BEAM APPLICATIONS

D x W x H

Table supporting structures - BEAMS

Legs are connected with supporting beams. There is one beam for a single line of tables while two beams connect back-to-back table structures. Adjustable clamps at either end of the beam can be adjusted to accommodate the following applications in both single table as well as back-to-back table configurations.

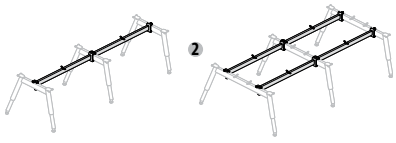
STANDARD TABLE BEAM

Single table beam application (1)

Designed to bridge two legs to form support for a single table, or for two back-to-back worksurfaces Adjustable clamps at either end of the beam are pushed all the way in to allow both table legs to be tucked under the worksurface.

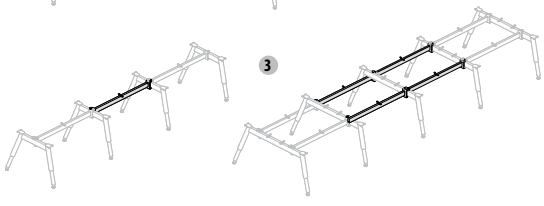
End of run table beam application (2)

Supports one table leg assembly tucked under the worksurface (one adjustable clamp pushed all the way in), while the other table leg assembly can be shared between two adjacent worksurfaces (adjustable clamp pulled out to extend the beam).



Interconnecting table beam application (3)

Supports both table leg assemblies extended to support adjacent worksurfaces on either side. Adjustable clamps at either end of the beam are pushed all the way in to allow both table legs to be tucked under the worksurface. Single table beam application supports single table leg assemblies with legs on both sides tucked under the worksurface.

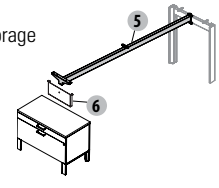


TELESCOPIC TABLE BEAM (4)

Supports a return connected perpendicularly to a 24" or 30" deep primary worksurface. The Telescopic beam is connected to a single or back-to-back leg on one side and to any-worksurface supporting beam on the opposite side. Telescopic beam clamp allows the table leg to be tucked under the worksurface or shared between two adjacent worksurfaces.

STORAGE TABLE BEAM (5)

The Storage beam is connected to a single or back-to-back leg on one side and to the worksurface on the opposite side - thus saving one leg assembly. Assembly worksurface is connected to storage units with included storage brackets. Storage table beam's flexibility allows for a single table application (with the table leg tucked in under the worksurface) as well as for a double table installation (two adjacent tables supported by a shared leg in the middle and two storage cabinets at the opposite ends.



STORAGE TABLE BEAM ADAPTER (6)

Connects to a storage table beam. This assembly allows a worksurface to be supported by a leg on one side and a spine (formed by interconnected storage cabinets) on the opposite side.

Bottom Table Beam

Bottom table beam connects to the lower cross beam on the 36" and 42" high "H" leg to create the footrest. One beam required for each table. Cannot be used as a substitute for the standard table beam. Specify bottom table beam that corresponds to the worksurface length. Includes all hardware necessary to connect to "H" leg. Powder coated steel beam and aluminum cast clamps.

Telescopic Table Beam

Provides support for a worksurface connected perpendicularly to a run of primary tables. Can be adjusted to accommodate 24" and 30" primary worksurfaces. One end of the beam is attached to a Leg Assembly while the other end is secured, off module to the perpendicular Standard Table Beam, End of Run or Interconnecting Beam. Specify Telescopic Table Beam size corresponding nominally to the return worksurface length.

Storage Table Beam Adapter

Allows a worksurface to be supported by a leg on one side and storage spine on the opposite side. A typical storage spine is formed by series of Interconnected 21" or 25"h storage cabinets of corresponding depth. The 21" or 25" adaptors provide structural support, acting as supports between the top of the storage cabinet spine and the bottom of the perpendicular worksurfaces. The flexible leg/beam/adapter assembly arrangement allows the leg to be tucked in under the worksurface or to be shared by two adjacent worksurfaces. Specify Storage Beam nominally 18" shorter than worksurfaces for storage spine support application. Specify **BRTSA21** or **BRTSA25** depending on height of storage units forming the spine. Includes all hardware necessary to connect the adapter to the beam, worksurface and storage spine.

POWER DELIVERY / CABLE MANAGEMENT

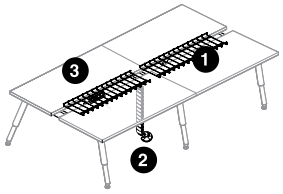
D x W x H

At the basic level, table and floor based office equipment is serviced by a wall or floor power supply. As the operation grows, there might be a need to organize excessive cable clutter.

Wire Basket (1) connects to the underside of worksurfaces with sprig brackets, and cables are simply dropped and coiled into them. *Wire Basket is not to be used with power troughs.*

Cable Snake (2) Installed in proximity of floor monument to manage vertical cable clutter..

Table clamped, single circuit **Desk Top Power Data Modules (3)** deliver services to desk height, while tapping into wall or floor power supply. Again, the excessive cables can be managed with Cable Trays.

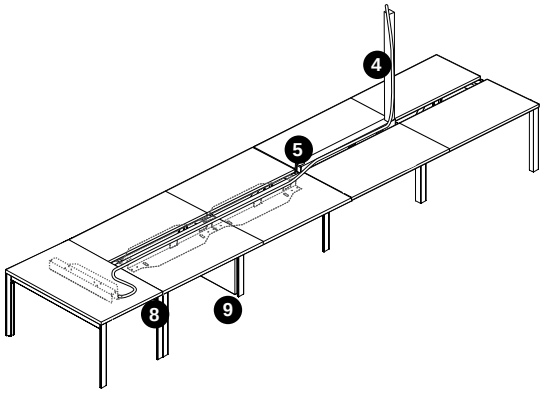


Ceiling pole **BRTCPP (4)** manages power and data cables between ceiling and above or below worksurface power troughs.

