hardware. There is no incremental increase in dimension along the run.
- For adequate stability, one of two methods of stabilization shown on page 75 must be adhered to.
- Due to depth of panel, back-to-back data modules should not be used in the base. Optional 3-hole kickplates are available.
- Add 2¼" to panel run for each "L", "T", "X", or extended straight connector ("S").
- Acoustical panels meet BIFMA recommendations.
- Fabric selection for 72"W panels is limited. Fabrics that are unavailable on 72"W panels are flagged with a * on page 15 of this price list.
- Do not remove electrical knockouts unless duplex is needed. For replacement covers, see page 96.

Building Vertically with Optimize Panels

Stacking Frame Connection
Glazed panels only in top position





Sliding doors are available in 50"H, 65"H, and 80"H.

Building Horizontally with Optimize Panels

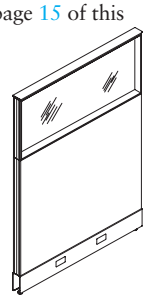
Method 1—Opposing Returns

Method 2—Single-Sided Returns

Important planning guidelines: For adequate stability, one of two methods of stabilization must be adhered to:

Method 1 — Opposing returns

- A parent run must be a minimum of 48" and a maximum of 144" between return panels.
- The parent run must have a minimum of two 24"W return panels running in opposing directions on each end of run.
- Return panels must not be any more than 30" shorter in height than parent run.
- When using 120° connectors, 12" must be added to length of return panels as determined by methods 1 and 2.



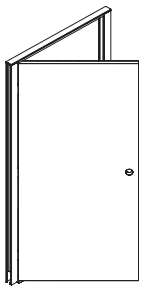
Method 2 — Single-sided returns

- A parent run must be a minimum of 48" and a maximum of 144" between return panels.
- The parent run must have a minimum of two return panels extending in one direction. Stack-ons may require additional length. See chart.
- Return panels must not be any more than 30" shorter in height than parent run.

Stacking Tackable and Glazed Panels (pages 78 and 80)

- When adding stacking panels, remove the top trim from the structural panel, and install top trim on top of the stacking panel.
- Stacking connection provides a solid connection, allowing the stacking frame to accept hang-on components, per Optimize configuration guidelines at left.
- Includes attachment hardware. Specify connectors separately.
- Only one stacking glazed panel can be added to top position of any Optimize panel of same width from 20"W to 72"W up to a maximum combined height of 80".
- End trim is specified in full end height to include height of base panel + stacking panel.
- Guidelines for using overhead storage with stacking frames are given on page 259.
- Stacking glazed panels feature clear or frosted tempered safety glass inserts (specified). Glass frame is painted to match trim.
- Stacking frames can be added to the top of same width 35"H, 50"H, and 65"H base panels up to 80"H; added to 42½"H panels up to 72½"H.
- Slot modularity will be lost on stacker used with 42½"H panels. If panel mounting slots are not being used, this is not an issue.
- Do not combine differing frame widths in a single stack. No spanning multiple frames.
- Stacking frames cannot be used as base frames.
- Fabric selection for 72"W panels is limited. Panel fabrics that are not available on 72"W panels are flagged with a "*" on page 15 of this price list.

Tackable Glazed Panels (page 80)

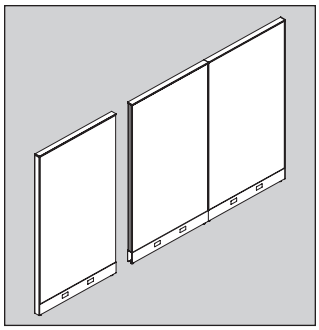


- Available 50"H and 65"H with 15"H clear or frosted tempered safety glass inserts (specified).
- Glass frame is painted to match trim.
- Top trim is specified separately.
- Cannot stack on glazed panels.
- Fabric selection for 72"W panels is limited. Available 72"W panel fabrics are flagged with a "W" on page 15 of this price list.

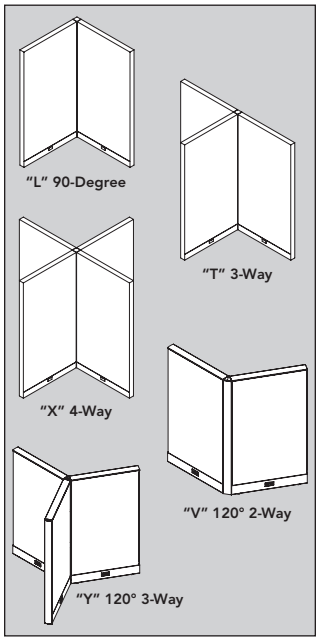
Glass Panel Mounted Screens (page 81)

- Frameless insert integrated into the base panel frame top trim.
- Replaces top trim on structural or stacking tackable frame.
- It is possible to span multiple frames when the combined frame width is equal to the panel mounted screen width.
- Can do variable height, must be used with grooved VH trim.
- Panel mounted screens are non-structural. Do not hang or stack on top of panel mounted screens.
- Available in ⅜" thick clear or frosted glass.
- To be included in overall height of panel with a maximum combined height of 80".

Door Panel Frame (page 81)

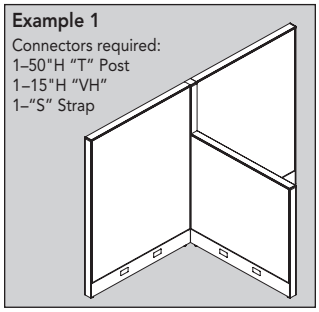


- The 80"H door panel frame includes 42"W frame, 36"W laminate door, hinges, and attaching hardware. Top trim is specified separately.
- See illustration at right.
- Lockset with knob or lever ordered separately.



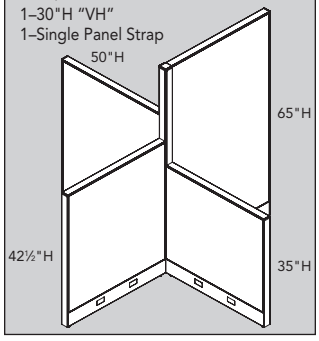
Optimize Sliding Doors and Mounting Kits (pages 77 and 81)

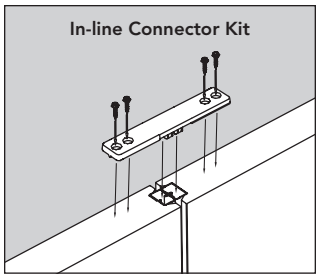
- Optimize sliding doors are available in 50"H, 65"H, and 80"H.
- See illustration and specification information on page 77.



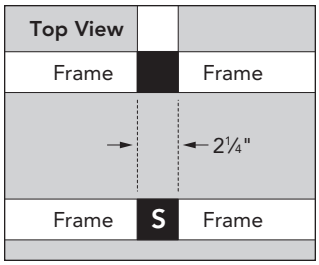
Method 2 – Single-sided Returns

Single-Sided Panel Run	Minimum Return Panels Total (X+Y)	Minimum Return Panels Total (X+Y) with Stack-ons
48"-108"	84"	84"
114"-144"	84"	96"



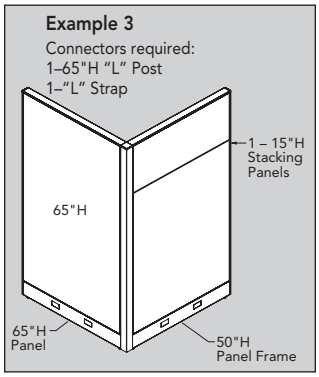


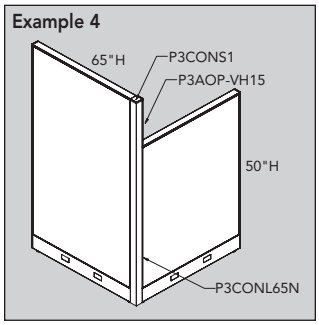
Example 1
Connectors required:
1–50"H "T" Post
1–15"H "VH"
1–"S" Strap



In variable height "T" connections as shown above, you would use the connectors as indicated.

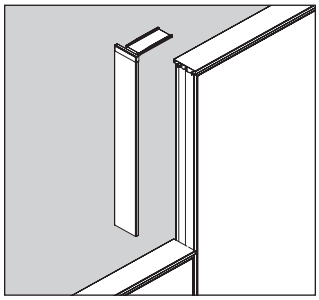
Example 2
Connectors required:
1–65"H "X" Post
1–15"H "VH"
1–22½"H "VH"
1–30"H "VH"
1–Single Panel Strap





Extended Straight "S" Connection

Example 3
Connectors required:
1–65"H "L" Post
1–"L" Strap



Base connectors (includes base pathway) must be specified at base regardless of full height or segmented connection.

Example 4

Example above represents Optimize variable height connection for 65"H to 50"H.

High-Low "H"

Connectors and Trim

In-line Connector Kit (page 82)
- In-line connections between panels in a continuous run are accomplished with an in-line connector kit. There is no incremental increase in dimension along the run.
- In-line connector kits include all parts required for connecting two panels of same height together.
- Kit includes in-line connector strap, hardware, and glide tower to glide tower screw.
- Order panel end trim kits to finish the end of every panel run (except when attaching panels to permanent walls).

"L", "T", "X", "S", "V", and "Y" Connectors (page 82)
- "L", "T", "X", "V", and "Y" connectors kits are used when connecting panels at intersecting runs. For "L", "T", and "X" connections connector kits, add 2¼" to the total length of the panel run for each intersection, whether located in the middle or at the end of the run.
- Specify connectors based on number and placement of panels.
- Connector posts are specified separately from connector straps—specify post based on tallest panel height and type of panel connection, specify straps based on connection of tallest panels (see variable height examples left).
- Connectors are made of extruded aluminum.
- Connector posts where power pole will enter need to be specified with single connector straps, model P3CONS1.
- Extended straight connector kit "S" can be used to keep continuous runs dimensionally consistent with opposing panel runs which incorporate "T" or "X" intersections.
- Add 2¼" to the length of the run for every extended straight connector used.

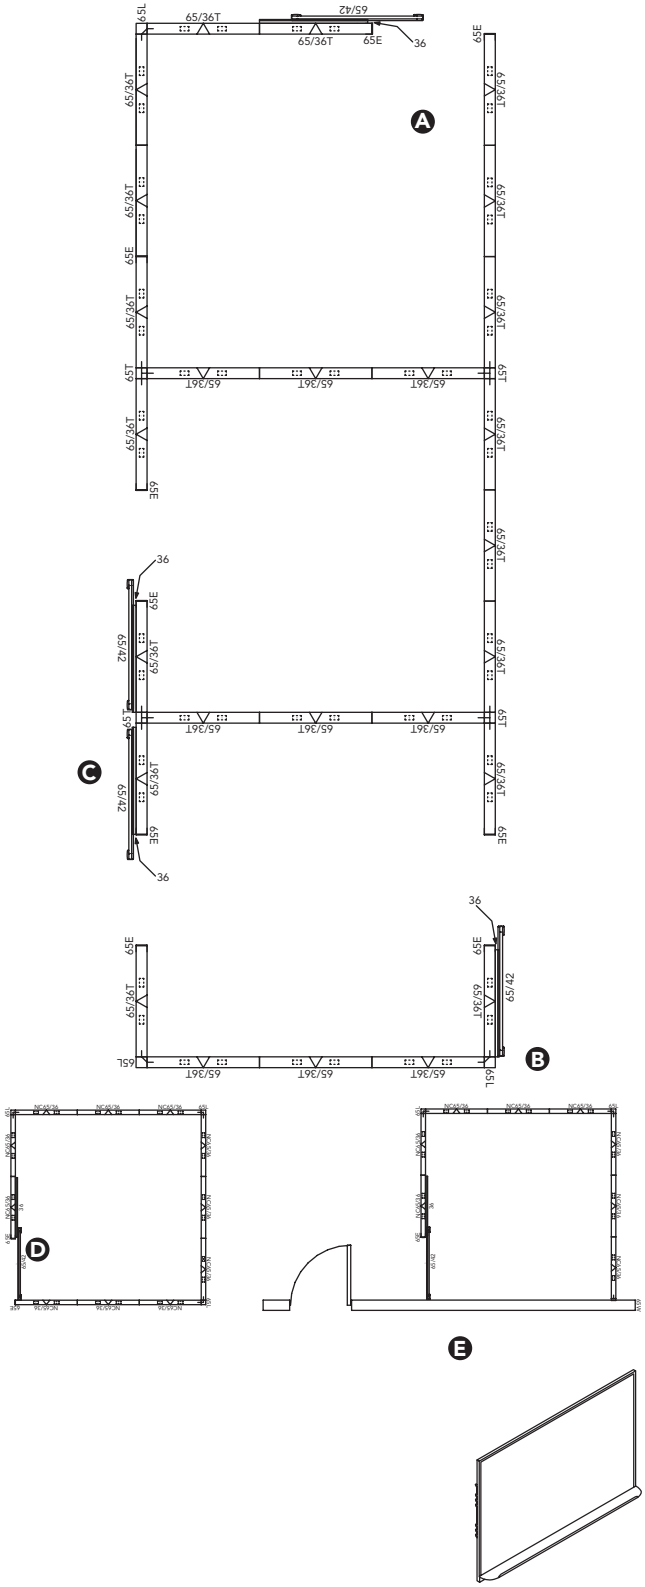
Multiple-Height Connections (page 82)
- Multiple-height connections also utilize standard "L", "T", "X", and "S" connectors, in the height of the tallest panel. (See examples 1-4 at left.)

Panel End Trim (page 84)
- End vertical trim cover (includes top cap — adds ⅜" to run).
- Order to finish the end of every panel run (except when attaching panels to permanent walls).

Variable Height Connector Kits — Post Trim (page 84)
- Includes connectors, vertical cover, and attaching hardware.
- Order one per each panel height change in an "L", "T", "X", or "S".

Grooved VH Finishing Kit (page 84)
- For use when the base panel frame of a panel mounted screen is shorter than the adjacent panel

In-line Variable Height End Trim Finish Kits (page 84)
- End vertical cover (includes top cap).
- High-low "H" covers the exposed end of a panel when joining panels in-line of differing heights. Optimize profile adds ⅜" to length of panel run.
- Order one per each panel height change in an in-line connection.
- At the end of a panel run use panel end trim.



Wall Mount Kits (page 84)
- Wall mount kits provide a means to affix a panel run to a permanent building wall.
- Includes top cap. (Color must be specified.)
- Connector adds 1" to length of panel run.
- Anchor devices are not supplied with the wall mount kit. Refer to Optimize Installation Instructions for appropriate hardware.

2-Way 120° Connector Kits (page 84)
- Includes top cap, connectors, vertical cover, and attaching hardware.

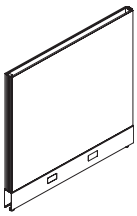
3-Way 120° Connector Kits (page 84)
- Includes top cap and connectors.

The sliding doors must be specified with specific mounting kits for each door ordered. With a Frosted Translucent insert and your choice of P1 or P2 paint, the sliding door will create a unique look for any office environment.

The **sliding doors** *are available in 50", 65", and 80"H models and can mount to 30", 36", 42", and 48"W panels. They accommodate a 36"W opening and are 42"W, nominally. The doors ship from the factory non-handed and become handed when field installed to fit the scope of the project. The handle pulls located on each side of the door are color matched to the trim to create a uniform style. And with the threshold free design, the sliding door offers better aesthetics and safety by eliminating the potential for tripping.*

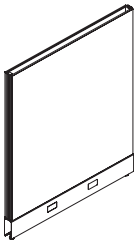
General Guidelines for Use of Sliding Door (page 81)

- The system requires the ordering of both a door and a mounting bracket kit.
- All doors are 42" wide to accommodate a 36"W opening and are non-handed .
- A mounting bracket kit must be ordered for each door corresponding to the mounting panels width (30", 36", 42", or 48"W). Kits available in P1 and P2 paint.



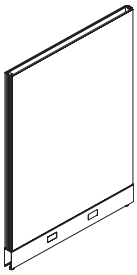
General Guidelines for Layout Planning of Sliding Door

- Stability guidelines must be followed when specifying a sliding door. (Refer to page 75). The sliding door system was designed to close an opening in a run of parallel panels. Doors mounted to long runs of panels without floor support, ties to worksurfaces, or return panels may seem less stable.
- If the door is used to close an opening **(A)** where the panel opposite the door is at 90°, there will be a gap equal to the panel thickness between the door and the panel end when closed.
- When planning the layout, care must be taken if the plan includes a door mounted on a panel that is less than 42"W. If the panel is at a corner **(B)**, the door will protrude into the aisle or next workstation when in the open position.
- If back-to-back doors are mounted on panels **(C)** that are less than 42"W they will interfere with each other if both are open at the same time.
- The door is attached at the base of the panel at any end position with a wrap around bracket. Bracket kits are ordered in conjunction with appropriate end trim profiles. The slots at the base of the panel must be clear **(D)** and cannot be utilized by worksurface supports or panel hung components.
- If the door is mounted to a panel run that is positioned adjacent to a wall **(E)** or an inside 90° angle and there is not a 42" clearance between the track and the wall/inside 90° the assembly of the first stop will be difficult and plans will need to be modified for the assembly.
- If a door is closing an opening of a workstation that includes a "T" connector in the opposite wall, an extended straight connector may need to be used to maintain the 36" required opening.



Marker Board (page 79)

- For use with dry marking pens.
- Hangs directly on Optimize™ panel frame.
- Brackets must be field re-located for use with other systems.
- Porcelain-coated steel surface.
- White with silver trim.
- Width must correspond with width of panel.



For specification information see pages 73-77.

OPTIMIZE

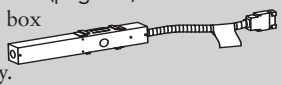
Electrical & Data

Optimize features capabilities for cable management, including electrical, voice, and data. The 8-wire electrical system can be integrated at base pathway. The frame allows voice and data cables to be routed horizontally in the base pathway.

Electrical Systems

Optimize Electrical Systems



Optimize offers a choice of four electrical systems:

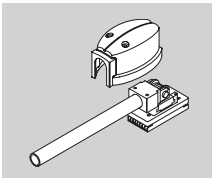
- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals
- Eight circuits; two four-circuit systems provided back-to-back.

- See pages 87-88 for a detailed explanation of each electrical system.
- All four systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian).
- Optimize panels and electrical components are UL Listed. Electrical components are also CSA certified.
- Installation and use of the electrical system, the number of receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through panels.

Hardwire Junction Box – New York Code (page 95)

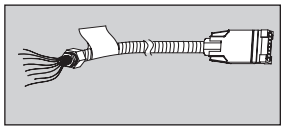
- Hardwire (New York Code) junction box (model A871400) is used when local electrical codes require hardwire entry.
- For use in panels 30"W to 72"W.
- When used in 30"W and 36"W panels, power can be routed only in one direction.
- When used in 42" and wider panels, an electrical pass-thru cable or harness for that panel width can be used to route power back in the opposite direction.
- Unit must connect to a power or pass-thru harness positioned in the base pathway area of an adjacent panel.
- Customer to furnish all cabling and wiring from power entry to power source.
- Junction box can be positioned at any duplex receptacle location.



Hardwire Wiring Harness – Chicago Code (page 95)

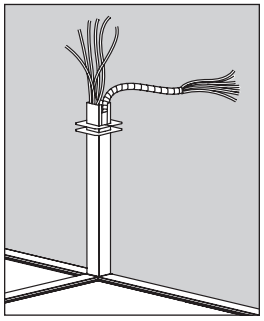
- Hardwire (Chicago Code) wiring harnesses and snap connectors are not allowed in Chicago — base pathways must be comprised of all metallic components.
- The base pathway junction box (model A871500) clips direct into receptacle locations for single sided applications.
- Customer must furnish conduit, wiring, and designer-type receptacles for the base pathway.
- Power entry can be routed from the ceiling, via an Optimize power pole, or from the floor into a junction box (model A871500).

Electrical Infeeds



- Power infeed cables deliver power from building to panel's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communications and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.

Base Pathway Power Infeed (page 95)



- Sealtight base pathway power infeed mounts into any receptacle position in the base pathway area.
- A heavy rubber sheathing shields conduit, allowing infeed to be exposed.

Ceiling Power Infeed (page 95)

- Ceiling power infeed connects to a prewired electrical harness in the base pathway, traverses through an adjacent panel, and terminates in the junction box at the top of the integrated power pole.
- Use integrated power pole model P278PP.
- Most codes allow flex conduit to be exposed after installation. Verify code requirements before ordering for exposed application.

Integrated Power/Communication Pole (page 95)

Integrated Power and Communications Pole

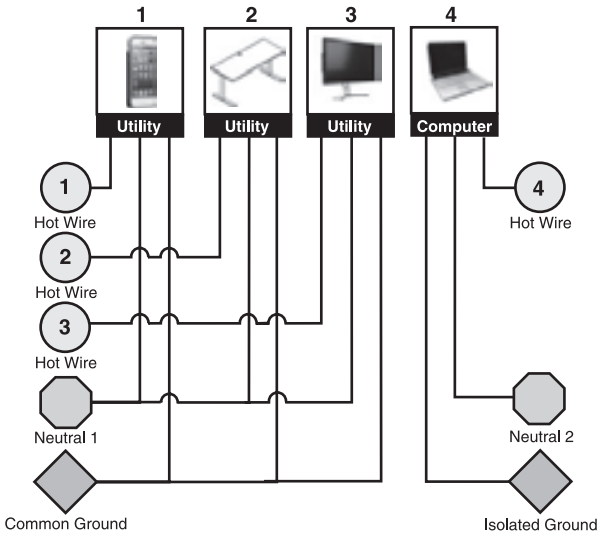
- Integrated power pole accommodates ceiling power infeed and communication/data lines.
- Provide capacity for routing power infeed and cables to the base pathway of a panel.
- Conduit of the infeed cable serves as the division of electrical and communications cabling.
- Installs into 42½-65"H or 15"H stacking 90°, "T", and "X" connections.
- Integrated power pole includes trim kit.
- Single cavity with removable cover.
- Field-cut to desired length.
- Outside Dimension: 2" square.
- When using a ceiling power infeed, consider that the infeed must connect into an electrical harness located in an adjacent panel. (See page 92 for cable capacity.)
- To power the prewired electrical system, from a ceiling power source, a ceiling infeed cable, Model A871912, A871912C, A871912A, A871912AC, A871918, A871918C, A871918A, or A871918AC must be purchased separately.
- For applications requiring longer integrated power poles, a 156"H model is available.

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - The four-circuit system (4-Hot/2-Neutral/2-Ground)
     - 3 + 1 option
     - 2 + 2 option
   - The three-circuit system (3-Hot/3-Neutral/2-Ground)
   - The eight-circuit system (back-to-back four-circuit systems)
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of isolated, isolated/dedicated, and separate neutrals circuits.
4. Specify appropriate power harnesses* and pass-thru cables.*
5. Determine the location, quantity, and type of power infeed needed.

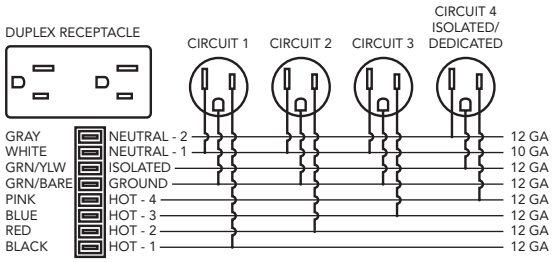
* Select power harness models (A8712XX), pass-thru cables (A8710XX), and pass-thru harness (A8711XX) with the last two digits corresponding with the panel width into which the component is to be positioned. The initial cable length can be stretched approximately 3" to transverse "T", "X", "L", and extended straight connectors.

Flexconnect™ Electrical System Options



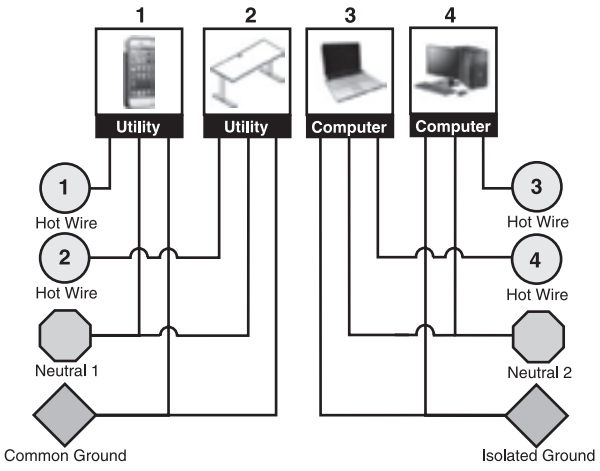
The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an “A” suffix and appear in a gray box in this pricer.

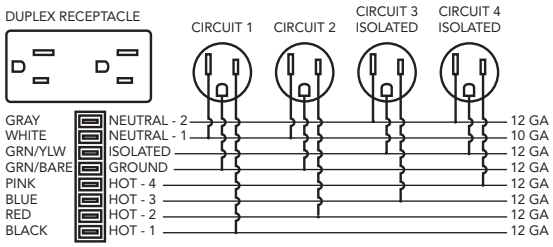


All three systems utilize an eight-wire electrical system rated at 20 amps per circuit (15 amps Canadian).

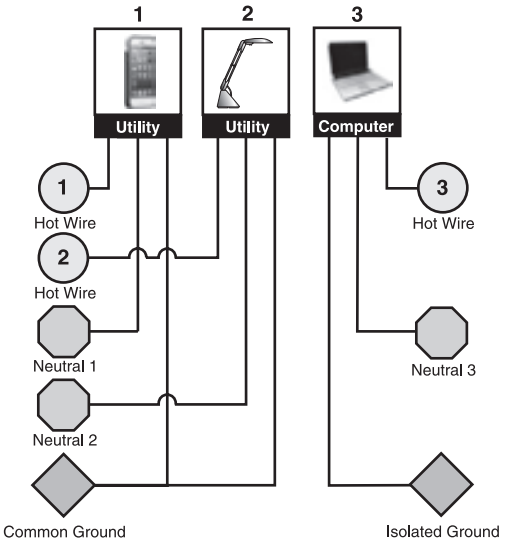
Reference the Office Equipment Typical Load Values matrix on page 93.



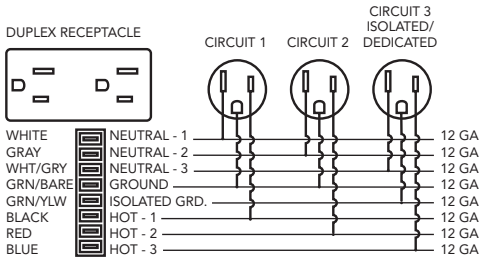
Four-circuit, 3 + 1 Receptacle Option



The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.



Four-circuit, 2 + 2 Receptacle Option



The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Three-circuit, separate neutrals

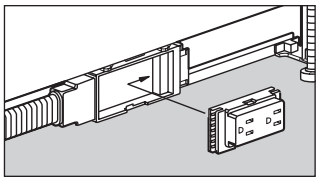
The three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/ dedicated. The three-circuit components have model numbers with an "A" suffix.

Optimize System Receptacle Usage					
Two 8-wire, 20 amp (15 amp Canadian) electrical systems are offered					
Electrical System	Circuitry	Receptacle Capacity			
Four-circuit 4-Hot/2-Neutral/2-Ground	**3 + 1**	Common Circuit-1 **A871501**	Common Circuit-2 (1) **A871502**	Common Circuit-3 **A871503**	Iso/Dedicated Circuit-4 **A871504**
	2 + 2	Common Circuit-1 **A871501**	Common Circuit-2 **A871502**	Isolated Circuit-3 **A871506**	Isolated Circuit-4 **A871504**
Three-circuit 3-Hot/3-Neutral/2-Ground	**w/separate neutrals**	Common Circuit-1 **A871501A**	Common Circuit-2 **A871502A**	Iso/Dedicated Circuit-3 **A871503A**	N/A

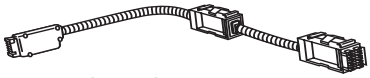
(1) Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.

Notes:

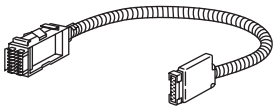
- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.
- Components of the two systems are keyed differently to prevent components of one system being connected to components of another system.
- Allsteel Model Numbers are printed on the UL labels, and components are color-coded to provide visual identification of the different components.
- Four-circuit components have black plastic parts.
- Three-circuit components have rust-colored terminal ends and receptacle backs are rust colored.



Duplex Receptacle

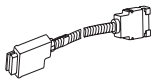


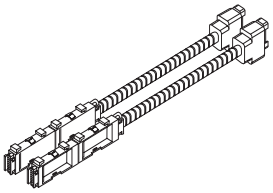
15 amp Receptacle



Power Harnesses, Pass-Thru Harnesses, and Dual Electrical Harnesses

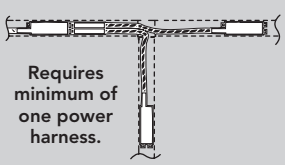
Electrical power harnesses are used to distribute power in Optimize panels. Harness power blocks snap directly onto brackets in base pathway. Power blocks on electrical power harness and pass-thru harness accept duplex receptacles.



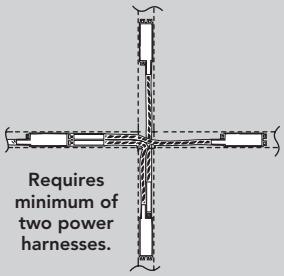


Electrical Power Harness

Electrical Pass-Thru Harness With Power Block



Electrical Pass-Thru Harness Without Power Block



Dual Electrical Eight-circuit Power Harness Kit

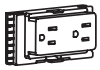
All electrical power harnesses and pass-thru harnesses (except 20"W) will stretch 3½", allowing them to span "T", "X", "120°" intersections, and "S" extended straight connections.

Note: "T" intersections require a minimum of one power harness and "X" intersections requires a minimum of two power harnesses.

Requires minimum of one power harness.

Requires minimum of two power harnesses.

Use of a ceiling infeed at this location requires an additional power harness.



Electrical Power Harnesses (page 94)
- Electrical power harnesses are used to distribute power in panels.
- Optimize electrical can only be located at base pathway.
- Specify harness length to match panel width.
- 24" power harness accepts one receptacle on each side of the harness, all other length power harnesses have power blocks to accept four duplex receptacles (two on each side of panel).
- Connectors at both ends of power harnesses allow power distribution in either direction.
- Harness power blocks snap directly onto brackets in base pathway.
- Use of a ceiling infeed requires one additional harness.

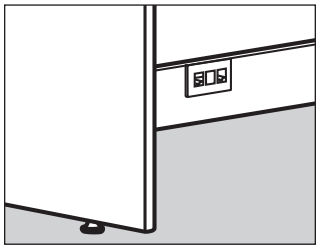
Electrical Pass-thru Harness With Power Block (page 94)
- Electrical pass-thru harness with power block have capacity to handle one duplex receptacle on each side of the panel when exposed.
- Specify harness length to match panel width or combined panel widths.
- Power harnesses accept one duplex receptacle per panel side.
- Note: "T" intersections require a minimum of one power harness and "X" intersections requires a minimum of two power harnesses.
- All electrical power harnesses and pass-thru harnesses with power block will stretch 3½", allowing them to span "T", "X", "A" intersections, and "S" extended straight connections.

Electrical Pass-thru Harnesses Without Power Block (page 94)
- Specify harness length to match panel width or combined panel widths.
- Electrical pass-thru cables distribute power through any panel(s) where receptacles are not required. Cable length cannot be stretched.

Dual Electrical Eight-Circuit Power Harness Kits (page 94)
- Kit provides back-to-back four-circuit systems giving double the capacity of harness and pass-thru cables.
- Specify harness length to match panel width.
- Requires two four-circuit infeeds.
- Uses four-circuit receptacles.
- Models must be positioned back-to-back in the panel — single-side use is not permitted.
- Components can only be routed in a single run — a single run can branch to single panel runs at "T" and "X" junctions.
- Standard four-circuit pass-thru cables (A8710xx) can be used in between power harnesses. Two are required in the back-to-back configurations.
- Models can be connected to standard four-circuit power harnesses and pass-thrus, although it is not recommended because of possible circuit number ambiguity.
- Two power infeeds are required to connect the back-to-back runs. Power A8719xx must be connector to a power block at the end of a run.
- Data faceplates and terminals cannot be positioned in a panel into which back-to-back power harnesses are installed
- Power infeeds A8719xx must be routed from a panel wherein no power harness is positioned, into an adjacent panel where a power harness is positioned and connected to the end of a power block.

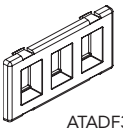
Receptacles

Duplex Receptacle



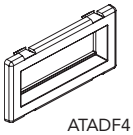
Receptacle Color Recommended to Coordinate with Paint Color

Paint Color	Receptacle Color
Designer White — PJW	Designer White — DW
Carob — P52	Black — E4
Champagne Metallic — PR5	Muslin — EU
Cinder — P7Q	Brownstone — EY
Fossil — P28	Flint — E9
Gunmetal Metallic — PR3	Brownstone — EY
Platinum Metallic — PR2	Loft — EV
Salt — P8C	Silver — ES
Titanium — P8T	Silver — ES

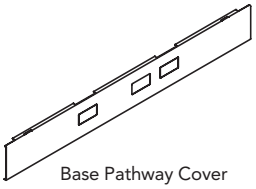


Duplex Receptacles (page 95)

- Duplex receptacles snap into power blocks of power harnesses or pass-through harnesses with blocks.
- Duplexes are available in multiple colors. See page 70 for finishes.
- Each receptacle is labeled to indicate which circuit it will be connected to: 1, 2, 3, or 4.
- Duplexes are model specific to support either 3+1 and 2+2 electrical infeed; or have an "A" suffix and are design to support a three-circuit separate neutral electrical infeed.



Data Components

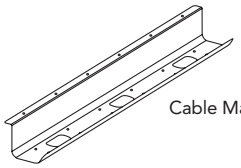


Voice/Data Receptacles

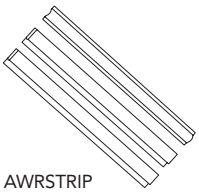
ATADF3

ATADF4

Base Pathway Cover

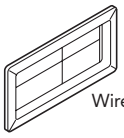


Data Faceplates (page 96)

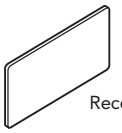


- Optimize not only provides space for large volumes of voice and data cables, it also offers several means of mounting commercially available voice and data components.
- Commercially available modular data faceplates can be mounted in vacant base receptacle openings.
- Due to panel depth, back-to-back data modules should not be used at the base on Optimize.

Optimize Base Pathway Covers (page 96)

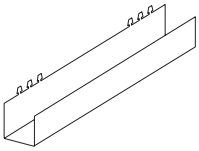


- Features an additional knockout (offset) for improved utilization of power and data. Knockouts are 2.700"W x 1.377"H up to 60"W.
- Due to panel depth, back-to-back data modules should not be used in the base on Optimize.



Cable and Wire Management

Cable Management Tray



AWRSTRIP

Cord Retainer Clip

Wireway Grommet

Receptacle Cover

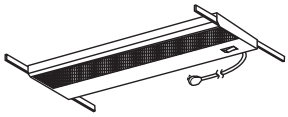
Cord Organizer

AMPCHASE

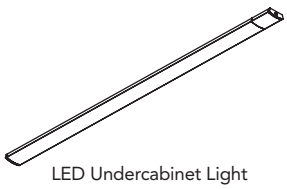
Cable Management Tray (page 96)
- Attaches under the worksurface to contain cables.
- Metal tray shelf is 4" deep. Can hold electrical power strip and/or surge protector.
- 24" and 36" lengths, use multiple units for larger worksurfaces.
- Attachment hardware included, paint option is black only.
- Zip tie attachment points located in base of tray. Zip ties not included.
- Limited paint offering. Available in all Grade P1 and Grade P2 paint finishes for Altitude Bases with the exception of Night Bronze (P8B).

Wire Management Strips/Channels (page 96)
- Self adhesive backing to attach to panels and underside of worksurfaces.
- Flexible strips allow cabling to enter/exit and can be contained inside the strips' cavities.
- Includes two wire management profiles. Smaller profile allows for qty. 3, .3" diameter cords, has area of .32 in^2. Larger "J" shaped profile allows for qty. 10, .3" diameter cords, has area of 1.14 in^2.

Cord Retainer Clip (page 96)
- Provides confinement of vertical electrical/data wiring.
- 1½"H cord clips snap into vertical panel slots to contain cords.
- 4 clips are provided standard with each task light cord.
- Package of 50. Available in Black only.



Wireway Grommet (page 96)
- Fits into any receptacle opening.
- Used when routing wires through receptacle opening.



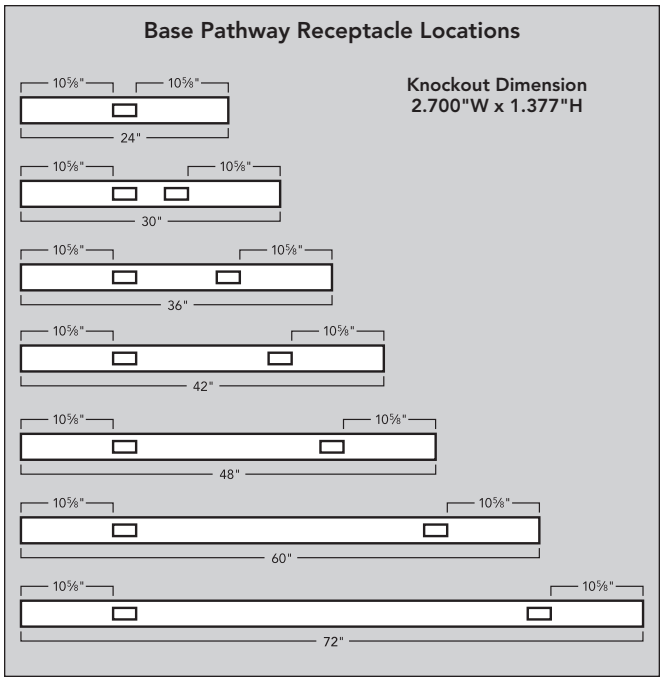
Replacement Receptacle Cover (page 96)
- Fits into unused receptacle opening in base raceway.
- Package of 25. Specify paint color.

Cord Organizer (page 97)
- Attaches to bottom of worksurface.
- 4"W x ⅞"D, made from sheet metal.
- Top sits flush with worksurface if mounted to worksurface.
- 4 cable cut outs: 2 – .250" diameter and 2 – 0.147" diameter; .250" diameter cut outs are centered between the .147" diameter cut outs.

Panel Mounted Wire Chase (page 97)
- Attaches between panels on Stride, Terrace, and Optimize via a slotted standard.
- Designed to sit below a worksurface and provide additional cord management from the base rail to beltline/under-worksurface height.
- Available in standard metal paint finishes.

Lighting

Task Lights



LED Undercabinet Light

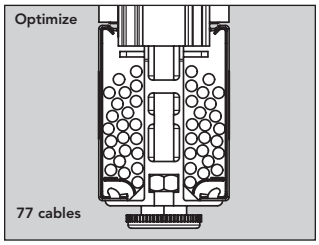
Task Lights (page 1037)
- Task lights can be recessed under storage cabinets or storage shelves, panel-hung, or freestanding.
- Three styles of recessed task lights in four sizes are available to correspond to cabinet or shelf width.
- All styles have 9' power cords in black, connected in the right rear corner.
- All models feature electronic ballast for longer bulb life and cooler operating temperature.
- Task lights with a fused plug to meet Chicago electrical code are also available.

Recommendation: Provide a separate circuit for task lights for proper long-term operation without RF interference to computers that may be in use.

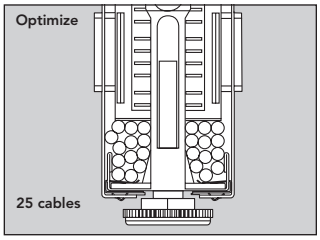
LED Undercabinet Light (page 1037)
- LED undercabinet light can be mounted beneath overhead cabinets with wood screws or magnets.

*For more power and wire management options, please visit the **Extensions** pages.*

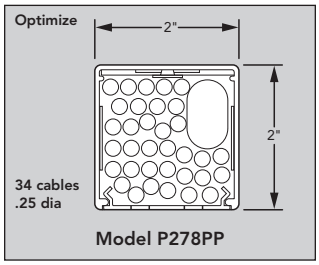
Circuit Usage



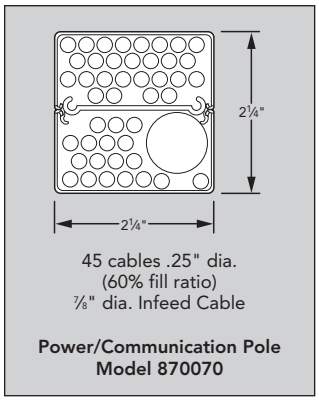
Strategy 1
Circuits to Equipment
Assign specific uses for each of the circuits:



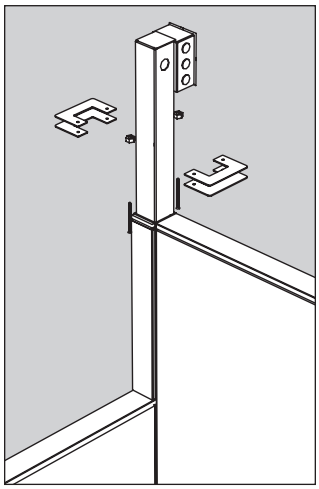
- For example, in a four-circuit system:
  Circuit 1 — Calculators, fans, etc.
  Circuit 2 — Task lights (could be wired to wall switch)
  Circuit 3 — CRT or flat screen monitors
  Circuit 4 — CPUs



Strategy 2
Circuits to Workstations
Assign specific workstations to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.



Placement of pedestals and lateral files may render some duplex locations inaccessible. Pedestal placement may also affect compatibility with pull-up receptacles.



Lay-in Cable Capacity

- The base pathway allows continuous voice and data lines to run through and between panels without interruption.
- Lay-in is provided for environments where systems furniture or cabling are subject to frequent change.
- Optimize base pathway accepts up to 77 voice/data cables (.25" dia.) (6.27 sq. in.) at 60% fill.
- When electrical system shares base pathway, the cable capacity in Optimize is reduced to 25 cables (2.03 sq. in.).
- Cable capacity of the Optimize integrated power pole is 3.3 sq. in. for a total capacity of 34 cables of .25" diameter.
- Cable capacity of the power pole/communication pole Model A870070 is 4.5 sq. in.
- Cables can enter/exit panel through underside of base pathway on frames.

Note: Cable quantities listed are at 60% fill ratio.

Office Equipment Typical Load Values

Item	*Amps
Desktop/2 Monitors	4

*** These colors are intended to be an inspirational option for the trending market. Product application is limited and color availability is approximately two years to coincide with evolving workplace trends.

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

The beauty of wood is the natural variation of grain patterns and colors that make each piece unique. This variation is also influenced by lighting conditions, orientation of mated parts, and varying acceptance of the finishing process. The varying colors and physical characteristics naturally occur in all wood species but are most pronounced in lighter colored woods, and are especially evident in natural finishes.

GROMMETS ON VENEER WORKSURFACES

Wire management grommets come standard on most veneer worksurfaces. Choose between metal or plastic grommet option. Note: Plastic grommet color is predetermined based on finish selection.

And how to make the most of your space with Involve®.

Involve "U" Stations 24′ x 6′ (3-pack)

Visit https://www.allsteeloffice.com/design-resources/idea-starters to view these typicals and more.

The building blocks for a better office.

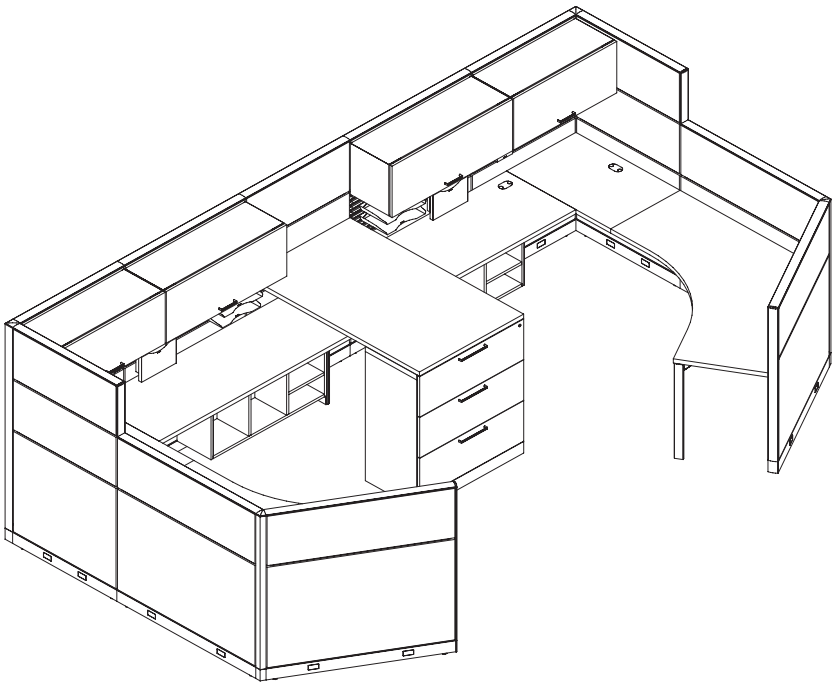
What makes a workspace inspiring? The truth is it's different for every office and every worker. The Terrace frame-and-tile solution offers both flexibility and refined design details, so you can keep it basic or dress it up. And, when paired with other Allsteel products, you can create beautiful, functional spaces that look every bit as good as they work.

Ideas often come from collaboration. Other times from focused research. And sometimes they appear out of the blue. Terrace makes it easy to design environments that help people do better work, from individual workstations for focused activities to teaming areas for group collaboration. With lower panels and frameless glass, open, naturally lit workspaces have an aesthetic that inspires. So nothing gets in the way of the next big idea.

More ways to design one-of-a-kind environments.

With Terrace, spaces can be as active as the people who use them. Worksurfaces of varying heights give people the freedom to enjoy the ergonomic benefits of changing postures. Soft seating integrated within primary and secondary work areas encourages spontaneous collaboration. And customized storage options can be integrated into spaces in a variety of ways to better fit individual workstyles.

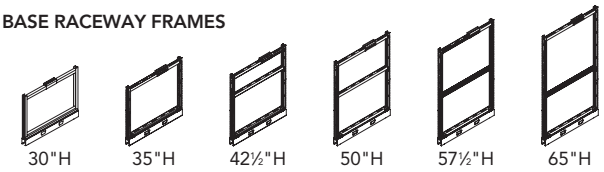
Terrace offers unique designs that make a strong visual statement customized for any application. From the clean aesthetic of benching to an open, cross-functional collaborative space to an individual workstation for focused activities, Terrace provides the options and features you want and need.



Make the most of your space and your resources.

With real estate at a premium and the need for workspaces to be more agile to accommodate future needs and changing workstyles, office furniture must work harder than ever. That's why Terrace is built to last with sturdy steel panels that stand up to years of use and numerous reconfigurations. And it's designed to work seamlessly with other Allsteel products, so you can easily integrate a variety of other furniture options whenever the need arises.

Terrace, make it yours.



Once you've selected the furniture for your space, a variety of material options are available to give it a personality all its own. Make a bold statement with woodgrain laminate storage and contrasting trim and panel fabric. Or create a brighter look with panels and storage in light fabrics and finishes. Find the perfect palette to complement your brand or style.

The most beautiful thing about Terrace is all the ways you can customize it for functionality, ergonomics, and aesthetics. It can support heads-down concentration or encourage open interaction. You can mix and match a variety of options, from panel heights to worksurfaces, fabrics to frameless glass, and storage to accessories. The choices are endless.

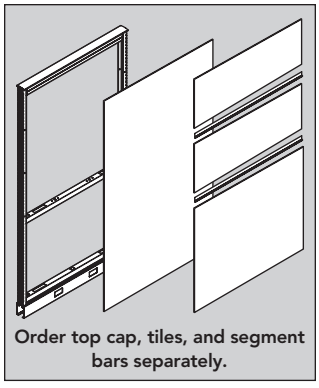
Frame Dimensions (Actual)

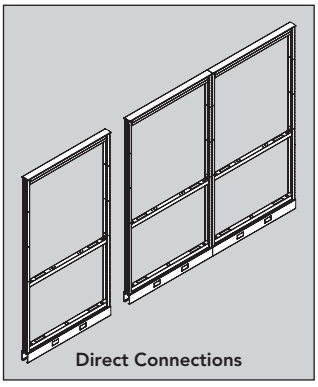
Depth: 2⅝" (use 2¾" to calculate intersections in length of panel run)

Widths: 24", 30", 36", 42", 48", 60"



Heights* with radius painted trim: 29¼", 34¼", 41¼", 49¼", 56¾", 64¼"

Stacking Frames: 15"H, 22½"H, 30"H



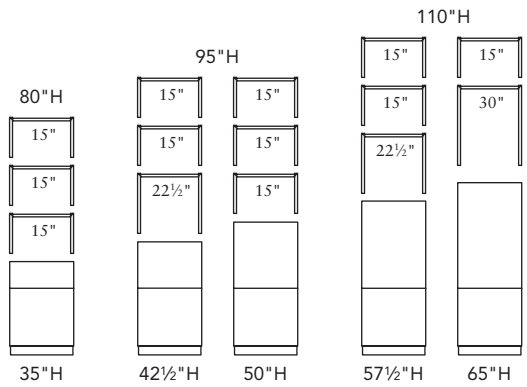
Leveling Glides on Frames with Raceway Covers: 2¾" range

Leveling Glides on Footed Frames: 2¼" range

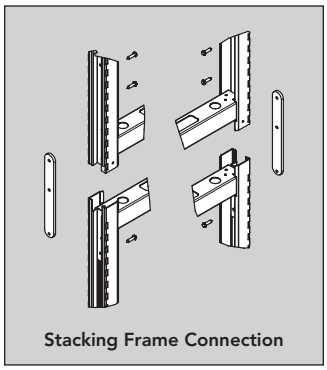
*with levelers fully retracted

Order top cap, tiles, and segment bars separately.

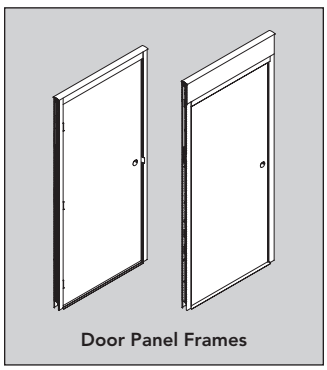
Direct Connections



Panel Frames (page 119)



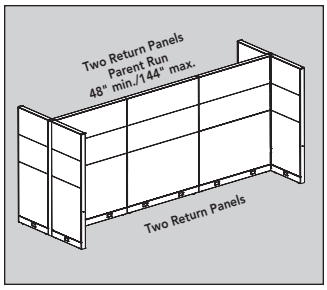
- Specifications: formed, steel vertical members, with tubular steel horizontal members are welded into a sturdy, structural panel frame.
- Panels are shipped with base pathway covers or decorative feet installed.
- Top trim, monolithic or segmented tiles, and segment bars are ordered separately with choices of applications.
- Direct connections between same height frames in a continuous run are accomplished with provided hardware. There is no incremental increase in dimension along the run.
- For adequate stability, one of two methods of stabilization shown on page 105 must be adhered to.
- Base raceway panel frames include: frame, base pathway covers, attaching hardware, and bottom segment clip.
- Footed panel frames include: frame, panel feet, attaching hardware, and bottom segment clip.
- No electrical or data capabilities in footed panel frames. Decorative feet replace base raceway covers.
- Do not remove electrical knockouts unless duplex is needed. For replacement covers, see page 96.



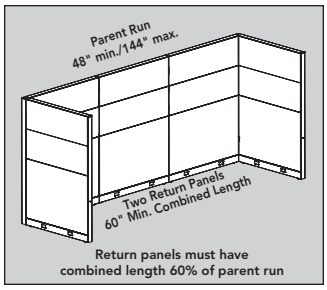
Panel Frame Conversion Kits (page 121)

- Base raceway to footed and footed to base raceway conversion kits can be used to convert existing frames. Footed to base raceway kits ship with glide tower assembly. Conversion process requires panel to be removed from panel run.

Building Vertically with Terrace Frames



Stacking Frame Connection



Door Panel Frames

Building Horizontally with Terrace Frames

Method 1—Opposing Returns

Method 2—Single-Sided Returns

Important planning guidelines: For adequate stability, one of two methods of stabilization must be adhered to:

Method 1—Opposing returns

- A parent run must be a minimum of 48" and a maximum of 144" between return panels. The parent run must have a minimum of two return panels running in opposing directions on each end of run.
- A single return panel (48" nominal minimum length) may be used with a mid-panel connector. The panel must extend at least 24" from one side of the parent run.
- Return panels must not be no more than 30" lower than the maximum height of the parent panel run.

Method 2—Single-sided returns

- A parent run must be a minimum of 48" and a maximum of 144" between return panels. The parent run must have a minimum of two return panels totaling at least 58% of its length, extending in one direction.
- Return panels must not be any more than 30" shorter in height than parent run. When using 120° connections, 12" must be added to length of return panels as determined by methods 1 and 2. Any run under 100" must have a minimum combined length of 60" of return panels.

Stacking Frames (page 120)

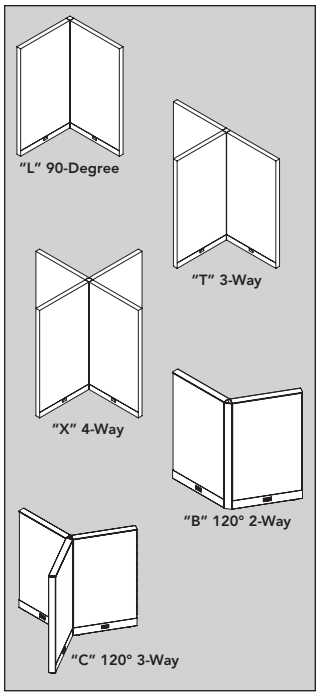
- When adding stacking frames, remove the top trim from the structural frame, and install it on top of uppermost stacking frame.
- Stacking connection provides a solid metal-to-metal connection, allowing the stacking frame to accept hang-on components, per Allsteel configuration guidelines.
- Includes attachment hardware and uses specified top trim. Add appropriate connectors.
- Stacking frames can be added to the top of a 35"H base panel frame up to 80"H, added to 42½"H and 50"H base panel frames in any combination up to 95"H, and added to the top of 57½"H and 65"H structural panel frames up to 110"H.
- To maintain panel mounting slot modularity 22½"H stacking frames should only be used with 42½"H, 57½"H base panel frames, or 87½"H door frames.
- To match 87½"H door frame height, use a 65"H base panel frame with a 22½"H stacking frame (slot modularity will be lost on stacker).
- To maintain modularity on 35"H, 50"H, and 65"H base panel frames use 15"H or 30"H stacking frames.
- If panel mounting slots are not being used, any stacking frame can be used on any base panel frame.
- Do not combine differing frame widths in a single stack or span multiple base panel frames with stacking frames.
- Stacking frames cannot be used as base frames.
- Tile options for stacking frames are given on page 113.
- Guidelines for using overhead storage with stacking frames are given on page 309.

Segment Bars (page 120)

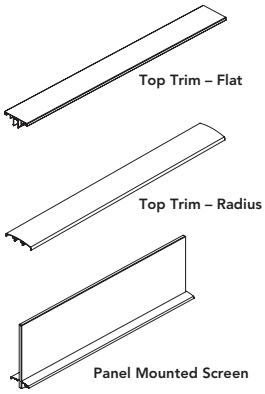
- Segment bars are horizontal steel cross members required between tile segments. Must be specified on each side of frame.
- Black only.

Electrical Mount Support Bars (page 120)

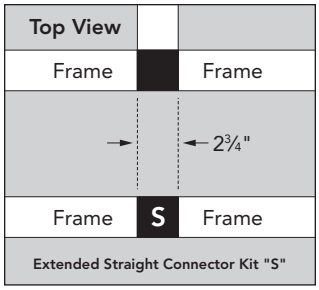
- Used to mount electrical in any location in panel frame other than base pathway or beltline. Order electrical mounting brackets separately.
- Tiles must be field ported when electrical is mounted in a location other than just above the worksurface at beltline.
- Can be used with acoustical tiles on one or both sides of the panel frame.
- Includes attaching hardware. Gray only.



Door Panel Frames (page 121)

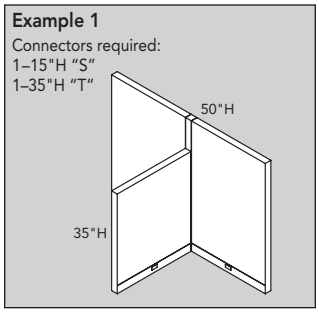


- The 87½"H door panel includes 42"W frame, 36"W door, hinges, top trim, and attaching hardware. See illustration above left.
- The 95"H door panel includes frame, 42"W door, hinges and attaching hardware, and two 8³⁄₁₆"H x 42"W fabric tiles for top of door frame.
- Doors available in laminate.
- Painted top caps available in radius or flat.
- Specify fabric for top tiles on 95"H door.
- Lockset with knob or lever ordered separately.

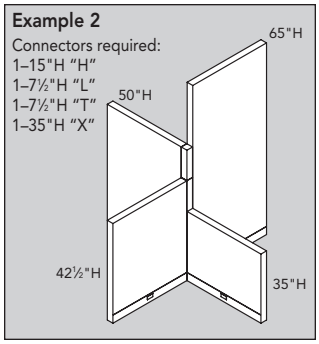


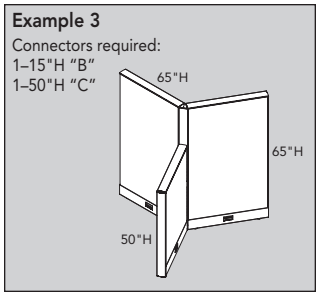
Sliding Door and Mounting Kit (page 121)

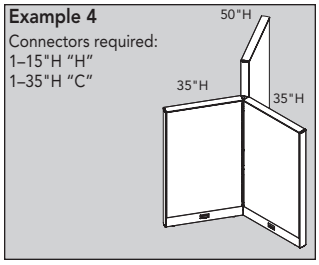
- See illustration and specification information on page 110.

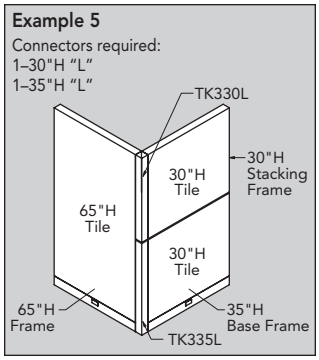


Frames & Connectors

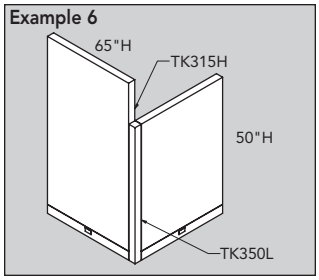








- **Multiple-height connections** also utilize standard "L", "T", "X", "S", and "E" connectors, with corresponding height connectors stacked according to the number of intersecting panels from the bottom up. (See examples below.)

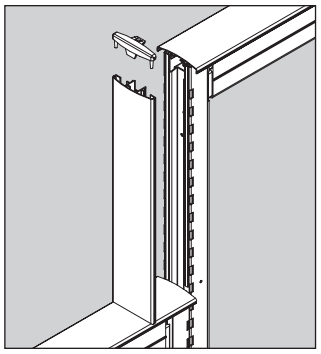


Connectors and Trim

Off-Modular Panel Connection Kit (page 121)
- Includes top and bottom attachment brackets and top trim finished end.
- Must be field installed. Installation requires defacing of the top tile.
- Cannot be mounted in locations where the bottom bracket is closer than 8 inches from the edge of frame in the base pathway on parent run panels.
- Not structural. No panel mounted glass on spine where attaching or on first off-modular panel.
- Only compatible with panels that have radius top trim.

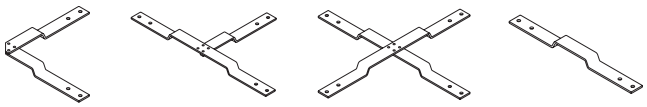
Top Trim (page 122)
- Use to finish top on base panel frames and footed panel frames.
- Top trim can span individual or multiple base panel or stacking frames.
- It is possible to span multiple frames when the combined frame width is equal to the top trim width.
- Some spanning examples are listed on page 122, other combinations are possible.
- Available in flat or radius in painted finish.
- Radius trim is not compatible with double-sided laminate tiles on Terrace.

Panel Mounted Screens (page 123)
- Frameless insert integrated into the base panel frame top trim.
- Replaces top trim on structural or stacking frame.
- It is possible to span multiple frames when the combined frame width is equal to the panel mounted screen width.
- Taller adjacent frames require "HG" grooved end trim.
- Panel mounted screens are non-structural. Do not hang or stack on top of panel mounted screens.
- Available in ⅜" thick clear or frosted glass.



Connector Kits (pages 124-126)
- "L", "T", "X", "S", "B", and "C" connector kits are used when connecting frames at intersecting runs.
- Base connectors include base pathway and must be specified at base regardless of full height or segmented connection. Specify height that corresponds with segment frame height. See Examples 5 and 6 at left.

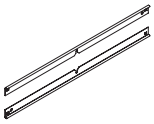
"L", "T", "X", and "S" Connector Kits (page 124-126)
- For "L", "T", "X", and "S" connector kits, add 2¾" to the total length of the panel run for each intersection, whether located in the middle or at the end of the run.
- "L", "T", "X", and "S" connector kits includes top cap, connectors, vertical cover, light gap extrusion, and attaching hardware.
- "X" connector kits Includes top cap and connectors.
- Extended straight connector kit "S" can be used to keep continuous runs dimensionally consistent with opposing panel runs which incorporate "T" or "X" intersections. (Add 2¾" to the length of the run for every extended straight connector used.) See illustration at left.



2-Way 120° Connector Kits (page 125)
- Includes top cap, connectors, vertical cover, and attaching hardware.

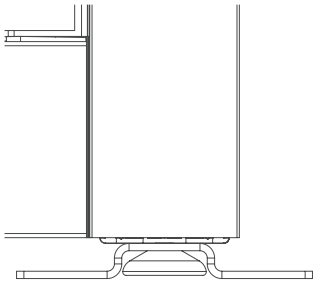
3-Way 120° Connector Kits (page 125)
- Includes top cap and connectors

"E" End Trim Kits (page 126)
- End vertical trim cover (includes top cap — adds ⅜" to run).

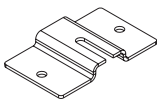


High-Low "H" End Trim

Top Stabilizer Brackets
Top and Bottom



Pair of Wall
Track Ends



Tile Attachment Kit
Top and Bottom

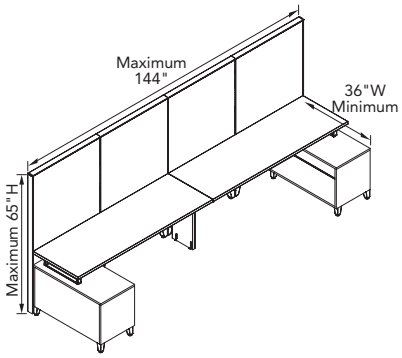
Segment Bar

High-Low End Trim Kits (page 126)
- High-low "H" covers the exposed end of a frame when joining frames of differing height in certain configurations — profile adds ⅜" to length of panel run. See illustration at left.
- At the end of a panel run use "E" model suffix end trim kit.

Grooved High-Low Trim (page 126)
- For use when the base panel frame of a panel mounted screen is shorter than the adjacent in-line panel. Taller adjacent in-line panel cannot have a panel mounted screen.

"W" Wall Mount Kits (page 126)
- Wall mount kits provide a means to affix a panel run to a permanent building wall.
- Kit adds 1 1/16" to length of panel run.
- Includes top cap. (Color must be specified.)
- Connector is Black only.

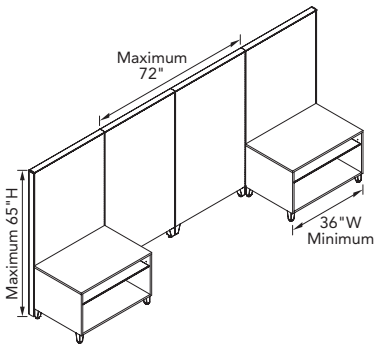
Top Stabilizer Brackets (page 127)
- Optional brackets to provide added strength to reduce flex at panel junctions.
- Lay in cabling below top cap is not possible where bracket is installed.
- Panel mounted screen cannot be used where bracket is installed.



Terrace Wall Track/Tile Attachment Kits (page 128)
- Allows for mounting of system panel components on permanent wall structures except cantilevers and sit-to-stand units.
- Begin with one pair of ends; for multiple kits in line, add middle unit(s) between ends.
- Height of wall track coordinates with panel height. Field cut for lower heights.
- Wall track will add 1" to depth of attached components.
- Use Terrace wall track tile attachment kit to install tiles onto wall track. Tool tiles cannot be used on wall track. Kit includes two tile bars. Top bar may only be used in the top uppermost position on wall track. Bottom bar can be used in the bottom position at any location on wall track.
- When segmenting tiles on wall track, segment bars must be ordered for placement between all vertically adjacent tiles or at the top position of a single tile that is not in the uppermost position.
- It is not recommended to use Landscape™ or laminate Terrace tiles with wall track. If these tiles are required consider using Stride wall track.
- When using Terrace wall track and using tiles to create a tackboard situation under overheads hung at 65"H, make sure to use a 30"H tile or 2-15"H tiles to cover the entire area between the overheads and the worksurface.

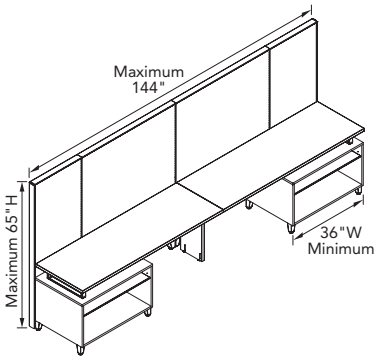
Seismic Attachment Bracket Kits (page 127)
- Kits come in quantity of 4 brackets.
- Allows for mounting panel systems to the floor.
- No additional brackets required to be HCAI compliant, brackets are offered if additional stability is desired.
- Additional information regarding HCAI compliance available via *HCAI Certification FAQ* available through www.allsteeloffice.com site.
- Panel system height recommended in lowest, level setting to clamp system to clip.

Leg or plinth base models available. Leg base units are shown below.



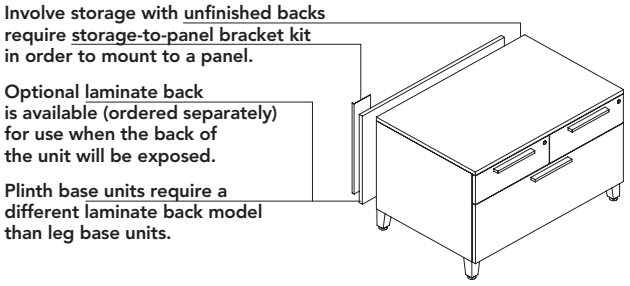
Side-mounted Credenzas

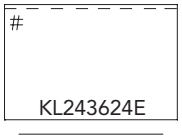
Use 1 storage-to-panel bracket per credenza — 1 LH and 1 RH.
The minimum credenza size is 24"H x 36"W x 18"D.
With a mid-run floor support, the maximum panel run is 144".
Without a mid-run floor support, the maximum panel run is 96".
Overheads and shelves cannot be used with 24"H side mounted credenzas.
Worksurfaces (if specified) must be mounted on the same side of the parent run as the credenzas.
Panel frame maximum height is 65".



Back-mounted Credenzas — Modular

Use 2 storage-to-panel brackets per credenza — 1 LH and 1 RH.
The minimum credenza size is 24"H x 36"W x 24"D.
The maximum panel run between back-mounted credenzas is 72".
Overheads and shelves cannot be used with 24"H back mounted credenzas.
Worksurfaces (if specified) must be mounted on the same side of the parent run as the credenzas.
Panel frame maximum height is 65".

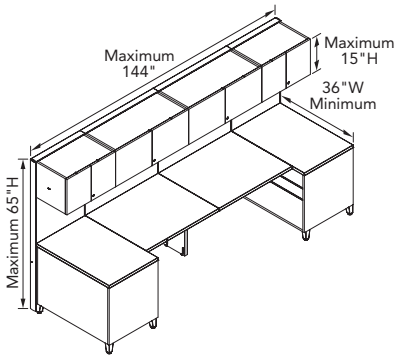




Back-mounted Credenzas — Off-Modular Ends

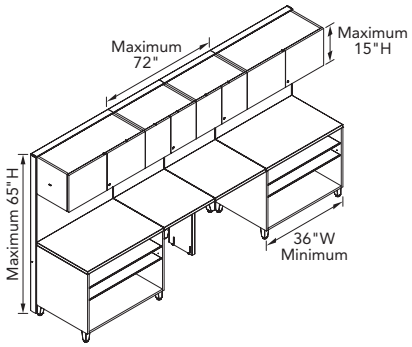
Use 1 storage-to-panel bracket per credenza — 1 LH and 1 RH.
The minimum credenza size is 24"H x 36"W x 24"D.
With a mid-run floor support, the maximum panel run is 144"
Without a mid-run floor support, the maximum panel run is 96".
Overheads and shelves cannot be used with 24"H back mounted credenzas.
Worksurfaces (if specified) must be mounted on the same side of the parent run as the credenzas.
Panel frame maximum height is 65".

Note: Storage with unfinished metal backs require storage-to-panel bracket kit in order to mount to a panel. Left- or right-handed storage-to-panel bracket is determined by slots on panel — left-handed bracket required when attaching to left panel slots and right-handed bracket required when attaching to right panel slots.



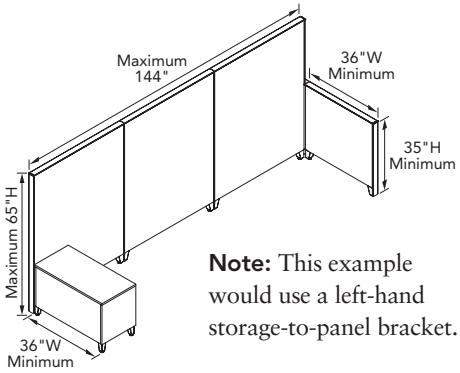
An example of a 2D CAD symbol for Involve is shown at left. Note the dashed line that represents the unfinished metal back. The pound sign indicates that counterweight kits may need to be added depending on the application. *See page 858 for counterweight specification rules.*

Leg or Plinth Base models available. Leg base units are shown below.



Side-mounted Credenzas — Modular for Overheads and Worksurfaces

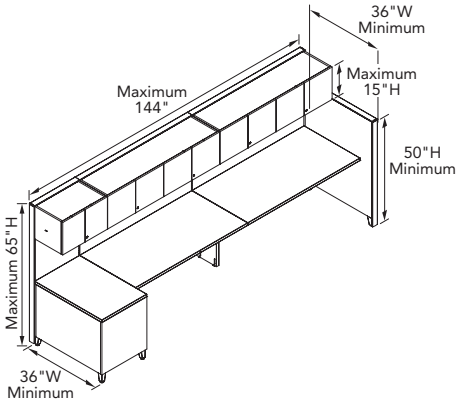
Use 2 storage-to-panel brackets per credenza — 1 LH and 1 RH.
The minimum credenza size is 28"H x 36"W x 24"D.
28"H side mounted credenzas must be mounted modular when using overheads and worksurfaces on panels.
With a mid-run floor support, the maximum panel run is 144".
Without a mid-run floor support, the maximum panel run is 96".
Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas.
Maximum overhead height is 15".
Panel frame maximum height is 65".



Back-mounted Credenzas — Modular for Overheads and Worksurfaces

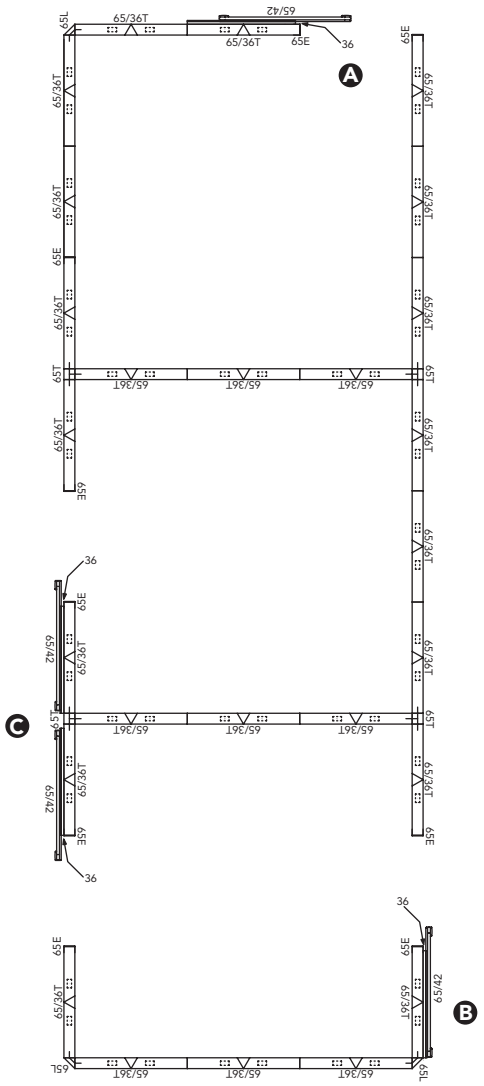
Use 2 storage-to-panel brackets per credenza — 1 LH and 1 RH.
The minimum credenza size is 28"H x 36"W x 24"D.
Full back units without trough due to stability, only troughless Approach or Involve allowed.
With a mid-run floor support, the maximum panel run is 144".
Without a mid-run floor support, the maximum panel run is 96".
The maximum panel run between back-mounted credenzas is 72".
Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas.
Maximum overhead height is 15".
Panel frame maximum height is 65".

Side-mounted Credenzas — with Return Panel

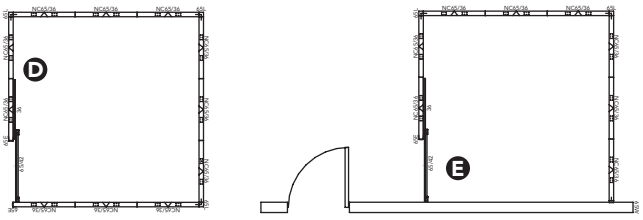


Use 1 storage-to-panel bracket on credenza.
The minimum credenza size is 24"H x 36"W x 18"D.
The minimum size for panel return is 35"H x 36"W.
With a mid-run floor support, the maximum panel run is 144"
Without a mid-run floor support, the maximum panel run is 96".
Overheads and shelves cannot be used with 24"H side mounted credenzas.
Worksurfaces (if specified) must be mounted on the same side of the parent run as the credenzas.
Panel frame maximum height is 65".

Note: This example would use a left-hand storage-to-panel bracket.



Side-mounted Credenzas — Modular for Overheads and Worksurfaces

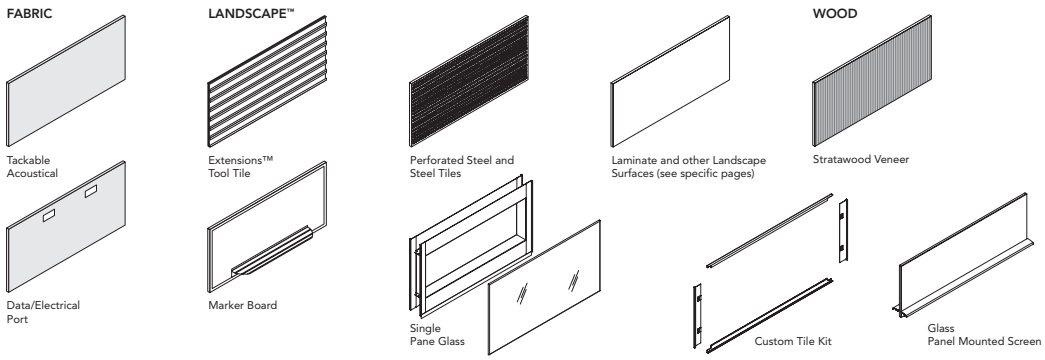


Use 2 storage-to-panel brackets per credenza — 1 LH and 1 RH.
The minimum credenza size is 28"H x 36"W x 24"D.
The minimum size for panel return is 50"H x 36"W.
28"H side mounted credenzas must be mounted modular when using overheads and worksurfaces on panels.
With a mid-run floor support, the maximum panel run is 144"
Without a mid-run floor support, the maximum panel run is 72".
Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas.
Maximum overhead height is 15".
Panel frame maximum height is 65".

Sliding doors for Terrace *are a great addition to any new or existing installations. The sliding door can be specified with specific mounting kits for each door ordered. With a Frosted Translucent insert and your choice of P1 or P2 paint, the sliding door will create a unique look for any office environment.*

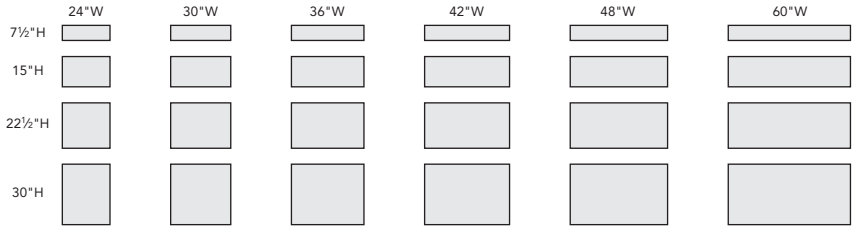
The **sliding doors** *are available in 50", 65", and 80"H models and can mount to 30", 36", 42", and 48"W panels. They accommodate a 36"W opening and are 42"W, nominally. The doors ship from the factory non-handed and become handed when field installed to fit the scope of the project. The handle pulls located on each side of the door are non-locking and are color matched to the trim to create a uniform style. And with the threshold free design, the sliding door offers better aesthetics and safety by eliminating the potential for tripping.*

General Guidelines for Use of Sliding Door



- The system requires the ordering of both a door and a mounting bracket kit.
- All doors are 42" wide to accommodate a 36"W opening and are non-handed . Door leveling is dependent on floor being level.
- A mounting bracket kit must be ordered for each door corresponding to the mounting panels width (30", 36", 42", or 48"W).
- Mounting bracket kits are system specific and for Terrace.

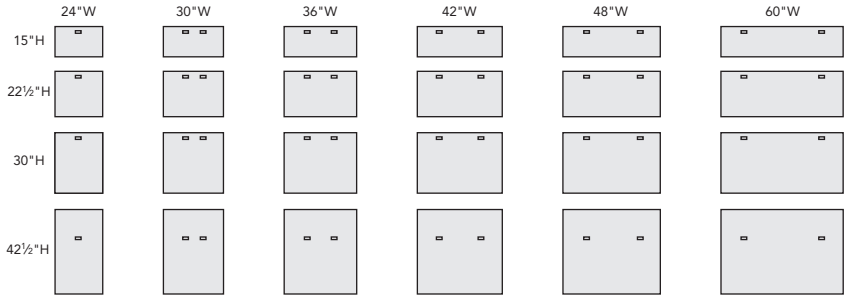
General Guidelines for Layout Planning of Sliding Door



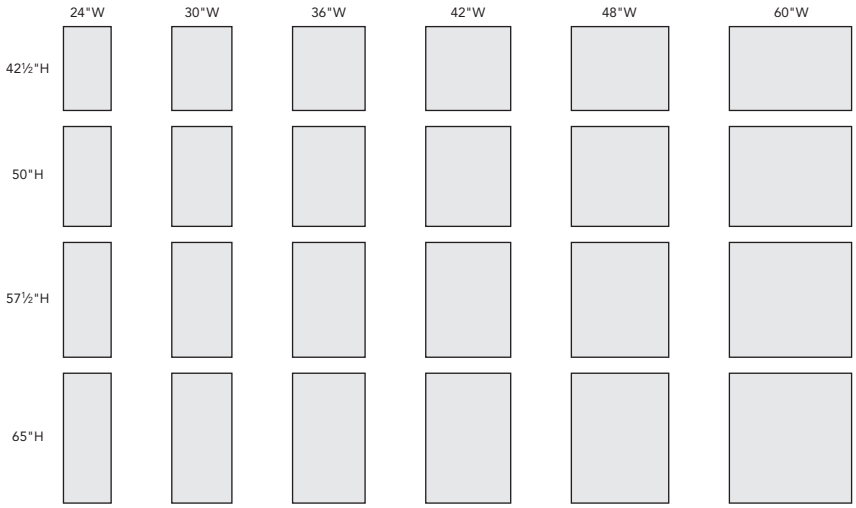
- Stability guidelines must be followed when specifying a sliding door. (Refer to page 105). The sliding door system was designed to close an opening in a run of parallel panels. Doors mounted to long runs of panels without floor support, ties to worksurfaces, or return panels may seem less stable.
- If the door is used to close an opening **(A)** where the panel opposite the door is at 90°, there will be a gap equal to the panel thickness between the door and the panel end when closed.
- When planning the layout, care must be taken if the plan includes a door mounted on a panel that is less than 42"W. If the panel is at a corner **(B)**, the door will protrude into the aisle or next workstation when in the open position.
- If back-to-back doors are mounted on panels **(C)** that are less than 42"W they will interfere with each if both are open at the same time.
- The door is attached at the base of the panel at any end position with a wrap around bracket. Bracket kits are ordered in conjunction with appropriate end trim profiles. The slots at the base of the panel must be clear **(D)** and cannot be utilized by worksurface supports or panel hung components.
- If the door is mounted to a panel run that is positioned adjacent to a wall **(E)** or an inside 90° angle and there is not a 42" clearance between the track and the wall/inside 90° the assembly of the first stop will be difficult and plans will need to be modified for the assembly.
- If a door is closing an opening of a workstation that includes a "T" connector in the opposite wall, an extended straight connector may need to be used to maintain the 36" required opening.