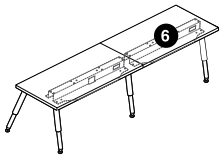
Above and Below Worksurface Power/Data Troughs (5) can be installed between back-to-back tables for extended below and above desk height power/data distribution. 8 wire, 4-circuit system. (2 + 2 circuit configuration)

NOTE: Specify **BRTHH58 (8)** to distribute power from double-sided, back-to-back below worksurface power trough to a single-sided, below worksurface power trough at the end of a table run.

Leg shroud (9) attaches to 34"w legs and manages power floor feed, as well as data cables from floor monument.



Single Sided Power/Data Troughs (6) can be installed to the underside of a single table.



Storage power/data box BRTVCM (7) attaches to storage units and provides access to one duplex/data terminal on top storage surface. Integrated single circuit module can be plugged to floor monument under the storage or to a wall outlet

Starter Beam

Starter beam can serve as a single, standalone unit or the beginning of a longer run of interconnected beams. 30" to 72" wide beams feature knockouts for two electrical duplex and one communication face place on each side while 24" wide beams accommodate one electrical duplex and one communication face place on each side. The leg expands by approximately 4" in height to compensate for uneven floors and allow for accurate leveling. Feet depth is 24". Starter Beam consists of horizontal channel, raceway covers, two legs, two 24" deep feet, two vertical end trims and corresponding end trim capture strips. Specify standard Flat Top Trim (**BRPBTC**), Glass and top trim kit (**BRPBEG**), or PET felt and top trim kit (**BRPBEF**) separately. Specify electrical components separately.

COLLABORATIVE SEATING

D x W x H

Bridges collaborative seating collection consists of seating, privacy screens, tables, tablets and power. It is a versatile modular furniture series which can be configured into many space planning scenarios, including corner, in-line, open concept, traditional reception, as well as secluded seating with high privacy partitions.

Furniture pieces can be used as stand alone items or can be mechanically linked together to form a variety of seating configurations.

Seat and backrest can be integrated with Bridges tables.

Corner tables and in-line 6" table modules double as power delivery centers.

Dedicated seat backrests feature dual USB charging port.

Some inline 6" table modules are furnished with grommets to support tablets.

Legs are available in standard Bridges metal painted finishes and anodized aluminum finish.

Bridges Collaborative Seating upholstery features a single stitch, thick white thread around the edges. The white, wide stitch along with crisp corners are part of its distinctive personality. In order to achieve crisp edges and to minimize "pillow" effect caused by taut fabric, the upholstery material has been applied deliberately loose, which may over time, produce puckering of the upholstery surface material. This can be easily corrected by stretching the fabric by hand or during vacuuming.

In order to efficiently utilize fabric yield, all 60" seats and backs feature a seam in the middle. The double stitch seam is sewn with a thin thread, closely matching the upholstery material in color.

Some complicated fabric patterns prevent pattern matching and will be upholstered without the seam at the discretion of the factory.

Should you require no middle seam by cutting into the roll, please specify "NO SEAM" at time of your order.

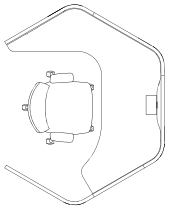
POWER CONNECTIONS

Plug In

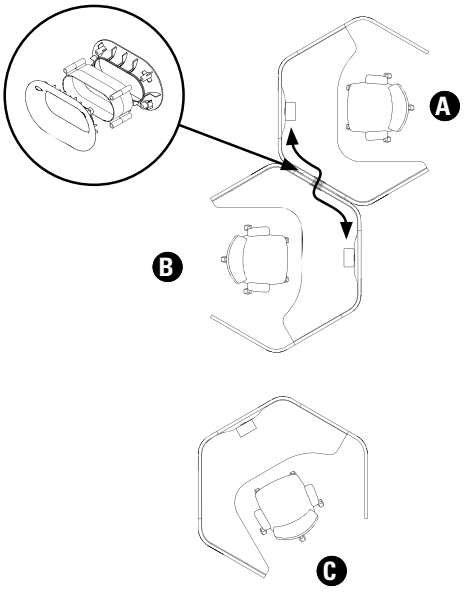
Simple casual wire - Direct plug-in or hard wired.



Daisy Chain Interconnect System

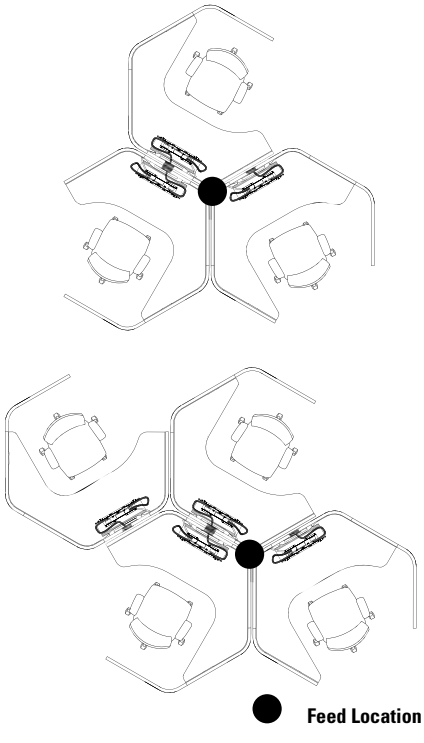
Plug-in power supply and interlinked, pre-determined universal modules. If specified, one module is shipped with the station and interconnected on site.

Integrating additional station (C) requires disconnecting A from B and plugging in the C on site.

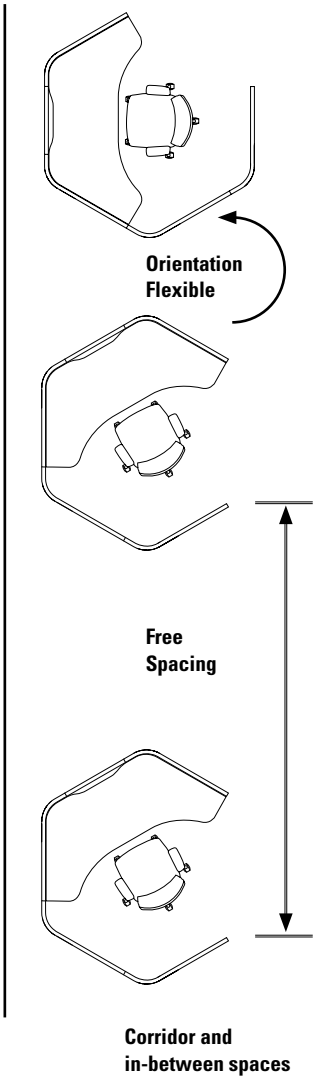


Dual Circuit Power

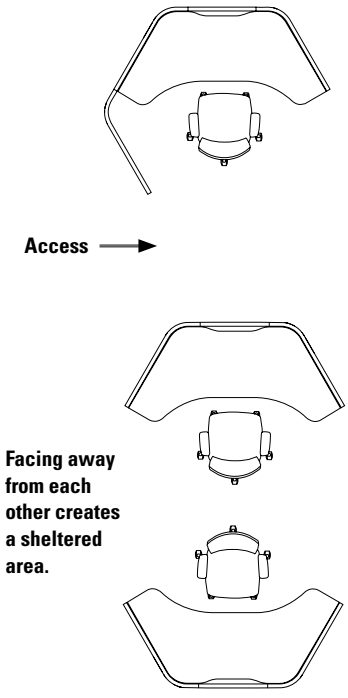
Outlets mounted below worksurfaces.

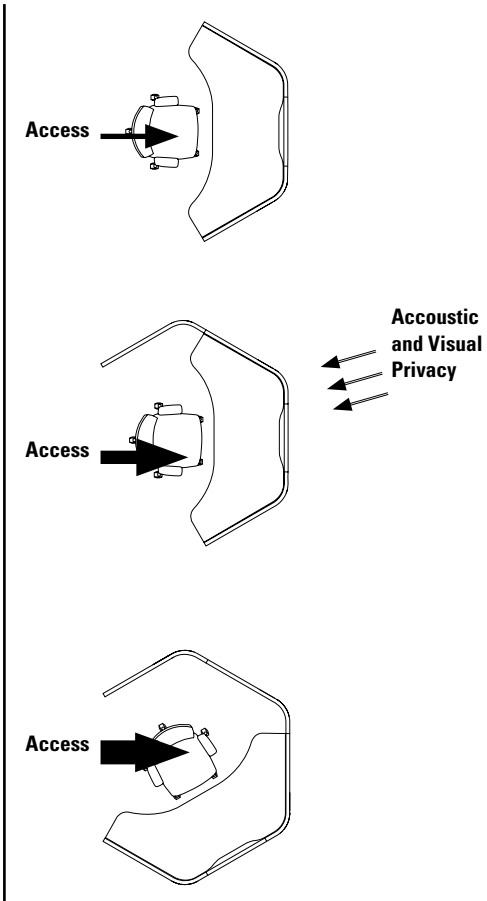


SPACE PLANNING



Corridor and in-between spaces



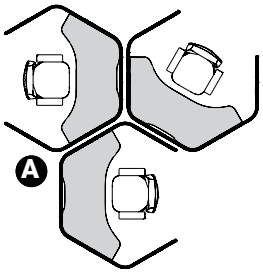


POD FORMATS

Align units in cluster plan
Option unit type and orientation

(A) Worksurfaces must have opposing alignment

Flat and curved dividers are non-handed and symmetrical. The addition of the legs determines if the j-dividers becomes LEFT handed or RIGHT handed. Any j-divider can be configured and reconfigured LEFT or RIGHT.