Tiles

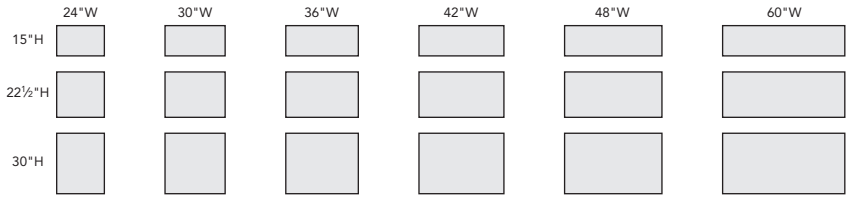
Terrace® — Overview of Tiles



Tiles — *Tackable Acoustical, Steel, Perforated Steel, Markerboard*, Foundation™, Laminate*, and Veneer Tiles.*

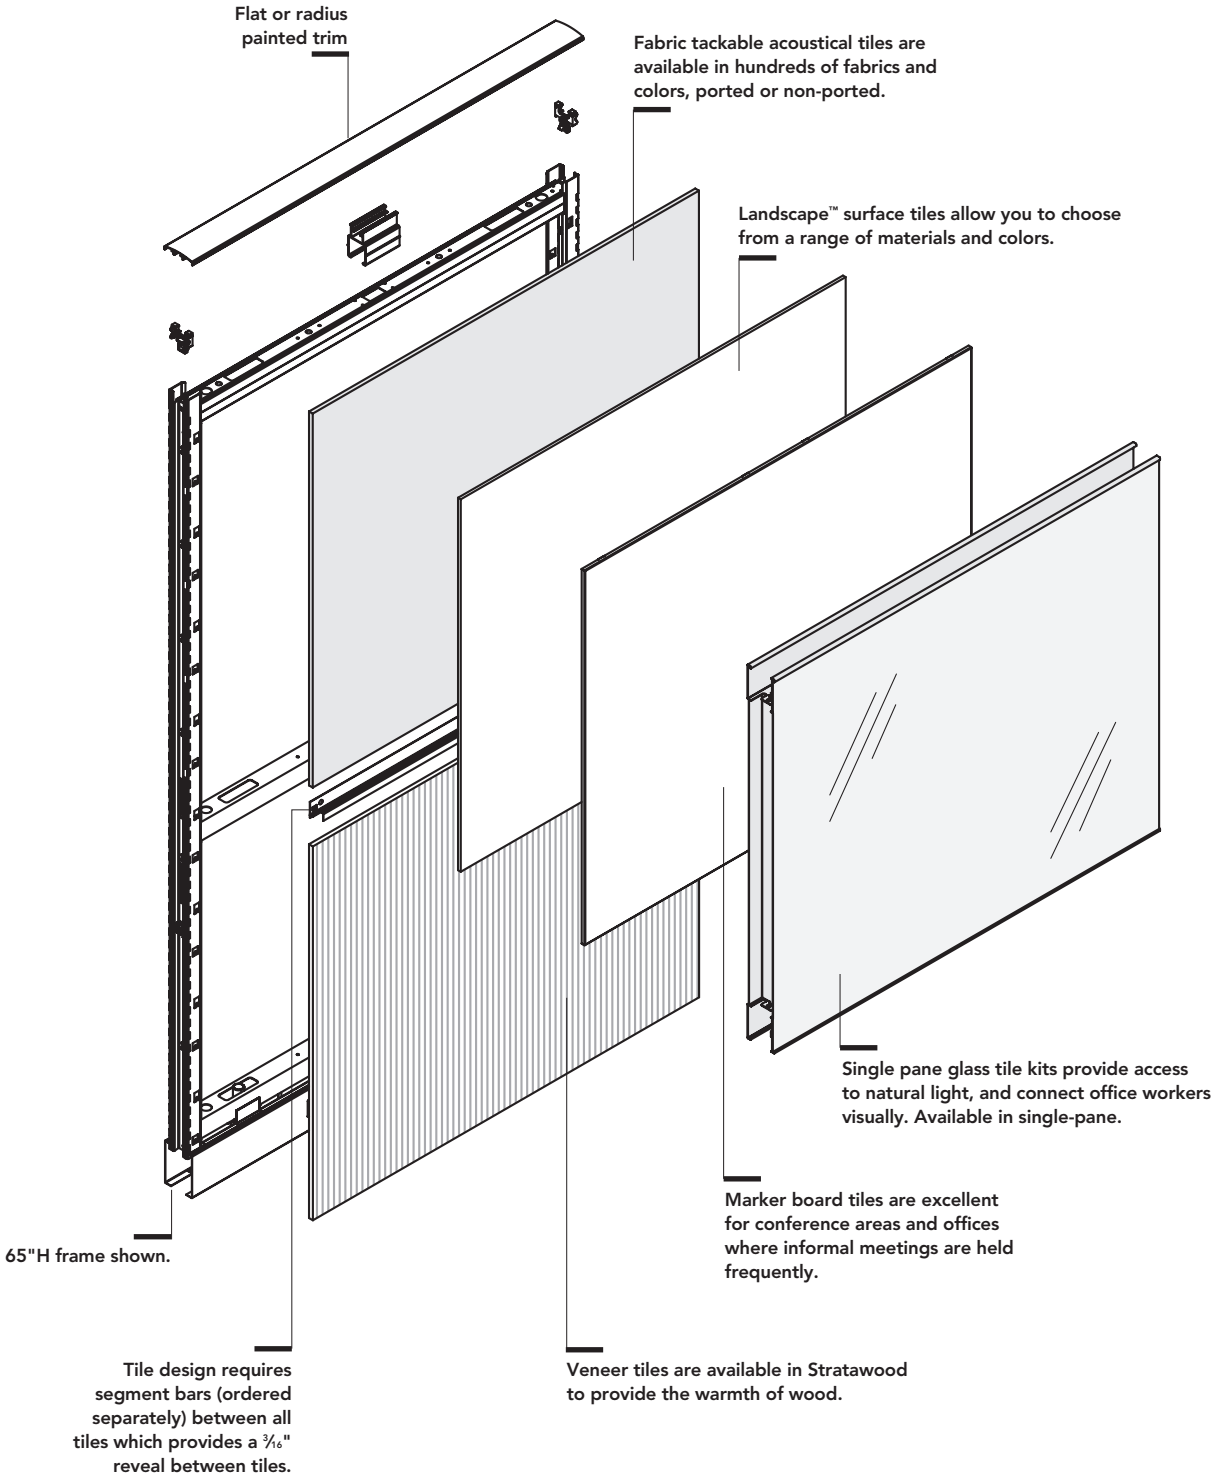


*Not available in 7½"H

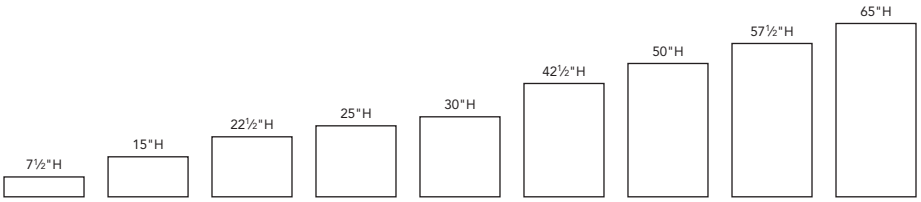


Data/Electrical Port *(port tiles available as acoustical only)*

Monolithic Tiles — *Tackable Acoustical and Port (veneer 42½"H non-ported only).*



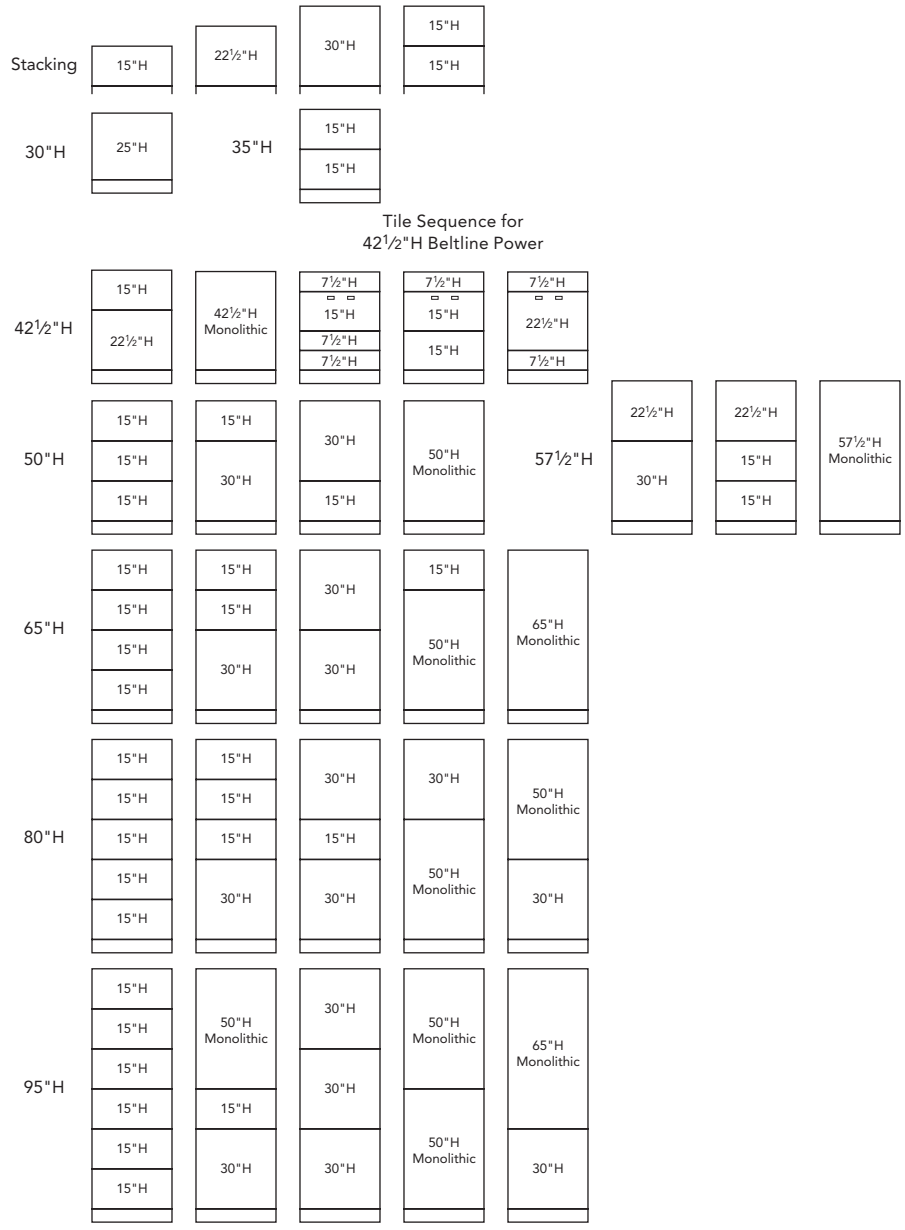
Glass Tile Kits



TERRACE

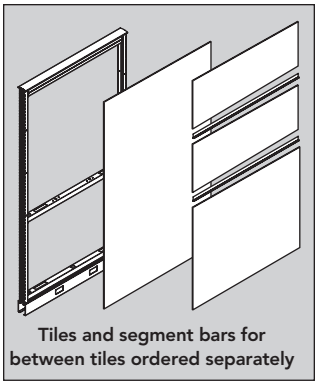
Terrace tiles come in a variety of styles. Select the aesthetic* and functional combination that meets your specific requirements. Additional tiles not shown below include Monolithic, Monolithic Port, and Custom.

*Aesthetics of opposing tile surface and/or frame interior should be considered when selecting perforated or light colored sheer materials.



Tile Heights

Monolithic tiles are actually 5" shorter to account for base raceway and top trim.

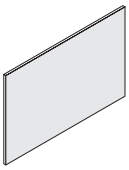


Typical Tile Height Configurations

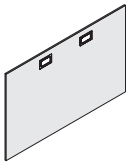
Middle segment bars are required between any two tiles — order separately based on tile configuration on each side of frame. **Note:** Most CAD specification programs have tools that will calculate quantity of segment bars required.

*Additional tile combinations to those shown above are possible; heights above 65" require stacking frames - maximum height is 110".

To calculate the total height of tiles(s) required, deduct 5" (height of base/top trim) from the total nominal panel height. **Example:** 65"H Frame takes 2 30"H tiles. 65–5 = 2 x 30

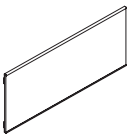


Tiles and segment bars for between tiles ordered separately

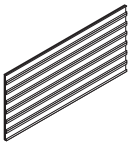


Tiles can be ordered in the size that matches the frame height plus the stacker height. **Example:** Order a 65"H monolithic tile if you are using a 35"H frame plus a 30"H stacker.

Terrace tiles are universal (except glass) and can be placed at any 7½" increment on the frame.

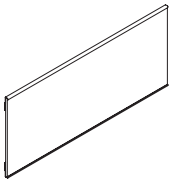


Tiles

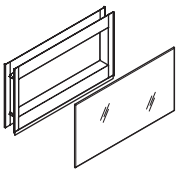


Tackable Acoustical Tiles (pages 129-130)
- Tiles do not include segment bars — order separately.
- 7½"H, 15"H, 22½"H, and 30"H tiles are non-dedicated. They can be used in any combination and in combination with other tile sizes.
- 25"H tiles can be used as monolithic tiles on 30"H frames.
- 30"H tiles can be used as monolithic tiles on 35"H frames.
- 42½"H, 50"H, 57½"H, and 65"H monolithic tiles are non-dedicated.
- 42½"H tiles can be used as monolithic on a 42½"H frame.
- 50"H monolithic tiles are actually 45"H and can be used in any combination with other tiles on a taller frame.
- 50"H tiles can be used as monolithic tiles on a 50"H frame.
- 57½"H tiles can be used as monolithic on a 57½"H frame.
- 65"H monolithic tiles are actually 60"H and can be used in combination with segmented tiles on a frame that is stacked above 65"H.
- 65"H tiles can be used as monolithic on a 65"H frame.

Port Tiles (pages 131-132)
- Receptacle openings with blank covers (1 in 24"W tiles; 2 in wider tiles). Located 29⅜" above bottom of base raceway.
- Tiles do not include segment bars — order separately.
- 15"H and 22½"H port tiles can be used on 42½"H or higher frame for data/power access above beltline. See tile sequence on page 113.
- 25"H tiles for use on 30"H frames.
- 35"H frames do not have beltline data/power capability.
- 30"H port tiles can be used in the base position on 42½"H or higher frames for data/power access above beltline.

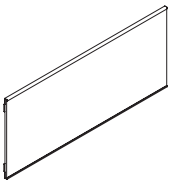


Steel Tiles (page 133)
- Tiles do not include segment bars — order separately.
- Painted steel construction.
- 25"H tiles for use on 30"H frames.
- 7½"H, 15"H, 22½"H, and 30"H tiles are non-dedicated and can be used in any tile position.

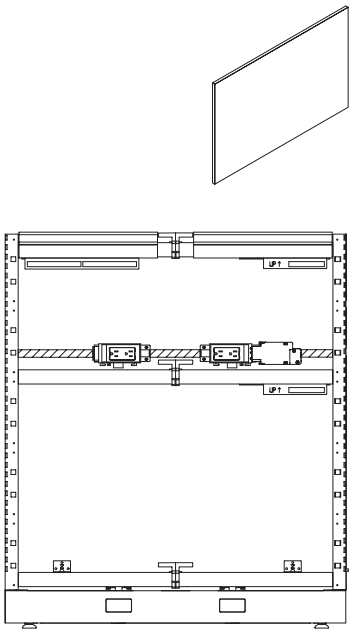


Tool Tiles (page 133)
- Tiles do not include segment bars — order separately.
- Sturdy aluminum extrusion with steel support construction.
- Powder-coated for durable finish.
- Work tools to be hung from this tile available in Extensions™ section.
- Use in place of standard 7½"H or 15"H tiles.
- Cannot be used in the bottom location of a panel frame or on wall track.
- Each tool tile has a suggested weight capacity of 80 lbs. of paper management accessories.

Perforated Steel Tiles (page 134)
- Tiles do not include segment bars — order separately.
- Allows air flow when placed on each side of panel.
- 7½"H, 15"H, 22½"H, and 30"H tiles are non-dedicated and can be used in any tile position.
- Aesthetics of opposing tile surface and/or frame interior should be considered when using perforated or light colored sheer materials.



Laminate Tiles (page 135)
- Available in standard laminate colors. See page 100.
- Tiles do not ship with segment bars — order separately.
- Tiles come completely assembled and attach with custom tile bracket kit. Specify paint color.
- It is not recommended to use this tile with wall track.
- 15"H and 30"H tiles are non-dedicated and can be used in any tile position.
- Grain direction runs vertical on all sizes.
- Made of ⅜" board with HPL laminate.



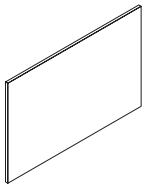
Glass Tiles (page 140)
- Tempered safety glass encased within a frame with built-in shrouds.
- Single-pane construction, glass is flush on one side.
- For use in stacking frames also.
- Glass opening is 4" less than nominal heights and widths.
- Cannot be used in top tile position of a 42½"H panel frame or any frame with integrated power pole.
- Cannot be used at the bottom or beltline location of panel frame.
- 30"H tiles will work in top position of 65"H frames and in 30"H stacking frame. Segment bar needs to be ordered
- Tiles do not ship with segment bars — order separately.

NOTE: Cannot mount countertops on glass tiles as the mounting brackets go through the top cap into the frame.

Marker Board Tiles (page 141)
- White marker board tile; painted steel surface.
- Accepts magnetic accessories.
- 15" magnetically attachable tray is natural aluminum color — order separately.
- 15"H, 22½"H, and 30"H tiles are non-dedicated and can be used in any tile position.
- For everyday cleaning of dry-erase marker ink, use Clorox wipes. Should a permanent marker be used, a citrus cleaner such as Quartet will remove the ink. Note that a citrus cleaner is not recommended for everyday cleaning as it leaves a residue on the marker board.
- Tiles do not ship with segment bars — order separately.

Handling and care for marker boards:
1. Leaving ink on the board for an extended period of time may lead to images remaining on the board, commonly known as “ghosting,” after erasing.
2. To avoid ghosting, thoroughly erase your marker board after every use and clean your board weekly with marker board cleaner.
3. Expo® brand dry-erase markers are recommended for best erasing results.
4. Avoid using red and orange markers for easier cleaning and to reduce the likelihood of ghosting.
5. Do not use permanent or non-dry erase markers.
6. To maintain eraser performance, follow manufacturer’s instructions.

Beltline power is only available above the beltline on the opposite side of the spanning tile.



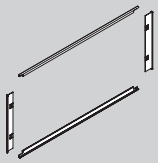
Tiles

Spanning Tiles (pages 138-139)

- Not compatible with landscape tiles.
- Base panel height must match tile height. Example: 50"H tile must go on a 50"H base frame, not 50"H tile on 35"H base frame + 15"H stacker.
- Can be used with any combination of two frame widths.
- No more than two frames per tile.
- Bracket Kits:
  - TKSTBRKT1 = 30/35"H
  - TKSTBRKT2 = 42/50"H
- Full laminate and edgeband options available.
- Horizontal grain only.
- For dual-sided spanning tile applications, an additional Bracket Kit must be ordered.
- For dual-sided applications, spanning tiles must be mounted to the same panel frames.
- Laminate is ⅜" thick, edgeband is 0.8mm thick.
- Slotted standard is accessible when using spanning tiles on the two outside slots.
- Cannot be used with Wall Track.

Frame Combinations

54w		60w		66w		72w		78w		84w		90w		96w	
Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2	Frame 1	Frame 2
24	30	24	36	24	42	24	48	30	48	24	60	30	60	36	60
		30	30	30	36	30	42	36	42	36	48	42	48	48	48
						36	36			42	42				



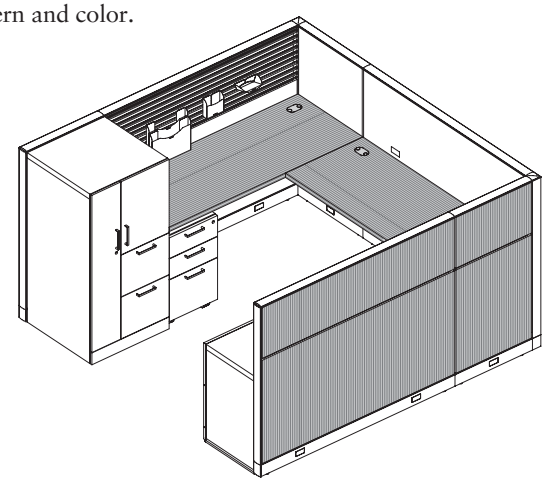
Landscape™ Tiles (page 142)
- ¼" material encased within a painted steel frame.
- Paint color for frame must be specified.
- Tiles do not ship with segment bars — order separately.
- 7½"H, 15"H, 22½"H, and 30"H tiles are non-dedicated and can be used in any tile position.
- Aesthetics of opposing tile surface and/or frame interior should be considered when using perforated or light colored sheer materials.

Foundation™ Tiles (page 142)
- Fabric laminated between recyclable PETG resin sheets.

Custom Tile Bracket Kits (page 143)
- Tile attachment kit allows for any approved ¼" thick "rigid" material to be used as a used as a Terrace tile.
- Use supplied dimensions below for tile size.

Custom Tile Bracket Kits

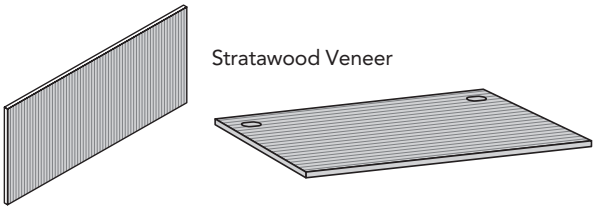
Custom material used in the custom tile brackets should be sized according to these dimensions:



Standard Tile Height	Actual Height Dimensions
7½"H	7.198"H
15"H	14.698"H
22½"H	22.198"H
30"H	29.698"H

Thickness of custom material must be ¼" thick ±.030".

Standard Tile Width	Actual Width Dimensions
20"W	19.481"W
24"W	23.481"W
30"W	29.481"W
36"W	35.481"W
42"W	41.481"W
48"W	47.481"W
60"W	59.481"W

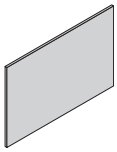


Terrace Stratawood Veneer

Wood owes its inherent beauty to variations in color, grain and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next, even though they are finished at the same time. Exposure to light and the aging process will cause darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. Therefore, Allsteel does not guarantee the exact matching grain, pattern and color.

Terrace veneer tiles and worksurfaces are offered in Stratawood (composite). (See page 100 for finishes.) These products offer excellent scratch, stain, and abrasions resistance, plus a high level of clarity.

Terrace Stratawood veneer worksurfaces are protected by one of the world's most advanced wood finishing process. It provides the ultimate in scratch, stain, chemical, and heat resistance for these high-wear surfaces. The jewel-like clarity and depth allow the natural beauty of the wood to glow through.

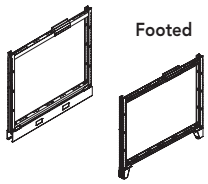


Stratawood Veneer

Stratawood veneer features a repeatable straight-grain pattern, absent of the cathedrals seen in Natural veneer. Although slight differences in tone should be expected, the Stratawood pattern will maintain a consistent appearance across all products.

Stratawood veneer is an engineered wood veneer enhanced by technology for consistency in both color and grain pattern resulting in very few defects.

Although exposure to light will cause Stratawood veneer to darken slightly, additional orders at later dates will match existing product pattern and will match the color when matured. This creates a smooth process for adding on to existing installations.



Veneer Tiles (page 144)

- Veneer tiles produced by Gunlocke® available in Stratawood veneer. See page 10 for additional veneer information.
- Stratawood veneer has a consistent straight-grain pattern.
- Veneer tiles ship with factory-installed attachment clips.
- Tiles do not include segment kits — order separately.
- For models TKG4xxxxLS, grain direction runs vertical on all sizes.
- For models TKG4xxxxLM, grain direction can be horizontal or vertical.

Caring for your veneer worksurface finish:

- General maintenance procedures entail wiping clean the entire surface with a clean water dampened soft cloth once per week. (Be sure to wipe with the grain.)
- Murphy's® Oil Soap may be used as a general purpose type cleaner with warm water to clean tops.
- The finish may also be polished with Guardsman® Furniture Polish (contains no waxes or silicones) to provide renewed luster.
- Be sure to wipe up all spills immediately.

For specification information see pages 103-110.

Electrical & Data

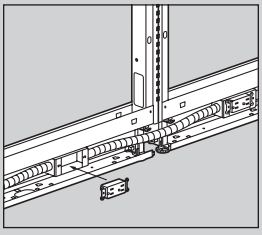
Terrace features capabilities for cable management, including electrical, voice, and data. The 8-wire electrical system can be integrated at base pathway and beltline. The open structure of the frame allows voice and data cables to be routed both vertically and horizontally.

Electrical Systems

Terrace offers a choice of four electrical systems:
- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals
- Eight circuits; two four-circuit systems provided back-to-back.

- See pages 147-148 for a detailed explanation of each electrical system.
- All four systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian) - 16 amps plannable in U.S.
- Terrace panels and electrical components are UL Listed. Electrical components are also CSA certified.
- Installation and use of the electrical system, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes.
- Use of a 35"H frame in a panel run will block beltline and above power distribution.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through cable openings in frame sides.

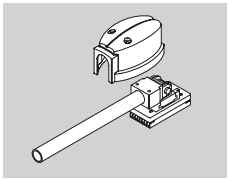


Note: No more than one conduit that is connected to a harness mounted to horizontal can be routed through the same cut out in the same horizontal at beltline. Attempting to use more will cause binding of conduit and may affect reveals on receptacles.

Hardwire New York Code (page 157)

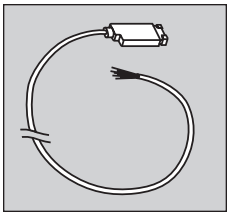
- Hardwire (New York Code) junction box (model A871400) is used when local electrical codes require hardwire entry.
- For use in panels 30"W to 60"W.
- When used in 30"W and 36"W panels, power can be routed only in one direction.
- When used in 42"W, 48"W, and 60"W panels, an electrical pass-thru cable or harness for that panel width can be used to route power back in the opposite direction.
- Unit must connect to a power or pass-thru harness positioned in the base pathway area of an adjacent panel.
- Customer to furnish all cabling and wiring from power entry to power source.
- Junction box can be positioned at any duplex receptacle location.

Hardwire Chicago Code (page 158)
- Wiring harnesses and snap connectors are not allowed in Chicago — base pathways must be comprised of all-metallic components.
- The base pathway, junction box (model 873600) clips directly into receptacle locations and can be used both single- and double-sided.
- In the beltline location, junction box (model 873550) can only be used single-sided.
- Base pathway model has a larger volume capacity for wiring to allow for dual-sided applications.
- Customer must furnish conduit, wiring, and designer-type receptacles for the base pathway and conduit, wiring, designer-type receptacles, and receptacle covers for the beltline.



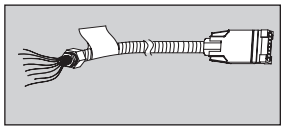
- Tiles at the beltline must be field ported.
- Power entry can be routed from the ceiling, via a Terrace power pole, or from the floor into a junction box (beltline model 873550; or base pathway model 873600).

Electrical Infeeds



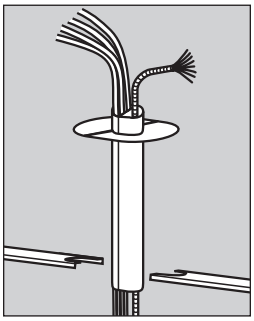
- Power infeed cables deliver power from building to panel's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communications and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.

Base Infeed (page 157)



- Sealttight base pathway power infeed mounts into any receptacle position in the base pathway area.
- A heavy rubber sheathing shields conduit, allowing infeed to be exposed.
- A jumper is required to connect base pathway power to beltline.

Sealtight Electrical Infeed (page 157)



- Sealtight electrical infeed cable is used with footed panels.
- Should not be ordered prior to installation to have pre-wired as infeed must be routed from inside of panel out to be connected to power.
- Cannot be connected to power harness in panel frame that infeed is brought into unless additional pass-thru harness without power block is used to feed from below beltline to above beltline.

Ceiling Power Infeed (page 157)

- Ceiling power infeed connects to a prewired electrical harness in the beltline or base pathway, traverses through an adjacent panel and terminates in the junction box at the top of the integrated power pole.
- Use models A870535 or A870565 with integrated power pole.
- Can also be used as infeed for footed panels.
- Most codes allow flex conduit to be exposed after installation. Verify code requirements before ordering for exposed application.

Integrated Power Pole (page 157)

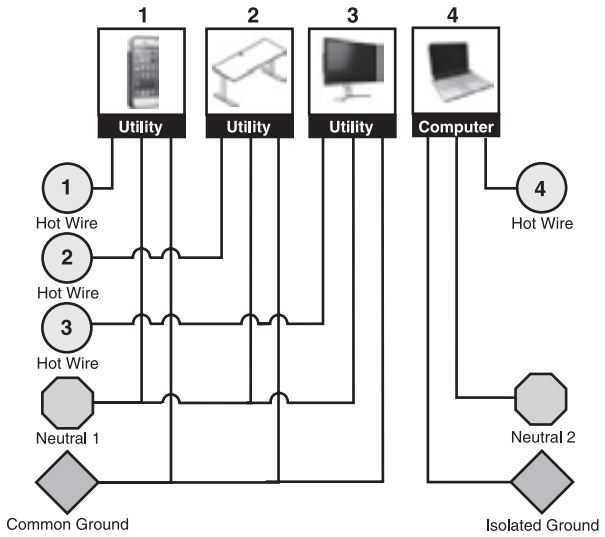
- Integrated power and communications poles provide capacity for routing power supply directly through the top of any structural or stacking frame using same width trim/connector kit in place of top cap.
- Avoid glass or translucent tiles in upper position of frames with integrated power poles.
- Power pole has a cavity on each side of a center septum.
- When using a ceiling power infeed, consider that the infeed must connect into an electrical harness located in an adjacent panel. (See pages 153-154 for cable capacity.)

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - The Four-circuit system (4-Hot/2-Neutral/2-Ground)
     - 3 + 1 option
     - 2 + 2 option
   - The three-circuit system (3-Hot/3-Neutral/2-Ground)
   - The eight-circuit system (back-to-back four-circuit systems)
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of isolated, isolated/dedicated, and separate neutrals circuits.
4. Specify appropriate power harnesses* and pass-thru cables.*
5. Determine the location, quantity, and type of power infeed needed.

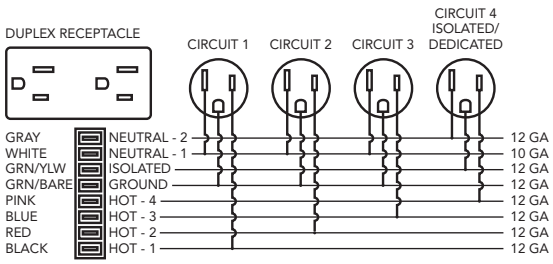
* Select power harness models (A8712XX), pass-thru cables (A8710XX), and pass-thru harness (A8711XX) with the last two digits corresponding with the panel width into which the component is to be positioned. The initial cable length can be stretched approximately 3" to transverse "T", "X", "L", and extended straight connectors.

Flexconnect™ Electrical System Options



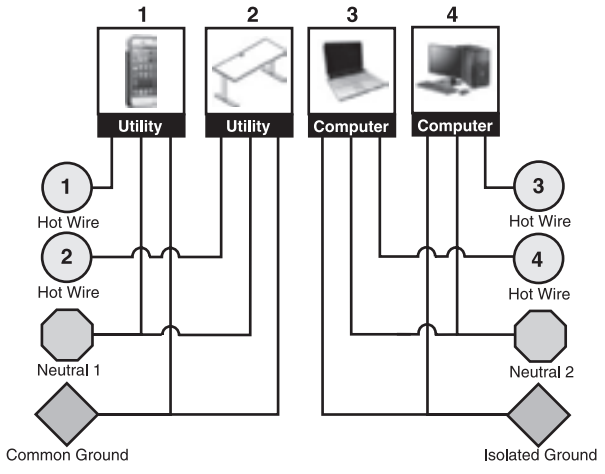
The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an “A” suffix and appear in a gray box in this pricer.

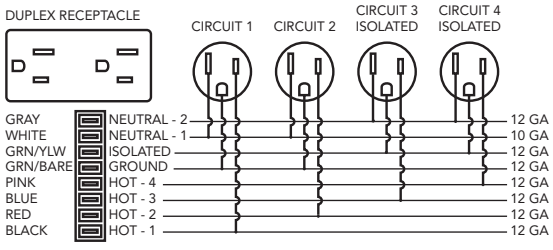


All three systems utilize an eight-wire electrical system rated at 20 amps per circuit (15 amps Canadian).

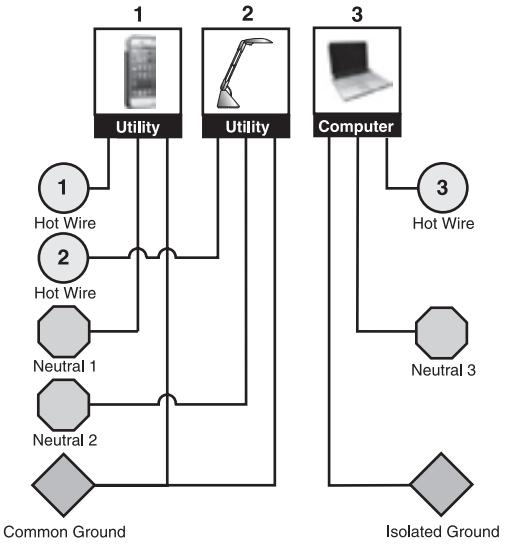
Reference the Office Equipment Typical Load Values matrix on page 155.



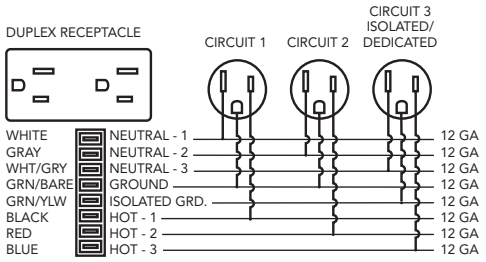
Four-circuit, 3 + 1 Receptacle Option



The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.



Four-circuit, 2 + 2 Receptacle Option



The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Three-circuit, separate neutrals

The three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/ dedicated. The three-circuit components have model numbers with an "A" suffix.

Terrace System Receptacle Usage

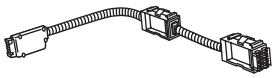
Two 8-wire, 20 amp (15 amp Canadian) electrical systems are offered

Electrical System	Circuitry	Receptacle Capacity			
Four-circuit 4-Hot/2-Neutral/2-Ground	**3 + 1**	Common Circuit-1 **A873501**	Common Circuit-2 (1) **A873502**	Common C ircuit-3 **A873503**	Iso/Dedicated Circuit-4 **A873504**
	2 + 2	Common Circuit-1 **A873501**	Common Cir- cuit-2 **A873502**	Isolated Circuit-3 **A873506**	Isolated Circuit-4 **A873504**
Three-circuit 3-Hot/3-Neutral/2-Ground	**w/separate neutrals**	Common Circuit-1 **A871501A**	Common Circuit-2 **A871502A**	Iso/Dedicated Circuit-3 **A871503A**	N/A

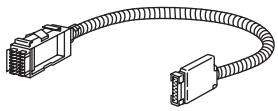
(1) Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.

Notes:

- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.
- Components of the two systems are keyed differently to prevent components of one system being connected to components of another system.
- Allsteel model numbers are printed on the UL labels, and components are color-coded to provide visual identification of the different components.
- Four-circuit components have black plastic parts.
- Three-circuit components have rust-colored terminal ends and receptacle backs are rust-colored.

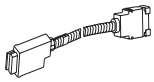


Duplex Receptacle



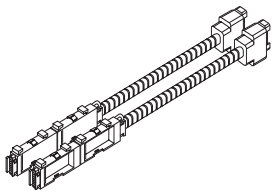
15 amp receptacle

Power Harnesses, Pass-Thru Cables, and Jumpers



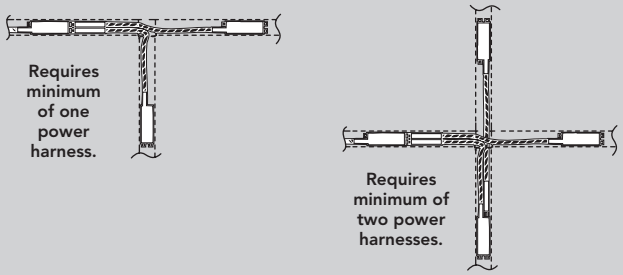
Electrical power harnesses are used to distribute power in Terrace panels. Harnesses can be mounted at base pathway or beltline. **Power blocks** on electrical power harness and pass-thru harness accept duplex receptacles.

Electrical Power Harness



Electrical Pass-Thru Harness With Power Block

Electrical Pass-Thru Harness Without Power Block



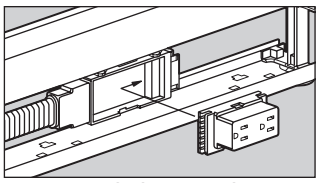
Electrical Jumper Cables

Dual Electrical Eight-circuit Power Harness Kit

All electrical power harnesses and pass-thru harnesses (except 20"W) will stretch 3½", allowing them to span "T", "X", and 120° intersections and "S" extended straight connections.

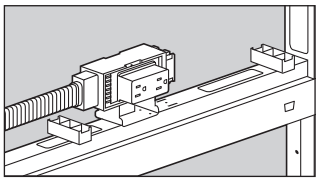
Note: "T" intersections require a minimum of one power harness and "X" intersections requires a minimum of two power harnesses.

Electrical Power Harnesses (page 156)
- Specify harness length to match panel width. 24" power harness accepts one receptacle on each side of the harness, all other length power harnesses have power blocks to accept four duplex receptacles (two on each side of panel).
- Connectors at both ends of power harnesses allow power distribution in either direction.
- Harness power blocks snap directly onto brackets in base pathway; harnesses require optional mounting brackets at beltline or other vertical locations
- Use of a ceiling infeed or jumper requires one additional harness.



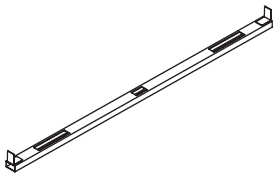
Electrical Pass-thru Harnesses With Power Block (page 156)
- Specify harness length to match panel width.
- Electrical pass-thru harnesses have capacity to handle one duplex receptacle on each side of the panel.
- A 60" pass-thru harness can be used to jump up to a single duplex receptacle per side at beltine and connecting to a power harness at base pathway.
- Electrical power harnesses and pass-thru cables cannot be routed at 90° at beltline once frames are connected to connector blocks.
- Specify harness length to match panel width.

Electrical Pass-thru Harnesses Without Power Block (page 156)
- Specify harness length to match panel width.
- Electrical pass-thru cables distribute power through any panel where receptacles are not required. Cable length cannot be stretched.



Electrical Jumper Cables (page 156)
- Electrical jumper cables connect power from base pathway or beltline to a harness located on any horizontal member as needed.
- Jumper cable plugs into power block end of electrical power harness or electrical pass-thru harness.
- Model A871366 is 66" to jumper up to 30 inches vertically – base pathway to beltline, beltline to base pathway, or up to 30" above or below beltline when connected to beltline electrical.
- Model A8713108 is 108" to jumper up to 65" vertically – from baserail up to the highest 15" opening on an 80"H frame.
- Jumper can also be used from beltline to adjacent beltline at 90° juncture via baseline.

Dual Electrical Eight-circuit Power Harness Kits (page 156)
- Kit provides back-to-back four-circuit systems giving double the capacity of harness and pass-thru cables. Cannot be used at beltline with Terrace. Restricted to base pathway only.
- Requires two four-circuit infeeds. Uses four-circuit receptacles.
- Models must be positioned "back-to-back" in the panel — single-side use is not permitted.
- Components can only be routed in a single run — a single run cannot branch to multiple panel runs at "T" and "X" junctions.
- Four-circuit jumper cables (A8713xx) can only be connected to a power block at one end of a run — power cannot be routed between a run in the base pathway and beltline area, except at one end of the run.
- Standard four-circuit pass-thru cables (A8710xx) can be used in between power harnesses. Two are required in the back-to back configurations.
- Models can be connected to standard four-circuit power harnesses and pass-thrus, although it is not recommended because of possible circuit number ambiguity.
- Two power infeeds are required to connect the back-to-back runs. Power A8719xx must be connector to a power block at the end of a run.
- Data faceplates and terminals cannot be positioned in a panel into which back-to-back power harnesses are installed.
- Power infeeds A8719xx must be routed from a panel wherein no power harness is positioned, into an adjacent panel where a power harness is positioned and connected to the end of a power block.

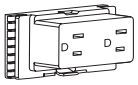


Power Blocks

Power Block Base Pathway Mounting

Power Block at Beltline

Horizontal Electrical Mount Support



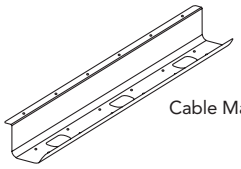
Terrace offers multiple options for mounting electrical:

Base Pathway Mounting
- Power blocks snap directly onto brackets in base pathway area and accept receptacles (sold separately) on each side of harness.

Electrical Mounting Brackets (page 158)
- Package of 12. One bracket required at beltline for each pass-thru harness and 24"W power harness. Two brackets required at beltline for 30"-60"W power harnesses.
- For ported receptacles at beltline or below worksurface, mount power blocks onto electrical mounting brackets which screw into Terrace panel frame.
- Model 8989EB for use with data/electrical port tiles at beltline or directly below standard worksurface height on 42½"H-65"H panels.
- Model 8989BW for use with data/electrical port tiles directly below standard worksurface height on 35"H panels only.
- Data/electrical port tiles must be used where exposed receptacles will be located. No standard port tiles are currently available for below worksurface, either field port using kit model UTP or contact tailored products.
- To connect power between the base pathway and the beltline area, four-circuit jumper cables (A8713xx) must be connected to a power block at one end of a run, routed into an adjacent panel that contains no power harness, then routed back into the panel that contains a power harness (or pass-thru cable), and connected to a power harness in the other pathway.

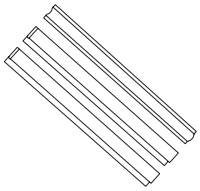
Horizontal Electrical Mount Support (page 159)
- Use horizontal electrical mount support bar and electrical mounting brackets (sold separately) when mounting power blocks at a location other than beltline or base pathway.
- Specify support bar width to match panel width.
- Tiles must be field ported when electrical is mounted in a location other than just above the worksurface at beltline.
- 22½"H ported tiles can be used to mount power below the worksurface with the electrical mount support bar being field located in the panel to align with the tile's ports.
- Can be used with acoustical tiles on one or both sides of the panel frame.
- One electrical mounting bracket required for each pass-thru harness and 24"W power harness. Two electrical mounting brackets required for 30"– 60"W power harnesses.
- Gray only. Includes attaching hardware.

Receptacles



Duplex Receptacle

Receptacle Color Recommended to Coordinate with Paint Color

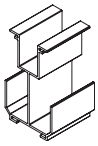


Paint Color	Receptacle Color
Designer White PJW	use Designer White DW
Bungalow	use Muslin EU
Champagne Metallic	use Muslin EU
Cinder	use Brownstone EY
Fossil	use Flint E9
Gunmetal Metallic	use Brownstone EY
Parchment	use Muslin EU
Pebble	use Loft EV
Pewter	use Flint E9
Platinum Metallic	use Silver ES
Salt	use Silver ES
Titanium	use Silver ES

Duplex Receptacles (page 157)
- Duplex receptacles snap into power blocks of power harnesses or pass-through harnesses.
- Duplexes are available in multiple colors. See page 100 for finishes.
- Each receptacle is labeled to indicate which circuit it will be connected to: 1, 2, 3, or 4.
- Duplexes are model specific to support either 3+1 and 2+2 electrical infeed; or have an "A" suffix and are design to support a three-circuit separate neutral electrical infeed.

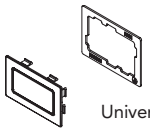
Cable and Wire Management

Cable Management Tray



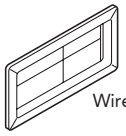
Cable Management Tray (page 158)
- Attaches under the worksurface to contain cables.
- Metal tray shelf is 4" deep. Can hold electrical power strip and/or surge protector.
- 24" and 36" lengths, use multiple units for larger worksurfaces.
- Attachment hardware included, paint option is black only.
- Zip tie attachment points located in base of tray. Zip ties not included.

AWRSTRIP



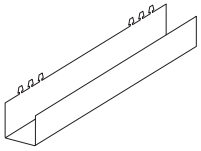
Wire Management Strips/Channels (page 158)
- Self adhesive backing to attach to panels and underside of worksurfaces.
- Flexible strips allow cabling to enter/exit and can be contained inside the strips' cavities.
- Includes two wire management profiles. Smaller profile allows for qty. 3, .3" diameter cords, has area of .32 in^2. Larger "J" shaped profile allows for qty. 10, .3" diameter cords, has area of 1.14 in^2.

Cord Retainer Clip



Cord Retainer Clip (page 158)
- Provides confinement of vertical electrical/data wiring.
- 1½"H cord clips snap into vertical panel slots to contain cords.
- 4 clips are provided standard with each task light cord.
- Package of 50. Available in Black only.

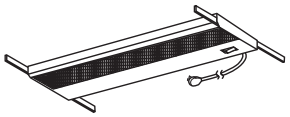
Data Management Organizer



Data Management Organizers (page 158)
- Cable organizers are made of rigid polymer, and hang from the horizontal cross members or in the base raceway. Can be stacked infinitely.
- Cables can be placed into the extensions of the organizers to keep cables aligned as they pass through the panel frame.
- Commercially available tie-wraps can also be used to strap cables to the organizer extensions.
- Organizers are ordered separately in packs of 20.

Universal Tile Port Kit

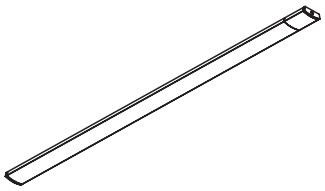
Universal Tile Port Kit (page 158)
- Allows field installation of additional data accessories.
- Grommet opening dimension — 1.375"H x 2.700"W.



Wireway Grommet

Wireway Grommet (page 159)
- Fits into any receptacle opening.
- Used when routing wires through receptacle opening.

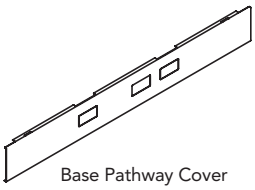
AMPCHASE



Panel Mounted Wire Chase (page 159)
- Attaches between panels on Stride, Terrace, and Optimize via a slotted standard.
- Designed to sit below a worksurface and provide additional cord management from the base rail to beltline/under-worksurface height.
- Available in standard metal paint finishes.

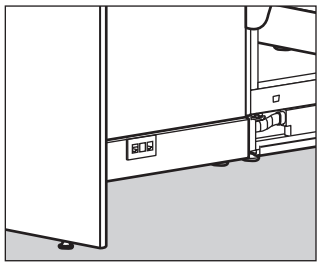
Lighting

Task Lights



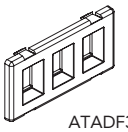
Task Lights (page 1037)
- Task lights can be recessed under storage cabinets or storage shelves, panel-hung, or freestanding.
- Three styles of recessed task lights in four sizes are available to correspond to cabinet or shelf width.
- All styles have 9' power cords in black, connected in the right rear corner.
- All models feature electronic ballast for longer bulb life and cooler operating temperature.
- Task lights with a fused plug to meet Chicago electrical code are also available.
  Recommendation: Provide a separate circuit for task lights for proper long-term operation without RF interference to computers that may be in use.

Undercabinet LED Light

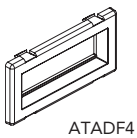


Undercabinet LED Light (page 1037)
- Undercabinet LED light can be mounted beneath overhead cabinets with wood screws or magnets.

Data



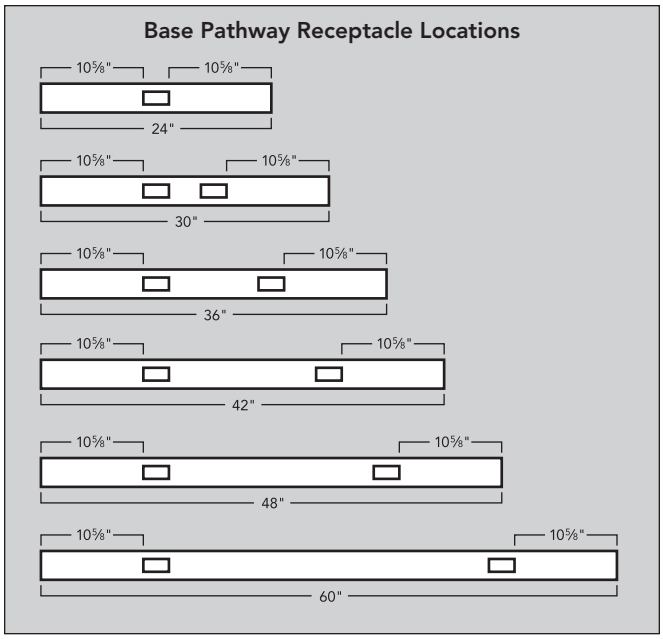
Base Pathway Cover

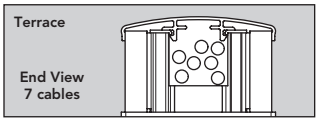


Terrace Base Pathway Covers (page 159)
- Features an additional knockout (offset) for improved utilization of power and data. Knockouts are 2.700"W x 1.377"H.
- Due to panel depth, back-to-back data modules should not be used at beltline or in the base on Terrace.

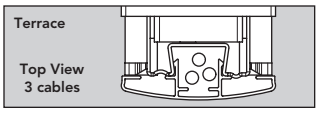
Voice/Data Receptacle

ATADF3

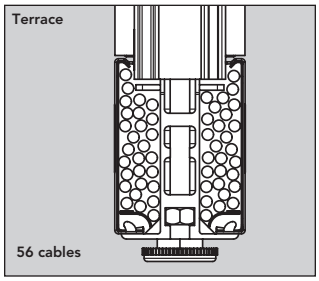


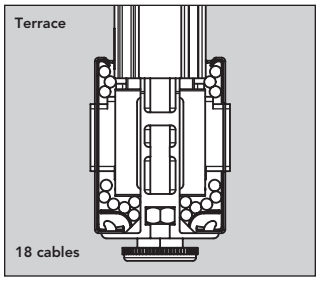


ATADF4

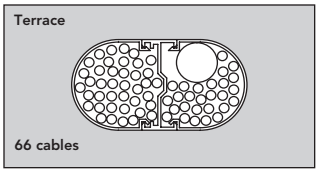


Data Faceplates (page 159)
- Fit into receptacle and data port openings in base raceway covers or into data port (UTP).
- Due to panel depth, data modules should not be used back-to-back at beltline or in the base on Terrace.



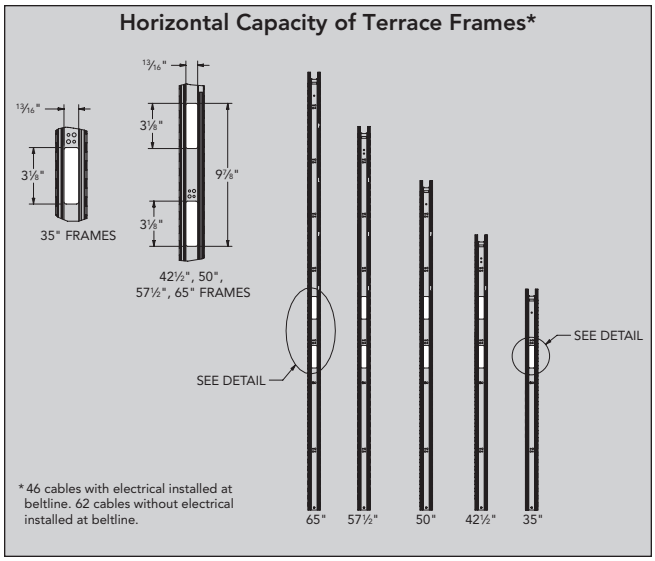


Cord Organizer (page 159)
- Attaches to bottom of worksurface.
- 4"W x ⅞"D, made from sheet metal.
- Top sits flush with worksurface if mounted to worksurface.
- 4 cable cut outs: 2 – .250" diameter and 2 – 0.147" diameter; .250" diameter cut outs are centered between the .147" diameter cut outs.

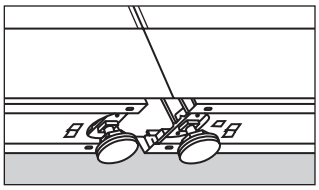


Circuit Usage

Strategy 1
Circuits to Equipment
Assign specific uses for each of the circuits:



- For example, in a four-circuit system:
  Circuit 1 — Calculators, fans, etc.
  Circuit 2 — Task lights (could be wired to wall switch)
  Circuit 3 — CRT or flat screen monitors
  Circuit 4 — CPUs



Strategy 2
Circuits to Workstations
Assign specific workstations to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.

Placement of pedestals and lateral files may render some duplex locations inaccessible. Pedestal placement may also affect compatibility with pull-up receptacles.

Lay-in Cable Capacity

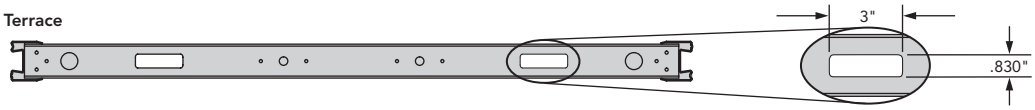
- The top and base pathway allow continuous voice and data lines to run through and between panels without interruption.
- Lay-in is provided for environments where systems furniture or cabling are subject to frequent change.
- Terrace top pathway accepts up to 7 voice/data cables (.25" dia).
- Terrace variable height junctions accept up to 3 voice/data cables (.25" dia.).
- Terrace base pathway accepts up to 56 voice/data cables (.25" dia.) (6.03 sq. in.) at 60% fill.
- When electrical system shares base pathway, the cable capacity in Terrace is reduced to 18 cables (2.25 sq. in.). Cable quantities listed are at 60% fill ratio.
- Cable capacity of the Terrace power pole, in addition to electrical infeed is 2.79 sq. in. on one side and 2.91 sq. in. on the other for a total capacity of 66 cables of .25" diameter.

Underside of Base Pathway
Juncture Between Frames

Terrace String-in Capacity

- **Openings in frame sides** permit data and communication cables to be run between frames in Terrace.
- Using tackable acoustical tiles, the beltline pathway accommodates up to 62 cables (.25" dia) or 46 cables with electrical components installed.

DO NOT run electrical equipment or extension cords through cable openings in frame sides. Use beltline or base-mounted electrical system for all electrical supply.



- **Cables can enter/exit panel** through underside of base pathway at juncture between frames.
- Openings are sized as follows (in sq. in.):

Terrace System	Sq. In.
Straight connection	6.0
"S" Extended Straight Connection	10.0
"L" 90° Connection	8.9
"T" Connection	15.9
"X" Connection	17.9
"A" Connection	—
"Y" Connection	—

- When leveling glides are fully retracted, panel-to-floor clearance is 7⁄16". This may affect the volume of cabling that can be fed into the frame from the bottom of the pathway.

Vertical Capacity

Vertical Capacity Through Panel Frames

	Panel Width	Qty. of .25" Cables at 45% Fill Ratio	Qty. of .25" Cables at 60% Fill Ratio	Total Space (sq. in.)
Terrace	24" – 60"W	45	60	5.26

- A 60% fill ratio is achievable; however, when electrical components are installed in the beltline area, cabling capacity through the beltline area will be limited to approximately 45% fill ratio.

Office Equipment Typical Load Values

Item	*Amps
Desktop/2 Monitors	4
Laptop Computer	1
Laptop/2 Monitors/Docking Station	3
Paper Shredder	1.22

*** These colors are intended to be an inspirational option for the trending market. Product application is limited and color availability is approximately two years to coincide with evolving workplace trends.

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

The beauty of wood is the natural variation of grain patterns and colors that make each piece unique. This variation is also influenced by lighting conditions, orientation of mated parts, and varying acceptance of the finishing process. The varying colors and physical characteristics naturally occur in all wood species but are most pronounced in lighter colored woods, and are especially evident in natural finishes.

GROMMETS ON VENEER WORKSURFACES

Wire management grommets come standard on most veneer worksurfaces. Choose between metal or plastic grommet option. Note: Plastic grommet color is predetermined based on finish selection.

Stride® Frame & Tile Panel System

Keep pace with your environment.

When designing Stride, we set out to discover a furniture platform that could evolve to reflect the changes today's organizations are experiencing. To create components that could adapt to personal preferences and demands of different job functions. To make of the most sustainably minded and manufactured products available. What we found is a whole new way to build a better office environment.

You're asking more of your staff. So we asked more of our furniture.

Today, you have to get more done in less time and in a smaller space. Stride responds by maximizing every inch you have. Perch overhead cabinets and rail-mounted screens bring storage within easy reach and create desktop privacy. Support worksurfaces are available at different heights for managing multiple tasks and easy access to technology.

Designed for real people and real work.

Stride supports multiple job functions, not rigid hierarchy. So it's possible to create an office that serves everyone, whether they work side-by-side or back-to-back. We found a simple way to make every task more comfortable with sit-to-stand worksurfaces that allow users to change postures. Low panels and glass screens keep the space clean, lean, and light.

Space that works like an office, but feels like home.

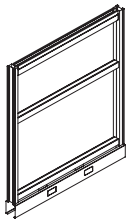
Because each component of Stride was designed with every other component in mind, the entire collection works together seamlessly. Countless thoughtful details have been designed to increase comfort, improve effectiveness, and add visual appeal.

As Stride was being developed, we considered the needs of the person using the furniture. A range of contemporary worksurface shapes makes it easier to get work done. Segmentation every 7½" offers unlimited access to power. And design details like footed panels, tiles to-the-floor, and spanning glass create a welcoming aesthetic. So even the most straightforward workspace can be more inspiring, long-lasing, and productive.

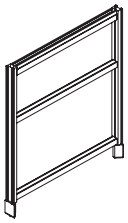
With simplification of form and subtleness of strength, Stride supports highly collaborative users who need dedicated spaces, as well as mobile workers who only need to touch down for part of the day. Exceptionally easy access to power and data allows people to settle in or come and go. And the elegantly designed open leg supports long spans, creating uninterrupted workspaces.

A people-centric approach to furniture design makes spaces more comfortable, functional, and friendly. It's flexible enough to support the different ways that people work. As your company grows and changes, so does Stride; built-in flexibility allows the collection to adapt to your organization's evolving needs. Yet it's more than furniture. It's a platform for building better environments, while protecting the one we have.

An exceptional collection of materials — textiles, finishes, landscape material options and color palette — were also developed for Stride and many of these additions help to bring a more residential vs. contract ethos to the furnishings.



With an integrated and cohesive kit of universal components, Stride supports a broad range of applications across the open plan and seamless migration from an environment with more separation to one with more openness or vice versa. Stride can be scaled down or up with ease — adding, subtracting, or rearranging, providing a stunning degree of versatility and flexibility to adapt to the organization and the individual.



Stride brings it all together in one complete collection of surfaces, storage, and space division.

Mix and match worksurfaces and space division for your own unique solution. Stride achieves a stunning degree of versatility and flexibility. The use of cohesive, scalable materials and finishes creates a beautiful aesthetic in every application.

15"H Stacker Kit

Frames

Stride base raceway panel frames include frame, base pathway covers, and in-line connection attachment hardware. Footed panel frames include panel feet. No electrical or data capabilities in base of footed panel frames. Base raceway to footed and footed-to-base raceway kits can be used to convert existing frames to footed style or to base raceway covered style.

Panel frames are only available without top trim. Flat top trim (ordered separately) is available in painted or veneer to match panel width or to span multiple frames.

Panels (frames and tiles) are 3" thick (use 3⅛" to calculate intersections in length of panel run).

Stacking frames are available in 15", 22½", and 30"H.

Structural panel frames are available in 35", 42½", 50", 57½", and 65" nominal heights.

Frames accommodate tiles at 7½" increments. One segment kit (ordered separately) required on base panel frames and stacking frames between each segmented tile.

Beltline area accommodates electrical power and provides desktop access to data and communication cables.

Horizontal cross-members at 22½" provide additional rigidity on frames.

All steel horizontal members have vertical cable and electrical routing capacity.

Opening in the side of uprights accommodates a large volume of data cabling and electrical.

Frames can be specified with knockouts only on one side of base raceway cover.

4"H base raceway cover has outlet openings that accept duplex receptacles or commercially available modular data faceplates. Optional raceway cover with additional opening or no outlet openings available.

Lay-in base raceway accepts voice, data, and fiber optic cable, as well as electrical system.

Leveling glides provide 2¾" of adjustment on frames with raceway covers and 2" of adjustment on footed frames. Glides are accessible from the interior of the frame, except on panel feet.

Stride Frame Dimensions (Actual)

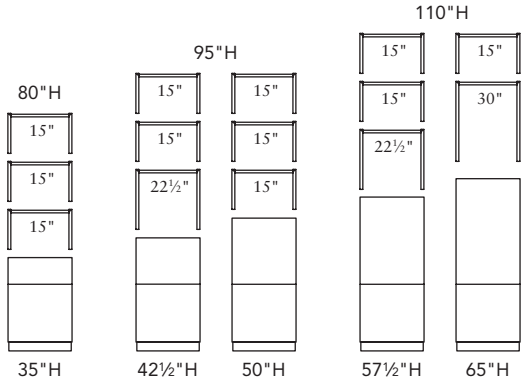
Depth: 3" (use 3⅛" to calculate intersections in length of panel run)

Widths: 24", 30", 36", 42", 48", 60"

Heights*: 34⅜", 41⅞", 49⅜", 56⅞", 64⅜"

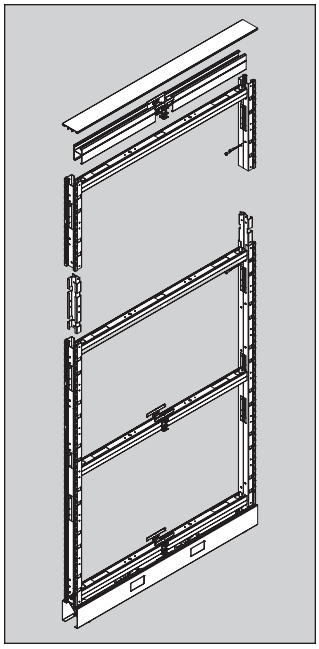
Stacking Frames: 15", 22½", 30"H

Leveling Glides on Frames with Raceway Covers: 2¾" range



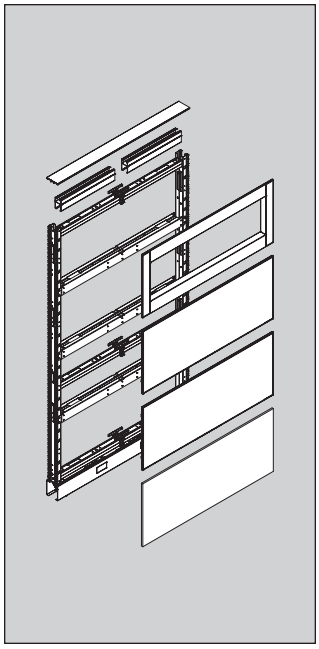
Leveling Glides on Footed Frames: 2" range

*with levelers fully retracted

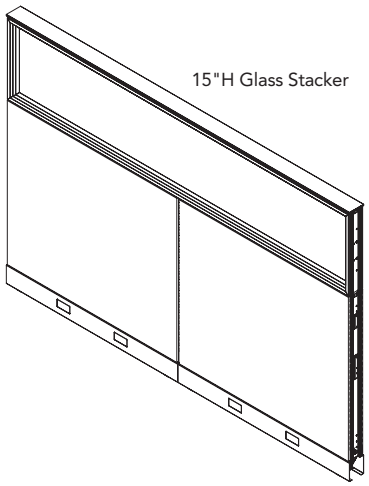


Panel Frames and Conversion Kits (pages 187-188)

- Specifications: formed steel vertical members, with tubular steel horizontal members are welded into a strong, sturdy structural panel frame.
- Top trim, tiles, and segment kits are ordered separately depending on application choice.
- Panel frames are standardly shipped with base raceway covers or decorative feet installed. There is no electrical or data capabilities in base of footed panel frames.
- Base raceway to footed and footed-to-base raceway kits can be used to convert existing frames. Footed-to-base raceway kits ship with glide tower assembly. Conversion process requires panel to be removed from panel run.
- Do not remove electrical knockouts unless duplex is needed. For replacement covers, see page 96.
- Direct connections between same height frames in a continuous run are accomplished with provided hardware. There is no incremental increase in length along the run.
- For adequate stability, one of two methods of stabilization shown on page 169 must be adhered to.



Building vertically with Stride frames



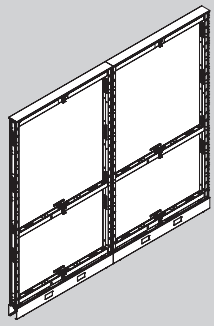
Stacking Connection

Segmented Panels

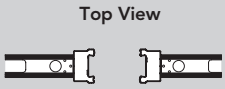
A low profile glass stacker kit is a single pane of clear or frosted safety tempered glass centered within a silver metal frame.

Stacking Frames (page 188)

- Stacking frames can be added to the top of any base panel frame.
- This stacking connection provides a solid metal-to-metal connection, allowing the stacking frame to accept hang-on components, per Allsteel configuration guidelines.
- A maximum of three stacking frames are allowed on base panel frames 35"H-65"H up to a maximum height of 110". Do not combine differing frame widths in a single stack or span multiple base panel frames with stacking frames.
- Guidelines for using overhead storage with stacking frames are given on page 370.
- Includes attachment hardware.
- Add appropriate connector blocks (2 per stacker level).
- When adding stacking frames, the top trim and top trim retainer are removed from the base frame and installed on the uppermost stacking frame.
- To maintain panel mounting slot modularity 22½"H stacking frames should only be used with 42½"H, 57½"H base panel frames or 87½"H door frames. To match 87½"H door frame height, use a 65"H base panel frame with a 22½"H stacking frame (slot modularity will be lost on stacker). To maintain modularity on 35"H, 50"H, and 65"H base panel frames use 15"H or 30"H stacking frames.
- If panel mounting slots are not being used, any stacking frame can be used on any base panel frame of matching width.



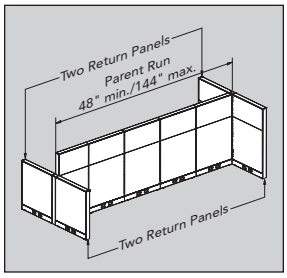
Segment Kits (page 188)



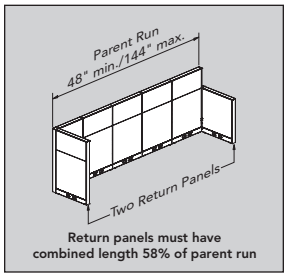
- One segment kit required (order segment kit separately) on base panel frames and stacking frames between each segmented tile.
- Segment kit not required at beltline (22½" above the base raceway).
- One segment kit accommodates segmentation on both sides of the frame.
- Segment kit is required to mount electrical other than at beltline or base raceway. Kit provides support for components at 7½"H increments.
- Segment kit not required between low profile glass and base frame.

Low Profile Glass Stacker Kits and Tie Brackets (page 189)

- Single pane clear or frosted safety tempered glass encased within a frame.
- Glass is positioned in the middle of the stacking frame.
- Can be used to span multiple frames when the combined frame width is equal to the low profile glass stacker width.
- Mounts to base panel frame(s) as a stacking unit.
- The top trim from the base panel frame or spanning top trim is used to finish the top of low profile glass stacker kit.
- For use at top position only.
- Low profile glass stackers are non-structural. Do not hang or stack on top of low profile glass stacker kits.
- Cannot mount a countertop on low profile glass stacker kits.
- Tie bracket kit(s) required when two or more low profile glass stackers are adjacent (order separately). Specify based on low profile glass stacker kit intersections at the same height only, ignoring base frames at the same height.
- Tie bracket kits only connect to low profile glass stacker kits. They do not attach to base frames.
- Low profile glass stackers do not have panel slots.
- Height of low profile glass stackers must be considered when calculating overall height.
- Horizontal segment kit is not needed below low profile glass stacker.
- Add appropriate additional connector blocks.
- Uppermost tile(s) on base frame(s) below low profile glass stacker must be removed for stacker installation.

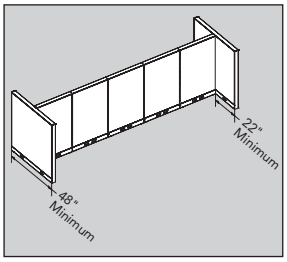


Building horizontally with Stride frames



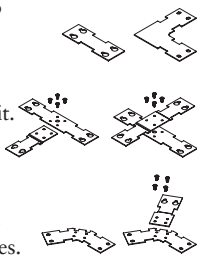
Direct connections between same height frames.

Important planning guidelines: For adequate stability, one of two methods of stabilization must be adhered to:



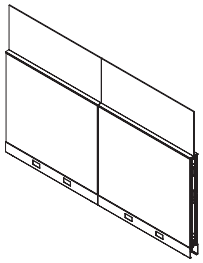
- **Method 1—Opposing returns:** A parent run must be a minimum of 48" and a maximum of 144" between return panels. The parent run must have a minimum of two return panels running in opposing directions on each end of run. Return panels must be a minimum of 24"W; and must not be any more than 30" shorter in height than parent run.

Return panels must have combined length 58% of parent run



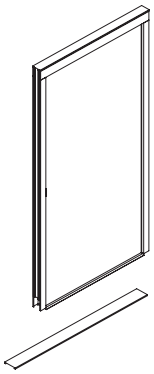
- **Method 2—Single-sided returns:** A parent run must be a minimum of 48" and a maximum of 144" between return panels. The parent run must have a minimum of two return panels totaling at least 58% of its length, extending in one direction. Return panels must not be any more than 30" shorter in height than parent run. Any run under 100" must have a minimum combined length of 60" of return panels.

- **An off-modular return panel** must be at least 48"W and there must be at least 22"W on one side of the parent run.



Note: Alternate stabilization methods available using back- or side-mounted Stride credenzas — see pages 170-171.

Tie Bracket Kits for Low Profile Glass Stackers (page 189)



- For use with low profile glass stackers when two or more low profile glass stacker kits come together at a connector juncture.
- Only used when attaching one low profile glass stacker kit to another low profile glass stacker kit.
- Specify based on low profile glass stacker kit intersections at the same height only, ignoring base frames at the same height.
- Tie bracket kits only connect to low profile glass stacker kits. Brackets do not attach to base frames.

Panel Mounted Screens (pages 190-191)

- A panel mounted screen is a frameless insert that is integrated into the top trim on a base panel frame.
- The panel mounted screen replaces the top trim on base panel frame or stacking frame on which it is mounted.
- Panel mounted screens cannot be mounted on low profile glass stackers.
- "G" grooved end trim must be used when a base panel frame below a panel mounted screen is shorter than the adjacent in-line panel.
- Panel mounted screens are non-structural and therefore cannot be stacked on top of support hanging elements.
- Finishes and Sizes:
  Clear or Frosted safety glass — available in 7½"H and 15"H

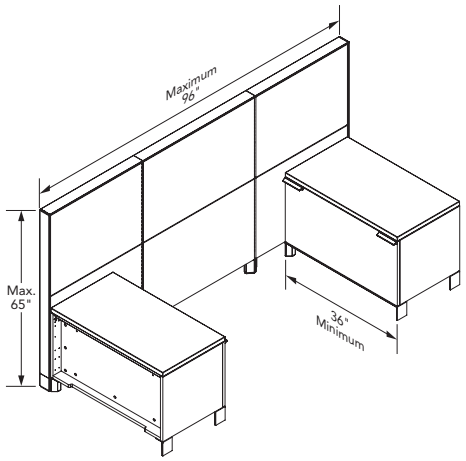
Hinged Door Panel Frame (page 192)

- Includes 42"W frame, top trim, 36"W door, hinges, and attachment hardware.
- Door is available in laminate.
- Order door knob or lever separately, see page 192.

Sliding Door and Mounting Kit (page 192)

- See illustration and specification information on page 172.

Standard Flat Top Trim (page 193)

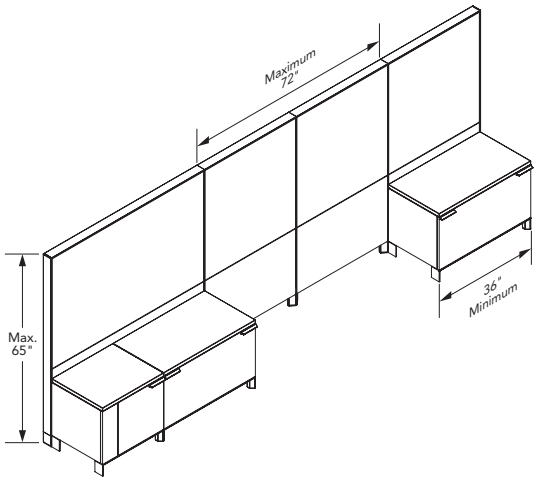


- Used when specifying base panel frames without top trim.
- Top trim can span individual or multiple base panel or stacking frames.
- It is possible to span multiple frames when the combined frame width is equal to the top trim width.
- Some examples are listed on page 193, other combinations are possible.
- Available in painted or veneer finish.

Connector Span Flat Top Trim (page 193)

- It is possible to span multiple frames and one ("TS", "XS", or "SS") connector when the combined frame width is equal to the top trim width and one "S" style connector.
- Only to be used on a parent run where all return panels are at a lower height (extended straight connections only).
- Available in painted or veneer finish.

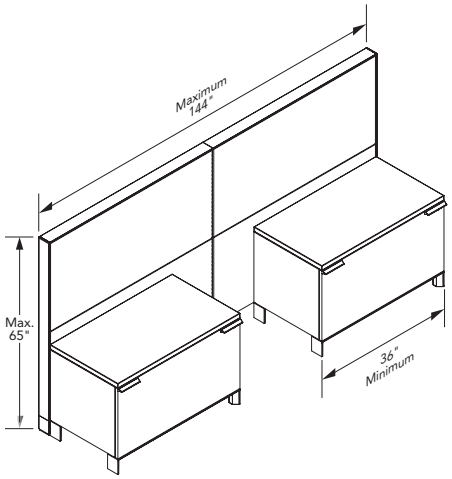
Frames and Credenzas



Low Credenza Side to Panel Bracket

Side-mounted low credenzas

- The minimum Stride low credenza width is 36" on each end.
- With a mid-run floor support the maximum panel run is 144".
- Without a mid-run floor support, the maximum panel run is 96".
- Overheads and shelves cannot be used with side-mounted low credenzas.
- Worksurfaces (if specified) must be mounted on the same side of the parent run as the credenzas.
- Panel frame maximum height is 65"H. Stacking frames can be used.

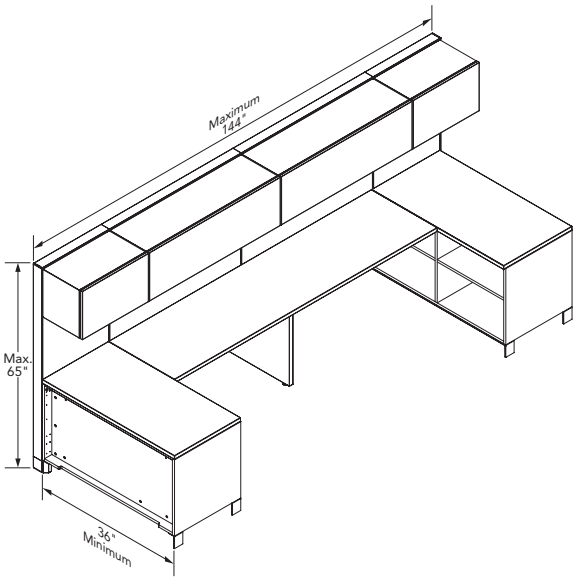


Credenza Back to Panel Bracket — Modular

Back-mounted credenzas

- The minimum Stride credenza width is 36"W on each end.
- The maximum panel run between back-mounted credenzas is 72".
- With the use of one bracket kit, two credenzas can be ganged together up to 72"W and can span two panels. Each panel must be the same width as each credenza.
- When using overhead cabinets or shelves, both sides of the run must have credenzas that are the same width as the panel or panels joined without a connector.
- Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas. Stacking frames cannot be used with overheads.
- Panel frame maximum height is 65"H.

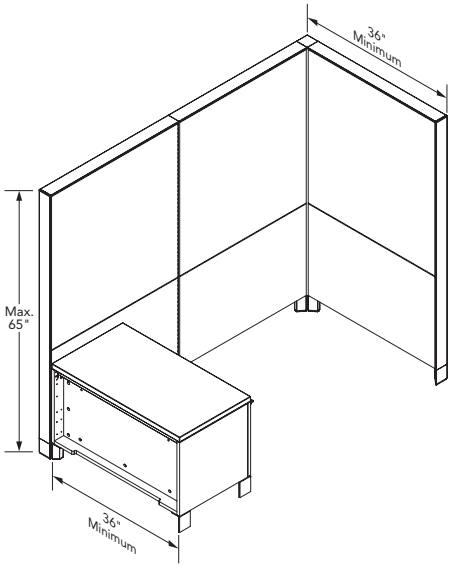
Credenza Back to Panel Bracket — Off-Modular Ends



Off-Modular back-mounted Credenzas

- The minimum Stride credenza width is 36"W.
- With a floor support the maximum panel run is 144".
- Without a floor support, the maximum panel run is 96".
- Overheads and shelves cannot be used if both ends of the credenza are not on modular.
- Panel frame maximum height is 65"H. Stacking frames can be used.

Frames and Credenzas

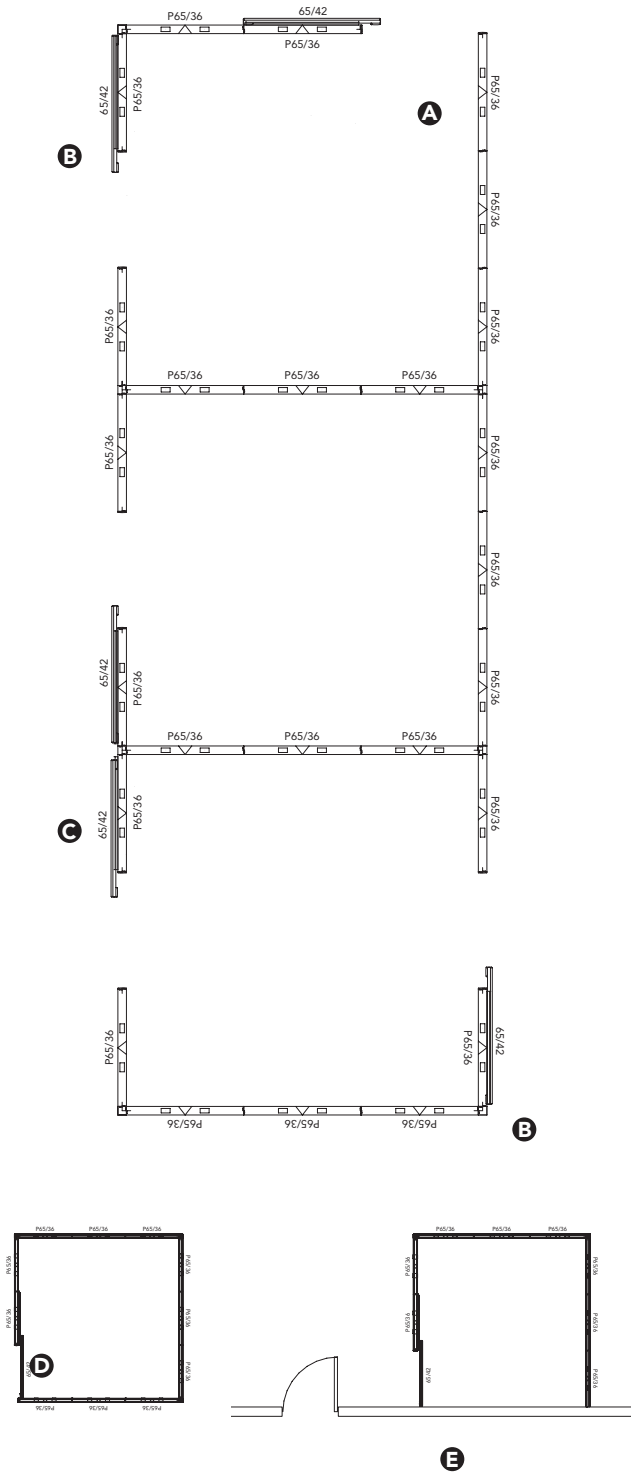


High Credenza Side to Panel Bracket

Side-mounted high credenzas

- The minimum Stride high credenza width is 36"W on each end.
- With a floor support the maximum panel run is 144".
- Without a floor support, the maximum panel run is 96".
- Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas. Stacking frames cannot be used with overheads.
- Panel frame maximum height is 65"H.

Credenza Side to Panel Bracket with Return Panel



Bracket with return panel

- Minimum Stride credenza width 36".
- With a floor support the maximum panel run is 144".
- Without a floor support, the maximum panel run is 96".
- The minimum size for panel return is 36"W x 35"H.
- Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the high credenza.
- Panel frame maximum height is 65"H.

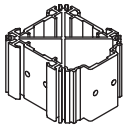
Frames

The sliding door for Stride is system specific; one model for Stride with specific mounting kits for each door ordered. With a frosted translucent insert and your choice of P1 or P2 paint, the sliding door will create a unique look for any office environment.

Sliding doors are available in 50", 65", and 80"H models and can mount to 30", 36", 42", and 48"W panels. They accommodate a 36"W opening and are 42"W, nominally. The doors ship from the factory non-handed and become handed when field installed to fit the specifications of the project. The handle pulls located on each side of the door are color matched to the trim to create a uniform style. And with the threshold free design, the sliding door offers better aesthetics and safety by eliminating the potential for tripping.

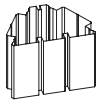
Sliding Doors and Mounting Bracket Kits (page 192)

- The system requires the ordering of both a door and a mounting bracket kit.
- The door and mounting bracket kits are system specific. The Stride door and mounting kit only works with Stride.
- All sliding doors are 42" wide to accommodate a 36"W opening. Doors are non-handed and non-locking.
- A mounting bracket kit must be ordered for each door corresponding to the mounting panels width (30", 36", 42", or 48"W) on which the kit is being installed.



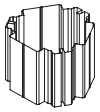
General Guidelines for Layout Planning of Sliding Door

- Stability guidelines must be followed when specifying a sliding door. (Refer to page 169). The sliding door system was designed to close an opening in a run of parallel panels. Doors mounted to long runs of panels without floor support, ties to worksurfaces or return panels may seem less stable.
- If the door is used to close an opening **(A)** where the panel opposite the door is at 90°, there will be a gap equal to the panel thickness between the door and the panel end when closed.
- When planning the layout, care must be taken if the plan includes a door mounted on a panel that is less than 42"W.
- If the panel is at a corner **(B)**, the door will protrude into the aisle or next workstation when in the open position.
- If back-to-back doors are mounted on panels **(C)** that are less than 42"W they will interfere with each if both are open at the same time.
- The door is attached at the base of the panel at any end position with a wrap around bracket. Bracket kits are ordered in conjunction with appropriate end trim profiles. The slots at the base of the panel must be clear **(D)** and cannot be utilized by worksurface supports or panel hung components.
- If the door is mounted to a panel run that is positioned adjacent to a wall **(E)** or an inside 90° angle and there is not a 42" clearance between the track and the wall/inside 90° the assembly of the first stop will be difficult and plans will need to be modified for the assembly.
- If a door is closing an opening of a workstation that includes a "T" connector in the opposite wall, an extended straight connector may need to be used to maintain the 36" required opening.
- Door leveling is dependent on floor being level.



Connectors

There are three components to consider when specifying Stride connectors: 1) connector blocks 2) light block kit 3) vertical trim. Light block and trim must be ordered separately. See examples of "L", "T", and "X" configurations on pages 176 and 177.