Power/ data is delivered through screen walls via grommet

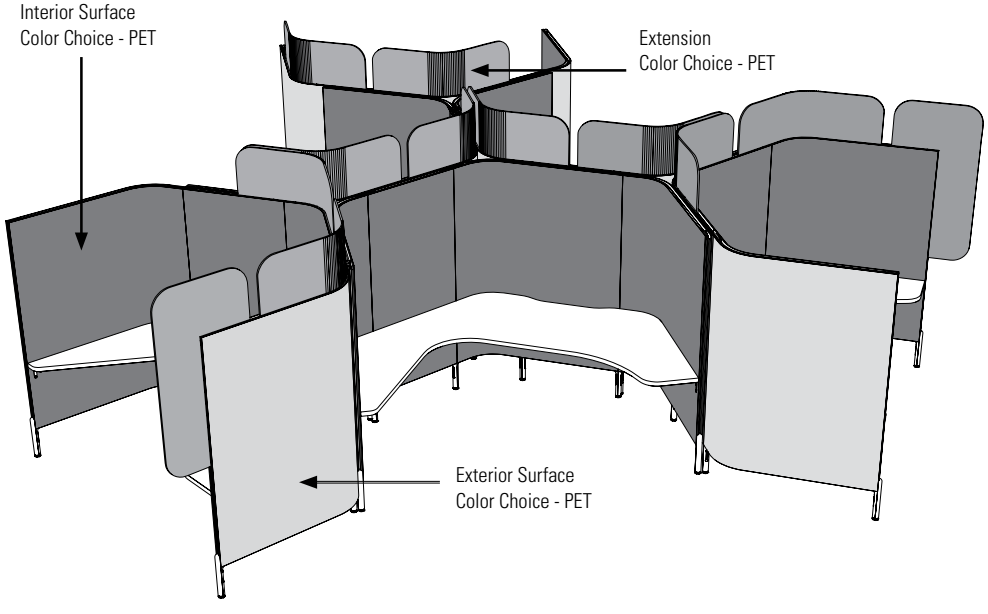
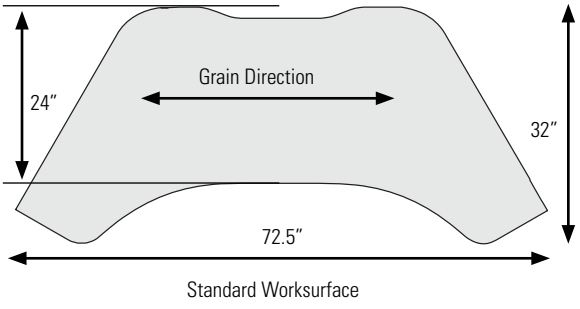
PET FELT COLOR PROGRAMMING

PET Felt finishes may be the same or different for the interior and exterior of the Softpod. Only one finish may be applied to either the interior or exterior of each divider within each Softpod. Extensions may be in any single PET Felt color to complement or contrast. Due to variations in the color of felt, we recommend a contrasting or complementary color.

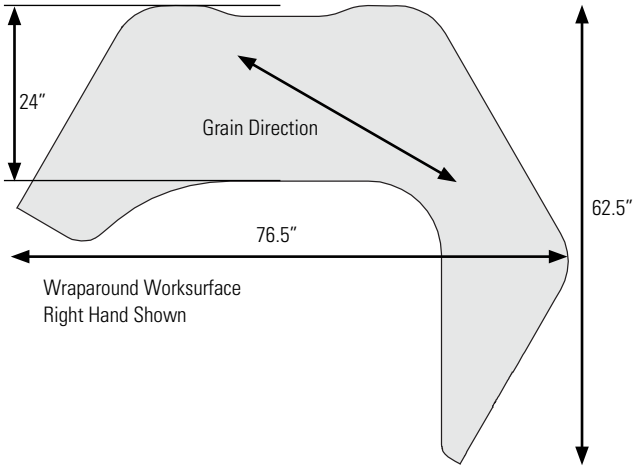


WORKSURFACE DIMENSIONS AND GRAIN DIRECTION



Standard Worksurface

- A single worksurface to be used within Softpod dividers.
- The surface is non-handed with pre-determined mounting points.
- Choose from either standard LP - low pressure laminate or HP - high pressure laminate, with PVC edge.



Wraparound Worksurface
Right Hand Shown

- A single wraparound worksurface to be used within Softpod dividers.
- The surface is handed L -left or R -right with pre-determined mounting points.
- Compatible with only 4 or 5 divider station configurations
- Choose from either standard LP - low pressure laminate or HP - high pressure laminate, with PVC edge.

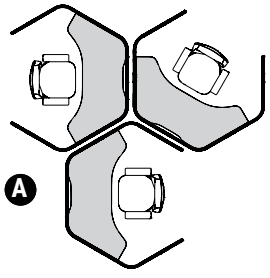
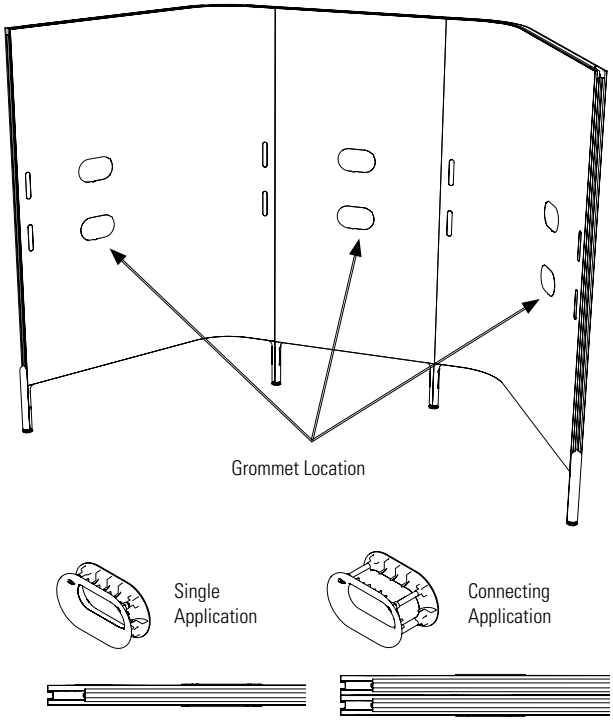
ELECTRICAL

- Power and data lines can enter Softpod via floor, ceiling, or through grommet in the divider. The grommet opening is built into every Softpod divider at a specific location, but it is covered by an on-site removable PET plug.
- A grommet on a single Softpod can also facilitate cable access to a wall outlet.
- Grommets installed on specific dividers facilitate passage of wires through Softpod dividers into adjacent Softpods.
- Orientation of worksurfaces plays an important role when planning Softpod cluster layouts with the need to pass cables between individual Softpods as the cables are best hidden underneath.
- Worksurfaces must have opposing alignment.
- Align units in cluster plan option unit type & orientation.