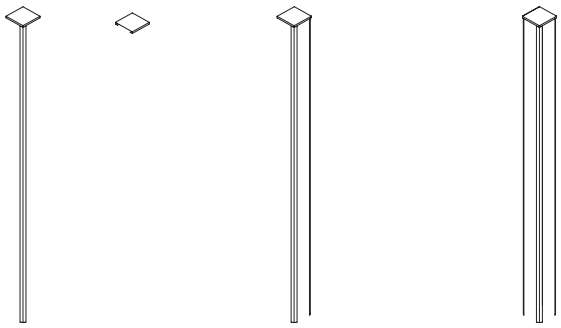
Connector Blocks

2-Way, 3-Way, and 4-Way Universal Connector Blocks

2-Way 120° Connector Blocks

3-Way 120° Connector Blocks

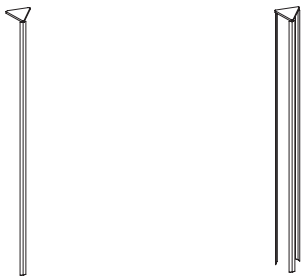
35"H Frames = 2 Connector Blocks
42½"H Frames = 3 Connector Blocks
50"H Frames = 3 Connector Blocks
57½"H Frames = 3 Connector Blocks
65"H Frames = 4 Connector Blocks



Add connector blocks for each level:
7½"H = 1 connector block
15, 22½ or 30"H = 2 connector blocks

STEP 1: CONNECTOR BLOCKS (page 194)

- Universal connector blocks are used to connect frames at "L", "T", "X", or "S" connector junctures, 2-Way "B" 120° connector blocks are used for 120° connector junctures, and 3-Way "C" 120° connector blocks are used for 3-way connector junctures.
- At all connector junctures, specify the number of base frame connector blocks based on the height of the shortest base frame(s).
- Starting at the top of the lowest base frame and going up, add additional connector blocks for each level change. *A level change is any difference in height between frames and/or stacking frames within a connector juncture, not necessarily top cap to top cap. A level change includes a stacking frame (each stacking frame level requires 2 connector blocks).*
- Continue adding blocks for each level until there are fewer than two frames remaining above the last specified level.
- When specifying the 2-, 3-, or 4-way Universal Connector Blocks, CAP/CET specification tools will auto-pick the Z3UCON10P model which comes as a pack of 10. You can manually overwrite this model to Z3UCON and adjust the quantity as needed.



Light Block

2-Way Light Block **3-Way Light Block** **4-Way Light Block**

2-Way "L" 2-Way "S"

120° Light Block

2-Way "B" 3-Way "C"

2 Frames (90°) = 2-Way Light Block Kit (L)
3 Frames = 3-Way Light Block Kit (T)
4 Frames = 4-Way Light Block Kit (X)

2 Frames (120°) = 2-Way Light Block Kit (B)
3 Frames (120°) = 3- Way Light Block Kit (C)

STEP 2: LIGHT BLOCK KIT (pages 195-200)

- Each light block kit includes a top cap transition piece and light block. Light block can be specified without top cap for use in extended straight specifications when using spanning top trim.
- Connector blocks and trim must be ordered separately. Trim is available in painted or veneer finish. If top cap only (for use at a 2-way extended straight connector juncture) no light block is required.
- Light block height is equal to the tallest frames. ***Exception:*** When there is only one tallest frame, determine the light block height considering the frames(s) at the next highest frame height.
- Light block quantity is determined by the number of frames at the connector juncture.
- The top cap transition piece is determined by the configuration of the tallest frames at a connector juncture. ***Exception:*** When there is only one tallest frame, specify the top cap transition piece considering the frame(s) at the next highest frame height **and** the tallest frame.
- The top cap transition piece will be located at the height of the light block light block kits can also be specified without a top cap transition piece.

Light Block Model Logic:

Stride connector = **Z365XS**

Z3	**6 5**	**X**	**S**
	2a. Height	**2b.** Connector Junction	**2c.** Top Cap Trans. Piece (config.)

2a. Light block height = ␣ ␣

2b. Connector junction = ␣
- X – 4-Way
- T – 3-Way
- L – 2-Way
- B – 120° – 2-Way
- C – 120° – 3-Way

2c. Top cap transition piece (configuration): X, T, L, S, B, C = ␣
Letter codes will be the same if panels are all the same height.

Connectors

Vertical Trim

"VH" Variable Height End Trim

"EG" Grooved Variable Height End Trim

"L" 2-Way 90° Filler Trim

"F" Flat Filler Trim (Use 2 for "S" Extended Straight)

"B" 2-Way 120° Filler Trim

"E" End Trim

"EF" End Trim for Footed Panel

STEP 3: TRIM (pages 195-200)

- Vertical trim finishes off panel frames and connectors - available in painted or veneer finish. Connector and light blocks must be ordered separately.
- Vertical filler trim is specified by first considering the location (height) of the top cap transition piece at the connector juncture. (Step 2)

Variable Height (pages 195-200)

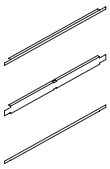
- Directly above the top cap transition piece, specify variable height vertical trim "VH" to cover the exposed frame. "VH" attaches directly to the end of the panel frame to finish ends in a high-low condition.
- "G" grooved variable height end trim is used when the base frame of a panel mounted screen is shorter than the adjacent in-line panel.

Filler Trim (pages 195-200)

- Below the top cap transition piece, fill voids to cover exposed connector blocks. If there are two adjacent exposed sides (90°) use "L" 90° vertical filler trim. "L" 90° vertical filler trim attaches to connector blocks
- Fill in remaining voids with "F" flat vertical filler trim, which also attached to connector blocks.
- For "S" extended straight configurations, specify 2 "F" flat vertical filler trim pieces.
- "B" vertical filler trim is used below the top cap transition piece in 120° configurations.

Finished Ends (page 200)

- "E" vertical end trim attaches to the end of the panel frame for use as a finished end on base raceway panel frames.
- "EF" vertical end trim for footed panel is used as a finished end on footed panels frames.
- Wall mount kits provide a means to affix a panel frame to a permanent building wall. Kit adds ¼" to length of panel run.



Wall Kits

Wall Mount Kit

Wall Track

Wall Track Tile Attachment Kit

Wall Track Tile Segment

"W" Wall Mount Kit (page 201)

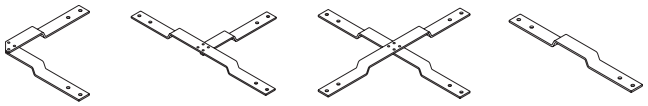
- Includes top cap.
- Adds 1¼" to run.
- Provides means to affix a panel run to permanent building wall.
- Anchor devices are not supplied.
- Available in painted or veneer finish.

Wall Track (page 201)

- Allows for mounting of system panel components on permanent wall structures.
- Vertical wall track is 60"H. Field cut for lower heights.
- Wall track will add ⅞" to depth of attached components.
- One pair — left and right included.

Wall Track Tile Attachment Kit (page 201)

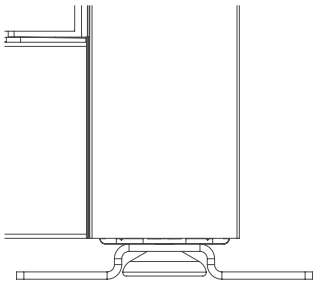
- Allows mounting of Stride tiles to wall track segments.
- Includes two top/bottom bars and one middle segment bar.
- Add additional wall track tile segment(s) if attaching more than two tiles.



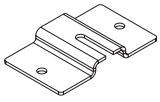
Wall Track Tile Segment (page 201)

- Includes one middle segment bar for additional segmentation.

Connectors

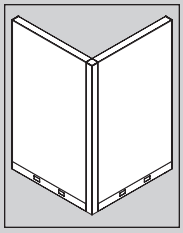


Stride® — Working with Top Stabilizer Brackets



Top Stabilizer Brackets

Top Stabilizer Brackets
Top and Bottom



Top Stabilizer Brackets (page 202)
- Optional brackets to provide added strength to reduce flex at panel junctions.
- Lay in cabling below top cap is not possible where bracket is installed.
- Panel mounted screen cannot be used where bracket is installed.

Seismic Attachment Bracket Kits (page 127)
- Kits come in quantity of 4 brackets.
- Allows for mounting panel systems to the floor.
- No additional brackets required to be HCAI compliant, brackets are offered if additional stability is desired.
- Additional information regarding HCAI compliance available via *HCAI Certification FAQ* available through www.allsteeloffice.com site.
- Panel system height recommended in lowest, level setting to clamp system to clip.

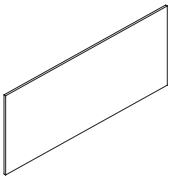
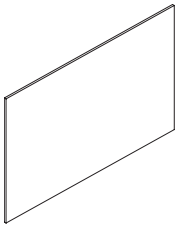
Tiles

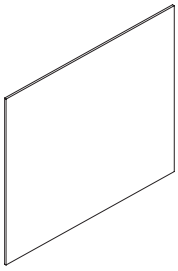
Stride tiles come in a variety of styles. Select the aesthetic* and functional combination that meets your specific requirements.
Additional tiles available, see pages 178-185.



*Aesthetics of opposing tile surface and/or frame interior should be considered when selecting perforated or light colored translucent materials.



Tiles



7½"H Tile

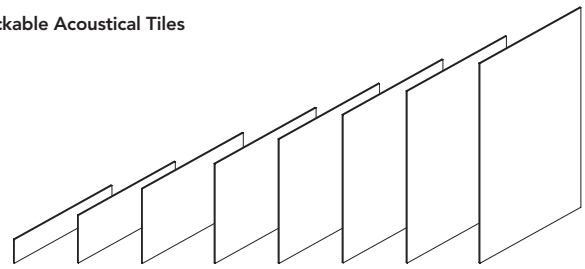
15"H Tile

22½"H Tile

30"H Tile

Landscape™ Surface Material is a ¼" thick material that is available for use on tiles, tower sidelights, storage fronts, panel mounted screens, and modesty panels. The Landscape surface material offering for Stride includes: Foundation and Quattro. Refer to the matrix below for usage guidelines.

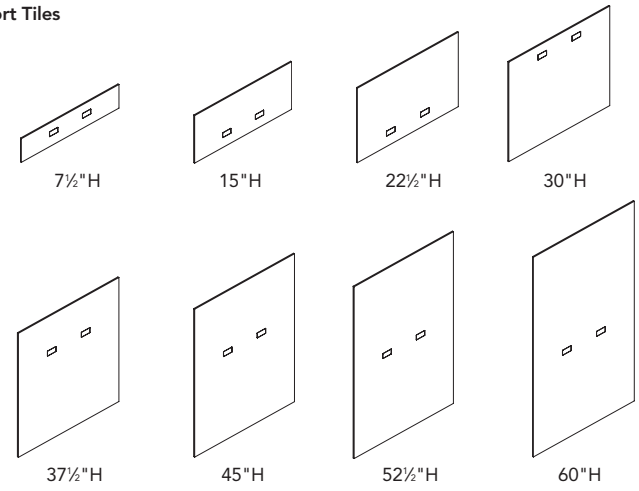
Foundation
- Foundation is a fabric material laminated between recyclable PETG resin sheets.
- Foundation is available in two color options: Pure White and Sand.



Quattro
- Quattro is fabric laminated between recyclable PETG resin sheets.
- Quattro is available in Platinum.

Frosted Translucent
- Frosted Translucent is ¼" thick Plexiglas acrylic with flat polished edge.
- Frosted Translucent is available in one color option: Frost.

	Tiles	Tower Sidelights	Storage Fronts	Panel Mounted Screens	Desk Screens	Modesty Panels
Foundation	•	•	•			
Quattro	•	•	•			
Frosted Translucent					•	



Tiles ship with attachment clips installed. Tiles do not include segment kits, order separately.

Tackable Acoustical Tiles

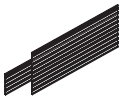
Steel
Tile-to-the-Floor



22½", 30"H

Perforated Steel Tiles

7½", 15", 22½", 30"H

Tool Tiles

7½", 15"H

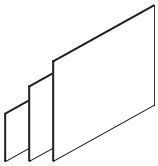
Tackable Acoustical Tiles (pages 203-204)
- Tackable and acoustical. 7½"H-60"H, 20"W-60"W.
- Tiles do not include segment kits — order separately.
- Tiles are level® 2 when a level® 2 fabric is used.

Port Tiles (pages 205-206)
- Receptacle openings with blank covers (1 in 24"W tiles; 2 in wider tiles).
- Receptacle openings have the ability to accept most commercially available modular data plates.
- Tackable and acoustical. 7½"H-60"H, 24"W-60"W.
- Grommet opening dimension is 1.375"H x 2.700"W.
- When using rail based off-modular, ported tile grommets may interfere with frames mounted perpendicular to the spine.
- 7½"-15"H port tiles can be mounted in any position except bottom position on frame.
- 7½"-22½"H are ported in the bottom for use when segmenting.
- 22• "H port tiles can be flipped for below worksurface power access.
- 30"-60"H port tiles are used to position grommets above a worksurface mounted at 29½"H. Designed for use in bottom position, but can be used in any position.
- Tiles do not include segment kits — order separately.
- Tiles are level® 2 when a level® 2 fabric is used.

Tackable Acoustical Tiles to-the-Floor (page 207)
- Tackable and acoustical. 22½"H-60"H, 20"W-60"W.
- Tiles to-the-floor are to be used in the bottom position only.
- Tiles to-the-floor are 5" longer to accommodate to-the-floor applications and replace base raceway cover.
- Tiles do not include segment kits — order separately.
- Tiles are level® 2 when a level® 2 fabric is used.
- Cannot use tiles to-the-floor with footed panel frames.
- Requires simple in field modification to frame glide tower. After modification, base raceway cover cannot be used with fabric or steel tiles.

Steel Tiles (page 208)
- Painted steel construction. 7½"H-30"H, 20"W-60"W.
- Tiles do not include segment kits — order separately.
- Steel tiles can be used in any location.

Steel Tiles to-the-Floor (page 208)
- Painted steel construction. 22½"H-30"H, 20"W-60"W.
- Tiles do not include segment kits — order separately.
- Tiles to-the-floor are to be used in the bottom position only.
- Tiles to-the-floor are 5" longer to accommodate to-the-floor applications and replace base raceway cover.
- Attachment hardware included.
- Cannot use tiles to-the-floor with footed panel frames.



Perforated Steel Tiles (page 209)
- Tiles do not include segment kits — order separately.
- Allows air flow when placed on each side of panel.
- Aesthetics of opposing tile surface and/or frame interior should be considered when selecting perforated steel tiles.
- Should not be used at locations that span horizontal segment kits or at beltline.

Tool Tiles (page 210)
- Sturdy aluminum extrusion.
- Accommodates Extensions™ work tools — weight capacity not to exceed 80 lbs. If monitor arm attached subtract 25 lbs.
- Consideration needs to be given to height of tools and location of worksurfaces and storage.
- Do not segment within the center of the back side of a 15"H tool tile, instead use two 7½"H tool tiles.
- Tiles do not include segment kits — order separately.
- Do not use at top of wall track.

Tiles

Tiles ship with attachment clips installed. Tiles do not include segment kits, order separately.

Porcelain Marker Board Tiles

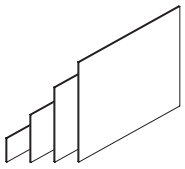
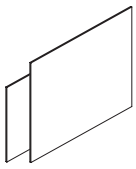
Landscape Surface Tiles



7½", 15", 22½", 30"H
Infinite Spectrum™, Pearlescent Strata, Foundation, Quattro

Handling and care for marker boards:



1. Leaving ink on the board for an extended period of time may lead to images remaining on the board, commonly known as "ghosting," after erasing.
2. To avoid ghosting, thoroughly erase your marker board after every use and clean your board weekly with marker board cleaner.
3. Expo® brand dry-erase markers are recommended for best erasing results.
4. Avoid using red and orange markers for easier cleaning and to reduce the likelihood of ghosting.
5. Do not use permanent or non-dry erase markers.
6. To maintain eraser performance, follow manufacturer's instructions.

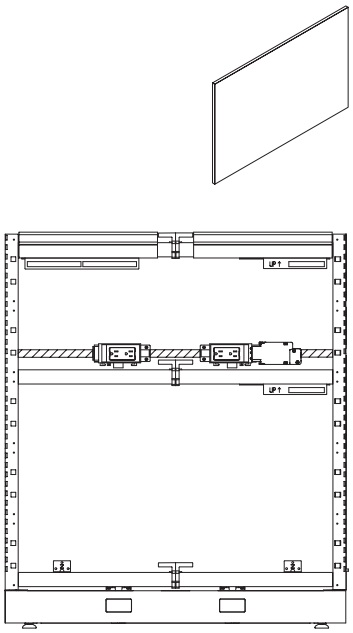
Porcelain Marker Board Tiles (page 211)
- White porcelain-coated steel surface encased within a steel frame.
- Accepts magnetic accessories.
- Paint color for frame must be specified.
- Marker boards ship with tile attachment clips installed.
- Tiles do not include segment kits — order separately.
- 15"W magnetic marker board tray that is natural aluminum is available. Order model TK4TRAYMS separately.
- For everyday cleaning of dry-erase marker ink, use Clorox wipes. Should a permanent marker be used, a citrus cleaner such as Quartet will remove the ink. Note that a citrus cleaner is not recommended for everyday cleaning as it leaves a residue on the marker board.

Steel Marker Board Tiles (page 211)
- White marker board tile; painted steel surface.
- Accepts magnetic accessories.
- Tiles do not include segment kits — order separately.
- 15"W magnetic marker board tray that is natural aluminum is available. Order model TK4TRAYMS separately.
- For everyday cleaning of dry-erase marker ink, use Clorox wipes. Should a permanent marker be used, a citrus cleaner such as Quartet will remove the ink. Note that a citrus cleaner is not recommended for everyday cleaning as it leaves a residue on the marker board.

Landscape Surface Tiles (page 212)
- ¼" material encased within a painted steel frame.
- Paint color for frame must be specified.
- Tiles do not ship with segment kits — order separately.
- Should not be used at locations that span horizontal segment kits or at beltline.
- Available in Foundation™ and Quattro.



Laminate Tiles (pages 213-214)
- Laminate construction, available in all standard laminate finishes.
- Tiles do not include segment kits — order separately.
- Grain direction runs both vertical and horizontal on 55.5" tiles but only vertical on 60" or larger tiles.
- Made of ⅜" board with HPL laminate.

Laminate Tiles to-the-Floor (pages 215-217)
- Laminate construction, available in all standard laminate finishes.
- Tiles to-the-floor are to be used in the bottom position only.
- Tiles to-the-floor are 5" longer to accommodate to-the-floor applications and replace base raceway cover.
- Do not use tiles to-the-floor with footed panel frames.
- Tiles do not include segment kits — order separately.

Single Pane Glass Tile Kits (page 218)
- Kit includes single pane of tempered safety glass for one side of frame and trim for the other side of frame.
- Glass is flush on one side.
- Tiles do not include segment kits — order separately.
- Kits ship with tile attachment clips installed.
- Attachment hardware included.
- Should not be used at locations that span horizontal segment kits or at beltline.
- Low profile glass stacker kits also available.

Pass-Thru Trim Kits (page 218)
- Painted steel frame.
- Open frame without tiles, used for ability to pass objects from one side of frame to the other.
- Segment kits not included — order separately.
- One kit accommodates both sides of panel frame.
- Attachment hardware included.
- Should not be used at locations that span horizontal segment kits or at beltline.

Tiles

Beltline power is only available above the beltline on the opposite side of the spanning tile.

Tiles

Spanning Tiles (pages 216-217)

- Not compatible with landscape tiles.
- Base panel height must match tile height. Example: 50"H tile must go on a 50"H base frame, not 50"H tile on 35"H base frame + 15"H stacker.
- Can be used with any combination of two frame widths.
- No more than two frames per tile.
- Bracket Kits:
  - Z4STBRKT1 = 30/35"H
  - Z4STBRKT2 = 42/50"H
- Full laminate and edgeband options available.
- Horizontal grain only.
- For dual-sided spanning tile applications, an additional Bracket Kit must be ordered.
- For dual-sided applications, spanning tiles must be mounted to the same panel frames.
- Laminate is ⅜" thick, edgeband is 0.8mm thick.
- Slotted standard is accessible when using spanning tiles on the two outside slots.
- Cannot be used with Wall Track.
- Spanning tiles are not compatible with panel frames produced prior to July 2014. For applications with panels produced prior to July 2014, please reach out to the Tailored Products Group.

Veneer

Stride Stratawood and Natural Veneer

Wood owes its inherent beauty to variations in color, grain and texture, and therefore, these variations are not considered defects. There may be minor variations from one piece of furniture to the next, even though they are finished at the same time. Exposure to light and the aging process will cause darkening of natural wood products. Light finishes on wood products do not mask the natural characteristics of wood. Therefore, Allsteel does not guarantee the exact matching grain, pattern and color.

Stride veneer trim, connectors, tiles and storage fronts are offered in Stratawood (composite) finishes and in Natural veneer finishes. (See page 162 for finishes.)

Stride Stratawood and Natural veneer worksurfaces are protected by one of the world's most advanced wood finishing process by Gunlocke®. It provides the ultimate in scratch, stain, chemical, and heat resistance for these high-wear surfaces. The jewel-like clarity and depth allow the natural beauty of the wood to glow through.

Stratawood Veneer Vs. Natural Veneer: Which is best for you?

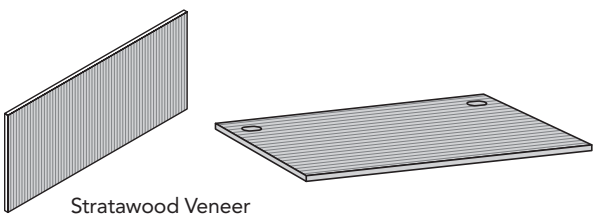
Stratawood and Natural veneer have similarities and differences. Both options provide a wood surface. Exposure to light will cause both options to darken. Both Stratawood and Natural veneer will be a stylish addition to any specification. However the look, feel and process for Stratawood and Natural veneer are different.

Stratawood Veneer

Stratawood veneer features a repeatable straight-grain pattern, absent of the cathedrals seen in Natural veneer. Although slight differences in tone should be expected, the Stratawood pattern will maintain a consistent appearance across all products.

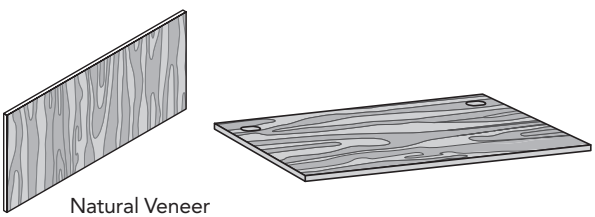
Stratawood veneer is an engineered wood veneer enhanced by technology for consistency in both color and grain pattern resulting in very few defects.

Although exposure to light will cause Stratawood veneer to darken slightly, additional orders at later dates will match existing product pattern and will match the color when matured. This creates a smooth process for adding on to existing installations.



Natural Veneer

Natural veneer is subject to nature's quality control. Differences in grain and color are naturally occurring variations and can not be controlled by the manufacturer and cannot be considered as product defects. Natural veneer has the characteristics and beauty of a living organism; with its own variations of grain, growth, and color patterns. For these reasons, Natural veneer is preferred by many for its warmth and personal characteristics.



Color changes will occur over time when wood is exposed to light. For this reason, when new product is ordered as an addition to existing product, there will be color variances between the old and new product. Please remember when specifying new product that although the species of veneer will be the same, additional product is being manufactured from a different tree. It may take several months for the new furniture to mature to the color level of the existing product. Even with this maturation process the additional product may not be an exact match.

When ordering Natural veneer tiles for Stride frames, please refer to pages 183-184 for information. Natural tiles sets must be ordered to ensure grain pattern matching. All panels with two or more continual natural veneer segments will need to be ordered as a set and will be grain matched for consistency. These tile sets must remain together throughout the manufacturing and installation process.

Natural veneer worksurfaces may exhibit a color variance between the surface and the edge detail or when butted together at a 90 degree angle. This natural phenomenon is called polarization (or grain flip) which alters the color and appearance of adjacent worksurfaces with grain running perpendicular. The appearance of wood veneer may change slightly depending on what angle it is viewed from, although it is most often noticed on worksurfaces installed at 90 degree angles to each other. For your guidance, please see illustrations within the worksurface section when specifying for an understanding of grain direction in your installation.

Stratawood Veneer

Natural Veneer

Veneer

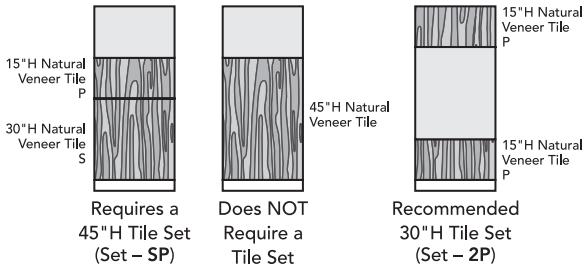
Caring for your Veneer finish:

- General maintenance procedures entail wiping clean the entire surface with a clean, water dampened soft cloth once per week. (Be sure to wipe with the grain.)
- Murphy's® Oil Soap may be used as a general purpose type cleaner with warm water to clean tops.
- The finish may also be polished with Guardsman® Furniture Polish (contains no waxes or silicones) to provide renewed luster.
- Be sure to wipe up all spills immediately.

Veneer on Stride

2 Different Veneer Types

Natural veneer is subject to nature's quality control. Each specimen will exhibit differences in grain pattern and tone. This is to be expected, and, in fact contributes to the individuality of each product.



Stratawood veneer features a straight-grain pattern, absent of the cathedrals seen in natural veneer. Although slight differences in tone should be expected, the Stratawood pattern will maintain a consistent appearance across all products.

Veneer Finish Options

See page 162 for available finishes and finish indicators in both Natural and Stratawood.

Natural Veneer Tile Sets for Stride

- Natural veneer tile sets are used when 2 or more natural veneer tiles are vertically adjacent to each other on the same panel (see illustration below) in order to maximize the beauty of real wood and carry the grain pattern from tile to tile.
- Tile sets do not apply to Stratawood tiles, as the grain pattern is consistent from tile to tile.

Specifying Standard Natural Veneer Tile Sets

1. Determine the height of the natural veneer tile set.
   a. The total height of tile required can be calculated by deducting 5" (the height of the frame base) from the nominal panel height.
   b. To calculate set height simply add the heights of the tiles in the set (for example, one 15"H tile and one 30"H tile would require a 45"H tile set — see illustration above).
2. Natural veneer to-the-floor tile sets are available following regular sets.
   - A 45"H Natural veneer to-the-floor tile set will fully fill a 50"H frame.
   - A 52½"H Natural veneer to-the-floor tile set will fully fill a 57½"H frame.
   - A 60"H Natural veneer to-the-floor tile set will fully fill a 65"H frame.

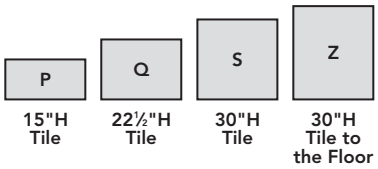
Note

1. Tile sets MUST remain together throughout the installation process in order to maximize the beauty of real wood and carry the grain pattern vertically from tile to tile.
2. The backside of each tile in the tile set is marked with a set number so that the tiles comprising that specific set do not get confused with any other natural veneer tile sets.
3. The backside of each tile in the tile set with a letter denoting the placement of each tile in the set. The tile marked A is the top tile in the set, followed by B, C, and so on.

Natural Veneer Tile Set Position Options Chart

Natural Veneer Tile Sets	Nominal Panel Height	Natural Veneer Tile Set Code	Tile Set Height	Tiles Included (bottom to top)
	35"H	2P	30"H	PP
	42½"H	QP	37½"H	QP
	50"H	3P	45"H	PPP
		SP	45"H	SP
	57½"H	Q2P	52½"H	QPP
		SQ	52½"H	SQ
	65"H	4P	60"H	PPPP
		S2P	60"H	SPP

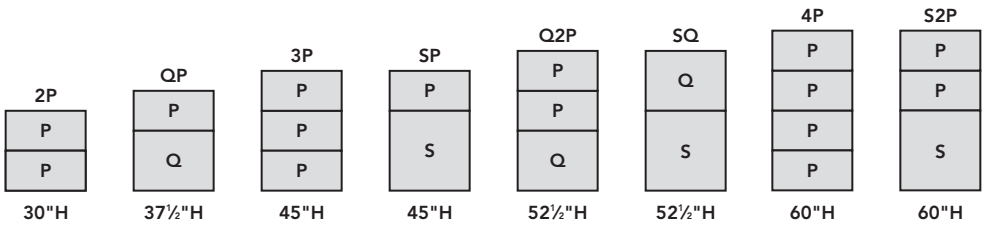
Veneer Tiles (page 219)
- Veneer tiles produced by Gunlocke® available in Stratawood or Natural veneer.
- Stratawood veneer has a consistent straight-grain pattern.
- Natural veneer will have cathedrals and as a natural material is subject to nature's quality control with variations in grain pattern and tone.
- Tiles do not include segment kits — order separately.
- Veneer tiles, kits, and tile sets all ship with attachment clips installed.
- If two or more natural veneer tiles are vertically adjacent, Natural veneer tile sets should be ordered to carry the grain pattern.
- Grain direction runs both vertical and horizontal on 55.5" tiles but only vertical on 60" or larger tiles.



Veneer Tiles to-the-Floor Kits (page 220)
- Tiles do not include segment kits — order separately.
- Tiles to-the-floor are to be used in the bottom position only.
- Tiles to-the-floor are 5" longer to accommodate to-the-floor applications.
- Tiles to-the-floor replace base raceway cover.
- Tiles to-the-floor cannot be used with footed panel frames.

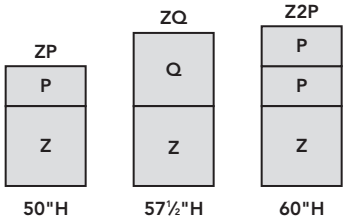
Natural Veneer Tile Sets (pages 221-222)
- Specify when two or more natural veneer tiles are adjacent to carry the vertical grain pattern from tile to tile.

Veneer to-the-Floor Tile Sets (page 223)
- Specify when two or more natural veneer tiles are adjacent to carry the vertical grain pattern from tile to tile.
- Veneer to-the-floor tile set are 5" longer to accommodate to-the-floor applications.
- Veneer to-the-floor tile sets replace base raceway cover.
- Veneer to-the-floor tile sets cannot be used with footed panel frames.

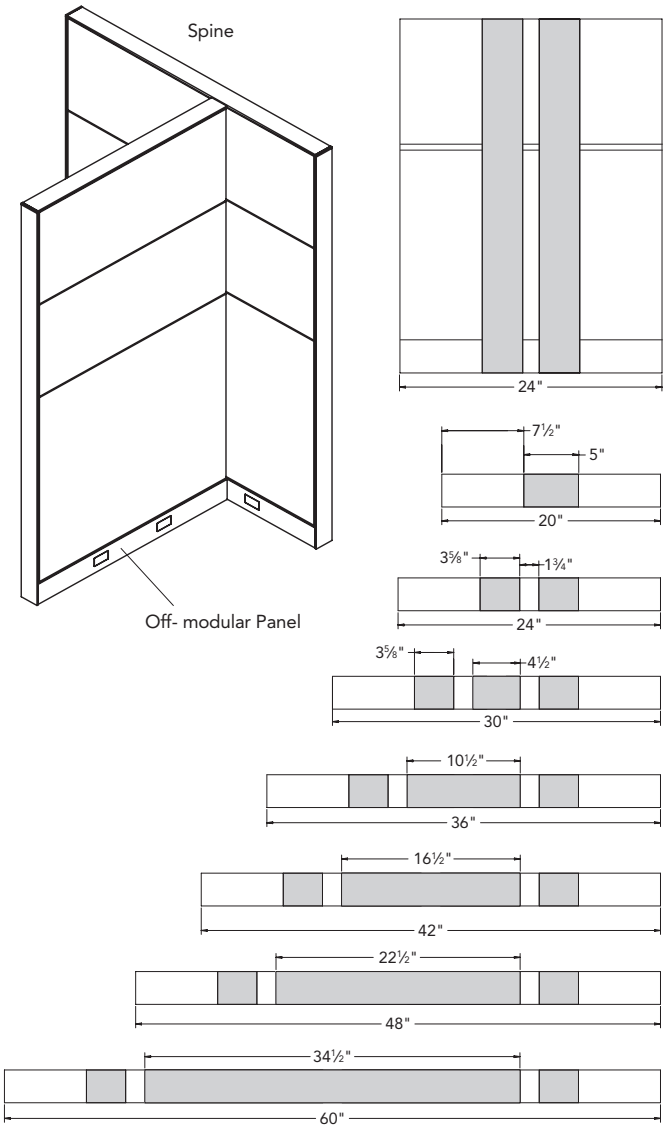


Natural Veneer Tile Sets

Tile Height Codes used for Natural Veneer Sets below:

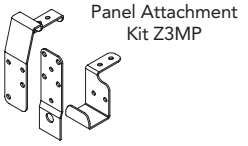


Letters on tiles represent height of individual tiles, see codes above.

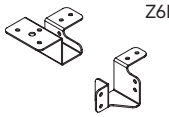


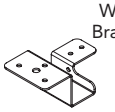
Ordering code is listed above each tile set, and total height of set is listed below.

Veneer to-the-floor tile sets have a base tile that is 5" longer to accommodate "to-the-floor" applications.

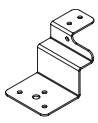


Off-Modular

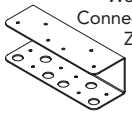




Shaded area indicates acceptable location for off-module connector when using electrical power harnesses.



Off-Module Non-Rail Based Connector Guidelines



- Off-module connector kits join panels off-module at 90° angles. The total 3" panel thickness must be positioned within the confines of the shaded areas, as depicted in the illustration, but cannot be positioned directly over electrical cutouts in the frame horizontal.
- Tiles and base pathway covers cannot be removed from the face of a panel to which an off-module connected panel is mounted.
- Base panel frames must be the same height.
- Do not stack on an off-modular return panel.
- Do not suspend more than one overhead storage unit per side from panels in a panel run which is mounted, at one or both ends, with an off-module connector kit.
- Use data port (model UTP) to route data and electrical between primary panel run and panel-mounted off-modular.
- Panel mounted screens or low profile glass stackers cannot be used on the parent run or on an off-modular panel.
- Footed panel frames can be used on the spine wall but cannot be used as the off-modular panel frame.
- To-the-floor tiles cannot be used on the side of the spine wall where off-modular return panel is attached.

Panel Attachment Kit Z3MP

End Panel Kit Z6EPK

Worksurface Bracket Z6MK

3" Layered Worksurface Bracket Z6Z3MK

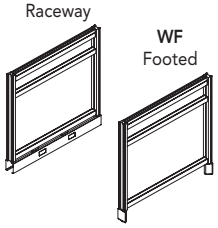
Layered Worksurface Connection Bracket Z6C3BK

Off-Modular Non Rail-Based Accessories

Panel Attachment Kit (page 224)
- Connector allows for off-module connection, does not add to length of run.
- Black only.

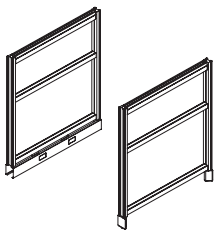
End Panel Kit (page 224)
- Used to attach an end panel off-modular.
- Bracket requires a segmented panel at 22½"H for mounting.

Worksurface Bracket (page 224)
- Allows in-line support legs and end-panels to be attached off-module.
- Bracket requires a segmented panel at 22½"H for mounting.
- Cannot be used closer than 12" from end of panel.



3" Layered Worksurface Bracket (page 224)
- Used to mount off-modular worksurface at 26½"H.
- Bracket requires a segmented panel at 22½"H for mounting.

Layered Worksurface Connection Bracket (page 224)
- Used to attach a worksurface 3" higher or lower to an installed worksurface.



Frames

- Optional Acoustic Inserts enhance the acoustic value of Stride Panels.
- Full Acoustic Insert provides two fillers to span from lower horizontal cross member to upper horizontal cross member.
- Upper Acoustic Insert spans from above beltline horizontal to upper horizontal cross member.
- Acoustic Insert material can be compressed up to 90% to allow for power and data cables routed in panels between tiles.

Electrical & Data

Stride features high capacity for cable management, including electrical, voice, and data capabilities. The 8-wire electrical system can be integrated at base pathway and beltline. The open structure of the frame allows voice and data cables to be routed both vertically and horizontally.

Electrical & Data

Electrical Systems

Stride electrical offers a choice of four electrical systems:

- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals
- Eight circuits; two four-circuit systems provided back-to-back.

- See pages 228-229 for a detailed explanation of each electrical system.
- All four systems utilize an 8-wire electrical system, rated at 20 amps per circuit (16 amps plan-able U.S. and 15 amps Canadian).
- Stride panels and electrical components are UL Listed. Electrical components are also CSA certified. PVC-free models are C2C certified.
- Installation and use of the electrical system, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes.

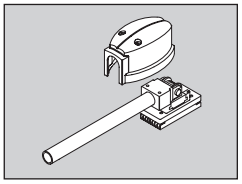
Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through cable openings in frame sides.

Note: No more than one conduit that is connected to a harness mounted to horizontal can be routed through the same cut out in the same horizontal. Attempting to use more will cause binding of conduit and may affect reveals on receptacles.

Hardwire New York Code (page 237)

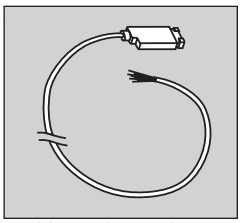
- **Hardwire (New York Code) junction box** (model A871400C) is used when local electrical codes require hardwire entry.
- For use in panels 30"W to 60"W.
- When used in 30"W and 36"W panels, power can be routed only in one direction.
- When used in 42"W, 48"W, and 60"W panels, an electrical pass-thru cable or harness for that panel width can be used to route power back in the opposite direction.
- Unit must connect to a power or pass-thru harness positioned in the base pathway area of an adjacent panel.
- Customer to furnish all cabling and wiring from power entry to power source.
- Junction box can be positioned at any duplex receptacle location.

Hardwire Chicago Code (page 239)



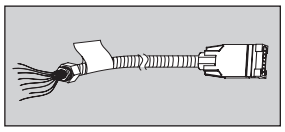
- Wiring harnesses and snap connectors are not allowed in Chicago — base pathways must be comprised of all-metallic components.
- For the base pathway, junction box (model 877600) clips directly into receptacle locations and can be used both single- and double-sided.
- In the beltline location, junction box (model 877550) can only be used single-sided.
- Base pathway model has a larger volume capacity for wiring to allow for dual-sided applications.
- Customer must furnish conduit, wiring, and designer-type receptacles for the base pathway and conduit, wiring, designer-type receptacles, and receptacle covers for the beltline.
- Tiles at the beltline must be field ported.
- Power entry can be routed from the ceiling, via a Stride power pole, or from the floor into a junction box (beltline model 877550; or base pathway model 877600).

Electrical Infeeds



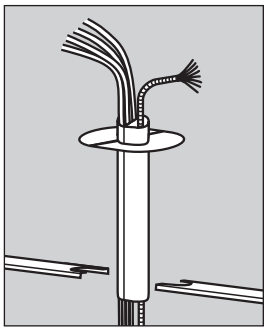
- **Power infeed cables** deliver power from building to panel's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communications and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.

Base Infeed (page 237)



- **Sealtight base pathway power infeed** attaches to any receptacle opening at the base pathway.
- A heavy rubber sheathing shields conduit, allowing infeed to be exposed.
- A jumper is required to connect base pathway power to beltline.

Sealtight Electrical Infeed Cable (page 237)



- **Sealtight electrical infeed cable** is used with footed panels.
- Should not be ordered prior to installation to have prewired as infeed must be routed from inside of panel out to be connected to power.
- Cannot be connected to power harness in panel frame that infeed is brought into unless additional pass-thru harness without power block is used to feed from below beltline to above beltline.

Ceiling Power Infeed (page 237)

- **Ceiling power infeed** connects to a prewired electrical harness in the beltline or base pathway, traverses through an adjacent panel and terminates in the junction box at the top of the integrated power pole.
- For use with integrated power pole models Z235PP and Z265PP.
- Can also be used as infeed for footed panels.
- Most codes permit flex conduit to be exposed after installation. Verify code requirements before ordering for exposed application.

Integrated Power Pole (page 237)

- **Integrated power and communications poles** provide capacity for routing power supply directly through the top of any structural or stacking frame using same width trim/connector kit in place of top cap.
- Power pole has a cavity on each side of a center septum.
- See page 234 for cable capacity.
- When using a ceiling power infeed, consider that the infeed must connect into an electrical harness located in an adjacent panel.
- Integrated power pole will not work with low profile glass stackers, panel mounted glass screens, or panel mounted screens.
- Avoid glass or translucent tiles in upper position of frames with integrated power poles.

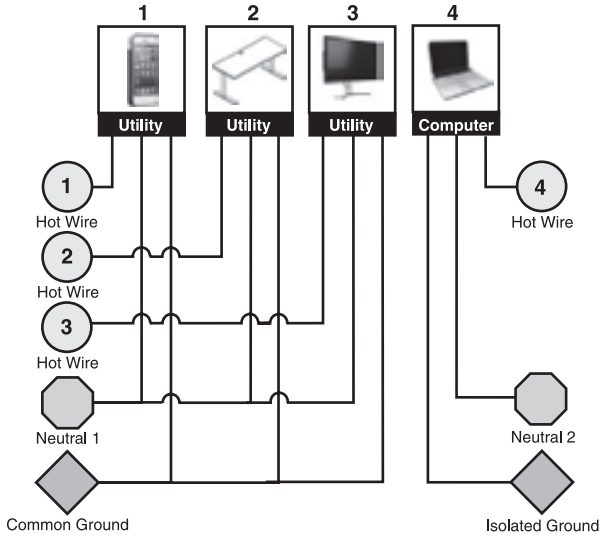
Electrical & Data

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - The Four-circuit system (4-Hot/2-Neutral/2-Ground)
     - 3 + 1 option
     - 2 + 2 option
   - The Three-circuit system (3-Hot/3-Neutral/2-Ground)
   - The Eight-circuit system (back-to-back four-circuit systems)
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of Isolated, Isolated/Dedicated, and Separate Neutrals circuits.
4. Specify appropriate Power Harnesses* and Pass-Thru Cables.*
5. Determine the location, quantity, and type of Power Infeeds needed.

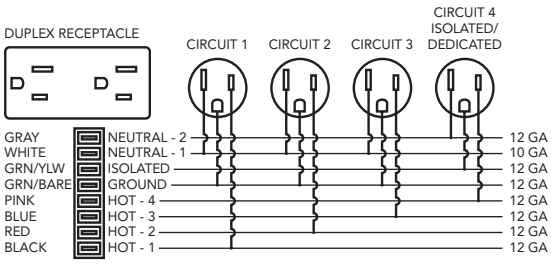
* Select Power Harness models (A8712XX), Pass-Thru Cables (A8710XX) and Pass-Thru Harness (A8711XX) with the last two digits corresponding with the panel width into which the component is to be positioned. The initial cable length can be stretched approximately 3" to transverse "T", "X", "L" and Extended Straight Connectors.

Flexconnect™ Electrical System Options



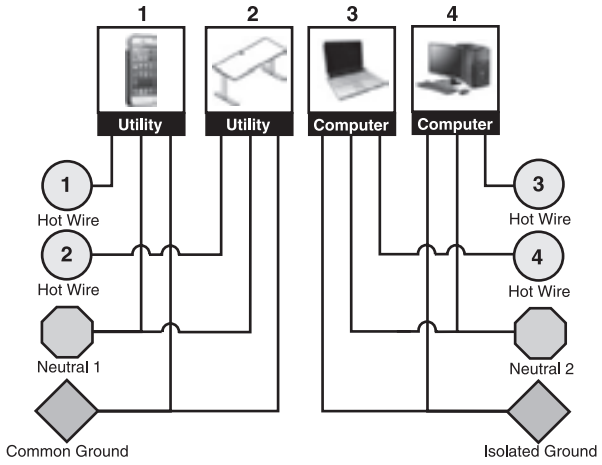
The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same prewired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an "A" suffix.

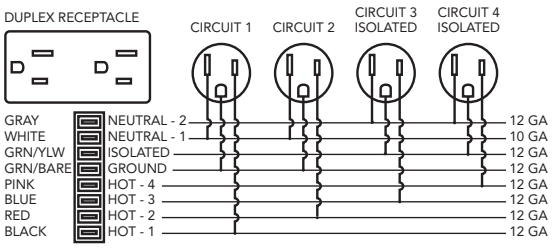


All three systems utilize an eight-wire electrical system rated at 20 amps per circuit (15 amps Canadian).

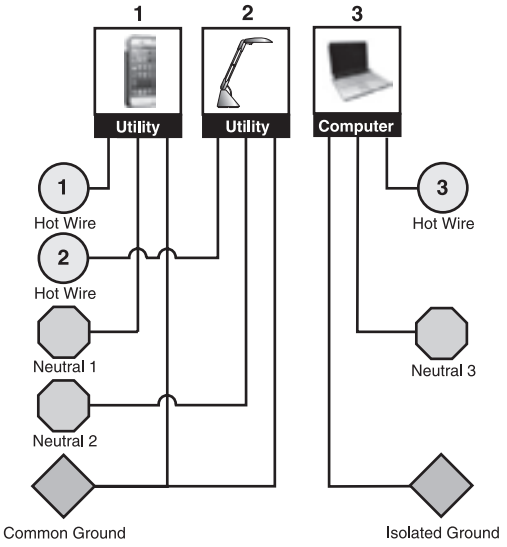
Reference the Office Equipment Typical Load Values matrix on page 236.



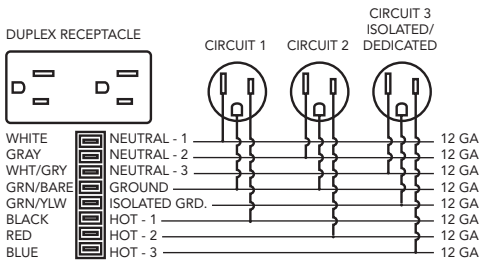
Four-circuit, 3 + 1 Receptacle Option



The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.



Four-circuit, 2 + 2 Receptacle Option



The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Three-circuit, separate neutrals

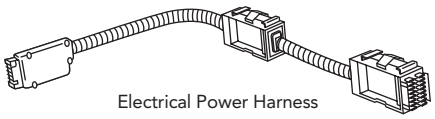
The three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/ dedicated. The three-circuit components have model numbers with an "A" suffix.

Stride System Receptacle Usage					
Two 8-wire, 20 amp (15 amp Canadian) electrical systems are offered					
Electrical System	Circuitry	Receptacle Capacity			
Four-circuit 4-Hot/2-Neutral/2-Ground	**3 + 1**	Common Circuit-1 **A877501**	Common Circuit-2 (1) **A877502**	Common Circuit-3 **A877503**	Iso/Dedicated Circuit-4 **A877504**
	2 + 2	Common Circuit-1 **A877501**	Common Circuit-2 **A877502**	Isolated Circuit-3 **A877506**	Isolated Circuit-4 **A877504**
Three-circuit 3-Hot/3-Neutral/2-Ground	**w/separate neutrals**	Common Circuit-1 **A877501A**	Common Circuit-2 **A877502A**	Iso/Dedicated Circuit-3 **A877503A**	N/A

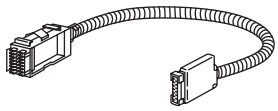
(1) Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.

Notes:

- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.
- Components of the two systems are keyed differently to prevent components of one system being connected to components of another system.
- Allsteel Model Numbers are printed on the UL labels, and components are color-coded to provide visual identification of the different components.
- Four-circuit components have black plastic parts.
- Three-circuit components have rust-colored terminal ends and receptacle backs are rust colored.

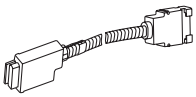


Duplex Receptacle



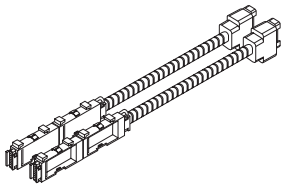
15 amp Receptacle

Power Harnesses, Pass-Thru Cables, and Jumpers



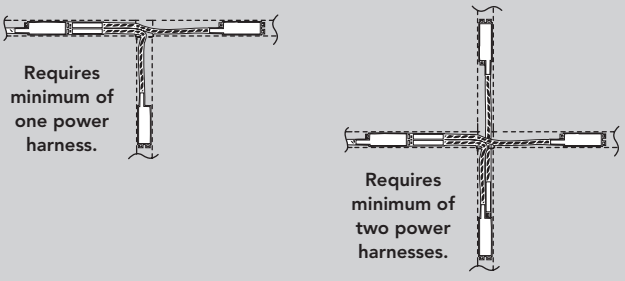
Electrical power harnesses are used to distribute power in Stride panels. Harnesses can be mounted at the base pathway and at 7½" vertical intervals above the base pathway using mounting brackets or power block beltline mounting brackets. **Power blocks** on electrical power harnesses and pass-thru harnesses accept duplex receptacles.

Electrical Power Harness



Electrical Pass-Thru Harness

Electrical Pass-Thru Harness without Power Block



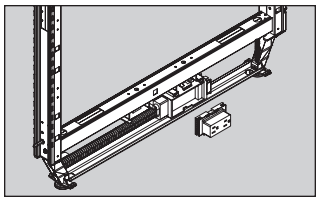
Electrical Jumper Cables

Dual Electrical Eight-circuit Power Harness Kit

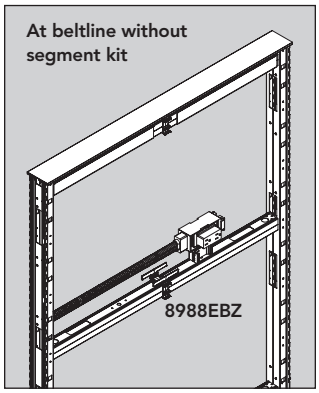
All electrical power harnesses and pass-thru harnesses (except 20"W) will stretch 3½", allowing them to span "T", "X", and "A" intersections and "S" extended straight connections.
Note: "T" intersections require a minimum of one power harness and "X" intersections requires a minimum of two power harnesses.

Use of a ceiling infeed or jumper requires one additional harness.

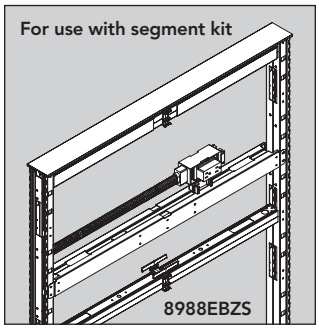
Power Harnesses (page 238)
- Specify harness length to match panel width. 24" power harnesses accept one receptacle on each side of the harness when exposed, all other power harnesses have power blocks to accept four duplex receptacles (two on each side of panel).
- Connectors at both ends of power harnesses allow power distribution in either direction.
- Harness power blocks snap directly onto brackets in base pathway; at beltline or other vertical locations harnesses require optional mounting brackets.



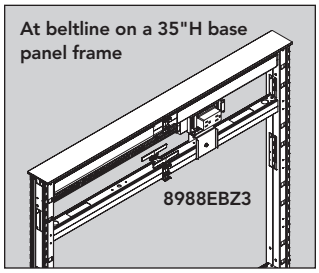
Pass-thru Harnesses (page 238)
- Electrical pass-thru harnesses have capacity to handle one duplex receptacle on each side of panel.
- Electrical pass-thru harnesses distribute power in panels — specify harness length to match panel width.
- Electrical pass-thru cables distribute power through any panel where receptacles are not required.
- 20"W frames use 20"W pass-thru cables since they do not have electrical knockouts or ported tiles. Cable length cannot be stretched.



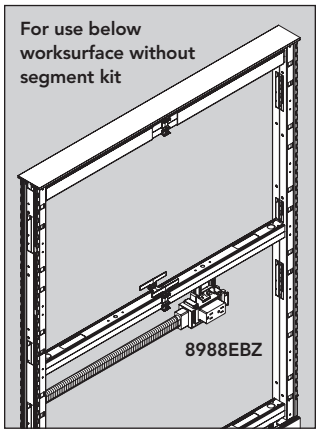
Jumper Cables (page 238)
- Electrical jumper cables connect power from base pathway or beltline to a harness located on any horizontal member as needed.
- Jumper cable plugs into power block end of electrical power harness or electrical pass-thru harness.
- Model A871366 is 66" and connects beltline power harnesses at 90° juncture to adjacent base line power.
- Model A8713108 is 106" to jumper up to 69" vertically – from base rail up to the highest 7½" opening on an 65"H frame.



Dual Electrical Eight-circuit Power Harness Kits (page 238)
- Kit provides back-to-back four-circuit systems giving double the capacity of harness and pass-thru cables
- Requires two four-circuit infeeds. Uses four-circuit receptacles.
- Models must be positioned "back-to-back" in the panel — single-side use is not permitted
- Components can only be routed in a single run — a single run cannot branch to multiple panel runs at "T" and "X" junctions.
- Four-circuit jumper cables (A8713xx) can only be connected to a power block at one end of a run. Power cannot be routed between a run in the base pathway and a run in the beltline area, except at one end of the run.
- To connect power between the base pathway and the beltline area, four-circuit jumper cables (A8713xx) must be connected to a power block at one end of a run, routed into an adjacent panel that contains no power harness, then routed back into the panel that contains a power harness (or pass-thru cable), and connected to a power harness in the other pathway.
- Standard four-circuit pass-thru cables (A8710xx) can be used in between power harnesses. Two are required in the back-to-back configurations.
- Models can be connected to standard four-circuit power harnesses and pass-thrus, although it is not recommended because of possible circuit number ambiguity
- Two power infeeds are required to connect the back-to-back runs. Power infeed A8719xx must be connector to a power block at the end of a run.
- Data faceplates and terminals cannot be positioned in a panel into which back-to-back power harnesses are installed
- Power infeeds A8719xx must be routed from a panel wherein no power harness is positioned, into an adjacent panel where a power harness is positioned and connected to the end of a power block.

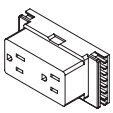


Electrical & Data



Power Blocks

Stride offers multiple options for mounting electrical:



Base Pathway Mounting
- Power blocks snap directly onto brackets in base pathway area and accept receptacles on each side of harness.

Beltline Mounting Brackets (page 239)
- For exposed receptacles at beltline mount power blocks onto electrical mounting bracket (8988EBZ or 8988EBZ3 for 35"H base panel frames — sold separately) which screw into the panel frame or segment kit.
- Port tiles must be used where exposed receptacles will be located.

Segment Kit Mounting Brackets (page 239)
- When using segment kits at other locations mount power blocks onto electrical mounting bracket (8988EBZS — sold separately) which screw into segment kit.
- Port tiles must be used where exposed receptacles will be located.

Below Worksurface Mounting Brackets (page 239)
- When using a 22½" ported tile for power below the worksurface, use beltline electrical mounting bracket (8988EBZ — sold separately) and mount the bracket underneath the standard beltline horizontal.

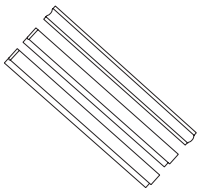
Paint Color	Receptacle Color
Carob — P52	Black — E4
Champagne Metallic — PR5	Muslin — EU
Cinder P7Q	Brownstone — EY
Fossil — P28	Flint — E9
Gunmetal Metallic — PR3	Brownstone — EY
Platinum Metallic — PR2	Loft — EV
Salt P8C	Silver — ES
Titanium P8T	Silver — ES

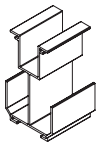


Duplex Receptacles (page 239)
- Duplex receptacles snap into power blocks of power harnesses or pass-through harnesses.
- Duplexes are available in multiple colors. See page 162 for finishes.
- Each receptacle is labeled to indicate which circuit it will be connected to: 1, 2, 3, or 4.
- Duplexes are model specific to support either 3+1 and 2+2 electrical infeed; or have an "A" suffix and are design to support a three-circuit separate neutral electrical infeed.

Cable and Wire Management

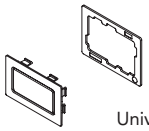
Cable Management Tray

Cable Management Tray (page 239)
- Attaches under the worksurface to contain cables.
- Metal tray shelf is 4" deep. Can hold electrical power strip and/or surge protector.
- 24" and 36" lengths, use multiple units for larger worksurfaces.
- Attachment hardware included, paint option is black only.
- Zip tie attachment points located in base of tray. Zip ties not included.
- Limited paint offering. Available in all Grade P1 and Grade P2 paint finishes for Altitude Bases with the exception of Night Bronze (P8B).



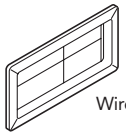
AWRSTRIP

Wire Management Strips/Channels (page 239)
- Self adhesive backing to attach to panels and underside of worksurfaces.
- Flexible strips allow cabling to enter/exit and can be contained inside the strips' cavities.
- Includes two wire management profiles. Smaller profile allows for qty. 3, .3" diameter cords, has area of .32 in^2. Larger "J" shaped profile allows for qty. 10, .3" diameter cords, has area of 1.14 in^2.



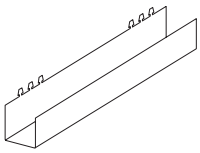
Cord Retainer Clip

Cord Retainer Clip (page 239)
- Provides confinement of vertical electrical/data wiring.
- 1½"H cord clips snap into vertical panel slots to contain cords.
- 4 clips are provided standard with each task light cord.



Data Management Organizer

Data Management Organizers (page 239)
- **Cable organizers** are made of rigid polymer, and hang from the horizontal cross members or in the base raceway. Can be stacked infinitely.
- Cables can be placed into the extensions of the organizers to keep cables aligned as they pass through the panel frame.
- Commercially available tie-wraps can also be used to strap cables to the organizer extensions.
- Organizers are ordered separately in packs of 20.

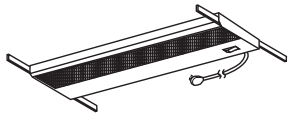


Universal Tile Port Kit

Universal Tile Port Kit (page 239)
- Allows field installation of additional data accessories.
- Grommet opening dimension — 1.375"H x 2.700"W.

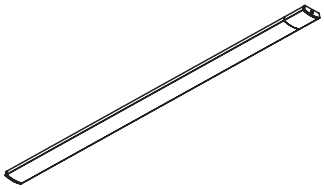
Wireway Grommet

Wireway Grommet (page 239)
- Fits into any receptacle opening.
- Used when routing wires through receptacle opening.



AMPCHASE

Panel Mounted Wire Chase (page 239)
- Attaches between panels on Stride, Terrace, and Optimize via a slotted standard.
- Designed to sit below a worksurface and provide additional cord management from the base rail to beltline/under-worksurface height.
- Available in standard metal paint finishes.



*For more power and wire management options, please visit the **Extensions** pages.*

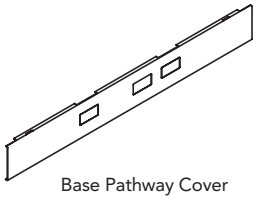
Electrical & Data

Lighting

Task Lights

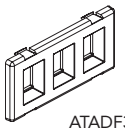
Undercabinet LED Light

Task Lights (page 1037)



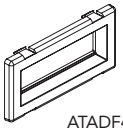
- Task lights can be recessed under storage cabinets or storage shelves, panel-hung, or freestanding.
- Three styles of recessed task lights in four sizes are available to correspond to cabinet or shelf width.
- All styles have 9' power cords in black, connected in the right rear corner.
- All models feature electronic ballast for longer bulb life and cooler operating temperature.
- Task lights with a fused plug to meet Chicago electrical code are also available.

Recommendation: Provide a separate circuit for task lights for proper long-term operation without RF interference to computers that may be in use.



Undercabinet LED Light (page 1037)

- Undercabinet LED light can be mounted beneath overhead cabinets with wood screws or magnets.

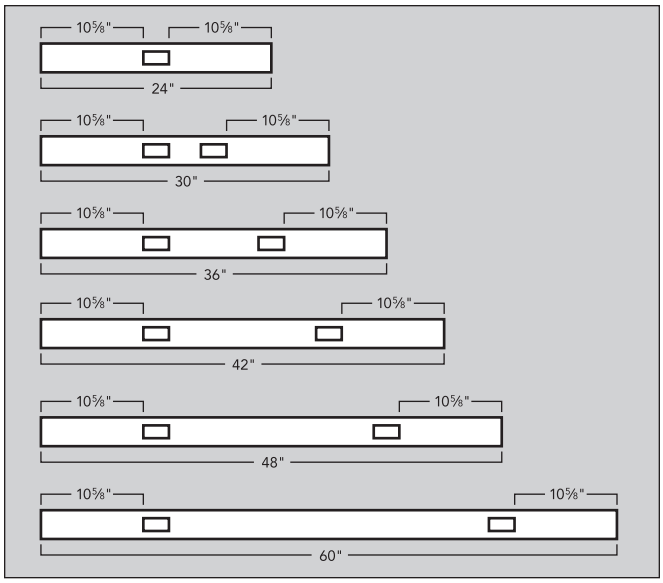


Data

Base Pathway Cover

ATADF3

ATADF4



Base Pathway Covers (page 240)

- Features an additional knockout (offset) for improved utilization of power and data. Knockouts are 2.700"W x 1.377"H.
- Due to panel depth, back-to-back data modules should not be used at beltline or in the base on Stride.

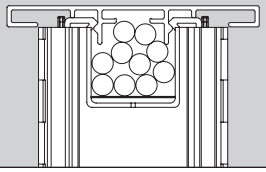
Data Faceplates (page 240)

- Fit into receptacle and data port openings in base raceway covers or into data port (UTP).
- Due to panel depth, back-to-back data modules should not be used at beltline or in the base on Stride.

Base Pathway Receptacle Locations

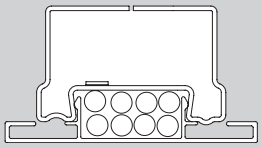
Circuit Usage

Strategy 1
Circuits to Equipment
Assign specific uses for each of the circuits. For example, in a four-circuit system:

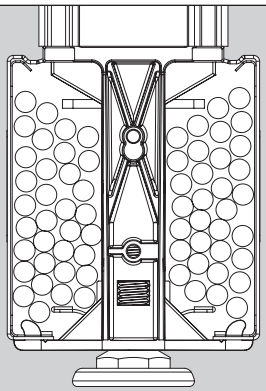


- Circuit 1 — calculators, fans, etc.
- Circuit 2 — task lights (could be wired to wall switch)
- Circuit 3 — CRT or flat screen monitors
- Circuit 4 — CPUs

Strategy 2
Circuits to Workstations
Assign specific workstations to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.

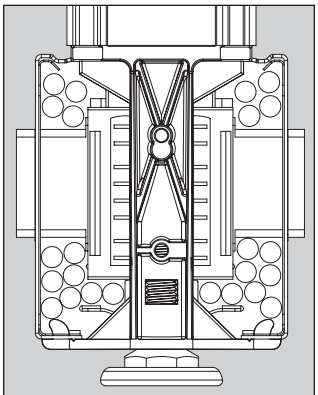


Placement of pedestals and lateral files may render some duplex locations inaccessible. Pedestal placement may also affect compatibility with pull-up receptacles.

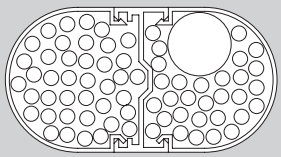


Lay-in Cable Capacity — Stride cable quantities listed at 60% fill ratio

Top Pathway (side view)
Up to 10 voice/data cables (.25" dia).



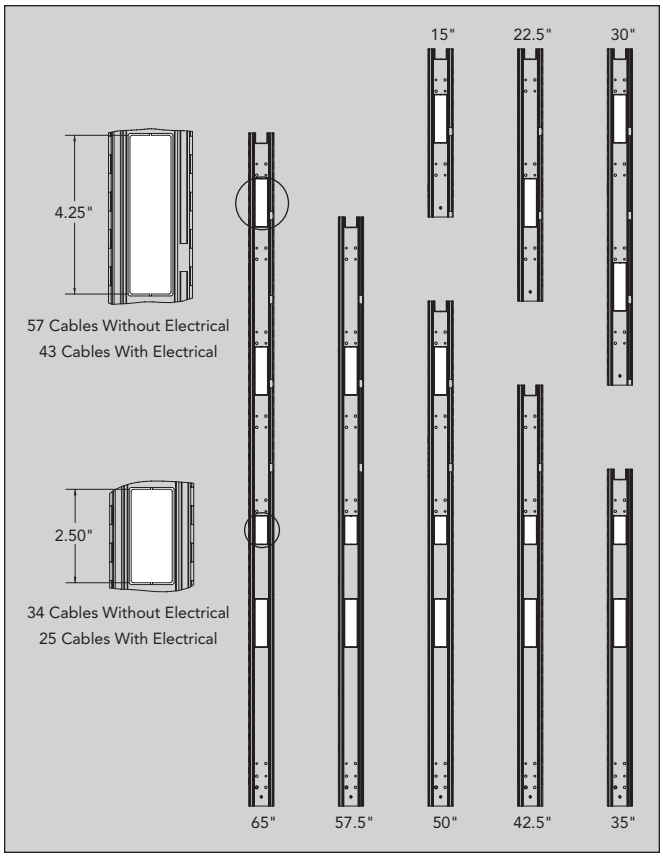
Variable Height Junction (top view)
Up to 8 voice/data cables (.25" dia).



Base Pathway without electrical (side view)
Up to 68 voice/data cables (.25" dia).

Base Pathway with electrical (side view)
Up to 24 voice/data cables (.25" dia).

Power Pole (top view)



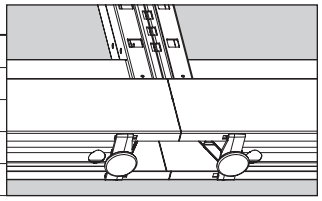
Up to 69 voice/data cables (.25" dia).

The top and base pathway allow continuous voice and data lines to run through and between panels without interruption. Lay-in is provided for environments where systems furniture or cabling are subject to frequent change.

- Stride panels top pathway accepts up to 10 voice/data cables (.25" dia).
- Stride panels variable height junctions accept up to 8 voice/data cables (.25" dia.) with a bend radius of approximately ½" to ¾".
- Stride panels base pathway accepts up to 68 (5.56 sq. in.) voice/data cables (.25" dia.) when electrical system is located in beltline pathway.
- When electrical system shares base pathway, the cable capacity in Stride panels is reduced to 24 (1.95 sq. in.) voice/data cables (.25" dia.) Cable quantities listed are at 60% fill ratio.
- Cable capacity of the Stride power pole, in addition to electrical infeed, is 2.79 sq. in. on one side and 2.91 sq. in. on the other for a total capacity of 69 cables of .25" diameter. Cable quantities listed are at 60% fill ratio.

Electrical & Data

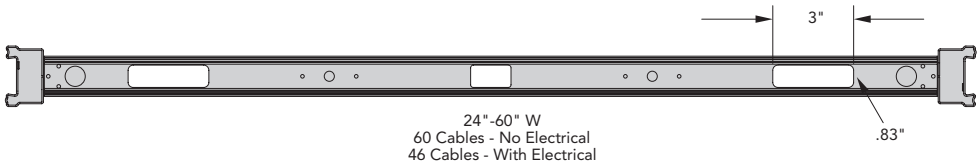
Horizontal Capacity of Stride Frames



DO NOT run electrical equipment or extension cords through cable openings in frame sides. Use beltline or base-mounted electrical system for all electrical supply.

String-in Capacity

- Openings in frame sides permit data and communication cables to be run between frames at up to five levels in a 65"H Stride frame.
- Using tackable acoustical tiles, each opening accommodates up to 57 cables (.25" dia) and the beltline pathway accommodates 25 cables with electrical components installed.
- Cables can enter/exit panel through underside of base pathway at juncture between frames. Openings are sized as follows::



Stride Connections	Sq. In.
Straight	5.4
"S" Extended Straight	12.9
"L" 90°	13.0
"T"	16.6
"X"	20.4

- When leveling glides are fully retracted, panel-to-floor clearance is 7/16". This may affect the volume of cabling that can be fed into the frame from the bottom of the pathway.

Vertical Capacity

Vertical Capacity Through Stride Panel Frames

	Panel Width	Qty of .25" Cables at 40% Fill Ratio	Qty of .25" Cables at 60% Fill Ratio	Total Space (sq. in.)
Stride	24" – 60"W	46	60	4.90

- A 60% fill ratio is achievable; however, when electrical components are installed in the beltline area, cabling capacity through the beltline area will be limited to approximately 45% fill ratio.

Office Equipment Typical Load Values

Item	*Amps
Desktop Computer/2 Monitors	4
Laptop Computer	1
Laptop/2 Monitors/Docking Station	4
Paper Shredder	1.22
Radio	0.05

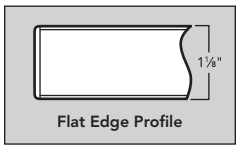
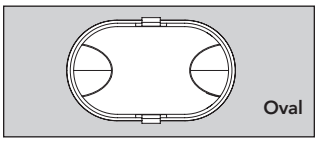
Note: Add suffix "N" to model number for no grommets, no upcharge.

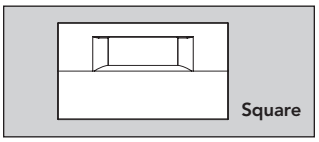
Worksurfaces

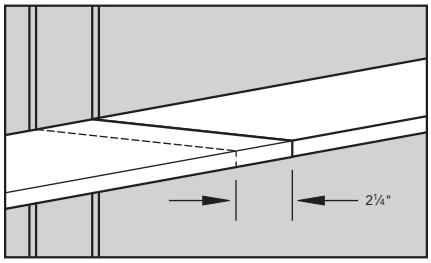


Optimize™ — Working with Worksurfaces and Supports



Worksurfaces are 1⅛" thick with particleboard core and with top surfaces finished in laminate. Bottom surfaces are covered with a backer sheet. Worksurfaces can be panel hung or used in freestanding applications. Modesty panels and appropriate supports are required to configure freestanding Cadence® desks.





Worksurfaces

- **Laminate tops** offer flat edge trim in twenty standard colors (customer specified) to match solid or woodgrain laminates and to complement patterned laminates.
- **Optional wider width primary worksurfaces** are available for use with Optimize panel runs having a "T" or "S" connection — upcharge applies.

- **Wire management grommets** are standard in most worksurfaces (unless specified with no grommets) and specified in plastic or metal. Metal grommets are available in oval or square.
- Rectangular worksurfaces over 42"W have two grommets. Corner cove worksurfaces will have two grommets. Peninsula and corner worksurfaces have one. D-Shaped worksurfaces and countertops do not have grommets.
- Grommets on standard systems worksurfaces are located 6⅝" from the side edges and 3⅝" from the back edge.
- Add Suffix "N" to a model number for no grommets — no upcharge.

Supports

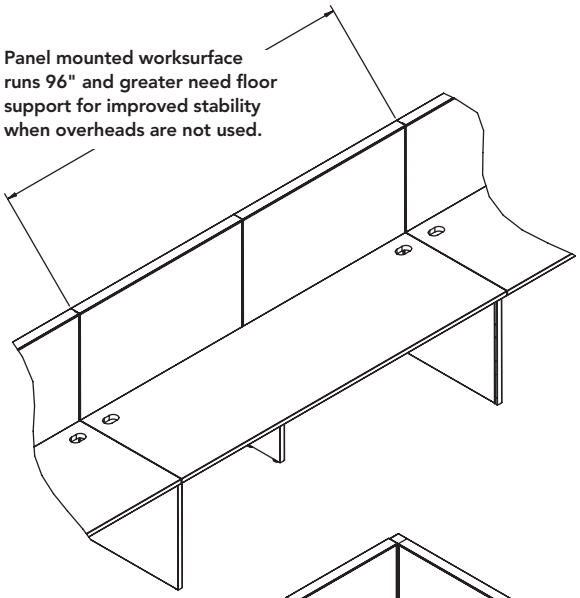
Worksurfaces can be configured at 29½"H with end-panel supports and in-line support panels, or at various heights on 1" increments using specific product configurations.

Worksurface support options include:

- Support column*
- Flat brackets
- External support channel
- Worksurface bracket kits
- Height adjustable mechanisms
- Cantilever brackets
- In-line support legs*
- End-panel supports*
- Support storage units*
- Pedestal-to-panel attachment kit*
- Desk-to-panel attachment kit*
- Corner desk leg
- Bridge and return kits
- Modesty panels
- Gussets

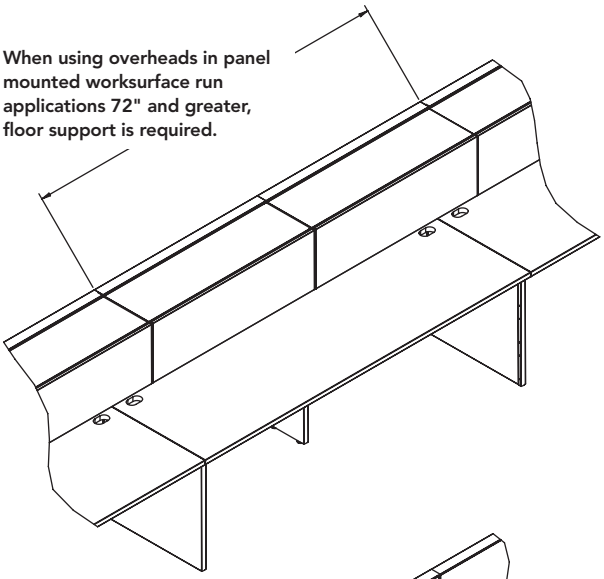
*Units provide floor support.

Support Guidelines — See Drawings on page 243



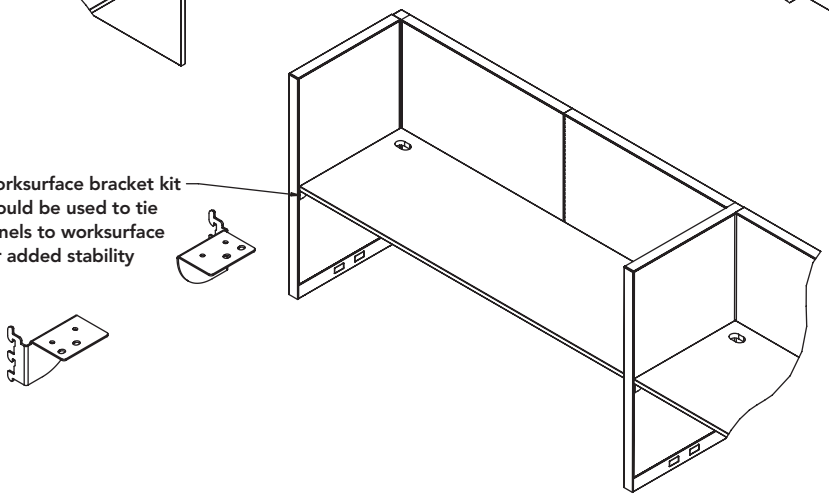
- Panel mounted worksurface runs 96" and greater need floor support for improved stability when overheads are not used.
- When using overheads in panel mounted worksurface run applications 72" and greater, floor support* is required. (See list at left.)
- When using overheads at the end of a panel run, floor supports* are required.
- Worksurface bracket kit should be used to tie panels to worksurface for added stability.
- A return panel at the end of a panel run can be substituted with one of these floor supports: storage, open or closed end support panel, O-leg.

continued on next page

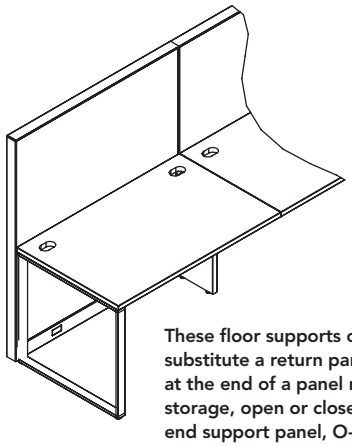


continued from previous page

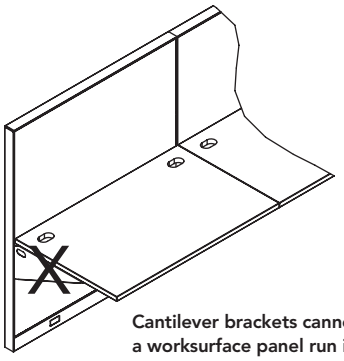
- Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return panel or floor support.
- Worksurface runs 60"W or greater require an external worksurface support channel when a center support cantilever cannot be used. It is recommended for spans greater than 48"W. See pages 247 and 249.
- Support channel may interfere with mounting of some CPU holders and keyboard supports.
- Cantilevers are recommended in place of an external worksurface support channel where feasible.
- Cadence Desking configurations utilize modesty panels and gussets in place of external support channels for worksurfaces up to 72"W. See pages 266-274.



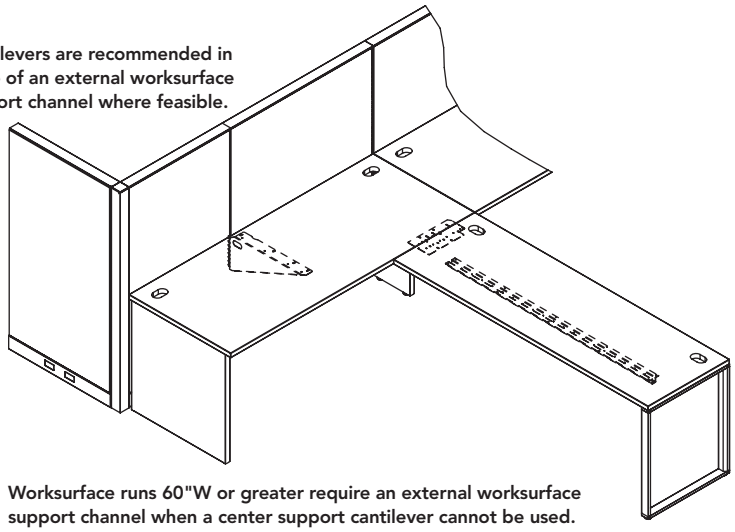
Panel mounted worksurface runs 96" and greater need floor support for improved stability when overheads are not used.



When using overheads in panel mounted worksurface run applications 72" and greater, floor support is required.



Worksurface bracket kit should be used to tie panels to worksurface for added stability

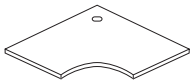


These floor supports can substitute a return panel at the end of a panel run: storage, open or closed end support panel, O-legs.

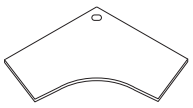
Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return or floor support.

Cantilevers are recommended in place of an external worksurface support channel where feasible.

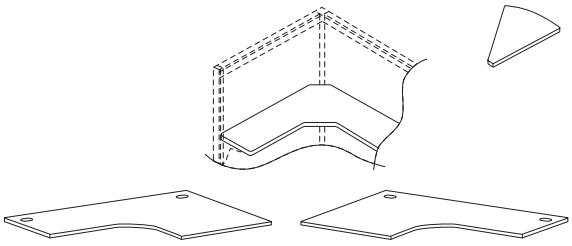
Worksurface runs 60"W or greater require an external worksurface support channel when a center support cantilever cannot be used. It is recommended for spans greater than 48"W. See pages 247 and 249.



Worksurfaces with Flat Edge



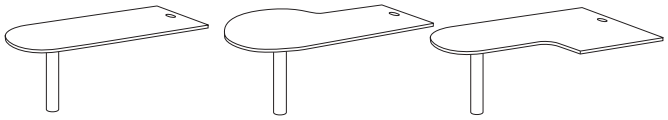
Primary Worksurfaces (page 248)
- Primary worksurfaces are available in 20", 24", and 30" depths up to 96"W. Worksurface spans greater than 72" require floor support.
- Nominal worksurface width is equal to nominal panel width.
- Wire management grommets standard, one for widths up to 42", two on widths 48"W and greater. Add "N" suffix for no grommets.
- Worksurfaces greater than 60"W require a cantilever bracket for center support in panel mounted applications. Specify 18" cantilever on 20"D, and 24" cantilever on 24"D and 30"D worksurfaces.
- Width must correspond with panel width(s). For worksurface to span a "T" or extended straight connection add upcharge and suffix "TM" to model number.
- Primary worksurfaces can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Working With Cadence®, pages 266-274.
- The 9120 Program can be used to order HPL particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120"W x 36"D. See pages 255-256.



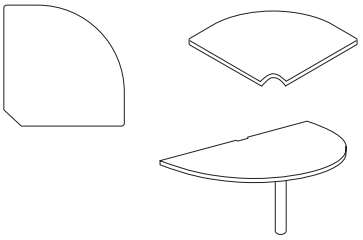
Bow-Front Worksurfaces (page 249)
- Two wire management grommets standard.
- Can be used with a modesty panel and appropriate supports to configure freestanding desk. Refer to Cadence pages 266-274.

Corner Worksurfaces (page 250)
- One wire management grommet.
- Corner worksurfaces with woodgrain laminate have grain direction diagonal to adjacent worksurfaces.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

120° Corner Worksurfaces (page 250)
- Standard with one wire management grommet in corner location.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.



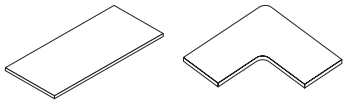
60° Pie Worksurface (page 250)
- Order support column and two flat brackets separately.



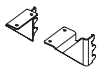
Corner Shelf (page 250)
- Diagonal leading edge = 10½"; diagonal depth = 22½".
- Includes panel attachment brackets.

Corner Cove Worksurfaces (page 251)
- Two wire management grommets standard.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner. All other support hardware is ordered separately.
- Can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Cadence pages 266-274.
- Worksurfaces greater than 60"W require a cantilever bracket for center support in panel mounted applications. Specify 24" cantilever on 24"D and 30"D worksurfaces.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

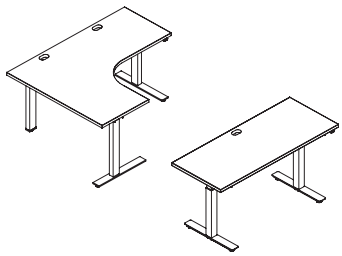
Worksurfaces with Flat Edge



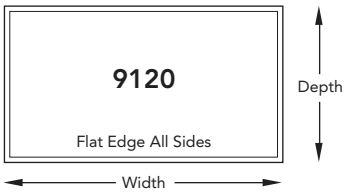
Peninsula, P-Shaped, and Jetty Worksurfaces (page 252)
- Wire management grommets standard.
- Support column ordered separately, column includes panel support brackets T6BK.
- Can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Cadence® pages 266-274.



Quarter-Round Worksurfaces (page 253)
- Use to connect two 90° panel-attached worksurfaces.
- Order support column and two flat brackets separately.

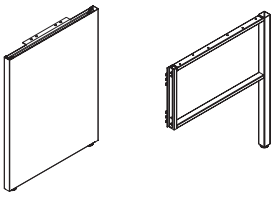


D-Shaped Worksurfaces (page 253)
- Order support column and two 24"D in-line support legs separately.
- Not recommended for use with T6CB24L or T6CB24R for shared applications.
- Includes attachment bracket.

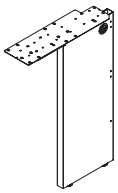


Countertops (page 254)
- Mounting brackets and attaching hardware ordered separately.
- Countertops are flush with panel top cap.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

Countertop Brackets (page 254)
- Countertop brackets must be ordered separately. Models P51500 and P51500-42 each contain one right-hand and one left-hand bracket.
- Specify paint color.
- Model P51500 brackets are for 35"H or 50"H panels. Model P51500-42 brackets are for 42½"H panels.
- Order two model P51500 or P51500-42 for straight countertops. Order three model P51500 or P51500-42 for corner countertops.

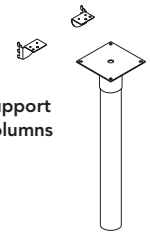


Height-Adjustable Worksurfaces
- For freestanding applications, see height-adjustable tables in the Seating & Tables Price List.



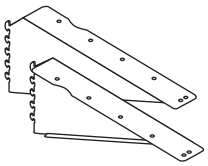
Non-Standard Worksurface Sizes (pages 255 and 256)
- The 9120 Program can be used to order particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120"W x 36"D.
- Other modification requests should be made through Allsteel Tailored Products Group.

Worksurface Supports



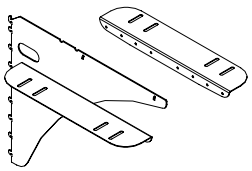
End-Panel, Closed End, and Open End Supports

End Supports and Bracket Kits (page 257)
- End-panels are 1⅝" thick. For use in place of panels at the end of worksurface runs.
- Levelers provide 1½" vertical adjustment.
- Must be connected into panel slots for panel hung applications.
- Straight worksurfaces adjacent to 120° connections must be supported by full end-panels.
- 11"D end-panel models for use with D-shaped worksurfaces or curvilinear shaped worksurfaces in freestanding applications.
- Panel mounted end-panel supports are ordered for right- or left-handed application.
- Open end panel supports are non-handed and are only for panel mounted applications.
- End-panel models can be converted to freestanding with removal of panel mount bracket. End-panel bracket kit converts freestanding end-panel support model to panel mounted.



Support Legs

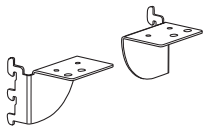
Support Legs and Bracket Kit (page 257)
- Support legs are 1⅝" thick. Leg portion is 12¾"D. Supports the junction of two worksurfaces.
- Non-handed for use at either end of worksurface.
- Provided with flat bracket.
- Worksurface in-line support legs are used to support worksurfaces only in a shared position. Worksurfaces require to the floor support every 72".
- Levelers provide 1½" vertical adjustment.
- Must be connected into panel slots for panel hung applications.
- Panel mounted models can be converted to freestanding with removal of panel mount bracket.
- Support leg bracket kit (non-handed) converts freestanding model to panel mounted.



Support Columns

Support Columns (page 257)
- Used to support one end of curvilinear worksurfaces.
- D-shaped, P-shaped, peninsula, jetty, boomerang, and reef worksurfaces require support columns (ordered separately).
- Includes column, worksurface bracket kit T6BK, attaching hardware, and adjustable glides.

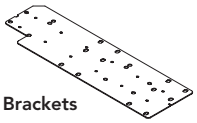
Handed Cantilever Brackets



Cantilever Brackets — handed (page 257)
- Cantilever brackets are left or right handed. No assembly required.
- They can be inserted into panel reveals in 1" vertical increments.
- One size is used for both 24" and 30"D worksurfaces.
- 18"D cantilever are for use with 20"D worksurfaces and to support 24"D worksurfaces 66"-72"W that require a cantilever bracket for center support in panel mounted applications.
- 12"D cantilevers are only for use with 12"D secondary worksurfaces.
- Both left and right brackets are required in shared applications.
- Includes tie bracket and attachment hardware.
- Use with runs 72" or less — avoid installation on only one side of a straight connection except to support corner worksurfaces. Floor support is required for runs greater than 72". See page 243.
- Cantilevers can and should still be used in the middle of a worksurface run 72"W or less for proper support and to help prevent worksurface bowing. See page 243.
- DO NOT position at the end of a panel run.
- DO NOT use to support worksurfaces from which a hanging pedestal is suspended or peninsula worksurface is attached.
- DO NOT use cantilever brackets to support worksurfaces supported with permanent-wall hanger kit.

Non-Handed Cantilever Brackets

Cantilever Bracket — non-handed (page 257)
- Assembly required. Includes attachment hardware.
- Includes two angle brackets for shared applications. Use two cantilever brackets when adjacent worksurfaces are positioned at different heights.
- One size is used for both 24" and 30"D worksurfaces.



Worksurface Supports

Worksurface Brackets

Worksurface Bracket Kit — T6BK (page 257)
- Worksurface bracket kit allows one end of a worksurface to be supported by a return panel. Return panel width must be the same as the depth of the worksurface.
- Kit includes one pair of brackets and attachment hardware.
- Freestanding pedestals can also be used to support one end of a panel-attached worksurface in conjunction with worksurface bracket.

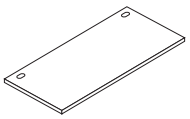
Worksurface Storage Bracket Kit — T6SB (page 257)
- Worksurface storage bracket kit (T6SB) is used for aesthetics where under-desk storage is immediately adjacent to the return panel. In all other applications use worksurface bracket kit (T6BK) to utilize worksurface threaded metal inserts.
- Black only.
- Kit includes one pair of brackets and attachment hardware.
- Brackets do not align with worksurface threaded metal inserts, and therefore require wood screws (included).

Flat Brackets

Flat Brackets (page 257)
- Includes bracket and attaching hardware.
- Can be used to connect one worksurface perpendicular to another worksurface.

Pedestal-to-Panel Brackets

Pedestal-to-Panel Attachment Bracket (page 257)
- Can be used in place of full end panel or return panel.
- Provides structural support to panel run by securing panel directly to pedestal.
- Works with Essentials™ and Involve® pedestals.



External Worksurface Support Channel

External Worksurface Support Channel (page 249)
- Is required on a systems worksurface for additional support for spans 60"W or greater. Width of worksurface span can be reduced by using support storage.
- Extends 1½" below the worksurface. Installs 7" from user's edge.
- When using 28"H mobile pedestals the length of support channel needs to be reduced to accommodate width of the pedestal.
- Support channel may interfere with mounting of some CPU holders and keyboard supports. May require spacer kit AKMH.

Freestanding Desks
- Freestanding desks can be created by combining primary and corner worksurfaces with modesty panels and appropriate desk supports. See Cadence® pages 266-274.

Worksurfaces

For specification information see pages 241-247 and 266-274.
For non-standard worksurface sizes see pages 255-256.

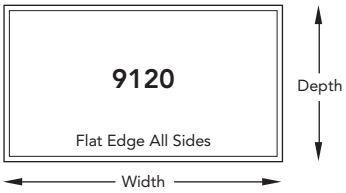
ORDERING



The 9120 Program can be used to order particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120" W x 36" D.

Specify:

1. **Model Number**
   Specify closest nominal width/depth model (round up).
2. **Grommet Option** (if desired)
   See grommet specification instructions on this page.
3. **Grommet Type:**
   P Plastic
   M Metal (add $16 per grommet for laminate)
4. **Grommet Color:**
   (Metal only)
   EL Matte Silver
   NOTE: Plastic grommet will match flat edge.
5. **Laminate Choices**
   See page 70.
6. **Flat Edge Color Choices**
   See EDGE COLORS page 70 for laminates.
7. **Exact Size**
   Specify the **EXACT Width** and **EXACT Depth** you require. Width and depth is specified in ⅛" increments which is denoted as a single digit following the whole number dimension at the end of the model number string.

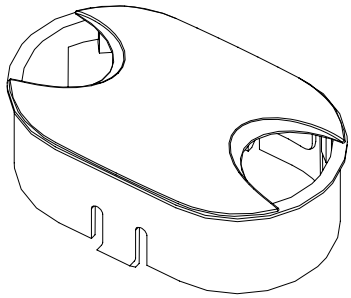
⅛"	= 1	⅝"	= 5
¼"	= 2	¾"	= 6
⅜"	= 3	⅞"	= 7
½"	= 4	no extra increment	= 0

For example, when ordering a worksurface that is 34⅝"W x 20½"D, specification should be 345Wx204D.
Example: **9120R3624.G0.TM33.EU.345Wx204D**.

PRODUCT SPECIFICATIONS

- Flat Edge on all sides
- 45 lb. particle board
- 1⅛" top thickness
- .020 resin impregnated paper backer sheet
- Grommets available
- Maximum width 120" (maximum recommended unsupported span is 42")
- Maximum depth 36"
- Standard Allsteel laminates
- Quantities of 10 or greater are palletized; less than 10 are individually cartoned.

Note: 9120 worksurface maximum unsupported span is 42". 9120 worksurfaces do not have pre-drilled pilot holes or threaded metal inserts.



When spanning multiple freestanding storage units with one worksurface, add ⅛" for each additional storage unit. For example, when ordering a worksurface for three 30"W lateral files. 3 units x 30" = 90" + ⅛" + ⅛" = 90¼" worksurface. Do NOT follow this rule if panel wrapping storage units.

CHANGES / CANCELLATIONS

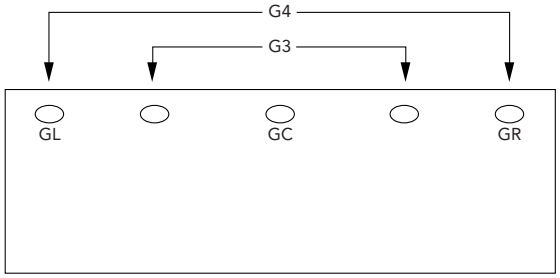
No changes/cancellations for 9120 Program Worksurfaces.

GROMMET SPECIFICATIONS

Plastic grommets are made of durable ABS plastic and grommets match edge color on laminate worksurfaces. Metal grommets are only available Matte Silver oval for laminate.

PRICING

One Grommet – GC, GL, or GR Position $23.00
Two Grommets – G3 or G4 Position..... $46.00
NOTE: Add $16 per grommet for Metal grommets with laminate.



ORDERING

Specify grommet location and color.
Example: **9120R10836.GCP.TM33.EU.1022Wx326D**

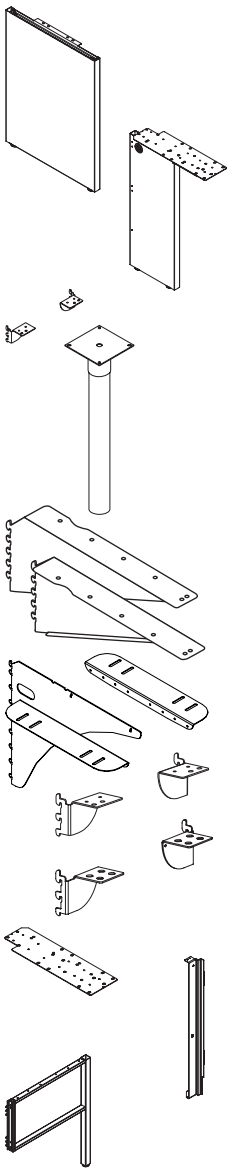
Code Grommet Position

- GC Centered side-to-side – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
- GL 6⁵⁄₁₆" from left side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
- GR 6⁵⁄₁₆" from right side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
- G3 Pair of grommets each 18" from side edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center (Position G3 not available on tops 60"W or less.)
- G4 Pair of grommets each 6⁵⁄₁₆" from side edge to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
- G0 No grommets

Dimensions are from grommet center line to top edge.

Rectangular Top

Grommet positions other than those shown above are considered non-standard.



Worksurfaces

For specification information see page 255.

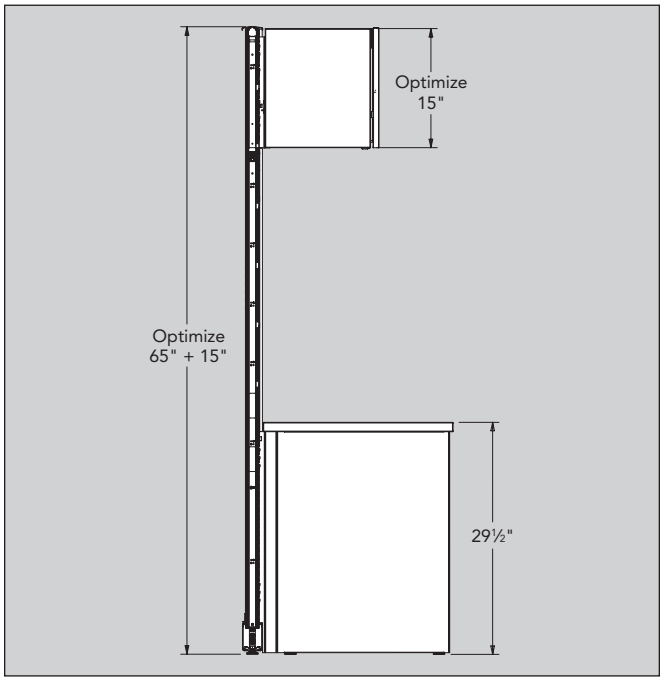
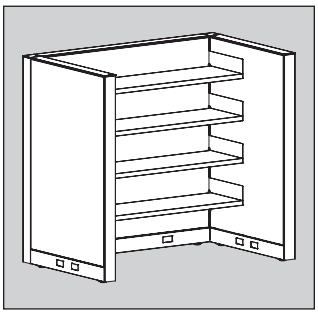
Depth	12⅞" RTA models 11½"
Height	4⅝" RTA models 5⅝"

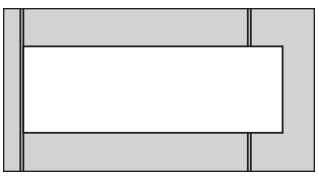


- **Task lights** can be mounted beneath storage shelves and overhead storage cabinets.
- Additional panel hung and freestanding lighting options are available.

- **Cord retainer clips** fasten into panel slots to anchor power cords.
- Available in black only.
- Clips are provided with under-shelf mounted task lights. Additional clips can be purchased separately.

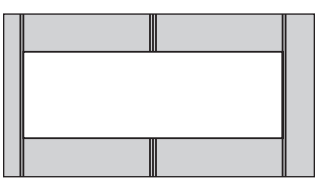


Specification Guidelines



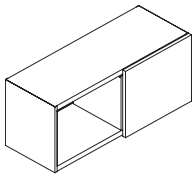
- In a panel run, only two overhead storage cabinets or open storage shelves are recommended per panel side.
- Overhead storage cabinets and open storage shelves can be mounted on Optimize structural and stacking panels to a maximum height of 80"H.
- Base panel frames with stacking frames that have an overall height of 57½" will not accept overhead storage cabinets if spanning between stacker and base panel.
- Immediate adjacent panels must be equal height to panels with overhead storage cabinets on them.

When overhead storage units are suspended from stacking frames, the following guidelines should be adhered to:

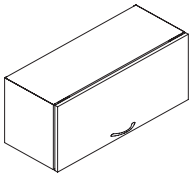


- Stacking panels can be added to any base panel up to 80"H.
- Stacking frames should be added to all the parent run panels, and to each return-panel run. Stacking panels added to return panel must match the parent run configuration.
- A maximum of two overhead storage units should be suspended from each side of stacking frames on any given panel.

- No limitation to the number of units on structural frames when run is supported with return panels on each side of storage shelves or overhead storage cabinets.

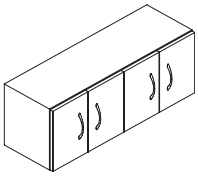


- **Assembled metal overhead cabinets** can be mounted on a panel equal to or up to 18" narrower than cabinet using provided panel attachment brackets.
- One side of overhead must be held on-module.



- **RTA overhead, RTA shelf, and receding door** width must correspond with width of panel(s).
- It is possible to span two panels when combined panel width equals cabinet or shelf width.

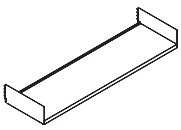
Metal Overheads & Shelves



Overheads, Shelves, and Hutches

Sliding Door Overhead

Flipper Door Overhead



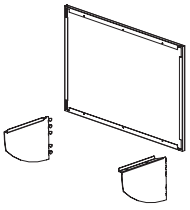
Hinged Door Overhead

Assembled Overhead Storage Cabinet (page 262)

- Steel cabinet with backstop.
- Available with sliding, hinged, or flipper door(s).
- Easy-Assist flipper door optional — requires minimal assistance in opening and closing.
- Easy-Assist flipper door not available on 60"W or 72"W cabinets — specify 2–30"W cabinets or 2–36"W cabinets.
- Self-engaging safety latch to secure cabinet to panel.
- Width can correspond with width of panel, or two panels joined with an in-line connector kit.
- Arch or square pull optional on flipper doors.
- 60"W and 72"W flipper door cabinets have two doors with two independent locks.
- 24"-36"W hinged door cabinets have 1 lock and 2 optional pulls, 42"-48"W have 2 locks and 4 optional pulls.
- Accommodates recessed task lighting (specified separately).
- For locking specifications, see pages 1044-1046.
- Cabinets are 14¼"D x 15"H.
- 15"H cabinets can also be mounted on a panel equal to or up to 18" narrower than cabinet using provided panel attachment brackets.
- Sliding doors have a built-in pull.
- Sliding, Hinged, and Flipper Door Overhead Weight Limits:

24"W ..... 59 lbs.	42"W ..... 105 lbs.
30"W ..... 74 lbs.	48"W ..... 121 lbs.
36"W ..... 90 lbs.	60"W ..... 152 lbs.

- Mounting an overhead on frames that have an overall height of 57½"H is not recommended. Slot modularity in relation to adjacent panels may be compromised.

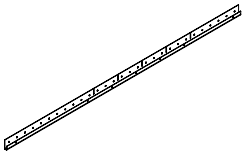


Open Shelf

Assembled Open Shelf (page 262)

- Metal shelf with back stop.
- Locking clips (2) standard.
- Will accommodate recessed task lighting (ordered separately).
- Weight Limits:

24"W ..... 61 lbs.	42"W ..... 108 lbs.
30"W ..... 77 lbs.	48"W ..... 124 lbs.
36"W ..... 93 lbs.	60"W ..... 155 lbs.

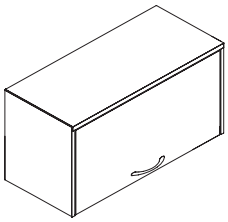


- Mounting an open shelf on Optimize frames cannot span base panel frame and stack-on frame — slot modularity is not maintained.

Upmount Kit for Overhead Cabinets

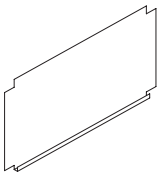
Upmount Kits for Assembled Overhead Cabinets (page 262)

- Consists of two upmount brackets, full back panel, and required installation hardware.
- Allows mounting of an assembled overhead cabinet up to 15" above height of panel.
- Specify "Z2" prefix model number upmount kits with 15"H, 35"H, 50"H, or 65"H Optimize panels; and "Z4" prefix model number upmount kits with 42½"H Optimize panels.
- Brackets require a clearance of 6½"below bottom of overhead cabinet.
- Width must correspond with width of panel frame or 2 panel frames joined directly in-line.
- Full back panel adds ½" to depth of overhead case.
- Full back panel only used when upmounting cabinet.
- Cannot be used with RTA models.



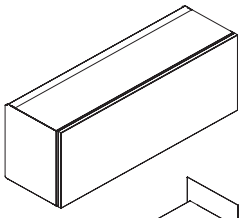
Horizontal Wall Track

Horizontal Wall Track (page 262)

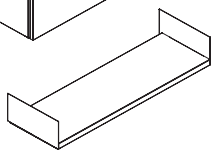


- Allows mounting assembled overhead cabinets on permanent wall structures ONLY. Attachment hardware not included.
- Cannot be used with RTA models.
- Track is 60"W and notched at 6" intervals as a guide for field cutting.
- For use with 15"H sliding door overhead, field modification is necessary.
- Available in black only.

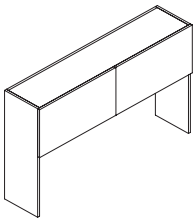
Overheads, Shelves, and Hutches



Assembled Receding Door Overhead Storage Cabinet (page 263)
- Steel cabinet with open back. Optional back can be ordered separately.
- Arch or square pull optional.
- 60"W cabinet has 2 – 30"W doors with 2 independent locks.
- Accommodates recessed task lighting — ordered separately.
- For locking specifications, see pages 1044-1046.
- Cabinets are 13¼"D x 15"H. When door is recessed, interior dimensions are 12⅛"D x 11⅝"H.
- Weight Limits:

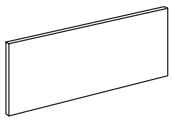


30"W ..... 70 lbs.	48"W ..... 110 lbs.
36"W ..... 85 lbs.	60"W ..... 138 lbs.
42"W ..... 100 lbs.	



Receding Door Overhead Back (page 263)
- Optional for use with receding door overhead.
- Order width to match overhead cabinet.

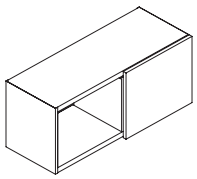
Ready to Assemble (RTA) Flipper Door Overhead (page 263)
- Steel cabinet with open back.
- 60"W and 72"W cabinets have 2 doors with independent locks.
- Accommodates recessed task lighting — ordered separately.
- Random keying, for locking specifications see pages 1044-1046.
- Cabinets are 12"D x 15"H. Interior dimensions 11⅛"D x 12¾"H.



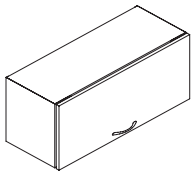
Ready to Assemble (RTA) Shelf (page 263)
- Metal shelf with locking clips.
- Accommodates recessed task lighting — ordered separately.

Stack-On Hutch

Stack-on Hutch (page 264)
- Have flipper doors with square horizontal edges.
- Universal model can be converted to an open hutch.
- Doors are standard with a core removable lock (60"W, 66"W and 72"W have two doors and two locks.)
- Attachment tape provided.
- Order hutch to match width of worksurface(s) it covers.
- Hutches have clearance of 19¾" for computers, etc.
- Depth dimensions shown includes thickness of door.
- Universal model inside depth dimension is 12¾".
- Stack-on hutches accommodate recessed task lighting.
- For locking specification see pages 1044-1046.
- Chicago task light cords cannot be routed through the hutch end panels, due to the large size of the fused plugs.



Tackboards for Hutches



Tackboards (page 264)
- Use tackboard to close the back of stack-on or hutch below storage unit.
- Due to width of fabric roll, 72"W tackboards are available in railroad cut only.

Metal Overheads

For specification information see pages 258-261.

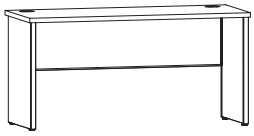
Cadence® Freestanding



Cadence offers unlimited versatility. Its modular flexibility creates office solutions of all shapes, sizes, and styles.

Configurations

Full Modesty

Half Modesty

Gussets

All the right choices

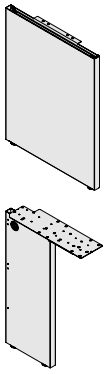
Choose Cadence freestanding desking with confidence. It personalizes any work environment, accommodates a range of needs, and offers all the right features — curvilinear worksurface shapes, multiple worksurface edges, and a complete paint finish and laminate offering. Cadence is made to last with heavy-gauge steel construction. Metal-to-metal worksurface connection points make installation and reconfiguration reliable and easy. And Cadence is backed by a lifetime warranty.

Universally flexible

Cadence sets up easily and reconfigures time after time. It even shares components with Optimize and Terrace® which simplifies inventory management. Cadence is created with worksurfaces, supports, modesty panels, end panels, and brackets. Cadence is compatible with the entire line of Allsteel storage solutions and Extensions™ — work tools to provide personalized organization for every workstyle.

Systems integration — Cadence works in combination with Optimize or Terrace panels, extending the functionality of each product line.

Highly adaptable — Make the most of building architecture by using an existing wall to create a semi-private workspace.



Space utilization — Multiple worksurface shapes offer unlimited design potential for using space creatively and efficiently.

Team interaction — Cadence design flexibility allows you to create personal workspace and a team collaboration area in the same office.

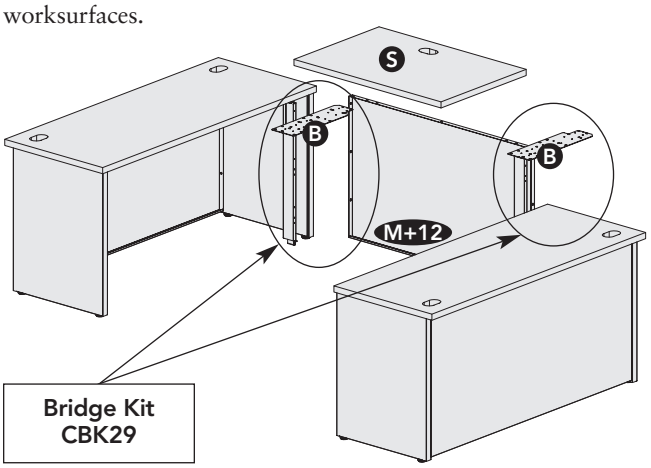
The Cadence choice

It works in the open plan, the private office, or in combination with Optimize or Terrace panels, allowing complete office coordination. The flexible, universal design of Cadence supports virtually any workstyle and any interior aesthetic. Backed by Allsteel's Lifetime Warranty and manufactured to strict environmental standards, Cadence provides one high-value package.

Configurations

End Panels E and Support Legs L

Each are available in two options: freestanding or panel-mount. If the freestanding version is purchased and later needs to be converted to panel-mount, the proper handed panel-mount bracket may be purchased separately.



The 11"D end panel is used to freestand peninsulas, curvilinear shapes, and D-tops in panel applications.

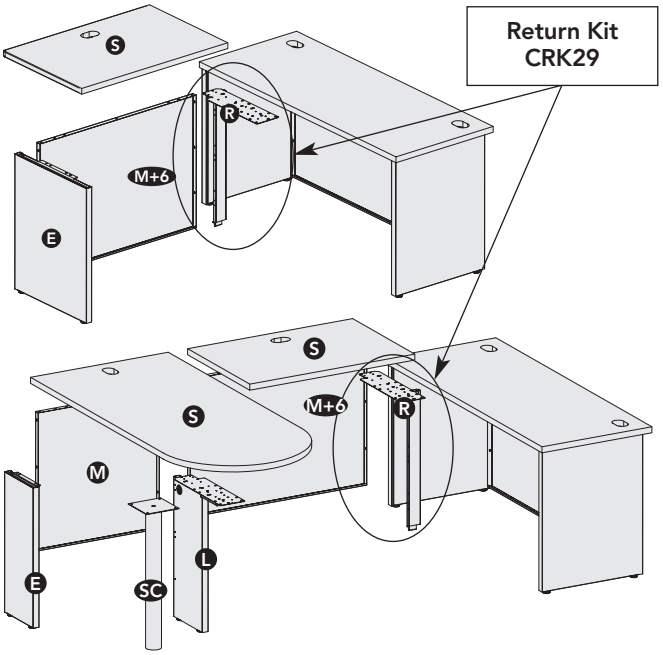
Corner Desk Legs C

Corner desk legs have a 90-degree bend and welded construction. The strong construction allows gussets or half-height modesty panels to be used with corner legs.

Bridge Kits B

Bridge kits include: two flat brackets, two modesty panel-to-end panel attachment brackets, and two tie straps. This kit is used when attaching a bridge unit between two rectangular worksurfaces.

There are some bridge instances where only half of a bridge kit is needed (e.g. using a bridge between a rectangular worksurface and a corner or peninsula). A return kit may be ordered for these instances.

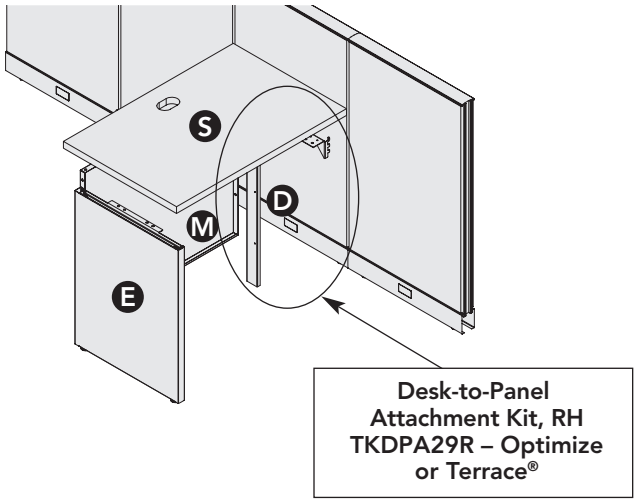


Surface S

Support Column SC

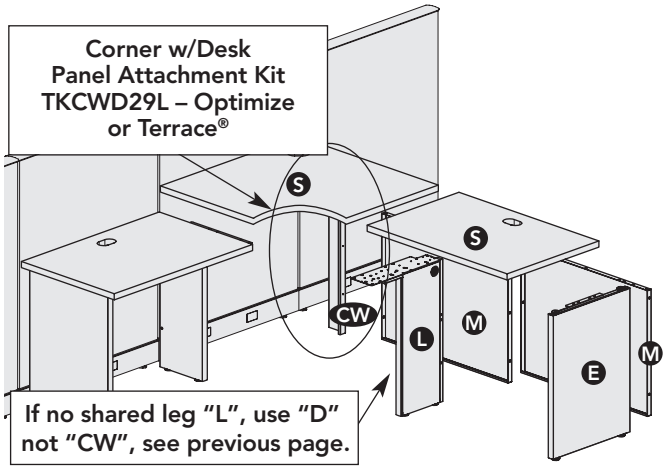
Support columns are used to support one end of curvilinear worksurfaces. Includes column, worksurface bracket kit T6BK, attaching hardware, and adjustable glides.

Return Kits R



Return kits include: one flat bracket, one modesty panel-to-end panel attachment bracket, and one tie strap. These are used when attaching a return to a primary desk. Return kits can also be used in some bridge applications — one example is shown below when using a peninsula.

Desk-to-Panel Attachment Kits D

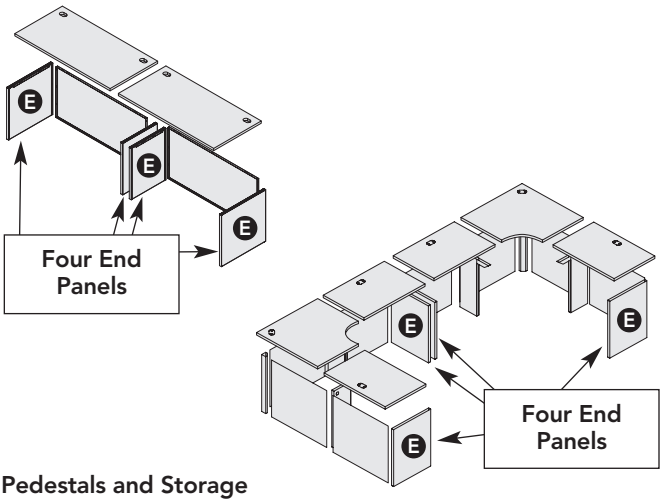


Desk-to-panel attachment kits are used to connect a worksurface and modesty panel perpendicular to a panel of corresponding width. Opposing end of worksurface must be attached with an end-panel, support leg, or corner leg mounted directly under this worksurface.

When using a corner or corner cove worksurface with the rear corner attached to a panel, and opposing end of worksurface is attached to a freestanding desk, use corner w/desk attachment kit. Hand of unit is determined from the user's side of the desk (right hand unit attaches to right side of modesty).

Corner w/Desk Panel Attachment Kit CW

Corner w/desk panel attachment kit connects the rear corner of a corner or corner cove worksurface and modesty panel to a panel when the opposing end of the worksurface shares a support leg with an adjacent freestanding desk and the support leg is mounted under the freestanding desk. Hand of unit is determined from the user's side of the desk (left hand unit attaches to left side of modesty).



Corner Worksurfaces

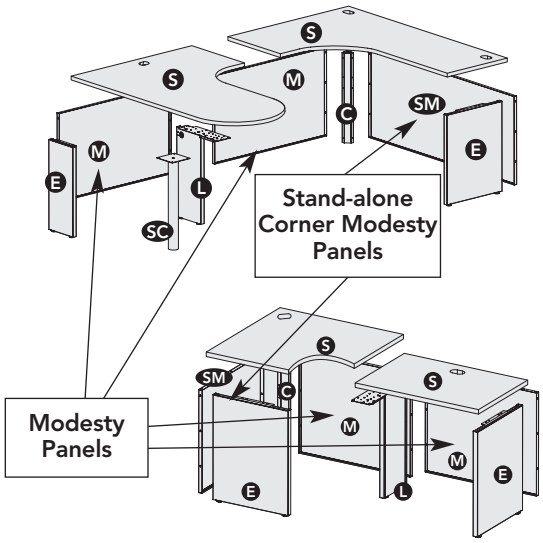
Corner worksurfaces to accommodate 90-degree corner desk legs.

In-Line Connections of Desks

Freestanding full end panels must be used to support adjacent rectangular desks, corner desks, and corner desks with returns. Freestanding support legs should NOT be used at the in-line junction. 24"D full end panels may be used at the in-line junction on 30"D rectangular desks if two worksurface tie straps are used to secure the desks together. Contact Allsteel Customer Support for ordering information.

Pedestals and Storage

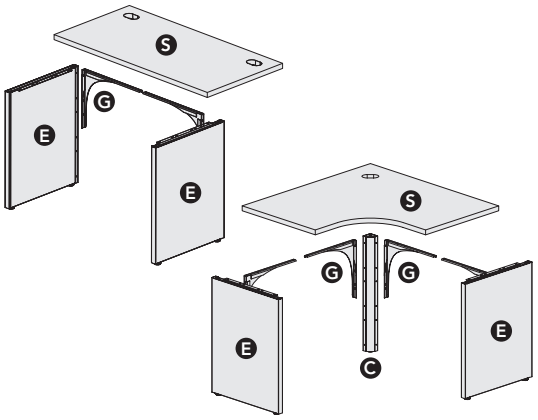
Pedestals must be ordered one size smaller than the depth of the worksurface. For example, 18"D or 20"D peds should be used with 24"D worksurfaces. 18", 20"D, or 23"D pedestals can be used with 30"D worksurfaces. Using 18"D laterals or personal files provide additional pull style and storage options under 24"D worksurfaces.



Modesty Panels M

The following are some general guidelines for Cadence modesty panels:

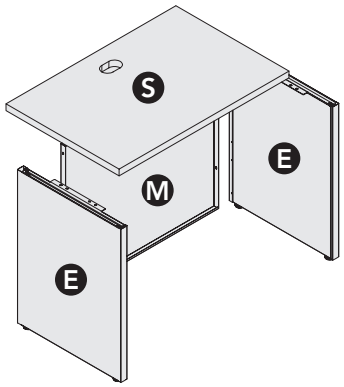
- **Desk:** Modesty panel width is the same width as the worksurface
- **Return:** Modesty panel width is 6" greater than the width of the worksurface
- **Bridge connecting two rectangular worksurfaces:** Modesty panel width is 12" greater than the width of the bridge worksurface
- **Bridge connecting a rectangular worksurface and corner or peninsula:** Modesty panel width is 6" greater than the width of the worksurface
- **Corner connecting to an adjacent worksurface:** Modesty panel width is the same width as the worksurface.



Stand-Alone Corner Modesty Panels SM

Stand-alone corner modesty panels are used only when one or both sides of a corner or corner cove worksurface are freestanding and NOT attached to another worksurface. Specify the width the same as the width of the worksurface.

Gussets G



Gussets can be used in place of a modesty panel with desks 36"W to 60"W. Gussets can also be used with corner desk legs.

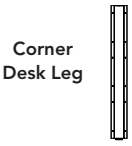
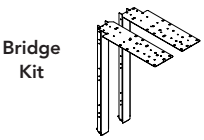
Cadence Supports



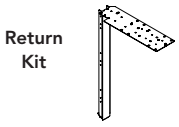
End-Panel Supports

End-Panel Supports (page 275)
- End panels are 1⅝" thick. For use at the end of worksurface runs.
- Levelers provide 1½" vertical adjustment.
- Freestanding models can be converted to Optimize panel-mount with end panel bracket kit.
- Must be connected into panel slots for panel hung applications.
- Straight worksurfaces adjacent to 120° connections must be supported by full end panels.
- 11"D models for use with D-shaped worksurfaces or curvilinear shaped worksurfaces in freestanding applications.



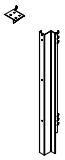
Support Leg

Support Legs (page 275)
- Support legs are non-handed. Supports the junction of two worksurfaces.
- Leg portion is 12¾"D and is 1⅝" thick.
- Flat bracket included.
- Levelers provide 2¾" vertical adjustment.
- Freestanding models can be converted to Optimize panel-mount with support leg bracket (non-handed).
- Must be connected into panel slots for panel hung applications.



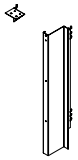
Corner Desk Leg

Corner Desk Leg (page 275)
- Attaches two modesty panels at rear of corner desk.
- Leveler provides 2¾" vertical adjustment.
- See examples on pages 268 and 271.



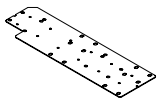
Bridge Kit

Bridge Kit (page 275)
- Connects bridge worksurface and modesty panel to end panels and worksurfaces that are perpendicular to the bridge worksurface.
- Includes two flat brackets and two modesty panel-to-end-panel brackets.
- See examples on pages 267 and 271.



Return Kit

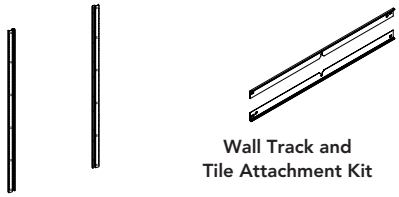
Return Kit (page 275)
- Connects return worksurface and modesty panel to end panel and perpendicular worksurface — non-handed.
- Includes one flat brackets and one modesty panel-to-end-panel bracket.
- See examples on pages 267 and 269.



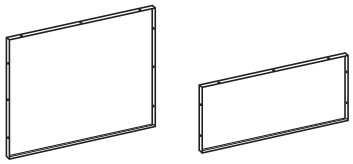
Desk-to-Panel Attachment Kit

Desk-to-Panel Attachment Kit (page 275)
- Used to connect a worksurface and modesty panel perpendicularly to a Optimize Panel of corresponding width. Opposing end of worksurface must be attached with an end-panel, support leg, or corner leg mounted directly under this worksurface.
- If using corner or corner cove with the rear corner attached to a panel, and opposing end of worksurface is attached to a freestanding desk — use corner w/desk panel attachment kit.
- "Hand" of unit is determined from the user's side of the desk (left hand unit attaches to left side of modesty).

Corner w/Desk Attachment Kit



Corner w/Desk Panel Attachment Kit for Optimize (page 275)
- Used when the rear corner of a corner or corner cove worksurface and modesty panel is attached to a Optimize panel and opposing end of worksurface is attached to a freestanding desk. Opposing end of worksurface shares the support leg that is mounted under the adjacent freestanding desk.
- "Hand" of unit is determined from the user's side of the desk.



Flat Bracket

Flat Brackets (page 275)
- Bracket and attaching hardware.
- Can be used to connect one worksurface perpendicular to another worksurface.

Cadence Supports

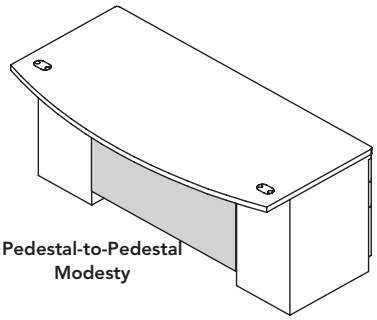
Wall Track and
Tile Attachment Kit

Full and Half High Modesty Panels

Freestanding Pedestals

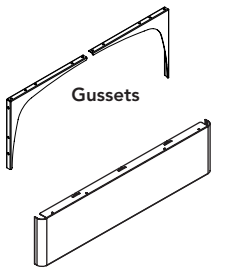
- Can also be used to support one end of a panel-attached worksurface in conjunction with worksurface bracket.

Freestanding Desks



- Freestanding desks can be created by combining primary and corner worksurfaces with modesty panels and appropriate desk supports. See pages 266-272.

Pedestal Compatibility with Cadence and Panel-hung Worksurfaces



Cadence Desking	24" Deep	30" Deep
18"D Ped	Yes	Yes
19⅞"D Ped	Yes*	Yes

Optimize Wall Track/Tile Attachment Kits (page 275)

- Allows for mounting of system panel components on permanent wall structures.
- Begin with one pair of ends; for multiple kits in line, add middle unit(s) between ends.
- Height of wall track coordinates with panel height. Field cut for lower heights.
- Wall track will add 1" to depth of attached components.
- Use Terrace® wall track tile attachment kit to install tiles onto Optimize wall track. Kit includes two tile bars. Top bar may only be used in the top uppermost position on wall track. Bottom bar can be used in the bottom position at any location on wall track.
- When segmenting tiles on wall track, segment bars must be ordered for placement between all vertically adjacent tiles or at the top position of a single tile that is not in the uppermost position.
- When using Optimize wall track and using Terrace tiles to create a tackboard situation under overheads hung at 65"H, make sure to use a 30"H tile or 2-15"H tiles to cover the entire area between the overheads and the worksurface.

Modesty Panel (page 276)

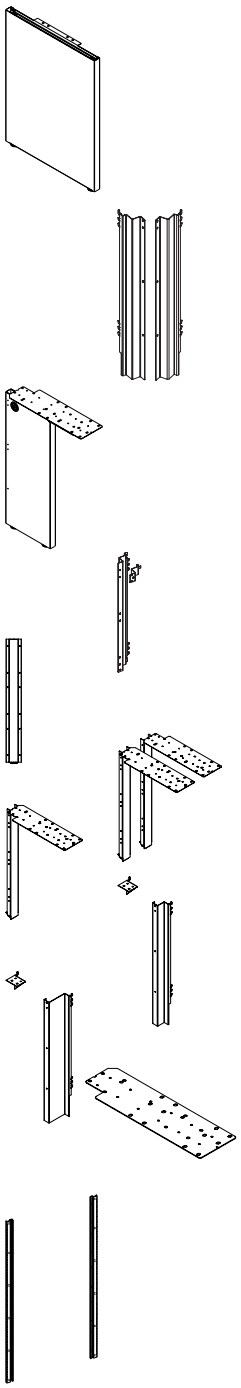
- Mounts to end-panel supports, desk support legs, bridge kit, return kit, desk-to-panel, and corner w/desk panel attachment kits.
- 29½"H units provide ¾" of space between bottom of modesty panel and floor.
- Actual width of 29½"H modesty panel is 3¾" less than the nominal dimension listed on page 276.
- 14"H units provide 14¼" of space between bottom of modesty panel and floor.
- Refer to pages 266-272 to select proper width.
- Use 14"H modesty panels for desks positioned against a wall to provide access to electrical receptacles.
- 14"H modesty panels, stand-alone corner modesty panels or gussets can be used with corner or corner cove worksurfaces.

Stand-alone Corner Modesty Panel (page 276)

- 29½"H units provide ¾" of spacing between bottom of panel and floor.
- 14"H units provide 14¼" of space between bottom of modesty panel and floor.
- Actual width of modesty panel is 6³⁄₁₆" less than the nominal dimension listed on page 276.
- Modesty panels are inset 2⅞"; when adding pedestals, consult chart below.

Pedestal-to-Pedestal Modesty Panels (page 276)

- Widths available to work with 60"W, 66"W, and 72"W worksurfaces to create freestanding double pedestal desk using two medal support pedestals.



Gussets (page 276)

- Provides easy access to wall outlets.
- Cannot be used with suspended pedestals.
- Gussets can be used on corner and corner cove worksurfaces.

Universal Modesty Panel (page 276)

- Mounts under peninsula, P-shape, jetty, and boomerang worksurfaces. Refer to chart below to select proper width.
- Can be used with panel-mounted and freestanding worksurfaces.
- Provides 8½" of privacy and is non-handed.
- Constructed of steel. No upcharge for Select paint.
- Only requires attachment to the worksurface.
- Does not provide electrical, data or structural support.
- Panel is 1½" thick and can be mounted at various distances from edge of worksurface based on user's preference for clearance and conferencing requirements.

For specification information see pages 266-274.

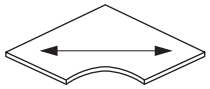
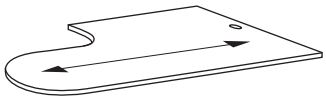
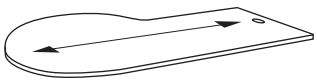
Terrace® — Overview of Flat Edge and Veneer Worksurfaces



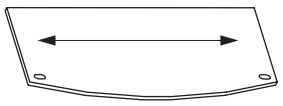
Laminate with Flat Edge or Veneer Worksurfaces



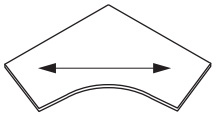
Edge Detail



Primary

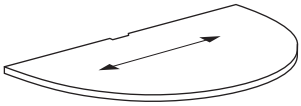


Cove

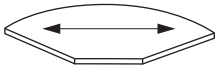


Corner

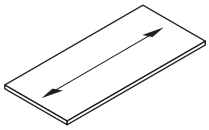
Peninsula



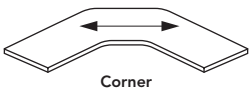
Jetty



P-Shaped



Bow-Front



120° Corner Worksurface

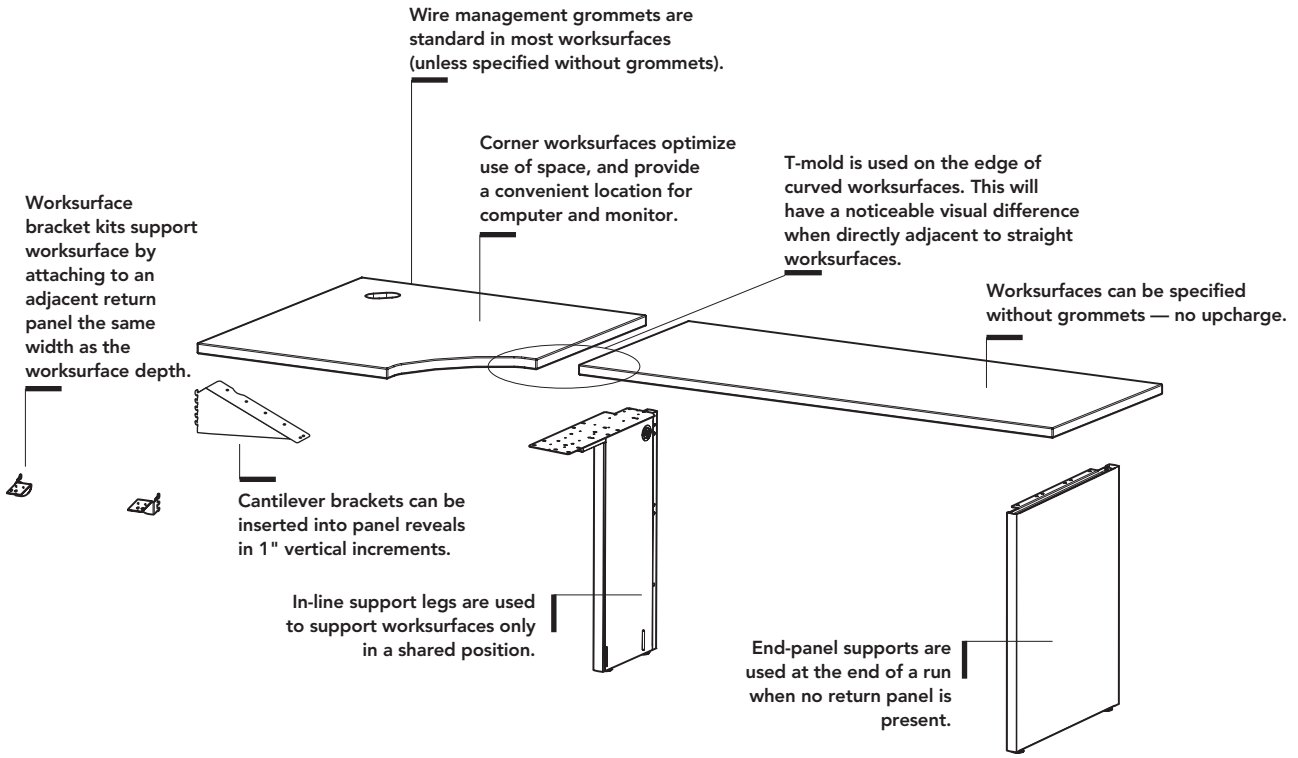
60° Pie*

D-Shaped

Quarter Round

Straight Countertop

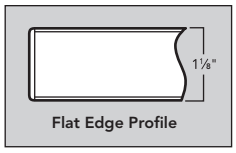
Corner Countertop



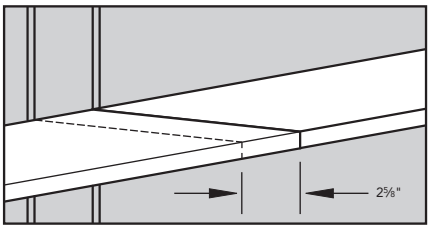
Arrows indicate grain direction for woodgrain laminates.
Grain direction on symmetrical corner worksurfaces runs at a diagonal.

*Laminate only

Note: Add suffix "N" to model number for no grommets, no upcharge.



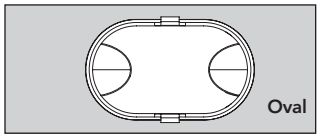
Worksurfaces

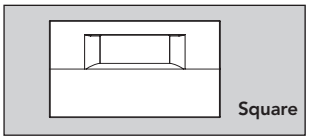


Worksurfaces are 1⅛" thick with particleboard core and with top surfaces finished in laminate. Bottom surfaces are covered with a backer sheet. Worksurfaces are available in laminate and Stratawood veneer. Veneer worksurfaces are by Gunlocke.

Worksurfaces

- Laminate worksurfaces are 1⅛" thick with particle board core and with top surfaces finished in high-pressure laminate. Bottom surfaces are covered with a backer sheet.
- **Flat edge trim** is available on laminate tops in twenty standard colors (customer specified) to match solid or woodgrain laminates and to complement patterned laminates.
- Veneer worksurfaces have square veneer edge.





- **Optional wider width primary worksurfaces** are available for use with Terrace panel runs having a "T" or "S" connection — upcharge applies.

Wire management grommets are standard in most worksurfaces (unless specified with no grommets) and are specified in plastic or metal.

- **Metal grommets** are available in oval or square (shown below).

- Rectangular worksurfaces over 42"W have two grommets. Corner cove worksurfaces will have two grommets. Peninsula and corner worksurfaces have one. D-Shaped worksurfaces and countertops do not have grommets.
- Grommets on standard systems worksurfaces are located 6⁵⁄₁₆" from side edges and 3⁵⁄₁₆" from back edge.
- Add Suffix "N" to a model number for no grommets — no upcharge.

Supports

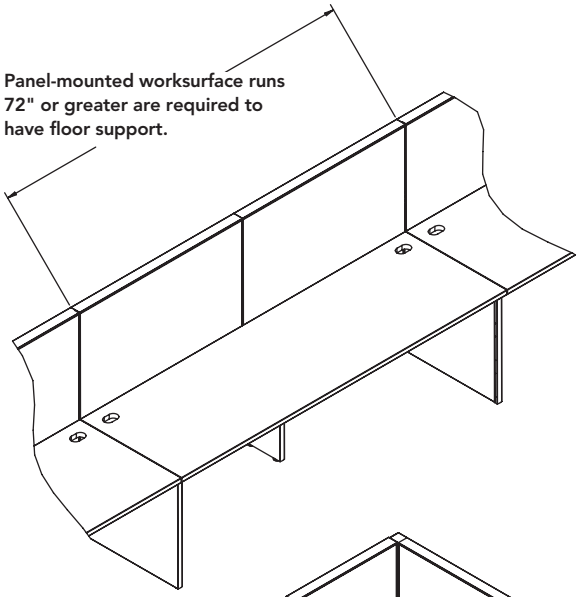
Worksurfaces can be configured at 29½"H with end-panel supports and in-line support panels, or at various heights on 1" increments using specific product configurations.

Worksurface support options include:

- Support column*
- Flat brackets
- External support channel
- Worksurface bracket kits
- Height adjustable mechanisms
- Cantilever brackets
- In-line support legs*
- End-panel supports*
- Support storage units*
- Pedestal-to-panel attachment kit*
- Desk-to-panel attachment kit*
- Corner desk leg*
- Bridge and return kits
- Modesty panels
- Gussets

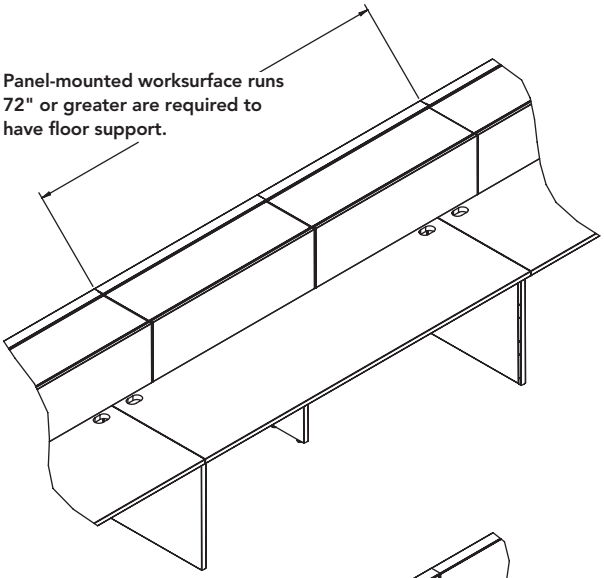
*Units provide floor support.

Support Guidelines — See Drawings on page 279



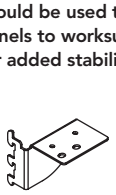
- Panel-mounted worksurface runs 72" or greater are required to have floor support.
- When using overheads in panel mounted worksurface run applications 72" and greater, floor support* is required. (See list at left.)
- When using overheads at the end of a panel run, floor supports* are required.
- Worksurface bracket kit should be used to tie panels to worksurface for added stability.
- A return panel at the end of a panel run can be substituted with one of these floor supports: storage, open or closed end support panel, O-leg.

continued on next page

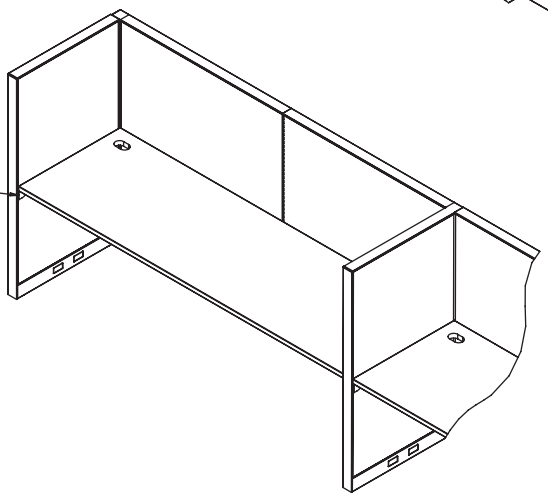


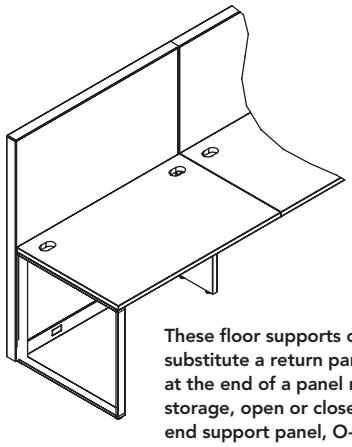
continued from previous page

- Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return panel or floor support.
- Unsupported worksurfaces 60"W or greater require an external worksurface support channel. When a center support cantilever cannot be used, an external worksurface support channel is recommended for spans greater than 48"W. See pages 283 and 293.
- Support channel may interfere with mounting of some CPU holders and keyboard supports.
- Cantilevers are recommended in place of an external worksurface support channel where feasible.
- Cadence Desking configurations utilize modesty panels and gussets in place of external support channels for worksurfaces up to 72"W. See pages 284-292.

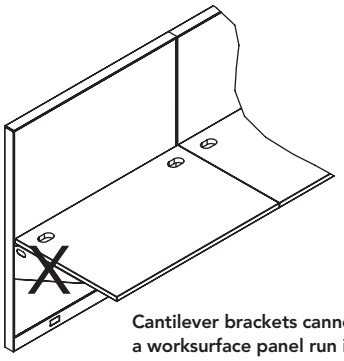


Panel-mounted worksurface runs 72" or greater are required to have floor support.

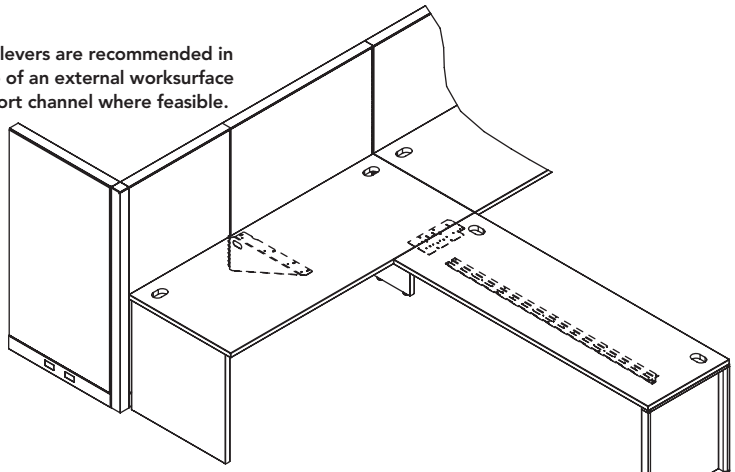




Panel-mounted worksurface runs 72" or greater are required to have floor support.



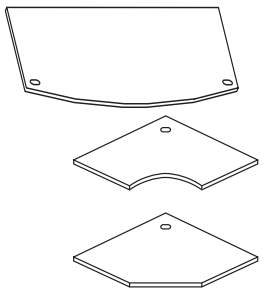
Worksurface bracket kit should be used to tie panels to worksurface for added stability



These floor supports can substitute a return panel at the end of a panel run: storage, open or closed end support panel, O-legs.

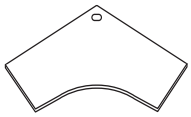
Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return or floor support.

Cantilevers are recommended in place of an external worksurface support channel where feasible.



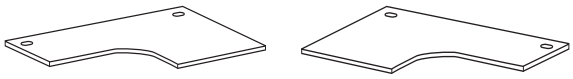
Unsupported worksurfaces 60"W or greater require an external worksurface support channel. When a center support cantilever cannot be used, an external worksurface support channel is recommended for spans greater than 48"W.

Worksurfaces - Laminate (L) w/Flat Edge and Veneer (V) w/Square Edge

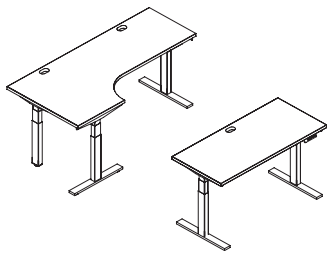


Primary Worksurfaces (L page 293)
- Primary worksurfaces are available in 24" and 30" depths.
- Nominal worksurface width is equal to nominal panel width.
- Wire management grommets standard, one for widths up to 42", two on widths 48"W and greater.
- Worksurfaces greater than 60"W require a cantilever bracket for center support in panel mounted applications. Specify 18" cantilever on 18"D, and 24" cantilever on 24"D and 30"D worksurfaces.
- Primary worksurfaces can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Working With Cadence, pages 284-292.

Bow-Front Worksurfaces (L page 294)
- Two wire management grommets standard.
- Bow-front worksurfaces can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Working With Cadence, pages 284-292.

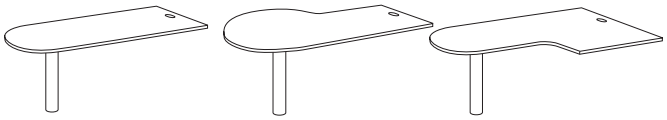


Corner Worksurfaces (L page 295)
- One wire management grommet.
- Corner worksurfaces with woodgrain laminate have grain direction diagonal to adjacent worksurfaces.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

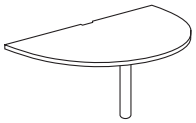


120° Corner Worksurfaces (L page 295)
- Standard with one wire management grommet in corner location.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

60° Pie Worksurface (L page 295)
- Order support column and two flat brackets separately.

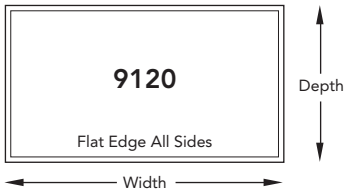


Corner Cove Worksurfaces (L page 296)
- Two wire management grommets standard.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner. All other support hardware is ordered separately.
- Can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Cadence pages 284-292.
- Worksurfaces greater than 60"W require a cantilever bracket for center support in panel mounted applications. Specify 24" cantilever on 24"D and 30"D worksurfaces.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.



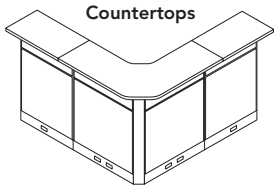
Height-Adjustable Worksurfaces
- For freestanding applications, see height-adjustable tables pages in the Seating, Collaboration, and Tables Price List.

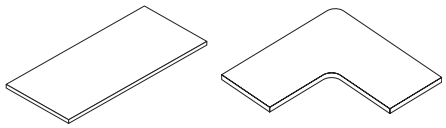
Worksurfaces — Laminate(L) w/Flat Edge and Veneer(V) w/Square Edge



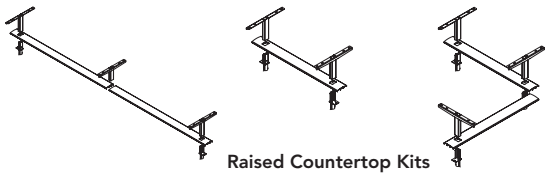
Peninsula, P-Shaped, and Jetty Worksurfaces
(L page 297)
- Wire management grommets standard.
- Support column ordered separately, column includes panel support brackets T6BK.
- Can be used with a modesty panel and appropriate supports to configure freestanding desk(s). Refer to Cadence pages 284-292.

D-Shaped Worksurfaces (L page 298)
- Order support column and two 24"D in-line support legs separately.
- Not recommended for use with T6CB24L or T6CB24R for shared applications.
- Includes attachment bracket.





Quarter-Round Worksurfaces (L page 298; V page 303)
- Use to connect two 90° panel-attached worksurfaces.
- Order support column and two flat brackets separately.

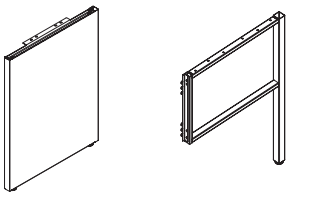


Non-Standard Worksurface Sizes (L, V pages 301-302)
- The 9120 Program can be used to order particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120"W x 36"D.
- Other modification requests should be made through Allsteel Tailored Products Group.

Countertops - Laminate (L) w/Flat and Veneer (V) w/Square

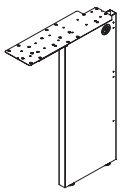
Countertops

Raised Countertop Kits



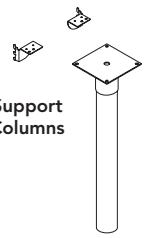
Countertops
- Countertops are available in straight and corner configurations.
- Choose between raised countertops which require raised countertop kit (ordered separately) or flush countertops which include brackets, top trim, and mounting hardware.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

Raised Countertops (L page 299)
- Countertops are raised 5" above panel top cap.
- Order raised countertop kits separately.
- Add appropriate suffix to end of model number for in-line variable height applications.
- Countertop kit can extend up to 6" beyond end of kit.



Raised Countertop Kits (L page 299)
- Includes top cap and attachment hardware.

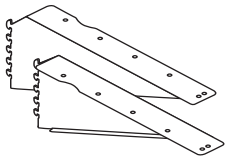
Flush Countertops (L page 300)
- Mounting brackets, top trim, and attaching hardware included.
- Flush countertops come with a painted top cap — specify color.
- Countertops are flush with the ends of panel top cap.



Worksurface Supports

End-Panel and Open End Supports

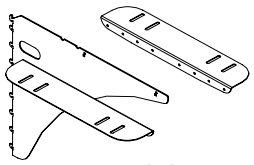
End Supports and Bracket Kits (page 304)
- End-panels are 1⅝" thick. For use in place of panels at the end of worksurface runs.
- Levelers provide 1½" vertical adjustment.
- Must be connected into panel slots for panel hung applications.
- Straight worksurfaces adjacent to 120° connections must be supported by full end-panels.
- 11"D end-panel models for use with D-shaped worksurfaces or curvilinear shaped worksurfaces in freestanding applications.
- Panel mounted end-panel supports are ordered for right- or left-handed application.
- Open end panel supports are non-handed and are only for panel mounted applications.
- End-panel models can be converted to freestanding with removal of panel mount bracket.
- End-panel bracket kit converts freestanding end-panel support model to panel mounted.



Support Legs

Support Legs and Bracket Kit (page 304)
- Support legs are 1⅝" thick. Supports the junction of two worksurfaces.
- Non-handed for use at either end of worksurface. Leg portion is 12¾"D.
- Provided with flat bracket.
- Worksurface in-line support legs are used to support worksurfaces only in a shared position.
- Levelers provide 1½" vertical adjustment.
- Must be connected into panel slots for panel hung applications.
- Closed full length models can be converted to freestanding with removal of panel mount bracket.
- Support Leg Bracket Kit (non-handed) converts closed full length freestanding model to panel mounted.

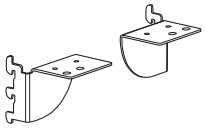
Support Columns



Support Columns (page 304)
- Used to support one end of curvilinear worksurfaces.
- Includes column, worksurface bracket kit T6BK, attaching hardware, and adjustable glides.
- D-shaped, P-shaped, peninsula, jetty, boomerang, and reef worksurfaces require support columns (ordered separately).

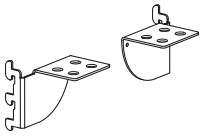
Worksurface Supports

Handed
Cantilever Brackets



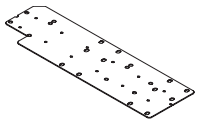
Cantilever Brackets (page 304)
- Use with runs less than 96". Floor support is required for runs 96" and longer.
- Where applicable, cantilevers are recommended over an external worksurface support channel. Unsupported worksurface runs 66"W or greater require an external worksurface support channel when a cantilever cannot be used.
- Do not use at the end of a worksurface where no 90° return panel is positioned.
- Includes tie bracket and attachment hardware.
- Avoid installation on only one side of a straight connection except to support corner worksurfaces.
- DO NOT use to support worksurfaces from which a hanging pedestal is suspended, or to which a peninsula worksurface is attached.
- DO NOT use cantilever brackets to support worksurfaces supported with permanent-wall hanger kit.
- Do not use with wall track or to support a worksurface to which a return worksurface is attached.

Non-Handed
Cantilever Brackets



Cantilever Bracket — Handed (page 304)
- Cantilever brackets are handed (left or right) and can be inserted into panel reveals in 1" vertical increments. No assembly required.
- Left- and right-hand brackets required in shared applications.
- 24"D cantilevers are required to be used for both 24"D or 30"D worksurfaces.
- 18"D cantilevers are required to be used for 20"D worksurfaces or center support for 24"D.
- 12"D cantilevers are required to be used for 12"D worksurfaces.

Cantilever Bracket — Non-Handed (page 304)
- Cantilever brackets are non-handed and can be inserted into panel reveals in 1" vertical increments. Assembly required.
- One bracket in shared applications — includes two angled brackets.
- Bracket accommodates 24"D or 30"D worksurfaces.



Worksurface Brackets

Worksurface Bracket Kit — T6BK (page 304)
- Worksurface bracket kit allows one end of a worksurface to be supported by a return panel. Return panel width must be the same as the depth of the worksurface.
- Brackets — one pair. Attachment hardware included.

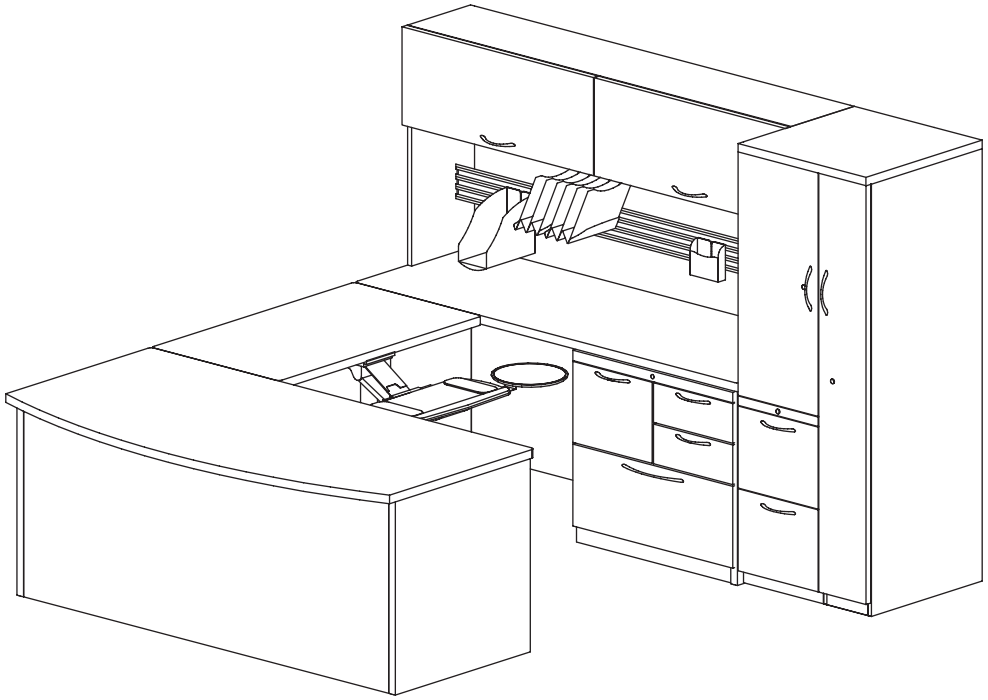
Worksurface Bracket — T6SB (page 304)
- Worksurface storage bracket kit (T6SB) is used for aesthetics where under-desk storage is immediately adjacent to the return panel. In all other applications use worksurface bracket kit (T6BK) to utilize worksurface threaded metal inserts. Black only.
- Brackets do not align with worksurface threaded metal inserts, and therefore require wood screws (included).

Flat Brackets

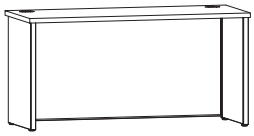
Flat Brackets (page 304)
- Bracket and attaching hardware.
- Can be used to connect one worksurface perpendicular to another worksurface.

Pedestal-to-Panel
Brackets

Pedestal-to-Panel Attachment Bracket (page 304)
- Can be used in place of full end panel or return panel.
- Provides structural support to panel run by securing panel directly to pedestal.
- Attachment hardware included.

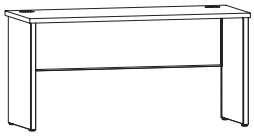


External Worksurface
Support Channel



External Worksurface Support Channel (page 293)
- An external worksurface support channel is required on unsupported worksurfaces 60"W or greater. Width of worksurface span can be reduced by using support storage.
- The support channel extends 1½" below the worksurface. Installs 7" from user's edge.
- When using 28"H mobile pedestals the length of support channel needs to be reduced to accommodate width of the pedestal.
- Support channel may interfere with mounting of some CPU holders and keyboard supports. May require spacer kit AKMH.

Cadence® Freestanding



Cadence offers unlimited versatility. Its modular flexibility creates office solutions of all shapes, sizes, and styles.

Configurations

Full Modesty

Half Modesty

Gussets

All the right choices

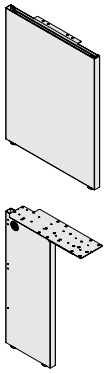
Choose Cadence freestanding desking with confidence. It personalizes any work environment, accommodates a range of needs, and offers all the right features — curvilinear worksurface shapes, multiple worksurface edges, and a complete paint finish and laminate offering. Cadence is made to last with heavy-gauge steel construction. Metal-to-metal worksurface connection points make installation and reconfiguration reliable and easy. And Cadence is backed by a lifetime warranty.

Universally flexible

Cadence sets up easily and reconfigures time after time. It even shares components with Terrace or Optimize™ which simplifies inventory management. Cadence is created with worksurfaces, supports, modesty panels, end panels, and brackets. Cadence is compatible with the entire line of Allsteel metal storage solutions and Extensions™ — work tools to provide personalized organization for every workstyle.

Systems integration — Cadence works in combination with Terrace or Optimize panels, extending the functionality of both product lines.

Highly adaptable — Make the most of building architecture by using an existing wall to create a semi-private workspace.



Space utilization — Multiple worksurface shapes offer unlimited design potential for using space creatively and efficiently.

Team interaction — Cadence design flexibility allows you to create personal workspace and a team collaboration area in the same office.

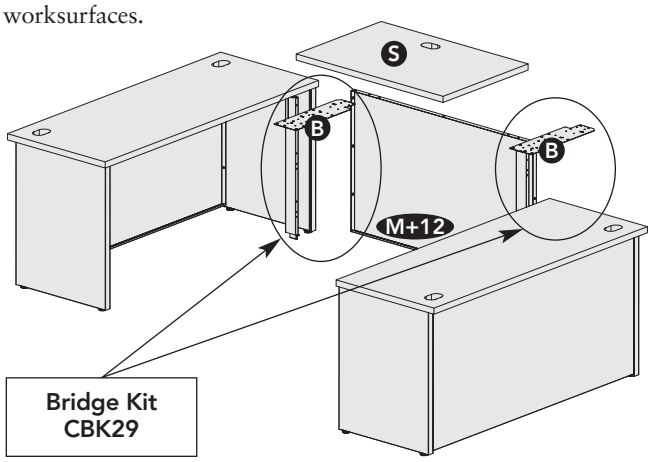
The Cadence Choice

It works in the open plan, the private office, or in combination with Terrace or Optimize panels, allowing complete office coordination. The flexible, universal design of Cadence supports virtually any workstyle and any interior aesthetic. Backed by Allsteel's Lifetime Warranty and manufactured to strict environmental standards, Cadence provides one high-value package.

Configurations

End Panels E and Support Legs L

Each are available in two options: freestanding or panel-mount. The only difference between the two options are the panel-mount models come with a left- or right-handed bracket to attach the support to a panel in a Cadence systems application. If the freestanding version is purchased and later needs to be converted to panel-mount, the proper handed panel-mount bracket may be purchased separately.



The 11"D end panel is used to freestand peninsulas, curvilinear shapes, and D-Tops in panel applications.

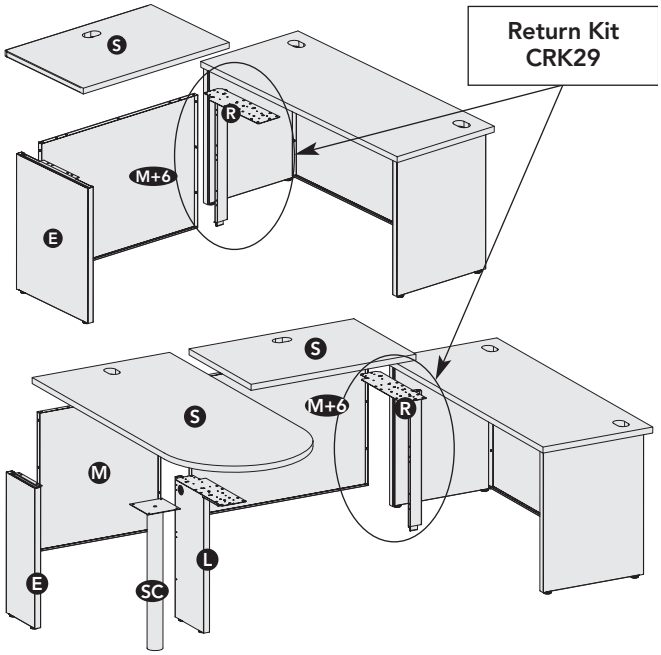
Corner Desk Legs C

Corner desk legs have a 90-degree bend and welded construction. The strong construction allows gussets or half-height modesty panels to be used with corner legs.

Bridge Kits B

Bridge kits include: two flat brackets, two modesty panel-to-end panel attachment brackets, and two tie straps. This kit is used when attaching a bridge unit between two rectangular worksurfaces.

There are some bridge instances where only half of a bridge kit is needed (e.g. using a bridge between a rectangular worksurface and a corner or peninsula). A return kit may be ordered for these instances.

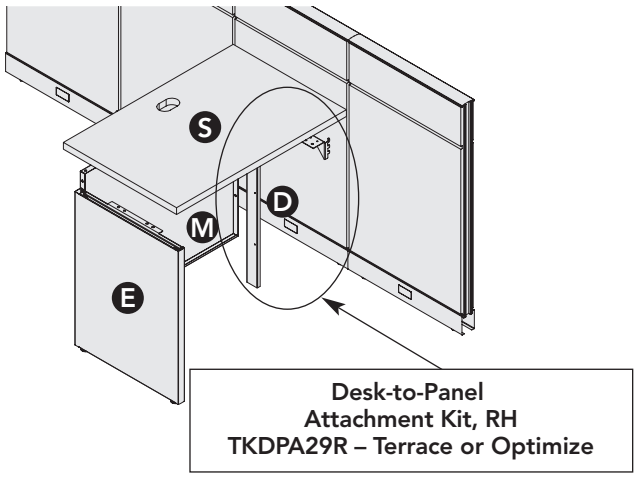


Surface S

Support Column SC

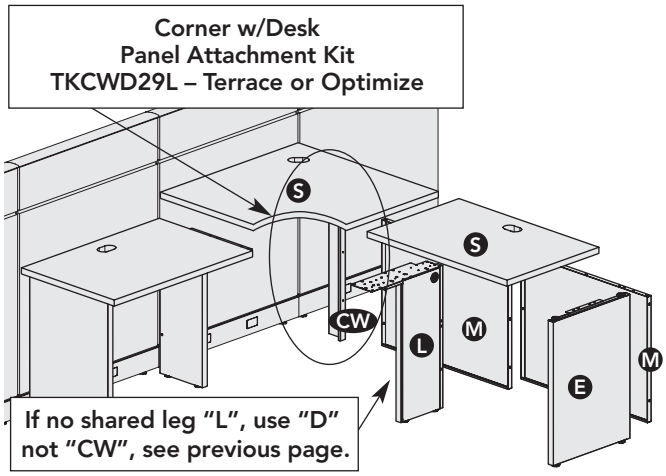
Used to support one end of curvilinear worksurfaces. Includes column, worksurface bracket kit T6BK, attaching hardware, and adjustable glides.

Return Kits R



Return kits include: one flat bracket, one modesty panel-to-end panel attachment bracket, and one tie strap. These are used when attaching a return to a primary desk. Return kits can also be used in some bridge applications — one example is shown below when using a peninsula.

Desk-to-Panel Attachment Kits D

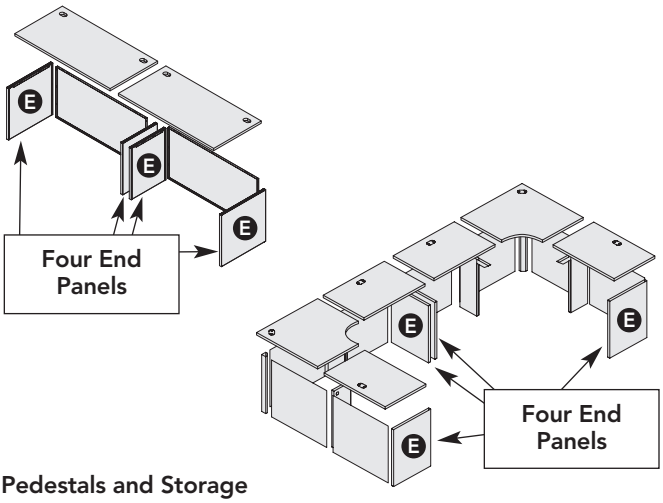


Desk-to-panel attachment kits are used to connect a worksurface and modesty panel perpendicular to a panel of corresponding width. Opposing end of worksurface must be attached with an end-panel, support leg or corner leg mounted directly under this worksurface.

When using a corner or corner cove worksurface with the rear corner attached to a panel, and opposing end of worksurface is attached to a freestanding desk — use corner w/desk attachment kit. "Hand" of unit is determined from the user's side of the desk (right hand unit attaches to right side of modesty).

Corner w/Desk Panel Attachment Kit CW

Corner w/desk panel attachment kit connects the rear corner of a corner or corner cove worksurface and modesty panel to a panel when the opposing end of the worksurface shares a support leg with an adjacent freestanding desk and the support leg is mounted under the freestanding desk. "Hand" of unit is determined from the user's side of the desk (left hand unit attaches to left side of modesty).



Corner Worksurfaces

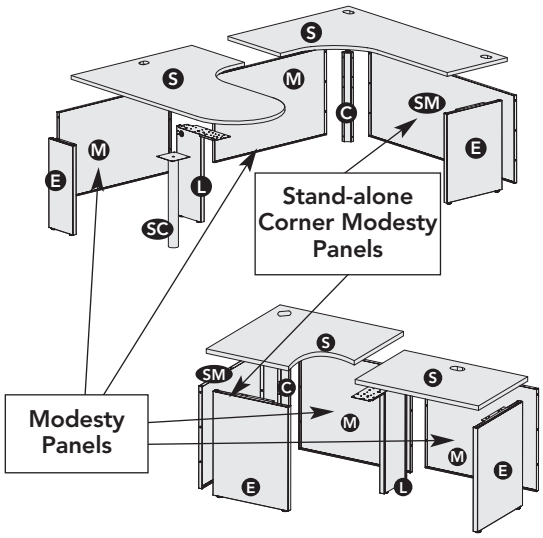
Corner worksurfaces to accommodate 90-degree corner desk legs.

In-Line Connections of Desks

Freestanding full end panels must be used to support adjacent rectangular desks, corner desks, and corner desks with returns. Freestanding support legs should NOT be used at the in-line junction. 24"D full end panels may be used at the in-line junction on 30"D rectangular desks if two worksurface tie straps are used to secure the desks together. Contact Allsteel Customer Support for ordering information.

Pedestals and Storage

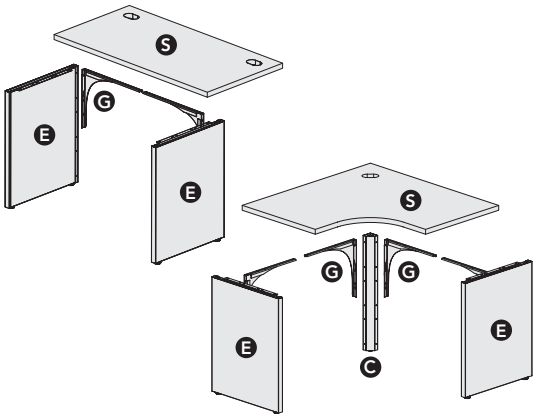
Pedestals must be ordered one size smaller than the depth of the worksurface. For example, 18"D or 20"D peds should be used with 24"D worksurfaces. 18"D, 20"D, or 23"D pedestals can be used with 30"D worksurfaces. Using 18"D laterals or personal files provide additional pull style and storage options under 24"D worksurfaces.



Modesty Panels M

The following are some general guidelines for Cadence modesty panels:

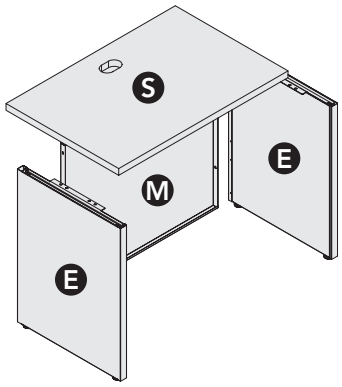
- **Desk:** Modesty panel width is the same width as the worksurface
- **Return:** Modesty panel width is 6" greater than the width of the worksurface
- **Bridge connecting two rectangular worksurfaces:** Modesty panel width is 12" greater than the width of the bridge worksurface
- **Bridge connecting a rectangular worksurface and corner or peninsula:** Modesty panel width is 6" greater than the width of the worksurface
- **Corner connecting to an adjacent worksurface:** Modesty panel width is the same width as the worksurface.



Stand-Alone Corner Modesty Panels SM

Stand-alone corner modesty panels are used only when one or both sides of a corner or corner cove worksurface are freestanding and NOT attached to another worksurface. Specify the width the same as the width of the worksurface.

Gussets G



Gussets can be used in place of a modesty panel with desks 36"W to 60"W. Gussets can also be used with corner desk legs.

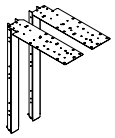
Cadence Supports

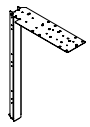
End-Panel Supports

End-Panel Supports (page 305)
- End panels are 1⅝" thick. For use at the end of worksurface runs.
- Levelers provide 1½" vertical adjustment.
- Freestanding models can be converted to Terrace panel-mount with end panel bracket kit.
- Must be connected into panel slots for panel hung applications.
- Straight worksurfaces adjacent to 120° and 135° connections must be supported by full end panels.
- 11"D models for use with D-shaped worksurfaces or curvilinear shaped worksurfaces in freestanding applications.