(**A**) Worksurfaces must have opposing alignment.



- Ceiling pole attaches to the divider grommet under worksurface.
- Location of the ceiling pole on the inside of the Softpod is determined by the contoured recess at the back of worksurface.
- White dots below indicate possible ceiling feed pole location within the Pod (must be at the same location as worksurface contoured recess).
- Grey dots indicate possible Ceiling feed pole location outside of the Pod (because cables pass through
  the divider grommets and under the worksurface).
- Black arrows indicate possible power and data cable passage between Softpods (because cables pass through the divider grommet under the worksurface, through the second divider grommet and into the adjacent Softpod, under worksurface.
- In either case, the cables enter or exit the Softpodthrough the divider grommet.

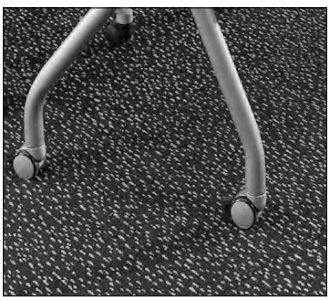
BUNGEE™ TABLES

Bungee is a series of freestanding tables and accessories designed for classrooms, training rooms, boardrooms and any other multi-functional space that may require frequent configurations. Tables are sold complete with legs and Bungee cords so they may quickly and easily be connected together without searching for tools or worrying about loose parts.

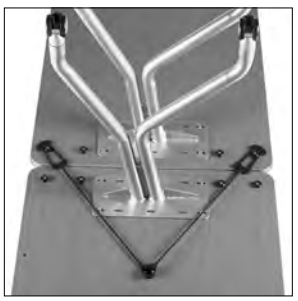
Bungee tables feature rounded corners with a unique "bubble molding" that is engineered to compress under the tension of the Bungee cords. The compressed molding creates a seal that serves to locate and align interconnected tables while also providing a soft and forgiving edge.

Choose from a variety of top shapes and laminate finishes to create your individual style. In addition, most tables offer a choice of tapered legs or spider legs in a Tungsten or Black finish with adjustable levelers or optional casters. Optional modesty panels, grommets, wire management and power blocks further enhance your workspace.

Flip-Top tables can be nested and easily stored by activating the single hand release mechanism from the left or right side.



Optional locking casters are available in Tungsten or Black (standard on Flip-Top models).



Bungee cords are utilized to quickly and easily reconfigure tables

- Products specified with the high pressure laminate option (**HPL**) are finished on the underside of the surface with a kraft paper backing.

BUNGEE CORDS

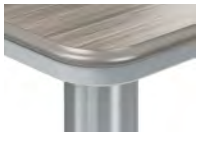
- Bungee cords are patented elastic devices designed to provide a rapid, no-tool method of attaching tables of the same depth.
- The elastic nature of cords allows two connected tables to be moved around without risk of damage to the table top or connecting hardware.
- Bungee cords are included with all freestanding tables and carry a lifetime warranty.

EDGE DETAIL

- Bungee comes with a choice of four edge styles (check model for edge availability):

A3 - square corner, standard edge **AR** - square corner, bicut edge

AS - square corner, Silver **AB** - square corner, Black



BS - rounded corner, Silver **BB** - rounded corner, Black

- **BB/BS** - Bungee Bubble Edge: unique "bubble" molding is engineered to compress under the tension of the Bungee cords, creating a seal that serves to locate and align interconnected tables.
- **AB/AS** - Split color PVC edge: edge matches split color aesthetic of the bubble edge, but allows for 90 degree corners and a cleaner look.
- **A3** - Global's preferred edge. Coordinates well with Adaptabilities and Zira 1" tops.
- **AR** - Bicut edge. Coordinates well with Zira 1" tops.
- **NOTE**: Trapezoid tables can only be specified with Bubble Edge (Rounded Corners).
- **NOTE**: Boardroom Table sets allow for all edge types but ONLY with rounded corners (when AS/AB/A3/AR are selected, the table will be produced with rounded corners).

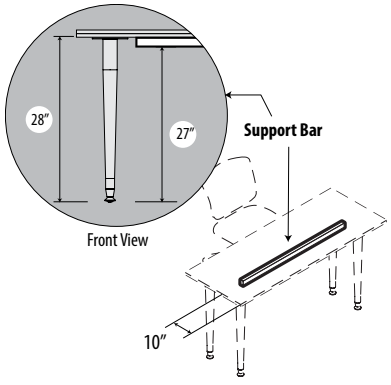
BUNGEE SL™ - NOTES

GENERAL INFORMATION

- Introducing Bungee SL - a product line to complement and coordinate with the top selling Bungee training tables series.
- Bungee SL takes the popular aesthetic of the Bungee series and allows tables to be specified in shared leg and permanent applications - great for benching, training, teaming and academic areas.
- Bungee SL tops and legs are sold separately, increasing the flexibility of the product in the future and allows for space saving in areas where real estate is a premium.
- High pressure tops are available in all Bungee SL laminates at an extended lead time - please refer to model # for pricing.
- For environmental certifications, please visit globalfurnituregroup.com

CONSTRUCTION

- Tops are 1" thick thermally fused laminate (**TFL**) or optional 1-1/16" thick high pressure laminate (**HPL**).
- All laminate components are made of 45 lb. density particle board with high performance thermally fused laminate surface or high pressure laminate surface with a kraft paper backing.
- Tops 60" and over feature a built-in support bar. The support bar is 10" from the **approach** side, and clearance to the bottom of the support bar is 27" from the floor.
- **BUNGEE CORDS ARE NOT INCLUDED AND ARE NOT COMPATIBLE WITH BUNGEE SL TOPS**



EDGE DETAIL

- Bungee SL comes with a choice of four edge styles:

A3 - square corner, standard edge

AR - square corner, bicut edge

AS - square corner, Silver

AB - square corner, Black

BS - rounded corner, Silver

BB - rounded corner, Black

- **BB/BS** - Bungee bubble edge: unique "bubble" molding found on original Bungee
- **AB/AS** - Split color PVC edge: edge matches split color aesthetic of the bubble edge, but allows for 90 degree corners and a cleaner look.
- **A3** - 2mm preferred matching edge. Coordinates well with Adaptabilities and Zira 1" tops.
- **AR** - Bicut edge. Coordinates well with Adaptabilities and Zira 1" tops.

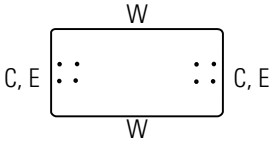
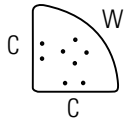
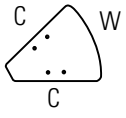
  ***cannot freestand**



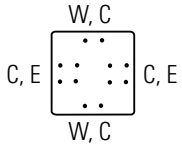
Rectangle



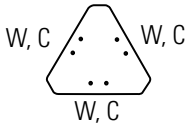
Quarter Round*



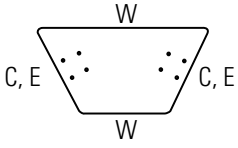
45° Wedge*



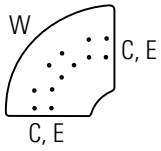
Square



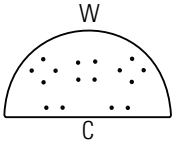
60° Triangle*



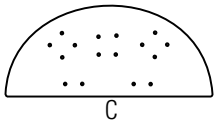
Trapezoid



90° Crescent



Half Round

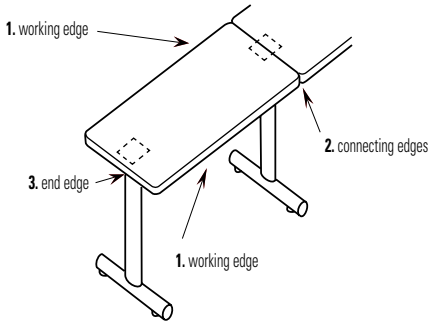


Extended Half Round*

Working Edge (1) - Edges designated with the letter "**W**" indicate that this is a **working** or sitting edge. These edges can be connected with optional ganging hardware in free-standing applications.

Connecting Edge (2) - Edges designated with the letter "**C**" indicate that this is a **connecting** edge. These edges can be connected to any other connecting edge of equal width, regardless of the top shape or size.

End Edge (3) - Edges designated with the letter "**E**" indicate that this is an **end** edge or an edge that can finish a run of tops. If a top has two end edges it can be freestanding. 90˚ crescent tops can be freestanding if the optional center leg is added.



FREESTANDING AND CONNECTING CONDITIONS

Freestanding tables are defined as any one worksurface supported by two or more legs; **connecting tables** are defined as more than one work surface supported by a single leg at each point of connection. The rule for determining the quantity of legs of an open configuration is the number of worksurfaces plus one **(See Figure 1)**.

On closed configurations, the number of legs is equal to the number of worksurfaces **(See Figure 2)**. There are some exceptions, such as when optional third legs are used on quarter round or 90˚ crescent shapes.

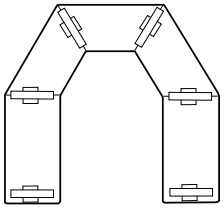


Figure 1. Open Configuration
Number of Surfaces = 5
Number of Legs = 6

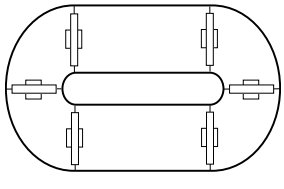

Figure 2. Closed Configuration
Number of Surfaces = 6
Number of Legs = 6

FREESTANDING CONDITIONS

- All square, rectangle and trapezoid shapes are able to act as freestanding tables **(Figure 3)**.
- When Trapezoid tops are freestanding, legs must be on the outer left and right sides **(Figure 4)**.
- 90˚ crescent work surfaces have provision for an optional third center leg for additional stability when heavy loads are applied to the outside edge. They can also be used as freestanding tables when a third leg is added **(Figure 5)**.
- All freestanding tables can be connected with optional ganging hardware.
- Freestanding tables can be ganged with connected tables in some cases, providing that the number and size of connected tables is easily movable **(Figure 6)**.
- **DO NOT DRAG TABLES WHEN RE-CONFIGURING.**