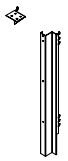
Support Leg

Support Legs (page 305)
- Support legs are non-handed. Supports the junction of two worksurfaces.
- Leg portion is 12¾"D and is 1⅝" thick.
- Flat bracket included.
- Levelers provide 2¾" vertical adjustment.
- Freestanding models can be converted to Terrace panel-mount with support leg bracket (non-handed).
- Must be connected into panel slots for panel hung applications.



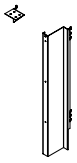
Corner Desk Leg

Corner Desk Leg (page 305)
- Attaches two modesty panels at rear of corner desk.
- Leveler provides 2¾" vertical adjustment.
- See examples on pages 289 and 290.



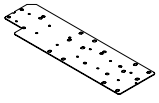
Bridge Kit

Bridge Kit (page 305)
- Connects bridge worksurface and modesty panel to end panels and worksurfaces that are perpendicular to the bridge worksurface.
- Includes two flat brackets and two modesty panel-to-end-panel brackets.
- See examples on pages 285 and 288.



Return Kit

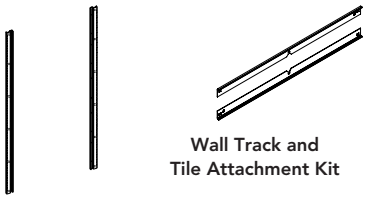
Return Kit (page 305)
- Connects return worksurface and modesty panel to end panel and perpendicular worksurface — non-handed.
- Includes one flat brackets and one modesty panel-to-end-panel bracket.
- See examples on pages 285 and 287.



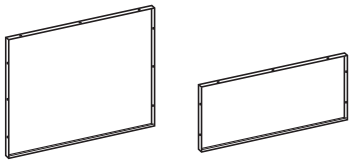
Desk-to-Panel Attachment Kit

Desk-to-Panel Attachment Kit (page 305)
- Used to connect a worksurface and modesty panel perpendicularly to a Terrace Panel of corresponding width. Opposing end of worksurface must be attached with an end-panel, support leg or corner leg mounted directly under this worksurface.
- If using corner or corner cove with the rear corner attached to a panel, and opposing end of worksurface is attached to a freestanding desk — use corner w/desk panel attachment kit.
- "Hand" of unit is determined from the user's side of the desk (left hand unit attaches to left side of modesty).

Corner w/Desk Attachment Kit



Corner w/Desk Panel Attachment Kit for Terrace (page 305)
- Used when the rear corner of a corner or corner cove worksurface and modesty panel is attached to a Terrace panel and opposing end of worksurface is attached to a freestanding desk. Opposing end of worksurface shares the support leg that is mounted under the adjacent freestanding desk.
- "Hand" of unit is determined from the user's side of the desk.



Flat Bracket

Flat Brackets (page 305)
- Bracket and attaching hardware.
- Can be used to connect one worksurface perpendicular to another worksurface.

Wall Track, Tile attachment Kits, Modesty Panels, and Gussets

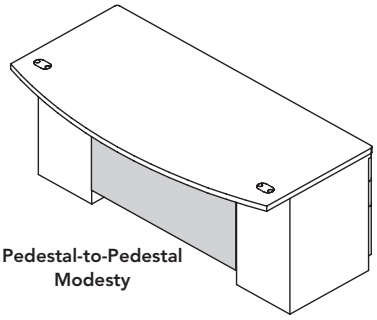
Wall Track and
Tile Attachment Kit

Full and Half High Modesty Panels

Freestanding Pedestals

- Can also be used to support one end of a panel-attached worksurface in conjunction with worksurface bracket.

Freestanding Desks



- **Freestanding desks** can be created by combining primary and corner worksurfaces with modesty panels and appropriate desk supports. See pages 284-290.

Pedestal Compatibility with Cadence and Panel-hung Worksurfaces

Terrace Wall Track/Tile Attachment Kits (page 305)

- Allows for mounting of system panel components on permanent wall structures.
- Begin with one pair of ends; for multiple kits in line, add middle unit(s) between ends.
- Height of wall track coordinates with panel height. Field cut for lower heights.
- Wall track will add 1" to depth of attached components.
- Use Terrace wall track tile attachment kit to install tiles onto wall track. Kit includes two tile bars. Top bar may only be used in the top uppermost position on wall track. Bottom bar can be used in the bottom position at any location on wall track.
- When segmenting tiles on wall track, segment bars must be ordered for placement between all vertically adjacent tiles or at the top position of a single tile that is not in the uppermost position.
- When using Terrace wall track and using tiles to create a tackboard situation under overheads hung at 65"H, make sure to use a 30"H tile or 2-15"H tiles to cover the entire area between the overheads and the worksurface.

Modesty Panel (page 306)

- Mounts to end-panel supports, desk support legs, bridge kit, return kit, desk-to-panel, and corner w/desk panel attachment kits.
- 29½"H units provide ¾" of space between bottom of modesty panel and floor.
- Actual width of 29½"H modesty panel is 3¾" less than the nominal dimension listed in the Systems Price List.
- 14"H units provide 14¼" of space between bottom of modesty panel and floor.
- Refer to pages 284-290 to select proper width.
- Use 14"H modesty panels for desks positioned against a wall to provide access to electrical receptacles.
- 14"H modesty panels, stand-alone corner modesty panels, or gussets can be used with corner or corner cove worksurfaces.

Stand-alone Corner Modesty Panel (page 306)

- 29½"H units provide ¾" of spacing between bottom of panel and floor.
- 14"H units provide 14¼" of space between bottom of modesty panel and floor.
- Actual width of modesty panel is 6³⁄₁₆" less than the nominal dimension listed in the Systems Price List.
- Modesty panels are inset 2⅞"; when adding pedestals consult chart at left.

Pedestal-to-Pedestal Modesty Panels (page 306)

- Widths available to work with 60"W, 66"W, and 72"W worksurfaces to create freestanding double pedestal desk using two medal support pedestals.

Gussets (page 306)

- Provides easy access to wall outlets.
- Cannot be used with suspended pedestals.
- Gussets can be used on corner and corner cove worksurfaces.

Universal Modesty Panel (page 306)

- Mounts under peninsula, P-Shape and jetty worksurfaces. Refer to chart below to select proper width.
- Can be used with panel-mounted and freestanding worksurfaces.
- Provides 8½" of privacy and is non-handed.
- Constructed of steel. No upcharge for P2 paint.
- Only requires attachment to the worksurface.
- Does not provide electrical, data or structural support.
- Panel is 1½" thick and can be mounted at various distances from edge of worksurface based on user's preference for clearance and conferencing requirements.

Worksurfaces

For specification information see pages 278-283
For non-standard worksurface sizes see page 301.

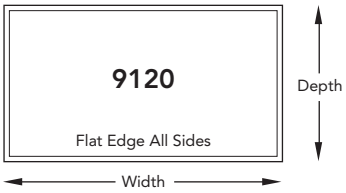
Example: **TN51572S.LT3B.E9.PR2**

ORDERING



The 9120 Program can be used to order particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120" W x 36" D.

Specify:

1. **Model Number** (see page 302)
   Specify closest nominal width/depth model (round up).
2. **Grommet Option** (if desired)
   See grommet specification instructions on this page.
3. **Grommet Type:**
   P Plastic
   M Metal (add $16 per grommet for laminate)
4. **Grommet Color:**
   (Metal only)
   EL Matte Silver
   Note: Plastic grommet will match flat edge.
5. **Laminate and Veneer Choices**
   See page 100.
6. **Flat Edge Color Choices**
   See edge colors page 100 for laminates.
7. **Exact Size**
   Specify the **exact width** and **exact depth** you require.
   Width and depth is specified in ⅛" increments which is denoted as a single digit following the whole number dimension at the end of the model number string.

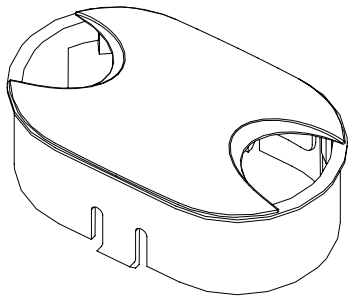
⅛" =	1	⅝" =	5
¼" =	2	¾" =	6
⅜" =	3	⅞" =	7
½" =	4	no extra increment =	0

For example, when ordering a worksurface that is 34⅜"W x 20½"D, specification should be 345Wx204D.
Example: **9120R3624.G0.TM33.EU.345Wx204D**.

PRODUCT SPECIFICATIONS

- Flat edge on all sides
- 45 lb. particle board
- 1⅛" top thickness
- .020 resin impregnated paper backer sheet
- Grommets available
- Maximum width 120" (maximum recommended unsupported span is 42")
- Maximum depth 36"
- Standard Allsteel laminates and veneers
- Quantities of 10 or greater are palletized; less than 10 are individually cartoned.

Note: 9120 worksurface maximum unsupported span is 42". 9120 worksurfaces do not have pre-drilled pilot holes or threaded metal inserts.



When spanning multiple freestanding storage units with one worksurface, add ⅛" for each additional storage unit. For example, when ordering a worksurface for three 30"W lateral files. 3 units x 30" = 90" + ⅛" + ⅛" = 90¼" worksurface. Do NOT follow this rule if panel wrapping storage units.

CHANGES / CANCELLATIONS

No changes/cancellations for 9120 Program worksurfaces.

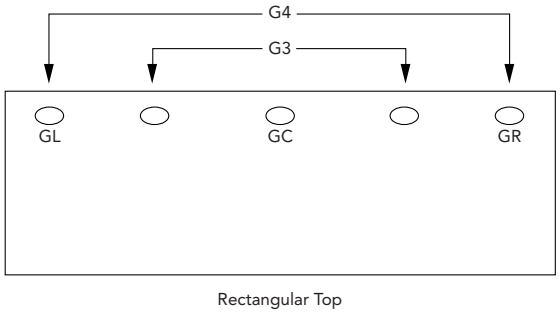
GROMMET SPECIFICATIONS

Plastic grommets are made of durable ABS plastic and grommets match edge color on laminate worksurfaces. Metal grommets are only available Matte Silver oval for laminate and square for veneer.

PRICING

See page 302 for laminate and veneer 9120 worksurface pricing.

One Grommet — GC, GL, or GR Position..... $23.00
Two Grommets — G3 or G4 Position..... $46.00
Note: Add $16 per grommet for metal grommets with laminate.



ORDERING

Specify grommet location and color.
Example: **9120R10836.GCP.TM33.EU.1022Wx326D**

Code Grommet Position

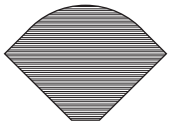
GC	Centered side-to-side – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
GL	6⁵⁄₁₆" from left side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
GR	6⁵⁄₁₆" from right side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
G3	Pair of grommets each 18" from side edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center (Position G3 not available on tops 60"W or less.)
G4	Pair of grommets each 6⁵⁄₁₆" from side edge to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
G0	No grommets

Dimensions are from grommet center line to top edge.

Rectangular Top

Grommet positions other than those shown above are considered non-standard.

Worksurfaces



For specification information see page 301.

Laminate and Veneer Worksurfaces / Non-Standard Sizes

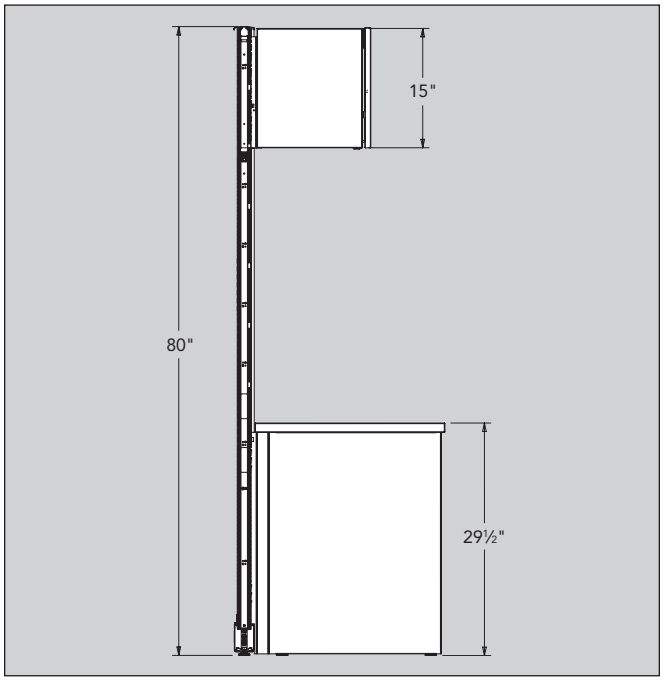
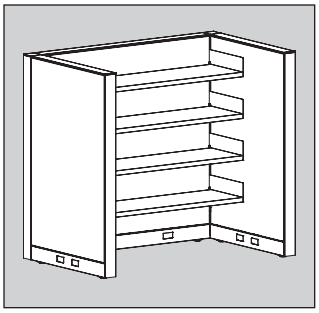
Overhead Storage Cabinet	
Width	24", 30", 36", 42", 48", 60"
Inside width	Flipper or 24"-36"W Hinged door — ⅜" less than width 42"-48"W Hinged or Sliding door — two compartments that are half of ⅜" less than width
Depth	14¼" RTA models 12"
Inside depth	12⅞" Receding door 12⅛" RTA models 11⅝"
Height	15"
Inside height	12¾" Receding door 11⅝" RTA models 12¾"
Open Shelf	
Width	24", 30", 36", 42", 48", 60"
Depth	12⅞" RTA models 11½"
Height	4⅝" RTA models 5⅝"

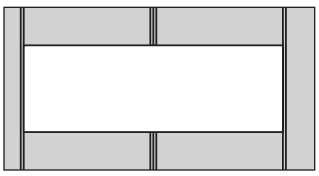


- **Task lights** can be mounted beneath storage shelves and overhead storage cabinets.
- Additional panel hung and freestanding lighting options are available.

- **Cord retainer clips** fasten into panel slots to anchor power cords.
- Available in black only.
- Clips are provided with under-shelf mounted task lights. Additional clips can be purchased separately.

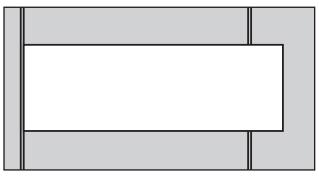


Specification Guidelines

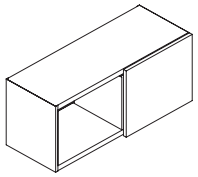


- In a panel run, only two overhead storage cabinets or open storage shelves are recommended per panel side.
- Do not suspend more than one overhead storage unit per side from panels in a panel run which is mounted, at one or both ends, with an off-module connector kit.
- Overhead storage cabinets and open storage shelves can be mounted on Terrace structural and stacking panels to a maximum height of 80"H.
- When mounting an overhead on a 57½"H base panel frame, select the option for Z57 bracket.
- For all other base panel frame and base panel frames with stacking frames the YZ bracket should be selected.
- Base panel frames with stacking frames that have an overall height of 57½" also use the YZ bracket.

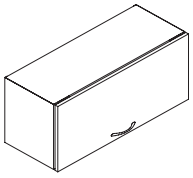
When overhead storage units are suspended from stacking frames, the following guidelines should be adhered to:



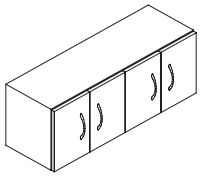
- Stacking frames should be added to all the parent run panels, and to, at least the first panel of each return-panel run. Stacking panels added to return panel must match the parent run configuration.
- A maximum of two overhead storage units should be suspended from each side of stacking frames on any given panel.
- With Terrace, a full height panel end cover is required for adequate stability when using overhead storage on the end of a run, or on a return panel.



- No limitation to the number of units on structural frames when run is supported with return panels on each side of storage shelves or overhead storage cabinets.



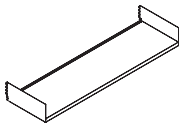
- **Storage shelf, receding door overhead, RTA overhead, and RTA shelf width** must correspond with width of panel(s).
- It is possible to span two panels when combined panel width equals cabinet or shelf width.



- **Terrace assembled metal overhead cabinets** can be mounted on a panel equal to or up to 18" narrower than cabinet using provided panel attachment brackets.

Sliding Door Overhead

Flipper Door Overhead



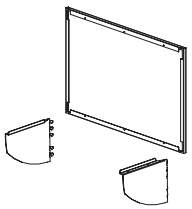
Hinged Door Overhead

Overhead Storage Cabinet (page 311)

- Steel cabinet with backstop.
- Available with sliding, hinged, or flipper door(s).
- Easy-Assist flipper door optional — requires minimal assistance in opening and closing. Not available on 60"W cabinets, specify 2–30"W cabinets with Easy-Assist.
- Self-engaging safety latch to secure cabinet to panel.
- Width can correspond with width of panel, or 2 panels joined without a connector.
- Arch or square pull optional on flipper and hinged doors.
- 60"W flipper door cabinet has 2–30"W doors with 2 independent locks.
- 24"-36"W hinged door cabinets have 1 lock and 2 optional pulls, 42"-48"W have 2 locks and 4 optional pulls.
- Accommodates recessed task lighting (specified separately).
- For locking specifications, see pages 1044-1046.
- Cabinets are 14¼"D x 15"H.
- 15"H cabinets can also be mounted on a panel equal to or up to 18"narrower than cabinet using provided panel attachment brackets.
- Sliding doors have a built in pull.
- Sliding, hinged, and flipper door overhead weight limits:

24"W	59 lbs.	42"W	105 lbs.
30"W	74 lbs.	48"W	121 lbs.
36"W	90 lbs.	60"W	152 lbs.

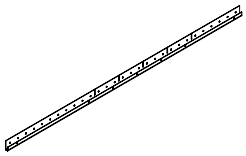
- When mounting an overhead on a 57½"H base panel frame, select the option for Z57 bracket. For all other base panel frame and base panel frames with stacking frames the YZ bracket should be selected. Base panel frames with stacking frames that have an overall height of 57½"H also use the YZ bracket.



Open Shelf

Open Shelf (page 311)

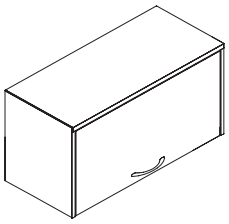
- Metal shelf with back stop.
- Locking clips (2) standard.
- Will accommodate recessed task lighting — ordered separately.
- Weight Limits:



24"W	61 lbs.	42"W	108 lbs.
30"W	77 lbs.	48"W	124 lbs.
36"W	93 lbs.	60"W	155 lbs.

Upmount Kit for Overhead Cabinets

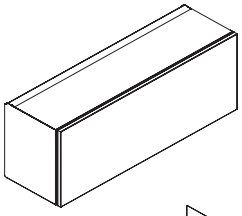
Upmount Kits for Assembled Overhead Cabinets (page 311)



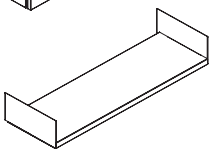
- Consists of two upmount brackets, full back panel and required installation hardware.
- Allows mounting of an assembled overhead cabinet up to 15" above height of panel.
- Specify "Z2" prefix model number upmount kits with 15"H, 30"H, 35"H, 50"H, or 65"H frames; and "Z4" prefix model numbers for use with 22½"H, 42½"H, or 57½"H frames.
- Brackets require a clearance of 6½"below bottom of overhead cabinet.
- Width must correspond with width of panel frame or 2 panel frames joined directly in-line.
- Full back panel adds ½" to depth of overhead case. Full back panel only used when upmounting cabinet.
- Cannot be used with RTA models.

Horizontal Wall Track

Horizontal Wall Track (page 311)

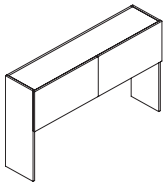


- Allows mounting overheads on permanent wall structures only.
- Cannot be used with RTA models.
- Track is 60"W and notched at 6" intervals as a guide for field cutting.
- For use with 15"H sliding door overhead, field modification is necessary.
- Available in Black only.
- Attachment hardware not included.



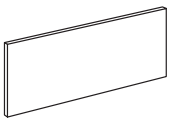
Receding Door Overhead

Receding Door Overhead Storage Cabinet (page 312)
- Steel cabinet with open back. Optional back can be ordered separately.
- Arch or Square pull optional.
- 60"W cabinet has 2 30"W doors with 2 independent locks.
- Accommodates recessed task lighting — ordered separately.
- For locking specifications, see pages 1044-1046.
- Cabinets are 13¼"D x 15"H. When door is recessed, interior dimensions are 12⅛"D x 11⅞"H.
- Weight Limits:



30"W.....70 lbs.	48"W.....110 lbs.
36"W.....85 lbs.	60"W.....138 lbs.
42"W.....100 lbs.	

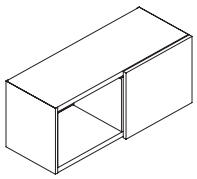
Ready to Assemble (RTA) Flipper Door Overhead (page 312)
- Steel cabinet with open back.
- 60"W and 72"W cabinets have 2 doors with independent locks.
- Accommodates recessed task lighting — ordered separately.
- Random keying, for locking specifications see pages 1044-1046.
- Cabinets are 12"D x 15"H. Interior dimensions 11⅞"D x 12¾"H.



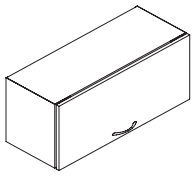
Ready to Assemble (RTA) Shelf (page 312)
- Metal shelf with locking clips.
- Accommodates recessed task lighting — ordered separately.

Stack-On Hutch

Stack-on Hutch (page 313)
- Have flipper doors with square horizontal edges.
- Universal model can be converted to open hutch.
- Doors are standard with a core removable lock (60"W, 66"W and 72"W have two doors and two locks.)
- Attachment tape provided.
- Order hutch to match width of worksurface(s) it covers.
- Hutches have clearance of 19¾" for computers, etc.
- Ship easy to assemble.
- Depth dimensions shown includes thickness of door.
- Universal model inside depth dimension is 12¾"
- Stack-on hutches accommodate recessed task lighting.
- For locking specification see pages 1044-1046.
- Chicago task light cords cannot be routed through the Hutch end panels, due to the large size of the fused plugs.



Tackboards for Hutches



Tackboards (page 313)
- Use tackboard to close the back of stack-on or hutch below storage unit.
- Due to width of fabric roll, 72"W tackboards are available in railroad cut only.
- Back of tackboard is painted steel, a finished surface.

Metal Overheads

For specification information see pages 307-310.

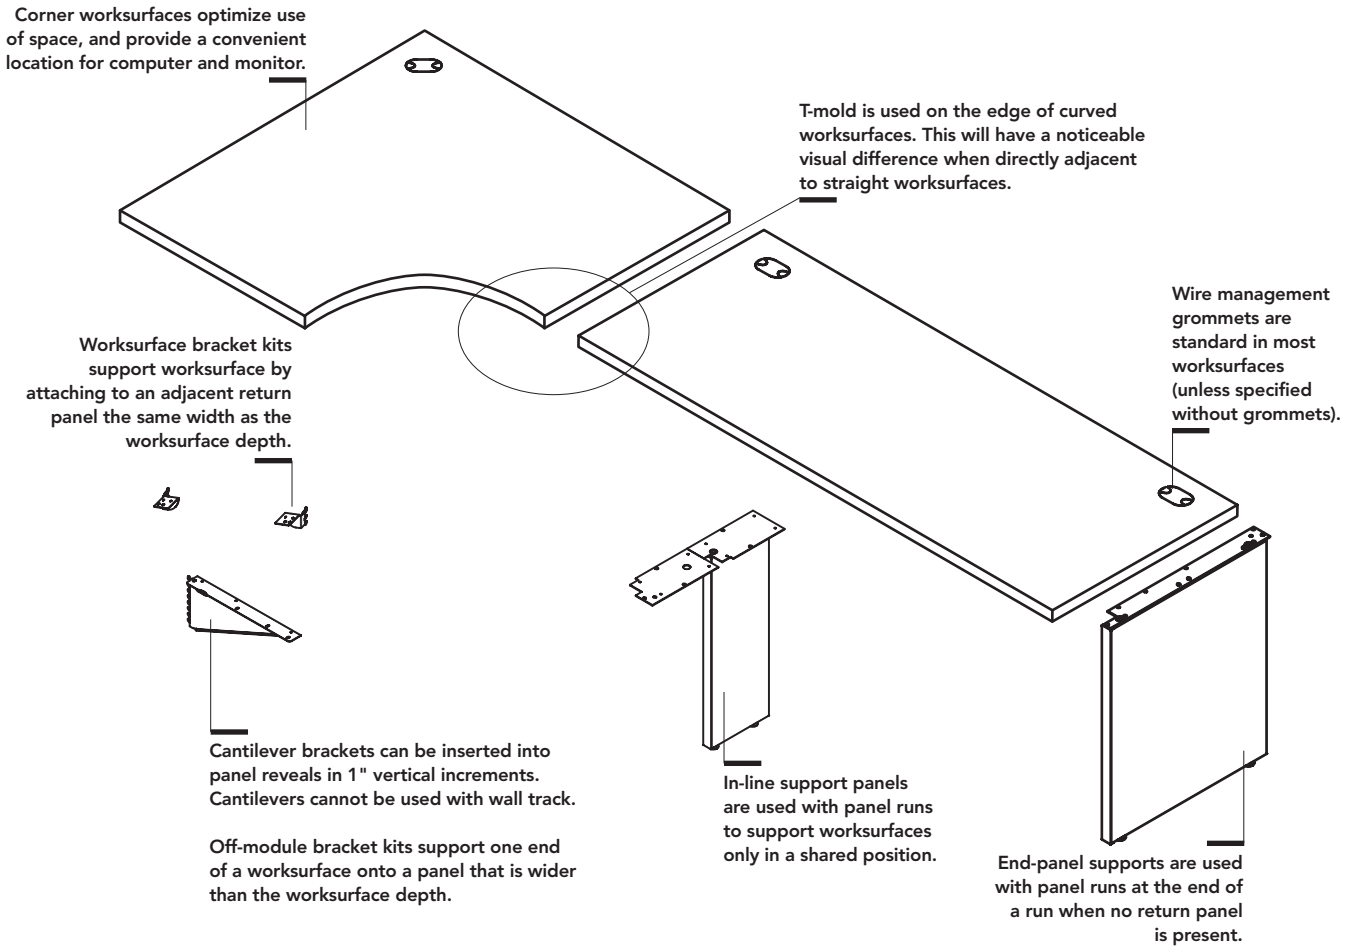
Laminate with Flat Edge or Veneer with Square Edge Worksurfaces

Flat Edge Detail



Note: Add suffix "N" to model number for no grommets, no upcharge.

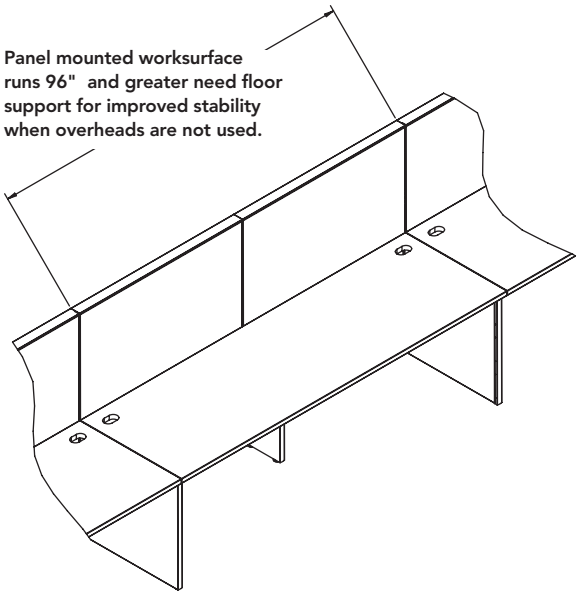
Arrows indicate grain direction for woodgrain laminates.
Grain direction on symmetrical corner worksurfaces runs at a diagonal.

Worksurfaces

Laminate worksurfaces are 1⅛" thick with particleboard core and with top surfaces finished in laminate. Bottom surfaces are covered with a backer sheet. Wall track allows for mounting of systems panel components on permanent wall structures.

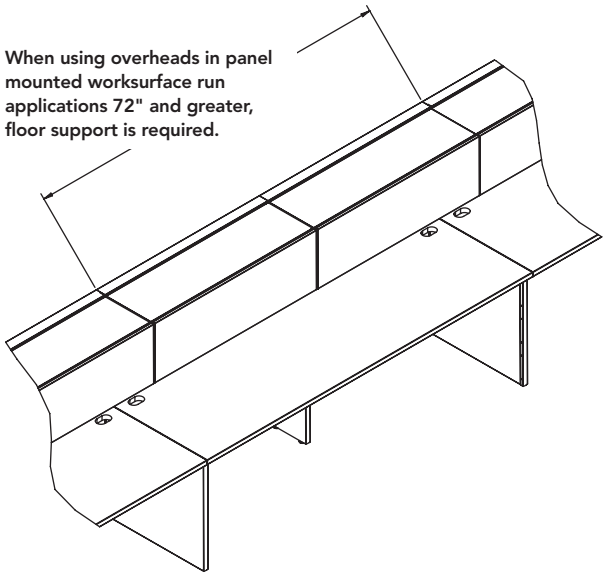
Worksurfaces can be configured at 29½"H or 26½"H with end-panel supports and in-line support panels, or at various heights on 1" increments using specific product configurations.

Worksurface support options include:



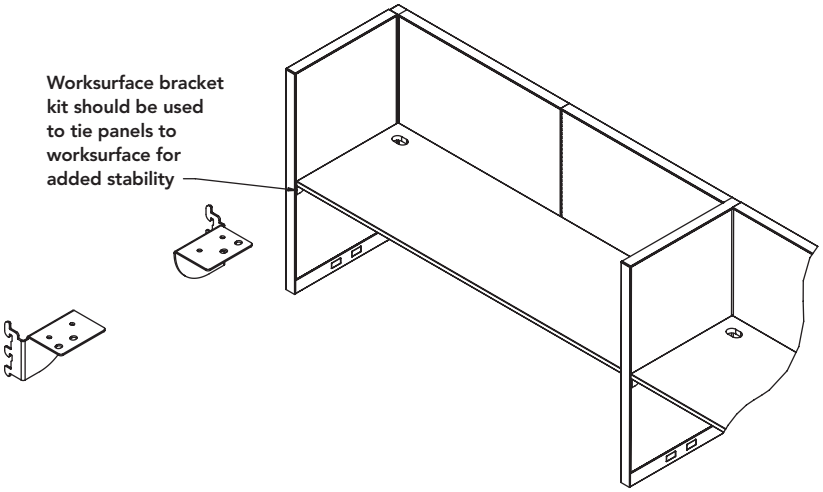
- Support column*
- Off-module bracket kit
- Flat brackets
- External support channel
- Worksurface bracket kit
- Height adjustable mechanism
- Cantilever bracket
- In-line support panels*
- End support panel*
- Support storage units*
- Storage unit with stanchion*
- C-Legs*
- Post Legs*

*Units provide floor support.

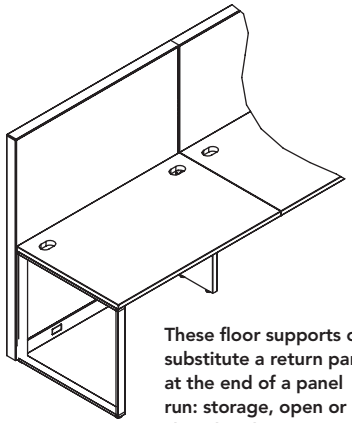


Support Guidelines — See Drawings on page 316

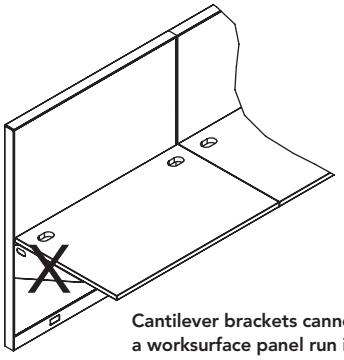
- Panel mounted worksurface runs 96" and greater need floor support for improved stability when overheads are not used.
- When using overheads in panel mounted worksurface run applications 72" and greater, floor support* is required. (See list at left.)
- When using overheads at the end of a panel run, floor supports* are required.
- Worksurface bracket kit should be used to tie panels to worksurface for added stability.
- A return panel at the end of a panel run can be substituted with one of these floor supports: storage, open or closed end support panel, O-leg.
- Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return panel or floor support.
- Unsupported worksurfaces 60"W or greater require an external worksurface support channel. When a center support cantilever cannot be used, an external worksurface support channel is recommended for spans greater than 48"W.
- Support channel may interfere with mounting of some CPU holders and keyboard supports.
- Cantilevers are recommended in place of an external worksurface support channel where feasible.



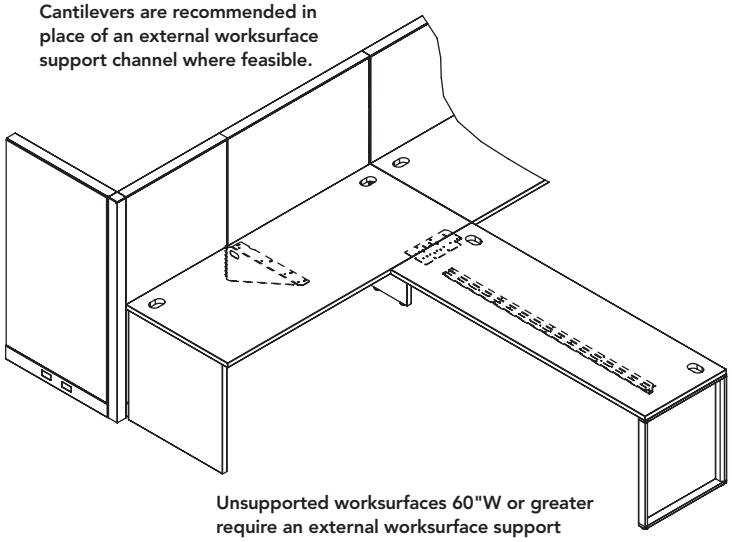
Panel mounted worksurface runs 96" and greater need floor support for improved stability when overheads are not used.



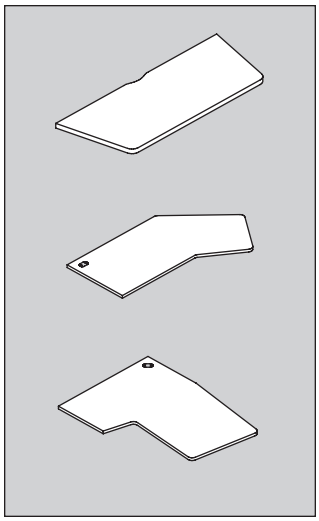
When using overheads in panel mounted worksurface run applications 72" and greater, floor support is required.



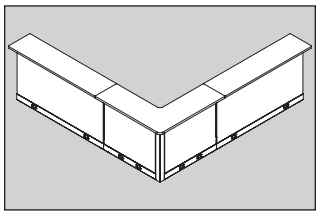
Worksurface bracket kit should be used to tie panels to worksurface for added stability



These floor supports can substitute a return panel at the end of a panel run: storage, open or closed end support panel, O-legs (shown, additional drawing on page 317)



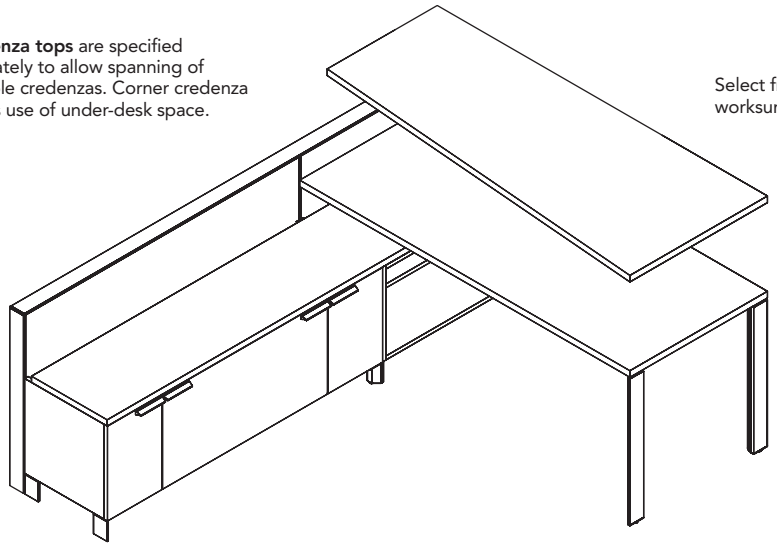
Cantilever brackets cannot be used at the end of a worksurface panel run in place of a return or floor support.



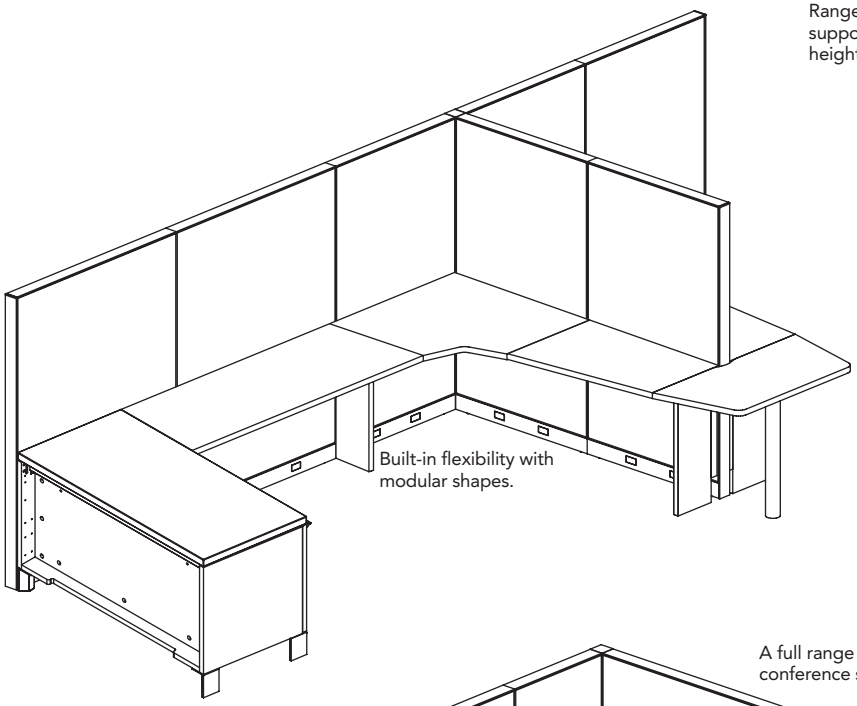
Cantilevers are recommended in place of an external worksurface support channel where feasible.

Unsupported worksurfaces 60"W or greater require an external worksurface support channel. When a center support cantilever cannot be used, an external worksurface support channel is recommended for spans greater than 48"W.

Linear D-shape, linear J, Linear boomerang, D-shaped, P-shaped, peninsula, jetty, boomerang, and reef worksurfaces require support columns (ordered separately).



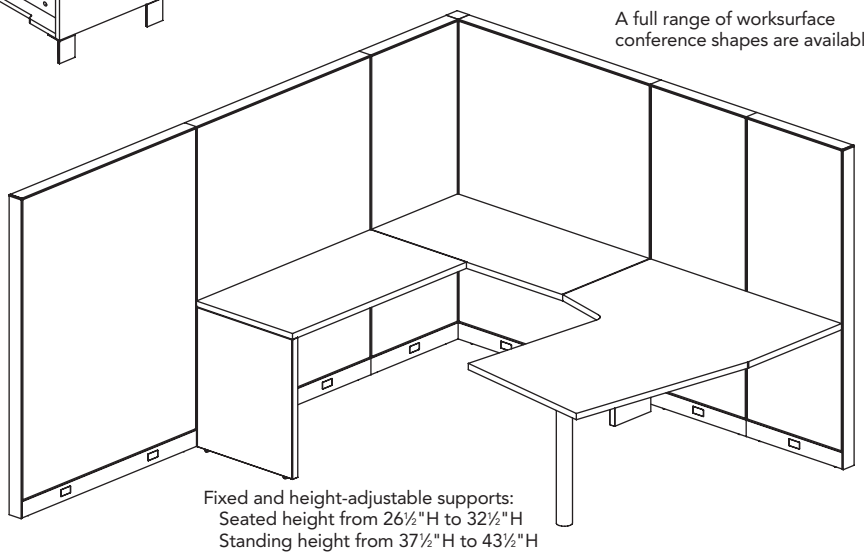
Stride countertops are flush with the top cap and are available in straight, corner, and **120°** configurations. Mounting hardware is included with Stride countertops. Panel top caps need to be ordered separately.



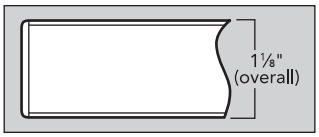
Worksurface Application Versatility

Credenza tops are specified separately to allow spanning of multiple credenzas. Corner credenza makes use of under-desk space.

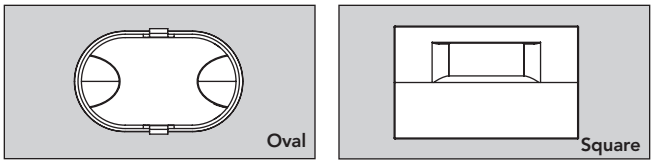
Select from a range of worksurface shapes.



Range of light-scale support options with height adjustability.



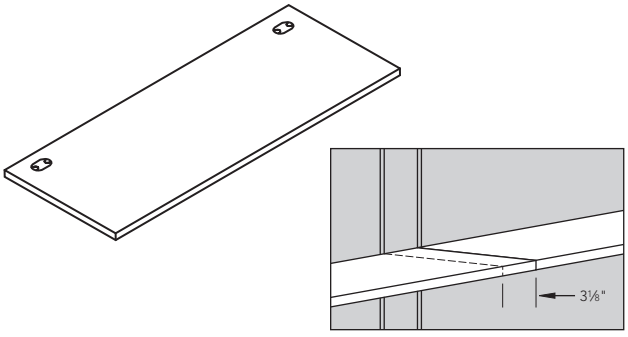
Built-in flexibility with modular shapes.



A full range of worksurface conference shapes are available.

Fixed and height-adjustable supports:
Seated height from 26½"H to 32½"H
Standing height from 37½"H to 43½"H

Flat Edge Trim

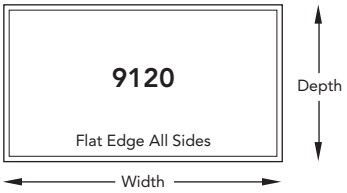


Wire Management Grommets

Worksurfaces

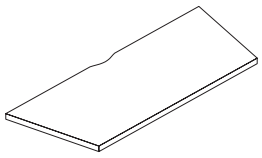
- Laminate (L) worksurfaces are 1⅛" thick with particleboard core and with top surfaces finished in laminate. Bottom surfaces are covered with a backer sheet.
- Flat edge trim is available on laminate tops in standard colors (customer specified) to match solid laminates and to complement patterned or woodgrain laminates.
- Veneer (V) worksurfaces have square veneer edge.

Wire management grommets are standard in most worksurfaces and are specified in plastic or metal.



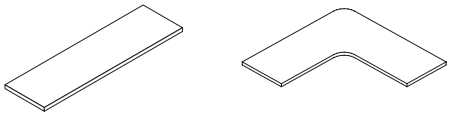
- Metal grommets are available in oval or square (shown at left).
- Grommets on standard systems worksurfaces are located 6⁵⁄₁₆" from side edges and 3⁵⁄₁₆" from back edge.
- Add Suffix "N" to a model number for no grommets, no upcharge.

Optional width worksurfaces to span "T" or "S" panel connection.



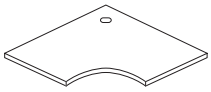
Primary Worksurfaces (L pages 325-326)

- Primary worksurfaces are available in 20", 24", 30", and 36" depths.
- One grommet for widths up to 42", two on widths 48"W and greater.
- Worksurfaces greater than 60"W require a cantilever bracket for center support in panel mounted applications. Specify 12" cantilever on 12"D, 18" cantilever on 20"D, and 24" cantilever on 24"D and 30"D worksurfaces.
- Optional width worksurfaces, 3⅛" wider than standard panel widths, are available for use with Stride panel runs having a "T" or "S" connection.
- Bracketry on post legs will interfere with grommets on systems (non-desking) worksurfaces.
- Nominal worksurface width is equal to nominal panel width.
- Does NOT include rear support bracket. Support hardware is ordered separately.
- Desking worksurfaces should be specified whenever worksurfaces 48"W and wider are not attached to a panel.

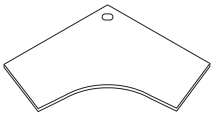


Non-Standard Worksurface Sizes (L and V on pages 332 and 333)

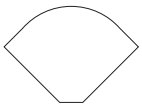
- The 9120 Program can be used to order laminate and veneer rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120"W x 36"D.
- Other modification requests should be made through Allsteel Tailored Products Group.



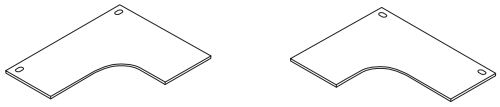
Linear D-Shaped Worksurfaces (L page 327)



- Order support column and two 10"D in-line support panels.
- Worksurface includes attachment bracket.
- Not recommended for use with T6CB24L or T6CB24R for shared applications.

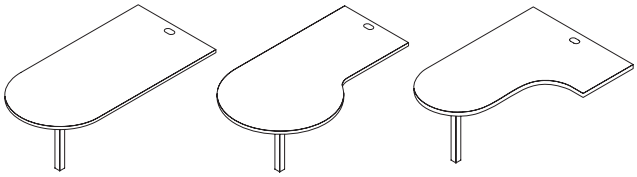


Countertops (L page 328)
- Available in Straight and Corner.
- Mounting bracket and attachment hardware included. When used with in-line high-low "H" trim kit add "V" suffix for straight countertop and "RV" for right or "LV" for left on corner countertops. Not available with fluid form models.
- Countertops are flush with panel top cap. Stride top caps need to be ordered separately.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

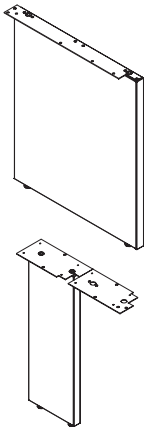


Corner Worksurfaces (L page 329)
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK. All other support hardware is ordered separately.
- Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner.
- Corner worksurfaces with woodgrain laminate and veneer have grain direction diagonal to adjacent worksurfaces.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

120° Corner Worksurfaces (L page 329)
- Standard with one wire management grommet in corner location.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK.
- Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and Wall Track stanchion is not positioned in the right-hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

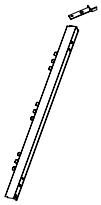


Quarter-Round Worksurface (V page 334)
- Connect to 90° panel-attached worksurfaces.
- Order support column and shared cantilevers or in-line support legs separately.



Corner Cove Worksurfaces (L page 330)
- Worksurfaces 66" and over require a cantilever bracket for center support in panel mounted applications. Specify 24" cantilever on 24"D and 30"D worksurfaces.
- Does NOT include rear support bracket. If rear support bracket is needed, order T6BK.
- Worksurface bracket kit (order separately) required at junction where a panel is wall-mounted to a permanent wall and wall track stanchion is not positioned in the right-hand corner.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

Support columns shown below ordered separately.



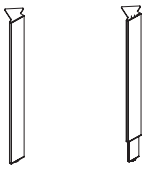
Peninsula, P-Shaped and Jetty Worksurfaces (L page 331)
- Support column ordered separately, column includes panel support brackets T6BK.

End Panels and Panel Brackets

Panel Mount Bracket

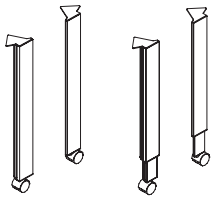
Ped-to-Panel

Worksurfaces can be configured at 29½"H with end-panel supports and in-line support panels, or at various heights on 1" increments using specific product configurations.



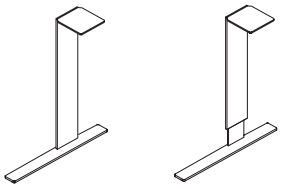
End Support Panel — Metal (page 335)
- Includes end-panel (non-handed), attaching hardware, and adjustable glides. (Panel mount version includes panel mount bracket.)
- End support panels are used in place of return panels at the end of worksurface runs.
- Leveling glides provide 3" of adjustment.
- Cannot be used with rabbet edge worksurfaces.

In-Line Support Panel — Metal (page 335)
- Includes support panel (non-handed), attaching hardware, adjustable glides, and wire management grommet. (Panel-mount version includes panel mount brackets.)
- Cannot be used with rabbet edge worksurfaces.

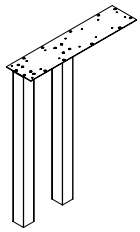


Panel Mount Bracket — Non-Handed (page 335)
- Includes hardware to convert freestanding end-panel or support leg to panel mount.

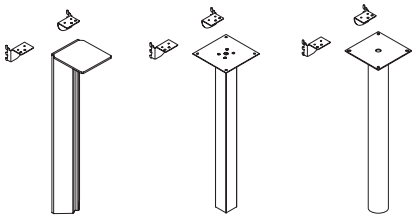
Pedestal-to-Panel Attachment Bracket (page 335)
- Can be used with Align™ pedestal in place of full end-panel or return panel. Provides structural support to panel run by securing panel directly to pedestal.
- Freestanding pedestals can also be used to support one end of a panel-attached worksurface in conjunction with ped-to-panel attachment kit.



Legs

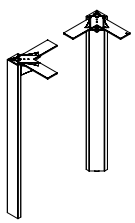


Post Legs (page 336)
- Used to support one corner of a panel attached worksurface. Cannot be used in freestanding applications, use table post legs.
- Fixed height is for support at 29½"H and 40½"H.
- 26½"H to 32½"H height adjustable legs provide a 6" range of adjustment in ½" increments.
- 37½"H to 43½"H height adjustable legs provide a 6" range of adjustment in ½" increments.
- Telescoping legs require common tools to adjust height.
- Leveling glides provide 1" of additional adjustment.
- Attachment hardware included.
- Post leg will interfere with the grommet location on systems (non-desking) worksurfaces.

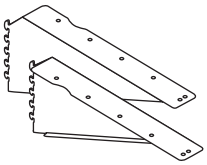


Freestanding Post Legs (page 336)
- Reinforced post leg with an integrated gusset is used to build a freestanding table.
- For use with Stride desking worksurfaces.
- Fixed height is for support at 29½"H.
- 26½"H to 32½"H height adjustable legs provide a 6" range of adjustment in ½" increments.
- Telescoping legs require common tools to adjust height.
- Leveling glides provide 1" of additional adjustment. Caster version aligns with glide version when glide is fully retracted.
- Attachment hardware included.

C-Legs (page 337)
- Used to support one end of a worksurface or table. Cannot be shared between surfaces.
- C-Legs cannot be used at both ends of a surface to create a freestanding desk.
- Fixed Height is for support at 29½"H.
- 26½"H to 32½"H height adjustable legs provide a 6" range of adjustment in ½" increments.
- Height adjustable C-legs are for use on worksurface spans up to 72"W. Fixed height C-legs must be used if the span is greater than 72"W.
- Telescoping legs require common tools to adjust height.
- Leveling glides provide ½" of additional adjustment.
- Attachment hardware included.

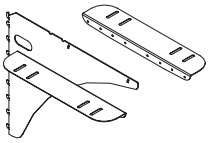


Post In-line Support Leg (page 337)
- Includes legs (non-handed, mounted to bracket) and attaching hardware.

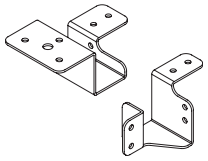


Z6SCF Y6EPKP TT629SC

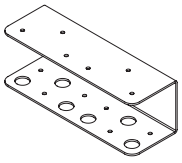
Support Columns (page 337)
- Includes column, worksurface bracket kit T6BK, attaching hardware, and adjustable glides.
- Fixed height column is for support at 29½"H.
- Height adjustable column provides a 6" range of adjustment in ½" increments from 26½"H to 30½"H.



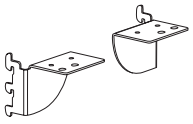
Light-scale Wire Management Table Post Legs (page 337)
- Includes pair of legs (non-handed, mounted to bracket) and attaching hardware. Available for modesty panel or not for modesty.
- Available painted or anodized.



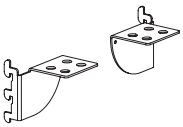
Worksurface Support Brackets



Cantilever Brackets — Handed



Cantilever Brackets — Non-Handed



Non Rail-Based End Panel Kit Z6EPK

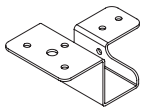
Layered Worksurface Bracket Z6C3BK

Worksurface Bracket Kit T6BK

Worksurface Bracket Kit T6SB

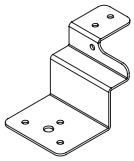
Cantilever Brackets
- Use with runs less than 96". Floor support is required for runs 96" and longer.
- Where applicable, cantilevers are recommended over an external worksurface support channel. Unsupported worksurface runs 60"W or greater require an external worksurface support channel when a cantilever cannot be used.
- Do not use at the end of a worksurface where no 90° return panel is positioned.
- Includes tie bracket and attachment hardware.
- Avoid installation on only one side of a straight connection except to support corner worksurfaces.
- DO NOT use to support worksurfaces from which a hanging pedestal is suspended, or to which a peninsula worksurface is attached.
- DO NOT use cantilever brackets to support worksurfaces supported with permanent-wall hanger kit.
- Do not use with wall track or to support a worksurface to which a return worksurface is attached.

Cantilever Bracket — Handed (page 338)
- Cantilever brackets are handed (left or right) and can be inserted into panel reveals in 1" vertical increments. No assembly required.
- Left- and right-hand brackets required in shared applications.
- 24"D cantilevers are required to be used for both 24"D or 30"D worksurfaces.
- 18"D cantilevers are required to be used for 20"D worksurfaces or center support for 24"D.
- 12"D cantilevers are required to be used for 12"D worksurfaces.



Cantilever Bracket — Non-Handed (page 338)
- Cantilever brackets are non-handed and can be inserted into panel reveals in 1" vertical increments. Assembly required.
- One bracket in shared applications — includes two angled brackets.
- Bracket accommodates 24"D or 30"D worksurfaces.

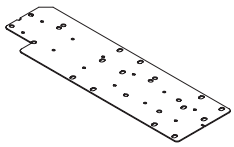
Non Rail-based End Panel Kit (page 338)
- Non rail-based end panel kit Z6EPK is used to attach an end panel off-module to a segmented panel.



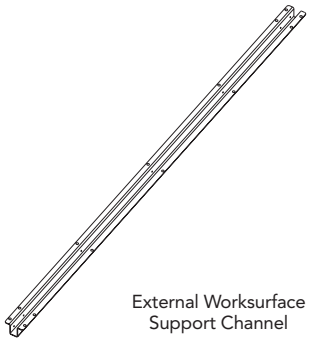
Layered Worksurface Bracket (page 338)
- Layered worksurface bracket model Z6C3BK, used for mounting off-modular worksurfaces 3" higher or lower than the installed worksurface.

Worksurface Bracket Kits (Pair)— T6BK (page 338)
- Worksurface bracket kit allows one end of a worksurface to be supported by a return panel. Attachment hardware included.
- Return panel width must be the same as the depth of the worksurface.

Worksurface Bracket — T6SB (page 338)
- Worksurface storage bracket kit (T6SB) is used for aesthetics where under-desk storage is immediately adjacent to the return panel. In all other applications use worksurface bracket kit (T6BK) to utilize worksurface threaded metal inserts.
- Brackets — one pair. Black only.
- Attachment hardware included.
- Brackets do not align with worksurface threaded metal inserts, and therefore require wood screws (included).

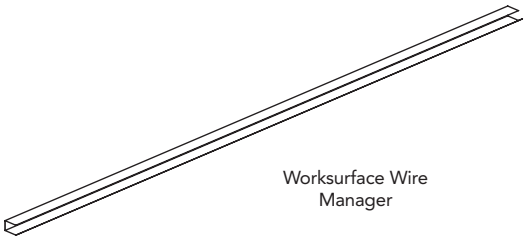


Off-Module Worksurface Bracket Z6MK



Off-Module Worksurface Bracket Z6Z3MK

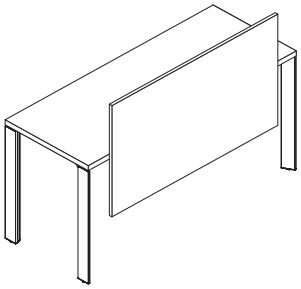
Off-Modular Worksurface Brackets (page 338)
- Allows in-line support legs and end-panels to be attached off-module.
- Cannot be used closer than 12" from end of panel.
- Non-rail based 3" layered worksurface bracket used to mount off-modular worksurface at 26½".
- Off-module worksurface bracket model Z6MK can only be used for attachment of a worksurface end to a segmented panel at 29½"H.
- Off-module worksurface bracket model Z6Z3MK is used for mounting non-rail based off-modular worksurfaces to a segmented panel at 26½"H.



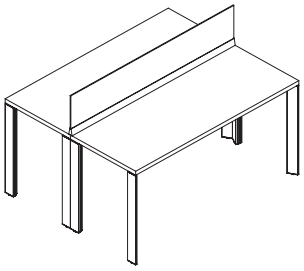
Flat Bracket

Flat Brackets (page 338)
- Flat brackets can be used to connect one worksurface perpendicular to another worksurface.
- Use two 12"D flat brackets (T612FB) side-by-side with rabbet edge worksurfaces and when placing flat or rabbet edge worksurfaces perpendicular to high credenzas.

External Worksurface Support Channel

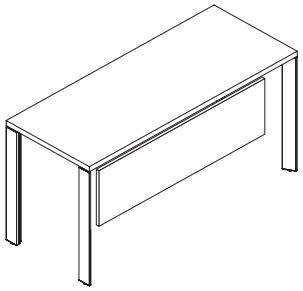


External Worksurface Support Channel (page 338)
- Support channel should be specified separately for use with non-desking worksurfaces.
- Extends 1½" below the worksurface. Installs 7" from user's edge.
- When using 28"H mobile pedestals the length of support channel needs to be reduced to accommodate width of the pedestal.
- Support channel may interfere with mounting of some CPU holders and keyboard supports.
- Is required on a systems worksurface for additional support for unsupported spans 66"W or greater. Width of worksurface span can be reduced by using support storage.
- Required when mounting a modesty panel.
- 36"D worksurfaces require two external support channels distributed equally from the center of the worksurface.

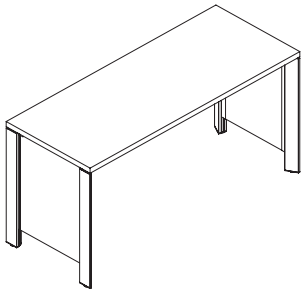


Worksurface Wire Manager

Worksurface Wire Manager (page 338)
- Provides channel to run wires under a worksurface.
- Extends 1⅛" below the worksurface.
- Wire manager (ordered separately) is mounted in front of the desk support channel to hide exposed hardware.

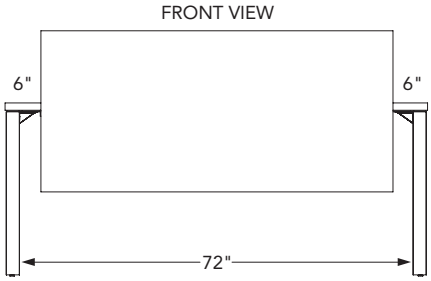


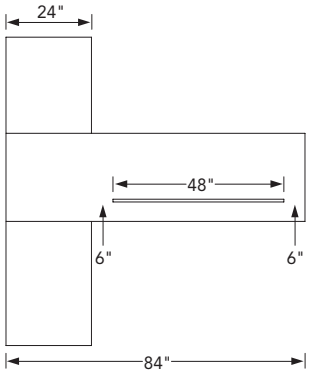
Desk screens and modesty panels provide light-scale space division. There are four options available: full desk screens, shared desk screens, desk modesty panels, and leg modesty panels.



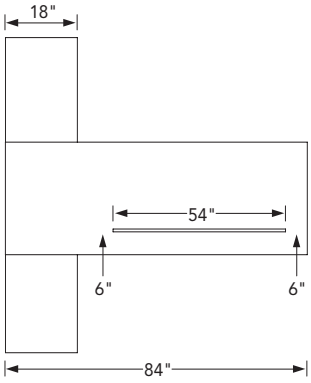
Full desk screens extend above and below the worksurface acting as both a screen and a modesty panel. They are 28"H and available in painted wood or painted wood with fabric Insert. Landscape™ surface material will soon be available as an additional finish option.

Shared desk screens are for use above the worksurface in a back-to-back application for added privacy. They are 13"H and are available in ⅜" Clear or Frosted Glass.





Modesty panels are for use below the worksurface. They must be used with Stride desking worksurfaces or a systems worksurface with an external support channel installed. An optional worksurface wire manager conceals hardware. They are 14"H and available in ¾" thick painted wood or ¼" thick Landscape surface material.



Leg modesty panels are used between two post legs on either a 24"D or a 30"D worksurface. They are 29"H and are available in Landscape surface material.

Specification Rules for Desk-Mounted Screens and Modesty Panels

High Credenzas — TOP VIEW

Low Credenzas — TOP VIEW

Freestanding Table Applications:
Subtract 12" from the size of the table/worksurface to get the recommended screen or modesty widths.

Example for an 72"W table: 72" – 12" = 60"W

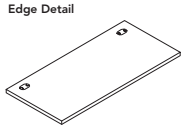
Specify a 60"W screen and center-mount on the table.

Credenza-based Layered Applications:

- **High credenzas** — Subtract 24" for the credenza depth and an additional 12" from the width of the worksurface to get the recommended width.

  Example for an 84"W table: 84" – (24" + 12") = 48"W

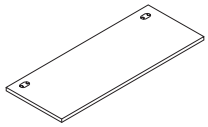
  Specify a 48"W screen and center-mount on the worksurface opening.



- **Low credenzas** — Subtract 18" for the credenza depth and an additional 12" from the width of the worksurface to get to the recommended screen width.

  Example for an 84"W table: 84" – (18" + 12") = 54"W

  Specify a 54"W screen and center-mount on the worksurface opening.



Flat Edge Detail

Description	Laminate w/Flat Edge Model	Laminate w/Flat Edge L1 List Price	L2 List Price	L3 List Price
20"D Primary Worksurfaces				
24"W	**T52024S**	$ 426	$ 447	$ 464
30"W	**T52030S**	$ 452	$ 474	$ 492
36"W	**T52036S**	$ 504	$ 527	$ 548
42"W	**T52042S**	$ 567	$ 592	$ 615
48"W	**T52048S**	$ 611	$ 637	$ 661
54"W	**T52054S**	$ 663	$ 692	$ 715
60"W	**T52060S**	$ 754	$ 788	$ 813
66"W	**T52066S**	$ 817	$ 854	$ 880
72"W	**T52072S**	$ 851	$ 889	$ 915
78"W	**T52078S**	$ 1109	$ 1156	$ 1194
84"W	**T52084S**	$ 1158	$ 1206	$ 1246

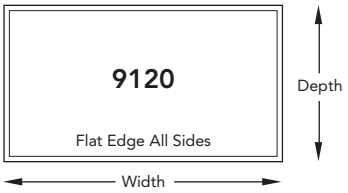
ORDERING



The 9120 Program can be used to order particle board rectangular worksurfaces in any non-standard width and depth in ⅛" increments up to a maximum of 120" W x 36" D.

Specify:

1. **Model Number**
   Specify closest nominal width/depth model (round up).
2. **Grommet Option** (if desired)
   See grommet specification instructions on this page.
3. **Grommet Type:**
   P Plastic
   M Metal (add $16 per grommet for laminate)
4. **Grommet Color:**
   (Metal only)
   EL Matte Silver
   Note: Plastic grommet will match flat edge.
5. **Laminate and Veneer Choices**
   See page 162.
6. **Flat Edge Color Choices**
   See edge colors page 162 for laminates.
7. **Exact Size**
   Specify the **exact width** and **exact depth** you require.
   Width and depth is specified in ⅛" increments which is denoted as a single digit following the whole number dimension at the end of the model number string.

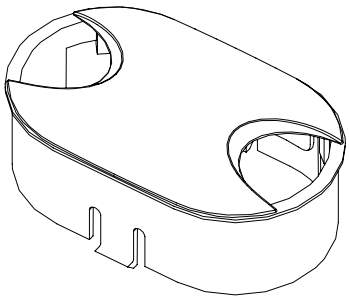
⅛" =	1	⅝" =	5
¼" =	2	¾" =	6
⅜" =	3	⅞" =	7
½" =	4	no extra increment =	0

For example, when ordering a worksurface that is 34⅜"W x 20½"D, specification should be 345Wx204D.
Example: **9120R3624.G0.TM33.EU.345Wx204D**.

PRODUCT SPECIFICATIONS

- Flat edge on all sides
- 45 lb. particle board
- 1⅛" top thickness
- .020 resin impregnated paper backer sheet
- Grommets available
- Maximum width 120" (maximum recommended unsupported span is 42")
- Maximum depth 36"
- Standard Allsteel laminates and veneers
- Quantities of 10 or greater are palletized; less than 10 are individually cartoned.

Note: 9120 worksurface maximum unsupported span is 42". 9120 worksurfaces do not have pre-drilled pilot holes or threaded metal inserts.



When spanning multiple freestanding storage units with one worksurface, add ⅛" for each additional storage unit. For example, when ordering a worksurface for three 30"W lateral files. 3 units x 30" = 90" + ⅛" + ⅛" = 90¼" worksurface. Do NOT follow this rule if panel wrapping storage units.

CHANGES / CANCELLATIONS

No changes/cancellations for 9120 Program worksurfaces.

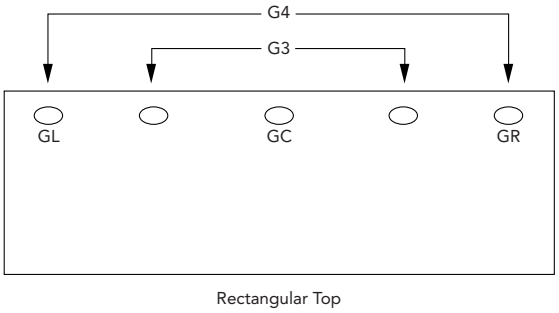
GROMMET SPECIFICATIONS

Plastic grommets are made of durable ABS plastic and grommets match edge color on laminate worksurfaces. Metal grommets are only available Matte Silver oval for laminate and square for veneer.

PRICING

See page 333 for laminate and veneer 9120 worksurface pricing.

One Grommet — GC, GL, or GR Position..... $23.00
Two Grommets — G3 or G4 Position..... $46.00
Note: Add $16 per grommet for metal grommets with laminate.



ORDERING

Specify grommet location and color.
Example: **9120R10836.GCP.TM33.EU.1022Wx326D**

Code Grommet Position

GC	Centered side-to-side – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
GL	6⁵⁄₁₆" from left side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
GR	6⁵⁄₁₆" from right side to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
G3	Pair of grommets each 18" from side edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center (Position G3 not available on tops 60"W or less.)
G4	Pair of grommets each 6⁵⁄₁₆" from side edge to grommet edge – 3⅛" from rear to grommet edge; 4½" from rear to grommet center
G0	No grommets

Dimensions are from grommet center line to top edge.

Rectangular Top

Grommet positions other than those shown above are considered non-standard.

For specification information see page 332.

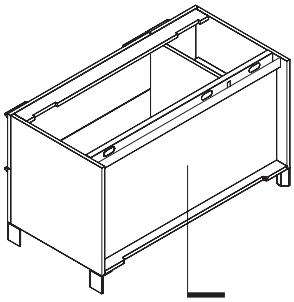
Credenza Top

Seat Cushion

Credenza Bottom Trim

Credenza Side Trim



Credenzas ship fully assembled except for the credenza top, which must be ordered separately. Credenza tops in laminate or veneer with flat/square details are available in various depths. Veneer fronts by Gunlocke®.

Laminate credenza tops, a footed base, and aluminum trim along the front edge of the credenza enhance the durability of the credenza.

A relocatable seat cushion can be placed on the credenza top of a low credenza for additional seating.

Credenza bottom trim is standard on the front of all credenzas.

Optional side trim is an aesthetic piece for end of run credenzas and is ordered separately and field installed.

All credenzas have a recessed back with a cavity to support wire management. An optional metal back should be specified separately to finish the credenza in a single-sided application where the back is exposed. Finished back configurations should not utilize rail as the top cap required shows an unfinished top groove.

Relocatable wire trough provides a channel for wire management.

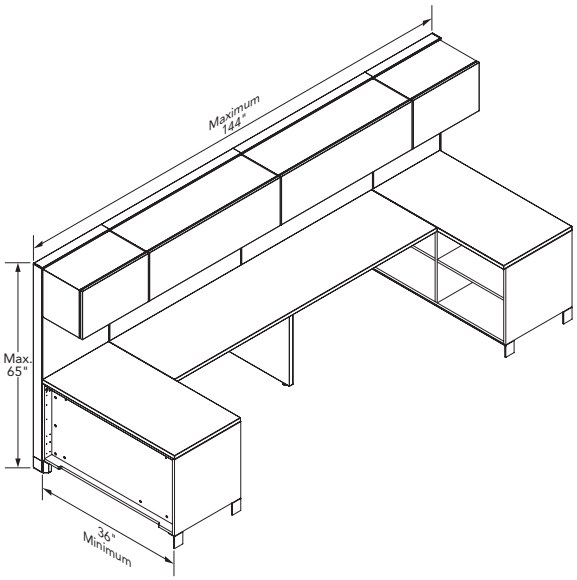
Each credenza ships with one front bracket that can be used to gang (multiple) credenzas in-line.

Credenza top must be ordered separately and can span multiple credenzas.

Corner credenzas with bin when housing a CPU must be used with credenza tops for wire trough or rail (not full depth) to minimize heat buildup.

Credenzas can support panels in certain applications with the addition of a credenza-to-panel bracket, see guidelines on pages 170-171 and bracket on page 365.

Credenzas can be shipped with lock cores removed; cores can be installed after files are in place. Core removable lock feature allows key numbers to be easily changed in the field.

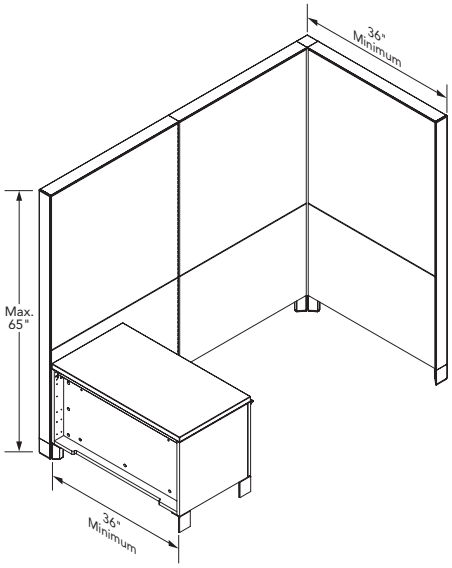


All credenzas feature silver linear pulls. Pulls, feet, and bottom trim are all PR6 Silver finish.

Credenzas are constructed from ¾" thick powder-coated medium density fiberboard with concealed fastener construction.

Credenza feet have sleeves to conceal the leveling glides. Leveling range is 1⅛". The hex-head design of the stem allows leveling to be done even when the credenza is fully loaded.

Credenzas ship with the feet located at the outside corners. Alternate mounting holes are provided for front feet to be inset 4" on mid-run credenzas, during installation.

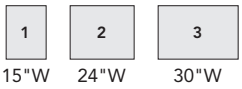


High Credenza Side to Panel Bracket

Side-mounted high credenzas

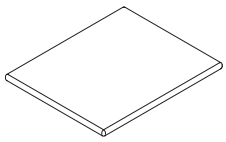
- The minimum Stride high credenza width is 36"W on each end.
- With a floor support the maximum panel run is 144".
- Without a floor support, the maximum panel run is 96".
- Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the credenzas. Stacking frames cannot be used with overheads.
- Panel frame maximum height is 65"H.

Credenza Side to Panel Bracket with Return Panel



Bracket with return panel

- Minimum Stride credenza width 36".
- With a floor support the maximum panel run is 144".
- Without a floor support, the maximum panel run is 96".
- The minimum size for panel return is 36"W x 35"H.
- Overheads, shelves, and worksurfaces must be mounted on the same side of the parent run as the high credenza.
- Panel frame maximum height is 65"H.

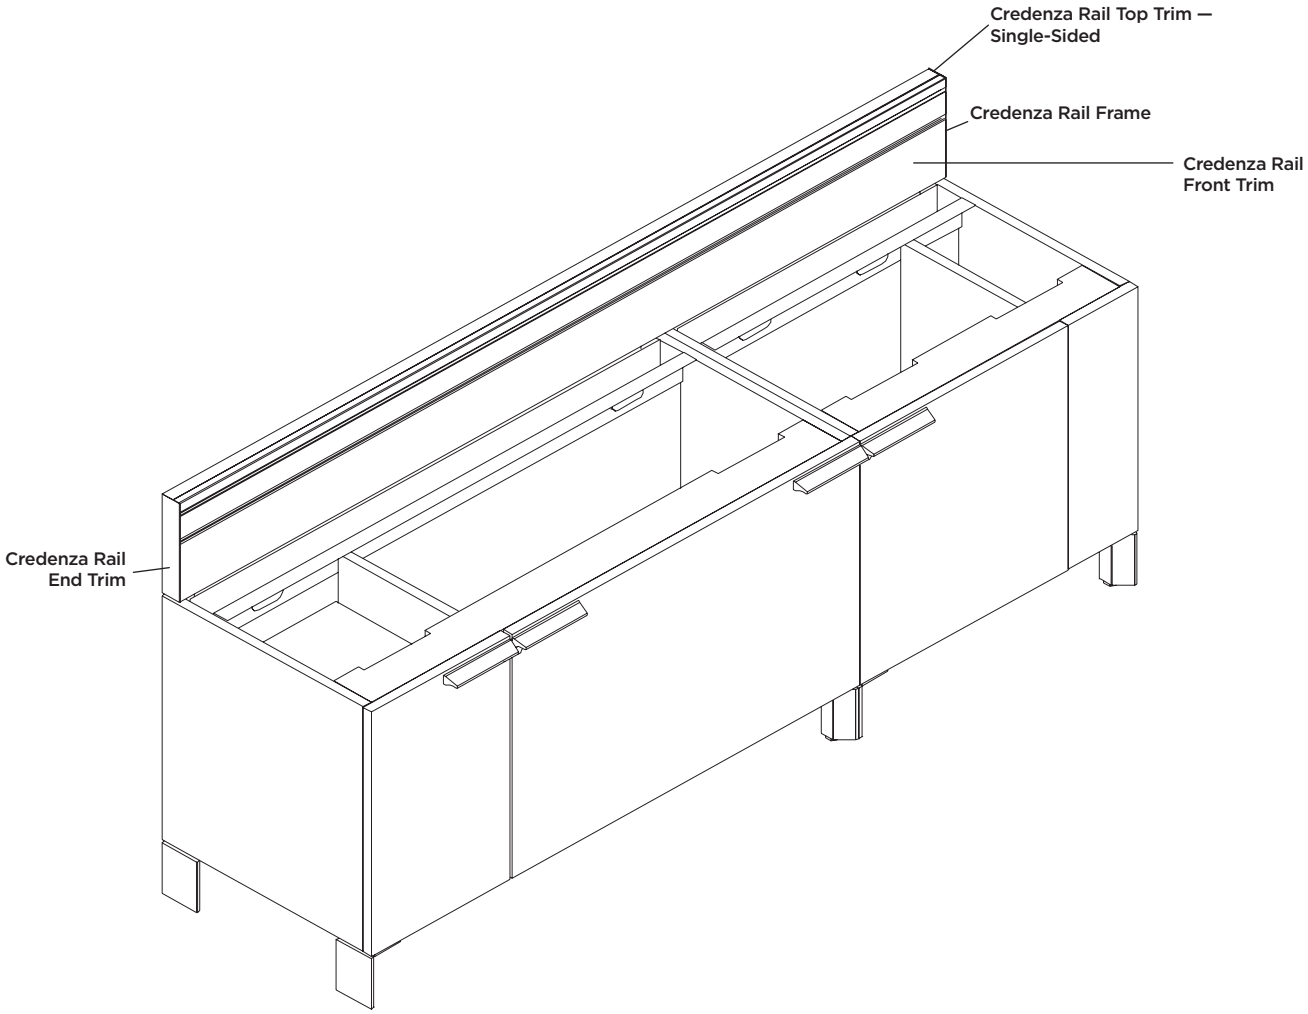


Recommended Seat Cushion Sizes for Mobile Pedestals and Low Credenzas

18"D Cushions for use with
Pedestals and Full Depth Credenza Tops

15"W Mobile Pedestal 15"W Cushion	1
24"W Credenza 24"W Cushion	2
30"W Credenza 30"/15"W Cushion	3 or 1
36"W Credenza 15"/24"W Cushion	1 or 2
42"W Credenza 24"W Cushion	2
48"W Credenza 24"W Cushion	2
60"W Credenza 30"W Cushion	3

Seat Cushions

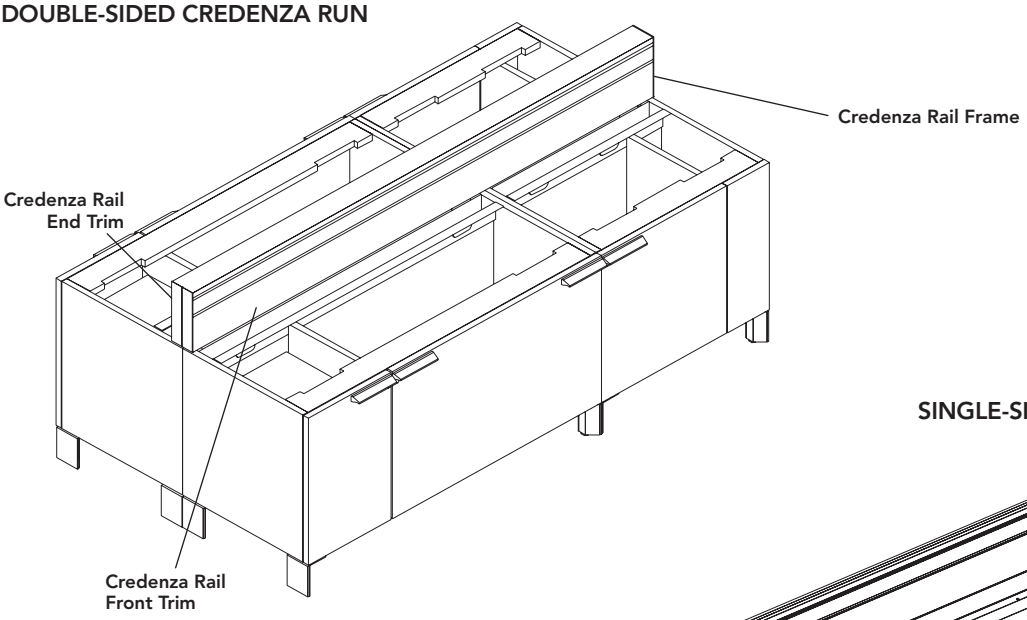


Seat Cushions (page 362)

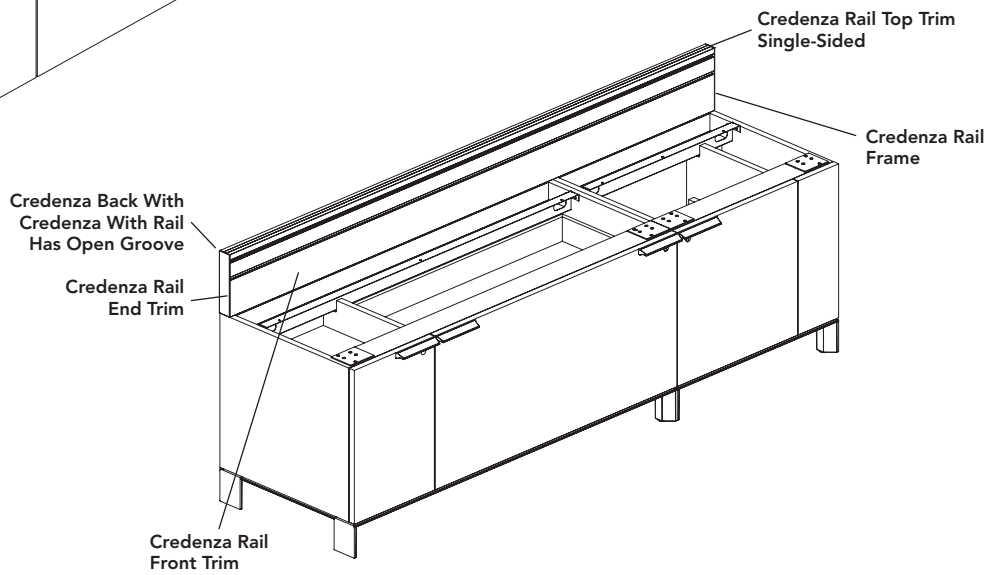
- Place on top of low credenza tops or mobile pedestal for quick and convenient additional seating.
- For use on low credenzas only.
- Seat cushion must rest on top of credenza top — order separately.
- COM yardage for seat cushion is 1 yard.

*The **credenza rail** is a single-sided 1½" thick frame that can be fitted atop credenza units.*

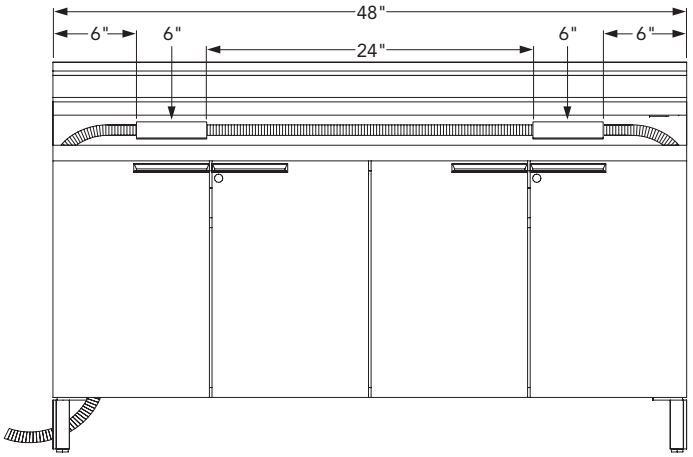
Credenza Rail (page 363)
- Provides support for perpendicular run-off worksurfaces.
- When used on low credenzas, credenza rail supports a height adjustment range of 27½" to 30½" in 1" increments.
- Channel for power and data.
- Connection point for accessories.
- Will show groove on top of rail if adding a back panel.



Guidelines:
1. The credenza rail may have only one worksurface mounted to each individual rail.
2. The credenza rail can span multiple credenzas, but must stay on-module with credenzas.
3. Credenza rail must be fully supported by a run of credenzas.
4. A worksurface can be mounted off-modular along the rail at four heights — 27½"-30½"H in 1" increments.
5. All components must be specified separately.

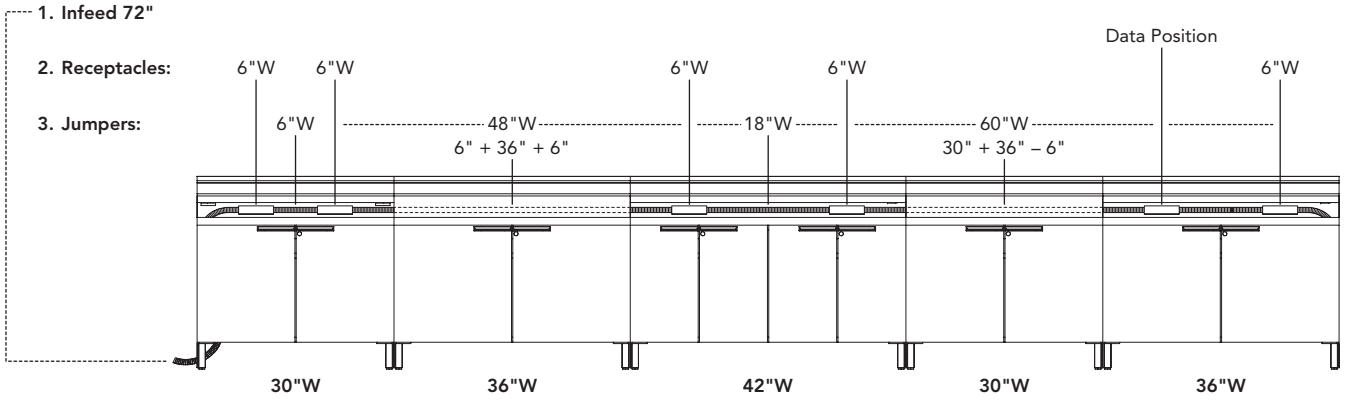


All credenza rail components must be ordered separately.

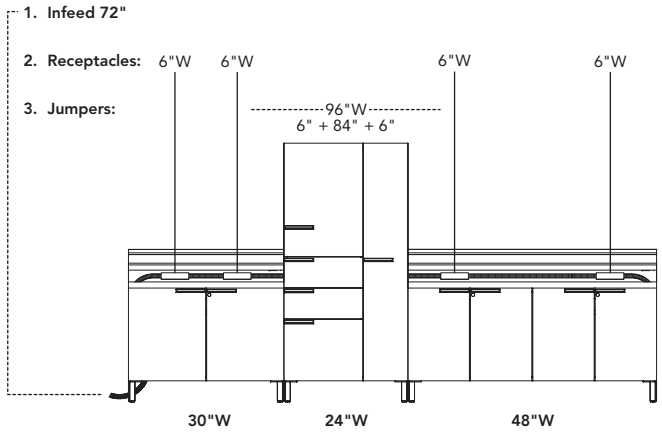


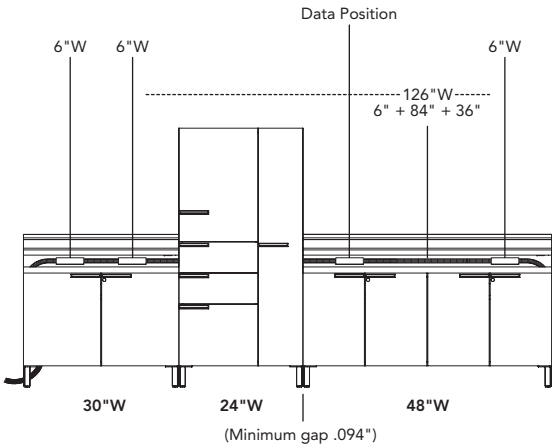
- Credenza rail frame
- Credenza rail front trim
- Credenza rail end trim
- Credenza rail bracket kit
- Credenza rail top trim

DOUBLE-SIDED CREDENZA RUN



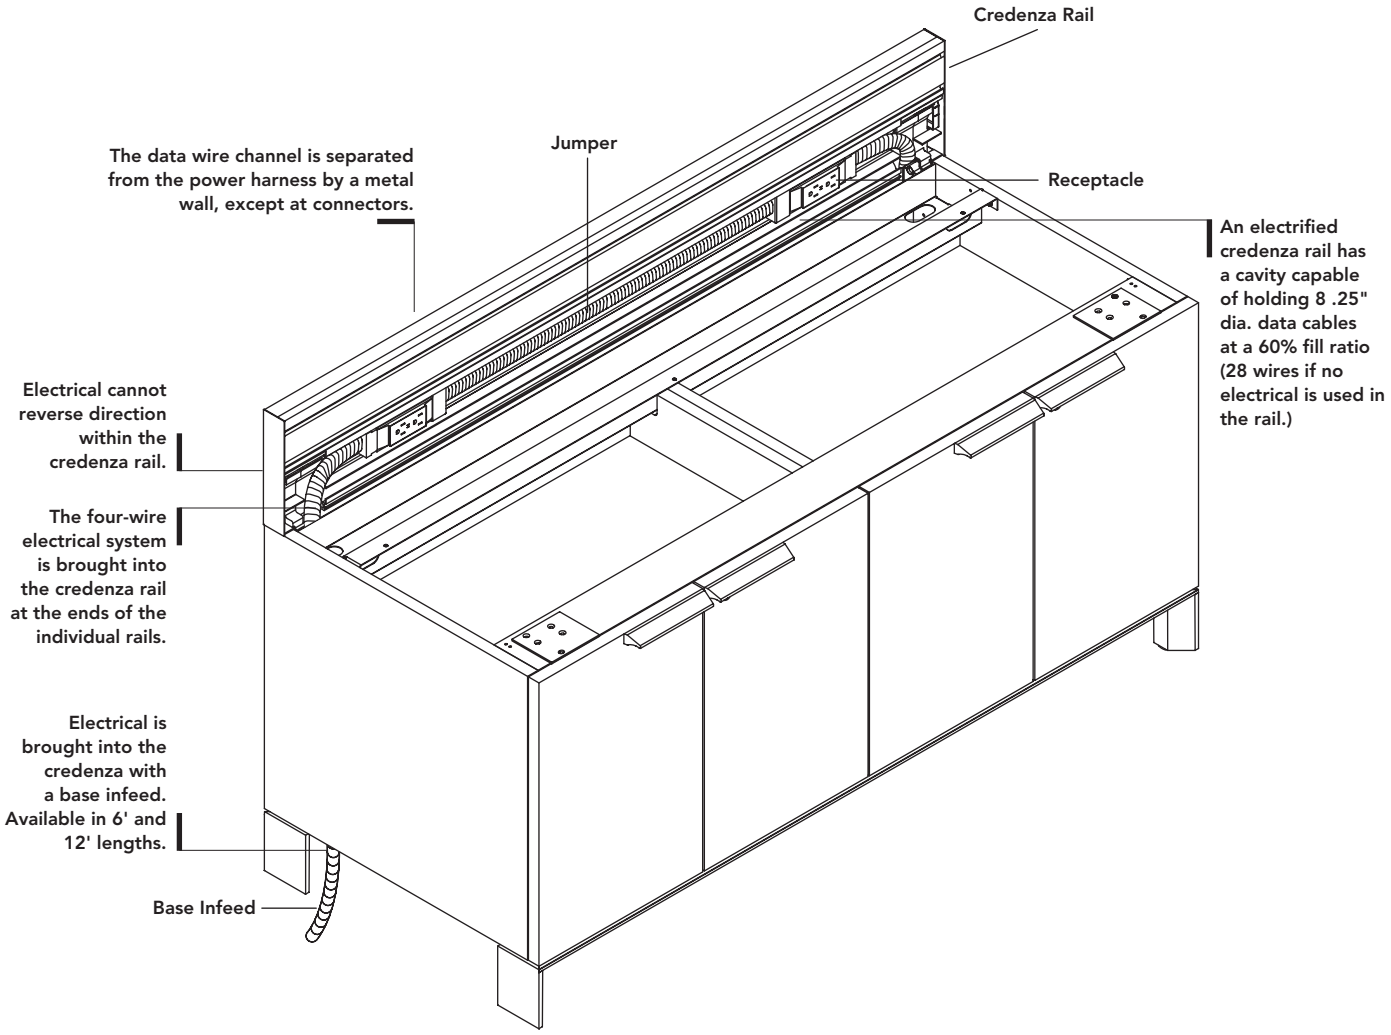
SINGLE-SIDED CREDENZA RUN



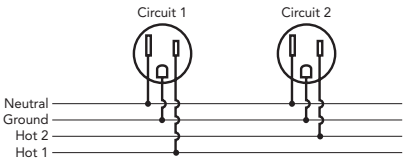


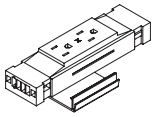
Routing Electrical: Credenzas

Jumper Situation:	Within a credenza	Spanning a credenza	Spanning a credenza with an open position for data.
Formula:	Subtract 24" from width of credenza. 30"W – 24" = 6" Jumper	Add 12" to width of spanned credenza. 36"W + 12" = 48" Jumper	Subtract 6" from total width of middle and end credenzas. (30"W + 36"W) – 6" = 60" Jumper



Routing Electrical: Credenzas with a Tower

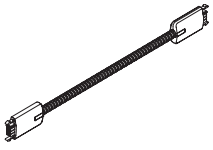




Jumper Situation:	Spanning a tower	Spanning a tower with an open position for data.
Formula:	6" + 84" + 6" = 96" Jumper	6" + 84" + 6" + 6" + 24" = 126" Jumper

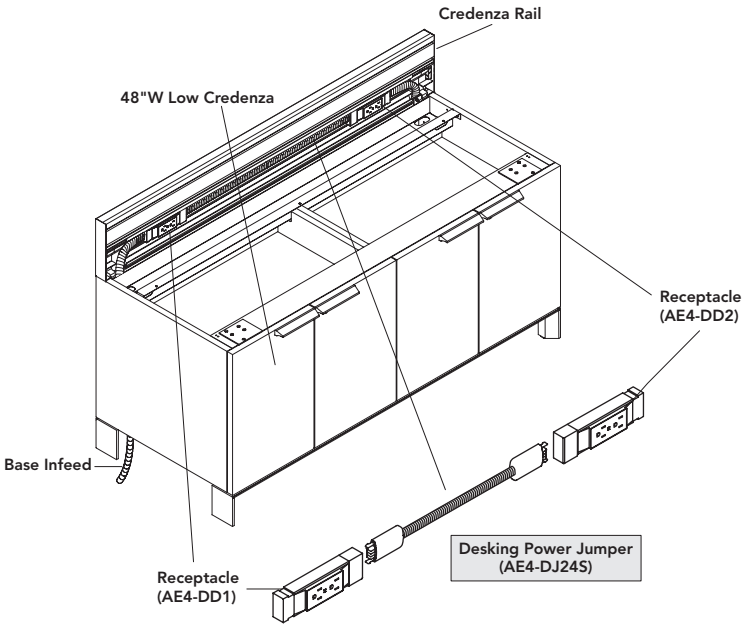
The 4-wire electrical system is a UL183-listed 2 circuit non-dedicated electrical system. The credenza rail supports continuous power and data distribution. With ported trim, the credenza rail provides easy access to power and data. In addition to the standard electrical components, PVC-free components are also available.

SPECIFICATION INFORMATION

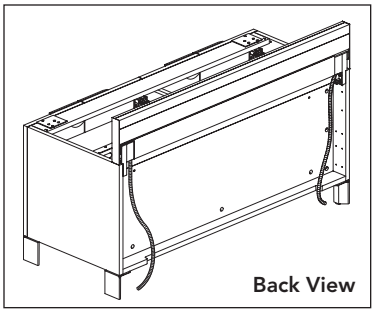


Duplex Receptacle

0"W Desking Power Jumper



Desking Power Jumper

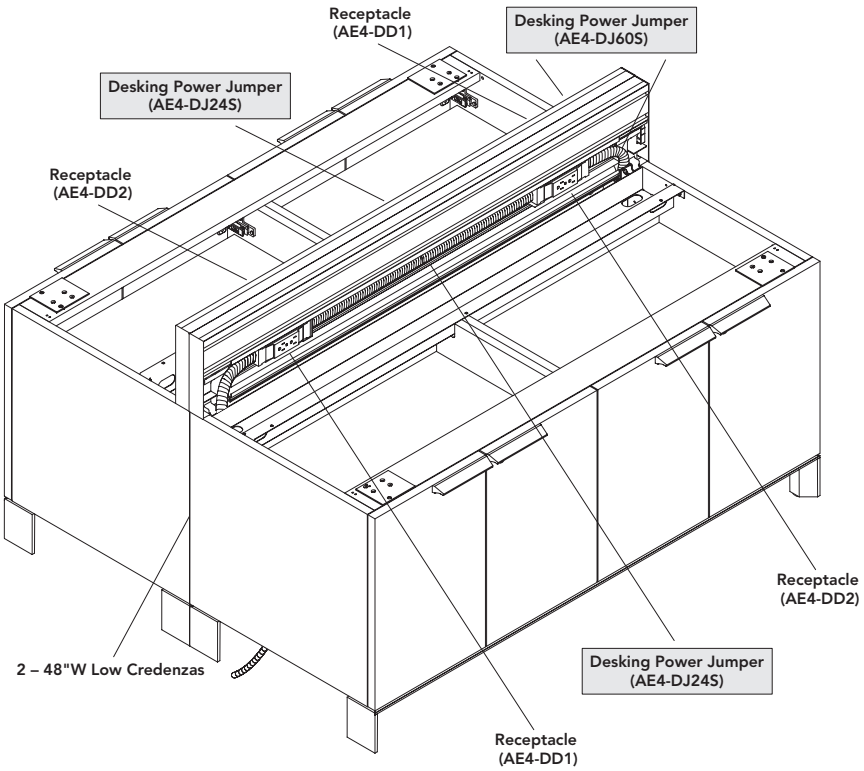


This electrical system has two hot wires, a shared neutral wire, and a shared ground wire. Each circuit is rated at 20 amps. A maximum of 13 duplex receptacles is permitted per circuit. Each receptacle is rated at 15 amps. Consult your electrician to ensure the planned electrical load is within permissible limits.

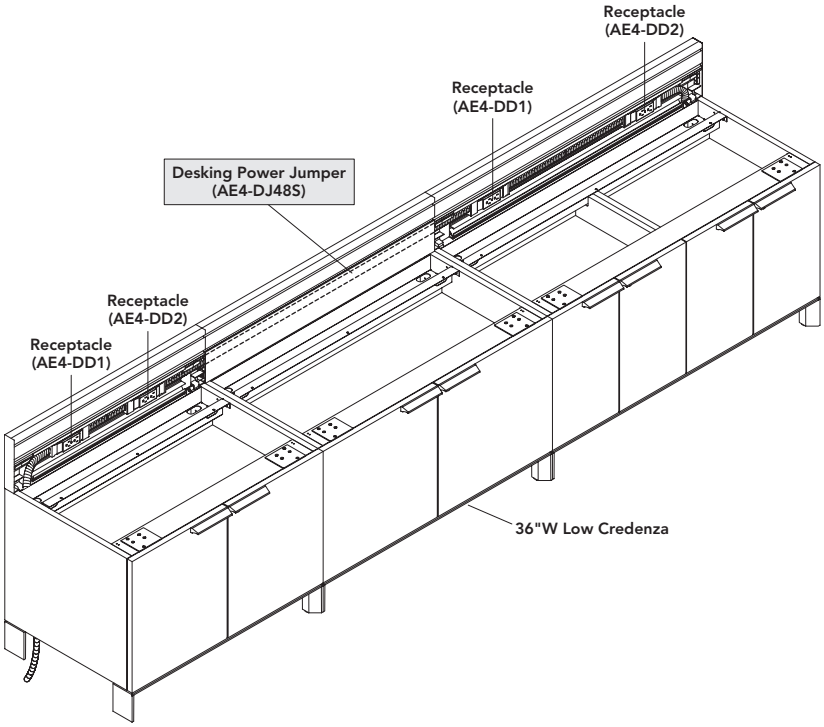
1. Determine location, quantity, and circuit number for duplex receptacles and power entry.
2. Base electrical infeed delivers power from building to system.
3. Desking power jumpers connect together duplex receptacles or groups of duplex receptacles.

It is the customer's responsibility to ensure that the installation of the electrical components meets all local and national building codes and all other applicable regulations.

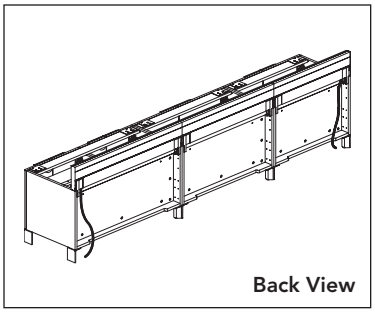
A. Routing Electrical: Within Credenza



Credenza Width	Jumper Size	Jumper Model
24"	0"	AE4-DJ0S
30"	6"	AE4-DJ6S
36"	12"	AE4-DJ12S
42"	18"	AE4-DJ18S
48"	24"	AE4-DJ24S
60"	36"	AE4-DJ36S

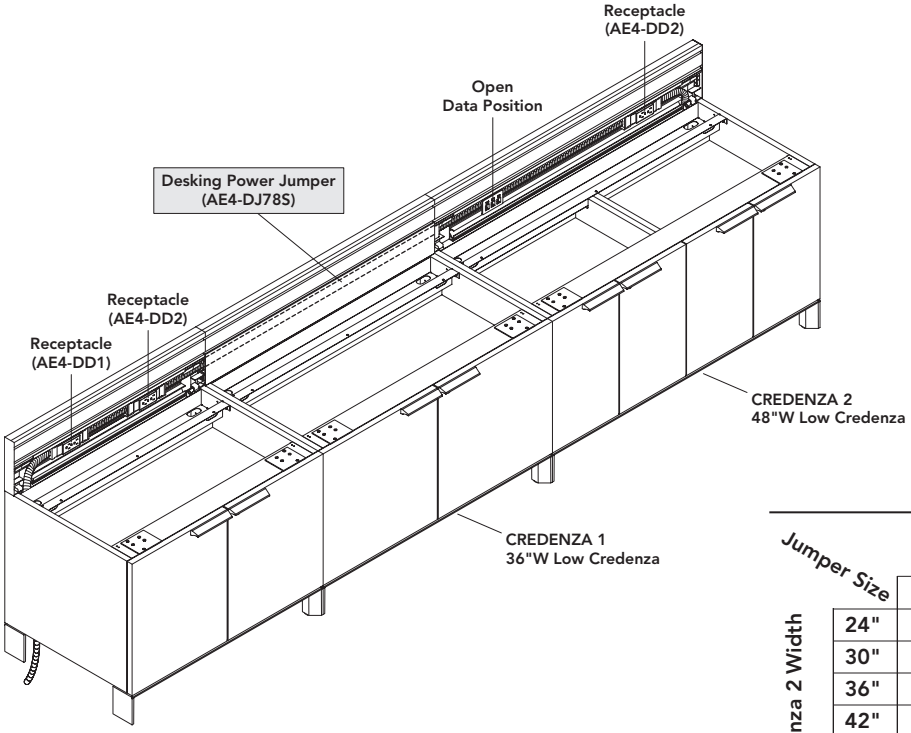


B. Routing Electrical: Within Credenza Back-to-Back

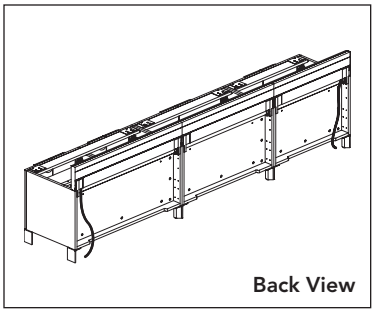


All electrical components must be duplicated in a back-to-back situation.
The credenza rail provides power to only one side of the credenza.

When routing from the front side to the back side in back-to-back credenzas use a 60" desking power jumper.



C. Routing Electrical: Spanning a Credenza



Back View

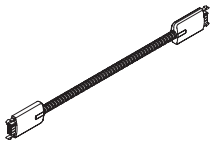
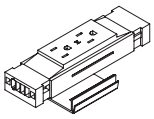
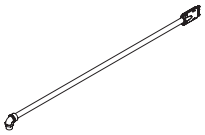
*Credenza with open data position

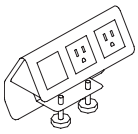


Wood Storage



An electrified credenza rail has a cavity capable of holding 8 .25" dia. cables at 60% fill ratio (28 wires if no electrical is used in the rail).





AMP data faceplates (models ATADF3 and ATADF4) and a jack (model ATADJ5) can also be used. An AMP data port extender is needed to install the data faceplate and jack in the credenza rail. The following data port extenders can be ordered from AMP: 1933468-1 (Black), 1993468-2 (Light Almond), and 1933468-4 (Nema Gray).

4-Wire Electrical Components for Stride Credenzas

Desking Power Jumpers (page 364)
- UL-listed 4-wire electrical system.
- Ability to conceal power and data receptacles below primary worksurface.
- PVC-free electrical components available.
- Mounting brackets included.
- Cannot reverse direction within credenza rail.
- Length of 4-wire jumper needs to match distance between receptacles as there is not room to loop additional cable.

Duplex Receptacles (page 364)
- 4-wire receptacles are ordered separately for circuit 1 or 2 and are only available in ES Silver.
- 4-wire Infeed cable or jumper plug directly into each end of a 4-wire duplex receptacle.
- 4-wire receptacle adds 6" to length of electrical run.

Base Electrical Infeed Cable (page 364)
- Feed in from floor.
- UL183 listed to be exposed.
- 4-wire infeed can enter from the end of a credenza rail only.
- Credenzas ship with clips under the case for holding infeed off the floor.
- Select quantity of infeed cables depending on individual power requirements.

Worksurface Power/Data Module (page 364)
- Provides easy access to technology at primary worksurface.
- Mounts to edge of a worksurface and requires ⅜" gap. Consider whether ⅜" gap will work with layout.
- Must be mounted at time of initial worksurface installation if mounting between a worksurface and a panel. Maintaining a ⅜" gap may not be possible with worksurfaces that are panel wrapped.

Configurations
Towers are available in three heights: 42½", 50", and 65"H. Configurations include box/box/file, file/file, file with project drawer. 50" and 65"H towers are available with side access and Landscape™ surface sidelight.

Combination File
Combination files are 65"H and are available either 18"D or 24"D. They can either be specified with a 2 drawer lateral or lateral with a project drawer.

Aesthetic Alignment
Drawer configuration matches across Stride painted wood storage offering and tower heights align with Stride panel segmentation. Towers feature a bottom aesthetic trim piece that provides protection for the bottom edge for the tower.

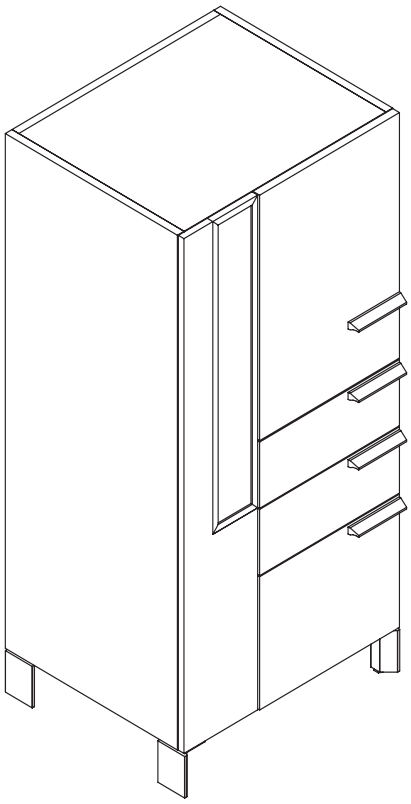
Painted Wood Construction
¾" thick powder-coated medium density fiberboard with concealed fastener construction.

Footed Base
All towers have a metal footed base with concealed leveling glides. Feet on wood storage match style of Stride footed panels.

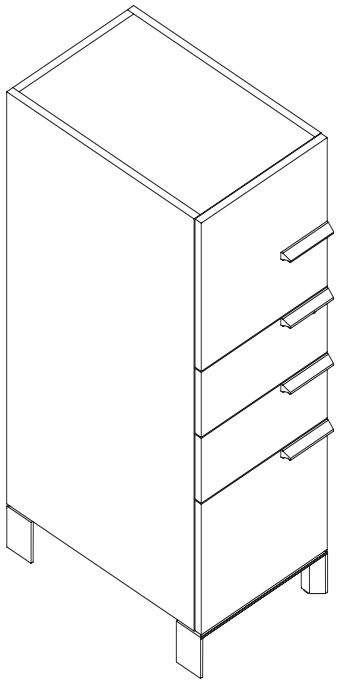
Four Hex-head Leveling Glides
The hex-head design of the stem allows leveling to be done even when the tower is fully loaded. Range is 1⅛".

Linear Pull Style
Elegant asymmetric pull style matches across wood storage offering.

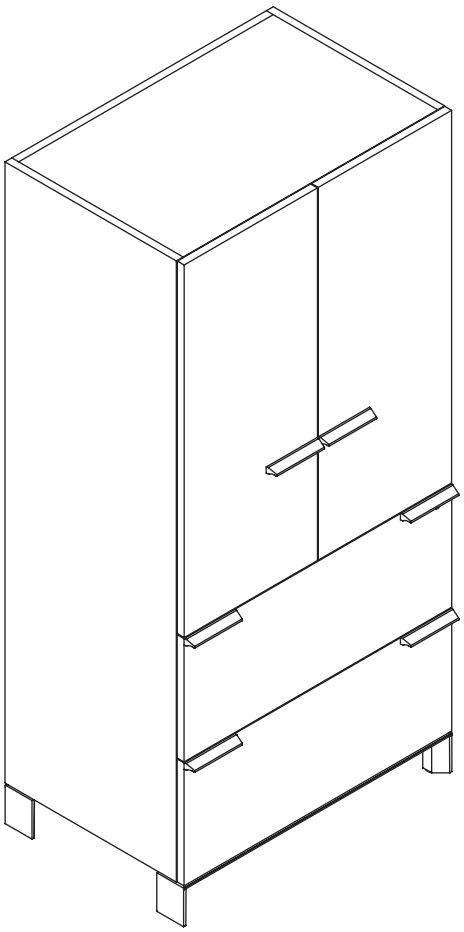
Suspension
Heavy-duty ball bearing slides.



European Hinges
Wardrobe and cabinet door both feature European-style hinged door.



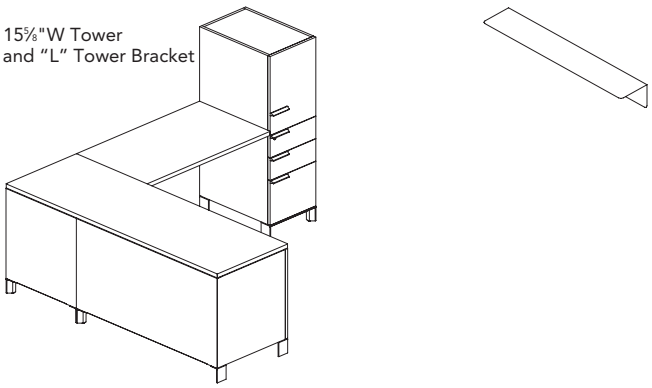
Filing
File drawers can accommodate front-to-back letter filing.



Shelves
Shelves in the cabinet door are adjustable in 2" increments. Shelves in side-access towers are fixed.

Wardrobe Door
All 24"W towers have wardrobe doors. 24"D with a coat rod; 18"D with a coat hook.

Lock Cores
Towers can be shipped with lock cores removed; cores can then be installed after towers are placed. Core removable lock feature allows key numbers to be easily changed in the field. It also facilitates installation.

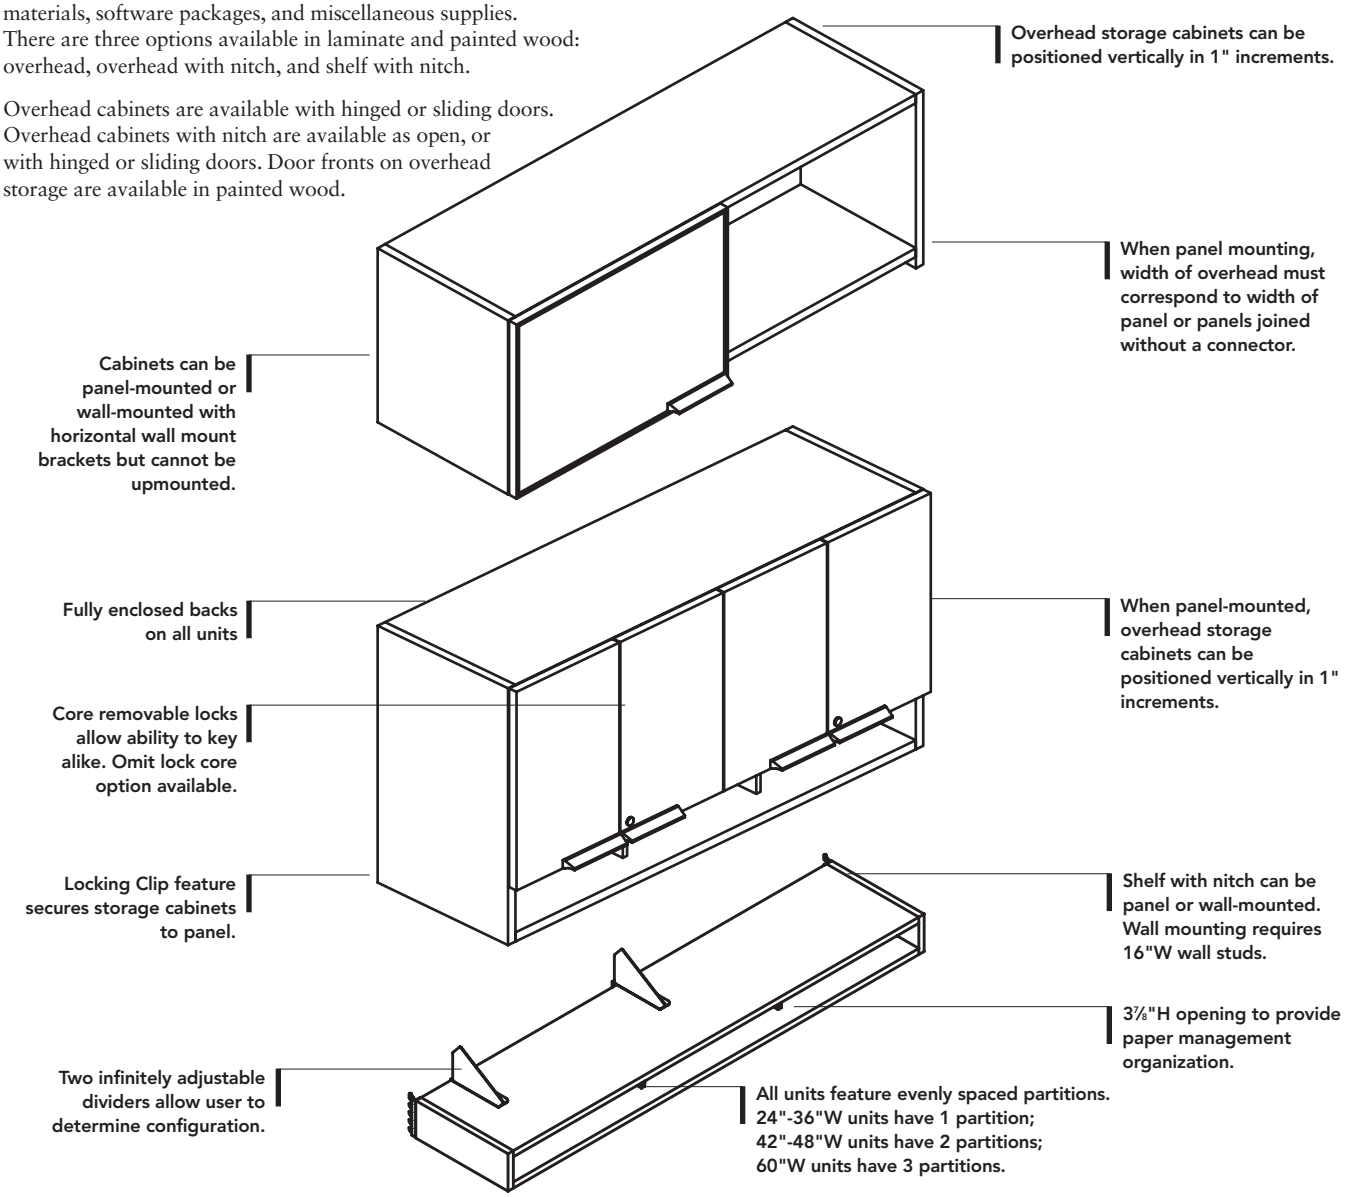


Painted Wood Towers and Combination File Accessories

Worksurface Supports
Tower has pre-drilled pilot holes on pull side of cabinet to accommodate addition of the "L" tower bracket.

"L" Tower Bracket - An "L" tower bracket can be ordered separately and fitted to any tower to support worksurfaces at 29½"H.

15⅝"W Tower
and "L" Tower Bracket



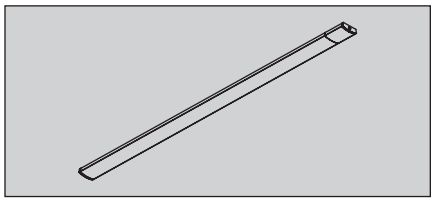
"L" Tower Bracket (page 365)

- Used to support a worksurface at 29½"H.
- Attaches using pre-drilled holes inside the tower.
- Can be attached to 18"D or 24"D towers.
- When using the "L" tower bracket, the depth of the worksurface and tower should be equal.
  18"D worksurface — 18"D tower
  24"D worksurface — 24"D tower
- "L" tower bracket is for use with laminate and painted wood storage only.

Wood Storage

Overhead storage components maximize the use of space in the workstation and also provide convenient access to binders, reference materials, software packages, and miscellaneous supplies. There are three options available in laminate and painted wood: overhead, overhead with nitch, and shelf with nitch.

Overhead cabinets are available with hinged or sliding doors. Overhead cabinets with nitch are available as open, or with hinged or sliding doors. Door fronts on overhead storage are available in painted wood.



Product Dimensions

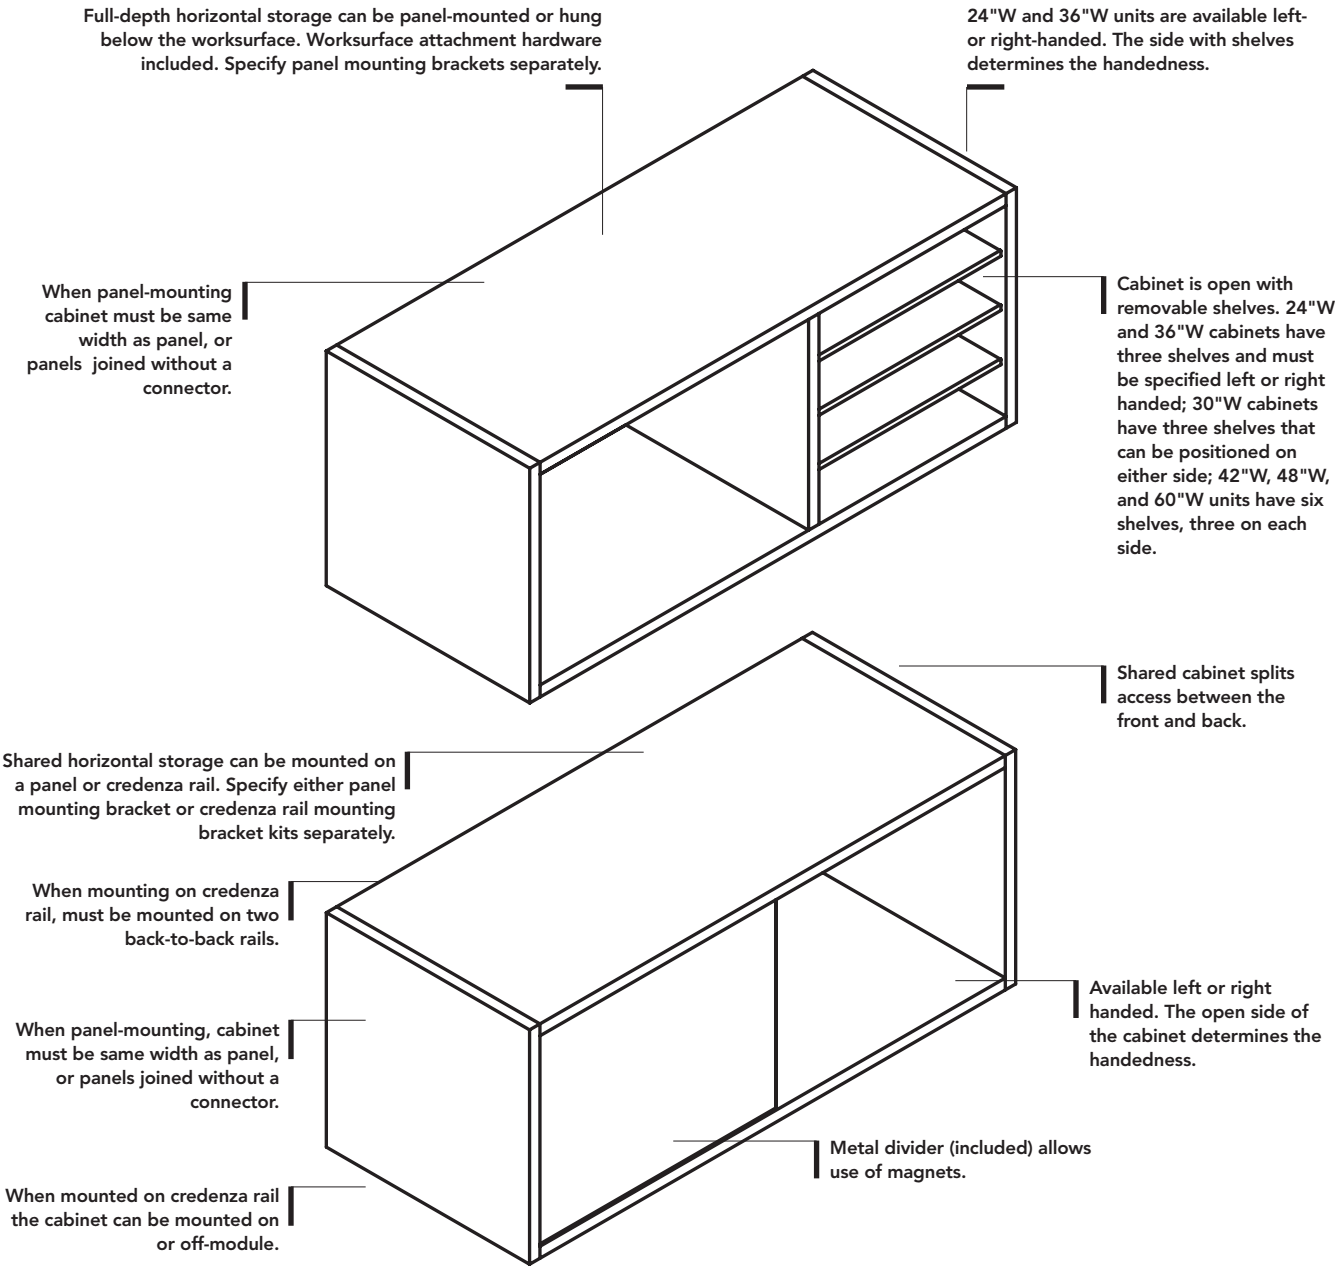
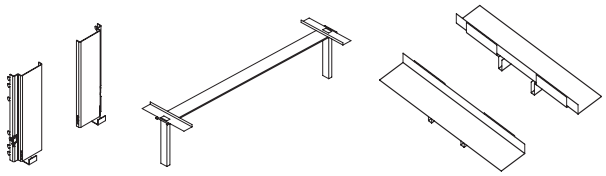
LED undercabinet light can be mounted beneath laminate or painted wood overhead cabinets for a low profile lighting option. (Do not use recessed tasklights with painted wood storage.)

Cord retainer clips fasten into panel slots to anchor power cords. Available in black only. Three clips ship with each LED undercabinet light.



Horizontal Wall-Mount Brackets (page 366)
- Use to attach an overhead directly to wall.
- Attachment hardware not included.

Undercabinet LED Light (page 366)
- Low profile energy-efficient LED tasklight for use with overhead storage cabinets.
- 15W power supply (0.125 amp).
- 3500K color temperature.
- 95 footcandles at 18".
- Magnetic or screw-mount option — attachment hardware included.
- Power drive is attached to plug: allow 1⅞"D space at outlet.
- Includes 3 cord retainer clips.
- For daisy chain capabilities and additional information see page 1035.



Tackboards (page 366)
- 15"H tackboards are designed to work with overheads with nitch.
- 20"H tackboards are designed to work with overheads without nitch.
- Wall-mounted tackboards come with brackets to mount to wall. Does not require wall track.

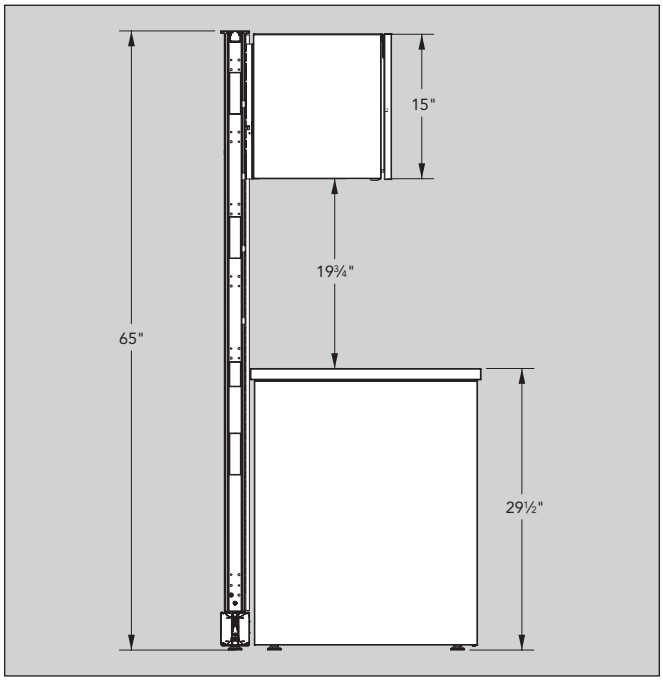
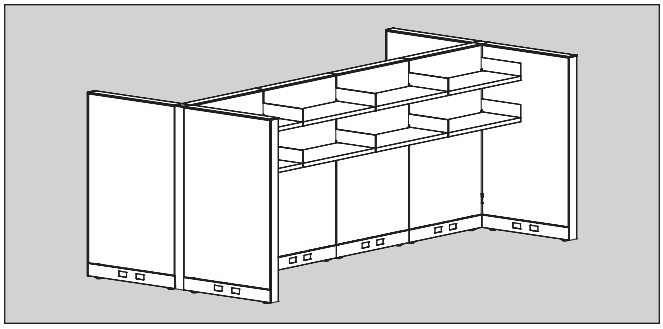
Product dimensions

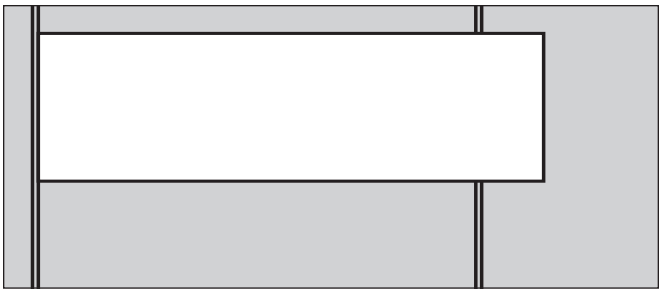


Overhead Storage Cabinet	
Width	24", 30", 36", 42", 48", 60"
Inside width	Flipper or 24" -36"W Hinged door — ⅜" less than width 42"-48"W Hinged or Sliding door — two compartments that are half of ⅜" less than width
Depth	14¼" RTA models 12"
Inside depth	12⅞" Receding door 12⅛" RTA models 11⅝"
Height	15"
Inside height	12¾" Receding door 11⅝" RTA models 12¾"
Open Shelf	
Width	24", 30", 36", 42", 48", 60"
Depth	12⅞" RTA models 11½"
Height	4⅝" RTA models 5⅜"

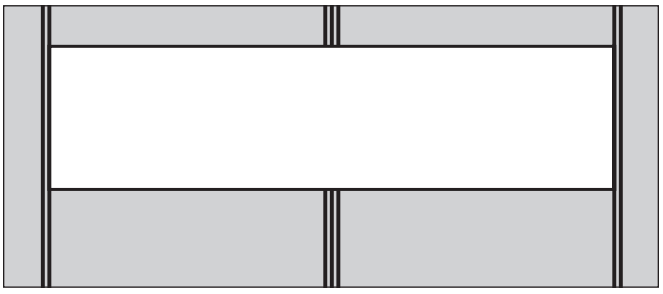


Recessed task lights can be mounted beneath storage shelves and overhead storage cabinets. Additional panel hung and freestanding lighting options are available.
Note: Do not use with laminate or painted wood storage.

Cord retainer clips fasten into panel slots to anchor power cords. Available in black only. Clips are provided with under-shelf mounted task lights. Additional clips can be purchased separately.

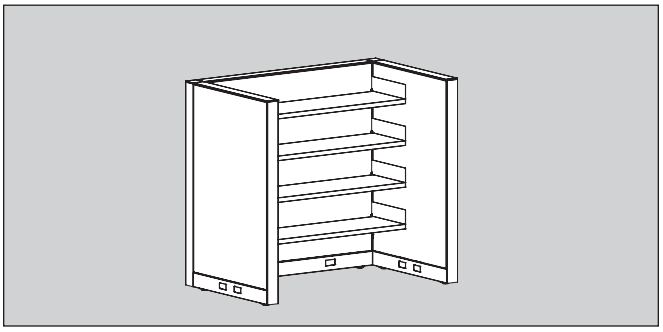


Overhead storage cabinets and open storage shelves can be mounted on Stride structural and stacking panels to a maximum height of 80". When mounting an overhead on a 57½"H base panel frame, select the option for Z57 bracket. For all other base panel frame and base panel frames with stacking frames the YZ bracket should be selected. Base panel frames with stacking frames that have an overall height of 57½" also use the YZ bracket.



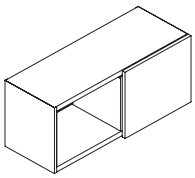
In a panel run, only two overhead storage cabinets or open storage shelves are recommended per panel side. Do not suspend more than one overhead storage unit per side from panels in a panel run which is mounted, at one or both ends, with an off-module connector kit.

When overhead storage units are suspended from stacking frames, the following guidelines should be adhered to:

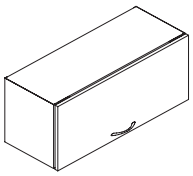


- Stacking frames should be added to all the parent run panels, and to each return-panel run.
- Stacking panels added to return panel must match the parent run configuration.
- A maximum of two overhead storage units should be suspended from each side of stacking frames on any given panel.

Metal Overhead Cabinets can be mounted on a panel equal to or up to 18" narrower than cabinet using provided panel attachment brackets.



Storage shelf, receding door overhead, RTA overhead, and RTA shelf width must correspond with width of panel(s). It is possible to span two panels when combined panel width equals cabinet or shelf width.



Up to 5 units can be hung on structural frames when run is supported with return panels on each side of storage shelves or overhead storage cabinets.

15"H Overhead Storage Cabinet (page 372)

- Steel cabinet with backstop. Cabinets are 14¼"D x 15"H.
- Available with sliding, hinged, or flipper door(s).
- Easy-Assist flipper door optional — requires minimal assistance in opening and closing. Not available on 60"W cabinets, specify 2–30"W flipper door cabinets with Easy-Assist.
- Self-engaging safety latch to secure cabinet to panel.
- Arch or Square pull optional on flipper and hinged doors.
- 60"W flipper cabinet has 2–30"W doors with 2 independent locks.
- 24"-36"W hinged door cabinets have 1 lock and 2 optional pulls, 42"-48"W have 2 locks and 4 optional pulls.
- Accommodates recessed task lighting — ordered separately.
- For locking specifications, see pages 1044-1046.
- 15"H cabinets can be mounted on a panel equal or up to 18" narrower than the cabinet using provided panel attachment brackets.
- Sliding doors have a built in pull.
- When mounting an overhead on a 57½"H base panel frame, select the option for Z57 bracket. For all other base panel frame and base panel frames with stacking frames the YZ bracket should be selected. Base panel frames with stacking frames that have an overall height of 57½"H also use the YZ bracket.

Open Shelf (page 373)

- Metal shelf with back stop. Locking clips (2) standard.
- Will accommodate recessed task lighting —ordered separately.
- Width can correspond with width of panel, or 2 panels joined without a connector.

Upmount Kits for Assembled Overhead Cabinets (page 372)

- Consists of two upmount brackets, full back panel and required installation hardware.
- Allows mounting of an assembled cabinet up to 15" above height of panel. Cannot be used with RTA models.
- Specify "Z2" prefix model number upmount kits with 15"H, 30"H, 35"H, 50"H, or 65"H frames; and "Z4" prefix model numbers for use with 22½"H, 42½"H, or 57½"H frames.
- Brackets require a clearance of 6" below bottom of overhead cabinet.
- Width must correspond with width of panel frame or 2 panel frames joined directly in-line.
- Full back panel adds ½" to depth of overhead case.
- Full back panel only used when upmounting cabinet.

Horizontal Wall Track (page 372)

- Allows mounting overheads on permanent wall structures ONLY.
- Cannot be used with RTA models.
- Track is 60"W and notched at 6" intervals as a guide for field cutting.
- Field modification necessary for use with sliding door overhead.
- Available in black only. Attachment hardware not included.

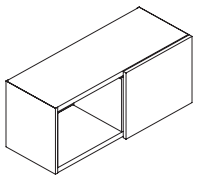
15"H Receding Door Overhead (page 373)

- Steel cabinet with open back. Optional back ordered separately.
- Arch or Square pull optional.
- 60"W cabinet has 2 30"W doors with 2 independent locks.
- Accommodates recessed task lighting — ordered separately.
- For locking specification, see pages 1044-1046.
- Cabinets are 13¼"D x 15"H. When door is recessed, interior dimensions are 12⅛"D x 11⅛"H.

Receding Door Overhead Back (page 373)

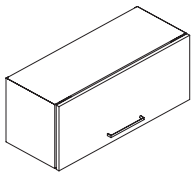
- Optional, order width to match receding door overhead.

Ready to Assemble (RTA) Flipper Door Overhead (page 373)



- Steel cabinet with open back.
- 60"W and 72"W cabinets have 2 doors with independent locks.
- Accommodates recessed task lighting — ordered separately.
- Random keying, for locking specifications see pages 1044-1046.
- Cabinets are 12"D x 15"H. Interior dimensions 11⅛"D x 12¾"H.

Ready to Assemble (RTA) Shelf (page 373)



- Metal shelf with locking clips.
- Accommodates recessed task lighting — ordered separately.

Metal Overheads & Shelves

For specification information see pages 369-371.

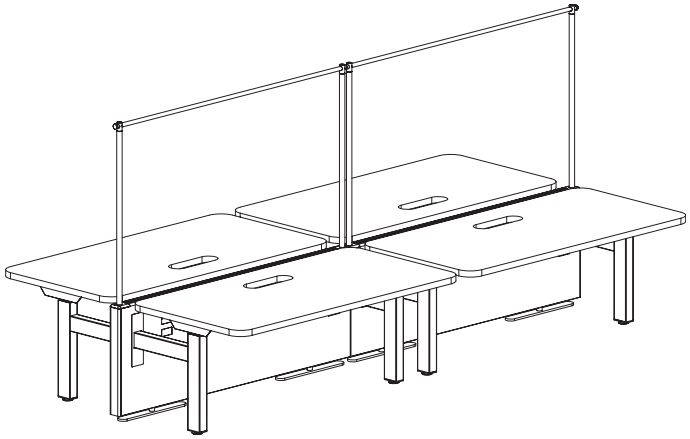
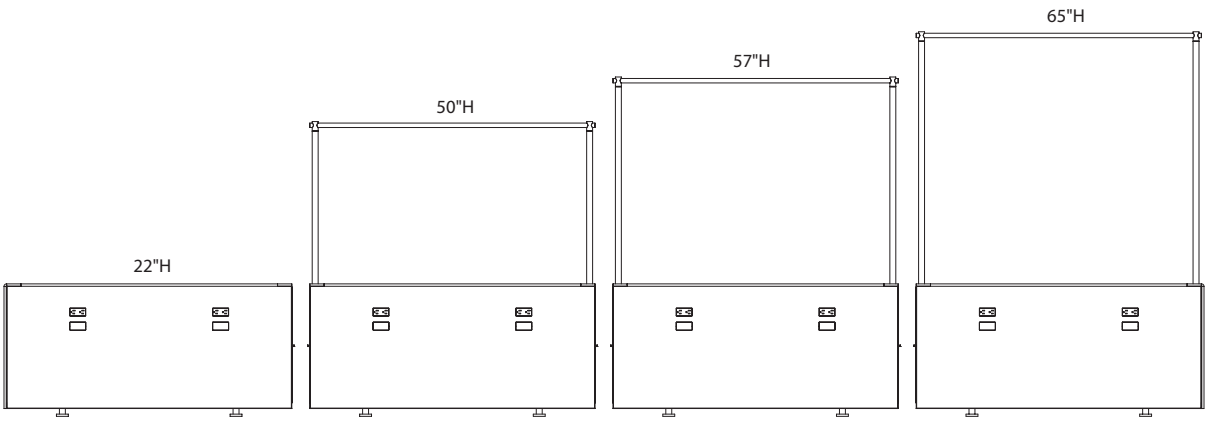
Mural offers a unique way to plan and divide space with a movable base structure that easily accommodates reconfiguration. A wide selection of inserts plus shelves, provide the desired privacy and functionality for each workspace; with movable and freestanding screens offering an additional level of privacy when needed. Integrated or freestanding height-adjustable surfaces allow users to change postures throughout the day for comfort and productivity. The result is a system that invites individuals to customize their workspace to fit their workstyle and reflect their personality.



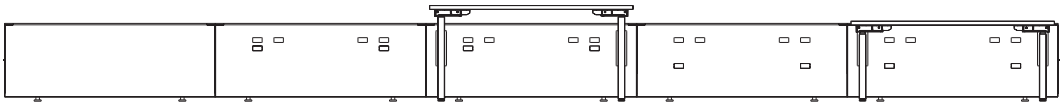
It's All in the "Flex"

Mural's flex connector transforms a static station into an adaptable station. Bringing new meaning to organic configurations, Mural's possibilities are limitless.



Integrated Height-Adjustability

Mural stations can integrate 2-stage or 3-stage height-adjustable tables with ease. Freestanding height-adjustable tables can also be paired with Mural's fence.



Privacy to Fit Your Organization's Need

Vertical screen frames support a variety of screening options that support user comfort and privacy.

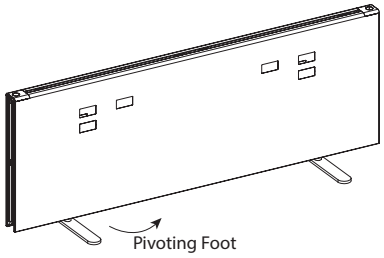
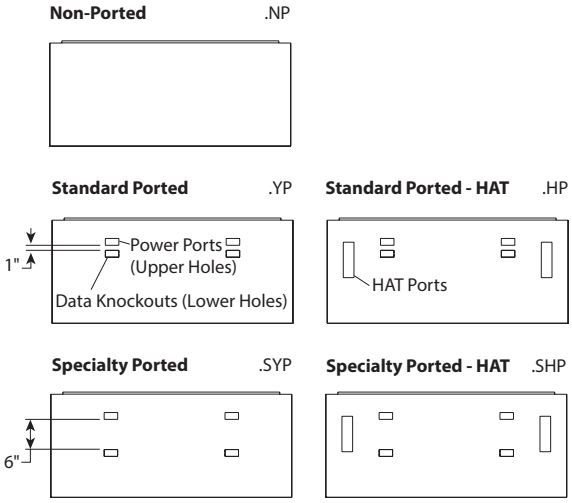
Fence & Connectors

Fence & Connectors



Fence:

- The fence is made up of a frame and tiles.
- Connectors attach to fence to create desired configurations.
- Screen Frames attach to top of fence for integrated vertical privacy solution.
- When screen frames are not specified, a No-Screen Frame Filler Kit (SAFILLERKITNF) should be specified.
- When screens are not used, a No-Screen Filler Kit should be specified to fill screen gap.
- In-line connections possible with and without connectors. Other connectors available, see connector section.
- Overall Depth: 2.6"
- Overall Height: 22"
- Overall Width: 30", 36", 42", 48", 54", 60", 66", 72", 84"

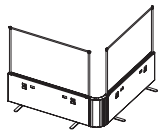


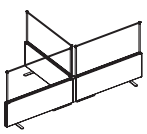
Frames:

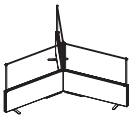
- Pivoting foot included with frame.
- Pivoting foot dimensions: 17"L x 2"W.
- Pivoting foot allows for 3" of leveling adjustment.
- Pivoting foot can be turned in when adjacent to gallery panels, panel returns, and simple/enhanced connectors.
- Pivoting feet can be turned in when tethered to an integrated height-adjustable table.
- 30"W fence will only have room for one foot to be pivoted inwards.
- Frames > 60"W ship as two frames and are adjoined in the field.
- Pivoting feet must be turned out when using a 2-way Y connector on freestanding applications.
- Gallery panels must be at least 33"W x 42½"H and attached next to foot locations to turn feet in on single-sided applications.

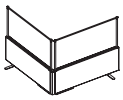
Tiles:

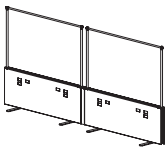
- Painted steel tile.
- Specified as non-ported, ported, and integrated desk (always ported).
- 2 data knockouts per side for ported tiles.
- Specialty tiles available with data ports spaced 6" lower than power in both ported and HAT tiles.
- Tiles up to 54" come with 2 electrical knockouts per side.
- 60" and greater tiles have 4 electrical knockouts per side.
- Port cover model available for day 2 reconfigurations.
- Data ports are knock-outs and do not have to be used.

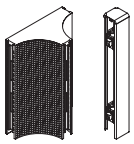




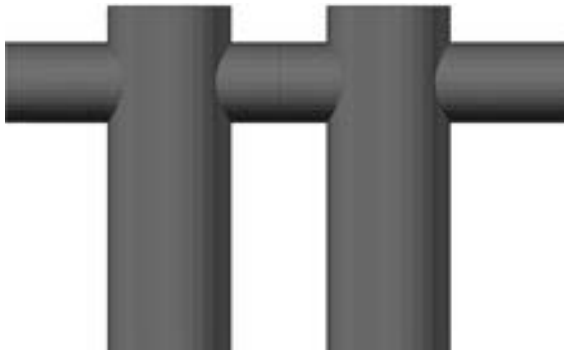








*Tiles shown are 48"W



Fence & Connectors

Connectors:

- Organic and linear planning made possible through variety of connector options.
- Flex connector featuring knit cover, available in 3 colors.
- Flex connector enables end panels to be user movable.
- Enhanced connectors featuring knit cover available in X, Y, and T configurations.
- Simple Connectors available in straight, L, X, T, Y (2-way), and 7 (3-way) configurations.
- Enhanced connector top trim and simple connectors available in Allsteel standard paints.
- Use of extended straight connectors allow for equal length of run when there isn't a return fence specified.

Flex Connection	T-Connection	Y-Connection (3-way)	X-Connection	L-Connection	Y-Connection (2-way)	Straight Connection
						
						
SC12SFF	SC12TF/SC12TS	SC12YF/SC12YS3	SC12XF/SC12XS	SC12LS	SC12YS2	SC12SS

Screen Frames + Screens

Screen Frames:
- Screen frame supports screens, shelves, and planters.
- Screen frame cap sold separately.
- Adds additional height to fence: 26"H (50"H), 34"H (57½"H), 41"H (65"H).
- Screen frame width only compatible with associated fence (30"W Screen Frame = 30"W fence).
- Screen frame aligner hardware must be used in linear application.
- When specifying in-line, fence connections screen frame heights must match.
- Available in Allsteel standard paints.
- Maximum of 10 lbs for decorative accents suspended from screen frame. Consider collaborative board within weight requirements.

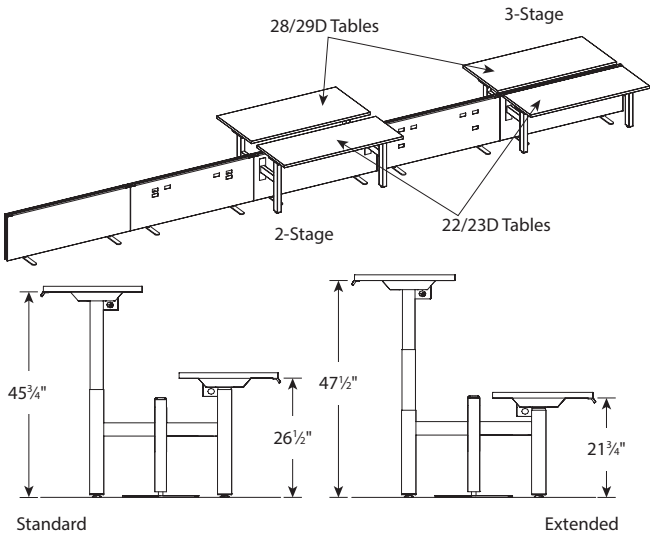
Screens:
- Available in fabric, PET, mesh, acrylic, glass, laminate, and veneer.
- Screen heights must match screen frame height. Refer to screen frame compatibility for width requirements.
- Screen clamps attach screens to screen frame.
- Screen clamps available in Allsteel standard paints.
- Screen clamps hardware always silver. Clamping pads will always be black.
- See screen frame compatibility chart.
- Mesh does not need screen clamps.
- Veneer screens larger than 60" wide are available with horizontal grain only.

Screen Filler Kits:
- When two half screens are used within screen frame, SAFILLERKIT1 should be specified.
- When screens are not used, but a screen frame is specified, filler kits should be used to fill fence gaps. See screen filler compatibility chart.
- When no screens or screen frames are used, SAFILLERKITNF should be specified.

Shelves:
- Pill shape laminate shelf available in Allsteel standard laminates.
- Maximum 2 shelves per screen frame.
- Do not specify monitor arms with integrated height-adjustable tables and screen frame shelves.
- All desktop mounted accessories could interfere with shelves on applications with integrated height adjustability. This should be considered when choosing location of shelves on screen frame.
- Shelves come with all screen frame mounting hardware. Hardware will always be black. Shelf screen clamp and stiffener are available in standard Allsteel paint finishes.
- Shelf hardware is only compatible with Mural Screen frames.
- Shelves can support decorative accents with a maximum weight capacity of 25 lbs.
- Shelf is ¾" thick
- For applications with integrated height adjustability, the following shelf limitations apply: (1) no shelves can be used with 26"H screen frames, (2) 1 shelf can be used with 34"H screen frames, (3) 2 shelves can be used with 41"H screen frames.

Planters:
- Planters introduce biophilia and personality to the workstation.
- Mount directly to laminate shelves. Planter comes with pilot holes and hardware. Shelves do not have pilot holes to allow for flexibility in placement.
- One planter per shelf.
- Internal dimensions: 6"H, 6"D, 24"W.
- Does not come with liner.
- Available in 10 paint finishes.

Screen Frame Compatibility



Screen Frame	Full Width	Half Width
30"W	25"W	—

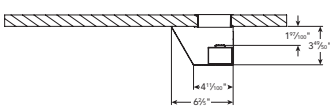
66"W	SAFILLERKIT61	SAFILLERKIT30
72"W	SAFILLERKIT67	SAFILLERKIT33
84"W	SAFILLERKIT79	SAFILLERKIT39

Collaborative Screens

Model Numbers	Screen	Size Volume	Weight
SS1724M	17x24	17.0 in^3	4.8 lb
SS2724M	27x24	26.9 in^3	7.6 lb

Worksurface:



Mural Power Bay:
- User Access grommet conveniently tucks power and cords away into under worksurface tray.
- User access power possible through specifying Mural Power Bay grommet option, power, and wire management trough.
- Mural Power Bay grommet option specified on the .option. Grommet color is determined by laminate edge band.
- Grommet is always an oval and centered on worksurface, see visual above for dimensions.
- Power (SEDMUP) must be specified with either SEDMW20 or SEDMW30 to provide user access to power.

Collaborative Boards:
- User Movable, magnetic collaborative boards.
- Specify marker board paint for a writable surface option.
- Available in two sizes: 17"H x 24"W and 27"H x 24"W.

Bent Screens:
- Upholstered freestanding bent screen provides user privacy in solo stations and collaborative areas.
- Available as left-handed and right-handed.
- Foot is available in textured salt or solar black.
- Screen dimensions: 52"H x 68"W.

Wire Management:

- Under worksurface tray conveniently stores power strip and unneeded cords throughout the day.
- Tray is available Allsteel standard paints.
- 20"W trough compatible with 46"W and 52"W worksurfaces.
- 30"W trough compatible with worksurfaces 58"W and greater.
- Trough will always be black.
- Fabric wire manager offers a softer approach to wire management and discreetly routes cords to fence receptacles.
- Reference visual above for wire manager trough dimensions.

Integrated Height-Adjustable Bases:
- 2-stage (26½" to 45¾") and 3-stage (21¾" to 47½").
- 250 lbs weight rating.
- Tables feature collision detection, a feature designed to stop table travel when the table detects an obstacle.
- Memory control, basic up/down control, and paddle control available as an option.
- Compatible with 48" – 72" fence configurations.
- Height-adjustable legs and crossbar kit specified separately. Unique crossbar kits to accommodate single and dual sided applications as well as 22/23"D and 28/29"D worksurfaces.
- Dual sided crossbar kits should ONLY be specified when two integrated height-adjustable bases are specified.
- Must specify with Integrated HAT tile option.
- Leg seamlessly integrates into fence.
- 2½" of leveling adjustment.
- Radii hanging pedestals on single-sided integrated Mural height adjustable tables are not allowed from a stability perspective.
- On a double-sided application (integrated HATs on both sides of the fence) it is allowed, Radii hanging pedestals will need to sit inset of the height adjustable leg.

Note: Not TAA compliant unless ordered with a TAA compliant configurable end product.

		A3 (T-Leg)		A6 (C-Leg)

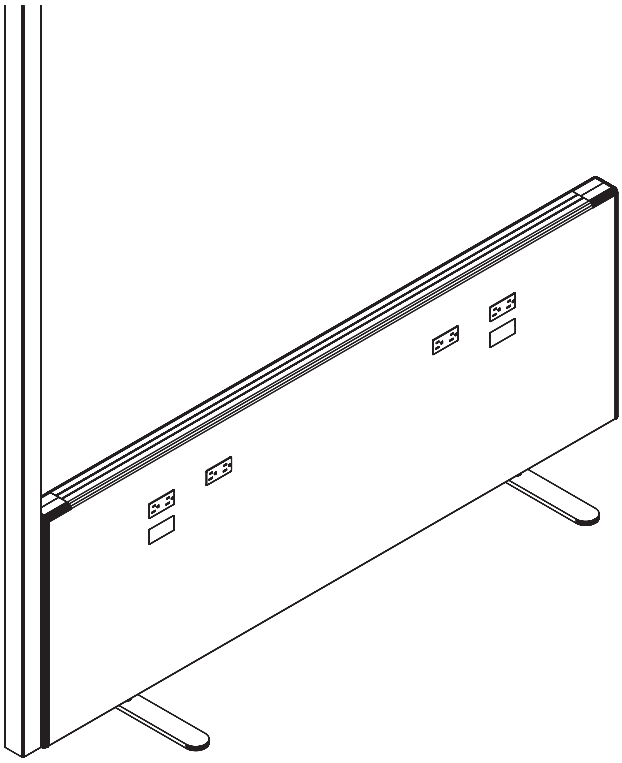
Legend	
●	Works, unit may sit flush to LH or RH edge of worksurface
○	Works, unit must sit inset of height-adjustable leg

Mural Worksurfaces:
- Rectangular, Rounded, and Eased Edge worksurfaces available.
- Primary worksurface depths are 22"D, 23"D, 28"D, and 29"D.
- Mural Power Bay and standard grommet options available.
- Worksurfaces compatible with all integrated height-adjustable bases.
- 23"D, 28"D, and 29"D worksurfaces compatible with freestanding A6 T-Leg, C-Leg bases. 22"D worksurfaces compatible with freestanding A6 T-leg bases ONLY.

Marker Holder:
- Can hold 4 markers and an eraser.
- Magnetic attachment makes accessory easy to move from steel surfaces.
- Available in Allsteel Standard Paints.

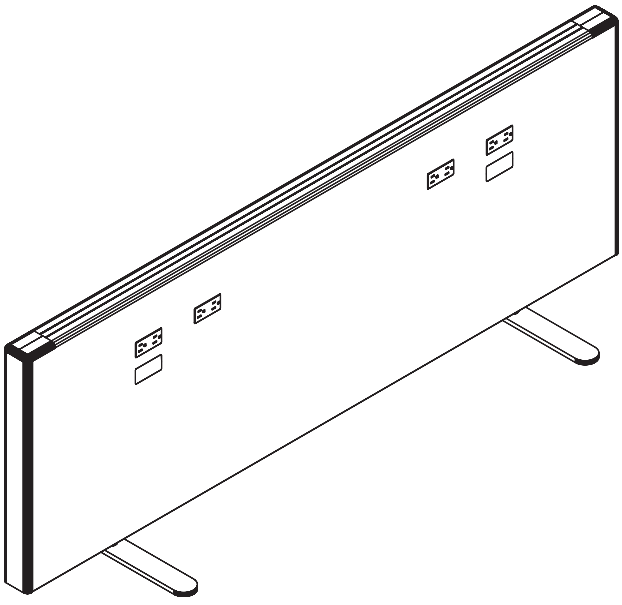
Privacy Collaboration Panel:
- Rolling collaboration panel with dual-sided bin.
- Specify markerboard laminate for writable surface option.
- Panel and bin laminate specified separately for design flexibility.
- Screen Dimensions: 50"H x 60"W.
- Bin Dimensions: 8"H x 24"W x 8.5"D.



Marker Boards:
- Thoroughly erase your marker board after every use.
- Marker boards should be cleaned weekly with marker board cleaner. Reminder: Completely erase the board before applying any cleaners.
- Leaving ink on the board for an extended period of time may lead to images remaining on the board, commonly known as “ghosting”, after erasing.
- To avoid ghosting, clean your board weekly with marker board cleaner.
- Expo brand dry-erase markers are recommended for best erasing results.
- Avoid using red and orange markers for easier cleaning and to reduce the likelihood of ghosting.
- Do not use permanent or non-dry erase markers.
- To maintain eraser performance, follow manufacturer's instructions.

Mural Electrical Systems

Power can come from a wall, floor or ceiling infeed.

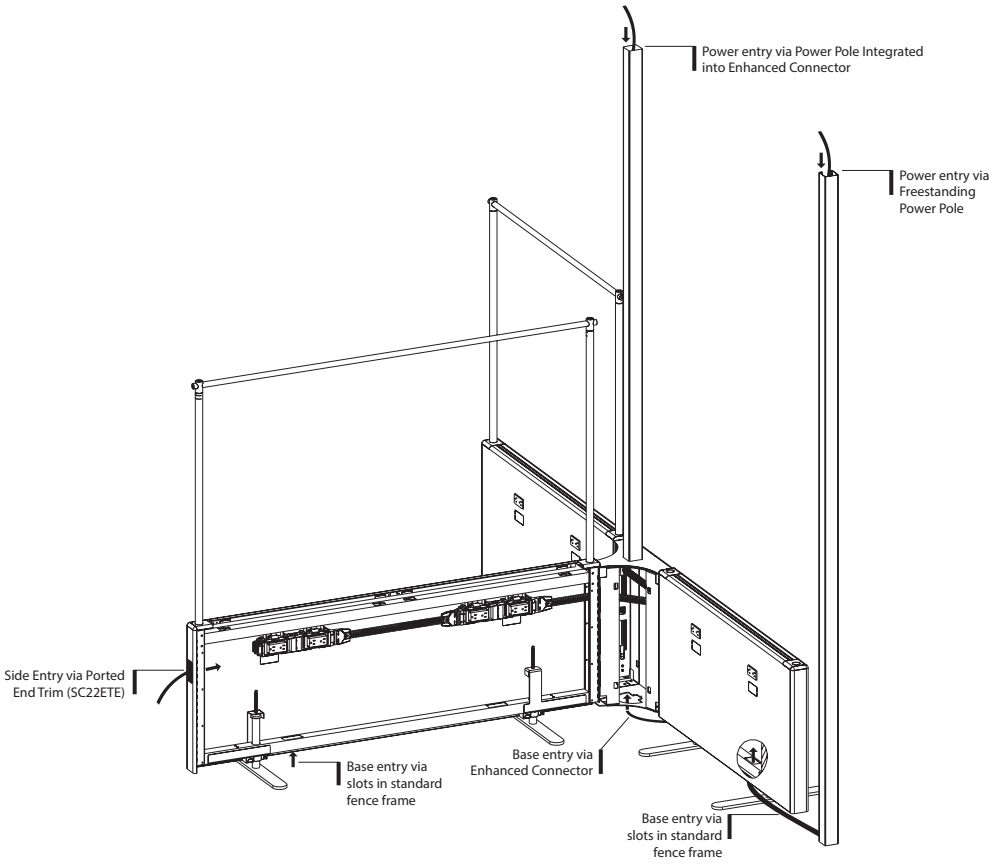


Ceiling Infeed:

- Requires a power pole, either freestanding next to the system or integrated into an enhanced connector (X, T, Y).
- When power pole is freestanding, the electrical infeed either:
  – Leaves the pole at the floor level, enters the system in the same way that a floor infeed would.
  – Leaves the pole part-way to the floor and enters through the side infeed trim (SC22ETE). This method requires installers cut a hole in the power pole at the correct height to line up with the hole in the infeed trim.
- When integrated, with power pole mounting kit, the infeed goes directly through the top of the enhanced connector.

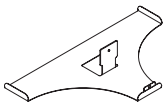
Floor Infeed:

- Enters through the bottom of the system.
- Points of entry are accessible at the center of each section of panel.
- Enhanced connectors have access point underneath for floor infeed.
- Infeed cannot be routed through simple connectors.



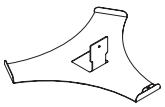
Wall Infeed:

- Requires use of the side infeed trim.
- Infeed enters through side of fence.
- Recommend this configuration when fence is located up against a wall to prevent user visibility of side infeed access.

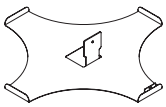


Electrical & Data

Mural features capabilities for cable management, including electrical, voice, and data. The 8-wire electrical system is integrated at the beltline. The open structure of the frame allows voice and data cables to be routed both vertically and horizontally.



Square Power Pole for Fixed Supports (page 463)



- A870070 power pole is 10½' tall
- SE08PP1 Power Pole is 8' tall.
- Power Pole may be used over one of enhanced connectors.
- To extend the power pole for a taller ceiling, order quantity-2 with a splicer kit SE08PP2.

SE08TPP2

SE08YPP2

SE08XPP2

Mural Electrical Systems

The electrical system for Mural offers two options: 3+1 or 2+2. Both systems utilize an 8-wire, four-circuit electrical system, rated at 20 amps (15 amps Canadian). Connect a maximum of 13 receptacles (12 in Canada, and fewer in certain U.S. locales) to one circuit. Consult your electrician to ensure the planned electrical load is within permissible limits. Follow the steps below to help specify your Mural electrical.

1. **Infeeds** — Determine the location, quantity, and type of power infeeds needed.
2. **Fence Power Kits** — Specify a Fence Power Kit for each ported fence. Power kits are determined by the size of fence ordered and are connected to one another with beam-to-beam jumpers - order separately.
3. **Connector Jumper Kits** — Ordered separately from fence power kits. Available in specific lengths for simple connectors, enhanced connectors, flex connector, and panel pass-through configurations.
4. **Duplex Receptacles** — Determine which electrical system will be used after consulting an electrician: 2+2 or 3+1. System is determined by which circuits are used. Specify circuit specific receptacles to fill all port locations where electrical is needed. Number of ports is determined by the fences and fence power kits specified. Port covers must be placed in port locations where duplex receptacles are not specified.

Electrical Systems

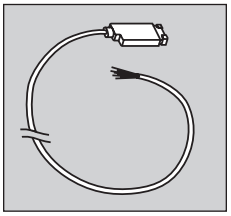
Mural offers a choice of four electrical systems:
- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals
- Eight circuits; two four-circuit systems provided back-to-back.

- See page 390 for a detailed explanation of each electrical system.
- All four systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian) - 16 amps plannable in U.S.
- Mural fence and electrical components are UL Listed. Electrical components are also CSA certified.
- Installation and use of the electrical system, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through cable openings in fence sides.

Note: No more than one conduit that is connected to a power kit mounted to horizontal can be routed through the same cut out in the same horizontal at beltline. Attempting to use more will cause binding of conduit and may affect reveals on receptacles.

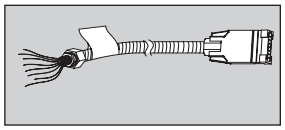
Hardwire New York Code (page 413)



- Hardwire (New York Code) junction box (model A871400) is used when local electrical codes require hardwire entry.
- For use in panels 30"W to 84"W.
- New York box can connect to a pass-through kit or directly to a power block.
- New York box takes the place of a receptacle. If using a ported tile, purchase port covers for this location.
- Customer to furnish all cabling and wiring from power entry to power source.
- Junction box can be positioned at any duplex receptacle location.

Hardwire Chicago Code (page 413)
- Wiring power kits and snap connectors are not allowed in Chicago — base pathways must be comprised of all-metallic components.
- Customer must furnish conduit, wiring, and designer-type receptacles for the base pathway and conduit, wiring, designer-type receptacles, and receptacle covers for the beltline.
- Power entry can be routed from the ceiling, via a power pole, or from the floor into a junction box.

Electrical Infeeds



- Power infeed cables deliver power from building to fence's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communications and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.

Sealtight Electrical Infeed (page 412)

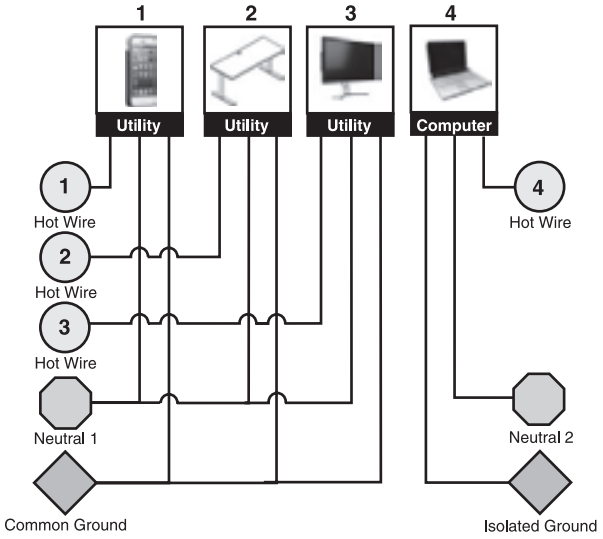
- Sealtight electrical infeed cable is used when routing power from floor with footed panels.
- If pre-wired as infeed, sealtight must be routed from inside of fence. Should not be ordered prior to installation.

Ceiling Power Infeed (page 412)

- Ceiling power infeed connects to a prewired electrical power kit in the beltline and terminates in the junction box at the top of the integrated power pole.
- Can also be used as infeed.
- Most codes allow flex conduit to be exposed after installation. Verify code requirements before ordering for exposed application.

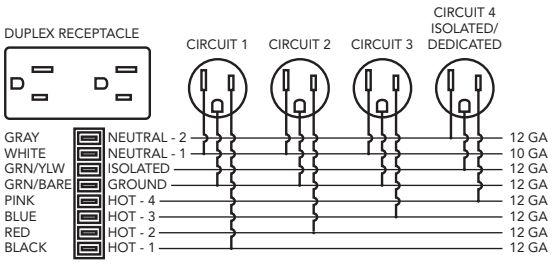
To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - The Four-circuit system (4-Hot/2-Neutral/2-Ground)
     - 3 + 1 option
     - 2 + 2 option
   - The three-circuit system (3-Hot/3-Neutral/2-Ground)
   - The eight-circuit system (back-to-back four-circuit systems)
2. Determine location, quantity, and circuit of duplexes.
3. Determine the appropriate choice and use of isolated, isolated/dedicated, and separate neutrals circuits.
4. Specify appropriate power kits and pass-through kits.
5. Determine the location, quantity, and type of power infeed needed.



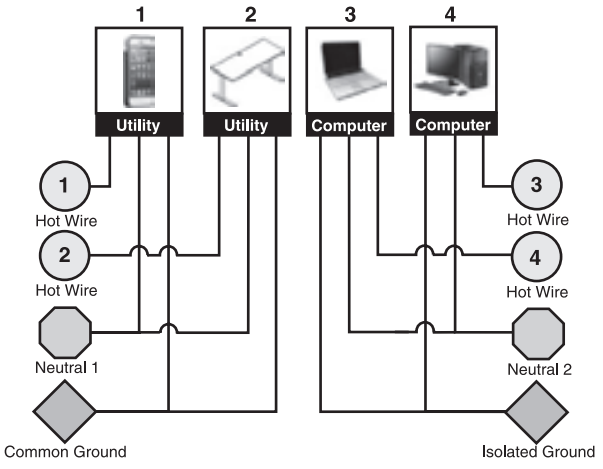
* Select power kits (SE(30-84)EK(3C/4C)), panel-to-panel standard jumpers/enhanced jumpers (SES(S/F)EJ(3/4)C), and pass-through kits (SES(M/G)EJ(3/4)C) with the last two digits corresponding with the panel width into which the component is to be positioned. Pass-through kits only cover space within the panel. Designers should still specify panel-to-panel jumpers between a pass-through to a power kit. Jumper kits do not stretch.

Flexconnect™ Electrical System Options

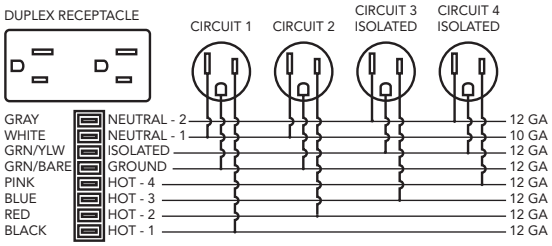


The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

Reference the Office Equipment Typical Load Values on page 391.



Four-circuit, 3 + 1 Receptacle Option



The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.

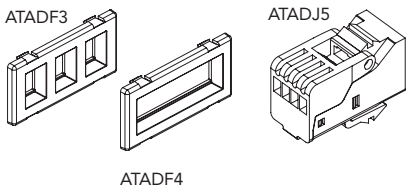
Four-circuit, 2 + 2 Receptacle Option

The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Office Equipment Typical Load Values

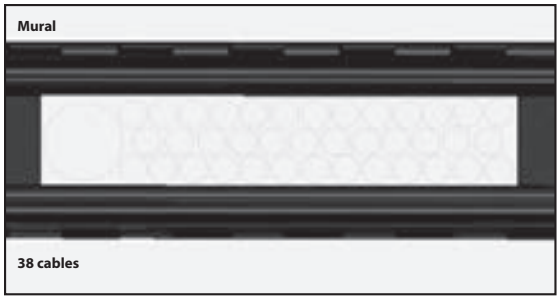
Item	*Amps
Desktop/2 Monitors	4
Laptop Computer	1
Laptop/2 Monitors/Docking Station	3
Paper Shredder	1.22
Radio	0.05
Scanner	3
Space Heater (1500 watts)	12
Task Light (equiv. 60-watt bulb) Fluorescent LED	 0.12 0.08
USB Charger	0.17
LCD Television (42")	1
LCD Monitor (21")	0.5
Bluetooth Speaker	0.1
Desktop Printer Inkjet Laser	 0.15 4 to 10
Multimedia Projector	1.7
Sit-to-Stand Height-Adjustable Desk	Idle 0.01 / Max 4
Office Kitchen	
Coffee Maker	10
Microwave	10
Toaster	12.5
Compact Refrigerator	1.5

*Chart is recommended for planning purposes. Check device specifications for exact amperage. Consult with your electrician regarding the applicable configurations.