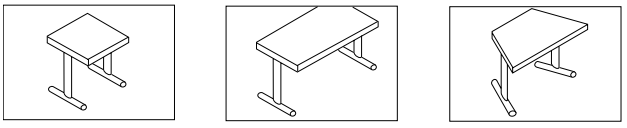

Figure 3 - Freestanding Tables

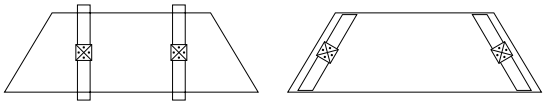

Figure 4 - Trapezoid Tops

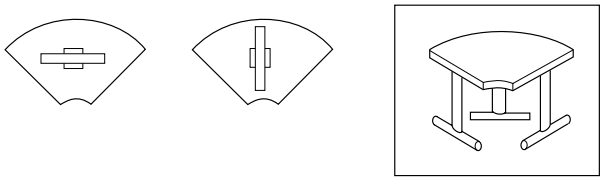

Figure 5 - Adding a Third Leg

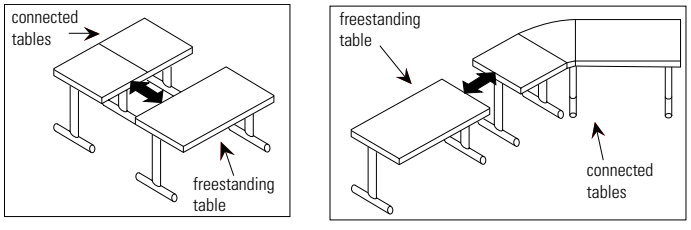

Figure 6 - Ganging with Connected Tables

CONNECTING CONDITIONS

- Any two worksurfaces of equal depth (24"D, 30"D or 36"D) can be connected with one leg, at the connecting or end edges **(Figure 8).**
- Half round work surfaces can be used in the following ways: They must be of equal width when connected to each other **(Figure 7)** or the connecting shapes must be equal to half the width of the connecting half round **(Figure 8)**.
- ConnecTABLES® is designed with the leg to be fastened parallel to connecting edges, but in some cases you may wish to fasten legs at 90˚ to connecting edges. This could allow for increased leg or knee clearance, depending on the intended use **(Figure 9)**.
- Quarter round and 90˚ crescent work surfaces have provision for an optional third leg for additional stability when heavy loads are applied to the outside edge. For quarter round work surfaces, it is recommended that configuration "A" be used since the outside end of the center leg in configuration "B" is almost flush with the outside edge of the worksurface. If configuration "B" is installed against a wall or where there will be no traffic flow, then configuration "B" can be used.

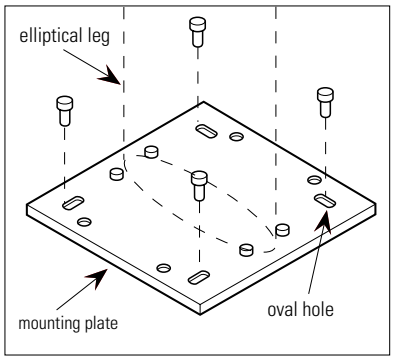
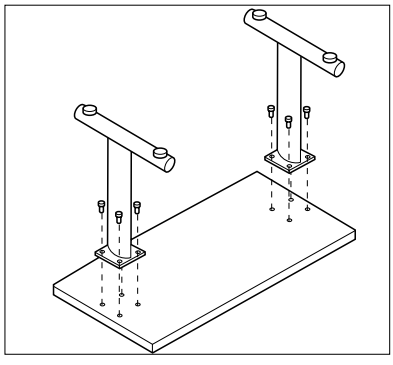
CONNECTABLES® - PUTTING IT ALL TOGETHER

Legs are fastened to worksurfaces utilizing a steel-to-steel connection. Each leg comes equipped with four ¼" x 7/8" machine screws. Screws are inserted through the four oval shaped holes only. Do not use wood screws! When fastening legs to work surfaces, hand thread screws into position to prevent any cross threading. When all screws have been hand threaded, tighten firmly with screwdriver to secure. Optional thumbscrews can be used in place of machine screws. Thumbscrews eliminate the need for a screwdriver, whether assembling or disassembling tables. **Do not use power tools for assembly of legs**.



FREESTANDING TABLES

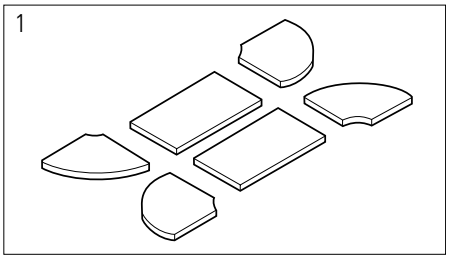
1. Turn work surface upside-down on clean floor. (You may want to use carton from packaging as a protective assembly surface to protect the top from scratching.)
2. Position leg mounting plate holes over threaded steel inserts in top.
3. Fasten each leg to top with four ¼" x 7/8" screws.
4. Turn table right-side up.
5. Level table by adjusting glides.

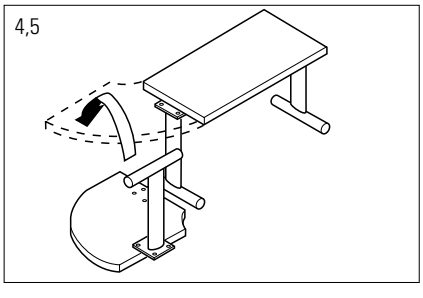


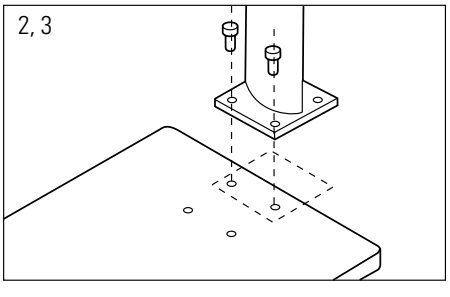
CONNECTING TABLES

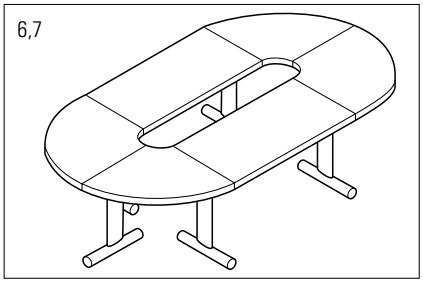
1. Determine approximate location of desired configuration in room and turn work surfaces upside-down on floor. (Remember you are working in reverse.)
2. Position leg mounting plate so it is centered over the connecting edge of the first work surface. Fasten leg with two ¼" x 7/8" screws.
3. Repeat step 2 and 3 on the opposite edge of the first work surface.
4. Turn table right-side up.
5. Turn table right-side up and fasten to the previous top from the underside.
6. To add additional work surfaces repeat step 6.
7. When all the tops have been connected, level complete configuration by adjusting glides.