Examples of Component Usage based on the *Office Equipment Typical Load Values* Chart

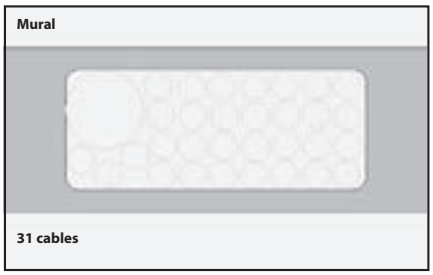
Power Option 3+1
Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers
Utility Circuits 1, 2, 3: Height-adjustable tables and ancillary items



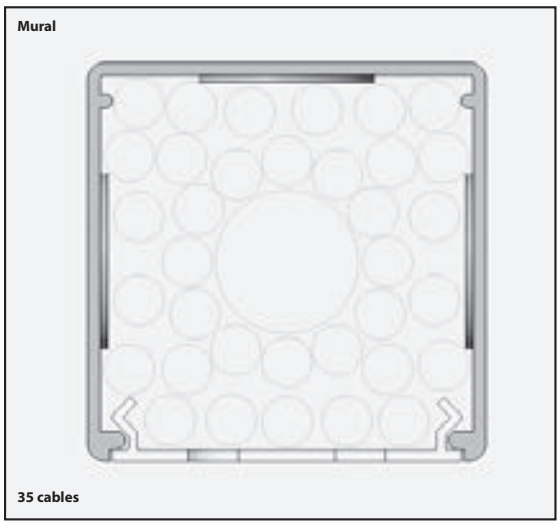
Power Option 2+2
Dedicated Circuit 3: 4 desktop computers with 2 monitors each; or 10 laptop computers
Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers
Utility Circuits 1, 2: Height-adjustable tables and ancillary items

Data Faceplates & Jacks (page 414)

- Faceplates fit into knockout ports on ported steel tiles.
- Faceplates do not work in fence electrical ports.
- Faceplate options available to install either 3 or 4 data jacks.
- Faceplates available in one color – black.
- Faceplates and Jacks sold separately.
- CAT 5E and CAT 6 data jacks available.
- Due to fence depth, data modules should not be used back-to-back.

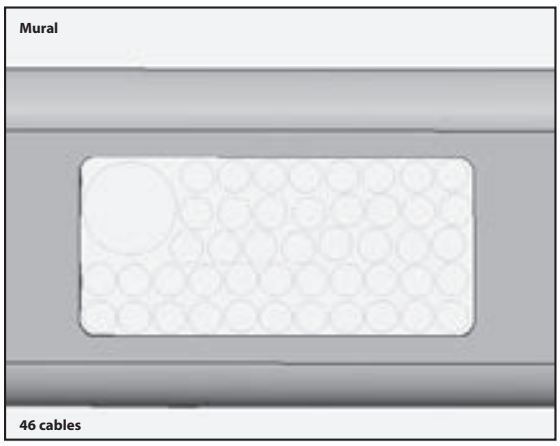


Cable Capacity



1. 

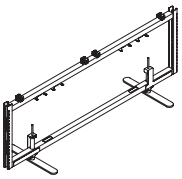
1. Cables side entry Mural welded frame. Total capacity of 38 cables of (.25" dia.).



2. 

3. 

2. Insert the electrical jumper and cable channels into the slots of the flexible connector. Total capacity of 20 cables of (.25" dia.).
3. Base entry via slots in standard fence frame. Total capacity of 31 cables of (.25" dia.).



4. 

4. Power entry via Freestanding Power Pole cable capacity (Power Pole, 2" x 2"). Total capacity of 35 cables of (.25" dia.).

5. 

5. Cables side entry via ported End Trim. Total capacity of 46 cables of (.25" dia.).

For specification information see pages 383-386.

***These colors are intended to be an inspirational option for the trending market. Product application is limited and color availability is approximately two years to coincide with evolving workplace trends.

Metallic paints, due to varying reflectance, may appear to have less visual color consistency than other paint finishes, even when L/A/B values are exactly the same. (L/A/B — measurable aspects of color — values are maintained within a specified range, to ensure consistent appearance of paint colors.)

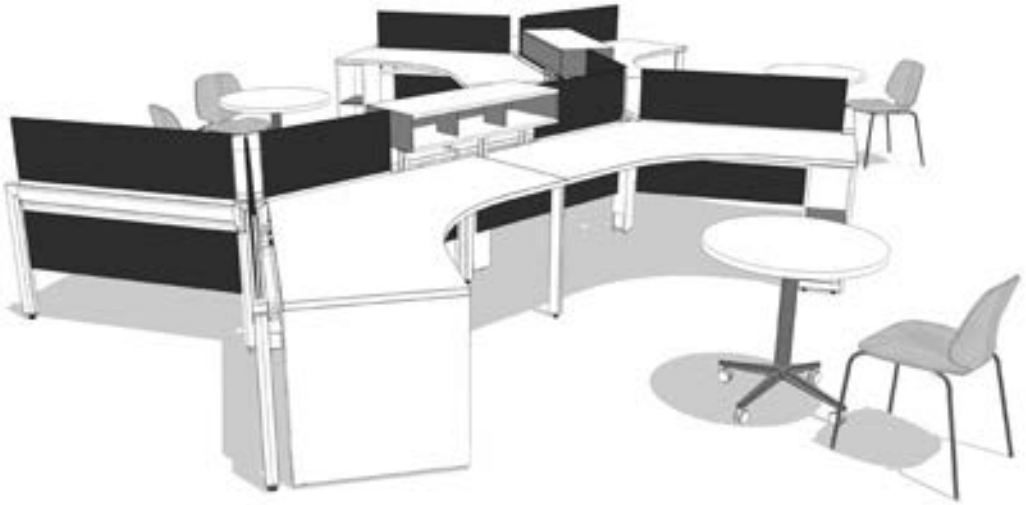
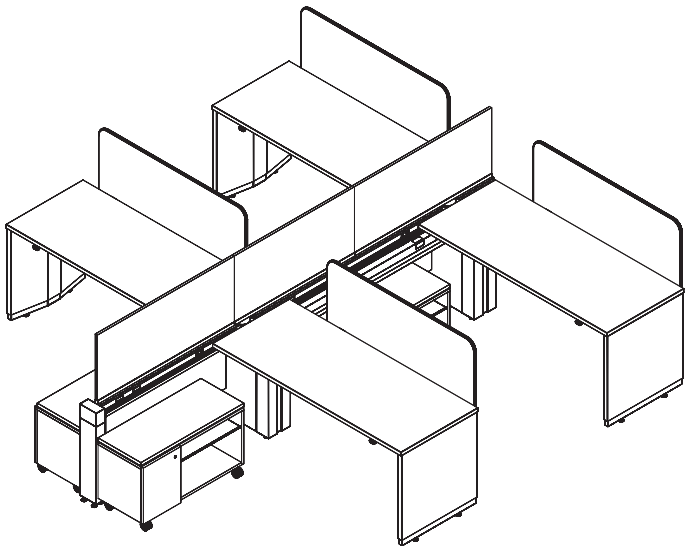
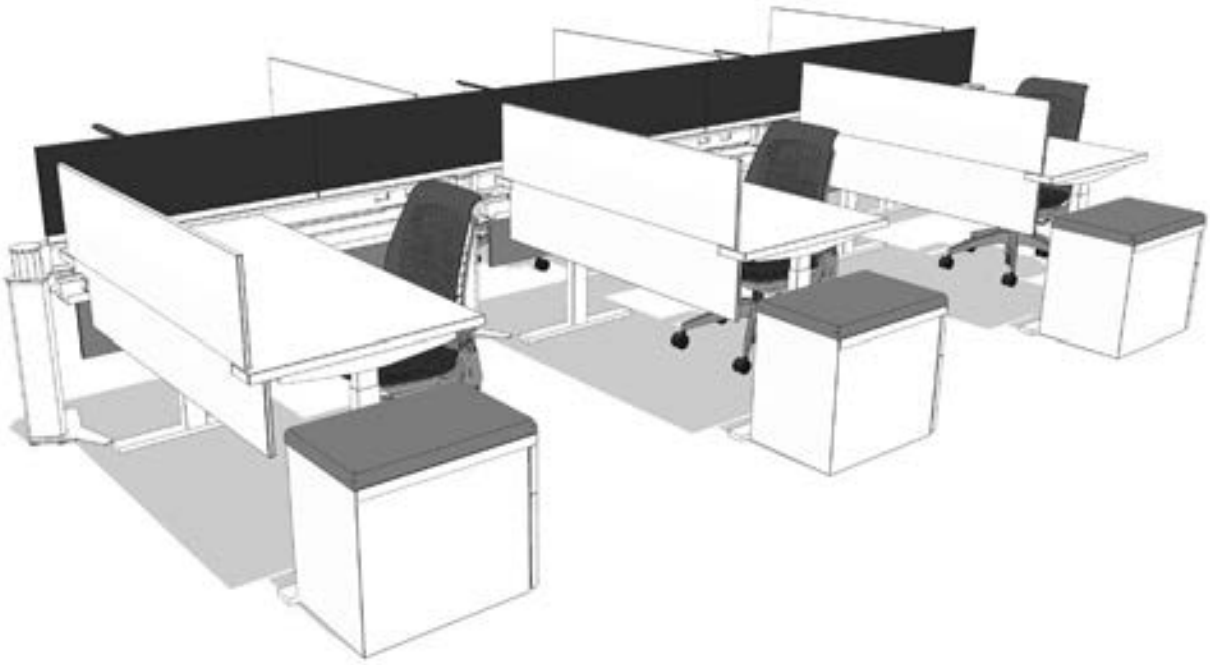
Further™ Benching



Choice is yours.



Further is an agile furniture solution that embraces the ever-changing workplace and frees people to adapt their environment — simply, elegantly and efficiently — at their own pace.



At the heart of Further is the hub. Ultimately flexible, the hub provides power and data support for a variety of applications, whether beam supported or freestanding.

Whether the planning approach is organic or linear, individual or team-based, Further can bring your design to life.

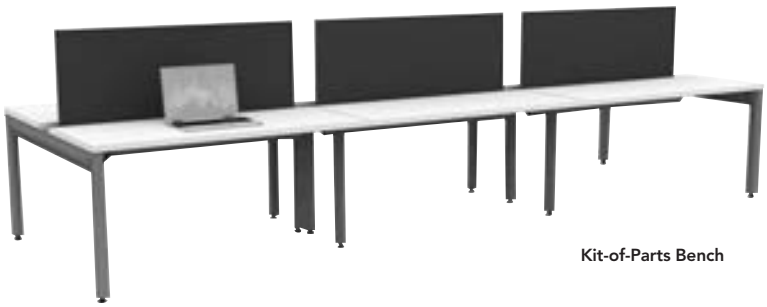
42½"H Tower

50"H Tower

Dual Sided Bench — Tethered

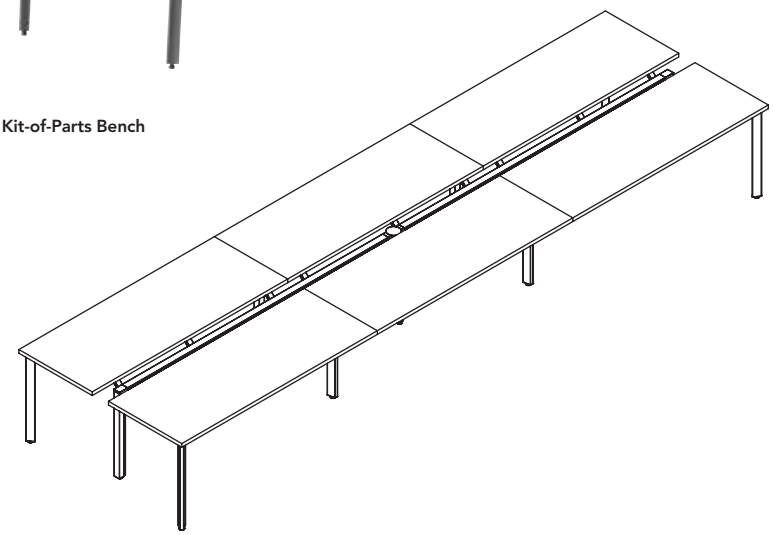
TIP:
Benches look cleaner when specified using built up supports as shown here: less legs, fewer kit-of-parts

Dual-Sided Bench (Non-Sit-to-Stand):



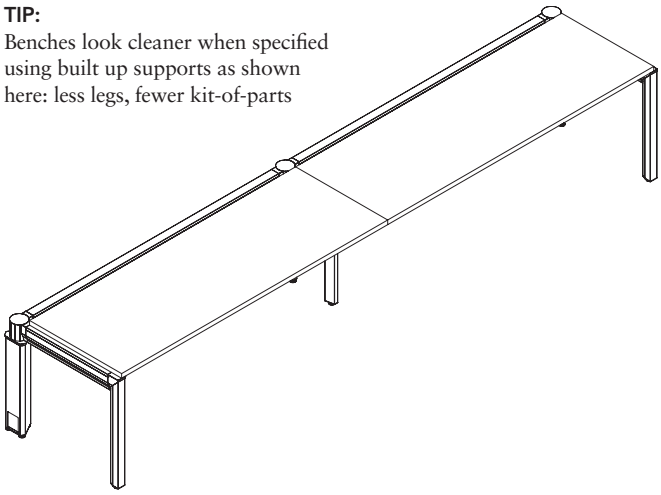
- Maximum run length is 60'.
- Available in two styles: H-Leg and A-Leg for both End and Mid-Supports.
- Use infeed cover for H-Leg and A-Leg supports.
- Beam mounted storage shelf is allowed.

When specifying with Kit-of-Parts (Beam End Leg, In-Line Leg, Worksurface Legs and Hubs), adhere to the following rules:



- A support to the edge of the worksurfaces is required every 18' of run. This may be any of the following:
  a) return beam
  b) support storage
  c) bench end
  d) worksurface support leg at front edge of worksurface.
- When two worksurfaces are side by side parallel to the beam, a worksurface support leg in a shared application or worksurface support storage is required.
- A minimum of four worksurfaces are required when using a beam and beam end leg kits on both ends of a run.
- Cannot not use two in-line support legs in a row.

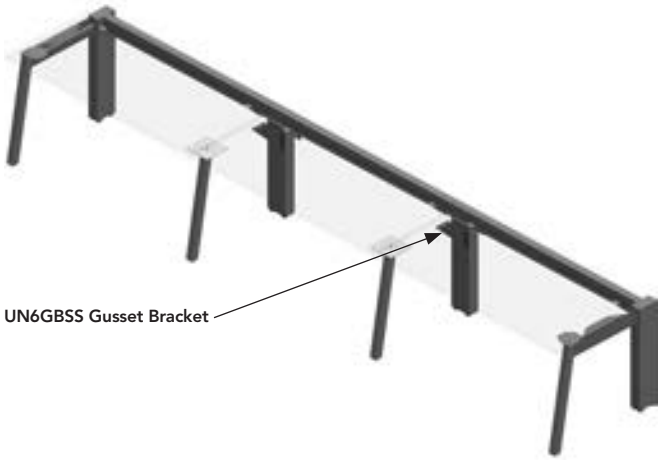
A-Leg Bench

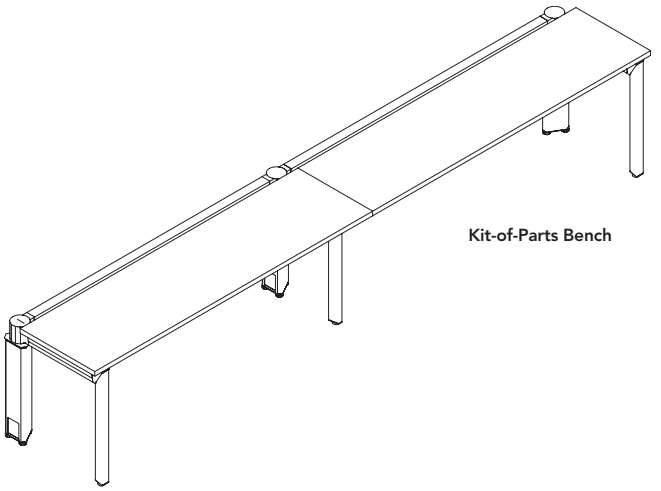


Kit-of-Parts Bench

Single Sided Bench — Tethered

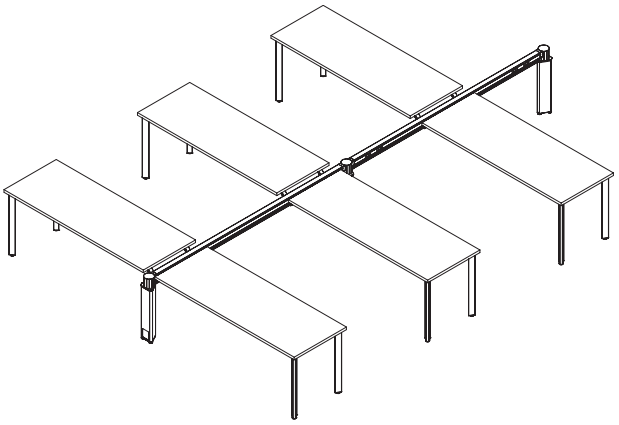
TIP:
Benches look cleaner when specified using built up supports as shown here: less legs, fewer kit-of-parts





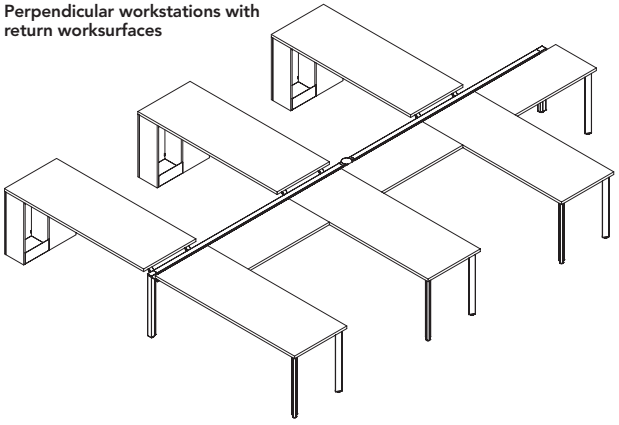
Single-Sided Bench

- Available in two styles: H-Leg and A-Leg for both End and Mid-Supports.
- Infeed can be routed through the H- or A-Frame supports.
- Use gusset bracket with every mid-support for stability. Adhere to this rule even when specifying In-Line legs or Hubs. Gusset bracket ordered separately - model UN6GBSS
- Beam mounted modesty screens recommended to provide privacy and conceal single-sided wire or data managers.
- Beam mounted storage shelf is allowed.

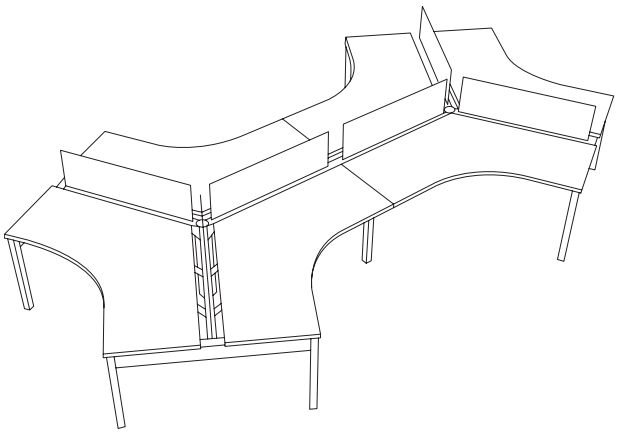


When specifying Kit-of-Parts bench (Beam End Leg, In-Line Leg, Worksurface Legs and/or Hubs), adhere to the following rules:

- Maximum run length is 26'.
- Maximum beam length allowed is 72".
- Worksurface support leg in a shared application or worksurface support storage is required.
- Gusset bracket is required at every mid-support leg or hub.
- Note: End-of-run worksurfaces overlay return beams halfway.



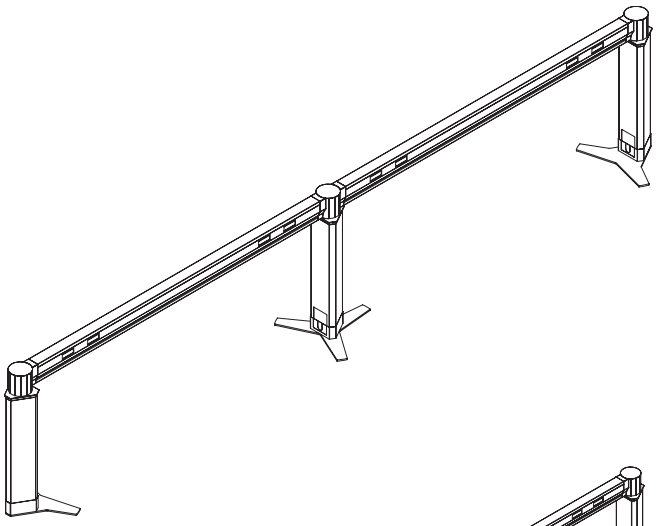
Perpendicular to Beam



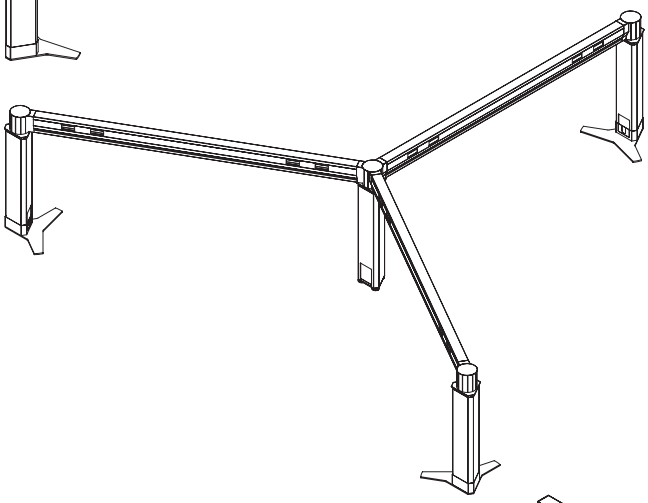
Perpendicular Workstations

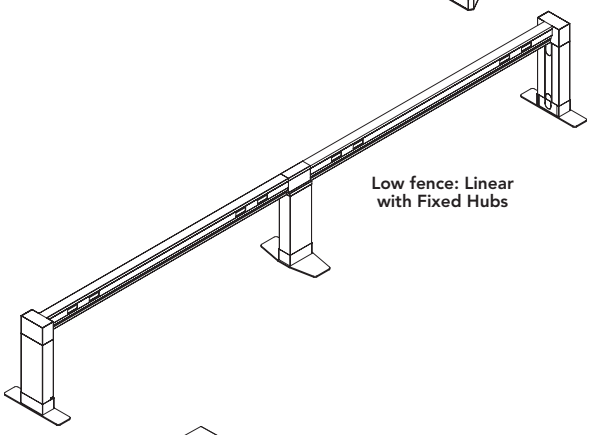
- Maximum setup length is 60'. Maximum of two 96" beams can be used in a run.
- Worksurfaces mounted perpendicularly to beam require 2 worksurface mounting brackets U6WBTF. Brackets cannot be placed more than 6" from edge of worksurface.
- Perpendicular workstations may be used with return worksurfaces. A flat bracket must be used between the two surfaces in place of a shared support leg.
- Specifying a setup with only perpendicular worksurfaces requires either support storage on the non-beam side or all beam support to be hubs.
- In-line support leg cannot be used.
- Horizontal storage is allowed. Worksurface stanchions must have a surface to rest on.

Perpendicular workstations with return worksurfaces



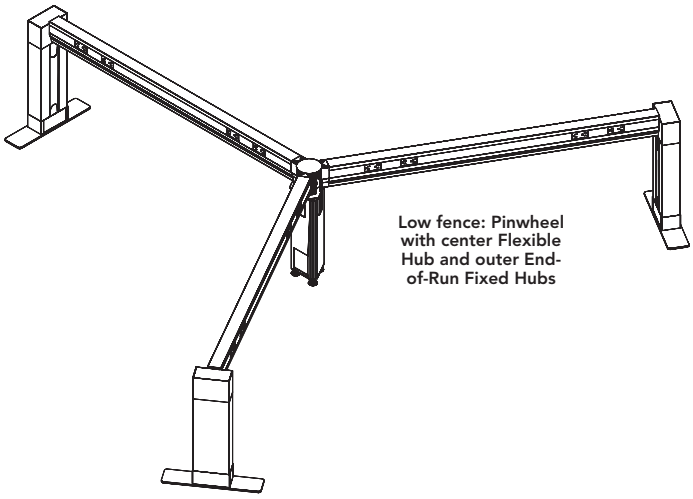
120° Pinwheel — Organic Tethered



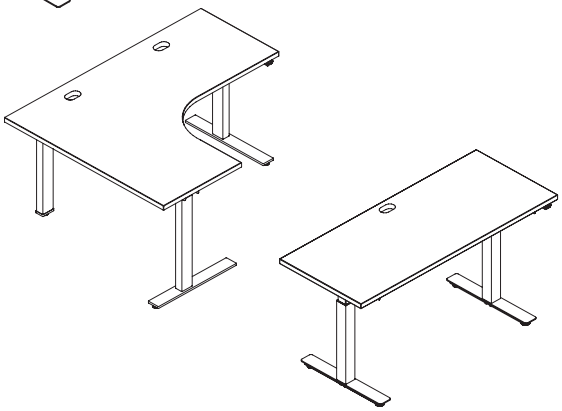


120° Organic Workstations

- Beam lengths match on module to short side of trapezoid surfaces only.
- Flexible hub required for 120° beam connections.
- When specified, runoff worksurface "hand" must be the opposite of the parent worksurface "hand" to match beam lengths.
- Horizontal storage is allowed. Worksurface stanchions must have a surface to rest on.
- When back-to-back worksurfaces are of equal depths (24"D or 27"D), Bench End and Mid-Supports can be specified.



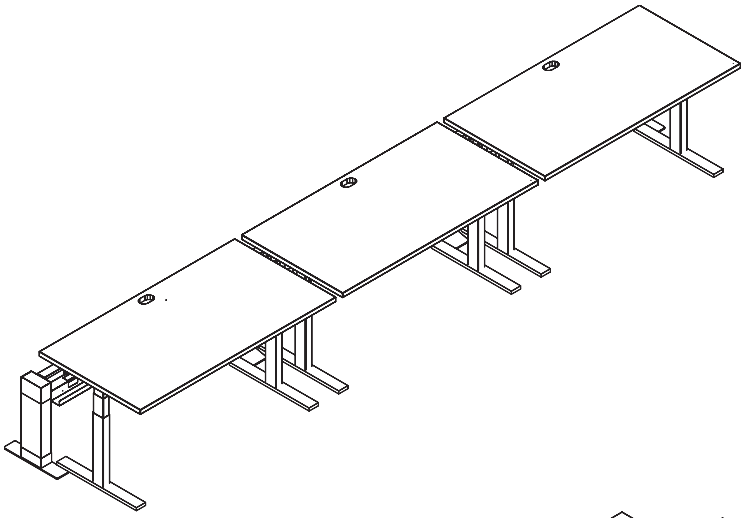
Freestanding Beams



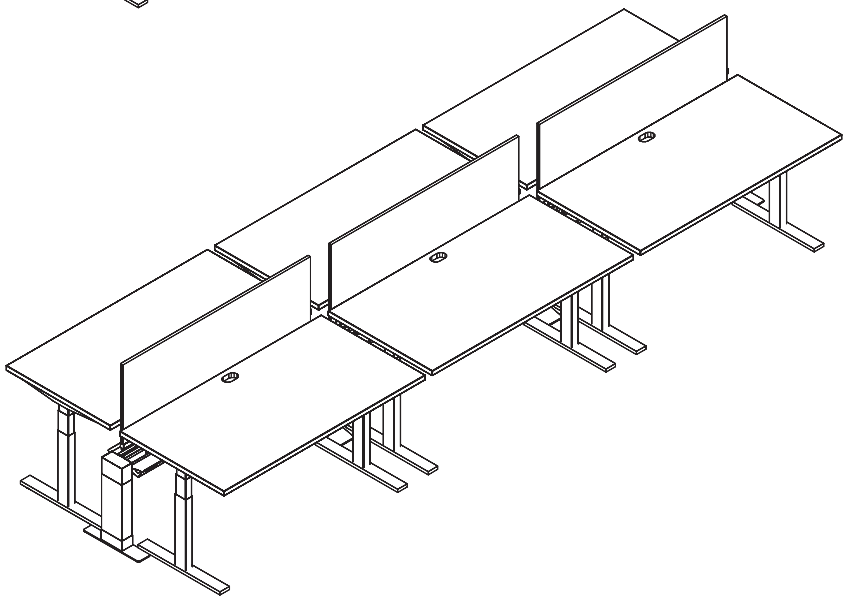
Low fence: Linear with Fixed Hubs

Low fence: Pinwheel with center Flexible Hub and outer End-of-Run Fixed Hubs

Freestanding Beams

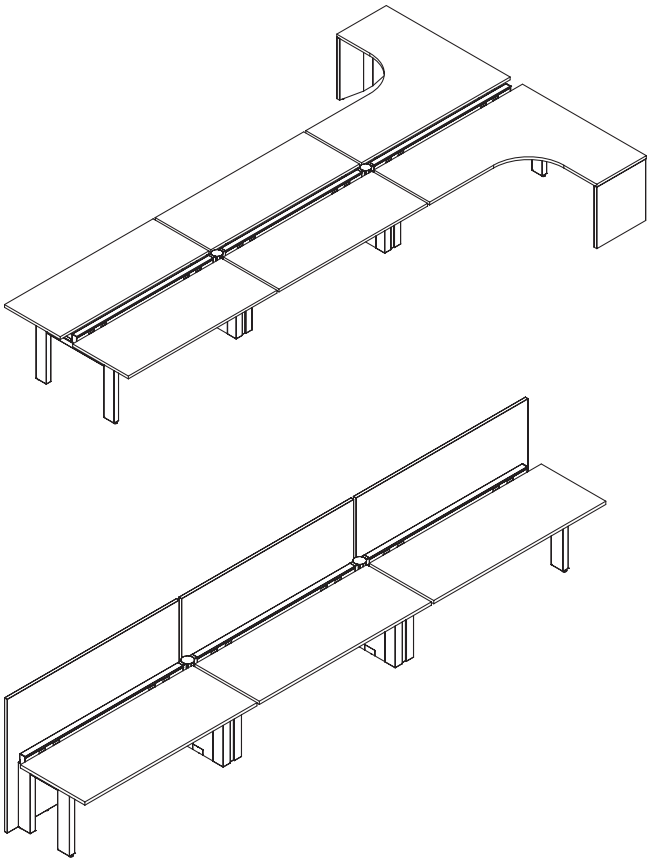


- No restrictions on maximum setup length.
- Hubs must be used for support. Gallery Panels can be used at ends in lieu of hubs.
- Low hubs recommended when using height-adjustable worksurfaces to avoid height-adjustable desk to beam collision.
- Hub feet or floor anchor brackets required, except at L-, T-, or X-connections.
- Minimum 54" beam in a one beam with two hubs application.
- Minimum return run length using a beam end support leg is 36", use of hub is recommended for return beams.
- Glass screens are allowed when supported using Gallery Panels at both ends or L-, T- or X-connections.
- Beam mounted fabric screens are allowed.
- 13"H fabric screens can be used as Modesty with low beams.
- Beam mounted horizontal storage not allowed.
- Flexible and Fixed Hubs are interchangeable.
- Flexible and Fixed Hubs may be used in conjunction to create the desired applications.
- 1-shelf per freestanding beam allowed. Must have hub feet.



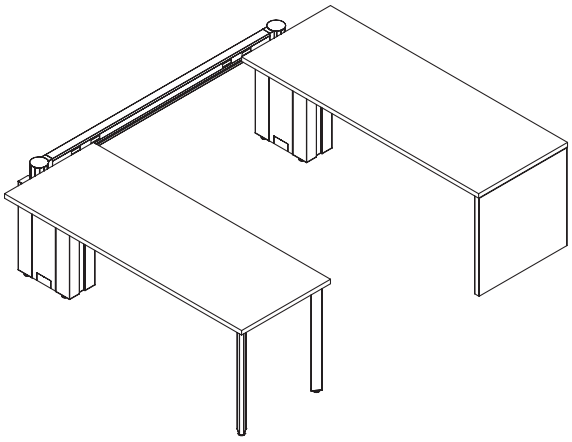
2- and 3-Stage Height-Adjustable Tables

Allsteel's Altitude electric height-adjustable tables provide the perfect combination of functionality and user control.



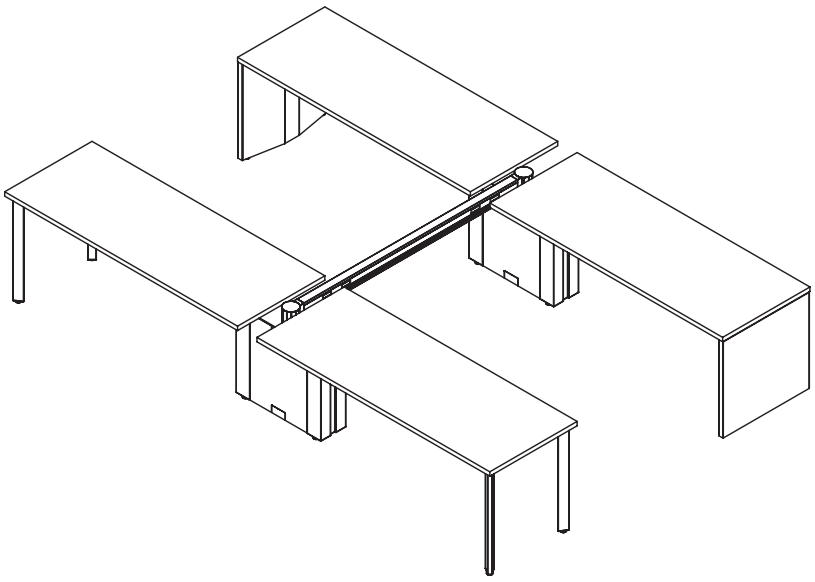
The sit-to-stand adjustment encourages posture changes throughout the day and has been shown to increase workplace satisfaction and overall comfort. These easy-to-operate tables can accommodate different workstyles, making it an ideal solution for any work environment.

Freestanding Beams



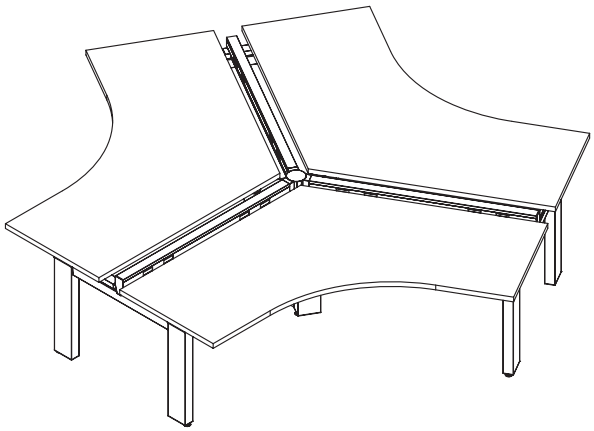
Adaptive Linear Benching — Height-Adjustable

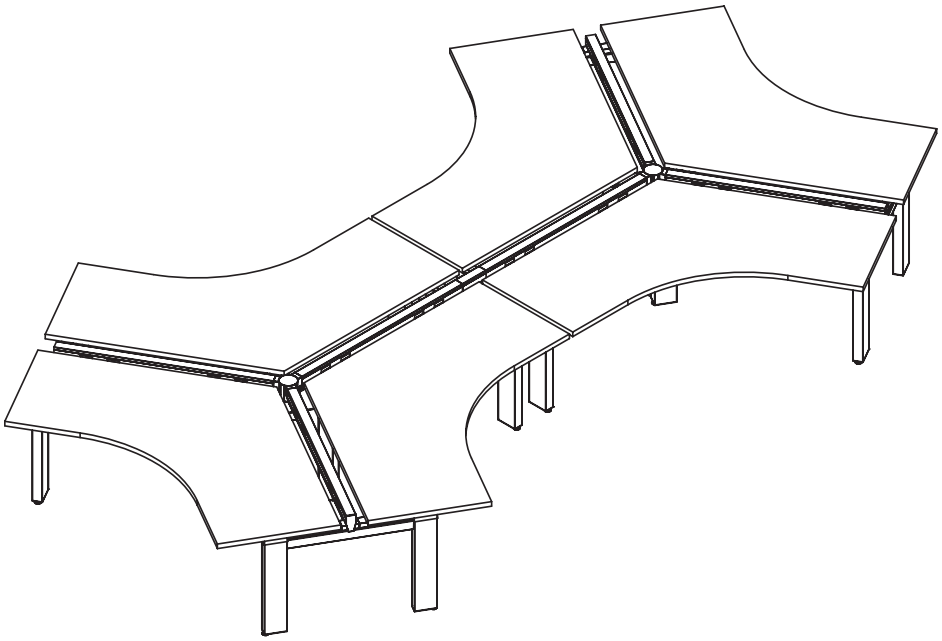
Adaptive Benching



- Mid-supports are required.
- A maximum of two mid-supports in a row may be used.
- Two end supports may be used in succession to extend 6-pack – requires 9" in-line beam connector.
- Single-sided setups require gallery panels to be mounted along spine of beam, or floor anchor brackets on all beam supports.
- Minimum of two single-sided stations allowed.
- Single-sided gallery panels must match the length of worksurfaces specified. Minimum height of the Gallery Panel must be 42"H.
- Adding power to a dual-sided two station application requires a hub at one end.
- Corner cove worksurfaces require a 3-leg control box kit and perpendicular outer support.

Adaptive Perpendicular — Height-Adjustable

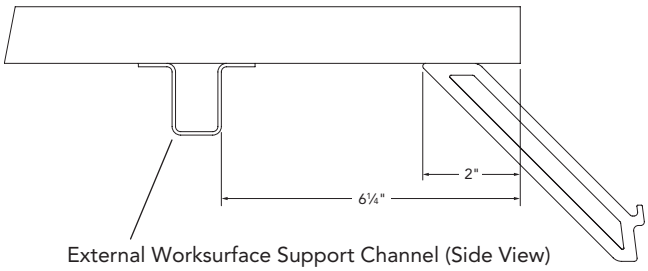




Adaptive Perpendicular Workstations

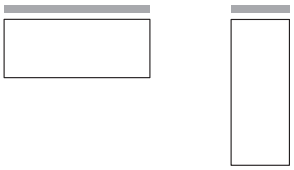
- No restriction on number of perpendicular mid supports used in a row.
- Worksurfaces are centered over perpendicular mid supports, but may be mounted up to 4⅛" forward from mid support to reduce footprint.
- Minimum of 4 stations for dual-sided applications, 2 stations for single-sided applications.
- Perpendicular mid support does not complete height-adjustable station – must order perpendicular outer support.
- Fixed height stations require two worksurface support legs on non-beam side in place of a perpendicular outer support.
- A minimum beam length of 30" must be used between perpendicular mid supports for 27"D surfaces, and a minimum length of 24" for 24"D surfaces.
- Trapezoid worksurfaces not allowed.

Adaptive Organic — Height-Adjustable



Adaptive 120° Workstations

- Requires a 120° mid support at all 3-way beam connections.
- End supports required on beams also connected to a 120° mid support.
- 7" in-line connector required to attach multiple 120° workstations.
- Single-sided end supports not allowed.



Flat Edge Detail

External Worksurface Support Channel (Side View)

The beam attaches to the shaded worksurface edge.

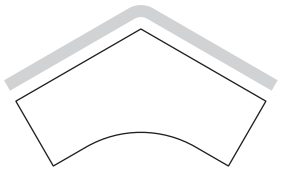
Rectangular Worksurfaces (Top View)

All Worksurfaces (pages 440-443)

- All worksurfaces for Further are 1¼" thick particleboard core with top surfaces finished in laminate, bottom surfaces covered with a backer sheet, and with a flat edge.
- Edge band is 2mm thick ABS plastic on all edges.
- All worksurfaces exclude grommets.
- 24"D worksurfaces support the use of storage from other Allsteel product lines.
- The gap from the back edge of the worksurface to the beam is 1⅞".
- Back edge of the worksurface to the beam centerline distance is 3".
- Maximum worksurface overhang of a parent run is 12". Worksurfaces that overhang the parent run by more than 12" require system legs or supporting storage to support the overhanging edge.
- Maximum 12" overhang when worksurfaces are used in freestanding or adjustable-height applications.
- Distance from floor to top of worksurface is 29½" with glides fully retracted.
- External worksurface support channels are required for unsupported spans at 60"W or greater — see description below.
- Legs and supports from other product lines (Involve open legs, etc.) can be used but there are no pilot holes to support ease of installation and reconfiguration.

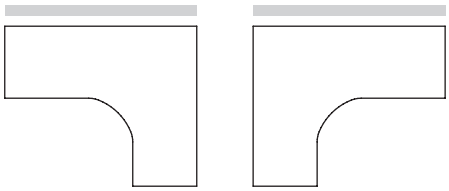
Rectangular Worksurfaces (page 441)

- Primary worksurface depths are 21", 24", and 27" (allows for gap and 24", 27", or 30" dimension to center of beam).
- Actual width and depth are equal to the nominal width and depth.



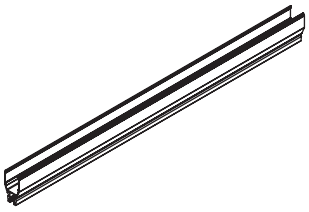
External Worksurface Support Channel (page 440)

- Must be added to unsupported spans at 60"W or greater. Pilot holes are included on worksurface to ensure accurate placement to avoid interference with screens, mounting plates etc.
- Extends 1½" below the worksurface. Stiffener is 6½" from back edge of the worksurface to the vertical wall of the stiffener.
- May interfere with storage or mounting of accessories.
- When using tethered surfaces order to match the size of worksurface. *Example:* Z5SC72 goes with an 72"W worksurface. Stiffener is 12" shorter than worksurface. For worksurfaces over 84", add a worksurface support leg or support storage centered along the width of the surface.
- If floor support storage is used, subtract width of storage from size of stiffener.
- For freestanding tables order one size down. Stiffener is 18" shorter than worksurface. Example: Z5SC66 is used with a 72"W worksurface.

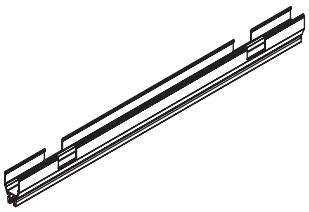


Flat Edge Detail

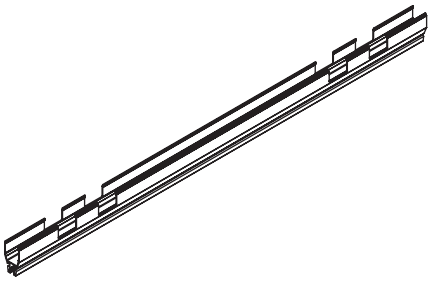
Shaded edge is side to attach to beam to be on module.



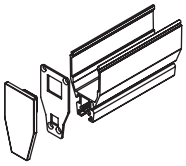
120˚ Worksurfaces (page 442)
- 120˚ worksurface depths are 21", 24", and 27".
- Can be configured with Altitude™ height-adjustable bases.
- Can be configured with support storage on either side of the worksurface.
- Requires 4 worksurface brackets U6WBTF when primary sides of surface are parallel with beams.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.



Corner Coves (page 443)
- Corner cove worksurface depths are 24" and 27"; widths are 60"W, 66"W, and 72"W; and return side is always 60"W and 24"D.
- Worksurfaces come with required external support channel.
- Can be configured in standard Further or Further Adaptive.
- T-mold is used on the edge of curved worksurfaces. This will have a noticeable visual difference when directly adjacent to straight worksurfaces.

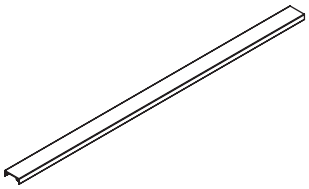


Beam Configurations

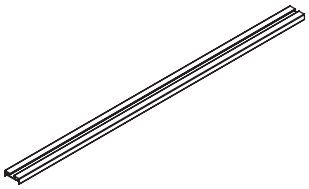


Beams — Non-Ported 18"–96"

Beams — Ported Short 36" and 42"



Beams — Ported Long 48"–96"



Cantilevered Beam 6"–12"

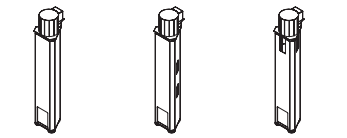
Top Trim

Flat — 6"–96"

Rail — 6"–96"

Beams (page 444)

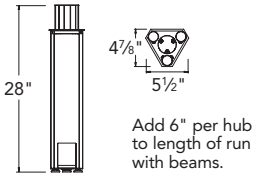
- Supplies power to user and supports worksurfaces, storage, and screens.
- Ported and non-ported options available in 6" increments. Ported beams require electrical receptacles or blank covers ordered separately.
- Flat or mounting top trim required to finish off beams – order separately.
- Beams do not connect directly in-line with one another, use in conjunction with beam support.
- Height of assembled beam with top trim is 4¼"H x 2⅛"D.
- Order worksurface support brackets U6WBTF separately – quantity varies, see page 438.
- Electrical port locations are back-to-back, symmetric about beam center, and a standard distance away from beam ends on all lengths.
- 36" and 42" ported beams have 2 duplex receptacle locations on each side (4 total), 48"-96" ported beams have 4 on each side (8 total).
- Ported beams do not carry data cables internally. Data cables are routed externally through beam mounted wire-managers. See pages 455 and 465.
- Non-ported beams can be used in conjunction with beam end legs and benching end connector to create a benching end condition.



Cantilevered Beam (page 444)

- Cantilevered beams can extend the length of a run by 6", 9", or 12".
- Must mount to a flexible hub or adaptive mid support.
- Must order flat or mounting top trim separately.
- Model includes a finished end cap.
- Worksurfaces can be mounted on a cantilevered beam when used in conjunction with a worksurface support bracket.
- Horizontal storage cannot be mounted to a cantilevered beam.

Beam Top Trim (page 445)



- Available in 6"-96" lengths in flat or mounting rail and is required to finish off a beam. Must match beam length, no exceptions.
- Mounting top trim contains a reveal for mounting screens and storage.
- Mounting top trim is recommended for projects specified under Chicago electrical Codes.
- Flat top trim is recommended on beams used in a bench end kit.

U3CG12

All Beam Supports (pages 446-449)
- Usage rules vary depending on configuration, see specification rules and examples, pages 423-431.
- Include leveling glides with 2¾" adjustment.

Flexible Hub (page 446)
- Supports up to four beams attached in 30° increments; order hubs based on the number of beams that will be connected.
- Carries power and data to the beam structure; infeed can be routed through the side or bottom of hub.
- Hub has one removable cover for installation of power and data.
- Standard, ported, and high-capacity options available.
- Ported flexible hub requires a power kit and duplex receptacles – each ordered separately.
- Flexible high-capacity hub increases system data capacity. (see pages 454-455)
- Flexible high-capacity hub comes with 2 grommet covers as standard.
- Required when using power pole U2HPP.
- Includes flat trim; may be used to span a screen over the trim.
- Freestanding applications require flexible hub feet. (see page 427)
- No foot is needed on a Flexible Hub when connecting to 2 or more beams in a non-linear application.

Flexible Hub Base Kit (page 446)
- Attaches to flexible hub.
- Options available for two and three feet. Two feet used at the end of a run, three feet used in the center.
- Provide standard leveling of 2¾".

Fixed Hubs (page 446)
- Carries power and data to the beam structure; infeed can be routed through the side or bottom of hub.
- Hub has one removable cover for installation of power and data.
- In-line and end-of-run options available.
- In-line fixed hub supports two beams in a 180° condition and adds 6" to run.
- End-of-run fixed hub supports one beam and adds 3" to run.
- End-of-run fixed hubs can be turned 180° to remove the cover and access leveling glides and cables inside.
- Freestanding option available – See additional details below.
- For a free-standing application, it is ideal to specify the low hubs. See below.
- Specify UN6HFCAU for In-Line foot or UN6HFEAU for end-of-run foot separately.
- Required when using square power pole.

Low Hubs (page 447)
- From floor to top of the low Hub is 20½".
- Fixed Hubs
  - include feet with standard leveling of 2¾".
  - are recommended for straight or linear applications.
- Flexible Hubs
  - feet are not required when used in L-, T-, or X-connection.
  - feet are required when using in linear application (feet ordered separately - see page 446).
  - may be used in conjunction with Fixed Hubs to create the desired applications.
  - are available in both standard- and high-capacity options.
  - include Hub-to-Beam connectors.
- Required when using square power pole.

Floor Anchor Brackets (page 446)
- Used to anchor beam and worksurface supports to the floor.
- Attach to standard leveling glides provided with all beam supports.
- May be required with hard-wired electrical depending on local code.
- May be used in place of flexible hub feet in freestanding applications.
- Hardware for mounting to floor is not included.
- Internal (hidden) option available for flexible hub. U3HAI
- External kit U3HAE contains 3 anchor brackets.

Carpet Grippers (page 446)
- Attach to leveling glides for added system rigidity when placed on carpeted surface.
- Kit U3CG12 contains 12 carpet grippers.

Beam
End Leg
(Adds 3")

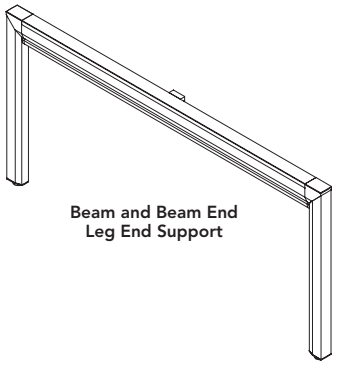
Beam End Leg (page 448)
- Supports a beam at the end of a run.
- Model includes vertical support leg, beam connector, and trim.
- Extends beam run by 3".

Worksurface
Support Legs

Square A-Leg,
Worksurface
Support

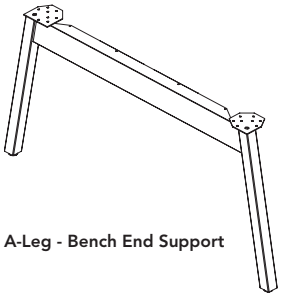
Square
Straight Leg,
Worksurface
Support

Worksurface Support Legs (page 448)
- Support worksurfaces that are tethered to the beam structure.
- Triangular Leg and Square Leg options available.
- Triangular Leg can be used to support free-standing tables.
- Can be used as a shared support leg centered between two worksurfaces. Includes tie-bracket for shared applications.
- When used as a shared support leg, must not be more than 15" back from front edge of worksurface on 24"D and 27"D worksurfaces; no more than 12" back on 15"D, 18"D and 21"D worksurfaces.



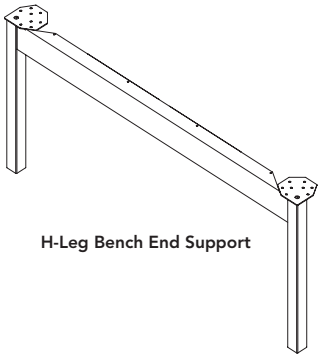
In-Line
Square Leg
(Adds 6")

In-Line Legs (page 449)
- Supports between two beams.
- Dual sided applications may not use two in a row.
- Single sided applications must be used in conjunction with the gusset bracket UN6GBSS. Ordered separately.
- Includes flat trim.
- Screens may span over in-line leg flat trim.



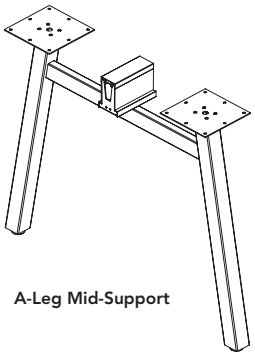
Wall Mount
(Adds 3")

Wall Mount (page 448)
- Attaches end of beam run to wall.
- Power infeed and data accessible.
- Mounts directly over or adjacent to a wall core.
- Mounting hardware for attaching to wall is to be supplied by installer. Requires hitting wall stud.
- Starts beam 3" from wall. On module worksurfaces sit flush to wall.
- Can be used in freestanding beam applications.

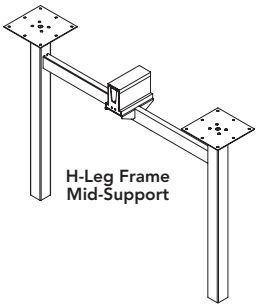


Beam and Beam End
Leg End Support

Bench End Triangular Supports with Built-up Components
(pages 444, 445, and 448)
- Supports a beam and two worksurfaces at the end of a run.
- Bench end support cannot be used to make a freestanding table.
- Comprised of the following items, all ordered separately:
  - Non-ported beam
  - Flat top trim
  - Beam end support leg (Qty 2)
  - Bench end connector kit
  - Worksurface mounting bracket (Qty 2)
- Beam and top trim length to be 2X the worksurface depth.
- Beam mounted modesty may be used on bench end beam.
- Power cannot be routed from parent run into bench end support beam.



A-Leg - Bench End Support



H-Leg Bench End Support

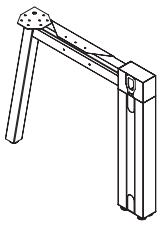
Bench End Support (Square leg page 449)

- Used in dual sided applications only.
- Supports a beam and two worksurfaces at the end of a run.
- Available in two styles: A-Leg and H-Leg.
- Power infeed accessible; infeed covers ordered separately.
- Bench end support cannot be used to make a freestanding table.
- Works with 24" and 27" deep worksurfaces.
- Beam mounted modesty cannot be used on bench end supports.
- Features “square” leg profile.

A-Leg Mid-Support

H-Leg Frame Mid-Support

Mid-Support (page 449)



- Used in dual sided applications only.
- Available in two styles: A-Leg and H-Leg.
- Power infeed accessible; infeed covers ordered separately.
- Includes flat trim; may be used to span a screen over the trim.
- Features “square” leg profile.
- Not compatible with Chicago or NYC J-boxes.

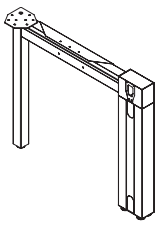


Table Leg w/Caster

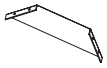
Table Leg with Caster (page 448)

- Support worksurfaces in freestanding table applications.
- Unsupported spans over 60" require external support channel.
- Tables 78"W or greater require 2 additional legs in the center of the table (6 legs total) to resist bowing.
- Can be used with surfaces from other product lines, but pilot hole locations will not be available for installation or reconfiguration.



A-Leg, Single Sided End Support

H-Leg, Single Sided End Support

Single Sided End Supports (page 449)

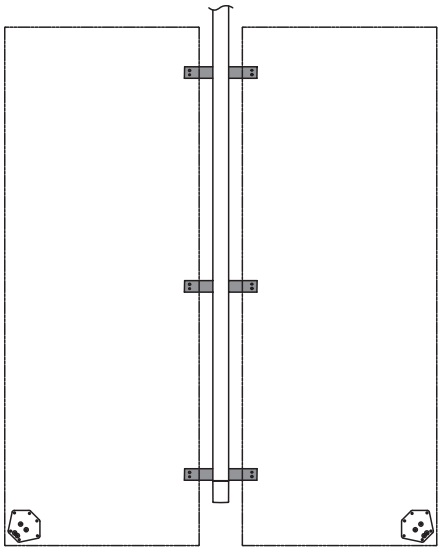
- Used in single sided applications, end of run.
- Available in two styles: A-Leg and H-Leg.
- Comes in Left and Right Hand configurations.
- Works with 24" and 27" deep worksurfaces.
- Infeed accessible.
- Bench end supports cannot be used to make a freestanding table.
- Features “square” leg profile.

Gusset Bracket

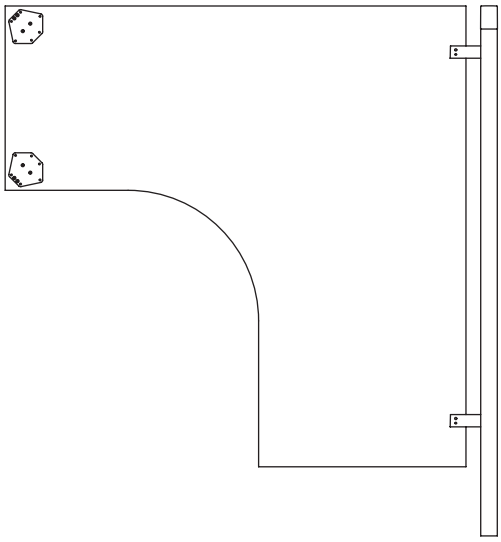
Gusset Bracket (page 448)

- Must be used in single sided applications to provide stability to In-Line leg or Hubs.
- Specify one bracket per support.

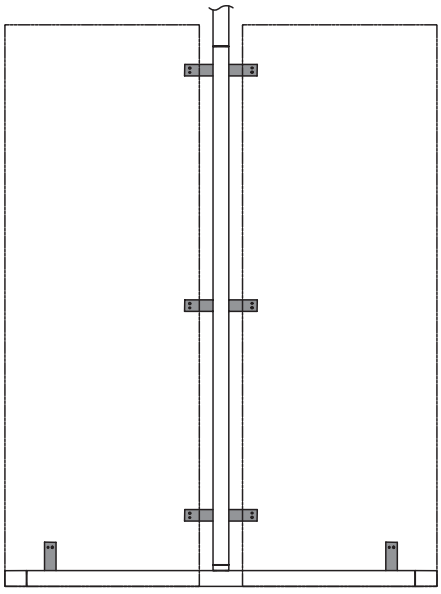
Worksurface Brackets Required for Attaching to Beams
(Additional Supports Required)



WORKSURFACE SHAPE:	QTY OF WORKSURFACE SUPPORT BRACKETS (Model U6WBTF)			
	1	2	3	4
Rectangular* Perpendicular		21"W–60"W**	Wider than 60"	
Runoff* **	15"W–39"W	Wider than 39"		
120°				46"W–52"W
Corner Cove (supported on one side)		60"W	Wider than 60"	

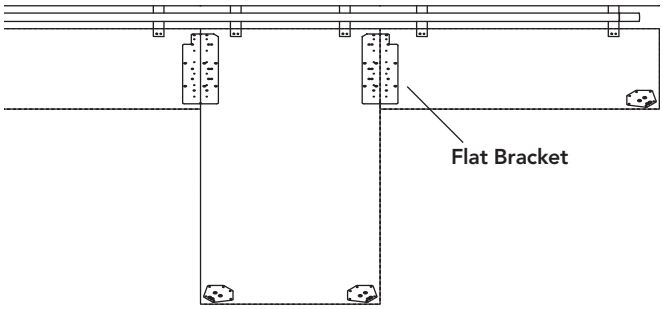


*Rectangular ends in return applications require an additional bracket.
**Dimensions are taken from the short width side of surface.
***Runoff worksurface dimension is taken from short side of worksurface.



Worksurface Support Bracket (pages 440 or 448)

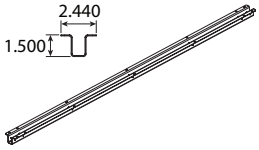
- Used to tether worksurfaces to the beam structure. All worksurfaces come with pilot holes for standard bracket locations along the back edge of worksurface.
- Brackets mount into the continuous reveal on each side of the beam.
- Worksurfaces cannot overhang worksurface support bracket by more than 12".
- Perpendicular worksurfaces require two worksurface support brackets no more than 6" from each edge.
- Quantity of brackets required varies by shape and size of worksurface – see chart and images to left.
- At least two brackets are required per worksurface. Support storage may replace one bracket on worksurfaces requiring three or more.



Rectangular with System Legs

Rectangular with Bench End

A Flat Bracket is required between the two surfaces when one worksurface is parallel to the beam and another is perpendicular.



Flat Bracket (page 448)

- Used to tether two worksurfaces together when floor support is not necessary.
- Required when one worksurface is parallel to the beam and another is perpendicular.
- 12" bracket used for 15" and 18" deep runoff surfaces.
- 24" bracket used for 21" and 24" deep worksurfaces.
- 30" bracket used for 27" worksurface.

For specification information see pages 423-439.

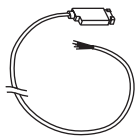
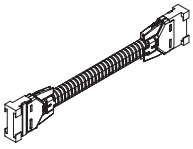
Electrical & Data



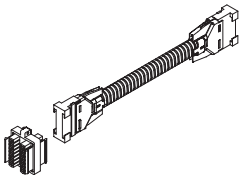
Further features cable management capabilities for electrical, voice, and data. The 8-wire electrical system can be integrated within beams. Voice and data cables are routed externally using beam mounted wire managers.

Further Electrical Systems

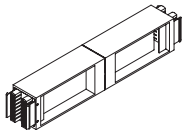


The electrical system for Further offers two options: 3+1 or 2+2. Both systems utilize an 8-wire, four-circuit electrical system, rated at 20 amps (15 amps Canadian). Connect a maximum of 13 receptacles (12 in Canada, and fewer in certain U.S. locales) to one circuit. Consult your electrician to ensure the planned electrical load is within permissible limits. Follow the steps below to help specify your Further electrical.

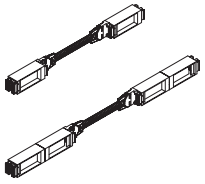
1. **Infeeds** — Determine the location, quantity, and type of power infeeds needed.
2. **Hub-to-Beam Power Kits** — Specify a Hub-to-Beam Power Kit with each Infeed. Order Kit based on the number of beams being powered at the infeed location. Ex: A Flexible Hub in the center of a 120° Pinwheel needs a Hub-to-3 Beam Power Kit. These kits connect to Beam Power Kits.
3. **Beam Power Kits & Jumpers** — Specify a Beam Power Kit for each ported beam. Power kits are determined by the size of beam ordered and are connected to one another with beam-to-beam jumpers - order separately.
4. **Duplex Receptacles** — Determine which electrical system will be used after consulting an electrician: 2+2 or 3+1. System is determined by which circuits are used. Specify circuit specific receptacles to fill all port locations where electrical is needed. Number of ports is determined by the beams and beam power kits specified. Port covers must be placed in port locations where duplex receptacles are not specified.



A871912



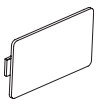
Electrical Infeed (page 463)
- Used to route power from a floor, wall, or ceiling core into the Further beam structure.
- Two infeeds can be routed into any hub, power pole, or H-leg. One infeed can be routed into the square leg bench end or wall mount.
- Available as sealtight cable in 12', or as flex cable in 12' or 18' lengths.
- Infeed cables cannot connect directly to beam power kits. Require a hub-to-beam power kit for all infeed locations.
- Consult your electrician to ensure the planned electrical load and cabling is within permissible national and local code limits.
- Infeed ordered separately for all hardwired applications. (see page 463)



Beam-to-Beam Jumper (page 464)
- Used to pass power from one beam to another over beam support.
- Quantity varies on the number of beams being passed to. See illustration.
- Beam-to-beam jumpers do not need to be ordered for locations where hub-to-beam power kits are specified.

Hub-to-Beam Power Kits (page 464)
- Used to connect power from infeed cable to beam power kits.
- Order power kits based on the number of beams being connected to each infeed cable. If two infeed cables are entering the system in the same location, two hub-to-beam power kits should be ordered.
- Power can be routed into 1-4 beams from one infeed.

Ported Hub Power Kit (page 464)
- Installed within the ported flexible hub and delivers power to user.
- Requires two duplex receptacles – ordered separately.
- Can be used in conjunction with all hub-to-beam power kits.
- Must order an additional beam-to-beam jumper when placed in a location without an infeed cable.

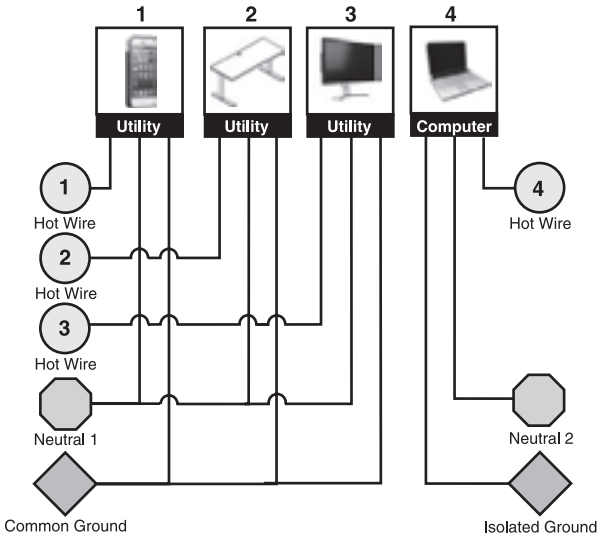


Beam Power Kits (page 464)
- Beam power kits are installed within the ported beam and deliver power to the user.
- Kits correlate to specific ported beam lengths; only one kit per beam.
- Quantity of duplex receptacles that can be used varies by length of beam specified. 36" and 42" ported beams have 2 ports on each side (4 total), 48"- 96" ported beams have 4 ports on each side (8 total). – duplex receptacles ordered separately.

Receptacle Color Recommended to Coordinate with Paint Color

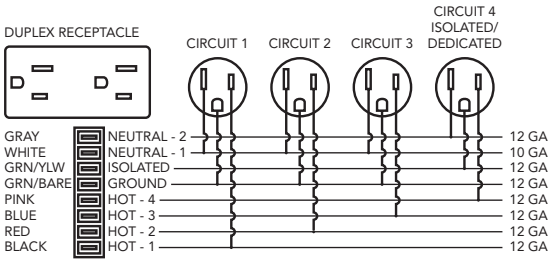
Paint Color	Receptacle Color
Carob — P52	Black — E4
Champagne Metallic — PR5	Muslin — EU
Cinder — P7Q	Brownstone — BW
Designer White — PJW	Designer White — DW
Fossil — P28	Flint — E9
Gunmetal Metallic— PR3	Brownstone — EY
Platinum Metallic — PR2	Silver — ES
Salt — P8C	Silver — ES
Titanium — P8T	Silver — ES

Duplex Receptacles (page 464)
- Receptacles snap into power blocks of power kits.
- Quantity depends on the length of beams specified.
- Four circuits available.
- Circuit 3 must be specified as a utility (3+1) or isolated (2+2) circuit depending on the electrical system desired.
- Available in 8 colors and labeled with circuit number on receptacle face.
- May be replaced with electrical port covers in locations where power is not desired – ordered separately.



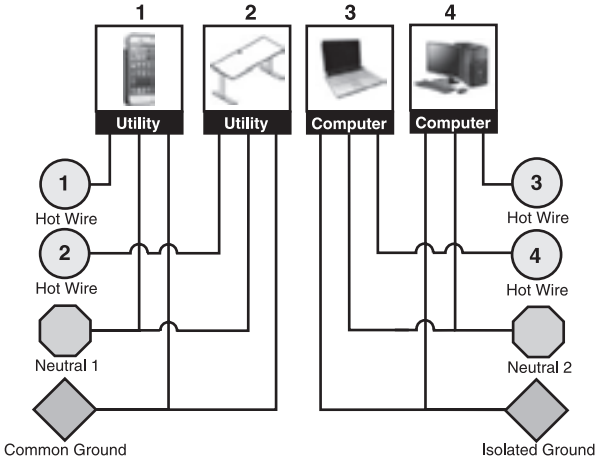
Electrical Port Cover (page 464)
- Fits into Further beam port locations in place of duplex receptacles.
- Does not fit into port sizes of other product lines.
- Requires electrical mounting kit UN8EBKCH.
- Chicago Code models available for hardwired applications.

Flexconnect™ Electrical System Options

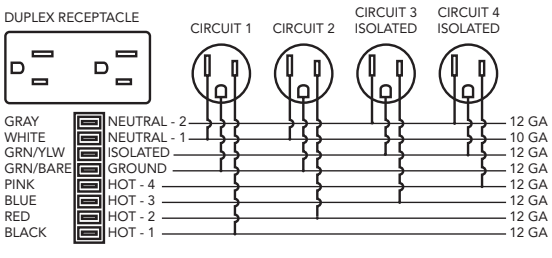


The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power infeed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals. Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

Reference the Office Equipment Typical Load Values on page 453.



Four-circuit, 3 + 1 Receptacle Option

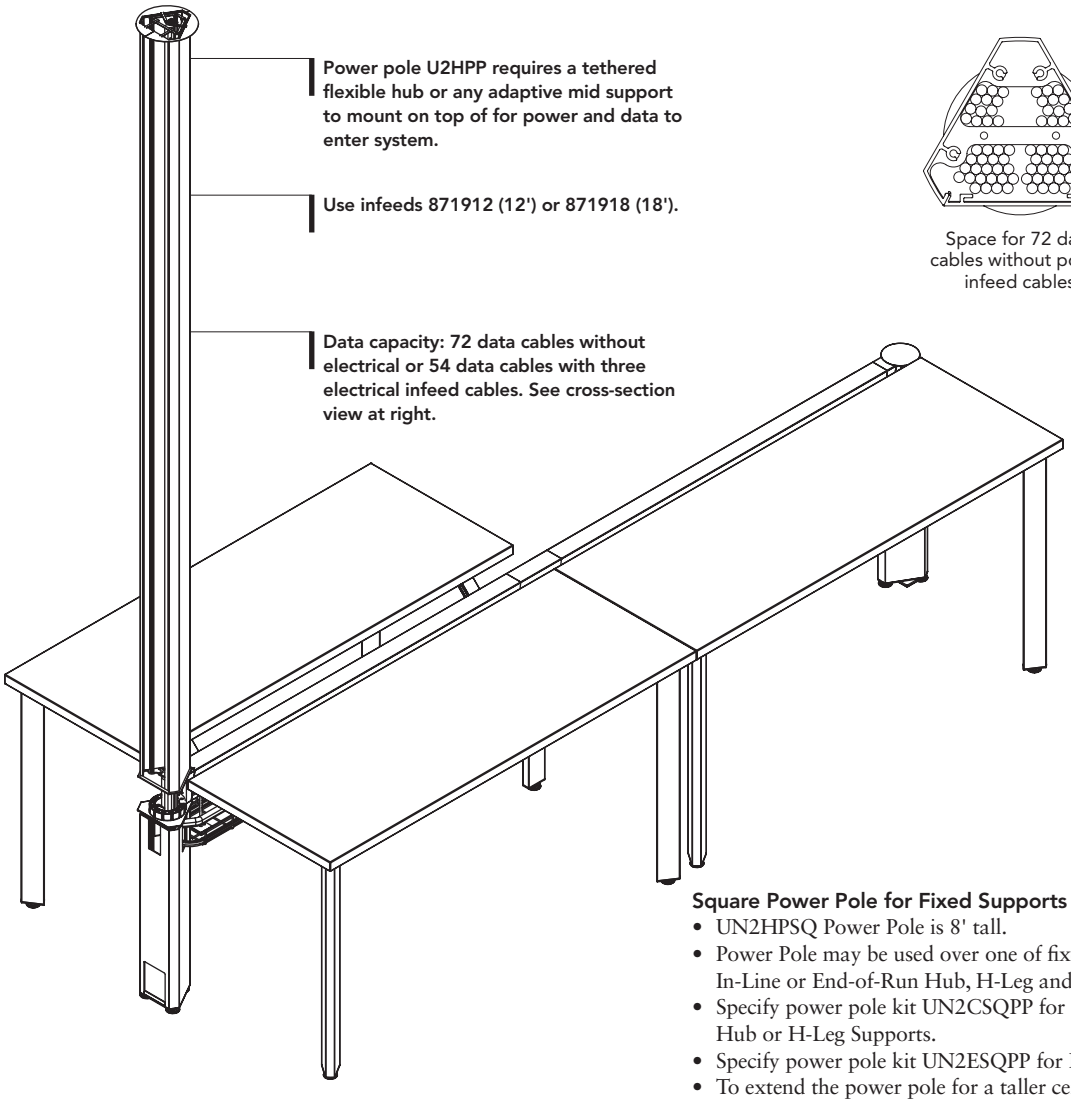


The 3 + 1 option is the electrical standard used on Allsteel systems for many years in most installations. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment. Circuit 2 (one of the 3 common circuits sharing a neutral wire) cannot be used with single-phase building electrical supply.

Four-circuit, 2 + 2 Receptacle Option

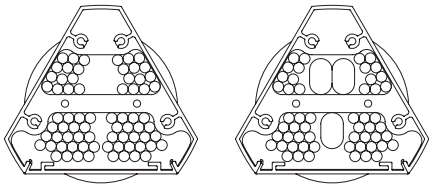
The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

Office Equipment Typical Load Values



Item	*Amps
Desktop/2 Monitors	4
Laptop Computer	1
Laptop/2 Monitors/Docking Station	3
Paper Shredder	1.22
Radio	0.05
Scanner	3
Space Heater (1500 watts)	12
Task Light (equiv. 60-watt bulb) Fluorescent LED	 0.12 0.08
USB Charger	0.17
LCD Television (42")	1
LCD Monitor (21")	0.5
Bluetooth Speaker	0.1
Desktop Printer Inkjet Laser	 0.15 4 to 10
Multimedia Projector	1.7
Sit-to-Stand Height-Adjustable Desk	Idle 0.01 / Max 4
Office Kitchen	
Coffee Maker	10
Microwave	10
Toaster	12.5
Compact Refrigerator	1.5

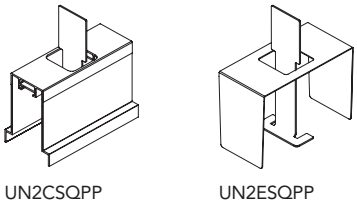
*Chart is recommended for planning purposes. Check device specifications for exact amperage. Consult with your electrician regarding the applicable configurations.



Examples of Component Usage based on the *Office Equipment Typical Load Values* Chart

Power Option 3+1
Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers
Utility Circuits 1, 2, 3: Height-adjustable tables and ancillary items

Power Option 2+2
Dedicated Circuit 3: 4 desktop computers with 2 monitors each; or 10 laptop computers
Dedicated Circuit 4: 4 desktop computers with 2 monitors each; or 10 laptop computers
Utility Circuits 1, 2: Height-adjustable tables and ancillary items



Model U2HPP

Space for 72 data cables without power infeed cables

Space for 54 data cables with three power infeed cables

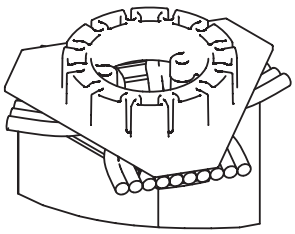
UN2CSQPP

UN2ESQPP

Square Power Pole for Fixed Supports (page 463)

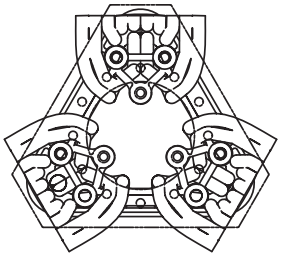
- UN2HPSQ Power Pole is 8' tall.
- Power Pole may be used over one of fixed supports: In-Line or End-of-Run Hub, H-Leg and In-Line Leg Supports.
- Specify power pole kit UN2CSQPP for In-Line Leg, In-Line Fixed Hub or H-Leg Supports.
- Specify power pole kit UN2ESQPP for End-of-Run Fixed Hub.
- To extend the power pole for a taller ceiling, order quantity-2 with a splicer kit UN2HPSQSK.

Power Pole (page 463)



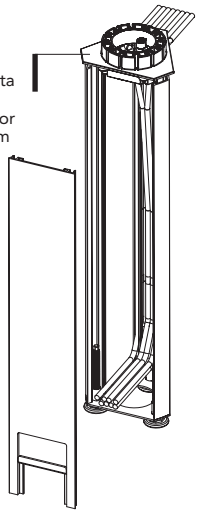
- Used to shroud infeed and data cables that are routed to the beam structure from a ceiling.
- Requires a flexible hub or any adaptive mid support to mount over.
- Cannot be used in freestanding applications.
- Power pole stands 124¼" high with hub glides fully retracted. Extension available through Allsteel Tailored Products.
- Kit includes all necessary mounting hardware and ceiling trim.
- Mounts over 1-4 beams. Aesthetic trim cover included for end condition applications.

Infeed Cover (page 463)



- Shrouds single infeed or up to 24 data cables.
- Specify UN6WC for H-Leg or UN6AWC A-Leg supports.
- Attaches to the legs with VHB tape - included in hardware.
- Not compatible with Chicago or NYC junction boxes. Refer to hubs if needed.

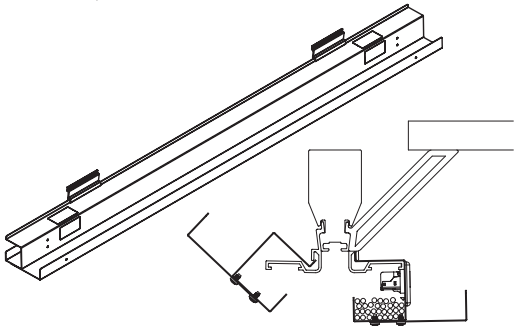
Top Views of Hub



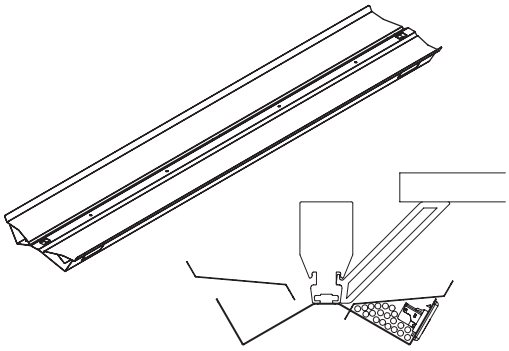
The top of the hub allows for a maximum of 30 (3.45 sq. in.) data cables (.300" dia.) to pass through the ½" gap around the perimeter of the hub

All quantities listed at 60% fill ratio

Cable capacities for routing voice and data cables through hub are provided at left for top, side, and bottom of hub.

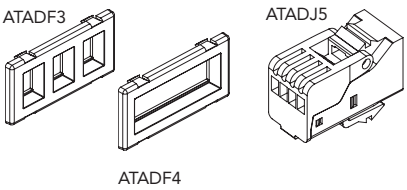


Data (page 465)
- Data is routed internally through any hub, power pole, wall-mount, or infeed cover; but is external to beam.
- Cabling is routed to users through beam-mounted wire managers. See illustrations at left.

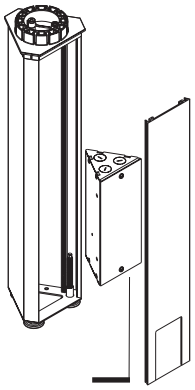


Maximum Support Capacities

Support	Data*	Infeeds	Beams
Standard Flexible Hub	30	3	4
High Capacity Flexible Hub	84	3	4
Power Pole U2HPP	72	3	4
Power Pole UH2HPSQ	34	2	NA
In-Line Fixed Hub	24	1	2
End of Run Fixed Hub	24	1	1
H-Leg**	NA	2	2
Bench End**	NA	1	1
Infeed Cover	24	1	NA

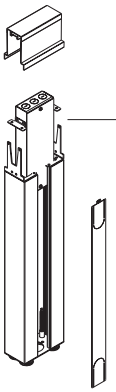


*Reduce capacity of data cables by 6 for each infeed specified
*Data cable size is based on 0.25-diameter cable.
**Data capacity is determined by wire managers and infeed cover.

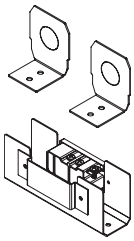


Single-Sided Wire Manager (page 465)
- Can be used with any single-sided, dual-sided, Further Adaptive, freestanding post and beam, and fixed-height applications.
- Holds user wires and up to 30 system data cables on one side of a beam.
- Mounts into the continuous reveal on either side of a beam – mounting clips included.
- Single-sided version is recommended when nesting storage.
- The data manager without the 2½"D tray can be ordered separately to maximize space, or the tray may be removed in the field.
- Available from 36" to 78" widths in 6" increments.
- Includes mounting locations for Cord Management Chain when used with Adaptive supports or freestanding height-adjustable workstations.
- Specify 6" shorter than beam length when used with Adaptive supports.
- Two single-sided wire managers can be used on either side of beam to increase data capacity. (60 total)
- May be used in conjunction with beam mounted modesty screens.
- Includes 4 knockout port locations for data faceplates (2.7"W x 1.375"H) on all widths. Data faceplates ordered separately.

Dual-Sided Wire Manager (page 465)
- Holds user wires and up to 20 system data cables each side of a beam. (40 total)
- Mounts to underside of beam; does not use continuous side reveal.
- Available from 36" to 78" widths in 6" increments.
- Includes 8 knockout port locations for data faceplates on all widths. Data faceplates ordered separately.
- Ideal for use in a fixed-height dual sided application.
- Does not support wire chain.
- Cannot be used in conjunction with beam mounted modesty screens.
- Cannot be used on Further Adaptive. Must use single-sided wire manager.

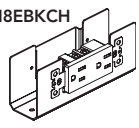


Data Faceplates & Jacks (page 466)
- Faceplates fit into knockout ports on both available wire managers.
- Faceplates do not work in beam electrical ports.
- Faceplate options available to install either 3 or 4 data jacks.
- Faceplates available in one color – black.
- Faceplates and Jacks sold separately.
- CAT 5E and CAT 6 data jacks available.

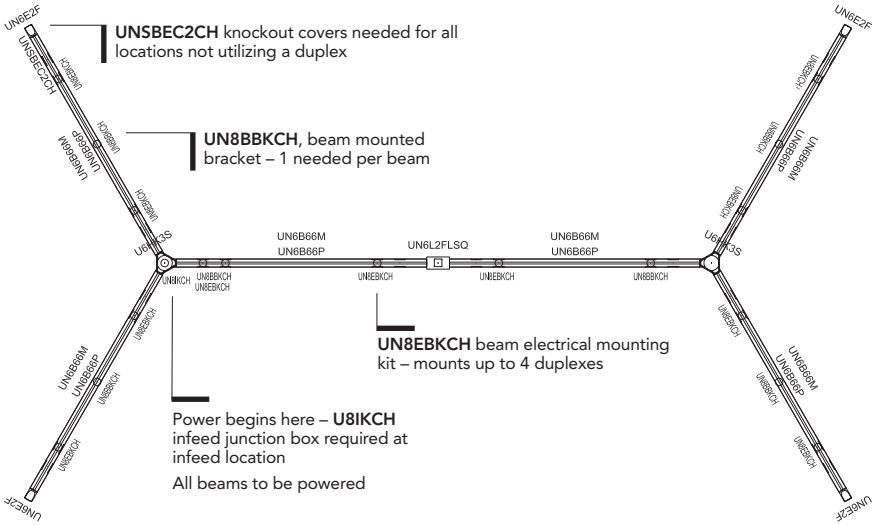


Chicago code junction box **U8IKCH** is compatible with both 28"H and 20½"H flexible hubs. The box is 9⅛"H x 3½"W.

U8IKCH

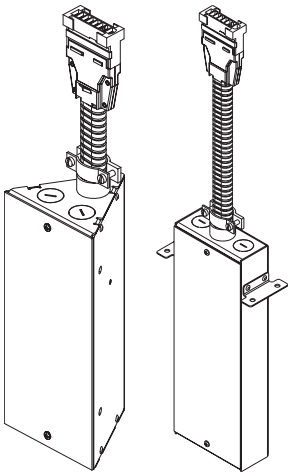


Chicago code junction box **U8SBKCH** is compatible with both 28"H and 20½"H fixed hubs. The box is 11"H x 5.7"W x 2.3"D.



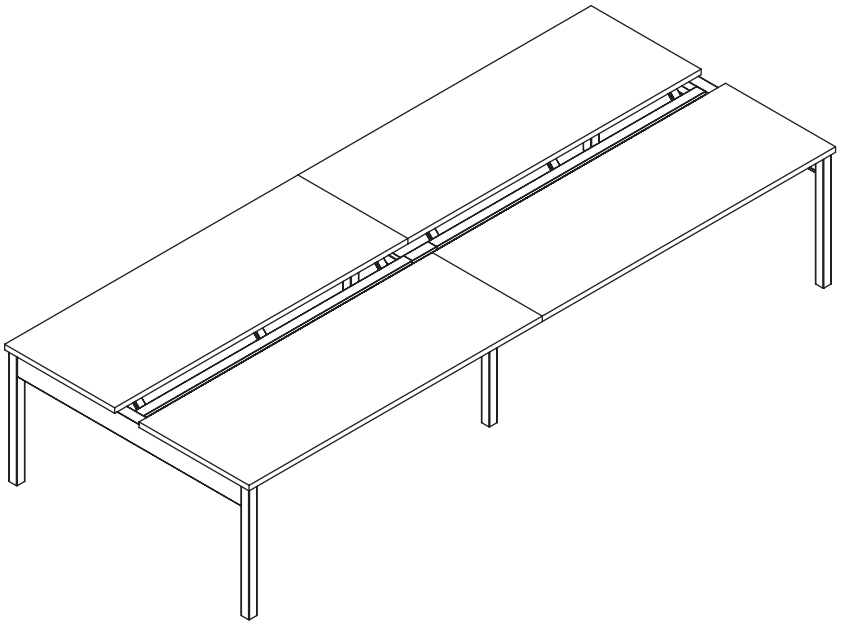
U8SBKCH

UN8BBKCH

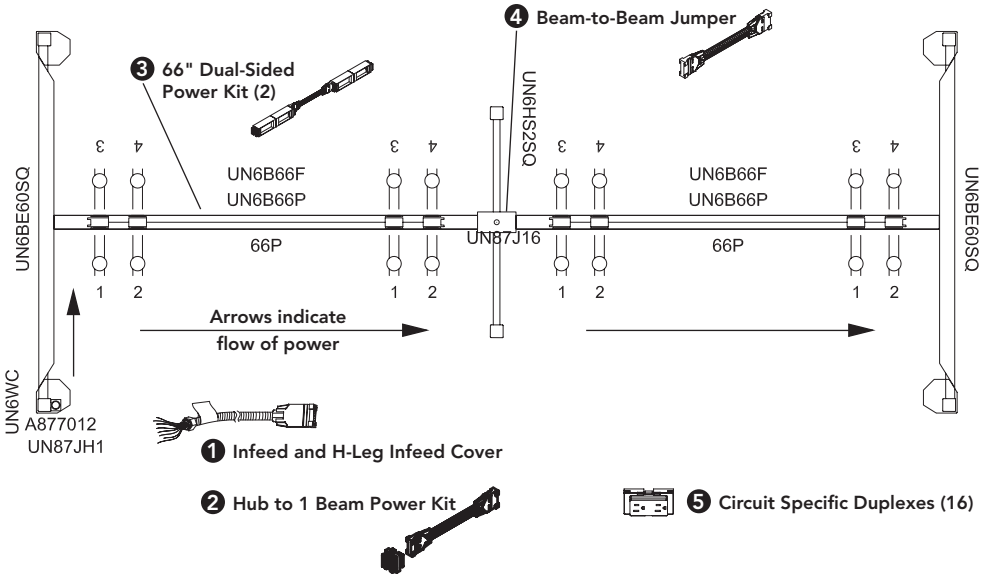


UN8EBKCH

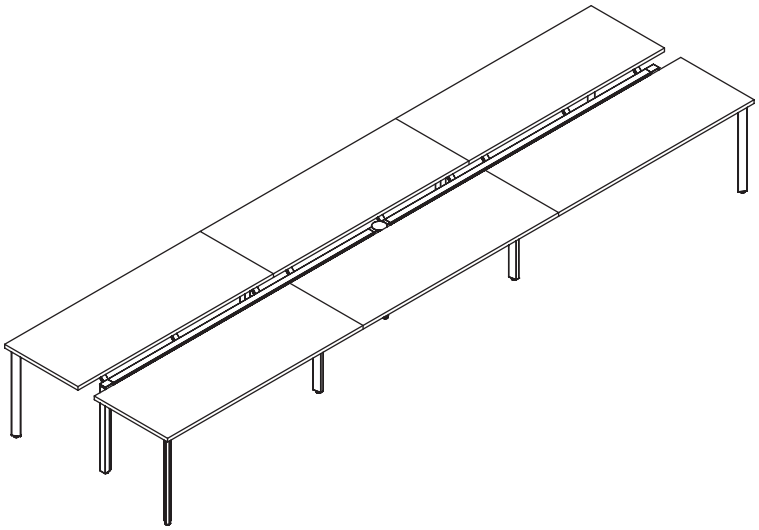
Hardwire – Chicago Code (page 463)



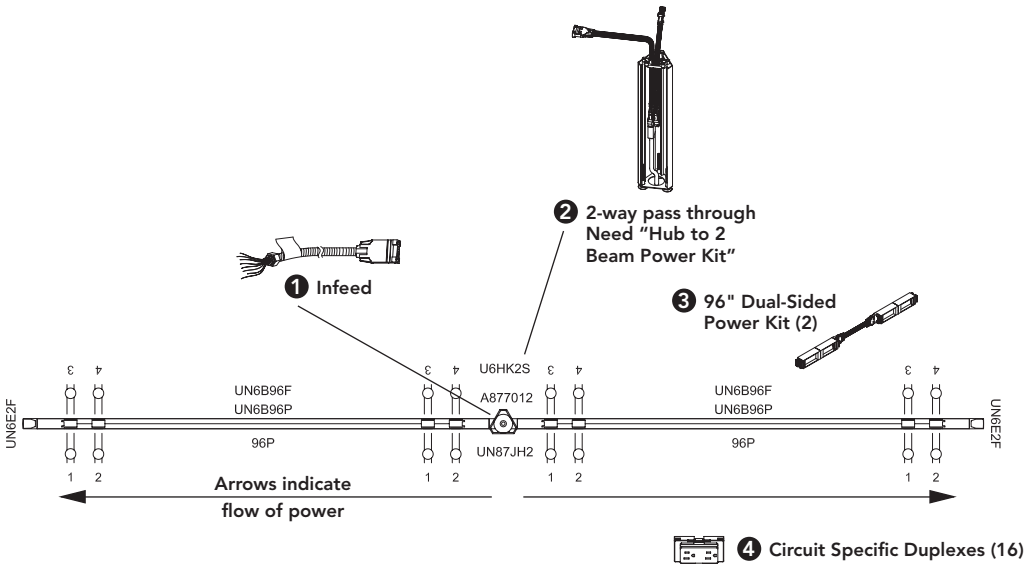
- Mounting rail top trim required for all hardwired powered beams.
- Cannot wire two receptacles back-to-back. Receptacles must be staggered.
- Junction box U8IKCH or U8SBKCH are required for all infeed locations.
- A ⅜" diameter conduit fitting must be used at the knockout locations on the junction box and brackets to fit within enclosures.
- One beam kit UN8BBKCH required per beam. Kit includes two brackets to enclose beam to meet NEC and UL requirements.
- Electrical mounting kit UN8EBKCH is required for mounting duplex receptacles and/or electrical port covers. Kit includes two brackets.
- Electrical port covers can be installed in place of a duplex receptacle on the electrical mounting bracket. Cannot be installed without the electrical mounting kit UN8EBKCH.
- Ported flexible hubs cannot be used in hardwired applications.
- All wiring, conduit, and receptacles to be supplied by electrician.
- Use U8IKCH for flexible hubs and U8SBKCH for fixed hubs.



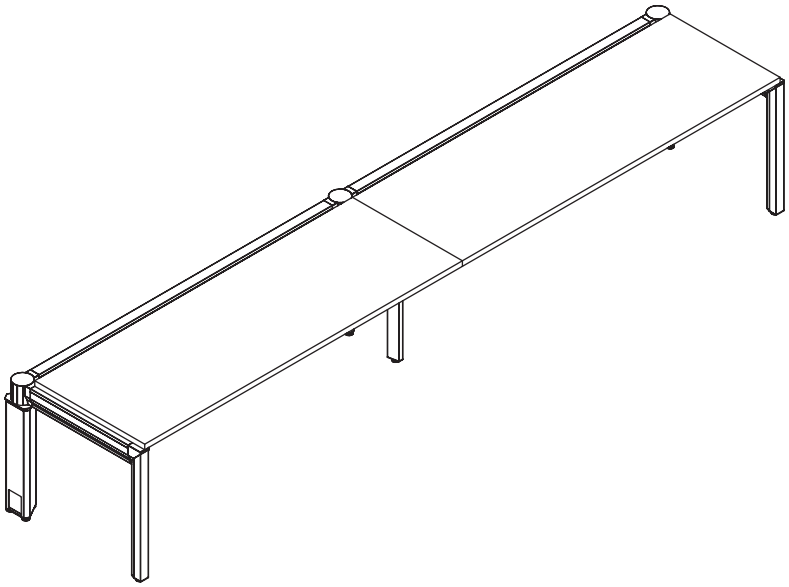
Hardwire – New York Code (page 463)

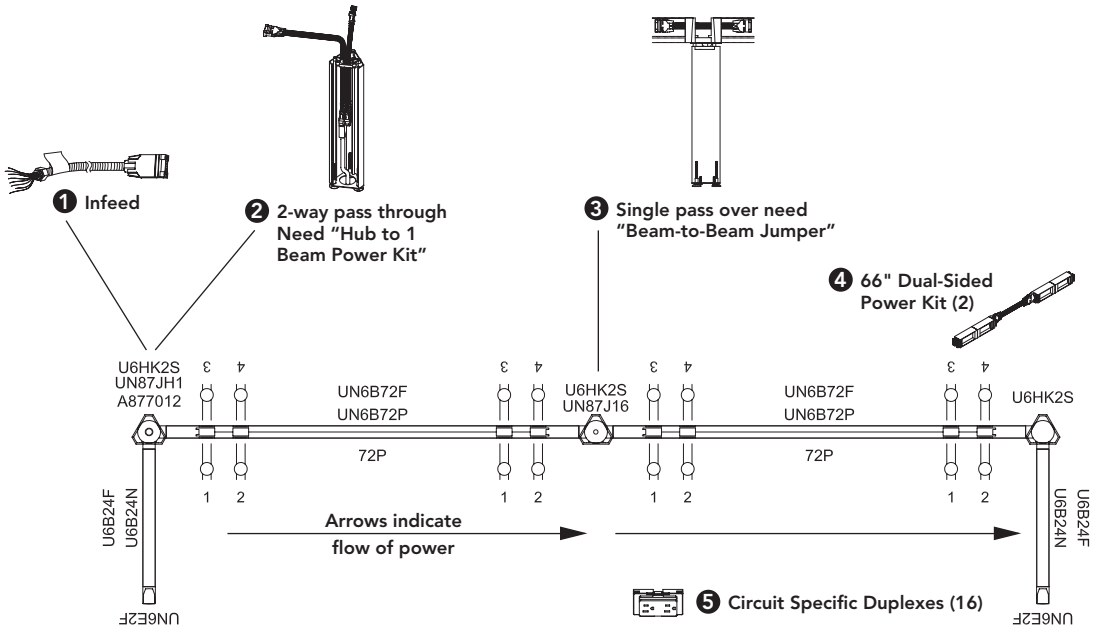


- Required for New York electrical.
- For flexible hubs and Further Adaptive, choose one of the 3 configurations:
  – U8IKNY1 for Hub to 1 Beam
  – U8IKNY2 for Hub to 2 Beam
  – U8IKNY3 for Hub to 3 Beam
- For fixed hubs (not for use with Further Adaptive), choose one of the 2 configurations:
  – U8SBKNY1 for Hub to 1 Beam
  – U8SBKNY2 for Hub to 2 Beam
- Ported flexible hubs cannot be used in hardwired applications.
- All wiring and conduit to be supplied by electrician.

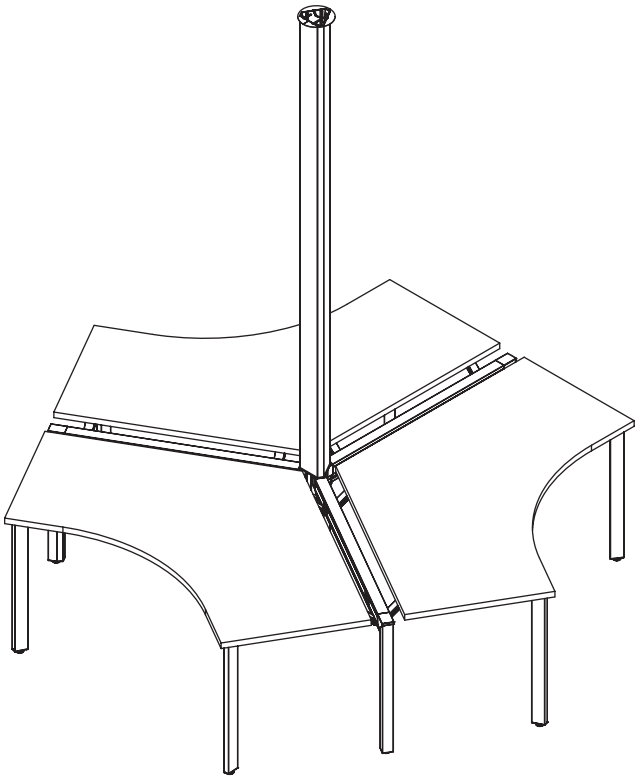


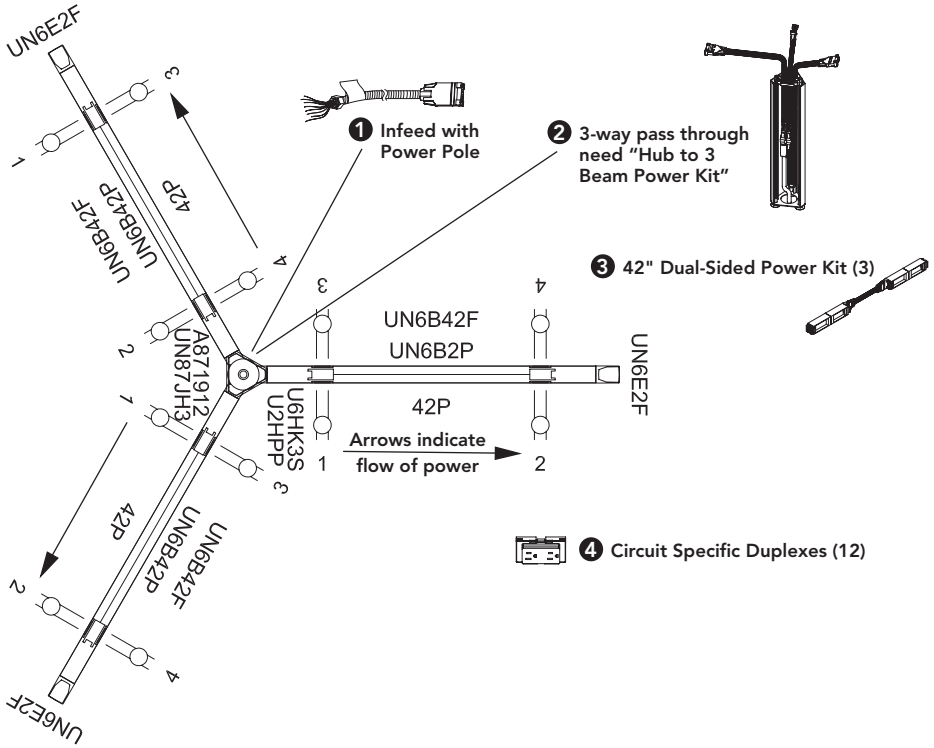
Further Electrical Example 1 — Dual-Sided Bench 4-Pack



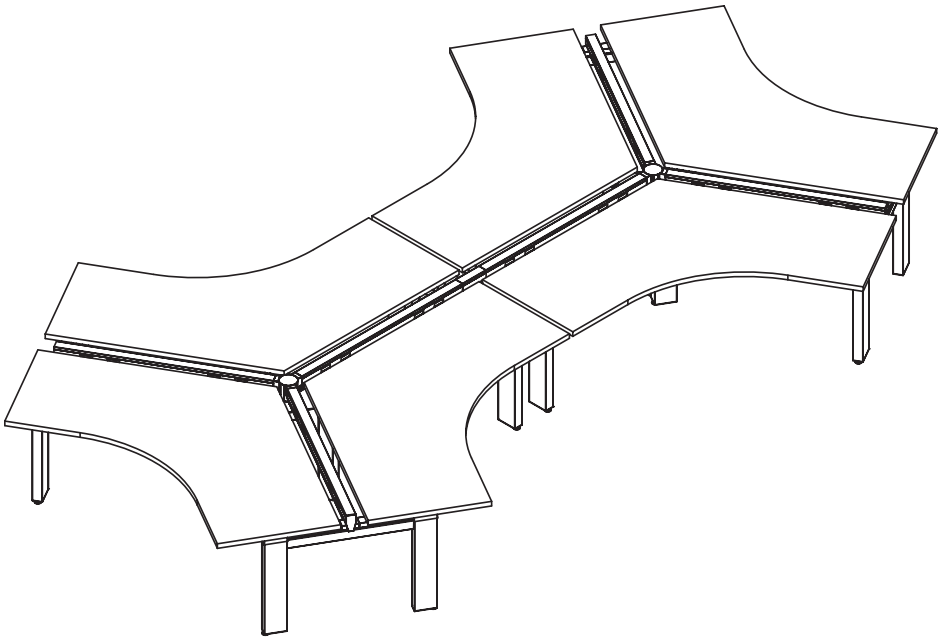


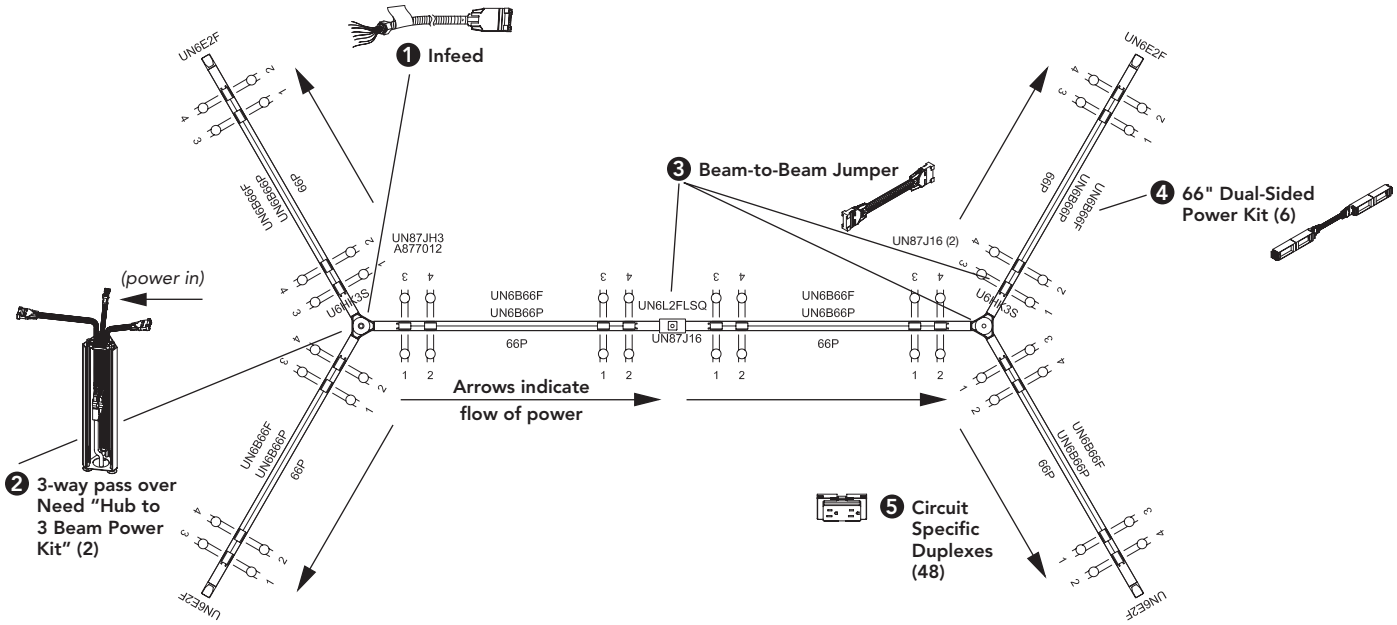
Further Electrical Example 2 — Dual-Sided Bench 6-Pack



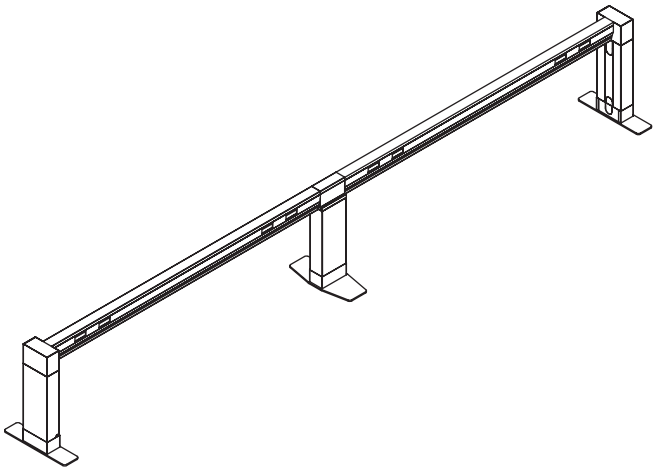


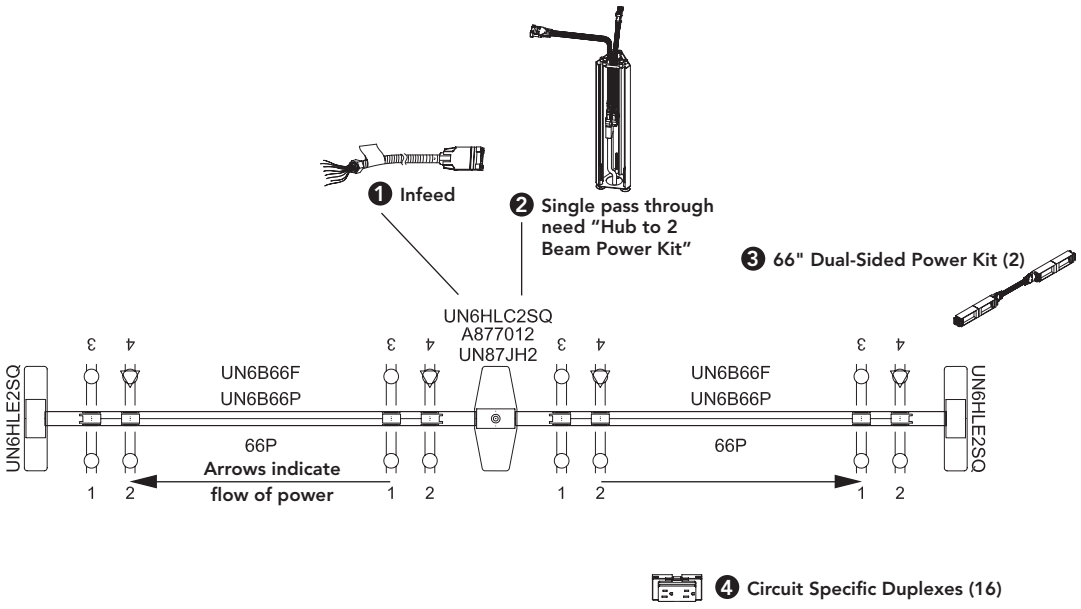
Further Electrical Example 3— Single-Sided Bench 2-Pack



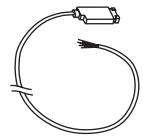


Further Electrical Example 4 — 120° Pinwheel with Power Pole





Further Electrical Example 5 — 120° Dogbone



Further Electrical Example 6 — Freestanding

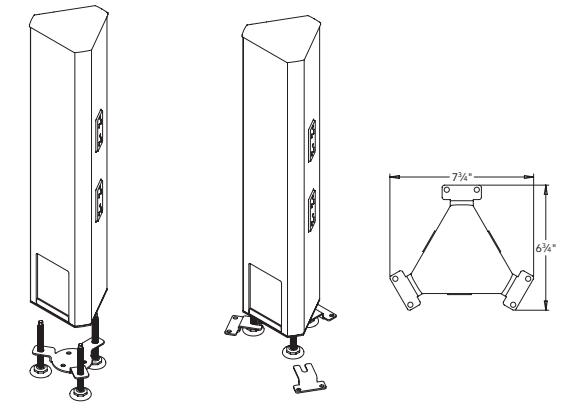
Collaborative Hub

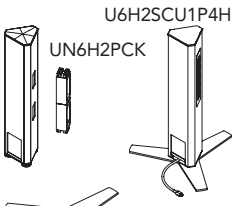


A Collaborative Standalone Hub provides access to power and data in teaming spaces in areas outside of the primary work area.

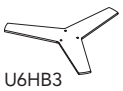
Hub with U3HAI base

Hub with U6HB3 base

U3HAI Internal



U3HAE External



Collaborative Hub (page 468)
- Provides access to power in teaming spaces outside of the individual workspace.
- Used as a standalone unit, does not support or run power into beams.
- Three feet base kit or floor anchor brackets required – order separately.
- Options available with a standard power cord, whip, or for use with an electrical infeed cable.
- 6' power cord or whip included, infeed cable ordered separate.
- When powered through infeed cable, two duplex receptacles are required – sold separately.

Collaborative Hub Foot Kit (page 468)
- Attaches to the bottom of a Collaborative Hub.
- Nonleveling hub feet kit required for Collaborative Hub if no floor anchors are specified.

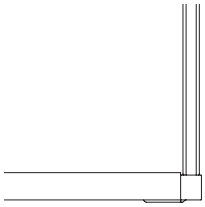
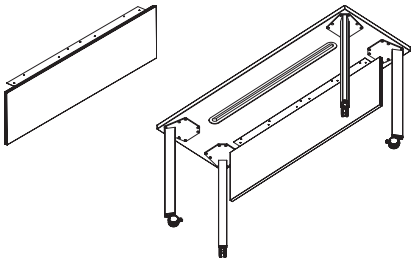
Beam Mounted Screen

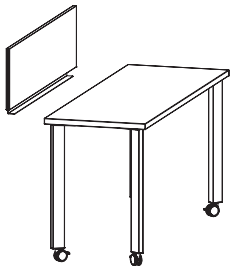
Beam Mounted Screens (pages 471 and 473)

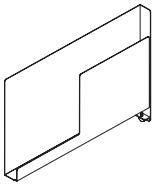
- Attach to the top or bottom of a beam, available in 6" increments at 13"H and 20½"H.
- Options available for tackable fabric up to 60"W, and glass up to 96"W.
- Fabric required when mounting screen to the bottom of a beam.
- Mounting top trim required to use screens on the top of a beam.
- May pass over a hub, h-leg, or in-line support without the use of split top trim.
- Beam mounted storage may be used on the same beam as a screen. Subtract the width of the storage unit from the screen.
- Worksurface mounted modesty screens are possible, but will interfere with cord management.
- Beam mounted modesty panels must be specified 6" shorter than beams when with Further Adaptive.

Elevated Version



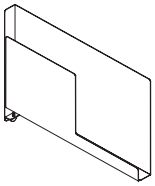




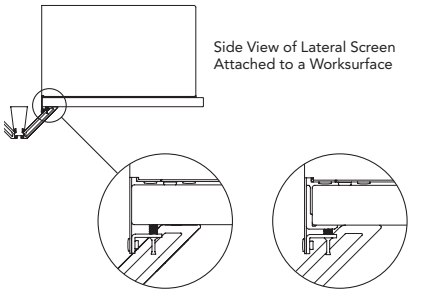


Flush Mount

Table Mounted Screens (pages 472 and 473)



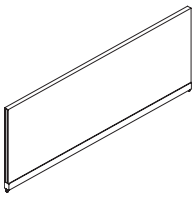
- Attach to the edge of a worksurface, available in 6" increments at 13" and 20½"H from 30"- 60"W.
- Flush-mounted option available in tackable fabric and glass.
- Glass screens only allowed on 27" deep worksurfaces.
- Elevated option available in fabric only.
- Elevated screens provide 1¼" clearance for routing cords and attachment of monitor arms.
- Flush-mounted screens should be specified 12" shorter than width of worksurface when used between Table legs – see example left.



U6BL1221ML

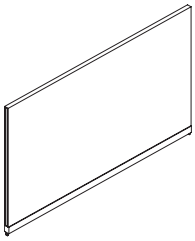
U6BL1221MR

Side View of Lateral Screen Attached to a Worksurface



Close-up of Attachment — Without Accessories Rail and With Accessories Rail

Table Mounted Modesty (page 472)
- Attaches to the underside of a worksurface, available in 6" increments at 13"H from 18"- 60"W.
- Specify 13" shorter than width of worksurface when used between Table legs – see example left.
- Must be inset at least 3" from back edge of worksurface if used with table mounted or user movable screens.



User Movable Screen (page 474)
- Mounts to the edge of a worksurface and may be transferred to other locations with ease. Available in 6" increments at 13"H from 18"-60"W.
- Specify 12" shorter than worksurface edge when used between Table legs – see example left.
- Cannot be placed on mid support edge of worksurface when used with Further Adaptive.

Lateral Screen (page 474)
- Clamps to back edge of worksurface at 12"H.
- 20" or 26"D models available. Screen is designed to sit back from front edge of worksurface.
- Space for folders is 1½" and holds approximately 340 sheets of paper.
- Folder storage is one-sided – LH and RH options available.
- Cannot be located right above run off support beams on Adaptive worksurfaces.

For specification information see page 469.

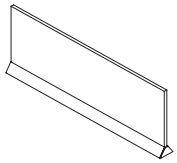
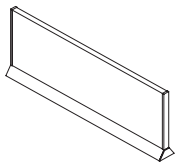
Lateral Divider Screens (page 476)
- Optional addition to the bench that provides space division and privacy. Lateral divider screens run perpendicular to the center trough.
- Lateral divider screens are sized to match worksurface depth, however it is not required that they are used on worksurface of the same depth.
- Standard depth screens will overhang worksurface ½".
- There are three types of lateral divider screens: tackable fabric, Frosted or Clear glass, and writable glass.
- Lateral divider screens attach to the underside on the back of the worksurface anywhere along the length of the bench within 7½" of each end.
- Lateral divider screens do not have to be mounted at the worksurface seam.
- Lateral divider screens may be used on standard systems worksurfaces, however, the screen mounts and aligns with the back edge of the worksurface. Not to be used on standard rabbet edge worksurfaces.
- Specify a shorter depth screen if using a lateral screen on a Stride Sit-to-Stand surface.
- Screens that match surface depths are available through Allsteel Tailored Products.



Tackable Fabric Lateral Divider Screens (page 476)
- ¾" thick tackable fabric
- Available 8"H and 13"H.
- Nominal depths are 27", 30", and 36".
- Actual depths are 22¾"D, 25¾"D, and 31¾"D.



Glass Lateral Divider Screens (page 476)
- ⅜" thick laminated clear or frosted glass.
- Available 8"H and 13"H.
- Nominal depths are 27", 30", and 36".
- Actual depths are 22¾"D, 25¾"D, and 31¾"D.

For specification information see page 475.
(See page 1052 for COM pricing on fabric Grades G-J for Fabric Screens.)

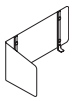
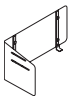
Further Adaptive — Metal Screens (page 479)
- Powder coated magnetic metal privacy screen.
- Metal surfaces can be easily disinfected with cleaners. See cleaning guide for more details at AllsteelOffice.com.
- Available in all standard paint colors.
- Provides ½" gap along the back for accessory mount and cord drop.
- Available in 48"W, 54"W, 60"W, 66"W and 72"W.
- 66"W and 72"W screens include 3rd center bracket.
- Available in Straight, L- and U-shape configurations. Above the desk only.
- L- and U-Shape screens are compatible with shrouded Further Adaptive Desk legs.
- Optional tackable accessories specified separately.
- 66"W tackable accessory comes as a set of (2) 24"W.
- 72"W tackable accessory comes as a set of (2) 20"W.
- Available in standard and extended wings.
- Wings mount flush to the edge of the surface with a VHB tape (included in hardware).
- 20"W tackable accessory must only be applied to both standard and extended wings without accessory slots.
- Wings are available with accessory slots that accept Radii Hot File, Side Saddle and Coat hook.
- Top slot can accept one Radii accessory.
- Bottom slot can accept a Coat hook and one other accessory.
- Accessories can hang on either side of the wing.
- TIP: If the Hot File is used in the top slot, it will block access for accessories in the bottom slot.
- Do not hang more than 5lbs of weight on wings.
- Screens are compatible with Radii undermount storage.
- Not compatible with standard 120-worksurfaces. Contact Allsteel TPG for custom sizes.

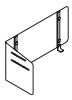
Size Reference Matrix

Tackboards	Wing	48"W	54"W	60"W	66"W	72"W
Actual Dimensions	20"W	30"W	36"W	42"W	20"W	24"W
Set of Tackboards	1	1	1	1	2	2



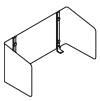
Accessories — Tackboard (page 479)
- Tackable accessories come with metal frame available in standard paint colors and fabric options.
- Attach to the screen using a dual lock tape (included in hardware).

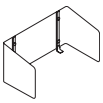




Accessories — Radii (page 480)
- Wings are available with accessory slots that accept Radii Hot File, Side Saddle and Coat hook.
- Top slot can accept one Radii accessory.
- Bottom slot can accept a Coat hook and one other accessory.
- Accessories can hang on either side of the wing.
- TIP: If the Hot File is used in the top slot, it will block access for accessories in the bottom slot.

Accessories — Further Worksurface Rail Mount (page 520)
- Accessory rail must be field cut to fit between the screen brackets.
- The following accessories are not compatible with screens: U9WTC and U9TM.





For specification information see pages 477-478.

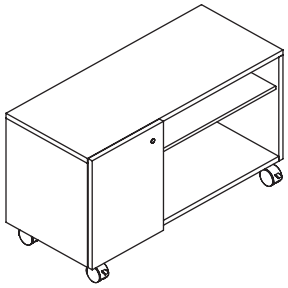
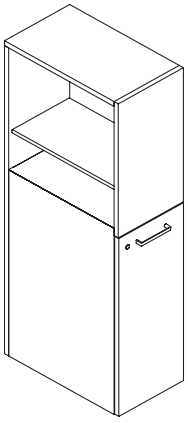
10"W x 27"D Support Pedestal Open w/ Personal Bin — Right **U7P1027PBR**

All Storage



- All storage is made from ¾" thick with particleboard core with top and bottom surfaces finished in laminate. Horizontal storage sides and back are painted steel.
- Edge band is made of 1mm thick ABS plastic — flat edge trim only.
- Cam and pin construction. Storage is plinth base only unless unit is mobile.
- Available in solid and woodgrain laminates, models with doors or drawers are available with a two-tone option.
- Pull options: arch, square, linear, straight. All standard in PR6 Silver.
- Locks have a silver finish.

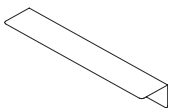


U7P1027PBR

U7P1521PD

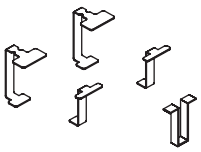
U7MC203615HL

U7T501221ADR



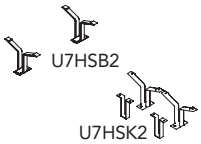
Open Support Pedestals (page 484)
- Constructed of laminate, shelves are painted steel.
- Open Support Pedestals may be used to add additional stability — see Further Stability Requirements on page 438.
- Support pedestals may be used to create freestanding desks, storage depth must match worksurface depth.
- 27"D models have a coat/bag hook located in back of unit.

Pull-Out Drawer Support Pedestal (page 484)
- Case is constructed of laminate and painted steel.
- Box and file drawers are miter fold, ½" thick particle board, polypropylene wrapped.
- Configuration is box/box/file and one shelf at top of unit.
- Shelf is not adjustable but can be removed.
- All drawers hidden behind single laminate front.
- Straight, linear, arch and square pulls available as options.
- 1⅝" leveling.
- Cannot be used as a freestanding, standalone unit.
- Outside overall dimensions: 15⅝"W and 21" or 27"D
- Box drawers extend 16" for both model depths.
- File drawers extend 16" on 21"D models and 20" on 27"D models.
- Front to back filing, standard letter size
- One lock, located in upper right hand corner of drawer front.
- Two-tone laminate option for drawer fronts
- Can be used to make a freestanding desk.



Mobile Credenza (page 484)
- Constructed of laminate, shelf is painted steel.
- Mobile credenza has a hinged door with lock, no pull.
- Front casters are locking, back casters are non-locking.

Side Access Towers (page 485)
- Top and sides are laminate, shelves are painted steel.
- Side Access Towers may be used to add additional stability — see Further Stability Requirements on page 438.
- 12" wide towers must be attached to a worksurface.
- Z6LB tower "L" bracket required when supporting a worksurface with a tower — storage depth must match worksurface depth.
- Tower drawers do not extend fully — 27"D towers have a 25"D drawer with 20" travel slides; 21"D towers have a 19"D drawer with 16" travel slides.
- 27"D models have a coat/bag hook located in back of drawer.



"L" Tower Bracket (page 485)
- Z6LB tower "L" bracket required when supporting a worksurface with a tower.
- Storage depth must match worksurface depth.

For specification information see pages 481-482.

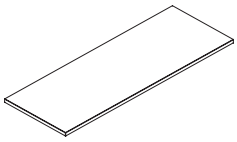
A full gallery of typicals from each Allsteel system can be found on our website:
https://www.allsteeloffice.com/design-resources/idea-starters.
Each typical includes a complete BOM with current pricing, downloadable CAD files and PDFs of each drawing.

Further Height-Adjustable Bench 2'-6" x 5'
All 4 stations are height-adjustable.
Bench configuration encourages collaboration.



Further Height-Adjustable Bench w/Towers 7' x 5'-6"
All 4 stations are height-adjustable.
Wardrobe and credenzas provide personal storage.

NOTE: Further Typicals can be found at https://www.allsteeloffice.com/design-resources/idea-starters.

Further Adaptive configurations use many of the standard Further components to create height-adjustable workstations. This Further Adaptive section contains just 40 models. For a complete Statement of Line of Further components see pages 421-422.

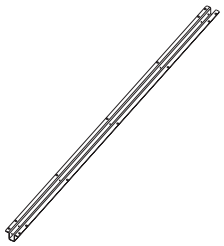
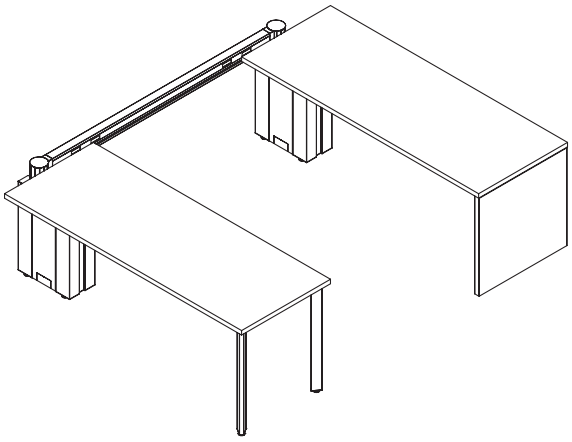
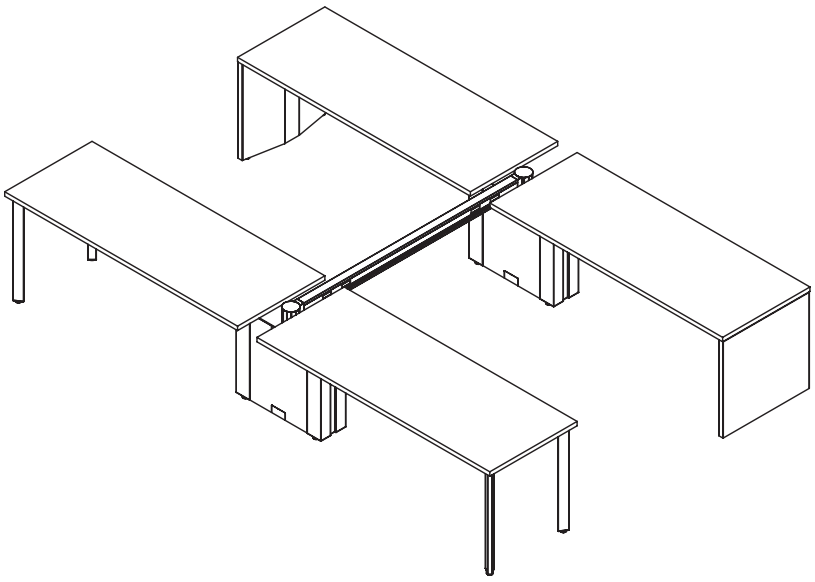
17" and 19" Jumpers



Further Adaptive (Integrated Height-Adjustable)

- Many standard Further components are utilized to create height-adjustable workstations, and may be restated here for easy reference.
- Height-adjustable stations can be mixed and matched with fixed height stations in any combination.
- Height-adjustable stations come with required control box kit.
- Fixed height and HAT leg kits can be used interchangeably with Further Adaptive supports ordered after 1/1/23.
- Mid-supports are required.
- A maximum of two mid-supports in a row may be used.
- Two end supports may be used in succession to extend 6-pack – requires 9" in-line beam connector.
- Single-sided setups require gallery panels to be mounted along spine of beam, or floor anchor brackets on all beam supports.
- Minimum of two single-sided stations allowed.
- Single-sided gallery panels must match the length of worksurfaces specified. Minimum height of the Gallery Panel must be 42"H.
- Adding power to a dual-sided two station application requires a hub at one end.
- Corner cove worksurfaces require a 3-leg HAT kit and perpendicular outer support.

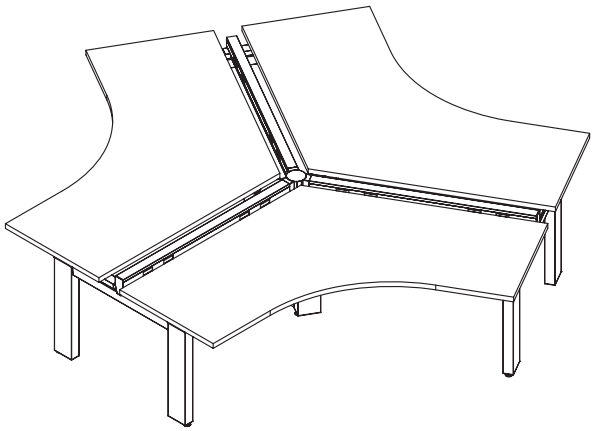


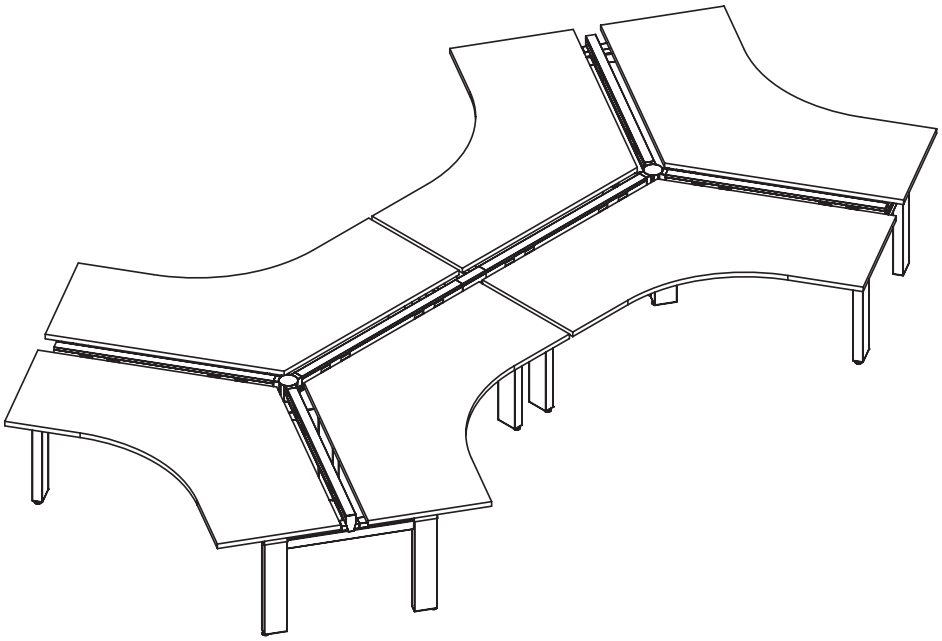


Worksurfaces (page 497)
- Standard 48"-72"W Further worksurfaces are used for height-adjustable workstations.
- 21"D worksurfaces cannot be used.
- A 1" gap exists between surfaces to eliminate pinch points.
- Worksurfaces cannot overhang supports on ends by more than 12".
- Distance from floor to top of height-adjustable worksurfaces ranges from 28" to 47⅝" with glides fully retracted. See illustration left.
- Distance from floor to top of worksurface for fixed height remains at 29½" with glides fully retracted. See illustrations below.
- Load maximum: 300 lbs. including weight of worksurface.

External Worksurface Support Channel (page 497)
- External stiffeners to be used on 60"W worksurfaces and greater.
- Specify stiffener 12" shorter than standard. (ex. 60"W worksurface uses stiffener Z5SC48)
- Extends 1½" below the worksurface. Stiffener is 6¼" from back edge of the worksurface.
- May interfere with storage or mounting of accessories.

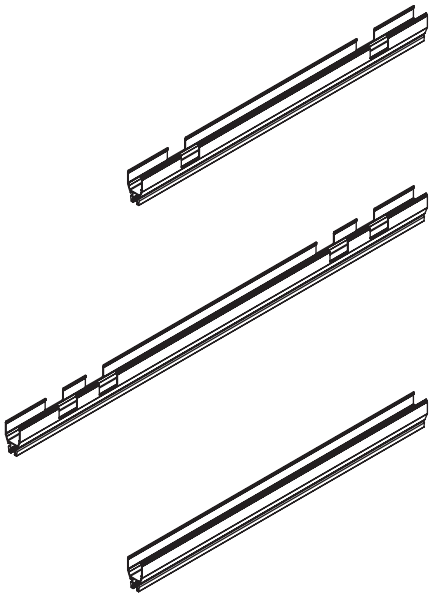
Adaptive Perpendicular — Height-Adjustable



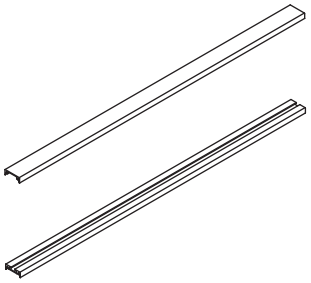


Adaptive Perpendicular Workstations

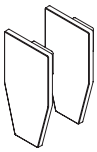
- No restriction on number of perpendicular mid supports used in a row.
- Worksurfaces are centered over perpendicular mid supports, but may be mounted up to 4⅛" forward from mid support to reduce footprint.
- Minimum of 4 stations for dual-sided applications, 2 stations for single-sided applications.
- Perpendicular mid support does not complete height-adjustable station – must order perpendicular outer support and HAT kit.
- Fixed height stations require two worksurface support legs on non-beam side in place of a perpendicular outer support.
- A minimum beam length of 30" must be used between perpendicular mid supports for 27"D surfaces, and a minimum length of 24" for 24"D surfaces.



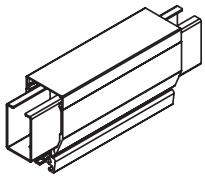
Adaptive Organic — Height-Adjustable



Adaptive 120° Workstations

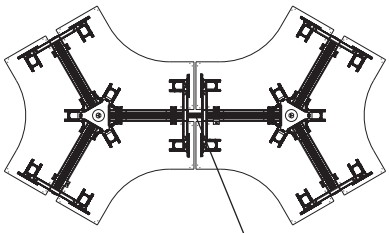


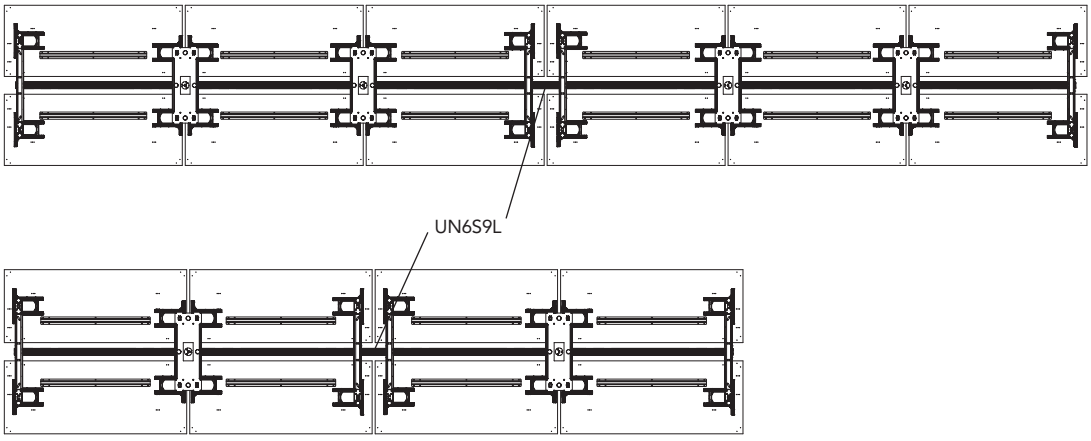
- Requires a 120° mid support at all 3-way beam connections.
- End supports required on beams also connected to a 120° mid support.
- 7" in-line connector required to attach multiple 120° workstations.
- Single-sided end supports not allowed.
- One (1) 3-Leg HAT or fixed kit will be used per worksurface.



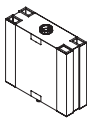
Beams (page 444)
- Supply power to users and support screens, but do not support worksurfaces or storage in adaptive applications.
- Ported and non-ported options available in 6" increments.
- Flat or mounting top trim required to finish off beams – order separately.
- Beams do not connect directly in-line with one another, use in conjunction with adaptive supports.
- Height of assembled beam with top trim is 4¼".
- Electrical port locations are back-to-back, symmetric about beam center, and a standard distance away from beam ends on all lengths.
- 36" and 42" ported beams have 2 receptacle locations on each side (4 total), 48"-96" ported beams have 4 on each side (8 total).
- Ported beams do not carry data cables internally. Routed externally through beam mounted wire-managers. See page 455.

Beam Top Trim (page 445)
- Available in 6"-96" lengths in flat or mounting rail and is required to finish off a beam. Must match beam length, no exceptions.
- Mounting top trim contains a reveal for mounting screens.
- Mounting top trim must be used for projects specified under Chicago electrical Codes.

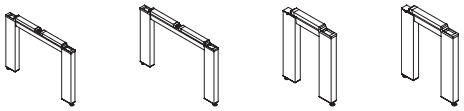




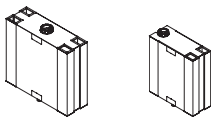
Beam End Cap (page 499)
- Caps off a beam at the end of a parent run.
- Used in conjunction with adaptive end support.
- Model ships with 2 end caps.

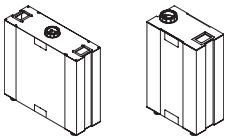


In-Line Beam Connector (page 499)

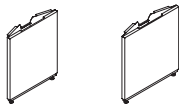


- Connects two end supports used in succession to extend a parent run.
- 7" connector used between 120° workstations, 9" connector used in linear benching applications.
- When routing power through an in-line beam connector, special length beam-to-beam jumpers are required; 7" – 17"(UN87J17), 9" – 19" (UN87J19).
- Needed every third beam for larger linear parent runs. Can be used after two beams in an 8-station typical to keep symmetry (gap will be 1"). *See examples at left and below.* For 120° applications use 7" beam length.
- Includes Flat trim; may be used to span a screen over the trim.



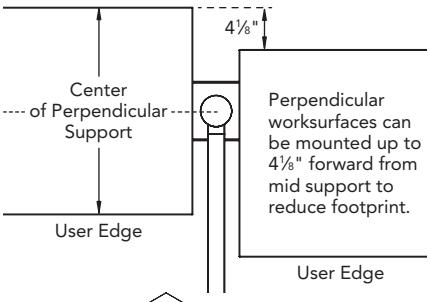


All Adaptive Supports (pages 498-499)
- Used in place of standard Further beam and worksurface supports.
- Specify a mid support to beam connector when specifying the Adaptive mid supports.
- Height-adjustable columns available in 20 Allsteel paint finishes.
- Load maximum: 250 lbs. per surface, including weight of worksurface.
- Include leveling glides with 2¾" adjustment.
- Columns are ordered separately from supports.

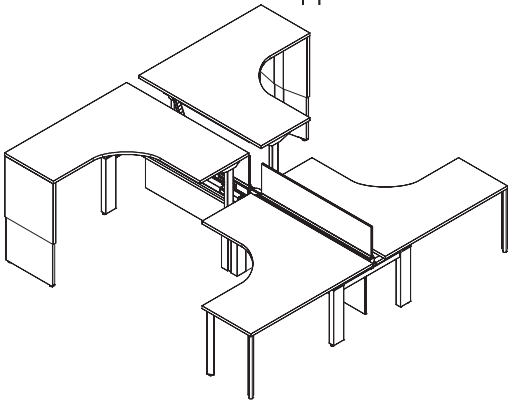


End Supports (page 498)
- Supports a beam and worksurface(s) at the end of a run. Cannot be used throughout the run.
- Available in dual- and single-sided models.
- 24" and 27" deep models to be used with corresponding worksurfaces.
- Two end supports may be used in succession to extend parent run. This application requires an in-line beam connector – ordered separately.

Mid Supports (page 498)
- Supports a beam and worksurface(s) in the middle of a run.
- Available in dual- and single-sided models.
- Same model used for both 24" and 27" deep worksurfaces.
- Hub to two beam connector kit UN3CHB2 required.
- Carries power and data to the beam structure; infeed can be routed through the side or bottom of support.

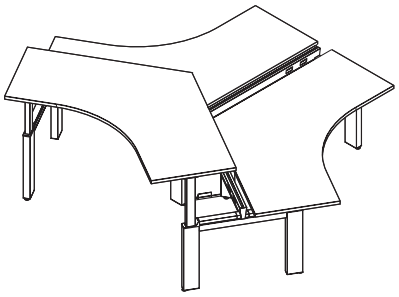


Perpendicular Mid Support (page 498)
- Used to support beam side of worksurface in perpendicular applications.
- Available in dual- and single-sided models.
- Same model used for both 24" and 27" deep worksurfaces.
- Hub to one or two beam connector kit required.
- Carries power and data to the beam structure; infeed can be routed through the side or bottom of support.

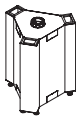


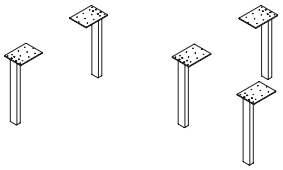
Perpendicular Outer Support (page 498)
- Used to support non-beam side of worksurface in perpendicular applications.
- Supports only one worksurface (not a shared support). 24"D and 27"D height-adjustable models available.
- In fixed height applications, two worksurface support legs are used – see illustration at upper left.

Perpendicular



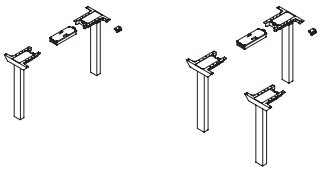
TOP VIEW



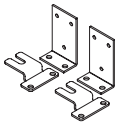


Maximum Support Capacities

Support	Data*	Infeeds	Beams
Linear Mid Support	88	2	2
Perpendicular Mid Support	88	2	2
120° Mid Support	132	3	3

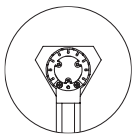


120° Mid Support (page 498)
- Used to support center of 120° worksurfaces in organic applications. Requires three dual-sided end supports – see example left.
- Same model used for 24" and 27" deep worksurfaces.
- Carries power and data to the beam structure; infeed can be routed through the side or bottom of support.



Fixed Leg Kits (page 498)
- 2-leg and 3-leg kits available.
- Includes required mounting hardware for fixed height stations.
- Ordered in addition to necessary supports.

Height-Adjustable Kits (page 498)
- 2-leg and 3-leg kit available.
- Columns, gussets, and control boxes are all included with the height-adjustable kits.
- Ordered in addition to necessary supports.
- Kits can be used to retrofit workstations.
- 2-stage models can range from 26½"H to 45¾"H.
- Basic up/down, memory preset, and paddle.
- Available in 20 Allsteel paint finishes.
- Anti-collision feature.
- 250 lbs. weight capacity.



Note: Not TAA compliant unless ordered with a TAA compliant configurable end product.

Adaptive Floor Anchor Brackets (page 499)
- Used to mount single-sided Adaptive supports to floor if gallery panels are not desired.
- Kit includes brackets for 2 end supports and 2 mid supports.
- Hardware for mounting to floor is not included.

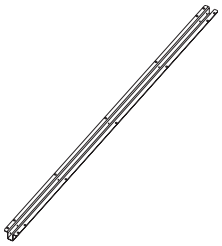
3 Beams to Mid Support — Model UN3CHB3

3-Way 90° 3-Way 120°



Mid Support to Beam Connector Kits (page 498)
- Reconfigurable connector kits used in conjunction with mid support to support beams.
- Ordered by quantity of beams joined to hub — 1, 2, or 3 beams; or connector gap filler and connector blocks can be ordered ala carte to aid in reconfiguration.
- Kits include top casting mounting bracket, top casting, hub to beam connector(s), gap fillers, connector gap fillers, and full top trim.
- Beams can be mounted in 30 degree increments using the same hub and beam connector kit. *Example:* 3 beam connector kit can make a 120 degree or a "T" arrangement. See beam connector kit illustration at left.
- When connector kit is mounted, a gap is created to pass data cords out.

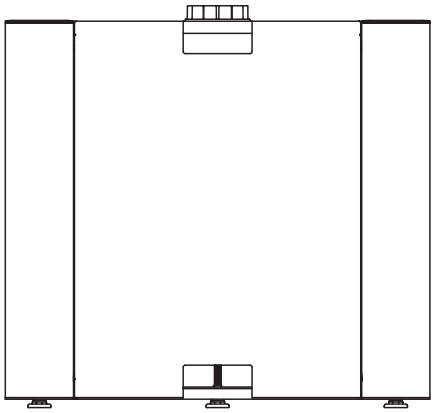
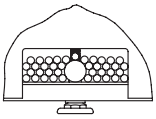
Adaptive Electrical (pages 503-504)



- Most electrical rules and options remain the same for Adaptive applications.
- Power infeeds cannot enter system through end supports.

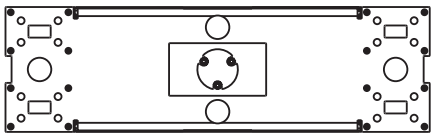
Application	Beam Size	Bench Connector	Jumper Model
Linear	48-72"	UN6S9L	UN87J19
120°	42"	UN6S7L	UN87J19
120°	48"	UN6S7L	UN87J17



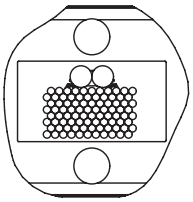
Upper knock-out opening (5.30 sq. in.) on access panel on mid support (both 2 & 4-column, 4-column shown) accepts up to 44 voice/data cables (.300" dia.)

All quantities listed at 60% fill ratio.

Lower knock-out opening (5.72 sq. in.) on access panel on mid support (both 2 & 4-column, 4-column shown) accepts up to 39 voice/data cables (.300" dia.) when electrical shares opening with one infeed.

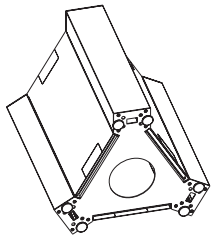


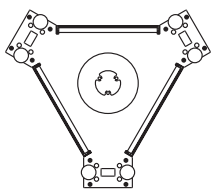
All quantities listed at 60% fill ratio.

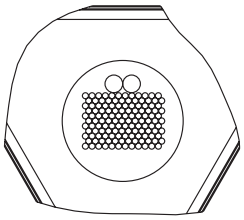


Lower knock-out opening (5.72 sq. in.) on access panel on mid support (both 2 & 4-column, 4-column shown) accepts up to 44 voice/data cables (.300" dia.) without power. Maximum of 72 cables in wire management.

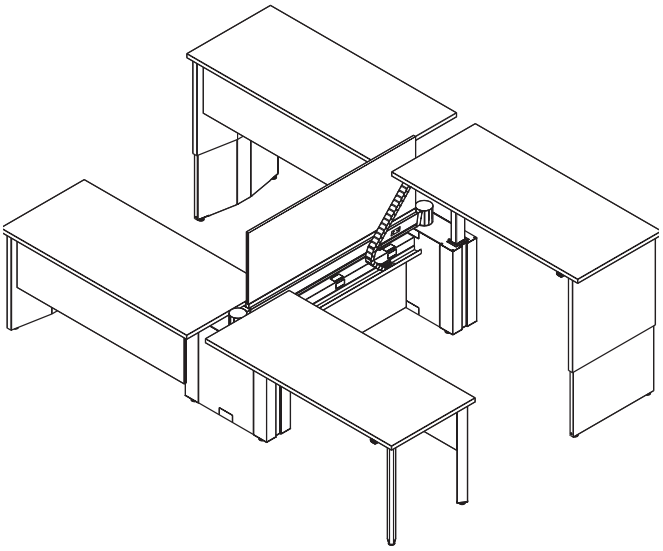
All quantities listed at 60% fill ratio.



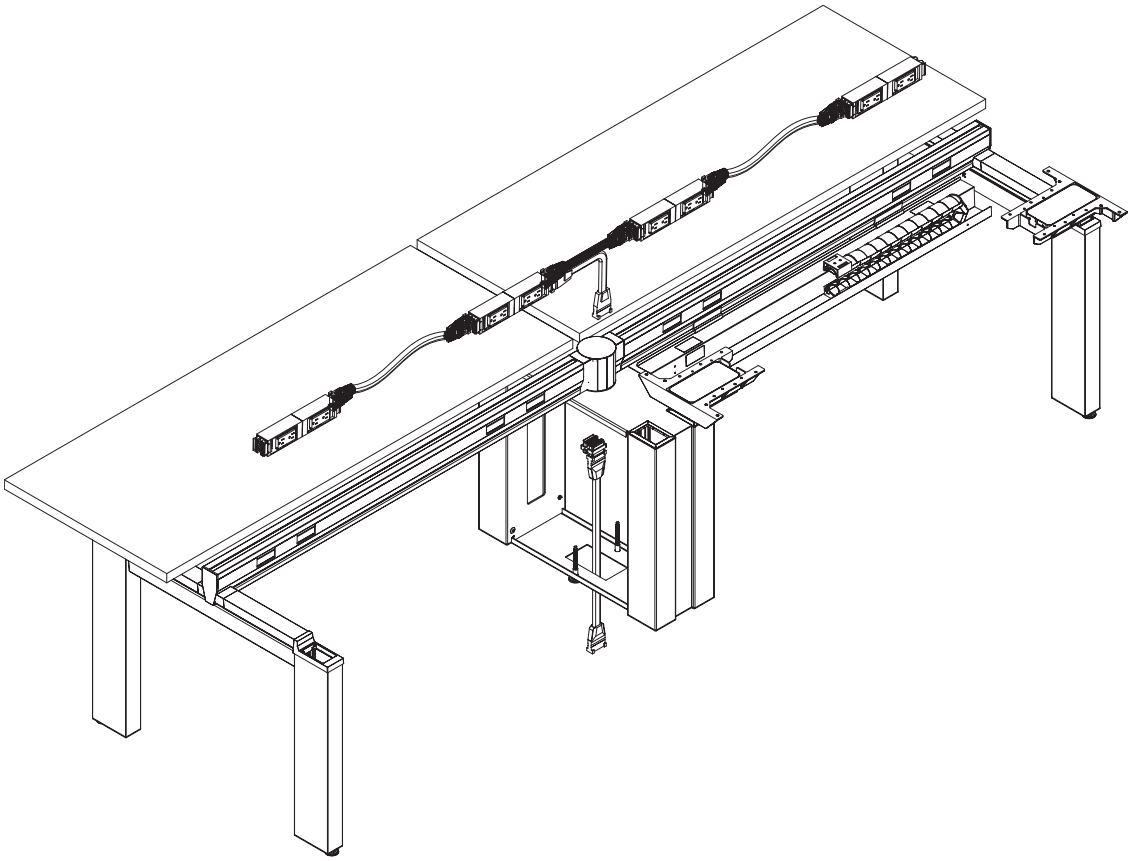


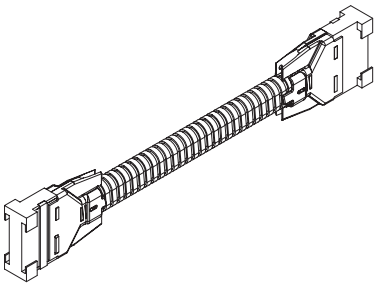


Bottom 6" x 3¼" opening (19.50 sq. in.) of mid support (both 2 & 4-column, 4-column shown) accepts up to 88 voice/data cables (.300" dia.) when electrical shares opening with two infeeds.

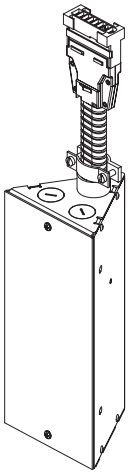


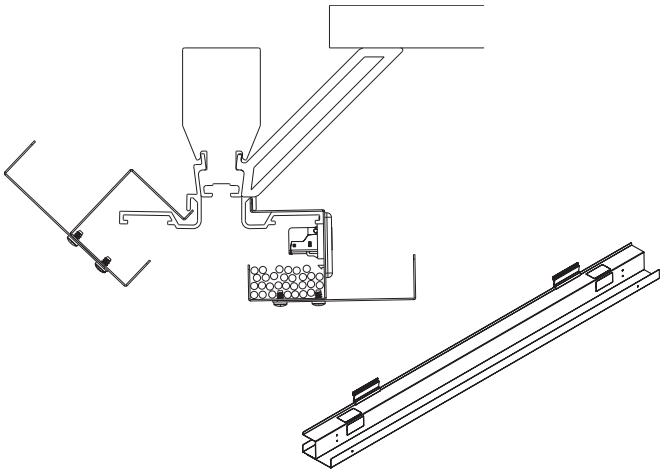
88 cables shown = 44 per access panel upper knock-out.





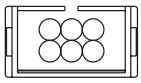
Bottom 6" dia. opening (28.27 sq. in.) of 120 mid support accepts up to 132 voice/data cables (.300" dia.) when electrical shares opening with two infeeds. 132 cables shown = 44 per access panel upper knock-out.





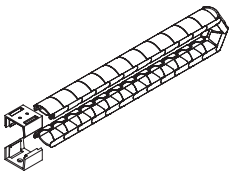
Beam-to-Beam Jumper (page 503)

- Standard 16" jumpers are used over mid supports.
- 17" jumper used over 7" connector.
- 19" jumper used over 9" connector.
- Special length jumpers are required when routing power over two end supports through an in-line beam connector.

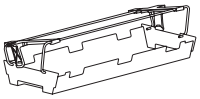


Hardwire – New York Code (page 463)

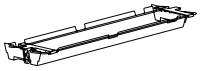
- Required for New York electrical.
- For flexible hubs and Further Adaptive, choose one of the 3 configurations:
  – U8IKNY1 for Hub to 1 Beam
  – U8IKNY2 for Hub to 2 Beam
  – U8IKNY3 for Hub to 3 Beam



Single-Sided Wire Manager (page 465)
- Can be used with any single-sided, dual-sided, Further Adaptive, freestanding post and beam, and fixed-height applications.
- Holds user wires and up to 30 system data cables on one side of a beam.
- Mounts into the continuous reveal on either side of a beam – mounting clips included.
- Single-sided version is recommended when nesting storage.
- The data manager without the 2½"D tray can be ordered separately to maximize space, or the tray can be removed in the field.
- Available from 36" to 78" widths in 6" increments.
- Includes mounting locations for Cord Management Chain when used with Adaptive supports or freestanding height-adjustable workstations.
- Specify 6" shorter than beam length when used with Adaptive supports.
- Two single-sided wire managers can be used on either side of beam to increase data capacity. (60 total)
- May be used in conjunction with beam mounted modesty screens.
- Includes 4 knockout port locations for data faceplates (2.7"W x 1.375"H) on all widths. Data faceplates ordered separately.

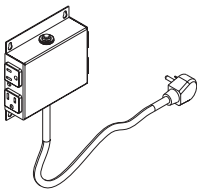


6 cables (.300" dia.)



Cord Management Chain (page 504)

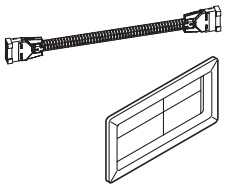
- Used to route and conceal power/data cables from worksurface to beam power receptacles.
- Houses 6 cables at .300" diameter – see illustration left.
- Chain is 36" and must be used in conjunction with a single-sided wire manager. Specify wire manager to be 6" shorter than beam length.
- Chain can be mounted in two orientations – see illustrations left.
- Chain is plastic and comes in one color – Black.
- Recommended cord length for electrical accessories is 60".
- Maximum of two chains can be mounted to a wire manager tray that is 48" or greater.



AFDTRGH20

AFDTRGH32

Flip-Down Wire Trough (page 504)
- Mounts beneath a worksurface. Used to conceal extra cord slack and power strips.
- May be used in conjunction with quad tap unit APWR4TAP to reduce the number of cords routed from a worksurface to a beam.
- For any worksurface less than 58"W, a 20"W Flip-Down Trough is recommended.
- For worksurfaces 58"W and wider, a 20"W or 32"W Flip-Down Trough may be used.
- Flush-mount Radii Storages are not recommended to use in conjunction with Flip-Down Trough.
- Only AKTSHORT keyboard tray is recommended for use in conjunction with the Flip-Down Trough.



APWR4TAP

Power Module — Under Worksurface, Quad Tap (page 632)
- Under surface mounting can be used under any surface with a 5" x 5" x 1.5" clearance.
- 10' straight power cord only, no specification needed.
- 4 receptacles, unit is black finish only, no specification needed.

*For more power and wire management options, please visit the **Extensions** pages.*

Storage (pages 481-485)

- Laminate shelves (24" & 30" W) can be mounted on Adaptive surfaces using worksurface mounted stanchion kits (U7HSK1).
- Storage below 26"H can be used underneath Adaptive surfaces when not directly underneath height-adjustable leg, otherwise storage must be below 23⅞"H. Taller storage units can be used if keypad with preset height capabilities (ATBCMC) is specified.
- Storage below 26"H can be used underneath fixed supports. Normal Further storage units may be used if positioned to not interfere with plates. See below.

Notes

Altitude® Benching

Specification and Price List

- Software support packages furnished to the customer, either by Allsteel® or by another source, which support the sale of Allsteel products are superseded by printed price lists.
- Prices are subject to change without notice. All orders are subject to prices in effect at the time of order.
- Please refer to your Allsteel Dealer Sales and Discount Policies for order placement information, terms and conditions.
- Additional copies of this Specification and Price List are available upon request from Allsteel Literature at 1-866-255-7833.
- Ordering information appears at the bottom of each product page complete with examples on how to specify. Fabric and finish pages are referenced at the bottom of product pages.

This publication is available as an interactive or downloadable PDF at www.allsteeloffice.com.

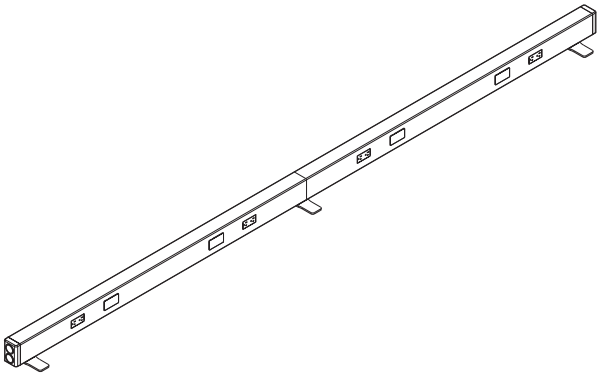
All of Allsteel's tables are level® – 2 certified to the ANSI/BIFMA e3 Furniture Sustainability Standard. See www.levelcertified.org for more information.

NOTE: Refer to individual product pages for upcharges.



GENERAL OVERVIEW

- Accommodates power and lay-in capacity for data cables.
- Available in 48", 54", 60", 66", and 72" lengths.
- Maximum of 2 duplexes and 2 data ports per side of rail.
- Models come equipped with hardware for in-line connections.
- Fiber optic cables can follow 90 degree turns at the intersection of the power rails.
- Power harnesses snap into electrical brackets within the power rail and accept duplex receptacles.
- Electrical power harness accepts up to 2 duplex receptacles per side of rail.
- End caps are required at an end-of-run, unless connected to an end-of-run power pole or a hub.
- Power rail can be set low to the floor using the floor legs or raised off the floor at 20½"H with elevated legs.

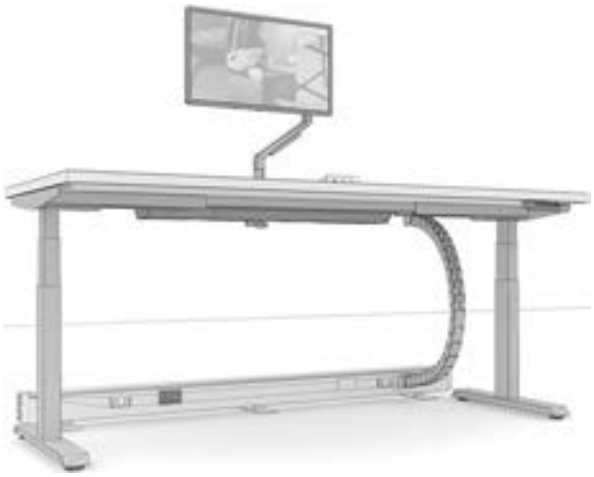
WORKING WITH ALTITUDE POWER RAILS

Low Rail with Floor Legs:

- Each power rail is supported by (2) floor legs.
- Floor legs have a leveling mechanism that can adjust up to 1¼"H.
- Legs are specified separately and come in qty of 1. Each leg is 7¼"D x 2¼"W.
- Leg is inset 2.8" from end of the power rail.
- Universal connector allows "L", "T" and "X" configurations.
- Can connect directly to another power rail in linear applications without use of the universal connector.
- Cannot mount screens on the low rail.
- Power infeed can access the power rail in multiple ways:
  - through a receptacle position on the power rail (side infeed).
  - through the end cap on to the first power block.
  - through power pole using a power pole connector kit.



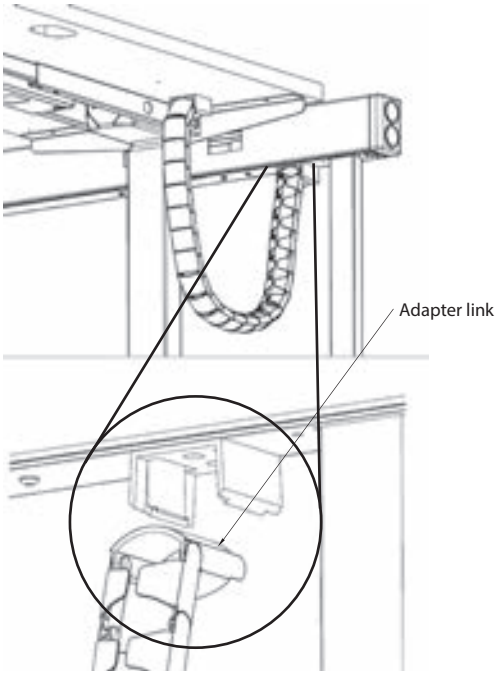
Raised Rail

- Power rails can be raised up to 20½"H using Elevated Legs and/or Hubs.
- Elevated Legs and Hubs can be used in conjunction to create the desired capability and aesthetic.
- Can be in Linear, L-, T- or X-configurations using Elevated Legs, Hubs or Universal Connector.
- Supports screens. See screens section for more details.
- Elevated Legs
  - Inset 2.8" from end of the power rail.
  - Can be shared in between the two rails in linear configuration.
  - Cannot route power and/or data.
  - Specified separately and come in qty of 1. Foot is included.
  - Leg is 15¼"D x 2¼"W x 17¾"H.
  - Order RFDRWAB separately to anchor to floor. Appropriate fasteners per floor type sourced locally.
- Support Hubs
  - Connect directly to the power rail.
  - Can be shared in between the two rails.
  - L-, T- and X-hubs can be shared in between power rails.
  - End of Run hub is only specified at end condition.
  - Can route power and/or data.
  - Can integrate power pole. Power Pole connector kit is specified separately and come in qty of 1. Foot is included.

Screens

- Constructed of painted steel material.
- Standard Allsteel paint options can be applied.
- Screen height is 20"H, provides overall height of 42"H above fixed floor.
- Painted steel is magnetic and cleanable. Refer to cleaning solutions page at Allsteel Office website.
- Attachment hardware included.

Altitude® Benching



Altitude Desk + 60"W Low Rail + WKSWMC

WORKING WITH CABLE MANAGEMENT

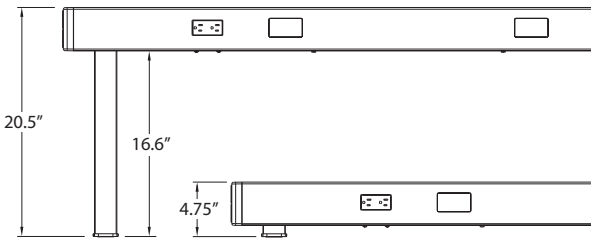
- Used to route and conceal power/data cables from control box and other devices. Includes all mounting hardware.
- Houses 6 cables @ 0.300" diameter.
- Specify WKSWMC for 58" chain. Only comes in Black Finish. Recommended for use with Low Rail.
- Specify A9CLWMC for 36" chain. Comes in Black, White and Silver. Recommended for use with Raised Rail.
- Links the power rail to a height adjustable desk.
- Has two connecting points: Top section connects underneath the Height Adjustable Desk and the bottom section connects underneath the power rail using a double-sided tape. Hardware included.
- When mounting the chain to underneath the rail, an adapter link is required. Included in the hardware.

Altitude Desk + 60"W Raised Rail + A9CLWMC

WORKING WITH POWER RAIL ELECTRICALS

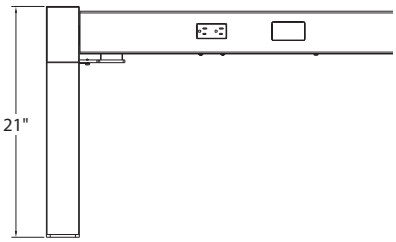
General Notes about Electrical and Circuitry:

- Power Rail offers a choice of four electrical systems:
  - Four-circuit, 3 + 1
  - Four-circuit, 2 + 2
  - Three-circuit, separate neutrals
  - Eight circuits; two four-circuit systems provided back to back.
  - See Altitude Pricer section "Working with Electrical" for a detailed explanation of each electrical system.
  - All four systems utilize an 8-wire electrical system, rated at 20 amps.
- Per circuit (15 amps Canadian) — 16 amps plannable in U.S.
  - Power Rail and electrical components are UL Listed. Electrical
- Components are also CSA certified.
  - Installation and use of the electrical system, the number of receptacles.
- Used on a given circuit and connections to the building power supply.
- Should follow all local and national electrical codes.



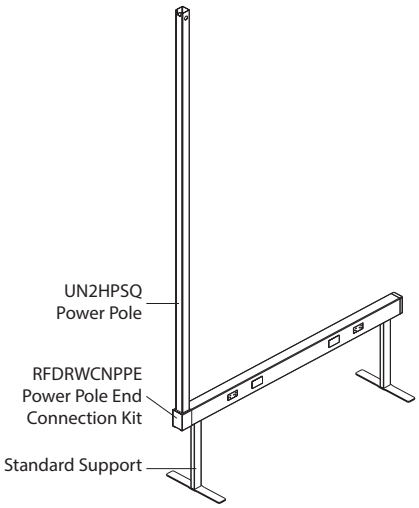
Electrical Infeeds

- Power infeed cables deliver power from building to panel's electrical system.
- Infeed cables are housed in conduit to separate electrical system from communications and data lines.
- Select quantity of base or ceiling infeed cables depending on individual power requirements.
- Refer to rail supports for infeed access points.

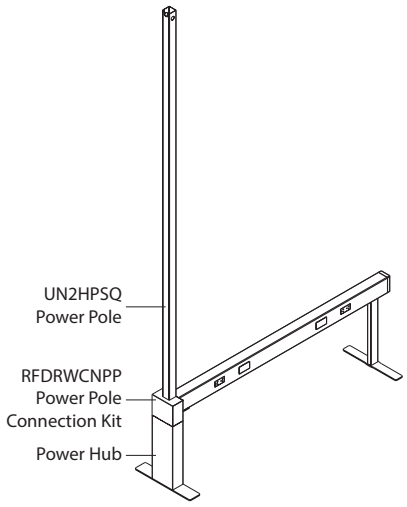


Altitude® Benching

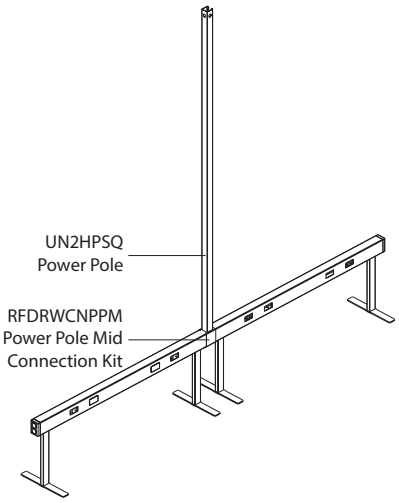
Routing Power



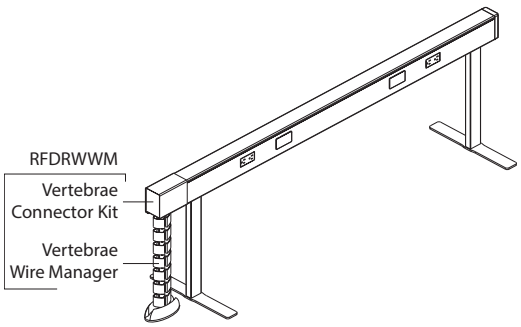
- Power infeed can access the raised power rail in multiple ways:
  - Through power pole using a power pole connector kit.
  - Through Support Hubs.
  - Through the infeed vertebrae.



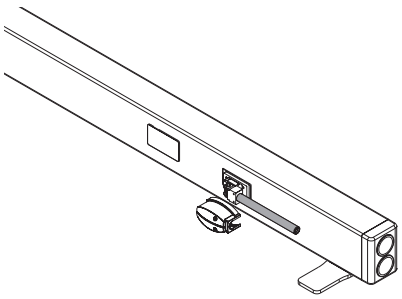
Raised Rail & Low Rail



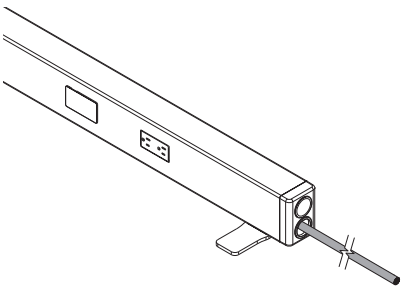
End of Run Hub



RFDRWCNPPE + UN2HPSQ
Connected to 60"W Rail



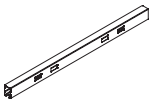
RFDRWHUBEND + RFDRWCNPP
UN2HPSQ connected to 60"W Rail



UN2HPSQ + RFDRWCNPPM
Connected to 60"W Rail

RFDRWWM
Connected to 60"W Rail

A876072 Infeed
Connected to 60"W Rail through
Receptacle Knockout



A877012 Infeed
Connected to 60"W Rail through End Cap