Note: Use the same procedures as above when using optional thumb screws.





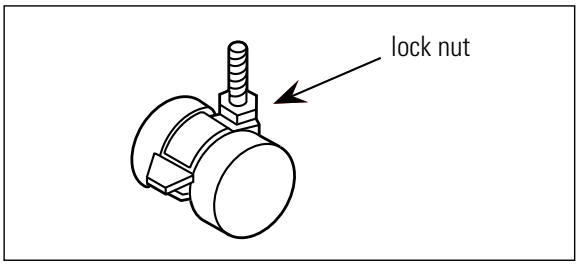




OPTIONAL CASTERS

1. Turn work surface upside-down on floor.
2. Remove existing glide if previously installed.
3. Fasten caster to T-leg by threading caster stem into base of T-leg and secure by tightening lock nut.
4. If casters are used in combination with gliders, level table by adjusting glides.

Note: Casters are available in locking or non-locking styles.



OPTIONAL GANGING HARDWARE

1. Optional ganging hardware should be used when quick and frequent reconfigurations are required.
2. Turn work surfaces to be ganged upside-down on floor.
3. Remove ganging hardware from package. Holes with steel inserts are located in the corner of tops.
4. Fasten ganging hardware to each work surface with supplied thumb screws.
5. Projected arm from ganging hardware can pivot out of the way when not in use.

Power/Data Cable Basket

Shallow, 8" wide basket manages cable excess and serves to manage cords and cables. It can be easily unclipped from spring steel brackets (included) to rearrange cable connections from below worksurface. Spring steel brackets can suspend the Cable Basket below the worksurface where it keeps the cords and cables off the floor and manages them along the horizontal plane - between floor monuments and Storage Vertical Cable Manager, for example. Tall storage cabinet's legs provide easy access to the Cable Basket where it can easily be unclipped from spring steel brackets to rearrange cable connections. Steel wire construction, chrome finish baskets; black spring steel hanging brackets, fasteners.

WORKSURFACES

- **Four** material choices: high performance thermally fused laminate, high pressure laminate, veneer and solid surface.
- **Thermally fused laminate** tops are 1" thick overall, constructed of 45 lb. density particle board core; 2 mm thick flat edge band to match, contrast with, or complement the top surface or corresponding base finish.
- **High pressure laminate** tops are 1-3/16" thick overall with choice of edge detail. 2mm thick flat edge to match, contrast with or complement the top surface or corresponding base finish on a 45lbs density particle board core. Also available with knife edge detail; edge finish would match top surface; core material is MDF. Recommended for counter applications or other high use areas. Product codes with **suffix LK** indicate high pressure laminate with knife edge.
- **Veneer** tops are 1-3/16" thick overall with choice of edge detail - flat edge or knife edge. Edge finish to correspond to surface finish. When flat edge, core material is 45 lbs density particle board; when knife edge, core material is MDF. Product codes with **suffix V** indicate veneer.

Solid surface material is 0.5" thick with built up edge profile over a particle board or plywood subtop depending on overall top size. Product codes with **suffix SF** indicate solid surface with flat edge; product codes with **suffix SK** indicate solid surface with knife edge. There is no edge finish selection on solid surface tops. For detailed material information, please reference WilsonArt's Solid Surface collection.

BASES

- **Caution**: to meet BIFMA standards for performance and stability, appropriate base size must be specified with corresponding top sizes identified. **Top plates and base plates vary by base size and will only work with table shape sizes as referenced on the following pages.**
- Bases are constructed of a round or square solid steel metal plate for counter balance, covered with a finished steel shroud, affixed with four bolts to a 3" diameter cold rolled steel tube.
- GRB14H25 attach to tops with a 6" x 6" steel plate, welded to a 1.5" diameter steel tube, bolted to a 0.5" thick solid steel counter balance. Not to be used on tops greater than 22" x 22" in size.
- GSB13H25 and GSOB13H25 attach to tops with a 6" x 6" steel plate, welded to a 1.5" diameter steel tube, bolted to a 0.5" thick solid steel counter balance. Not to be used on tops greater than 22" x 22" in size.
- GRB22H15, GRB22H21, GRB22H26, GRB22, GRB22H35, GRB22H41, GSB19H15, GSB19H21, GSB19H26,w GSB19, GSB19H35 and GSB19H41 attach to tops with a 6"x 6" steel plate, welded to a 3" diameter steel tube, bolted to a 0.5" thick solid steel counter balance.
- **Top plate and base plate of GRB22 and GSB19 models in all heights, have pass-through cut-outs to accommodate a single port simplex or dual USB module to deliver power or USB charging to the surface**. This allows the module to be mounted directly above the base and to pass the unit's cord through the base column resulting in the cord and plug head exiting from the bottom of the base for plugging into a floor or wall mount power source.
- GRB28, GRB34, GSB23 and GSB28 attach to tops with an 11" x 11" steel plate, welded to a 4" diameter steel tube, bolted to a 0.375" thick solid steel counter balance.
- Bases are available PAINTED in "Sandtex" finish for extra durability. Also available in plated finishes (see 765) at an upcharge and with an extended lead time. Please see model # for pricing.
- All bases include six height adjustable glides with 0.75" of adjustability.
- Round bases available in 22", 28" and 34" dia.
- Square bases available in 18.5", 22.5" and 28.5".
